THE

ATLANTIC MONTHLY.

A MAGAZINE OF LITERATURE, ART, AND POLITICS.

VOL. VII.—JANUARY, 1861.—NO. XXXIX.

WASHINGTON CITY.

WASHINGTON is the paradise of paradoxes,—a city of magnificent distances, but of still more magnificent discrepancies. Anything may be affirmed of it, everything denied. What it seems to be it is not; and although it is getting to be what it never was, it must always remain what it now is. It might be called a city, if it were not alternately populous and uninhabited; and it would be a wide-spread village, if it were not a collection of hospitals for decayed or callow politicians. It is the hybernating-place of fashion, of intelligence, of vice,—a resort without the attractions of waters either mineral or salt, where there is no bathing and no springs, but drinking in abundance and gambling in any quantity. Defenceless, as regards walls, redoubts, moats, or other fortifications, it is nevertheless the Sevastopol of the Republic, against which the allied army of Contractors and Claim-Agents incessantly lay siege. It is a great, little, splendid, mean, extravagant, poverty-stricken barrack for soldiers of fortune and votaries of folly.

Scattered helter-skelter over an immense surface, cut up into scalene triangles, the oddity of its plan makes Washington a succession of surprises which never fail to vex and astonish the stranger, be he ever so highly endowed

as to the phrenological bump of locality. Depending upon the hap-hazard start the ignoramus may chance to make, any particular house or street is either nearer at hand or farther off than the ordinary human mind finds it agreeable to believe. The first duty of the new-comer is to teach his nether extremities to avoid instinctively the hypothenuse of the street-triangulation, and the last lesson the resident fails to learn is which of the shortcuts from point to point is the least lengthy. Beyond a doubt, the corners of the streets were constructed upon a cold and brutal calculation of the greatest possible amount of oral sin which disappointed haste and irritated anxiety are capable of committing; nor is any relief to the tendency to profanity thus engendered afforded by the inexcusable nomenclature of the streets and avenues,—a nomenclature in which the resources of the alphabet, the arithmetic, the names of all the States of the Union, and the Presidents as well, are exhausted with the most unsystematic profligacy. A man not gifted with supernatural acuteness, in striving to get from Brown's Hotel to the General Post-Office, turns a corner and suddenly finds himself nowhere, simply because he is everywhere,—being at the instant upon three separate streets

and two distinct avenues. And, as a further consequence of the scalene arrangement of things, it happens that the stranger in Washington, however civic his birth and education may have been, is always unconsciously performing those military evolutions styled marching to the right or left oblique, — acquiring thereby, it is said, that obliquity of the moral vision which sooner or later afflicts every human being who inhabits this strange, lop-sided city-village.

So queer, indeed, is Washington City in every aspect, that one newly impressed by its incongruities is compelled to regard Swift's description of Lilliputia and Sydney Smith's account of Australia as poor attempts at fun. For, leaving out of view the pigmies of the former place, whose like we know is never found in Congress, what is there in that Australian bird with the voice of a jackass to excite the feeblest interest in the mind of a man who has listened to the debates on Kansas? or what marvel is an amphibion with the bill of a duck to him who has gazed aghast at the intricate anatomy of the bill of English? It is true that the ignorant Antipodes, with a total disregard of all theories of projectiles, throw their boomerangs behind their backs in order to kill an animal that stands or runs before their faces, or skim them along the ground when they would destroy an object flying overhead. And these feats seem curious. But an accomplished "Constitutional Adviser" can perform feats far more surprising with a few lumps of coal or a number of ships-knees, which are but boomerangs of a larger growth. Another has invented the deadliest of political missiles, (in their recoil,) shaped like mules and dismantled forts, while a third has demolished the Treasury with a simple miscalculation. Still more astonishing are the performances of an eminent functionary who encourages polygamy by intimidation, purchases redress for national insult by intercepting his armies and fleets with an apology in the mouth of a Commissioner, and elevates the Republic in the eyes of man-

kind by conquering at Ostend even less than he has lost at the Executive Mansion.

In truth, the list of Washington anomalies is so extensive and so various, that no writer with a proper regard for his own reputation or his readers' credulity would dare enumerate them one by one. Without material injury to the common understanding, a few may be mentioned; but respect for public opinion would urge that the enormous whole be summed up in the comparatively safe and respectful assertion, that the one only absolutely certain thing in Washington is the absence of everything that is at all permanent. The following are some of the more obnoxious astonishments of the place.

Traversing a rocky prairie infested with hacks, you arrive late in the afternoon at a curbed boundary, too fatigued in body and too suffocated with dust to resent the insult to your common-sense implied in the announcement that you have merely crossed what is called an Avenue. Recovered from your fatigue, you ascend the steps of a marble palace, and enter but to find it garrisoned by shabby regiments armed with quills and steel pens. The cells they inhabit are gloomy as dungeons, but furnished like parlors. Their business is to keep everybody's accounts but their own. They are of all ages, but of a uniformly dejected aspect. Do not underrate their value. Mr. Bulwer has said, that, in the hands of men entirely great, the pen is mightier than the sword. Suffer yourself to be astonished at their numbers, but permit yourself to withdraw from their vicinity without questioning too closely their present utility or future destination. No personal affront to the public or the nineteenth century is intended by the superfluity of their numbers or the inadequacy of their capacities. Their rapid increase is attributable not to any incestuous breeding in-and-in among themselves, but to a violent seduction of the President and the Heads of Department by importunate Congressmen; and you may rest assured that this

criminal multiplication fills nobody with half so much righteous indignation and virtuous sorrow as the clerks themselves.

Emerging from the palace of quill-drivers, a new surprise awaits you. The palace is surmounted by what appear to be gigantic masts and booms, economically, but strongly rigged, and without any sails. In the distance, you see other palaces rigged in the same manner. The effect of this spectacle is painful in the extreme. Standing dry-shod as the Israelites were while crossing the Red Sea, you nevertheless seem to be in the midst of a small fleet of unaccountable sloops of the Saurian period. You question whether these are not the fabulous "Ships of State" so often mentioned in the elegant oratory of your country. You observe that these ships are anchored in an ocean of pavement, and your no longer trustworthy eyes search vainly for their helms. The nearest approach to a rudder is a chimney or an unfinished pillar; the closest resemblance to a pilot is a hod-carrying workman clambering up a gangway. Dismissing the nautical hypothesis, your next effort to relieve your perplexity results in the conjecture that the prodigious masts and booms may be nothing more than curious gibbets, the cross-pieces to which, conforming rigidly to the Washington rule of contrariety, are fastened to the bottom instead of the top of the upright. Your theory is, that the destinies of the nation are to be hanged on these monstrous gibbets, and you wonder whether the laws of gravitation will be complaisant enough to turn upside down for the accommodation of the hangman, whoever he may be. It is not without pain that you are forced at last to the commonplace belief that these remarkable mountings of the Public Buildings are neither masts nor booms, but simply derricks,—mechanical contrivances for the lifting of very heavy weights. It is some consolation, however, to be told that the weakness of these derricks has never been proved by the endeavor to elevate by means of them the moral character of the inhabitants of Washing-

ton. Content yourself, after a reasonable delay for natural wonderment, to leave the strange scene. This shipping-like aspect of the incomplete Departments is only a nice architectural tribute to the fact that the population of Washington is a floating population. This you will not be long in finding out. The oldest inhabitants are here to-day and gone to-morrow, as punctually, if not as poetically, as the Arabs of Mr. Longfellow. A few remain,—parasitic growths, clinging tenaciously to the old haunts. Like tartar on the teeth, they are proof against the hardest rubs of the tooth-brush of Fortune.

As with the people, so with the houses. Though they retain their positions, seldom abandoning the ground on which they were originally built, they change almost hourly their appearance and their uses,—inasmuch that the very solids of the city seem fluid, and even the stables are mutable,—the horse-house of last week being an office for the sale of patents, or periodicals, or lottery-tickets, this week, with every probability of becoming an oyster-cellar, a billiard-saloon, a cigar-store, a barber's shop, a bar-room, or a faro-bank, next week. And here is another astonishment. You will observe that the palatial museums for the temporary preservation of fossil or fungous penmen join walls, virtually, with habitations whose architecture would reflect no credit on the most curious hamlet in tide-water Virginia. To your amazement, you learn that all these houses, thousands in number, are boarding-houses. Of course, where everybody is a stranger, nobody keeps house. It would be pardonable to suppose, that, out of so many boarding-houses, some would be in reality what they are in name. Nothing can be farther from the fact. These houses contain apartments more or less cheerless and badly furnished, according to the price (always exorbitant, however small it may be) demanded for them, and are devoted exclusively to the storage of empty bottles and demijohns, to large boxes of vegetable- and flower-seeds, to

great piles of books, speeches, and documents not yet directed to people who will never read them, and to an abominable odor of boiling cabbages. This odor steals in from a number of pitch-dark tunnels and shafts, misnamed passages and staircases, in which there are more books, documents, and speeches, other boxes of seeds, and a still stronger odor of cabbages. The piles of books are traps set here for the benefit of the setters of broken legs and the patchers of skinless shins, and the noisome odors are propagated for the advantage of gentlemen who treat diseases of the larynx and lungs.

It would appear, then, that the so-called boarding-houses are, in point of fact, private gift-book stores, or rather, commission-houses for the receiving and forwarding of a profusion of undesirable documents and vegetations. You may view them also in the light of establishments for the manufacture and distribution of domestic perfumery, payment for which is never exacted at the moment of its involuntary purchase, but is left to be collected by a doctor, who calls upon you during the winter, levies on you with a lancet, and distrains upon your viscera with a compound cathartic pill.

It is claimed, that, in addition to the victims who pay egregious rents for boarding-house beds in order that they may have a place to store their documents and demi-johns, there are other permanent occupants of these houses. As, for example, Irish chambermaids, who subtract a few moments from the morning half-hour given to drinking the remnants of your whiskey, and devote them to cleaning up your room. Also a very strange being, peculiar to Washington boarding-houses, who is never visible at any time, and is only heard stumbling up-stairs about four o'clock in the morning. Also beldames of incalculable antiquity,—a regular allowance of one to each boarding-house,—who flit noiselessly and unceasingly about the passages and up and down the stairways, admonishing you of their presence by a ghostly snuffle, which always fright-

ens you, and prevents you from running into them and knocking them down. For these people, it is believed, a table is set in the houses where the boarders proper flatter their acquaintances that they sleep. It must be so, for the entire male population is constantly eating in the oyster-cellars. Indeed, if ocular evidence may be relied on, the best energies of the metropolis are given to the incessant consumption of "half a dozen raw," or "four fried and a glass of ale." The bar-rooms and eating-houses are always full or in the act of becoming full. By a fatality so unerring that it has ceased to be wonderful, it happens that you can never enter a Washington restaurant and find it partially empty, without being instantly followed by a dozen or two of bipeds as hungry and thirsty as yourself, who crowd up to the bar and destroy half the comfort you derive from your lunch or your toddy.

But, although everybody is forever eating oysters and drinking ale in myriads of subterranean holes and corners, nobody fails to eat at other places more surprising and original than any you have yet seen. In all other cities, people eat at home or at a hotel or an eating-house; in Washington they eat at bank. But they do not eat money,—at least, not in the form of bullion, or specie, or notes. These Washington banks, unlike those of London, Paris, and New York, are open mainly at night and all night long, are situated invariably in the second story, guarded as jealously as any seraglio, and admit nobody but strangers,—that is to say, everybody in Washington. This is singular. Still more singular is the fact, that the best food, served in the most exquisite manner, and (with sometimes a slight variation) the choicest wines and cigars, may be had at these banks free of cost, except to those who choose voluntarily to remunerate the banker by purchasing a commodity as costly and almost as worthless as the articles sold at ladies' fairs,—upon which principle, indeed, the Washington banks are conducted. The commodity alluded

to is in the form of small discs of ivory, called "chips" or "checks" or "shad" or "skad," and the price varies from twenty-five cents to a hundred dollars per "skad."

It is expected that every person who opens an account at bank by eating a supper there shall buy a number of "shad," but not with the view of taking them home to show to his wife and children. Yet it is not an uncommon thing for persons of a stingy and ungrateful disposition to spend most of their time in these benevolent institutions without ever spending so much as a dollar for "shad," but eating, drinking, and smoking, and particularly drinking, to the best of their ability. This reprehensible practice is known familiarly in Washington as "bucking ag'inst the sideboard," and is thought by some to be the safest mode of doing business at bank.

The presiding officer is never called President. He is called "Dealer,"—perhaps from the circumstance of his dealing in ivory,—and is not looked up to and worshipped as the influential man of banking-houses is generally. On the contrary, he is for the most part contemned by his best customers, whose heart's desire and prayer are to break his bank and ruin him utterly.

Seeing the multitude of boarding-houses, oyster-cellars, and ivory-banks, you may suppose there are no hotels in Washington. You are mistaken. There are plenty of hotels, many of them got up on the scale of magnificent distances that prevails everywhere, and somewhat on the maritime plan of the Departments. Outwardly, they look like colossal docks, erected for the benefit of hacks, large fleets of which you will always find moored under their lee, safe from the monsoon that prevails on the open sea of the Avenue. Inwardly, they are labyrinths, through whose gloomy mazes it is impossible to thread your way without the assistance of an Ariadne's clue in the shape of an Irishman panting under a trunk. So obscure and involved are the hotel-interiors, that it would be madness

for a stranger to venture in search of his room without the guidance of some one far more familiar with the devious course of the narrow clearings through the forest of apartments than the landlord himself. Now and then a reckless and adventurous proprietor undertakes to make a day's journey alone through his establishment. He is never heard of afterwards,—or, if found, is discovered in a remote angle or loft, in a state of insensibility from bewilderment and starvation. If it were not for an occasional negro, who, instigated by charitable motives or love of money, slouches about from room to room with an empty coal-scuttle as an excuse for his intrusions, a gentleman stopping at a Washington hotel would be doomed to certain death. In fact, the lives of all the guests hang upon a thread, or rather, a wire; for, if the bell should fail to answer, there would be no earthly chance of getting into daylight again. It is but reasonable to suppose that the wires to many rooms have been broken in times past, and it is well known in Washington that these rooms are now tenanted by skeletons of hapless travellers whose relatives and friends never doubted that they had been kidnapped or had gone down in the Arctic.

The differential calculus by which all Washington is computed obtains at the hotels as elsewhere, with this peculiarity,—that the differences are infinitely great, instead of infinitely small. While the fronts are very fine, showy, and youthful as the Lecompton Constitution, the rears are coarse, common, and old as the Missouri Compromise. The furniture in the rooms that look upon Pennsylvania Avenue is as fresh as the dogma of Squatter Sovereignty; that in all other rooms dates back to the Ordinance of '87. Some of the apartments exhibit a glaring splendor; the rest show beds, bureaus, and washstands which hard and long usage has polished to a sort of newness. Specimens of ancient pottery found on these washstands are now in the British Museum, and are reckoned among the finest of Layard's collections at Nineveh.

The dining-rooms are admirable examples of magnificent distance. The room is long, the tables are long, the kitchen is a long way off, and the waiters a long time going and coming. The meals are long, — so long that there is literally no end to them; they are eternal. It is customary to mark certain points in the endless route of appetite with mile-stones named breakfast, dinner, and supper; but these points have no more positive existence than the imaginary lines and angles of the geometrician. Breakfast runs entirely through dinner into supper, and dinner ends with coffee, the beginning of breakfast. Estimating the duration of dinner by the speed of an ordinary railroad-train, it is twenty miles from soup to fish, and fifty from turkey to nuts. But distance, however magnificent, does not lend enchantment to a meal. The wonder is that the knives and forks are not made to correspond in length with the repasts, — in which case the latter would be pitchforks, and the former John-Brown pikes.

The people of Washington are as various, mixed, dissimilar, and contrasted as the edifices they inhabit. Within the like area, which is by no means a small one, the same number of dignitaries can be found nowhere else on the face of the globe, — nor so many characters of doubtful reputation. If the beggars of Dublin, the cripples of Constantinople, and the lepers of Damascus should assemble in Baden-Baden during a Congress of Kings, then Baden-Baden would resemble Washington. Presidents, Senators, Honorables, Judges, Generals, Commodores, Governors, and the Exs of all these, congregate here as thick as pick-pockets at a horse-race or women at a wedding in church. Add Ambassadors, Plenipotentiaries, Lords, Counts, Barons, Chevaliers, the great and small fry of the Legations, Captains, Lieutenants, Claim-Agents, Negroes, Perpetual-Motion-Men, Fire-Eaters, Irishmen, Plug-Uglies, Hoosiers, Gamblers, Californians, Mexicans, Japanese, Indians, and Organ-Grinders, together with females to match

all varieties of males, and you have a vague notion of the people of Washington.

It is an axiom in physics, that a part cannot be greater than the whole; and it will be recollected, that, after Epistemon had his head sewed on, he related a tough story about the occupations of the mighty dead, and swore, that, in the course of his wanderings among the damned, he found Cicero kindling fires, Hannibal selling egg-shells, and Julius Cæsar cleaning stoves. The story holds good in regard to the mighty personages in Washington, but the axiom does not. Men whose fame fills the land, when they are at home or spouting about the country, sink into insignificance when they get to Washington. The sun is but a small potato in the midst of the countless systems of the sidereal heavens. In like manner, the majestic orbs of the political firmament undergo a cruel lessening of diameter as they approach the Federal City. The greatest of men ceases to be great in the presence of hundreds of his peers, and the multitude of the illustrious dwindle into individual littleness by reason of their superabundance. And when it comes to occupations, it will hardly be denied that the stranger who beholds a Senator "coppering on the ace," or a Congressman standing in a bar-room with a lump of mouldy cheese in one hand and a glass of "pony whiskey" in the other, or a Judge of the Supreme Court wriggling an ugly woman through the ridiculous movements of the polka in a hotel-parlor, must experience sensations quite as confounding as any Epistemon felt in Kingdom Come.

In spite of numberless receptions, levees, balls, hops, parties, dinners, and other reunions, there is, properly speaking, no society in Washington. Circles are said to exist, but, like that in the vortex of the whirlpool, they are incessantly changing. Divisions purely arbitrary may be made in any community. Hence the circles of Washington society may be represented sciagraphically in the following diagram.

The Circle of the Mudsill includes Negroes, Clerks, Irish Laborers, Patent and other Agents, Hackmen, Faro-Dealers, Washerwomen, and Newspaper-Correspondents. In the Hotel Circle, the Newest Strangers, Harpists, Members of Congress, Concertina-Men, Provincial Judges, Card-Writers, College-Students, Unprotected Females, "Star" and "States" Boys, Stool-Pigeons, Contractors, Sellers of Toothpicks, and Beau Hickman, are found. The Circle of the White House embraces the President, the Cabinet, the Chiefs of Bureaus, the Embassies, Corcoran and Riggs, formerly Mr. Forney, and until recently George Sanders and Isaiah Rynders. The little innermost circle is intended to represent a select body of residents, intense exclusives, who keep aloof from the other circles and hold them all in equal contempt. This circle is known only by report; in all probability it is a myth. It is worthy of remark that the circles of the White House and the Hotels rise higher and sink lower than that of the Mudsill, but whether this is a fact or a mere necessity of the diagram is not known.

Society, such as it is, in the metropolis, is indulgent to itself. It intermeddles not, asks no impertinent questions, and transacts its little affairs in perfect peace and quietude. Vigilant as the Inquisition in matters political, it is deaf and blind, but not dumb, as to all others. It dresses as it pleases, drinks as much as it chooses, eats indiscriminately, sleeps promiscuously, gets up at all hours of the day, and

does as little work as possible. Its only trouble is that "incomparable grief" to which Panurge was subject, and "which at that time they called lack of money." In truth, the normal condition of Washington society is, to use a vernacular term, "busted." It is not an isolated complaint. Everybody is "busted." No matter what may be the state of a man's funds when he gets to Washington, no matter how long he stays or how soon he leaves, to this "busted" complexion must he come at last. He is in Rome; he must take the consequences. Shall he insult the whole city with his solvency? Certainly not. He abandons his purse and his conscience to the madness of the hour, and, in generous emulation of the prevailing recklessness and immorality, dismisses every scruple and squanders his last cent. Then, and not till then, does he feel himself truly a Washington-man, able to look anybody in the face with the serene pride of an equal, and without the mortification of being accused or even suspected of having in all the earth a dollar that he can call his own.

Where morals are loose, piety is seldom in excess. But there are a half-dozen of churches in Washington, besides preaching every Sunday in the House of Representatives. The relative size and cost of the churches, as compared with the Public Buildings, indicates the true object of worship in Washington. Strange to say, the theatre is smaller than the churches. Clerical and dramatic entertainments cannot compete

with the superior attractions of the daily rows in Congress and the nightly orgies at the faro-banks. Heaven is regarded as another Chihuahua or Sonora, occupied at present by unfriendly Camanches, but destined to be annexed some day. In the mean time, a very important election is to come off in Connecticut or Pennsylvania. That must be attended to immediately. Such is piety in Washington.

The list of the unique prodigies of Washington is without limit. But marvels heaped together cease to be marvelous, and of all places in the world a museum is the most tiresome. So, amid the whirl and roar of winter-life in Washington, when one has no time to read, write, or think, and scarcely time to eat, drink, and sleep, when the days fly by like hours, and the brain reels under the excitement of the protracted debauch, life becomes an intolerable bore. Yet the place has an intense fascination for those who suffer most acutely from the *tedium vitæ* to which every one is more or less a prey; and men and women who have lived in Washington are seldom contented elsewhere. The moths return to the flaming candle until they are consumed.

In conclusion, it must be admitted that Washington is the Elysium of oddities, the Limbo of absurdities, an imbroglio of ludicrous anomalies. Planned on a scale of surpassing grandeur, its architectural execution is almost contemptible. Blessed with the name of the purest of men, it has the reputation of Sodom. The seat of the law-making power, it is the centre of violence and disorder which disturb the peace and harmony of the whole Republic,—the chosen resort for duelling, clandestine marriages, and the most stupendous thefts. It is a city without commerce and without manufactures; or rather, its commerce is illicit, and its manufacturers are newspaper-correspondents, who weave tissues of fiction out of the warp of rumor and the web of prevarication. The site of the United States Treasury, it is the home of everything

but affluence. Its public buildings are splendid, its private dwellings generally squalid. The houses are low, the rents high; the streets are broad, the crossings narrow; the hacks are black, the horses white; the squares are triangles, except that of the Capitol, which is oval; and the water is so soft that it is hard to drink it, even with the admixture of alcohol. It has a Monument that will never be finished, a Capitol that is to have a dome, a Scientific Institute which does nothing but report the rise and fall of the thermometer, and two pieces of Equestrian Statuary which it would be a waste of time to criticize. It boasts a streamlet dignified with the name of the river Tiber, and this streamlet is of the size and much the appearance of a vein in a dirty man's arm. It has a canal, but the canal is a mud-puddle during one half the day and an empty ditch during the other. In spite of the labors of the Smithsonian Institute, it has no particular weather. It has the climates of all parts of the habitable globe. It rains, hails, snows, blows, freezes, and melts in Washington, all in the space of twenty-four hours. After a fortnight of steady rain, the sun shines out, and in half an hour the streets are filled with clouds of dust. Property in Washington is exceedingly sensitive, the people alarmingly callous. The men are fine-looking, the women homely. The latter have plain faces, but magnificent busts and graceful figures. The former have an imposing presence and an empty pocket, a great name and a small conscience. Notwithstanding all these impediments and disadvantages, Washington is progressing rapidly. It is fast becoming a large city, but it must always remain a deserted village in the summer. Its destiny is that of the Union. It will be the greatest capital the world ever saw, or it will be "a parched place in the wilderness, a salt land and not inhabited," and "every one that passeth thereby shall be astonished and wag his head."

MIDSUMMER AND MAY.

[Concluded.]

SPRING at last stole placidly into summer, and Marguerite, who was always shivering in the house, kept the company in a whirl of out-door festivals.

"We have not lived so, Roger," said Mrs. McLean, "since the summer when you went away. We all follow the caprice of this child as a ship follows the little compass-needle."

And she made room for the child beside her in the carriage; for Mr. Raleigh was about driving them into town,—an exercise which had its particular charm for Marguerite, not only for the glimpse it afforded of the gay, bustling inland-city-life, but for opportunities of securing the reins and of occasioning panics. Lately, however, she had resigned the latter pleasure, and sat with quiet propriety by Mrs. McLean. Frequently, also, she took long drives alone or with one of the children, holding the reins listlessly, and ranging the highway unobservantly for miles around.

Mrs. Parcell declared the girl was homesick; Mrs. Heath doubted if the climate agreed with her: she neither denied nor affirmed their propositions.

Mr. Heath came and went from the city where her father was, without receiving any other notice than she would have bestowed on a peaceful walking-stick; his attentions to her during his visits were unequivocal; she accepted them as nonchalantly as from a waiter at table. On the occasion of his last stay, there had been a somewhat noticeable change in his demeanor: he wore a trifle of quite novel assurance; his supreme bearing was not mitigated by the restless sparkle of his eye; and in addressing her his compliments, he spoke as one having authority.

Mrs. Laudersdale, so long and so entirely accustomed to the reception of homage that it cost her no more reflec-

tion than an imperial princess bestows on the taxes that produce her tiara, turned slowly from the apparent apathy thus induced on her modes of thought, passivity lost in a gulf of anxious speculation, while she watched the theatre of events with a glow, like wine in lamplight, that burned behind her dusky eyes till they had the steady penetration of some wild creature's. She may have wondered if Mr. Raleigh's former feeling were yet alive; she may have wondered if Marguerite had found the spell that once she found, herself; she may have been kept in thrall by ignorance if he had ever read that old confessing note of hers: whatever she thought or hoped or dreaded, she said nothing, and did nothing.

Of all those who concerned themselves in the affair of Marguerite's health and spirits, Mr. Raleigh was the only one who might have solved their mystery. Perhaps the thought of wooing the child whose mother he had once loved was sufficiently repugnant to him to overcome the tenderness which every one was forced to feel for so beautiful a creation. I have not said that Marguerite was this, before, because, until brought into contrast with her mother, her extreme loveliness was too little positive to be felt; now it was the evanescent shimmer of pearl to the deep perpetual fire of the carbuncle. Softened, as she became, from her versatile cheeriness, she moved round like a moonbeam, and frequently had a bewildered grace, as if she knew not what to make of herself. Mr. Raleigh, from the moment in which he perceived that she no longer sought his company, retreated into his own apartments, and was less seen by the others than ever.

Returning from the drive on the morning of Mrs. McLean's last recorded remark, Mr. Raleigh, who had remained to give the horses in charge to a servant,

was about to pass, when the *tableau* within the drawing-room caught his attention and altered his course. He entered, and flung his gloves down on a table, and threw himself on the floor beside Marguerite and the children. She appeared to be revisited by a ray of her old sunshine, and had unrolled a giant parcel of candied sweets, which their mother would have sacrificed on the shrine of jalap and senna, the purchase of a surreptitious moment, and was now dispensing the brilliant comestibles with much ill-subdued glee. One mouth, that had bitten off the head of a checkerberry chanticleer, was convulsed with the acidulous tickling of sweetened laughter, till the biter was bit and a metamorphosis into the animal of attack seemed imminent; at the hands of another a warrior in barley-sugar was experiencing the vernacular for defeat with reproving haste and gravity; and there was yet another little omnivorous creature that put out both hands for indiscriminate snatching, and made a spectacle of himself in a general plaster of gum-arabic-drop and brandy-smash.

"Contraband?" said Mr. Raleigh.

"And sweet as stolen fruit," said Marguerite. "Ursule makes the richest comfits, but not so innumerable as these. Mamma and I owe our sweet-tooth and honey-lip to bits of her concoction."

"Mrs. Purcell," asked Mr. Raleigh, as that lady entered, "is this little banquet no seduction to you?"

"What are you doing?" she replied.

"Drinking honey-dew from acorns."

"Laudersdale as ever!" ejaculated she, looking over his shoulder. "I thought you had 'no sympathy with' —"

"But I 'like to see other folks take' —"

"Their sweets, in this case. No, thank you," she continued, after this little rehearsal of the past. "What are you poisoning all this brood for?"

"Mrs. Laudersdale eats sweetmeats; they don't poison her," remonstrated Katy.

"Mrs. Laudersdale, my dear, is exceptional."

Katy opened her eyes, as if she had been told that the object of her adoration was Japanese.

"It is the last grain that completes the transformation, as your story-books have told; and one day you will see her stand, a statue of sugar, and melt away in the sun. To be sure, the whole air will be sweetened, but there will be no Mrs. Laudersdale."

"For shame, Mrs. Purcell!" cried Marguerite. "You're not sweet-tempered, or you'd like sweet dainties yourself. Here are nuts swathed in syrup; you'll have none of them? Here are health and slumber and idle dreams in a chocolate-drop. Not a chocolate? Here are dates; if you wouldn't choose the things in themselves, truly you would for their associations? See, when you take up one, what a picture follows it: the plum that has swung at the top of a palm and crowded into itself the glow of those fierce noon-suns; it has been tossed by the sirocco, it has been steeped in reeking dew; there was always stretched above it the blue intense tent of a heaven full of light, — always below and around, long level reaches of hot shining sand; the phantoms of waning desert moons have hovered over it, swarthy Arab chiefs have encamped under it; it has threaded the narrow streets of Damascus — that city the most beautiful — on the backs of gaunt gray dromedaries; it has crossed the seas, — and all for you, if you take it, this product of desert freedom, torrid winds, and fervid suns!"

"I might swallow the date," said Mrs. Purcell, "but Africa would choke me."

Mr. Raleigh had remained silent for some time, watching Marguerite as she talked. It seemed to him that his youth was returning; he forgot his resolves, his desires, and became aware of nothing in the world but her voice. Just before she concluded, she grew conscious of his gaze, and almost at once ceased speaking; her eyes fell a moment to meet it, and then she would have flashed them aside, but that it was impossible; lucid lakes of light, they met his own; she was forced to con-

tinue it, to return it, to forget all, as he was forgetting, in that long look.

"What is this?" said Mrs. Purcell, stooping to pick up a trifle on the matting.

"*C'est à moi!*" cried Marguerite, springing up suddenly, and spilling all the fragments of the feast, to the evident satisfaction of the lately neglected guests.

"Yours?" said Mrs. Purcell with coolness, still retaining it. "Why do you think in French?"

"Because I choose!" said Marguerite, angrily. "I mean — How do you know that I do?"

"Your exclamation, when highly excited or contemptuously indifferent, is always in that tongue."

"Which am I now?"

"Really, you should know best. Here is your bawble"; and Mrs. Purcell tossed it lightly into her hands, and went out.

It was a sheath of old morocco. The motion loosened the clasp, and the contents, an ivory oval and a cushion of faded silk, fell to the floor. Mr. Raleigh bent and regathered them; there was nothing for Marguerite but to allow that he should do so. The oval had reversed in falling, so that he did not see it; but, glancing at her before returning it, he found her face and neck dyed deeper than the rose. Still reversed, he was about to relinquish it, when Mrs. McLean passed, and, hearing the scampering of little feet as they fled with booty, she also entered.

"Seeing you reminds me, Roger," said she. "What do you suppose has become of that little miniature I told you of? I was showing it to Marguerite the other night, and have not seen it since. I must have mislaid it, and it was particularly valuable, for it was some nameless thing that Mrs. Heath found among her mother's trinkets, and I begged it of her, it was such a perfect likeness of you. Can you have seen it?"

"Yes, I have it," he replied. "And haven't I as good a right to it as any?"

He extended his arm for the case which Marguerite held, and so touching her

hand, the touch was more lingering than it needed to be; but he avoided looking at her, or he would have seen that the late color had fled till the face was whiter than marble.

"Your old propensities," said Mrs. McLean. "You always will be a boy. By the way, what do you think of Mary Purcell's engagement? I thought she would always be a girl."

"Ah! McLean was speaking of it to me. Why were they not engaged before?"

"Because she was not an heiress."

Mr. Raleigh raised his eyebrows significantly.

"He could not afford to marry any but an heiress," explained Mrs. McLean.

Mr. Raleigh fastened the case and restored it silently.

"You think that absurd? You would not marry an heiress?"

Mr. Raleigh did not at once reply.

"You would not, then, propose to an heiress?"

"No."

As this monosyllable fell from his lips, Marguerite's motion placed her beyond hearing. She took a few swift steps, but paused and leaned against the wall of the gable for support, and, placing her hand upon the sun-beat bricks, she felt a warmth in them which there seemed to be neither in herself nor in the wide summer-air.

Mrs. Purcell came along, opening her parasol.

"I am going to the orchard," said she; "cherries are ripe. Hear the robins and the bells! Do you want to come?"

"No," said Marguerite.

"There are bees in the orchard, too, — the very bees, for aught I know, that Mr. Raleigh used to watch thirteen years ago, or their great-grand-bees, — they stand in the same place."

"You knew Mr. Raleigh thirteen years ago?" she asked, glancing up curiously.

"Yes."

"Well?"

"Very well."

"How much is very well?"

"He proposed to me. Smother your anger; he didn't care for me; some one told him that I cared for him."

"Did you?"

"This is what the Inquisition calls applying the question?" asked Mrs. Purcell. "Nonsense, dear child! he was quite in love with somebody else."

"And that was ——?"

"He supposed your mother to be a widow. Well, if you won't come, I shall go alone and read my 'L'Allegro' under the boughs, with breezes blowing between the lines. I can show you some little field-mice like unfledged birds, and a nest that protrudes now and then glittering eyes and cleft fangs."

Marguerite was silent; the latter commodity was *de trop*. Mrs. Purcell adjusted her parasol and passed on.

Here, then, was the whole affair. Marguerite pressed her hands to her forehead, as if fearful some of the swarming thoughts should escape; then she hastened up the slope behind the house, and entered and hid herself in the woods. Mr. Raleigh had loved her mother. Of course, then, there was not a shadow of doubt that her mother had loved him. Horrible thought! and she shook like an aspen, beneath it. For a time it seemed that she loathed him,—that she despised the woman who had given him regard. The present moment was a point of dreadful isolation; there was no past to remember, no future to expect; she herself was alone and forsaken, the whole world dark, and heaven blank. But that could not be forever. As she sat with her face buried in her hands, old words, old looks, flashed on her recollection; she comprehended what long years of silent suffering the one might have endured, what barren yearning the other; she saw how her mother's haughty calm might be the crust on a lava-sea; she felt what desolation must have filled Roger Raleigh's heart, when he found that she whom he had loved no longer lived, that he had cherished a lifeless ideal,—for Marguerite knew from his own lips that he had

not met the same woman whom he had left.

She started up, wondering what had led her upon this train of thought, why she had pursued it, and what reason she had for the pain it gave her. A step rustled among the distant last-year's leaves; there in the shadowy wood, where she did not dream of concealing her thoughts, where it seemed that all Nature shared her confidence, this step was like a finger laid on the hidden sore. She paused, a glow rushed over her frame, and her face grew hot with the convicting flush. Consternation, bitter condemnation, shame, impetuous resolve, swept over her in one torrent, and she saw that she had a secret which every one might touch, and, touching, cause to sting. She hurried onward through the wood, unconscious how rapidly or how far her heedless course extended. She sprang across gaps at which she would another time have shuddered; she clambered over fallen trees, penetrated thickets of tangled brier, and followed up the shrunken beds of streams, till suddenly the wood grew thin again, and she emerged upon an open space,—a long lawn, where the grass grew rank and tall as in deserted graveyards, and on which the afternoon sunshine lay with most dreary, desolate emphasis. Marguerite had scarcely comprehended herself before; now, as she looked out on the utter loneliness of the place, all joyousness, all content, seemed wiped from the world. She leaned against a tree where the building rose before her, old and forsaken, washed by rains, beaten by winds. A blind slung open, loose on a broken hinge; the emptiness of the house looked through it like a spirit. The woodbine seemed the only living thing about it,—the woodbine that had swung its clusters, heavy as grapes of Eshcol, along one wall, and, falling from support, had rioted upon the ground in masses of close-netted luxuriance.

Standing and surveying the silent scene of former gayety, a figure came down the slope, crushing the grass with lingering tread, checked himself, and, half-reversed,

surveyed it with her. Her first impulse was to approach, her next to retreat; by a resolution of forces she remained where she was. Mr. Raleigh's position prevented her from seeing the expression of his face; from his attitude seldom was anything to be divined. He turned with a motion of the arm, as if he swung off a burden, and met her eye. He laughed, and drew near.

"I am tempted to return to that suspicion of mine when I first met you, Miss Marguerite," said he. "You take shape from solitude and empty air as easily as a Dryad steps from her tree."

"There are no Dryads now," said Marguerite, sententiously.

"Then you confess to being a myth?"

"I confess to being tired, Mr. Raleigh."

Mr. Raleigh's manner changed, at her petulance and fatigue, to the old air of protection, and he gave her his hand. It was pleasant to be the object of his care, to be with him as at first, to renew their former relation. She acquiesced, and walked beside him.

"You have had some weary travel," he said, "and probably not more than half of it in the path."

And she feared he would glance at the rents in her frock, forgetting that they were not sufficiently infrequent facts to be noticeable.

"He treats me like a child," she thought. "He expects me to tear my dress! He forgets, that, while thirteen years were making a statue of her, they were making a woman of me!" And she snatched away her hand.

"I have the boat below," he said, without paying attention to the movement. "You took the longest way round, which, you have heard, is the shortest way home. You have never been on the lake with me." And he was about to assist her in.

She stepped back, hesitating.

"No, no," he said. "It is very well to think of walking back, but it must end in thinking. You have no impetus now to send you over another half-dozen miles of wood-faring, no pique to sting, lo."

And before she could remonstrate, she

was lifted in, the oars had flashed twice, and there was deep water between herself and shore. She was in reality too much fatigued to be vexed, and she sat silently watching the spaces through which they glanced, and listening to the rhythmic dip of the oars. The soft afternoon air, with its melancholy sweetness and tinge of softer hue, hung round them; the water, brown and warm, was dimpled with the flight of myriad insects; they wound among the islands, a path one of them knew of old. From the shelving rocks a wild convolvulus drooped its twisted bells across them, a sweet-brier snatched at her hair in passing, a sudden elder-tree shot out its creamy panicles above, they ripped up drowsy beds of folded lily-blooms.

Mr. Raleigh, suddenly lifting one oar, gave the boat a sharp curve and sent it out on the open expanse; it seemed to him that he had no right thus to live two lives in one. Still he wished to linger, and with now and then a lazy movement they slipped along. He leaned one arm on the upright oar, like a river-god, and from the store of boat-songs in his remembrance sang now and then a strain. Marguerite sat opposite and rested along the side, content for the moment to glide on as they were, without a reference to the past in her thought, without a dream of the future. Peach-bloom fell on the air, warmed all objects into mellow tint, and reddened deep into sunset. Tinkling cow-bells, where the kine wound out from pasture, stole faintly over the lake, reflected dyes suffused it and spread around them sheets of splendid color, outlines grew ever dimmer on the distant shores, a purple tone absorbed all brilliance, the shadows fell, and, bright with angry lustre, the planet Mars hung in the south and struck a spear, redder than rubies, down the placid mirror. The dew gathered and lay sparkling on the thwarts as they touched the garden-steps, and they mounted and traversed together the alleys of odorous dark. They entered at Mr. Raleigh's door and stepped thence into the main hall, where they could see the broad

light from the drawing-room windows streaming over the lawn beyond. Mrs. Laudersdale came down the hall to meet them.

"My dear Rite," she said, "I have been alarmed, and have sent the servants out for you. You left home in the morning, and you have not dined. Your father and Mr. Heath have arrived. Tea is just over, and we are waiting for you to dress and go into town; it is Mrs. Manton's evening, you recollect."

"Must I go, mamma?" asked Marguerite, after this statement of facts. "Then I must have tea first. Mr. Raleigh, I remember my wasted sweetmeats of the morning with a pang. How long ago that seems!"

In a moment her face told her regret for the allusion, and she hastened into the dining-room.

Mr. Raleigh and Marguerite had a merry tea, and Mrs. Purcell came and poured it out for them.

"Quite like the days when we went gypsying," said she, when near its conclusion.

"We have just come from the Bawn, Miss Marguerite and I," he replied.

"You have? I never go near it. Did it break your heart?"

Mr. Raleigh laughed.

"Is Mr. Raleigh's heart such a delicate organ?" asked Marguerite.

"Once, you might have been answered negatively; now, it must be like the French banner, *percé, troué, criblé*,"—

"Pray, add the remainder of your quotation," said he,—"sans peur et sans reproche."

"So that a trifle would reduce it to flinders," said Mrs. Purcell, without minding his interruption.

"Would you give it such a character, Miss Rite?" questioned Mr. Raleigh lightly.

"I? I don't see that you have any heart at all, Sir."

"I swallow my tea and my mortification."

"Do you remember your first repast at the Bawn?" asked Mrs. Purcell.

"Why not?"

"And the jelly like molten rubies that I made? It keeps well." And she moved a glittering dish toward him.

"All things of that summer keep well," he replied.

"Except yourself, Mr. Raleigh. The Indian jugglers are practising upon us, I suspect. You are no more like the same person who played sparkling comedy and sang passionate tragedy than this bamboo stick is like that willow wand."

"I wish I could retort, Miss Helen," he replied. "I beg your pardon!"

She was silent, and her eye fell and rested on the sheeny damask beneath. He glanced at her keenly an instant, then handed her his cup, saying,—

"May I trouble you?"

She looked up again, a smile breaking over the face wanner than youth, but which the hour's gayety had flushed to a forgetfulness of intervening years, extended her left hand for the cup, still gazing and smiling.

Various resolves had flitted through Marguerite's mind since her entrance. One, that she would yet make Mr. Raleigh feel her power, yielded to shame and self-contempt, and she despised herself for a woman won unwooded. But she was not sure that she was won. Perhaps, after all, she did not care particularly for Mr. Raleigh. He was much older than she; he was quite grave, sometimes satirical; she knew nothing about him; she was slightly afraid of him. On the whole, if she consulted her taste, she would have preferred a younger hero; she would rather be the Fornarina for a Raffaello; she had fancied her name sweetening the songs of Giraud Riquier, the last of the Troubadours; and she did not believe Beatrice Portinari to be so excellent among women, so different from other girls, that her name should have soared so far aloft with that escutcheon of the golden wing on a field azure. "But they say that there cannot be two epic periods in a nation's literature," thought Marguerite hurriedly; "so that a man who might have been Homer once will be nothing

but a gentleman now." And at this point, having decided that Mr. Raleigh was fully worth unlimited love, she added to her resolves a desire for content with whatever amount of friendly affection he chose to bestow upon her. And all this, while sifting the sugar over her raspberries. Nevertheless, she felt, in the midst of her heroic content, a strange jealousy at hearing the two thus discuss days in which she had no share, and she watched them furtively, with a sharp, hateful suspicion dawning in her mind. Now, as Mrs. Purcell's eyes met Mr. Raleigh's, and her hand was still extended for the cup, Marguerite fastened her glance on its glittering ring, and said abruptly, —

"Mrs. Purcell, have you a husband?"

Mrs. Purcell started and withdrew her hand, as if it had received a blow, just as Mr. Raleigh relinquished the cup, so that between them the bits of pictured porcelain fell and splintered over the equipage.

"Naughty child!" said Mrs. Purcell.

"See now what you've done!"

"What have I to do with it?"

"Then you haven't any bad news for me? Has any one heard from the Colonel? Is he ill?"

"Pshaw!" said Marguerite, rising and throwing down her napkin.

She went to the window and looked out.

"It is time you were gone, little lady," said Mr. Raleigh.

She approached Mrs. Purcell and passed her hand down her hair.

"What pretty soft hair you have!" said she. "These braids are like carved gold-stone. May I dress it with sweet-brier to-night? I brought home a spray."

"Rite!" said Mrs. Laudersdale sweetly, at the door; and Rite obeyed the summons.

In a half-hour she came slowly down the stairs, untwisting a long string of her mother's abandoned pearls, great pear-shaped things full of the pale lustre of gibbous moons. She wore a dress of white samarand, with a lavish ornament like threads and purfiles of gold upon

the bodice, and Ursule followed with a cloak. As she entered the drawing-room, the great bunches of white azalea, which her mother had brought from the swamps, caught her eye; she threw down the pearls, and broke off rapid clusters of the queenly flowers, touching the backward-curling hyacinthine petals, and caressingly passing her finger down the pale purple shadow of the snowy folds. Directly afterward she hung them in her breezy hair, from which, by natural tenure, they were not likely to fall, bound them over her shoulders and in her waist.

"See! I stand like Summer," she said, "wrapped in perfume; it is intoxicating."

Just then two hands touched her, and her father bent his face over her. She flung her arms round him, careless of their fragile array, kissed him on both cheeks, laughed, and kissed him again. She did not speak, for he disliked French, and English sometimes failed her.

"Here is Mr. Heath," her father said.

She partly turned, touched that gentleman's hand with the ends of her fingers, and nodded. Her father whispered a brief sentence in her ear.

"*Jamais, Monsieur, jamais!*" she exclaimed; then, with a quick gesture of deprecation, moved again toward him; but Mr. Laudersdale had coldly passed to make his compliments to Mrs. Heath.

"You are not in toilet?" said Marguerite, following him, but speaking with Mr. Raleigh.

"No, — Mrs. Purcell has been playing for me a little thing I always liked, — that sweet, tuneful afternoon chiding of the Miller and the Torrent.

She glanced at Mrs. Purcell, saw that her dress remained unaltered, and commenced pulling off the azaleas from her own.

"I do not want to go," she murmured. "I need not! Mamma and Mrs. McLean have already gone in the other carriage."

"Come, Marguerite," said Mr. Laudersdale, approaching her, as Mr. Heath and his mother disappeared.

"I am not going," she replied, quickly.

"Not going? I beg your pardon, my dear, but you are!" and he took her hand.

She half endeavored to withdraw it, threw a backward glance over her shoulder at the remaining pair, and, led by her father, went out.

Marguerite did her best to forget the vexation, was very affable with her father, and took no notice of any of Mr. Heath's prolonged remarks. The drive was at best a tiresome one, and she was already half-asleep when the carriage stopped. The noise and light, and the little vanities of the dressing-room, awakened her, and she descended prepared for conquest. But, after a few moments, it all became weariness, the air was close, the flowers faded, the music piercing. The toilets did not attract nor the faces interest her. She danced along absent and spiritless, when her eye, raised dreamily, fell on an object among the curtains and lay fascinated there. It was certainly Mr. Raleigh; but so little likely did that seem, that she again circled the room, with her eyes bent upon that point, expecting it to vanish. He must have come in the saddle, unless a coach had returned for him and Mrs. Purcell, — yes, there was Mrs. Purcell, — and she wore that sweet-brier fresh-blossoming in the light. With what ease she moved! — it must always have been the same grace; — how brilliant she was! There, — she was going to dance with Mr. Raleigh. No? Where, then? Into the music-room!

The music-room lay beyond an ante-room of flowers and prints, and was closed against the murmur of the parlors by great glass doors. Marguerite, from her position, could see Mr. Raleigh seated at the piano, and Mrs. Purcell standing by his side; now she turned a leaf, now she stooped, and their hands touched upon the keys. Marguerite slipped alone through the dancers, and drew nearer. There were others in the music-room, but they were at a distance from the piano. She entered the anteroom and

sat shadowed among the great fragrant shrubs. A group already stood there, eating ices and gayly gossiping. Mr. Laudersdale and Mr. Manton sauntered in, their heads together, and muttering occult matters of business, whose tally was kept with forefinger on palm.

"Where is Raleigh?" asked Mr. Manton, looking up. "He can tell us."

"At his old occupation," answered a gentleman from beside Mrs. Laudersdale, "flirting with forbidden fruit."

"An alliterative amusement," said Mrs. Laudersdale.

"You did not know the original Raleigh?" continued the gentleman. "But he always took pleasure in female society; yet, singularly enough, though fastidious in choice, it was only upon the married ladies that he bestowed his platonicisms. I observe the old Adam still clings to him."

"He probably found more liberty with them," remarked Mrs. Laudersdale, when no one else replied.

"Without doubt he took it."

"I mean, that, where attentions are known to intend nothing, one is not obliged to measure them, or to calculate upon effects."

"Of the latter no one can accuse Mr. Raleigh!" said Mr. Laudersdale, hotly, forgetting himself for once.

Mrs. Laudersdale lifted her large eyes and laid them on her husband's face.

"Excuse me! excuse me!" said the gentleman, with natural misconception. "I was not aware that he was a friend of yours." And taking a lady on his arm, he withdrew.

"Nor is he!" said Mr. Laudersdale, in lowest tones, replying to his wife's gaze, and for the first time intimating his feeling. "Never, never, can I repair the ruin he has made me!"

Mrs. Laudersdale rose and stretched out her arm, blindly.

"The room is quite dark," she murmured; "the flowers must soil the air. Will you take me up-stairs?"

Meanwhile, the unconscious object of their remark was turning over a pile of

pages with one hand, while the other trifled along the gleaming keys.

"Here it is," said he, drawing one from the others, and arranging it before him, — a *gondel-lied*.

There stole from his fingers the soft, slow sound of lapsing waters, the rocking on the tide, the long sway of some idle weed. Here a jet of tune was flung out from a distant bark, here a high octave flashed like a passing torch through night-shadows, and lofty arching darkness told in clustering chords. Now the boat fled through melancholy narrow ways of pillared pomp and stately beauty, now floated off on the wide lagoons alone with the stars and sea. Into this broke the passion of the gliding lovers, deep and strong, giving a soul to the whole, and fading away again, behind its wild beating, with the silence of lapping ripple and dipping oar.

Mrs. Purcell, standing beside the player, laid a careless arm across the instrument, and bent her face above him like a flower languid with the sun's rays. Suddenly the former smile suffused it, and, as the *gondel-lied* fell into a slow floating accompaniment, she sang with a swift, impetuous grace, and in a sweet, yet thrilling voice, the Moth Song. The shrill music and murmur from the parlors burst all at once in muffled volume upon the melody, and, turning, they both saw Marguerite standing in the doorway, like an angry wraith, and flitting back again. Mrs. Purcell laughed, but took up the thread of her song again where it was broken, and carried it through to the end. Then Mr. Raleigh tossed the *gondel-lied* aside, and rising, they continued their stroll.

"You have more than your share of the good things of life, Raleigh," said Mr. McLean, as the person addressed poured out wine for Mrs. Purcell. "Two affairs on hand at once? You drink deep. Light and sparkling, — thin and tart, — isn't it Solomon who forbids mixed drink?"

"I was never the worse for claret," replied Mr. Raleigh, bearing away the glittering glass.

The party from the Lake had not arrived at an early hour, and it was quite late when Mr. Raleigh made his way through ranks of tireless dancers, toward Marguerite. She had been dancing with a spirit that would have resembled joyousness but for its reckless *abandon*. She seemed to him then like a flame, as full of wilful sinuous caprice. At the first he scarcely liked it, but directly the artistic side of his nature recognized the extreme grace and beauty that flowed through every curve of movement. Standing now, the corn-silk hair slightly disordered and still blown about by the fan of some one near her, her eyes sparkling like stars in the dewdrops of wild wood-violets, warm, yet weary, and a flush deepening her cheek with color, while the flowers hung dead around her, she held a glass of wine and watched the bead swim to the brim. Mr. Raleigh approached unaware, and startled her as he spoke.

"It is *au gré du vent*, indeed," he said, — "just the white fluttering butterfly, — and now that the wings are clasped above this crimson blossom, I have a chance of capture." And smiling, he gently withdrew the splendid draught.

"*Buvez, Monsieur*," she said; "*c'est le vin de la vie!*"

"Do you know how near daylight it is?" he replied. "Mrs. Laudersdale fainted in the heat, and your father took her home long ago. The Heaths went also; and the carriage has just returned for the only ones of us that are left, you and me."

"Is it ready now?"

"Yes."

"So am I."

And in a few moments she sat opposite him in the coach, on their way home.

"It wouldn't be possible for me to sit on the box and drive?" she asked.

"No."

"I should like it, in this wild starlight, these flying clouds, this breath of dawn."

Meeting no response, she sank into silence. No emotion can keep one awake forever, and, after all her late fatigue, the roll of the easy vehicle upon the springs

soon soothed her into a dreamy state. Through the efforts at wakefulness, she watched the gleams that fell within from the carriage-lamps, the strange shadows on the roadside, the boughs tossing to the wind and flickering all their leaves in the speeding light; she watched, also, Mr. Raleigh's face, on which, in the fitful flashes, she detected a look of utter weariness.

"*Monsieur*," she exclaimed, "*il faut que je vous gêne!*"

"Immensely," said Mr. Raleigh with a smile; "but, fortunately, for no great time."

"We shall be soon at home? Then I must have slept."

"Very like. What did you dream?"

"Oh, one must not tell dreams before breakfast, or they come to pass, you know."

"No,—I am uninitiated in dream-craft. Mr. Heath"—

"*Monsieur*," she cried, with sudden heat, "*il me semble que je comprends les Laocoons! J'en suis de même!*"

As she spoke, she fell, struck forward by a sudden shock, the coach was rocking like a boat, and plunging down unknown gulfs. Mr. Raleigh seized her, broke through the door, and sprang out.

"*Qu'avez vous?*" she exclaimed.

"The old willow is fallen in the wind," he replied.

"*Quel dommage* that we did not see it fall!"

"It has killed one of the horses, I fear," he continued, measuring, as formerly, her terror by her levity. "Capua! is all right? Are you safe?"

"Yah, massa!" responded a voice from the depths, as Capua floundered with the remaining horse in the thicket at the lake-edge below. "Yah, massa,—nuffin harm Ol' Cap in water; spec he born to die in galluses; had nuff chance to be in glory, ef 'twas'n't. I's done beat wid dis yer pony, anyhow, Mass'r Raleigh. Seems, ef he was a 'sect to fly in de face ob all creation an' pay no 'tention to his centre o' gravity, he might walk up dis yer hill!"

Mr. Raleigh left Marguerite a moment,

to relieve Capua's perplexity. Through the remaining darkness, the sparkle of stars, and wild fling of shadows in the wind, she could but dimly discern the struggling figures, and the great creature trampling and snorting below. She remembered strange tales out of the "Arabian Nights," "Bellerophon and the Chimæra," "St. George and the Dragon"; she waited, half-expectant, to see the great talon-stretched wings flap up against the slow edge of dawn, where Orion lay, a pallid monster, watching the planet that flashed like some great gem low in a crystalline west, and she stepped nearer, with a kind of eager and martial spirit, to do battle in turn.

"Stand aside, Una!" cried Mr. Raleigh, who had worked in a determined characteristic silence, and the horse's head, sharp ear, and starting eye were brought to sight, and then his heaving bulk.

"All right, massa!" cried Capua, after a moment's survey, as he patted the trembling flanks. "Pretty tough ex'cise dat! Spect Massam Clean be mighty high,—his best cretur done about killed wid dat tree;—feared he show dis nigger a stick worf two o' dat!"

"We had like to have finished our dance on nothing," said Mr. Raleigh now, looking back on the splintered wheels and panels. "Will you mount? I can secure you from falling."

"Oh, no,—I can walk; it is only a little way."

"Reach home like Cinderella? If you had but one glass slipper, that might be; but in satin ones it is impossible." And she found herself seated aloft before quite aware what had happened.

Pacing along, they talked lightly, with the gayety natural upon excitement,—Capua once in a while adding a cogent word. As they opened the door, Mr. Raleigh paused a moment.

"I am glad," he said, "that my last day with you has been crowned by such adventures. I leave the Lake at noon."

She hung, listening, with a backward swerve of figure, and regarding him in

the dim light of the swinging hall-lamp, for the moment half-petrified. Suddenly she turned and seized his hand in hers,—then threw it off.

"*Cher ami*," she murmured hastily, in a piercing whisper, like some articulate sigh, "*si tu m'aimes, dis moi !*"

The door closed in the draught, the drawing-room door opened, and Mr. Laudersdale stepped out, having been awaiting their return. Mr. Raleigh caught the flash of Marguerite's eye and the crimson of her cheek, as she sprang forward up the stairs and out of sight.

The family did not breakfast together the next day, as politeness chooses to call the first hour after a ball, and Mr. Raleigh was making some arrangements preliminary to his departure, in his own apartments, at about the hour of noon. The rooms which he had formerly occupied Mrs. McLean had always kept closed, in a possibility of his return, and he had found himself installed in them upon his arrival. The library was to-day rather a melancholy room: the great book-cases did not enliven it; the grand-piano, with its old dark polish, seemed like a coffin, the sarcophagus of unrisen music; the oak panelling had absorbed a richer hue with the years than once it wore; the portrait of his mother seemed farther withdrawn from sight and air; Antinous took a tawnier tint in his long reverie. The Summer, past her height, sent a sad beam, the signal of decay, through the half-open shutters, and it lay wearily on the man who sat by the long table, and made more sombre yet the faded carpet and cumbrous chair.

There was a tap on the door. Mr. Raleigh rose and opened it, and invited Mr. Laudersdale in. The latter gentleman complied, took the chair resigned by the other, but after a few words became quiet. Mr. Raleigh made one or two attempts at conversation, then, seeing silence to be his visitor's whim, suffered him to indulge it, and himself continued his writing. Indeed, the peculiar relations existing between these men made

much conversation difficult. Mr. Laudersdale sat with his eyes upon the floor for several minutes, and his countenance wrapped in thought. Rising, with his hands behind him, he walked up and down the long room, still without speaking.

"Can I be of service to you, Sir?" asked the other, after observing him.

"Yes, Mr. Raleigh, I am led to think you can,"—still pacing up and down, and vouchsafing no further information.

At last, the monotonous movement ended, Mr. Laudersdale stood at the window, intercepting the sunshine, and examined some memoranda.

"Yes, Mr. Raleigh," he resumed, with all his courtly manner, upon close of the examination, "I am in hopes that you may assist me in a singular dilemma.

"I shall be very glad to do so."

"Thank you. This is the affair. About a year ago, being unable to make my usual visit to my daughter and her grandmother, I sent there in my place our head clerk, young Heath, to effect the few transactions, and also to take a month's recreation,—for we were all overworked and exhausted by the crisis. The first thing he proceeded to do was to fall in love with my daughter. Of course he did not mention this occurrence to me, on his return. When my daughter arrived at New York, I was again detained, myself, and sent her to this place under his care. He lingered rather longer than he should have done, knowing the state of things; but I suspected nothing, for the idea of a clerk's marriage with the heiress of the great Martinique estate never entered my mind; moreover, I have regarded her as a child; and I sent him back with various commissions at several times,—once on business with McLean, once to obtain my wife's signature to some sacrifice of property, and so on. I really beg your pardon, Mr. Raleigh; it is painful to another, I am aware, to be thrust upon family confidences"—

"Pray, Sir, proceed," said Mr. Raleigh, wheeling his chair about.

"But since you are in a manner connected with the affair, yourself" —

"You must be aware, Mr. Laudersdale, that my chief desire is the opportunity you afford me."

"I believe so. I am happy to afford it. On the occasion of Mr. Heath's last visit to this place, Marguerite drew attention to a coin whose history you heard, and the other half of which Mrs. Purcell wore. Mr. Heath obtained the fragment he possessed through my wife's aunt, Susanne Le Blanc; Mrs. Purcell obtained hers through her grandmother, Susan White. Of course, these good people were not slow to put the coin and the names together; Mr. Heath, moreover, had heard portions of the history of Susanne Le Blanc, when in Martinique.

"On resuming his duties in the counting-house, after this little incident, one day, at the close of business-hours, he demanded from me the remnants of this history with which he might be unacquainted. When I paused, he took up the story and finished it with ease, and — and poetical justice, I may say, Mr. Raleigh. Susanne was the sister of Mrs. Laudersdale's father, though far younger than he. She met a young American gentleman, and they became interested in each other. Her brother designed her for a different fate, — the governor of the island, indeed, was her suitor, — and forbade their intercourse. There were rumors of a private marriage; her apartments were searched for any record, note, or proof, unsuccessfully. If there were such, they had been left in the gentleman's hands for better concealment. It being supposed that they continued to meet, M. Le Blanc prevailed upon the governor to arrest the lover on some trifling pretence and send him out of the island. Shortly afterward, as he once confessed to his wife, he caused a circumstantial account of the death and funeral obsequies of each to reach the other. Immediately he urged the governor's suit again, and when she continued to resist, he fixed the wedding-day, himself, and ordered the *trousseau*. Upon this, one evening, she buried the box of

trinkets at the foot of the oleanders, and disappeared the next, and no trace of her was found.

"When I reached this point, young Heath turned to me with that impudently nonchalant drawl of his, saying, —

"And her property, Sir?"

"That," I replied innocently, 'which comprised half the estate, and which she would have received, on attaining the requisite age, was inherited by her brother, upon her suicide.'

"Apparent suicide, you mean,' said he; and thereupon took up the story, as I have said, matched date to date and person to person, and informed me that exactly a fortnight from the day of Mademoiselle Susanne Le Blanc's disappearance, a young lady took rooms at a hotel in a Southern city, and advertised for a situation as governess, under the name of Susan White. She gave no references, spoke English imperfectly, and had difficulty in obtaining one; finally, however, she was successful, and after a few years married into the family of her employer, and became the mother of Mrs. Heath. The likeness of Mrs. Purcell, the grandchild of Susan White, to Susanne Le Blanc, was so extraordinary, a number of years ago, that, when Ursule, my daughter's nurse, first saw her, she fainted with terror. My wife, you are aware, was born long after these events. This governess never communicated to her husband any more specific circumstance of her youth than that she had lived in the West Indies, and had left her family because they had resolved to marry her, — as she might have done, had she not died shortly after her daughter's birth. Among her few valuables were found this half-coin of Heath's, and a miniature, which his mother recently gave your cousin, but which, on account of its new interest, she has demanded again; for it is probably that of the ancient lover, and bearing, as it does, a very striking resemblance to yourself, you have pronounced it to be undoubtedly that of your uncle, Reuben Raleigh, and wondered how it came into the possession of Mrs. Heath's

mother. Now, as you may be aware, Reuben Raleigh was the name of Susanne Le Blanc's lover."

"No,—I was not aware."

Mr. Laudersdale's countenance, which had been animated in narration, suddenly fell.

"I was in hopes," he resumed,—*"I thought,—my relation of these occurrences may have been very confused; but it is as plain as daylight to me, that Susanne Le Blanc and Susan White are one, and that the property of the first is due to the heirs of the last."*

"Without doubt, Sir."

"The same is plain to the Heaths. I am sure that Marguerite will accept our decision in the matter,—sure that no daughter of mine would retain a fraudulent penny; for retain it she could, since there is not sufficient proof in any court, if we chose to contest; but it will beggar her."

"How, Sir? Beggar her to divide her property?"

"It is a singular division. The interest due on Susanne's moiety swells it enormously. Add to this, that, after M. Le Blanc's death, Madame Le Blanc, a much younger person, did not so well understand the management of affairs, the property depreciated, and many losses were encountered, and it happens that the sum due Mrs. Heath covers the whole amount that Marguerite possesses."

"Now, then, Sir?" exclaimed Mr. Raleigh, interrogatively.

"Now, then, Mrs. Heath requests my daughter's hand for her son, and offers to set off to him, at once, such sum as would constitute his half of her new property upon her decease, and allow him to enter our house as special partner."

"Ah!"

"This does not look so unreasonable. Last night he proposed formally to Marguerite, who is still ignorant of these affairs, and she refused him. I have urged her differently,—I can do no more than urge,—and she remains obdurate. To accumulate misfortunes, we escaped 1857 by a miracle. We have barely recover-

ed; and now various disasters striking us,—the loss of the Osprey the first and chief of them,—we are to-day on the verge of bankruptcy. Nothing but the entrance of this fortune can save us from ruin."

"Unfortunate!" said Mr. Raleigh,—*"most unfortunate! And can I serve you at this point?"*

"Not at all, Sir," said Mr. Laudersdale, with sudden erectness. "No,—I have but one hope. It has seemed to me barely possible that your uncle may have communicated to you events of his early life,—that you may have heard, that there may have been papers telling of the real fate of Susanne Le Blanc."

"None that I know of," said Mr. Raleigh, after a pause. "My uncle was a very reserved person. I often imagined that his youth had not been without its passages, something to account for his unvarying depression. In one letter, indeed, I asked him for such a narration. He promised to give it to me shortly,—the next mail, perhaps. The next mail I received nothing; and after that he made no allusion to the request."

"Indeed? Indeed? I should say,—pardon me, Mr. Raleigh,—that your portion of the next mail met with some accident. Your servants could not explain it?"

"There is Capua, who was major-domo. We can inquire," said Mr. Raleigh, with a smile, rising and ringing for that functionary.

On Capua's appearance, the question was asked, if he had ever secretly detained letter or paper of any kind.

"Lors, massa! I alwes knew 'twould come to dis!" he replied. "No, massa, neber!" shaking his head with repeated emphasis.

"I thought you might have met with some accident, Capua," said his master.

"Axerden be —, beg massa's pardon; but such s'picious poison any family's peace, and make a feller done forgit hisself."

"Very well," said Mr. Raleigh, who was made to believe by this vehemence

in what at first had seemed a mere fantasy. "Only remember, that, if you could assure me that any papers had been destroyed, the assurance would be of value."

"'Deed, Mass Roger? Dat alters de case," said Capua, grinning. "Dere 's been a good many papers 'stroyed in dis yer house firs' an' last."

"Which in particular?"

"Don' rekerlek, massa, it 's so long ago."

"But make an effort."

"Well, Massa Raleigh, — 'pears to me I *do* remember suthin', — I do b'lieve — yes, dis 's jist how 'twas. Spect I might as well make a crean breast ob it. I 's alwes had it hangin' roun' my conscous; do'no' but I 's done grad to git rid ob it. Alwes spected massa 'd be 'xcusin' Cap o' turnin' tief."

"That is the last accusation I should make against you, Capua."

"But dar I stan's convicted."

"Out with it, Capua!" said Mr. Laudersdale, laughing.

"Lord! Massa Lausdel! how you do scare a chile! Didn' know mass'r was dar. See, Mass Roger, dis 's jist how 'twas. Spec you mind dat time when all dese yer folks lib'd acrost de lake dat summer, an' massa was possessed to 'most lib dar too? Well, one day, massa mind Ol' Cap's runnin' acrost in de rain an' in great state ob excitement to tell him his house done burnt up?"

"Yes. What then?"

"Dat day, massa, de letters had come from Massa Reuben out in Indy, an' massa's pipe kinder 'tracted Cap's 'tention, an' so he jist set down in massa's chair an' took a smoke. Bimeby Cap thought, — 'Ef massa come an' ketch him!' — an' put down de pipe an' went to work, and bimeby I smelt mighty queer smell, massa, 'bout de house, made him tink Ol' Nick was come hissef for Ol' Cap, an' I come back into dis yer room an' Massa Reuben's letters from Indy was jist most done burnt up, he cotched 'em in dese yer ol' brack han's, Mass Roger, an' jist whipt 'em up in dat high crosset."

And having arrived at this confusion

in his personal pronouns, Capua mounted nimbly on pieces of furniture, thrust his pocket-knife through a crack of the wainscot, opened the door of a small unseen closet, and, after groping about and inserting his head as Van Amburgh did in the lion's mouth, scrambled down again with his hand full of charred and blackened papers, talking glibly all the while.

"Ef massa 'd jist listen to reason," he said, "'stead o' flyin' into one ob his tantrums, I might sprain de matter. You see, I knew Mass Roger 'd feel so oncomforble and remorseful to find his ol' uncle's letters done 'stroyed, an' 'twas all by axerden, an' couldn' help it noways, massa, an' been done sorry eber since, an' wished dar warn't no letters dis side de Atlantic nor torrer, ebery day I woke."

After which plea, Capua awaited his sentence.

"That will do, — it 's over now, old boy," said Mr. Raleigh, with his usual smile.

"Now, massa, you a'n't gwine" —

"No, Capua, I'm going to do nothing but look at the papers."

"But massa's" —

"You need not be troubled, — I said, I was not."

"But, massa, — s'pose I deserve a thrashing?"

"There's no danger of your getting it, you blameless Ethiop!"

Upon which pacific assurance, Capua departed.

The two gentlemen now proceeded to the examination of these fragments. Of the letters nothing whatever was to be made. From one of them dropped a little yellow folded paper that fell apart in its creases. Put together, it formed a sufficiently legible document, and they read the undoubted marriage-certificate of Susanne Le Blanc and Reuben Raleigh.

"I am sorry," said Mr. Laudersdale, after a moment. "I am sorry, instead of a fortune, to give them a bar-sinister."

"Your daughter is ignorant? — your wife?"

"Entirely. Will you allow me to invite them in here? They should see this paper."

"You do not anticipate any unpleasant effect?"

"Not the slightest. Marguerite has no notion of want or of pride. Her first and only thought will be—*sa cousine Hélène*." And Mr. Laudersdale went out.

Some light feet were to be heard patting down the stairs, a mingling of voices, then Mr. Laudersdale passed on, and Marguerite tapped, entered, and closed the door.

"My father has told me something I but half understand," said she, with her hand on the door. "Unless I marry Mr. Heath, I lose my wealth? What does that signify? Would all the mines of Peru tempt me?"

Mr. Raleigh remained leaning against the corner of the bookcase. She advanced and stood at the foot of the table, nearly opposite him. Her lips were glowing as if the fire of her excitement were fanned by every breath; her eyes, half hidden by the veiling lids, seemed to throw a light out beneath them and down her cheek. She wore a mantle of swan's down closely wrapped round her, for she had complained ceaselessly of the chilly summer.

"Mr. Raleigh," she said, "I am poorer than you are, now. I am no longer an heiress."

At this moment, the door opened again and Mrs. Laudersdale entered. At a step she stood in the one sunbeam; at another, the shutters blew together, and the room was left in semi-darkness, with her figure gleaming through it, outlined and starred in tremulous evanescent light. For an instant both Marguerite and Mr. Raleigh seemed to be half awe-struck by the radiant creature shining out of the dark; but directly, Marguerite sprang back and stripped away the torrid nasturtium-vine which her mother had perhaps been winding in her hair when her husband spoke with her, and whose other end, long and laden with fragrant flame, still hung in her hand and along her dress. Laughing, Marguerite in turn wound it about herself, and the flowers, so lately plucked from the bath of hot

air, where they had lain steeping in sun, flashed through the air a second, and then played all their faint spirit-like luminosity about their new wearer. She seemed sphered in beauty, like the Soul of Morning in some painter's fantasy, with all great stars blossoming out in floral life about her, colorless, yet brilliant in shape and light. It was too much; Mr. Raleigh opened the window and let in the daylight again, and a fresh air that lent the place a gayer life. As he did so, Mr. Laudersdale entered, and with him Mr. Heath and his mother. Mr. Laudersdale briefly recapitulated the facts, and added,—

"Communicating my doubts to Mr. Raleigh, he has kindly furnished me with the marriage-certificate of his uncle and Mademoiselle Le Blanc. And as Mr. Reuben Raleigh was living within thirteen years, you perceive that your claims are invalidated."

There was a brief silence while the paper was inspected.

"I am still of opinion that my grandmother's second marriage was legal," replied Mr. Heath; "yet I should be loath to drag up her name and subject ourselves to a possibility of disgrace. So, though the estate is ours, we can do without it!"

Meanwhile, Marguerite had approached her father, and was patching together the important scraps.

"What has this to do with it?" said she. "You admitted before this discovery—did you not?—that the property was no longer mine. These people are Aunt Susanne's heirs still, if not legally, yet justly. I will not retain a *sous* of it! My father shall instruct my lawyer, Mrs. Heath, to make all necessary transfers to yourself. Let us wish you good-morning!" And she opened the door for them to pass.

"Marguerite! are you mad?" asked her father, as the door closed.

"No, father,—but honest,—which is the same thing," she responded, still standing near it.

"True," he said, in a low tone like a groan. "But we are ruined."

"Ruined? Oh, no! You are well and strong. So am I. I can work. I shall get much embroidery to do, for I can do it perfectly; the nuns taught me. I have a thousand resources. And there is something my mother can do; it is her great secret; she has played at it summer after summer. She has moulded leaves and flowers and twined them round beautiful faces in clay, long enough; now she shall carve them in stone, and you will be rich again!"

Mrs. Laudersdale sat in a low chair while Marguerite spoke, the nasturtium-vine clinging round her feet like a gorgeous snake, her hands lying listlessly in her lap, and her attitude that of some queen who has lost her crown, and is totally bewildered by this strange conduct on the part of circumstances. All the strength and energy that had been the deceptions of manner were utterly fallen away, and it was plain, that, whatever the endowment was which Marguerite had mentioned, she could only play at it. She was but a woman, sheer woman, with the woman's one capability, and the exercise of that denied her.

Mr. Laudersdale remained with his eyes fixed on her, and lost, it seemed, to the presence of others.

"The disgrace is bitter," he murmured. "I have kept my name so proudly and so long! But that is little. It is for you I fear. I have stood in your sunshine and shadowed your life, dear!—At least," he continued, after a pause, "I can place you beyond the reach of suffering. I must finish my lonely way."

Mrs. Laudersdale looked up slowly and met his earnest glance.

"Must I leave you?" she exclaimed, with a wild terror in her tone. "Do you mean that I shall go away? Oh, you need not care for me,—you need never love me,—you may always be cold,—but I must serve you, live with you, die with you!" And she sprang forward with outstretched arms.

He caught her before her foot became entangled in the long folds of her skirt, drew her to himself, and held her. What

he murmured was inaudible to the others; but a tint redder than roses are swam to her cheek, and a smile broke over her face like a reflection in rippling water. She held his arm tightly in her hand, and erect and proud, as it were with a new life, bent toward Roger Raleigh.

"You see!" said she. "My husband loves me. And I,—it seems at this moment that I have never loved any other than him!"

There came a quick step along the matting, the handle of the door turned in Marguerite's resisting grasp, and Mrs. Purcell's light muslins swept through. Mr. Raleigh advanced to meet her,—a singular light upon his face, a strange accent of happiness in his voice.

"Since you seem to be a part of the affair," she said in a low tone, while her lip quivered with anger and scorn, "concerning which I have this moment been informed, pray, take to Mr. Laudersdale my brother's request to enter the house of Day, Knight, and Company, from this day."

"Has he made such a request?" asked Mr. Raleigh.

"He shall make it!" she murmured swiftly, and was gone.

That night a telegram flashed over the wires, and thenceforth, on the great financial tide, the ship Day, Knight, and Company lowered its peak to none.

The day crept through until evening, deepening into genuine heat, and Marguerite sat waiting for Mr. Raleigh to come and bid her farewell. It seemed that his plans were altered, or possibly he was gone, and at sunset she went out alone. The cardinals that here and there showed their red caps above the bank, the wild roses that still lined the way, the grapes that blossomed and reddened and ripened year after year ungathered, did not once lift her eyes. She sat down, at last, on an old fallen trunk cushioned with moss, half of it forever wet in the brook that babbled to the lake, and waited for the day to quench itself in coolness and darkness.

"Ah!" said Mr. Raleigh, leaping from

the other side of the brook to the mossy trunk, "is it you? I have been seeking you, and what sprite sends you to me?"

"I thought you were going away," she said, abruptly.

"That is a broken paving-stone," he answered, seating himself beside her, and throwing his hat on the grass.

"You asked me, yesterday, if I confessed to being a myth," she said, after a time. "If I should go back to Martinique, I should become one in your remembrance,—should I not? You would think of me just as you would have thought of the Dryad yesterday, if she had stepped from the tree and stepped back again?"

"Are you going to Martinique?" he asked, with a total change of face and manner.

"I don't know. I am tired of this; and I cannot live on an ice-field. I had such life at the South! It is 'as if a rose should shut and be a bud again.' I need my native weather, heat and sea."

"How can you go to Martinique?"

"Oh, I forgot!"

Mr. Raleigh did not reply, and they both sat listening to the faint night-side noises of the world.

"You are very quiet," he said at last, ceasing to fling waifs upon the stream.

"And you could be very gay, I believe."

"Yes. I am full of exuberant spirits. Do you know what day it is?"

"It is my birthday."

"It is my birthday!"

"How strange! The Jews would tell you that this sweet first of August was the birthday of the world.

"'Tis like the birthday of the world,

When earth was born in bloom,'"

she sang, but paused before her voice should become hoarse in tears.

"Do you know what you promised me on my birthday? I am going to claim it."

"The present. You shall have a cast which I had made from one of my mother's fancies or bas-reliefs,—she only does the front of anything,—a group of fleure-de-lis whose outlines make a child's face, my face."

"It is more than any likeness in stone or pencil that I shall ask of you."

"What then?"

"You cannot imagine?"

"*Monsieur*," she whispered, turning toward him, and blushing in the twilight, "*est ce que c'est moi?*"

There came out the low west-wind singing to itself through the leaves, the drone of a late-carousing honey-bee, the lapping of the water on the shore, the song of the wood-thrush replete with the sweetness of its half-melody; and ever and anon the pensive cry of the whippoorwill fluted across the deepening silence that summoned all these murmurs into hearing. A rustle like the breeze in the birches passed, and Mrs. Purcell retarded her rapid step to survey the woods-people who rose out of the shade and now went on together with her. It seemed as if the loons and whippoorwills grew wild with sorrow that night, and after a while Mrs. Purcell ceased her lively soliloquy, and as they walked they listened. Suddenly Mr. Raleigh turned. Mrs. Purcell was not beside him. They had been walking on the brook-edge; the path was full of gaps and cuts. With a fierce shudder and misgiving, he hurriedly retraced his steps, and searched and called; then, with the same haste, rejoining Marguerite, gained the house, for lanterns and assistance. Mrs. Purcell sat at the drawing-room window.

"*Comment?*" cried Marguerite, breathlessly.

"Oh, I had no idea of walking in fog up to my chin," said Mrs. Purcell; "so I took the short cut."

"You give me credit for the tragic element," she continued, under her breath, as Mr. Raleigh quietly passed her. "That is old style. To be sure, I might as well die there as in the swamps of Florida. Purcell is ordered to Florida. Of course, I am ordered too!" And she whirled him the letter which she held.

Other letters had been received with the evening-mail, and one that made Mr. Raleigh's return in September imperative occasioned some discussion in the

House of Laudersdale. The result was that that gentleman secured one passage more than he had intended in the spring; and if you ever watch the shipping-list, the arrival of the Spray-Plough at Calcutta, with Mr. and Mrs. Raleigh among the passengers, will be seen by you as soon as me.

Later in the evening of this same eventful day, as Mr. Raleigh and Marguerite sat together in the moonlight that flooded the great window, Mrs. Laudersdale passed them and went down the garden to the lake. She wore some white garment, as in her youth, and there was a dreamy sweetness in her eye and an unspoken joy about her lips. Mr. Raleigh could not help thinking it was a singular happiness, this that opened before her; it seemed to be like a fruit plucked from the stem and left to mature in the sunshine by itself, late and lingering, never sound at heart. She floated on, with the light in her dusky eyes and the seldom rose on her cheek,—floated on from moonbeam to moonbeam,—and the lovers brought back their glances and gave them to each other. For one, life opened a labyrinth of warmth and light and joy; for the other, youth was passed, destiny not to be appeased: if his affection enriched her, the best he could do was to bestow it; in his love there would yet be silent reservations.

"Mr. Raleigh," said Marguerite, "did you ever love my mother?"

"Once I thought I did."

"And now?"

"Whereas I was blind, now I see."

"Listen! Mrs. Purcell is singing in the drawing-room."

"Through lonely summers, where the roses
blow

Unsought, and shed their tangled sweets,
I sit and hark, or in the starry dark,

Or when the night-rain on the hill-side
beats.

Alone! But when the eternal summers flow
And reflux drown in song all moan,
Thy soul shall waste for its delight, and
haste

Through heaven. And I shall be no more
alone!"

"What a voice she sings with to-night!" said Marguerite. "It is stripped of all its ornamental disguises,—so slender, yet piercing!"

"A needle can pain like a sword-blade. There goes the moon in clouds. Hark! What was that? A cry?" And he started to his feet.

"No," she said,— "it is only the wild music of the lake, the voices of shadows calling to shadows."

"There it is again, but fainter; the wind carries it the other way."

"It is a desolating wind."

"And the light on the land is like that of eclipse!"

He stooped and raised her and folded her in his arms.

"I have a strange, terrible sense of calamity, *Mignonne!*" he said. "Let it strike, so it spare you!"

"Nothing can harm us," she replied, clinging to him. "Even death cannot come between us!"

"Marguerite!" said Mr. Laudersdale, entering, "where is your mother?"

"She went down to the lake, Sir."

"She cannot possibly have gone out upon it!"

"Oh, she frequently does; and so do we all."

"But this high wind has risen since. The flaws" — And he went out hastily.

There flashed on Mr. Raleigh's mental sight a vision of the moonlit lake, one instant. A boat, upon its side, bending its white sail down the depths; a lifted arm wound in the fatal rope; a woman's form, hanging by that arm, sustained in the dark transparent tide of death; the wild wind blowing over, the moonlight glazing all. For that instant he remained still as stone; the next, he strode away, and dashed down to the lake-shore. It seemed as if his vision yet continued. They had already put out in boats; he was too late. He waited in ghastly suspense till they rowed home with their slow freight. And then his arm supported the head with its long, uncoiling, heavy hair, and lifted the limbs, round which the drapery flowed

like a pall on sculpture, till another man took the burden from him and went up to the house with his dead.

When Mr. Raleigh entered the house again, it was at break of dawn. Some one opened the library-door and beckoned him in. Marguerite sprang into his arms.

"What if she had died?" said Mrs. Purcell, with her swift satiric breath, and folding a web of muslin over her arm. "See! I had got out the shroud. As it is, we drink *skål* and say grace at breakfast. The funeral baked-meats shall coldly furnish forth the marriage-feast. You men are all alike. *Le Roi est mort? Vive la Reine!*"

PAUL REVERE'S RIDE.

LISTEN, my children, and you shall hear
Of the midnight ride of Paul Revere,
On the eighteenth of April, in Seventy-Five:
Hardly a man is now alive
Who remembers that famous day and year.

He said to his friend, — "If the British march
By land or sea from the town to-night,
Hang a lantern aloft in the belfry-arch
Of the North-Church-tower, as a signal-light, —
One if by land, and two if by sea;
And I on the opposite shore will be,
Ready to ride and spread the alarm
Through every Middlesex village and farm,
For the country-folk to be up and to arm."

Then he said good-night, and with muffled oar
Silently rowed to the Charlestown shore,
Just as the moon rose over the bay,
Where swinging wide at her moorings lay
The Somersett, British man-of-war:
A phantom ship, with each mast and spar
Across the moon, like a prison-bar,
And a huge, black hulk, that was magnified
By its own reflection in the tide.

Meanwhile, his friend, through alley and street
Wanders and watches with eager ears,
Till in the silence around him he hears
The muster of men at the barrack-door,
The sound of arms, and the tramp of feet,
And the measured tread of the grenadiers
Marching down to their boats on the shore.

Then he climbed to the tower of the church,
Up the wooden stairs, with stealthy tread,

To the belfry-chamber overhead,
And startled the pigeons from their perch
On the sombre rafters, that round him made
Masses and moving shapes of shade,—
Up the light ladder, slender and tall,
To the highest window in the wall,
Where he paused to listen and look down
A moment on the roofs of the town,
And the moonlight flowing over all.

Beneath, in the churchyard, lay the dead
In their night-encampment on the hill,
Wrapped in silence so deep and still,
That he could hear, like a sentinel's tread,
The watchful night-wind, as it went
Creeping along from tent to tent,
And seeming to whisper, "All is well!"
A moment only he feels the spell
Of the place and the hour, the secret dread
Of the lonely belfry and the dead;
For suddenly all his thoughts are bent
On a shadowy something far away,
Where the river widens to meet the bay,—
A line of black, that bends and floats
On the rising tide, like a bridge of boats.

Meanwhile, impatient to mount and ride,
Booted and spurred, with a heavy stride,
On the opposite shore walked Paul Revere
Now he patted his horse's side,
Now gazed on the landscape far and near,
Then impetuous stamped the earth,
And turned and tightened his saddle-girth;
But mostly he watched with eager search
The belfry-tower of the old North Church,
As it rose above the graves on the hill,
Lonely, and spectral, and sombre, and still.

And lo! as he looks, on the belfry's height,
A glimmer, and then a gleam of light!
He springs to the saddle, the bridle he turns,
But lingers and gazes, till full on his sight
A second lamp in the belfry burns!

A hurry of hoofs in a village-street,
A shape in the moonlight, a bulk in the dark,
And beneath from the pebbles, in passing, a spark
Struck out by a steed that flies fearless and fleet:
That was all! And yet, through the gloom and the light,
The fate of a nation was riding that night;
And the spark struck out by that steed, in his flight,
Kindled the land into flame with its heat.

It was twelve by the village-clock,
When he crossed the bridge into Medford town.
He heard the crowing of the cock,
And the barking of the farmer's dog,
And felt the damp of the river-fog,
That rises when the sun goes down.

It was one by the village-clock,
When he rode into Lexington.
He saw the gilded weathercock
Swim in the moonlight as he passed,
And the meeting-house windows, blank and bare,
Gaze at him with a spectral glare,
As if they already stood aghast
At the bloody work they would look upon.

It was two by the village-clock,
When he came to the bridge in Concord town.
He heard the bleating of the flock,
And the twitter of birds among the trees,
And felt the breath of the morning-breeze
Blowing over the meadows brown.
And one was safe and asleep in his bed
Who at the bridge would be first to fall,
Who that day would be lying dead,
Pierced by a British musket-ball.

You know the rest. In the books you have read
How the British regulars fired and fled,—
How the farmers gave them ball for ball,
From behind each fence and farmyard-wall,
Chasing the red-coats down the lane,
Then crossing the fields to emerge again
Under the trees at the turn of the road,
And only pausing to fire and load.

So through the night rode Paul Revere ;
And so through the night went his cry of alarm
To every Middlesex village and farm,—
A cry of defiance, and not of fear,—
A voice in the darkness, a knock at the door,
And a word that shall echo forevermore !
For, borne on the night-wind of the Past,
Through all our history, to the last,
In the hour of darkness and peril and need,
The people will waken and listen to hear
The hurrying hoof-beat of that steed,
And the midnight-message of Paul Revere.

A NIGHT UNDER GROUND.

My dear Laura Matilda, have you ever worked your way under ground, like the ghost Hamlet, Senior? On the contrary, you confess, but a dim idea of that peculiar mode of progression abides in the well-ordered mansion of your mind?

Well, I do not wonder at it; you are civilized beyond the common herd; your mamma, careful of her own comfort and the beauty of her child, guards both. Your sunny summer-times go by in the shade of sylvan groves, or amid the whirl of Saratoga or Newport ball-rooms. I accept your ignorance; it is a pretty blossom in your maiden chaplet. For myself, I blush for my own familiarity with rough scenes chanced upon in wayward wanderings.

Let me tell you of a path among the "untrodden ways." Transport yourself with me.

Fancy a low, level, drowsy point of land, stretching out into the unbroken emerald green of Lake Superior, at the point where a narrow, yellowish river offers its tribute. The King of Lakes is exclusive; he disdains to blend his brilliant waters with those of the muddy river; a wavy line, distinctly and clearly defined, but seeming as if drawn by a trembling hand, undulates at their junction,—no democratic, union-seeking boundary, but the arbitrary line of division that separates the Sultan from the slave, the peer from the peasant.

Along this shore are scattered various buildings that seem to nod in the indolent sunshine of the bright, clear, quiet air of midsummer. One of these, differing from the rest in its more modern construction, is a spacious hotel that holds itself proudly erect, and from its summit the gay flag of my country floats flauntingly.

We must pass this by, and go down a plank-covered walk to reach the sandy-golden beach where the green waves

dash with silent dignity, in these long calms of July. Before the hotel the river flows also sleepily; but both shores are vocal with ladies' laughter and the singing of young girls, the lively chatter of a party of pleasure-tourists.

The fine steamer that brought us to this point has gone,

"Sailing out into the west,
Out into the west, as the sun went down";

but no "weeping and wringing of hands" was there; we knew it must "come back to the town,"—that we are merely transient waifs cast upon this quiet beach, flitting birds of passage who have alighted in the porticos of the "Bigelow House," Ontonagon, Michigan.

A long, low flat-boat, without visible sails, steam-pipes, or oars,—a narrow river-craft, with a box-like cabin at one end, the whole rude in its *ensemble*, and uncivilized in its details,—is the object that meets the gaze of those who would curiously inspect the means by which the adventurous novelty-seeking portion of our party are to be conveyed up this Ontonagon river to the great copper-mines that form the inestimable wealth of that region. For the metallic attraction has proved magnetic to the fancies of a few. A mine is a mystery; and mysteries, to the female mind, are delights.

What is the boat to us but a means? If it seem prosaic, what care we? Have we escaped the French fashions of *à-la-mode* watering-places, to be fastidious amid wigwams and unpeopled shores?

We all know what it is to embark for a day's travel, but we do not all understand the charm of being stowed away like freight in a boat such as the one here faintly sketched; how seats are improvised; how umbrellas are converted into stationary screens, and awnings grow out of inspiration; how baskets are hidden carefully among carpet-bags, and camp-stools, and water-jugs, and stowed-

in-shavings ice; how the long-suffering, patient ladies shelter themselves in the tiny, stifling cabin, while those of the merry, complexion-careless sort lounge in the daylight's glare, and one couple, fond of seclusion and sentiment, discover a good place for both, at the rudder-end.

There is an oar or two on board, it appears, as we push off in the early dawn; and these are employed for a mile or so at the mouth of the river; then the current begins to quicken in a narrower bed, and a group of sinewy men betake themselves to their poles, lazily at first, until —

But you do not know exactly what these implements are?

They are heavy, wooden, sharp-pointed poles, ten or twelve feet long. On either side of the boat runs a "walk," arranged as if a ladder were laid horizontally; but in reality the bars or rungs are firmly fastened to the walk, to be used as rests for the feet. Here the men, five on a side, march like a chain-gang, backward and forward; placing one end of the pole in the bed of the stream, resting the other in the hollow of the shoulder near the arm-pit, and bracing themselves by their feet against these bars, they pry the boat along.

Progression by such means is unavoidably slow; but no steamboat-race on our Western rivers, blind and reckless, boiler-defying and life-despising, ever produced more excitement than this same poling.

Wait till the current runs rapidly, fretting and seething in its angry haste, when for a moment's delay the boat must lose ground; when the poles are plunged into the rocky bed like harpoons into the back of an escaping whale; when the athletic forms of the men are bent forward until each prostrates himself in the exertion of his full powers; when not a false step—each step a run—can be hazarded; when that monotonous unanimity of labor is at its height, in which each boatman becomes possessed as if by a devil of strife; when their faces lose

every gentle semblance of humanity, and become distorted to a simple expression of stubborn brute force; when the muscles of their arms are knitted, rope-like, and every nerve stretched to its utmost;—wait till you have seen all this, and you will confess that a woman's lazy life can know no harder toil than that of the mind's sympathetic coexertion,—that is, if she be excitable or impressible.

The stream is tortuous, erratic, shallow, and narrow. Sometimes, as we glide, always noiselessly, beneath the overhanging foliage and tangled vines along shore, what myriads of gayly winged insects—brilliant dragon-flies, mammoth gnats, preposterous mosquitoes—swarm about our heads, disturbed from their gambols by the laughter and songs aboard our moving craft!

Only one halt in our journey, and that to dine. Just above this point we pass the swiftest rapids on the route, where the river widens, and each side of the bank is beautiful in its wooded picturesqueness, while the waters rush, in foaming, surging, tumbling confusion, over the rugged rocks, or dart between them like a merry band of water-sprites chasing each other in gleesome frolic.

It seems a desecration of these rapids thus to subdue and triumph over them. They are as if placed there by Nature as a sportive check to man's further intrusion; and as the waters come hurrying down, led, as it were, by some Undine jealous for her realm, their murmurings seem to say, in playful, yet earnest remonstrance,—“Let our gambols divert you; we will hasten to you; but approach no nearer! Permit us to guard the sanctuary of our hidden sources, our beloved and holy solitudes!”

But vain appeal! Our men pole frantically onward, and so the day passes. By mid-afternoon their labors cease, and we come to anchor at the bank, having achieved seventeen miles in nine hours! Let those of us to whom lightning-express-trains have been slow grumble hereafter at their fifty miles an hour!

A country-wagon receives most of the

ladies; the majority of their attendant cavaliers walk; of two horses, the side-saddled one has about one hundred pounds avoirdupois for his share, and, in spite of the lack of habit and equestrian "pomp and circumstance" generally, I cannot term it the most unpleasant three miles I ever travelled. The road is a wild, rugged ascent up a well-wooded hill-side. There is a tonic vigor in the atmosphere, which communicates itself irresistibly to one's mental state; the gladdened lungs inhale it eagerly, as a luxury. When one walks in this air, one seems to gain wings; to ride is to float at will.

Presently, at the top, a low village comes in sight; yelping curs start from wayside cabins; coarse, dull-featured women gape at half-opened doors or sit idly on rude steps; and the men we chance to meet wear that cadaverous pallor inseparable from the mere idea of a miner. We do not regret that the pert dogs have imparted speed to our horses' heels;—a swift, exhilarating gallop brings us in sight of a large, comfortable house, perched like a bird-box in the hills; then others are discerned; and in a few more bounds, we are at the gate. Here, where all visitors to the Minnesota Mines are received and entertained, we prove *avant-couriers* of the slowly advancing wagon-load,—“the largest party of ladies ever met there,” they tell us, as we forewarn our hosts of the band so boldly invading their copper-bound country.

Very soon we are rambling over the hills,—those of Nature's rearing, and others formed by the accumulation of refuse brought up from the mine. We discover and secure some fine specimens of the metal; sundry of the knowing ones, after mysterious interviews with rascally-looking miners, appear with curious bits of pure silver ore mingled with crystals of quartz and tinted with tiny specks of copper. These, being the most valuable curiosities of the region, are usually secreted by the miners for the purpose of private speculation.

We feel a reverence for this ground,

so teeming with metallic wealth,—and yet a certain timorousness, as we remember that we walk on a crust, that beneath us are great caves and subterranean galleries.

This outer shell, this surface-knowledge of what lies below, does not content me. I have also a brave friend who shares my feeling. We agree, that, despite the interest of this crust, to know of the fruit beneath and not taste it is worse than aggravating; we grow reckless in our thirst for the forbidden knowledge.

We have entertained a little plot in our headstrong minds all the way, which we have hardly dared to name before. It is surely not feminine to look longingly on those ladders made for the descent of hardy miners only; visitors beneath the surface are rare; only gentlemen interested in seeing for themselves the richness of these vaunted mines have essayed the tour; even many of these failing to penetrate farther than the first level, and bravely owning their faint-heartedness. In spite of this, we feel our way cautiously. A descent is to be made this night, when the Captain of the Mine goes his nightly round of inspection; a gentleman, the head and front of our expedition, whom we shall call the “Colonel,” proposes to accompany him.

Why may we not form an harmonious quartette? We have nerve; has it not been tested throughout the somewhat arduous journey of the preceding weeks? We have presence of mind; we are passable *gymnastes*.

In fact, viewing *Mon Amie* and me from our own point of view, than ourselves never did there exist two mortals more manifestly fashioned straight from the hand of Nature, and educated by previous physical culture and mental discipline for the performance of a feat at once perilous and daring, one unknown to the members of “our set,” and which might have been thought impracticable by all who had known us only in the gaslight glare of Society, and the circum-spection of crinoline's confining circle.

Does it matter by what cunning wiles

of pretty pleading and downright demonstrations of the project's reasonableness we succeeded (for we did succeed) in being allowed to take our fates in our own hands or trust them to our own surefootedness? I think not.

"For when a woman will, she will, you may depend on 't."

But you should have seen the robing! We are to start at ten, P. M. Previously we betake ourselves to our chambers, and, entertaining a vague notion that Fashion's expanse may prove inconvenient, we are looping up our trailing robes in fantastic folds, when a tap at the door.

Voilà! a servant with two full suits of new, but coarse, miners' clothes, — with a modest intimation from our companions of their advisability, — in fact, their absolute necessity. We pause aghast! Ah! the renewed shouts of laughter from those merry, but more timorous damsels, who, from their secure surroundings, — those becoming barriers adopted at the dictate of Parisian caprice and retained with feminine pertinacity, — had poked fun at our forlorn limpness!

This climax of costume is startling, but the laughter rouses our courage. We stand on the brink of our Rubicon. Shall trousers deter us from the passage? Shall a coat be synonymous with cowardice? No, — we rise superior to the occasion; we pant to be free; we imbreathe the spirit of liberty, as we don our blouses. We loop our long tresses under such head-coverings as would drive any artist hatter to despair; to us they prove a weighty argument against hats in general, as we feel their heavy rims press on our tender brain-roofs. However, when the saucy eyes of *Mon Amie* look out sparkling from under her begrimed helmet, the effect is not bad; on the contrary, the masquerade is piquant. No need to mention the ribbons that we knot under our wide, square collars for becomingness, our coquetry "under difficulties," nor the gauntleted gloves wherewith we protect our hands,

nor the daintiness of the little boots that peep from the loose trousers, which have something Turkish in their cut. *Mon Amie*, with her rosy blushes, reminds me of a jocund miller's boy; — as for myself, well, I do not think the Bloomer dress so very bad, after all!

A torch-bearing band have stationed themselves at the doors to bid us god-speed, — to make merry at our droll masquerade, — to quiz our odd head-gear, — to criticize us from head to foot, in short, — but between all, to offer words of caution. Then we go out into the starlit, but not over-bright night, — such a one as is friendly to lovers and to thieves, friendly to religion and to thought, the beloved of sentimentalists, and the adored of this particular group of adventurous miners. In Indian file, lantern-led, we traverse the narrow, beaten path that leads to one of the openings of the mine. These are covered by a rough-plank house, — too much like a shed to merit that pretentious term, which implies something fit to live in; in the centre of this shelter is an open space, perhaps a yard square, and similar in appearance to a trap-door in a roof. Here we wait a few moments, while the Captain of the Mine and the Agent of the Mining Company, — who has joined our party at the last moment, to afford us the undivided services of the Captain as guide, — are engaged in some mysterious process of moulding; an odor, not attar of rose, nor yet Frangipanni, salutes our nostrils; then our companions approach. Both the Colonel and the Agent are "lit up," — in fact, all-luminous with the radiance of tallow "dips"; one of these, stuck in a lump of soft clay, adheres to the front of each hat, and in their hands they have others.

We also are to wear a starry flame on our brows; and, not content with this, are invested with several short unlighted candles, which are to dangle gracefully by their wicks from a buttonhole of our becoming blouses. Thus our costume is complete; and I doubt if Buckingham sported the diamond tags of Anne of Austria with more satisfaction than do

we our novel and odorous decoration: we dub ourselves the Light Guard on the instant.

In the delay before starting, we observe several miners descend through the black and most suggestive trap-door, each bearing a tin can in his mouth, as a good dog carries a basket at the bidding of his master.

The flame of the candle, bright in the density of the pit's darkness, as its bearer descends step by step with the rapidity which custom has made easy, becomes in a few seconds like the tiniest glow-worm: one can follow the spark only; the man disappears within the moment.

I cannot describe, nor, indeed, convey the least idea of this peculiar effect. We feel our hearts tremble at the thought that whither that light has gone we must follow. For the first time I realize that we are about to go *into* the earth,—that we shall presently crawl like insects, burrow like underground vermin, beneath the surface, man's proper place. But such thoughts are not for long indulgence.

"Now let us descend!" says the Colonel.

Grasping the round of the ladder where it rose slightly above the floor, the Captain, our guide, with that air of assurance which practice bestows, swings himself from sight. To him succeeds the Colonel. Next comes my own turn. This is not the first time my feet have tried ladder-bars; in the country-spent vacations of my school-days, how many times have I alertly scaled the highest leading to granaries, to barn-lofts, to bird-houses, to all quasi-inaccessible places, whither my daring ignorance—reckless, because unconscious of danger—had tempted me! But mounting a clean, strong, wide ladder, in the full flood of day, light below, above, around, promising you security by its very fulness of effulgence, is a far different thing from groping your way, step by step, down a slimy, muddy frame which hangs in a straight line from the very start. I shake off a first tremor, draw a full breath, and with fortitude follow my leader carefully. As I look above,

after fairly getting committed, I can behold *Mon Amie's* feet, whose arched insteps cling round each bar with a pretty dependence that is in the highest degree appealing. Above her I hear the deep voice of the Agent.

And so the quintette, in grim harmony of enterprise, go down, down, down, like so many human buckets, into a bottomless well.

Alas, and alas! our own arms, with their as yet untried muscles, must be our only windlass to bring us to the surface again! Down, down, down, deeper, deeper, deeper! Will this first ladder never end?

Ah, at last! At the foot, on either side, stand the Captain and the Colonel, like sentries. We have reached a shelf of rock, and we may rest. Here we perch ourselves, like sea-birds on a precipice that overlooks the sea.

By the light of our flickering candles we behold each other's faces, and we can talk together. We are but two hundred feet under ground. A desolate stillness reigns here; no sound reaches us, either of labor or the steps of passing workmen. A cold stream of water trickles from a cleft rock behind us; we bathe our foreheads in it, and betake ourselves to the ladder again.

From our next resting-place we proceed through a gallery, an exhausted vein, kept open as a passage from one shaft to another. As we turn a corner, we seem to plunge into a rocky cavern; our feet tread on roughly imbedded rocks; the sides of the cave jut out in refuse boulders,—harsh, dark-colored, ashen; overhead are beams of hard wood, bracing and strengthening the excavation. We traverse this gallery hastily.

Now that we are here, we are conscious of excitement. *Mon Amie* manifests hers by her steady, deliberate tones, a sort of exaltation foreign to her usually vibrating voice, her tremulous cadences; she seems borne along, despite and above herself. For my own part, as my lungs inflate themselves with this pure, dry, bracing air, exquisitely redolent of health, and

testifying at once to a total exemption from noxious exhalations or mephitic vapors, I grow *tête-montée*, rattle-brained; my laugh echoes through these stony chambers, wild snatches of song hover on my lips, odd conceits flit through my brain, I joke, I dash forward with haste; my excitement endows me with a super-feminine self-possession.

But now we hear an ominous rattle, a clanking of chains, a rumbling as of distant thunder; we are approaching a shaft. The shafts in this mine are not sunk perpendicularly, but are slightly inclined: the huge buckets, lowered and raised by means of powerful machinery, are but ancient caldrons, counterparts of those in which the weird witches in "Macbeth" might have brewed their unholy decoctions, or such as the dreadful giants that formed the nightmare of my childhood might have used in preparing those Brobdignagian repasts among the ingredients of which a plump child-held the same rank as a crab in ours.

The sounds grow nearer; presently our guide disappears; then I behold the Colonel, in whose steps I follow, faithful as his shadow, crouch sidewise: we must pass behind this inclined plane, which rests on roughly hewn rocks, that protrude till it appears impossible that any living thing, except a lizard, can find a passage. I am sure we must shrink from the original rotundity with which Nature blessed us. I feel as the frog in the fable might have felt, if, after successfully inflating himself to the much-envied dimensions of the ox, he had suddenly found himself reduced to his proper proportions. Edging sidewise, accommodating the inequalities of the damp surfaces to the undulations of our forms, deafened, crazed by the roar of the caldrons that dash madly from side to side, we fairly ooze through.

More ladders! This time they are not hung quite perpendicularly, are shorter, and some lean a little, which affords rest; others have one side higher than the other: to these my already aching palms cling with desperation. So have I

seen insects adhere, through sheer force of fear, to a shaken stem, or a perilous branch beaten by a storm-wind.

The voices of my companions come to me from above, though I cannot see the soles of *Mon Amie's* friendly feet, which at first preserved an amiable companionship with my own hands; but, looking far upward, I behold a tiny, star-like spark. When I was a child, I used to think that fire-flies were the crowns of the fairies, which shone despite their wearers' invisibility: this idea was recalled to me.

Hark! booming from unthought-of depths, a roar rolls up in majestic waves of echoing thunder. At this resonant burst, I tremble,—I think a prayer.

"They are blasting below us," cries the Colonel, *de profundis*.

Then up rushes a volume of thick, white smoke, and we are enveloped as in shrouds. I have no more fear,—but the odor, ah! that sulphureous, sickening, deathly odor! Faintness seizes me,—the ladder swims before my eyes,—I am paralyzed,—Death has me, I think!

But the very excess of the danger has in it something of reviving power. I remember, that, just as I left my room,—whose quiet safety never before appeared so heavenly,—prompted by some instinctive impulse, I had placed a small vial of ammonia in the breast-pocket of my coat.

I have wellnigh swooned with ecstasy, as I have inhaled the overcoming odors of some rare bouquet, love-bestowed and prized beyond gems; my senses have reeled in the intoxication of those wondrous extracts whose Oriental, tangible richness of fragrance holds me in a spell almost mystical in its enthrallment; but I dare aver that no blossom's breath, no pungent perfume distilled by the erudite inspiration of Science, ever possessed a tithe of the delicious agony of that whiff of unromantic ammonia, which, powerful as the touch of magic, and thrilling as the kiss of love, snatched me back to life, arrested my tottering senses, as they blindly staggered on the very brink of certain death.

When we reach the next level, and our faces are revealed to each other, with one voice they exclaim, "How frightfully pale you are!" But I say nothing. In fact, their familiar features, wearing no longer their daylight semblance, present an aspect at once grim and grotesque, and more like the spirits of my friends than their incorporated substances.

Traversing the wild, rude corridors, we find that the path grows more perilous, the way more intricate; we have words of warning from our protectors, who often look back anxiously. They have begun to realize what they have done in yielding to a woman's odd caprice.

In this level we are shown the spots from which famous masses of copper have been removed, and are granted useful, but fleeting statistics of weight; we are also so fortunate as to discover some chips of the wonderful block, raised in '54, I think, which weighed five hundred tons. Then we chance upon chasms, which, seen so dimly, though dreadful enough in reality, are made a thousand times more so by the terrors of imagination; we creep along the brinks of these, scarcely daring to look down; above, the heavy boulders lie heaped in frightful confusion. When we have crawled past these death-traps and stand in safety once more, we throw down bits of stone, and seconds elapse before we hear the dull *thump* with which each signals its arrival in the depths. Along the edges of some of these gloomy pits we cannot pick our way; therefore a plank is thrown across, and, trusting to so slender a bridge, we pass, one by one. A single false step were enough to dash one to atoms,—so to be transformed to a bruised and mangled mass, to perform one's own sepulture, and lie in a grander grave than will ever be hollowed by mortal hands to hide our useless bodies.

The deeper one penetrates into these mines, the wilder, more dangerous the paths. It is as though the upper regions were kept in "company" order, but lower down we meet with the every-day roughnesses of veritable miners'-life; we follow their hazardous, but familiar steps;

we behold all the hardships these toiling, burrowing workers undergo, that the hidden coffers of Earth may yield their tribute of treasure to Man, its self-appointed, arrogant master.

Occasionally we meet a passing miner. Grasping his ponderous tools, he flits by like a phantom; even in the momentary glance, we can perceive how livid his sunless labor has left him; he is blanched as a ghoul, and moves as noiselessly, with feather-light step. Each with a motion salutes the Captain; but they do not heed the little group of strangers who have braved so many dangers to behold the wonders which to them are as commonplace as the forge to a blacksmith, or to a carpenter his work-bench.

Still farther below us we hear the clink and clatter of real work. Down we plunge,—another ladder, "long drawn out." Some of its rounds are wanting; others are loose and worn to a mere splinter. Warned by the voice below me, I proceed with a trembling caution, tenfold more exciting to the strained nerves than the wildest bound on a mettled racer, the fiercest rush that ever tingled through every fibre of the rider's frame.

The water has saturated the banks by which our crazy ladder hangs, and every round is damp and slimy with clayey mud. Alas, for my poor pretty gantlets! *Mon Amie* has thrown away hers, as useless.

Finally the ladder ceases abruptly. My feet in vain seek a resting-place. There is none.

A voice says,—that kindly, earnest voice, the symbol of protective care, and our smother of all difficulties,—“We have swung ourselves down by a chain that hangs from the side of the last round. We are too far below to reach or assist you. Take the chain firmly; it is the only route, and we cannot return!”

Que faire? Behold a pleasant predicament for two city-bred ladies, not “to the manner born,” of swinging themselves from the end of a ladder by means of a rusty iron chain, from which they

would alight—where? Surely, we know not.

I am very sure I could not reproduce in description, and probably not by practice, the inevitable monkey-contortions, the unimaginable animal agility, by which I transfer my weight to the clumsy links of this almost invisible chain. The size of the staple from which it hangs dissipates all fears in respect to its strength. Hand over hand, my feet sliding on the slippery bank, remembering sailors in the shrouds, and taking time to pity them, at last I reach friendly hands, and stand breathless on another level.

How the soft, white, dimpled palms of *Mon Amie* testify to the hardship of this episode, as she bathes them in the cooling water! But, because one's hands are tender, cannot one's nerves be strong, one's will indomitable?

Again on the tramp. The cavernous passages are sublime in height, the chasms fearful in their yawning gulfs. We pick our way daintily, at intervals pausing to listen to the distant reverberations of exploding blasts. The atmosphere here, as above, is fairly heavenly in its purity and invigorating freshness; it girds us with singular strength, and clothes us as in a garment of enchanted armor that defies all soul-sinking.

Creeping behind another shaft, we reach still another chasm, above which piles of dark rocks lie heaped in such confusion as might result from a great convulsion. There is a narrow path along its edge, and here the stones are small; but, as we look up, the mighty masses frown down upon us with threatening grandeur. Along this path, treading lightly, as if gifted with wings, the Captain passes; then the Agent (for we had slightly altered our order of march); *Mon Amie* follows. She is half-way past the danger, when an ominous pause,—we are ordered to stop.

Down into the chasm rolls a stone, displaced by an unlucky step of our pioneer. One stone is nothing,—but more follow that had been supported by this: small ones at first,—but the larger rocks

threaten a slide. If they are not arrested in their course, she is lost!

What a moment that is! I dare not breathe. *Mon Amie* stands statue-like, awaiting the death which she believes is upon her. Not many words are spoken. I think I feel all that her one glance conveys. But the brave men beyond her, with instant unanimous action bracing themselves against the sliding rocks, oppose their feeble force to the down-sweeping agents of destruction; a moment more, and they would have been too late. With the step of a frightened antelope *Mon Amie* trembles past them. I see her safe, and hasten on. "Step lightly!" says a voice full of suspense and fear, despite its calmness.

Step, indeed! As if I rest on those treacherous stones! My feet brush them no more than the wing of a butterfly grazes the roses among which it flutters. Step, forsooth! If ever the angels concerned themselves for this atom in Creation's myriads, they hover round me now, they bear me up, they teach me how to fly! Deprived now of their human props, how the angry fragments leap and tumble and chase one another through the echoing abyss below! These reverberations seem freighted with elfin voices that jeer the insensate rocks for their baffled scheme of mischief.

But they chanted a far different chorus, and the darkness saw another sight, when, a few moons later, they dashed themselves down in irresistible array, and bore with them in their desperate plunge the lifeless bodies of two passing miners, in whose hearts, it may be, dwelt at the moment only happy thoughts of the homes 'neath the blue skies to which they were hurrying, the dear familiar sunlit Paradise that would succeed the endless night of their *Inferno* of toil.

"But men must work, and women must weep; And the sooner 'tis over, the sooner to sleep!"

Well, we take up our march again presently, and, led by a monotonous hammering, proceed toward the sound. Some of the miners are at work here, clearing a

mass of ore from the stubborn rock. Their strokes fall as regularly as those of machinery, and the grim men who wield the ponderous hammers accompany each blow with a peculiar loud indrawing of the breath, like the pant of a blacksmith at his anvil. So strong is this resemblance, that we burst forth all together in the strains of the "Anvil Chorus"; and the accompaniment is beaten with tenfold more regularity and effect than on the stage, in the glare of the footlights, by "Il Trovatore's" gypsy-comrades. I doubt if Verdi's music was ever so rendered before, amid such surroundings. The compliment may be the higher, coming from so low a region.

Beyond this group are a few miners resting from toil. One of these, as he stands leaning his folded arms on a jutting rock, upon which he has placed his candle, elicits our spontaneous admiration. His beauty is Apollo-like,—every chiselled feature perfect in its classic regularity; his eyes sad, slumberous, and yet deep and glowing, are quite enough for any susceptible maiden's heart; about a broad expanse of forehead cluster thick masses of dark brown hair; his shirt, open at the throat, reveals glimpses of ivory; altogether he is statuesque and beautiful. Even his hands, strongly knit as they are, have not been rendered coarse by labor; they bear the same pallid hue as his face, and he looks like some nobly-born prisoner. "What untoward fate cast him there?" I often ask myself. He exists in my memory as a veritable Prince Charming, held captive in those gloomy caves of enchantment that yielded up to me their unreal realities in that nightmarish experience. I never fancy him on upper earth living coarsely, even, it may be, talking ungrammatically, defying Horne Tooke and outraging Murray, among beings of a lower order of humanity; but he rises like a statue, standing silent and apart.

Some one throws away a nearly burnt-out candle at this spot. It falls but a few inches from a can of gunpowder, which is not too securely closed. As I utter a

quick word of warning to the careless one, a miner starts. "Good Heaven!" I hear him exclaim, as we disappear,— "that was a woman!"

When we reach the next shaft, the Captain deposits himself in the descending bucket, and, irregularly tossing from side to side, goes down to overlook some work, and leave fresh orders with the miners. We await his return before again betaking ourselves to the ladders.

On the next level, we behold scores of men in busy action. I can think only of ants in an ant-hill: some are laden with ore; others bearing the refuse rocks and earth, the *débris* of the mine, to the shafts; others, again, are preparing blasts,— we do not tarry long with these; others with picks work steadily at the tough ore. In some places, the copper freshly broken glitters like gold, and the specks on the rocks, or in the earth-covered mass, as our candle-light awakens their sparkles, gleam like the spangles on a dancer's robe or stars in a midnight sky. All the while we hear the dreadful rattle of the down-sinking caldrons, or the heavy labor of the freighted ones, as they ascend from level to level.

Suddenly our path conducts us past a seated bevy of miners taking their "crib," as it is termed, from the food-can, which stands at hand,—a small fire blazing in the midst of them. Weary and sore, we seat ourselves near them, while our hardier companions talk with the respectful group.

They work eight hours at a time, they tell us,—ascending at the expiration of that period to betake themselves to their homes, which are mostly in the little village where the yelping curs also reside. They enjoy unusual health, and pity the upper-world of surface-laborers, whom they regard with a kind of contempt. Accidents are not frequent, considering the perils of their occupation. The miners here are generally Cornish-men, with some Germans.

I sit silent, thinking of my Prince Charming, with many vague conjectures.

At first, these men have paused in their repast in presence of the strangers; but now, with rude courtesy, noticing our weariness, they offer a portion to us. Faint and famishing, we by no means disdain it. I wonder what Mrs. Grundy would say, could her Argus-eyes penetrate to the spot, where we,—bound to “die of roses in aromatic pain,”—in miners’-garb, masculine and muddy, sit on stones with earthy delvers, more than six hundred feet under ground,—where the foot of woman has never trod before, nor the voice of woman echoed,—and sip, with the relish of intense thirst, steaming black tea from an old tin cup!

Eh, bien! for all that, let me do it justice. Never was black tea less herb-like; never draught of sillery, quaffed from goblet of rare Bohemian glass, more delicious! And so, with thank-yous that were not only from the lip, we toil on some distance yet, to the shaft by which we are to ascend,—one quite remote from that by which we began our trip.

Halting at the foot of the ladder, we pour forth the “Star-spangled Banner” with the full strength of lungs inflated by patriotism, until the stirring staves ring and resound through those dim caves. The miners, who hold the superstition, that to whisper bodes ill-luck, must have imagined we were exorcising evil spirits with an incantation.

Then begins our weary way upward. We sing “Excelsior” in our hearts, and forget our aching limbs, for the most laborious portion of the night’s toil is before us. The almost perpendicular ladder is just beside the powerful pump, which, worked by a steam-engine, exhausts the water from the mine, and its

busy piston, in monotonous measure, keeps time to our climbing.

Two rests during the entire distance, which we travel in brave silence. Indeed, we cannot speak,—the oppressive strain upon the chest is so great. Step after step, hand over hand, up we go. At last, warmer air greets us, lights flicker from above; the trap-door is reached; we are on the surface again; we are out of the depths,—and our hearts whisper a *Te Deum* of thanksgiving.

I think well of the establishment of a chapel, such as exists at the entrance to the Valenciana mine in Mexico, where each miner spends half an hour, going to or returning from his labors. Such a union of work and worship seems a proper adjunct to the profit and the peril.

There is a faint glimmer of coming dawn far away in the east, as we go forth into the midsummer-night, and we catch the distant notes of chanticleer, as he sounds his shrill *réveille* to the day.

As my confused brain seeks repose, and my weary limbs sink into the softness of the never-so-welcome bed, my thoughts fly to distant ones, to whom I would whisper,—as I do to you who have so patiently burrowed with me,—“Only love me for the dangers I have passed!”

But it is in vain that you long for a similar experience, my dear Laura Matilda. Being the first, we are also the last women to whom these subterranean passages will yield their mysteries, their windings, and their wonders. Against all of my own sex the Pandemonian depths of the Minnesota Mines are henceforth as obstinately barred as ever were the golden gates of the Mohammedan Paradise.

A LONELY HOUSE.

"Some weighty crime that Heaven could not pardon,
A secret curse, on that old building hung,
And its deserted garden."

Hood's *Haunted House*.

ONE autumn evening, not very long ago, I was driving out with my uncle. I had been spending several weeks at his house, and in that time had driven with him very often, so that I supposed myself familiar with nearly all the roads that stretched away from the pleasant village where he resided; but on this occasion he proposed taking me in an entirely new direction, over a tract of country I had never before seen.

For a mile or two after we left home, we bowled rapidly along on a well-travelled turnpike; then a sudden turn to the right brought us, with slackened speed, into a quiet country-road. Passing through the fields that bordered the highway, we came into a wild, romantic region of hill and dale that fully deserved all that my uncle had said in its praise.

Giving ourselves up to the sweet influences of the scene, we trotted our horses slowly, past dusky bits of forest that made the air fragrant with the damp smell of the woods, and by occasional shining pools adorned with floating pond-lilies, and shaded with thick, low bushes of witch-hazel. The sunlight had that orange glow that comes only on autumn evenings, the long, slant rays striking across the yellow fields and lighting up the dark evergreens which dotted the landscape with a tawny illumination, like dull flames. The locusts hummed drowsily, as if they were almost asleep, and the frogs in the ponds sent out an occasional muffled croak. Altogether, it was deliciously calm and deserted; we did not meet a human being or a habitation for miles, as we wound along the secluded path, now up and now down, but on the whole gradually ascending, till we reached the summit of a hill larger and steeper than the rest.

Here there stood a lonely house.

Pausing to allow our horses a moment's rest, my eye was caught by its deserted and dilapidated appearance. It had evidently been uninhabited for years. The fence had gone to decay, the gate lay rotting on the ground, and a forlorn sleigh, looking strangely out of place in contrast with the summer-flowers that had overgrown it, was drawn up before the entrance. The grass had obliterated every trace of the path that once led to the decayed steps, bushes had grown up thickly around the lower story of the house, and tangled vines, creeping in through the broken panes of the windows, hung in festoons from the moss-covered sills. The door had dropped from its hinges, and on one side of the front the boards had fallen off, so that I could see quite into the interior, where I noticed, with surprise, some furniture yet remained, though in great confusion, a broken chair and an overturned table being the most prominent objects. Outside, the same disorder was manifest in the great farm-wagon left standing where it had last been used, and the neglected out-buildings fast going to decay. About the whole place there was an aspect of peculiar gloom, and the house itself stood on this bleak hill looking out over the lonesome landscape with a sort of tragic melancholy in its black and weather-beaten front.

Now such a sight as this is very rare in our busy New England, where everything is turned to advantage, and where the thrifty owner of a tenement too old for habitation is sure to tear it down and convert the materials of which it is built to some other use. My curiosity was, therefore, at once excited regarding this place, and I turned to my uncle with an inquiry as to its history.

"It is a very sad one," he answered,—
"so sad that it gives a terrible dreariness
to this solitary spot."

"Then I am sure you will tell me the
causes which led to its desertion. You
know how much I like a story."

My uncle complied with the request,
and, as we wended our way home through
the deepening twilight, related a series of
strange facts, which, at the time, took a
powerful hold on my imagination, and
which I have since endeavored to group
into a continuous narrative.

This house, now so forlorn, was once a
neat and happy home. It was built by a
young farmer named James Blount, who
went into it with his young wife when he
brought her home from the distant State
where he had married her. For several
years they seemed very prosperous and
happy; then a heavy affliction came. The
healthy young farmer was thrown from
his horse, and carried to his home only to
linger a few terrible hours and expire in
great agony. Thus early in its history
was the doomed house overshadowed with
the gloom of sudden and violent death.

Every one was heartily sorry for the
widow with her two little boys, and the
people of the country-side did all that
they could to cheer her loneliness and
lighten her grief. But, as I have said,
she was a stranger among them, and she
seems to have been naturally of a reserved
disposition, preferring solitude in her
affliction; for she so repelled their atten-
tions, that, one by one, even her husband's
friends deserted her. Then, too, her
house was three miles from the nearest
neighbor, and this was necessarily a bar-
rier to frequent social intercourse. She
very rarely went into the village, even to
church, and thus people came to know
very little of her manner of life; it was
only guessed at by those few acquaint-
ance who, at rare intervals, made their
way to the Blount farm-house.

Among them it was remarked, that the
widow, still quite young, was unnatural-
ly stern and cold, and that her two sons,
who were growing up in this sad isola-

tion, were strangely like their mother,
not only in appearance, but in manners.
Their names were James and John. There
was but little over a year between them,
and they were so much alike that most
persons found a difficulty in distinguish-
ing one from the other. Both had fierce,
black eyes, short, crisp, black hair, and
swarthy skins,—quite unlike our freckled-
face Yankee boys,—so that the older vil-
lagers declared, with a sigh, that there was
not a trace of the good-hearted father
about them; they wholly resembled their
strange mother. The boys themselves
did nothing to lessen this disagreeable
impression; they were unusually grave
and reserved for their years, taking no
interest in the sports of other children;
and after a time, it became painfully evi-
dent to those who watched them that they
had no fondness for each other; on the
contrary, that affection which would nat-
urally have sprung from their nearness
in age and their constant companionship
seemed to be entirely wanting, and its
place usurped by an absolute dislike.

When this was first discovered, it was
supposed to account for the widow's aver-
sion to society. This idea, being once
started, made those idle busybodies there
are in every village eager to discover
if the suspicion were correct. Through
the men hired to work on the farm, it
was ascertained that the poor mother,
with all her sternness and her iron law,
had difficulty in keeping peace between
the boys. Twenty times a day they would
fall into angry dispute about some trifle;
and so violent were these altercations, that
it was said that she durst not for a mo-
ment have them both out of her sight,
lest one should inflict some deadly injury
upon the other. That this was no ill-
founded fear was evinced by a quarrel
that took place between them, when John
was perhaps eleven, and James twelve
years old.

It was witnessed by a village lad nam-
ed Isaac Welles. He was an alert, active
person, who liked to earn a penny or two
on his own account, out of work-hours.
With this notable intention, he arose soon

after dawn of a pleasant summer-morning, for the purpose of picking blackberries. Now he knew that they were very plentiful in a field near the Blount farmhouse, and, thinking such small theft no robbery, he made his way thither with all speed, and was soon filling his basket with the dew-sprinkled fruit. Early as it was, however, he soon discovered that there was some one up before him. He heard a sound of talking in low, caressing tones, and, glancing in the direction whence it came, he saw John Blount sitting under a tree near by, and playing with a little black squirrel, which appeared to be quite tame. Not caring to be discovered and warned off, Isaac went on with his work quietly, taking care to keep where he could see without being seen.

John was not long left alone in his innocent amusement, for in a few moments James Blount came running down from the house towards him. As he approached, John's face darkened; he caught up the squirrel, and made an endeavor to hide it under his jacket.

"No, you don't!" said James, as he came up, breathless. "I see you have got him, plain enough; he sha'n't get away this time,—so you might as well give him to me."

"No, I won't!" replied John, sullenly.

"You won't?"

"No!" said John, more fiercely, and then burst out, passionately,— "I don't see why you want to tease me about it; he a'n't your pet; I have found him and tamed him; he knows me and loves me, and he don't care for you; besides, you only want him to torment him. No! you sha'n't have him!"

"Sha'n't I? we'll see!" And James made a step forward.

John drew back several paces, at the same time trying to soothe the squirrel, which was becoming impatient of its confinement. His face quivered with excitement, as he went on, passionately,—

"I know what you want him for: you want him to hurt some way. You wrung

my black kitten's neck, and now you want to kill my squirrel. You are a bad, wicked boy, and I hate you!"

With the last words he started to run; but he had not gone far when his foot struck a stone, and he fell. At this, the squirrel, terrified, jumped from his arms; but James was close by, and before it could escape, he had caught it. John was up in an instant, and James, seeing that he could not avoid him, gave the poor little creature's neck a sudden twist and flung it gasping at his brother's feet, exclaiming,—

"There, now, you may have it!"

For one moment John stood still, white with rage and grief; then he uttered a sort of choking howl, and sprang at James,—

"You cruel coward!"

The words were accompanied with a half-articulate curse, as he struck at him, blindly, fiercely, and they closed in what seemed a deadly struggle. John, being the younger, had a slight disadvantage in size and weight, but wrath gave him more than his usual strength; while James fought desperately, as if for life. After a few moments they rolled on the ground together.

It was a fearful sight, those two brothers, boys though they were, fighting in that mad way. Their faces, so much alike that they seemed almost reflections of each other, were crimson with anger; their eyes shot fire; their breath came in sobbing pants; and very soon blood was drawn on both. After a brief contest, John, with a tremendous effort, threw James under him. With one hand he pinioned his arms, while the other was at his throat, where it closed with a deadly gripe. James made one last effort to save himself; with a violent wrench he succeeded in fixing his teeth in his brother's arm, but he failed in making him relax his hold, though they met in the firm flesh. John's brow grew darker, but he only tightened his clasp closer and closer, muttering,—

"So help me, God! I will kill you!"

His words were near being verified;

already the fallen boy's mouth had unclosed, the red of his face turned to livid purple, and his eyes stared wildly, when Mrs. Blount, pale, with disordered attire, as if she had but just risen and dressed hastily, ran, screaming, down the hill. Seizing John around the waist, she dragged him back, and flung him to the ground, exclaiming, —

“Oh, my sons! my sons! are you not brothers? Will you never be at peace?”

At this moment, Isaac arrived, breathless with running, at the spot. When she saw him, the widow ceased speaking, and made no further allusion to the quarrel while he remained. However, she gladly accepted his offered assistance in lifting James, who lay gasping, and well-nigh dead. As they turned towards the house, John rose, sullenly, and wrapping a handkerchief round his wounded arm, which was bleeding profusely, he glanced sorrowfully at his brother.

“He will get over this,” he muttered, with an oath; “but, sooner or later, I swear I will kill him!”

Without noticing his mother's appealing look, he walked back to the tree where the dead pet lay.

The half-strangled boy was carried to his bed, and a few simple remedies restored him to consciousness. As soon as possible, Mrs. Blount dismissed Isaac, declining his offers of going for a doctor, with cold thanks. As he went back to resume his interrupted blackberrying, he saw John sitting at the foot of the tree. He had dug a hole in which to bury the poor squirrel; it lay on his knee, a stream of dark gore oozing through its tiny white teeth. John was vainly endeavoring to wipe this with the handkerchief already stained with his own blood, while his hot tears fell fast and heavy.

As John had said, James recovered from the choking, and the only apparent results of the fight were that both boys were scarred for life. John bore on his right wrist the impression of his brother's teeth; and James's throat was disfigured by two deep, black marks, on each side, which were quite visible till his beard con-

cealed them. Yet, I doubt not, that desperate struggle, in that dawning summer-day, laid the foundation of the inextinguishable hatred that blasted those men's lives and was to be quenched only in death.

Several years passed after this, in which very little was known of what passed at the lonely house. The boys were old enough to perform most of the work of the farm, so that they no longer hired laborers except at harvest. Mrs. Blount had herself given her sons all the instruction they had ever received, and, being a woman of attainments beyond those usual in her station, she seemed quite competent to the task. Nothing more was heard of their quarrels; they were always coldly civil to each other, when in the presence of others, and were regarded by their companions with respect, though, I imagine, never with any cordial liking. So they grew up to be grave, taciturn men, still retaining the same strong resemblance of face and figure, though time had somewhat altered the features, by fixing a different expression on each, giving to John a fierce resolution, and to James a lurking distrustfulness of look. These years made less change in Mrs. Blount than in her sons; she was the same active, black-eyed woman, only that her sternness and reserve seemed to increase with her age, and a few silver threads appeared in her raven hair.

I have said that it was three miles from the Blount place to the nearest house. This was at the toll-gate, which was kept by a man named Curtis. He was a person of progressive tastes, supposed to have aristocratic inclinations. As he was a well-to-do man, these were evinced in a Brussels carpet and a piano-forte which figured in his small parlor, and by his sending his only child, a daughter, to a city boarding-school. She returned, as might have been expected, with ideas and desires far beyond the hill-side cottage where she was condemned to vegetate. Now she was very pretty, with dancing blue eyes and a profusion of

golden curls; she had, too, a most winning manner, hard for any one to resist; and these personal attractions, added to a style of dress that had never been seen or imagined among the simple country-folk, rendered her a most important person, so that no "tea-fight" or merry-making was complete without Nelly Curtis.

However, it might have been long enough before the recluse young Blounts would have encountered the gay little belle, had it not been that they were of necessity obliged to pass through the toll-gate, and sometimes forced to stop there. From some of her friends Nelly heard what a secluded life the two brothers led, and how especially averse they seemed to female society, and, with the appetite for conquest of a true flirt, she at once determined on adding them to the list of her victims. It was not long before she had an opportunity for beginning her wiles.

One fine spring morning, John Blount started on horseback to go to the village. The sun shone very brightly, the hedges-rows blushed with early blossoms, and the birds sang a song of rejoicing. It was one of those clear, soft days when one feels new life and vigor at the thought of the coming summer. Arrived at the toll-gate, John was surprised at seeing no one there to open it; he waited a moment, somewhat impatiently, and then called out, —

"Holloa!"

At this, as if startled by his voice, there appeared in the cottage door-way a slender, rosy-cheeked maiden, who looked blooming and graceful enough to be the incarnation of the fresh and beautiful May.

"Excuse me," she said, with a little curtsy; "I did not see you come up."

This, as Nelly informed the friend to whom she related the adventure, was a fib, — for Mr. Curtis was away, and she had been watching all the morning, in hopes one of the Blounts would pass; but she considered it a justifiable stratagem, as likely to secure his attention.

Meantime John was gazing spellbound at this apparition, which appeared to him charming beyond anything he had ever imagined. He was so far carried away, that he was quite speechless and wholly oblivious of the toll, until she came up to the side of the horse and held out her hand. Then he colored, and, with an awkward apology, gave her the change.

"Thank you, Sir."

Nelly smiled sweetly, and was just about to undo the latch of the gate, when John anticipated her by springing from his horse, and laying his powerful brown hand over her small white one, saying, —

"You can't do anything with this great, heavy gate. Stand aside, and let me open it."

Of course the offer was kindly accepted, and Nelly fairly overwhelmed him with her thanks, being herself somewhat touched by the unusual civility. John appeared quite overcome with confusion, and, remounting his horse, he rode off with a gruff "Good day." However, I fancy, that pleasant voice, and the accidental touch of that little hand, made an impression that never was effaced.

Having thus enslaved John, it was not long before a similar opportunity occurred for captivating James; though it would seem from Nelly's confessions to her confidante that this was not so easily accomplished with him as with his brother. The first time she opened the gate for him, he paid but little more heed to her than he would have to her father, and she never considered her conquest complete until one day when Mr. Curtis availed himself of a vacant seat in James's wagon to get Nelly taken into the village: that ride, she fancied, insured the wished-for result. Whether this was a correct supposition or not, certain it is that not many weeks elapsed before both the Blounts were completely fascinated by the gay coquette.

For some time the passion of each brother remained a secret to the other. Accident revealed it.

One soft summer-evening, John rode

down to the village for letters. As he passed through the toll-gate, he succeeded in making an appointment with Nelly for a walk on his return. He came back an hour later, and soon after sunset the two strolled down a shady path into the woods. It was moonlight, and Nelly was doubtless very charming in the mysterious radiance,—certainly her companion thought so,—for, when their walk was over, he induced her to sit with him on a fallen log that lay just within the shade of the trees, instead of returning to the house. They had been chatting there perhaps half an hour, when they were interrupted by the girl the Curtises kept to do “chores.”

“Please, Miss Nelly, there’s a gentleman wants to see you.”

“Very well, tell him I will be there in a moment.”

When the girl was gone, Nelly suddenly exclaimed, rather regretfully,—

“How stupid of me, not to ask who it was!”

John’s answer is not reported, only that he succeeded in lengthening the “moment” into a quarter of an hour, and then half an hour; and it might, perhaps, have lasted the whole evening, had they not, in the midst of a most interesting conversation, been startled by a rustling in the bushes behind them.

“There is some one watching us!” cried John, excitedly, and half rising.

“Nonsense!” said Nelly; “it is only a cat. Sit down again.”

This invitation was not to be declined. John sat down again, though still a little restless and uneasy. For some moments all was still. John had concluded that Nelly’s suggestion was a correct one, and they had begun to chat quite unconcernedly, when they were again interrupted. This time the sound was that of an approaching footstep, and for an instant a dark shadow fell across the moonlit path in front of them. Nelly was now fairly frightened, she uttered a faint shriek, and clung to John for protection. Doubtless this was a very pleasant appeal to the young farmer, but just now wrath

mastered every other feeling. He was ever easily angered, and, to be sure, the thought that they were watched was by no means agreeable. So, with a quick caress, he loosened her clasp and started to his feet, exclaiming,—

“Don’t be frightened, dear! I’ll punish the rascal!”

He made a dash in the direction whence the sound had come. In the shade of the trees stood the intruder quite still, making no attempt to avoid the furious onset. Mad with rage, John seized him by the collar, and, striking him repeatedly, and muttering curses, dragged him towards the bench where Nelly sat trembling. A few staggering steps, and they were on the path, with the pure, peaceful light of the moon falling full on the stranger’s face.

“Good God!” cried John, loosening his hold,—“it is my brother!”

James drew himself up, tossing back his disordered hair, and for a moment the two men regarded each other with stern, fixed looks, as if they were preparing for another encounter. By this time, Nelly, who was completely terrified, had begun to weep convulsively, and her sobs broke the ominous silence, as she gasped,—

“Oh, John, please don’t strike him again!”

At these words, John started, as if stung, and, looking at her with indignant sadness, said,—

“There, you needn’t cry, Nelly! I won’t hurt him; I will leave him to you safely.”

Then, overcome by the rush of recollection, he burst out, passionately,—

“Oh, James! James! you have rendered my life miserable by your treacheries, and now you have robbed me of her! This is no place to settle our quarrels; but I have sworn it once, and I swear it again now, some day I will be revenged!”

He would not stop to hear Nelly’s entreating voice; but, full of the one dreadful thought, that all her anxieties had been for another, while he was indiffer-

ent to her, he mounted his horse, without one backward look, and galloped fast away. I can fancy there was a wild whirl of emotion in his passionate heart: deadly hatred, jealousy, and crossed love are enough to drive any man mad.

Meantime, James apologized to Nelly for his intrusion, on the ground, that, becoming tired of waiting, and hearing she had gone out for a walk, he had started to meet them, but was about to turn back, fearing to interrupt them, when John's rudeness compelled him to appear. The excuse was accepted; and James soon occupied the seat recently vacated by poor John. So well did he avail himself of the circumstances, that he succeeded in convincing Nelly that his brother was a very ill-tempered person, whom it would be well for her to avoid. On this, with the true instinct of a flirt, she endeavored to persuade him that she had never really cared for John's attentions. James was but too willing to be convinced of this; and he parted from her, feeling satisfied that his suit would be successful.

Knowing well that his life was scarcely safe, if he were for a moment alone with John, after that night, James constantly exercised such caution as prevented the possibility of an encounter. He was determined as soon as possible to leave that neighborhood, always provided that Nelly would go with him. For some time he considered this as certain. John carefully avoided her, and no new suitor appeared.

I fear that pretty Nelly was a thorough coquette; for, having nearly broken one brother's heart, she very soon tired of the other, for whom she had never really cared a straw. These two men being the last to fall into her toils, she began to sigh wearily over her too easily captured victims, when her fickle fancy was caught by game more worthy so expert a sportsman.

It happened that at this time there came to the village a gentleman from New York, named Brooke, a bachelor of known wealth. He was perhaps forty

years old, and had run through a course of reckless dissipation which had rendered him thoroughly tired of city ways and city women. On the very first Sunday after his arrival, as he stood idly lounging at the church-door, his eye was caught by Nelly's fresh, rosy face. He followed her into church, and spent the time of service in staring her out of countenance. It will be readily imagined that she was not slow to follow up this first impression; and but few days elapsed before their acquaintance had ripened into intimacy.

Of course, his unceasing attentions could not fail of attracting notice and exciting remark; and it was not long before they came to the ears of the Blounts. John received the news with sullen indifference. It mattered little to him whom she liked now. James, however, refused to believe that there could be anything in it, regarding it as a mere passing caprice. In this view most of the village-people coincided; they considered it absurd to suppose that there could be anything serious in Mr. Brooke's devotion. Time would probably have proved the correctness of this supposition, had it not been, fortunately for Nelly, that she had a father with more steadiness of mind than her giddy brain was capable of. Mr. Curtis succeeded in turning the rapid attachment to such advantage, that in three weeks from the time of their first meeting they were not only engaged, but actually married.

It had been Nelly's intention, with the vanity of a true woman, to postpone the wedding a month longer, and then to have it on such a scale as would excite the admiration and envy of all her companions; but Mr. Curtis was too shrewd for this. He durst not put this rapid love to the test of waiting; and he so worked upon his daughter's fears, that she consented to a more hasty union. Mr. Brooke, too, showed some aversion to any public demonstration. Perhaps he was conscious that his friends would think he was doing a foolish thing, and he was therefore desirous of having it over before they had time to remonstrate. So, on a

fine bright Sunday, early in September, the drowsy congregation, who were dozing away the afternoon-service, were aroused by the publication of the banns of marriage between Henry Brooke and Nelly Curtis. It occasioned great whispering and tittering. But no one suspected that the wedding was near at hand; and there were very few lingerers after the service was over, when Nelly came in at the side-door with her father, was joined by Mr. Brooke, and actually married then and there.

The Blount brothers never went to church, but they almost always came into the village of a Sunday afternoon, and on this memorable day they were there as usual, but not together. John was earnestly discussing a new breed of cattle with a neighboring farmer, wholly oblivious of the false Nelly. James was standing with a group of young men on the village-green, when Isaac Welles, the whilom blackberry-boy, rushed up, breathless, to say that he had been detained in the church and had actually seen Nelly and Mr. Brooke married.

In the first eager questions that followed this announcement, no one noticed James, until they were astonished to see him fall heavily to the ground. He had fainted. They had not mentioned the publication of the banns to him, and he was wholly unprepared for this utter annihilation of all his hopes. Welles sprang to his side, and they raised him quickly. He was a strong man, and before they could bring any restoratives he had recovered.

"It is nothing," he said, with a sickly smile. "I think it must have been a sun-stroke. It is confoundedly hot."

This lame explanation was accepted, and James refused to go into any of the neighbors' houses, though he consented to seat himself, for a few moments, on a rustic bench in the shade of the trees.

Half an hour later, John, having finished his chat, strolled to the green and approached the group. He looked surprised when he caught sight of his brother, who of late had so carefully avoided

him. His astonishment increased when James rose, and, advancing a step, said,—

"John, Nelly Curtis is married to that Brooke!"

An angry flush rose to John's brow, and his black eyes flashed ominously, as he answered, in a hoarse, low voice,—

"So much the better, for now she will never be your wife."

"Neither mine nor yours," said James, maliciously;—then, after a moment, he added, "She was a worthless thing, and we are well rid of her."

At this, a tornado of passion seemed to seize John. He sprang forward, crying,—

"She was not worthless, and I will kill the first man who dares to say so."

There was an interval of dead silence; the brothers regarded each other for a moment, then James shrugged his shoulders contemptuously, and turned away. John glanced around him defiantly on the astonished crowd, and, seeing no one there likely to dispute with him, he seemed to have formed a sudden resolution, for he walked off rapidly after his brother.

Isaac Welles had stood by, no unobservant witness of this scene. He noted something in those two men's eyes that recalled the fierce quarrel of the two boys; and as soon as it was possible for him to get away, he went off after the Blounts, determined, if possible, to prevent mischief.

Meantime John had not met his brother; but, seeing James's horse was gone, he mounted his own and rode away towards home, determining to catch James before he could reach there. However, he did not overtake him. James was too cunning to ride directly to the farm-house, and John's headlong speed availed only to bring him there in time to find his mother alone and dangerously ill.

In a moment all other thoughts were laid aside. The pent-up affection of John's heart had centred itself on his only parent. She had always been cold and stern with her sons, yet they loved her with a tender devotion which reclaimed

natures that might otherwise have been wholly bad.

With all the tenderness of a woman, John assisted his mother to her bed, and, not daring to leave her, awaited eagerly the coming of the only other person who could summon aid,—his brother James.

At last he came,—riding slowly, with bowed head, up the lonely road. John went out to meet him. James looked up angry and astonished, and immediately threw himself into a position of defence. John shook his head.

"James," he said, "I cannot settle our quarrel now. Mother is very ill,—perhaps dying."

James started forward.

"Where is she? What is the matter?" he cried, eagerly.

"I do not know," answered John. "I will go for the doctor, now that you are come. I durst not leave her before. But, James, stop one moment. As long as she lives, you are safe,—I will not hurt you by word or act; but when she is gone,—beware!"

James did not answer, except by a nod, and John, turning, saw Isaac Welles standing at the gate. He had overheard the conversation and felt that there was no danger of a quarrel, and he now came eagerly forward with offers of assistance. They were gratefully accepted; for even the taciturnity of the brothers seemed to give way before the pressing fear that beset them.

There is ever great good-will and kindness in the scattered community of a village, and, despite the unpopularity of the Blounts, neighbors and friends soon came to them, ready and willing to aid them by every means in their power.

Mrs. Blount's illness proved to be quite as alarming as John had feared. The physician, from the first, held out very little hope of her recovery. The strong, healthy woman was stricken, as if in a moment; it was the first real illness she had ever had, and it made fearful progress. Yet her naturally iron constitution resisted desperately, so that, to the astonishment of all who saw her sufferings,

she lingered on, week after week, with wonderful tenacity of life. The summer faded into autumn, and autumn died into winter, and still she lived, failing slowly, each day losing strength, growing weaker and weaker, until it seemed as if she existed only by the force of will.

Of course it had long ago been found necessary to have some other dependence than the kindness of neighbors, and a stout Irish girl had been hired for the kitchen, while Mrs. Clark, a good, responsible woman, occupied the post of nurse. From these persons, and from Isaac Welles, the rest of the story is collected.

During all these months of her illness, the two brothers had been unfailing in their devotion to their poor suffering mother. Night and day they never tired, watching by her bedside for hours, and seeming scarcely to sleep. Of course they were much together, but no words of harshness ever passed their lips. When out of Mrs. Blount's presence, they spoke to each other as little as possible; in her presence, there was a studied civility that might have deceived any one but a mother. Even she was puzzled. She would lie and watch them with burning, eager eyes, striving to discover if it was a heart-felt reconciliation or only a hollow truce. It was the strong feeling she had that only her life kept them apart, which gave her power to defy death. Perhaps on this very account his stroke was all the more sudden at last.

It was a dark, lowering afternoon in December when the summons came. Mrs. Blount had been lying in a half-doze for more than an hour. Her sons had taken advantage of this sleep to attend to some necessary duties. The nurse sat beside the fire, watching the flames flicker on the dark walls, and idly wondering if the leaden-hued sky portended a snow-storm. Her musings were broken by the voice of the invalid, very faint, but quite distinct,—

"Nurse! nurse! Call my sons. I am dying!"

Mrs. Clark ran to the bed.

"Quick! quick!" cried Mrs. Blount. "Do not stop for me. You cannot help me now. Call my sons before it is too late!"

Her tone and action were so imperative that they enforced obedience, and the nurse ran down-stairs with all speed. She found no one but the hired girl in the kitchen, who said, in answer to her hurried inquiries, that both brothers were out, gone to bring in the cattle before the storm. Mrs. Clark sent her in all haste to recall them, and then returned to the sick-room. As she entered, the dying woman looked up quickly, her face clouded with disappointment when she saw that she was alone. The nurse said all in her power to assure her that her sons would soon be there, but she could not allay the strange excitement into which their absence seemed to have thrown her.

"My strength is failing," she said, sadly; "every moment is precious; if I die without that promise which they could not refuse to a dying mother's prayer, God knows what will become of them!"

Mrs. Clark urged the necessity of quiet, but the sufferer paid no heed to the caution. She talked on, wildly, and sometimes incoherently, about the hopes she built upon the reconciliation her death-bed would effect,—showing, in these few moments of unnatural loquacity, how deeply she had felt the animosity between her sons, and how great had been the effort to conquer it. This excitement could not continue long; her voice soon grew weaker, and at last she ceased speaking, appearing to sink into a stupor of exhaustion.

An instant after, the door opened and John ran eagerly to the couch, closely followed by James. Already the poor widow's eyes were closed; the livid hue that is so fatally significant overspread her face; her breath came in quick gasps.

"Mother! mother!" cried John, flinging himself on his knees beside her, and seizing the thin, hard hand.

At that sound, she opened her eyes, but it was too late; she no longer had the power of utterance. She glanced

from one brother to the other with a piteous, entreating look; her mouth moved convulsively; in the effort to speak, she sat upright for an instant, ghastly and rigid, and then fell heavily back.

All was over; her life of labor was changed for eternal rest; and the two men, whom only her power had restrained, stood with the last barrier between them removed, avowed and deadly enemies.

Yet, for all that, they were sincere mourners for the sole parent they had ever known, though it seemed, that, jealous even in their grief, neither cared to have the other see how much he suffered; for, after the first few moments, when the heart refuses to be satisfied of the certainty which it knows only too well, they turned away, and each sought his own room. Afterwards, when all was prepared and the room decently arranged, they returned, and alternately through the long night kept their vigil beside the corpse. It is strange, that, in those quiet hours of communion with the loved dead, no thought of relenting towards each other ever suggested itself.

The snow that had been hanging all day in the dark clouds above them towards evening began to fall. Stilly and continually the tiny flakes came down, hiding all the ruggedness of earth under a spotless mantle, even as the white shroud covered the toil-worn frame of the released sufferer.

In the morning the news spread rapidly, and neighbors came to the afflicted house. But the brothers seemed to resent their offers of assistance as an intrusion, refusing to allow any other watchers, themselves continuing night and day to watch beside the corpse; and that awful vigil, instead of softening their hearts, seemed to harden them into a more deadly hatred.

The third afternoon, when all the country-side was ghastly in its winding-sheet of snow, and the clouds hung heavy as a pall over the stricken earth, the little funeral held its way from the lonely farmhouse to the village-churchyard. As a

last tribute of respect to their mother, the two brothers drove side by side in the same sleigh. Those who saw them said that it was a sight not to be forgotten,—those two black figures, with their stern, pale faces, so much alike, yet so unsympathizing, sitting motionless, not even leaning on each other in that moment of grief. So they were together, yet apart, during the ceremony that consigned the wife to the grave where five-and-twenty years before they had laid the husband. So they were together, yet apart, when they turned their horse's head towards their home and rode away silently into the sombre twilight.

The last person who saw them that night was Mrs. Clark. The brothers had insisted that both she and the Irish girl should leave early in the day,—replying to all offers of putting the house in order, that they preferred to be alone. But on her way home after the funeral, Mrs. Clark passed the house in a friend's sleigh and stopped a moment for her bundle, which in the hurry of the morning had been forgotten. To her surprise, as she approached the door, she saw that there were no lights visible in any of the windows, although it was already very dark. Thinking the brothers were in the back part of the house, she pushed open the door, which yielded to her touch, and was just about to make her way towards the kitchen, when she heard a sound in the parlor, and then these words, quite distinctly:—

“Are you ready, James?”

“Yes,—only one word. It is a long account we have to settle, and it must be final.”

“It shall be. Mine is a heavy score. Years ago I swore to wipe it out, and now the time has come.”

Mrs. Clark's knock interrupted them. There was an angry exclamation, and the door was opened. To her intense surprise, no light came from within. She could not understand how they could settle their accounts in the darkness; but they gave her no time for reflection; an angry voice, in answer to her inqui-

ries, bade her go on to the kitchen, and she hastened off. There she found a single candle burning dimly; by its light she picked up her bundle, and, leaving the door open to see her way, returned to the front of the house. Though not a nervous woman, she felt an undefined fear at the mysterious darkness and silence; and as she passed the brothers standing in the doorway, she was struck with fresh terror at the livid pallor of those two stern faces that looked out from the black shadow. When she was going out, she heard the door of the parlor bolted within, and she rejoined her friends, right glad to be away from the sad house.

So those two men were left alone, locked into the dark room together, in the horrible companionship of their inextinguishable hatred and their own bad hearts. It will forever remain unknown what passed between them through the long hours of that awful night, when the wind howled madly around the lightless house, and the clouds gathered blacker and thicker, shrouding it in impenetrable gloom.

Three days passed before any living creature approached the spot,—three days of cold unparalleled in the annals of that country,—cold so severe that it compelled even the hardy farmers to keep as much as possible by the fireside. On the fourth day, Isaac Welles began to think they had been quite long enough alone, and he started with a friend to visit the Blount brothers. Arrived at the farm-house, they saw the sleigh standing before the door, but no sign of any one stirring. The shutters of the windows were closed, and no smoke came out of the chimney. They knocked at the door. No answer. Surprised at the silence, they at length tried to open it. It was not locked, but some heavy substance barred the way. With difficulty they forced it open wide enough to go in.

To this day those men shudder and turn pale, as they recall the awful scene that awaited them within that house, which was, in fact, a tomb.

The obstacle which opposed their en-

trance was the dead body of John Blount. He lay stretched on the floor, — his face mutilated by cuts and disfigured with gore, his clothes disordered and bloody, and one hand nearly severed from the arm by a deep gash at the wrist; yet it was evident that none of these wounds were mortal. After that terrible conflict, he had probably crawled to the door and fallen there, faint with loss of blood; the silent, cruel cold had completed the work of death.

Following the blood-track, the two men entered the parlor, with suspended breath and hearts that almost ceased to beat. There they found the dead body of James Blount, — his clothes half torn off, in the violence of the strife that could end only in murder. A long, deep cut on the throat had terminated that awful struggle, though many other less dangerous wounds showed how desperate it had been. He lay just as he fell, — his features still contracted with a look of defiance and hatred, and in his right hand still clasped a long, sharp knife. He had

succumbed in that mortal conflict, which quenched a lifelong quarrel, and was to prove fatal alike to victor and vanquished. Thus the vow of John Blount was fulfilled, — the pent-up hatred of years satisfied in his brother's murder.

The room was in the wildest disorder, — chairs thrown down and broken, tables overturned, and the carpet torn. In one corner they found a second long, sharp knife. It had been at least a fair fight.

They laid the two ghastly corpses side by side: they had been chained together all their lives; they were chained together in death. The two fratricides are buried in one grave.

This terrible tragedy blighted the spot where it took place. No one would ever inhabit that house again. The furniture was removed, except from the one room which to this day remains unchanged, and the building left to fall to decay. The superstitious affirm, that, in the long winter nights, oaths and groans steal out, muffled, on the rising wind, from the dark shadows of the Lonely House.

BARBARISM AND CIVILIZATION.

In the interior of the island of Borneo there has been found a certain race of wild creatures, of which kindred varieties have been discovered in the Philippine Islands, in Terra del Fuego, and in Southern Africa. They walk usually almost erect upon two legs, and in that attitude measure about four feet in height; they are dark, wrinkled, and hairy; they construct no habitations, form no families, scarcely associate together, sleep in trees or in caves, feed on snakes and vermin, on ants and ants' eggs, on mice, and on each other; they cannot be tamed, nor forced to any labor; and they are hunted and shot among the trees, like the great gorillas, of which they are a stunted copy. When they are captured alive, one finds, with

surprise, that their uncouth jabbering sounds like articulate language; they turn up a human face to gaze upon their captor; the females show instincts of modesty; and, in fine, these wretched beings are Men.

Men, "created in God's image," born immortal and capable of progress, and so differing from Socrates and Shakspeare only in degree. It is but a sliding scale from this melancholy debasement up to the most regal condition of humanity. A traceable line of affinity unites these out-cast children with the renowned historic races of the world: the Assyrian, the Egyptian, the Ethiopian, the Jew, — the beautiful Greek, the strong Roman, the keen Arab, the passionate Italian, the

stately Spaniard, the sad Portuguese, the brilliant Frenchman, the frank Northman, the wise German, the firm Englishman, and that last-born heir of Time, the American, inventor of many new things, but himself, by his temperament, the greatest novelty of all,—the American, with his cold, clear eye, his skin made of ice, and his veins filled with lava.

Who shall define what makes the essential difference between those lowest and these loftiest types? Not color; for the most degraded races seem never to be the blackest, and the builders of the Pyramids were far darker than the dwellers in the Aleutian Islands. Not unmixed purity of blood; since the Circassians, the purest type of the supreme Caucasian race, have given nothing to history but the courage of their men and the degradation of their women. Not religion; for enlightened nations have arisen under each great historic faith, while even Christianity has its Abyssinia and Arkansas. Not climate; for each quarter of the globe has witnessed both extremes. We can only say that there is an inexplicable step in progress, which we call civilization; it is the development of mankind into a sufficient maturity of strength to keep the peace and organize institutions; it is the arrival of literature and art; it is the lion and the lamb beginning to lie down together, without having, as some one has said, the lamb inside of the lion.

There are innumerable aspects of this great transformation; but there is one, in special, which has been continually ignored or evaded. In the midst of our civilization, there is a latent distrust of civilization. We are never weary of proclaiming the enormous gain it has brought to manners, to morals, and to intellect; but there is a wide-spread impression that the benefit is purchased by a corresponding physical decay. This alarm has had its best statement from Emerson. "Society never advances. It recedes as fast on one side as it gains on the other. . . . What a contrast between the well-clad, reading, writing, thinking American, with a watch, a pencil, and a bill of exchange

in his pocket, and the naked New-Zealander, whose property is a club, a spear, a mat, and the undivided twentieth part of a shed to sleep under! But compare the health of the two men, and you shall see that his aboriginal strength the white man has lost. If the traveller tell us truly, strike the savage with a broad-axe, and in a day or two the flesh shall unite and heal as if you struck the blow into soft pitch; and the same blow shall send the white man to his grave."

Were this true, the fact would be fatal. Man is a progressive being, only on condition that he begin at the beginning. He can afford to wait centuries for a brain, but he cannot subsist a second without a body. If civilization sacrifice the physical thus hopelessly to the mental, and barbarism merely sacrifice the mental to the physical, then barbarism is unquestionably the better thing, so far as it goes, because it provides the essential preliminary conditions, and so can afford to wait. Barbarism is a one-story log-hut, a poor thing, but better than nothing; while such a civilization would be simply a second story, with a first story too weak to sustain it, a magnificent sky-parlor, with all heaven in view from the upper windows, but with the whole family coming down in a crash presently, through a fatal neglect of the basement. In such a view, an American Indian or a Kaffir warrior may be a wholesome object, good for something already, and for much more when he gets a brain built on. But when one sees a bookworm in his library, an anxious merchant-prince in his counting-room, tottering feebly about, his thin underpinning scarcely able to support what he has already crammed into that heavy brain of his, and he still piling in more,—one feels disposed to cry out, "Unsafe passing here! Stand from under!"

Sydney Smith, in his "Moral Philosophy," has also put strongly this case of physiological despair. "Nothing can be plainer than that a life of society is unfavorable to all the animal powers of men. . . . A Choctaw could run from

here to Oxford without stopping. I go in the mail-coach; and the time the savage has employed in learning to run so fast I have employed in learning something useful. It would not only be useless in me to run like a Choctaw, but foolish and disgraceful." But one may well suppose, that, if the jovial divine had kept himself in training for this disgraceful lost art of running, his diary might not have recorded the habit of lying two hours in bed in the morning, "dawdling and doubting," as he says, or the fact of his having "passed the whole day in an unpleasant state of body, produced by laziness"; and he might not have been compelled to invent for himself that amazing rheumatic armor,—a pair of tin boots, a tin collar, a tin helmet, and a tin shoulder-of-mutton over each of his natural shoulders, all duly filled with boiling water, and worn in patience by the sedentary Sydney.

It is also to be remembered that this statement was made in 1805, when England and Germany were both waking up to a revival of physical training,—if we may trust Sir John Sinclair in the one case, and Salzmann in the other,—such as America is experiencing now. Many years afterwards, Sydney Smith wrote to his brother, that "a working senator should lead the life of an athlete." But supposing the fact still true, that an average red man can run, and an average white man cannot,—who does not see that it is the debility, not the feat, which is discreditable? Setting aside the substantial advantages of strength and activity, there is a melancholy loss of self-respect in buying cultivation for the brain by resigning the proper vigor of the body. Let men say what they please, they all demand a life which shall be whole and sound throughout, and there is a drawback upon all gifts that are paid for in infirmities. There is no thorough satisfaction in art or intellect, if we yet feel ashamed before the Indian because we cannot run, and before the South-Sea Islander because we cannot swim. Give us a total culture, and a success without any discount of shame.

After all, one feels a certain justice in Warburton's story of the Guinea trader, in Spence's Anecdotes. Mr. Pope was with Sir Godfrey Kneller one day, when his nephew, a Guinea trader, came in. "Nephew," said Sir Godfrey, "you have the honor of seeing the two greatest men in the world." "I don't know how great you may be," said the Guinea-man, "but I don't like your looks; I have often bought a man, much better than both of you together, all muscles and bones, for ten guineas."

Fortunately for the hopes of man, the alarm is unfounded. The advance of accurate knowledge dispels it. Civilization is cultivation, whole cultivation; and even in its present imperfect state, it not only permits physical training, but promotes it. The traditional glory of the savage body is yielding before medical statistics: it is becoming evident that the average barbarian, observed from the cradle to the grave, does not know enough and is not rich enough to keep his body in its highest condition, but, on the contrary, is small and sickly and short-lived and weak, compared with the man of civilization. The great athletes of the world have been civilized; the long-lived men have been civilized; the powerful armies have been civilized; and the average of life, health, size, and strength is highest to-day among those races where knowledge and wealth and comfort are most widely spread. And yet, by the common lamentation, one would suppose that all civilization is a slow suicide of the race, and that refinement and culture are to leave man at last in a condition like that of the little cherubs on old tomb-stones, all head and wings.

It must be owned that the delusion has all the superstitions of history in its favor, and only the facts against it. If we may trust tradition, the race has undoubtedly been tapering down from century to century since the Creation, so that the original Adam must have been more than twice the size of the Webster statue. However far back we go, admiring mem-

ory looks farther. Homer and Virgil never let their hero throw a stone without reminding us that modern heroes only live in glass houses, to have stones thrown at them. Lucretius and Juvenal chant the same lament. Xenophon, mourning the march of luxury among the Persians, says that modern effeminacy has reached such a pitch, that men have even devised coverings for their fingers, called gloves. Herodotus narrates, that, when Cambysses sent ambassadors to the Macrobians, they asked what the Persians had to eat and how long they commonly lived. He was told that they sometimes attained the age of eighty, and that they ate a mass of crushed grain, which they termed bread. On this, they said that it was no wonder, if the Persians died young, when they partook of such rubbish, and that probably they would not survive even so long, but for the wine they drank; while the Macrobians lived on flesh and milk, and survived one hundred and twenty years.

But, unfortunately, there were no Life Insurance Companies among the Macrobians, and therefore nothing to bring down this formidable average to a reliable schedule,—such as accurately informs every modern man how long he may live honestly, without defrauding either his client or his insurers. We know, moreover, precisely what Dr. Windship can lift, at any given date, and what the rest of us cannot; but Homer and Virgil never weighed the stones which their heroes threw, nor even the words in which they described the process. It is a matter of certainty that all great exploits are severely tested by Fairbanks's scales and stop-watches. It is wonderful how many persons, in the remoter districts, assure the newspaper-editors of their ability to lift twelve hundred pounds; and many a young oarsman can prove to you that he has pulled his mile faster than Ward or Clark, if you will only let him give his own guess at time and distance.

It is easy, therefore, to trace the origin of these exaggerations. Those old navigators, for instance, who saw so many fine things which were not to be

seen, how should they help peopling the barbarous realms with races of giants? Job Hartop, who three times observed a merman rise above water to his waist, near the Bermudas,—Harris, who endured such terrific cold in the Antartics, that once, perilously blowing his nose with his fingers, it flew into the fire and was seen no more,—Knyvett, who, in the same regions, pulled off his frozen stockings, and his toes with them, but had them replaced by the ship's surgeon,—of course these men saw giants, and it is only a matter for gratitude that they vouchsafed us dwarfs also, to keep up some remains of self-respect in us. In Magellan's Straits, for instance, they saw, on one side, from three to four thousand pigmies with mouths from ear to ear; while on the other shore they saw giants whose footsteps were four times as large as an Englishman's,—which was a strong expression, considering that the Englishman's footstep had already reached round the globe.

The only way to test these earlier observations is by later ones. For instance, in the year 1772, a Dutchman named Roggewein discovered Easter Island. His expedition had cost the government a good deal, and he had to bring home his money's worth of discoveries. Accordingly, his islanders were all giants,—twice as tall, he said, as the tallest of the Europeans; "they measured, one with another, the height of twelve feet; so that we could easily, — who will not wonder at it? — without stooping, have passed between the legs of these sons of Goliath. According to their height, so is their thickness." Moreover, he "puts down nothing but the real truth, and upon the nicest inspection," and, to exhibit this caution, warns us that it would be wrong to rate the women of those regions as high as the men, they being, as he pityingly owns, "commonly not above ten or eleven feet." Sweet young creatures they must have appeared, belle and steeple in one. And it was certainly a great disappointment to Captain Cook, when, on visiting the same island, fifty years

later, he could not find man or woman more than six feet tall. Thus ended the tale of this Flying Dutchman.

Thus lamentably have the inhabitants of Patagonia been also dwindling, though there, if anywhere, still lies the Cape of Bad Hope for the apostles of human degeneracy. Pigafetta originally estimated them at twelve feet. In the time of Commodore Byron, they had already grown downward; yet he said of them that they were "enormous goblins," seven feet high, every one of them. One of his officers, however, writing an independent narrative, seemed to think this a needless concession; he admits, indeed, that the women were not, perhaps, more than seven feet, or seven and a half, or, it might be, eight, "but the men were, for the most part, about nine feet high, and very often more." Lieutenant Cumming, he said, being but six feet two, appeared a mere pigmy among them. But it seems, that, in after-times, on some one's questioning this diminutive lieutenant as to the actual size of these enormous goblins, the veteran frankly confessed, that, "had it been anywhere else but in Patagonia, he should have called them good sturdy savages and thought no more on't."

But, these facts apart, there are certain general truths which look ominous for the reputation of the *physique* of savage tribes.

First, they cannot keep the race alive, they are always tending to decay. When first encountered by civilization, they usually tell stories of their own decline in numbers, and after that the downward movement is accelerated. They are poor, ignorant, improvident, oppressed by others' violence, or exhausted by their own; war kills them, infanticide and abortion cut them off before they reach the age of war, pestilences sweep them away, whole tribes perish by famine and small-pox. Under the stern climate of the Esquimaux and the soft skies of Tahiti, the same decline is seen. Parkman estimates that in 1763 the whole number of Indians east of the Mississippi was but ten thousand, and they were already mourning their own decay. Travellers seldom visit

a savage country without remarking on the scarcity of aged people and of young children. Lewis and Clarke, Mackenzie, Alexander Henry, observed this among Indian tribes never before visited by white men; Dr. Kane remarked it among the Esquimaux, D'Azara among the Indians of South America, and many travellers in the South-Sea Islands and even in Africa, though the black man apparently takes more readily to civilization than any other race, and then develops a terrible vitality, as American politicians find to their cost.

Meanwhile, the hardships which thus decimate the tribe toughen the survivors, and sometimes give them an apparent advantage over civilized men. The savages whom one encounters are necessarily the picked men of the race, and the observer takes no census of the multitudes who have perished in the process. Civilization keeps alive, in every generation, multitudes who would otherwise die prematurely. These millions of invalids do not owe to civilization their diseases, but their lives. It is painful that your sick friend should live on Cherry Pectoral; but if he had been born in barbarism, he would neither have had it to drink nor survived to drink it.

And again, it is now satisfactorily demonstrated that these picked survivors of savage life are commonly suffering under the same diseases with their civilized compeers, and show less vital power to resist them. In barbarous nations every foreigner is taken for a physician, and the first demand is for medicines; if not the right medicines, then the wrong ones; if no medicines are at hand, the written prescription, administered internally, is sometimes found a desirable restorative. The earliest missionaries to the South-Sea Islands found ulcers and dropsy and hump-backs there before them. The English Bishop of New Zealand, landing on a lone islet where no ship had ever touched, found the whole population prostrate with influenza. Lewis and Clarke, the first explorers of the Rocky Mountains, found Indian warriors ill with fever and dysentery, rheumatism and paralysis, and

Indian women in hysterics. "The tooth-ache," said Roger Williams of the New England tribes, "is the only pain which will force their stout hearts to cry"; even the Indian women, he says, never cry as he has heard "some of their men in this pain"; but Lewis and Clarke found whole tribes who had abolished this source of tears in the civilized manner, by having no teeth left. We complain of our weak eyes as a result of civilized habits, and Tennyson, in "Locksley Hall," wishes his children bred in some savage land, "not with blinded eyesight poring over miserable books." But savage life seems more injurious to the organs of vision than even the type of a cheap edition; for the most vigorous barbarians—on the prairies, in Southern archipelagos, on African deserts—suffer more from different forms of ophthalmia than from any other disease; without knowing the alphabet, they have worse eyes than if they were professors, and have not even the melancholy consolation of spectacles.

Again, the savage cannot, as a general rule, endure transplantation,—he cannot thrive in the country of the civilized man; whereas the latter, with time for training, can equal or excel him in strength and endurance on his own ground. As it is known that the human race generally can endure a greater variety of climate than the hardiest of the lower animals, so it is with the man of civilization, when compared with the barbarian. Kane, when he had once learned how to live in the Esquimaux country, lived better than the Esquimaux themselves; and he says expressly, that "their powers of resistance are no greater than those of well-trained voyagers from other lands." Richardson, Parkyns, Johnstone, give it as their opinion, that the European, once acclimated, bears the heat of the African deserts better than the native negro. "These Christians are devils," say the Arabs; "they can endure both cold and heat." What are the Bedouins to the Zouaves, who unquestionably would be as formidable in Lapland as in Algiers? Nay, in the very climates where the natives

are fading away, the civilized foreigner multiplies: thus, the strong New-Zealanders do not average two children to a family, while the households of the English colonists are larger than at home,—which is saying a good deal.

Most formidable of all is the absence of all recuperative power in the savage who rejects civilization. No effort of will improves his condition; he sees his race dying out, and he can only drink and forget it. But the civilized man has an immense capacity for self-restoration; he can make mistakes and correct them again, sin and repent, sink and rise. Instinct can only prevent; science can cure in one generation, and prevent in the next. It is known that some twenty years ago a thrill of horror shot through all Anglo-Saxondom at the reported physical condition of the operatives in English mines and factories. It is not so generally known, that, by a recent statement of the medical inspector of factories, there is declared to have been a most astounding renovation of female health in such establishments throughout all England since that time,—the simple result of sanitary laws. What science has done science can do. Everybody knows which symptom of American physical decay is habitually quoted as most alarming; one seldom sees a dentist who does not despair of the republic. Yet this calamity is nothing new; the elder branch of our race has been through that epidemic, and outlived it. In the robust days of Queen Bess, the teeth of the court ladies were habitually so black and decayed, that foreigners used constantly to ask if Englishwomen ate nothing but sugar. Hentzner, who visited the country in 1697, speaks of the same calamity as common among the English of all classes. Two centuries and a half have removed the stigma,—improved physical habits have put fresh pearls between the lips of all England now; and there seems no reason why we Americans may not yet be healthy, in spite of our teeth.

Thus much for general considerations; let us come now to more specific tests,

beginning with the comparison of size. The armor of the knights of the Middle Ages is too small for their modern descendants: Hamilton Smith records that two Englishmen of average dimensions found no suit large enough to fit them in the great collection of Sir Samuel Meyrick. The Oriental sabre will not admit the English hand, nor the bracelet of the Kafir warrior the English arm. The swords found in Roman tumuli have handles inconveniently small; and the great mediæval two-handed sword is now supposed to have been used only for one or two blows at the first onset, and then exchanged for a smaller one. The statements given by Homer, Aristotle, and Vitruvius represent six feet as a high standard for full-grown men; and the irrefutable evidence of the ancient doorways, bedsteads, and tombs proves the average size of the race to have certainly not diminished in modern days. The gigantic bones have all turned out to be animal remains; even the skeleton twenty-five feet high and ten feet broad, which one *savant* wrote a book called "*Gigantosteologia*" to prove human, and another, a counter-argument, called "*Gigantomachia*," to prove animal, — neither of the philosophers taking the trouble to draw a single fragment of the fossil. The enormous savage races have turned out, as has been shown, to be travellers' tales, — even the Patagonians being brought down to an average of five feet ten inches, and being, moreover, only a part of a race, the Abipones, of which the other families are smaller. Indeed, we can all learn by our own experience how irresistible is the tendency of the imagination to attribute vast proportions to all hardy and warlike tribes. Most persons fancy the Scottish Highlanders, for instance, to have been a race of giants; yet Charles Edward was said to be taller than any man in his Highland army, and his height was but five feet nine. We have the same impression in regard to our own Aborigines. Yet, when first, upon the prairies of Nebraska, I came in sight of a tribe of genuine, unadulterated Indians,

with no possession on earth but a bow and arrow and a bear-skin, — bare-skin in a double sense, I might add, — my instinctive exclamation was, "What race of dwarfs is this?" They were the descendants of the glorious Pawnees of Cooper, the heroes of every boy's imagination; yet, excepting the three chiefs, who were noble-looking men of six feet in height, the tallest of the tribe could not have measured five feet six inches.

The most careful investigations give the same results in respect to physical strength. Early travellers among our Indians, as Hearne and Mackenzie, and early missionaries to the South-Sea Islands, as Ellis, report athletic contests in which the natives could not equal the better-fed, better-clothed, better-trained Europeans. When the French *savans*, Péron, Regnier, Ransonnet, carried their dynamometers to the islands of the Indian Ocean, they found with surprise that an average English sailor was forty-two per cent. stronger, and an average Frenchman thirty per cent. stronger, than the strongest island tribe they visited. Even in comparing different European races, it is undeniable that bodily strength goes with the highest civilization. It is recorded in Robert Stephenson's Life, that, when the English "navvies" were employed upon the Paris and Boulogne Railway, they used spades and barrows just twice the size of those employed by their Continental rivals, and were regularly paid double. Quetelet's experiments with the dynamometer on university students showed the same results: first ranked the Englishman, then the Frenchman, then the Belgian, then the Russian, then the Southern European: for those races of Southern Europe which once ruled the Eastern and the Western worlds by physical and mental power have lost in strength as they have paused in civilization, and the easy victories of our armies in Mexico show us the result.

It is impossible to deny that the observations on this subject are yet very imperfect; and the only thing to be claimed is, that they all point one way. So far

as absolute statistical tables go, the above-named French observations have till recently stood almost alone, and have been the main reliance. The just criticism has, however, been made, that the subjects of these experiments were the inhabitants of New Holland and Van Diemen's Land, by no means the strongest instances on the side of barbarism. It is, therefore, fortunate that the French tables have now been superseded by some more important comparisons, accurately made by A. S. Thomson, M. D., Surgeon of the Fifty-Eighth Regiment of the British Army, and printed in the seventeenth volume of the *Journal of the London Statistical Society*.

The observations were made in New Zealand,—Dr. Thomson being stationed there with his regiment, and being charged with the duty of vaccinating all natives employed by the government. The islanders thus used for experiment were to some extent picked men, as none but able-bodied persons would have been selected for employ, and as they were, moreover, (he states,) accustomed to lifting burdens, and better-fed than the majority of their countrymen. The New

Zealand race, as a whole, is certainly a very favorable type of barbarism, having but just emerged from an utterly savage condition, having been cannibals within one generation, and being the very identical people among whom were recorded those wonderful cures of flesh-wounds to which Emerson has referred. Cook and all other navigators have praised their robust physical aspect, and they undoubtedly, with the Fijians and the Tongans, stand at the head of all island races. They are admitted to surpass our American Indians, as well as the Kaffirs and the Joloffs, probably the finest African races; and a careful comparison between New-Zealanders and Anglo-Saxons will, therefore, approach as near to an *experimentum crucis* as any single set of observations can. The following tables have been carefully prepared from those of Dr. Thomson, with the addition of some scanty facts from other sources,—scanty, because, as Quetelet indignantly observes, less pains have as yet been taken to measure accurately the physical powers of man than those of any machine he has constructed or any animal he has tamed.

TABLE.

	HEIGHT.	Number measured.	Average.
New-Zealanders		147	5 feet 6 $\frac{3}{4}$ inches.
Students at Edinburgh		800	5 " 7 $\frac{1}{10}$ "
Class of 1860. Cambridge (Mass.)		106	5 " 7 $\frac{3}{8}$ "
Students at Cambridge (Eng.)		80	5 " 8 $\frac{3}{8}$ "
	WEIGHT.		
New-Zealanders		146	140 pounds.
Soldiers 58th Regiment		1778	142 "
Class of 1860. Cambridge (Mass.)		106	142 $\frac{1}{2}$ "
Students at Cambridge (Eng.)		80	143 "
Men weighed at Boston (U. S.) Mechanics' Fair, 1860		4369	146 $\frac{3}{4}$ "
Englishmen (Dr. Thomson)		2648	148 "
Cambridge, Eng. (a newspaper statement)		—	151 "
Revolutionary officers at West Point, August 10th, 1778, given in "Milledulcia," p. 273		11	226 "
	AREA OF CHEST.		
New-Zealanders		151	35.36 inches.
Soldiers 58th Regiment		628	35.71 "
	STRENGTH IN LIFTING.		
New-Zealanders		31	367 pounds.
Students at Edinburgh, aged 25		—	416 "
Soldiers 58th Regiment		33	422 "

NOTE. The range of strength among the New-Zealanders was from 250 pounds to 420 pounds; among the soldiers, from 350 pounds to 504 pounds.

But it is the test of longevity which exhibits the greatest triumph for civilization, because here the life-insurance tables furnish ample, though comparatively recent statistics. Of course, in legendary ages all lives were of enormous length; and the Hindoos in their sacred books attribute to their progenitors a career of forty million years or thereabouts,—what may safely be termed a ripe old age; for if a man were still unripe after celebrating his forty-millionth birthday, he might as well give it up. But from the beginning of accurate statistics we know that the duration of life in any nation is a fair index of its progress in civilization. Quetelet gives statistics, more or less reliable, from every nation of Northern Europe, showing a gain of ten to twenty-five per cent. during the last century. Where the tables are most carefully prepared, the result is least equivocal. Thus, in Geneva, where accurate registers have been kept for three hundred years, it seems that from 1560 to 1600 the average lifetime of the citizens was twenty-one years and two months; in the next century, twenty-five years and nine months; in the century following, thirty-two years and nine months; and in the year 1833, forty years and five months: thus nearly doubling the average age of man in Geneva, within those three centuries of social progress. In France, it is estimated, that, in spite of revolutions and Napoleons, human life has been gaining at the rate of two months a year for nearly a century. By a manuscript of the fourteenth century, moreover, it is shown that the rate of mortality in Paris was then one in sixteen,—one person dying annually to every sixteen of the inhabitants. It is now one in thirty-two,—a gain of a hundred per cent. in five hundred years. In England the progress has been far more rapid. The rate of mortality in 1690 was one in thirty-three; in 1780 it was one in forty; and it stands now at one in sixty,—the healthiest condition in Europe,—while in half-barbarous Russia the rate of mortality is one in twenty-seven. It would be easy to multiply these statistics to any extent; but

they all point one way, and no medical statistician now pretends to oppose the dictum of Hufeland, that “a certain degree of culture is physically necessary for man, and promotes duration of life.”

The simple result is, that the civilized man is physically superior to the barbarian. There is now no evidence that there exists in any part of the world a savage race who, taken as a whole, surpass or even equal the Anglo-Saxon type in average physical condition; as there is also none among whom the President elect of the United States and the Commander-in-chief of his armies would not be regarded as remarkably tall men, and Dr. Windship a remarkably strong one. “It is now well known,” says Prichard, “that all savage races have less muscular power than civilized men.” Johnstone in Northern Africa, and Cumming in Southern Africa, could find no one to equal them in strength of arm. At the Sandwich Islands, Ellis records, that, “when a boat manned by English seamen and a canoe with natives left the shore together, the canoe would uniformly leave the boat behind, but they would soon relax, while the seamen, pulling steadily on, would pass them, but, if the voyage took three hours, would invariably reach the destination first.” Certain races may have been regularly trained by position and necessity in certain particular arts,—as Sandwich-Islanders in swimming, and our Indians in running,—and may naturally surpass the average skill of those who are comparatively out of practice in that speciality; yet it is remarkable that their greatest feats even in these ways never seem to surpass those achieved by picked specimens of civilization. The best Indian runners could only equal Lewis and Clarke’s men, and they have been repeatedly beaten in prize-races within the last few years; while the most remarkable aquatic feat on record is probably that of Mr. Atkins of Liverpool, who recently dived to a depth of two hundred and thirty feet, reappearing above water in one minute and eleven seconds.

In the wilderness and on the prairies,

we find a general impression that cultivation and refinement must weaken the race. Not at all; they simply domesticate it. Domestication is not weakness. A strong hand does not become less muscular under a kid glove; and a man who is a hero in a red shirt will also be a hero in a white one. Civilization, imperfect as it is, has already procured for us better food, better air, and better behavior; it gives us physical training on system; and its mental training, by refining the nervous organization, makes the same quantity of muscular power go much farther. The young English ensigns and lieutenants who at Waterloo (in the words of Wellington) "rushed to meet death, as if it were a game of cricket," were the fruit of civilization. They were representatives, indeed, of the aristocracy of their nation; and here, where the aim of all institutions is to make the whole nation an aristocracy, we must plan to secure the same splendid physical superiority on a grander scale. It is in our power, by using even very moderately for this purpose our magnificent machinery of common schools, to give to the physical side of civilization an advantage which it has possessed nowhere else, not even in England or Germany. It is not yet time to suggest detailed plans on this subject, since the public mind is not yet fully awake even to the demand. When the time comes, the necessary provisions can be made easily, — at least, as regards boys; for the physical training of girls is a far more difficult problem. The organization is more delicate and complicated, the embarrassments greater, the observations less carefully made, the successes fewer, the failures far more disastrous. Any intelligent and robust man may undertake the physical training of fifty boys, however delicate their organization, with a reasonable hope of rearing nearly all of them, by easy and obvious methods, into a vigorous maturity; but what wise man or woman can expect anything like the same proportion of success, at present, with fifty American girls?

This is the most momentous health-problem with which we have to deal, — to secure the proper physical advantages of civilization for American women. Without this there can be no lasting progress. The Sandwich Island proverb says, —

"If strong be the frame of the mother,
Her son shall make laws for the people."

But in this country, it is scarcely an exaggeration to say that every man grows to maturity surrounded by a circle of invalid female relatives, that he later finds himself the husband of an invalid wife and the parent of invalid daughters, and that he comes at last to regard invalidism, as Michelet coolly declares, the normal condition of that sex, — as if the Almighty did not know how to create a woman. This, of course, spreads a gloom over life. When I look at the morning throng of schoolgirls in summer, hurrying through every street, with fresh, young faces, and vesture of lilies, duly curled and straw-hatted and booted, and turned off as patterns of perfection by proud mammas, — it is not sad to me to think that all this young beauty must one day fade and die, for there are spheres of life beyond this earth, I know, and the soul is good to endure through more than one; — the sadness is in the unnatural nearness of the decay, to foresee the living death of disease that is waiting close at hand for so many, to know how terrible a proportion of those fair children are walking unconsciously into a weary, wretched, powerless, joyless, useless maturity. Among the myriad triumphs of advancing civilization, there seems but one formidable danger, and that is here.

It cannot be doubted, however, that the peril will pass by, with advancing knowledge. In proportion to our national recklessness of danger is the promptness with which remedial measures are adopted, when they at last become indispensable. In the mean time, we must look for proofs of the physical resources of woman into foreign and even into savage lands. When an American mother tells

me with pride, as occasionally happens, that her daughter can walk two miles and back without great fatigue, the very boast seems a tragedy; but when one reads that Oberea, queen of the Sandwich Islands, lifted Captain Wallis over a marsh as easily as if he had been a little child, there is a slight sense of consolation. Brunhilde, in the "Nibelungen," binds her offending lover with her girdle and slings him up to the wall. Cymburga, wife of Duke Ernest of Lithuania, could crack nuts between her fingers, and drive nails into a wall with her thumb;—whether she ever got her husband under it is not recorded. Let me preserve from oblivion the renown of my Lady Butterfield, who, about the year 1700, at Wanstead, in Essex, (England,) thus advertised:—"This is to give notice to my honored masters and ladies and loving friends, that my Lady Butterfield gives a challenge to ride a horse, or leap a horse, or run afoot, or *hollo*, with any woman in England seven years younger, but not a day older, because I won't undervalue myself, being now 74 years of age." Nor should be left unrecorded the high-born Scottish damsel whose tradition still remains at the Castle of Huntingtower, in Scotland, where two adjacent pinnacles still mark the Maiden's Leap. She sprang from battlement to battlement, a distance of nine feet and four inches, and eloped with her lover. Were a young lady to go through one of our villages in a series of leaps like that, and were she to require her lovers to follow in her footsteps, it is to be feared that she would die single.

Yet the transplanted race which has in two centuries stepped from Delft Haven to San Francisco has no reason to be ashamed of its physical achievements,

the more especially as it has found time on the way for one feat of labor and endurance which may be matched without fear against any historic deed. When civilization took possession of this continent, it found one vast coating of almost unbroken forest overspreading it from shore to prairie. To make room for civilization, that forest must go. What were Indians, however deadly,—what starvation, however imminent,—what pestilence, however lurking,—to a solid obstacle like this? No mere courage could cope with it, no mere subtlety, no mere skill, no Yankee ingenuity, no labor-saving machine with head for hands; but only firm, unwearying, bodily muscle to every stroke. Tree by tree, in two centuries, that forest has been felled. What were the Pyramids to that? There does not exist in history an athletic feat so astonishing.

But there yet lingers upon this continent a forest of moral evil more formidable, a barrier denser and darker, a Dismal Swamp of inhumanity, a barbarism upon the soil, before which civilization has thus far been compelled to pause,—happy, if it could even check its spread. Checked at last, there comes from it a cry as if the light of day had turned to darkness,—when the truth simply is, that darkness is being mastered and surrounded by the light of day. Is it a good thing to "extend the area of freedom" by pillaging some feeble Mexico? and does the phrase become a bad one only when it means the peaceful progress of constitutional liberty within our own borders? The phrases which oppression teaches become the watchwords of freedom at last, and the triumph of Civilization over Barbarism is the only Manifest Destiny of America.

WHO WAS CASPAR HAUSER?

RECENT publications have again attracted our attention to a subject which about thirty years ago was the cause of great excitement and innumerable speculations. The very extraordinary advent, life, and death of Caspar Hauser, the novelty and singularity of all his thoughts and actions, and his charming innocence and amiability, interested at the time all Europe in his behalf. Thrown upon the world in a state of utter helplessness, he was adopted by one of the cities of Germany, and became not only a universal pet, but a sight which people flocked from all parts to see. It became a perfect fever, raging throughout Germany, and extending also to other countries. The papers teemed with accounts and conjectures. Innumerable essays and even books were written, almost every one advancing a different theory for the solution of the mystery. But his death was still more the occasion for their appearance, and for some time thereafter they literally swarmed from the press. Every one who had in any way come in contact with him, and a great many who knew him by reputation only, thought themselves called upon to give their views, so that in a little while the subject acquired almost a literature of its own.

But this excitement gradually disappeared, and with it most of the literature which it had called forth. There are a few names, however, which occur frequently in connection with that of Caspar Hauser, to whose opinions we shall subsequently call attention. They are Feuerbach, Daumer, Merker, Stanhope, Binder, Meier, and Fuhrmann.* Of these, Binder was his earliest protector; Feuerbach conducted the legal investigations to which Caspar's mysterious appearance gave rise; Daumer was for a

long time his teacher and host; Stanhope adopted him; Meier afterwards filled Daumer's place; and Fuhrmann was the clergyman who attended his death-bed. Merker, though never thrown very closely in contact with Caspar, was a Prussian Counsellor of Police, and as such his opinion may perhaps have more than ordinary weight with some. Most of them published their various opinions during Caspar's life or soon after his death, and the subject was then allowed to sink to its proper level and attract no further attention. Within a few years, however, it has again been brought into prominent light by some new publications. One of these is an essay written by Feuerbach and published in his works edited by his son, in which he endeavors to prove that Caspar Hauser was the son of the Grand Duchess Stephanie of Baden; another is a book by Daumer, which he devotes entirely to the explosion of all theories that have ever been advanced; and a third, by Dr. Eschricht, contends that Caspar was at first an idiot and afterwards an impostor. Before considering these different theories, let us recall the principal incidents of his life. These have, indeed, been placed within the reach of the English reader by the Earl of Stanhope's book and by a translation of Feuerbach's "*Kaspar Hauser. Beispiel eines Verbrechens am Seelenleben des Menschen*,"* published in Boston in 1832; but, as the former has, we believe, obtained little circulation in this country, and the latter is now probably out of print, a short account of the life of this singular being may not be deemed amiss.

On the 26th of May, 1828, a citizen of Nuremberg, while loitering in front of his house in the outskirts of the town, saw, tottering towards him, a lad of sixteen or seventeen years, coarsely and

* Daumer, in his *Disclosures concerning Caspar Hauser*, refers to a great many more than these; but it is impossible to follow his example in so limited a space.

* *Caspar Hauser. An Example of a Crime against the Life of Man's Soul.*

poorly clad. He held in his hand a letter, which he presented to the citizen; but to all questions as to who he was, whence he came, and what he wanted, he replied only in an unintelligible jargon. The letter was addressed to the captain of a cavalry company then stationed at Nuremberg, to whom he was taken. It stated substantially, that a boy had been left at the writer's door on the 7th of October, 1812, that the writer was a poor laborer with a large family, but that he had nevertheless adopted the boy, and had reared him in such strict seclusion from the world that not even his existence was known. The letter said further, that, so far from being able to answer, the lad could not even comprehend any questions put to him. It therefore discouraged all attempts to obtain any information in that way, and ended with the advice, that, according to his desire, he should be made a dragoon, as his father had been before him. Inclosed in this letter was a note, professedly by the mother, and pretending to have been left with him, when, as an infant, Caspar Hauser was first cast upon the world, but, in reality, as it was afterwards proved, written by the same person. This note gave the date of his birth, pleaded the poverty of the mother as an excuse for thus abandoning her child, and contained the same request as to his joining a cavalry regiment when he should arrive at the age of seventeen.

The first impression produced by Caspar's appearance and behavior was, that he was some idiot or lunatic escaped from confinement; it remained only to be shown whence he had escaped. In the mean time he was placed under the protection of the police, who removed him to their guard-room. There he showed no consciousness of what was going on around him; his look was a dull, brutish stare; nor did he give any indication of intelligence, until pen and paper were placed in his hand, when he wrote clearly and repeatedly, "Kaspar Hauser." Since then he has been known by that name.

When it became evident that the first conjectures concerning him were wrong, strenuous efforts were made by the police to sound the mystery, but without the slightest success. He himself could give no clue; for he neither understood what others said nor could make himself understood. With the exception of some six words, the sounds Caspar uttered were entirely meaningless. He recognized none of the places where he had been, no trace could be obtained of him elsewhere, and the most vigilant search brought nothing to light. The surprise which his first appearance produced increased as he became better known. It then became more and more evident that he was neither an idiot nor a lunatic; at the same time his manners were so peculiar, and his ignorance of civilized life and his dislike for its customs so great, that all sorts of conjectures were resorted to in order to explain the mystery.

It was ascertained that he must have been incarcerated in some dungeon, entirely shut out from the light of the sun, which gave him great pain. The structure of his body, the tenderness of his feet, and the great difficulty and suffering which he experienced in walking, indicated beyond a doubt that he had been kept in a sitting posture, with his legs stretched straight out before him. His sustenance had been bread and water; for he not only evinced great repugnance to any other food, but the smallest quantity affected his constitution in the most violent manner. It was also evident that he had never come in contact with human beings, beyond what was necessary for supplying his immediate wants, and, strange to say, teaching him to write.

That these inferences were well-founded was proved by the subsequent disclosures of Caspar himself, after he had acquired a sufficient command of language. The account he then gave was as follows.

"He neither knows who he is nor where his home is. It was only at Nu-

remberg that he came into the world. Here he first learned, that, besides himself and 'the man with whom he had always been,' there existed other men and other creatures. As long as he can recollect, he had always lived in a hole, (a small, low apartment, which he sometimes calls a cage,) where he had always sat upon the ground, with bare feet, and clothed only with a shirt and a pair of breeches. In his apartment, he never heard a sound, whether produced by a man, by an animal, or by anything else. He never saw the heavens, nor did there ever appear a brightening (daylight) such as at Nuremberg. He never perceived any difference between day and night, and much less did he ever get a sight of the beautiful lights in the heavens. Whenever he awoke from sleep, he found a loaf of bread and a pitcher of water by him. Sometimes his water had a bad taste; whenever this was the case, he could no longer keep his eyes open, but was compelled to fall asleep; and when he afterwards awoke, he found that he had a cleap shirt on, and that his nails had been cut.*

"He never saw the face of the man who brought him his meat and drink. In his hole he had two wooden horses and several ribbons. With these horses he had always amused himself as long as he was awake; and his only occupation was, to make them run by his side, and to arrange the ribbons about them in different positions. Thus one day had passed the same as another; but he had never felt the want of anything, had never been sick, and — once only excepted — had never felt the sensation of pain. Upon the whole, he had been much happier there than in the world, where he was obliged to suffer so much. How long he had continued to live in this situation he knew not; for he had had no

knowledge of time. He knew not when or how he came there. Nor had he any recollection of ever having been in a different situation, or in any other than in that place. The man with whom he had always been never did him any harm. Yet one day, shortly before he was taken away, when he had been running his horse too hard, and had made too much noise, the man came and struck him upon his arm with a stick, or with a piece of wood; this caused the wound which he brought with him to Nuremberg.

"Pretty nearly about the same time, the man once came into his prison, placed a small table over his feet, and spread something white upon it, which he now knows to have been paper; he then came behind him, so as not to be seen by him, took hold of his hand, and moved it backwards and forwards on the paper, with a thing (a lead pencil) which he had stuck between his fingers. He (Hauser) was then ignorant of what it was; but he was mightily pleased, when he saw the black figures which began to appear upon the white paper. When he felt that his hand was free, and the man was gone from him, he was so much pleased with this new discovery, that he could never grow tired of drawing these figures repeatedly upon the paper. This occupation almost made him neglect his horses, although he did not know what those characters signified. The man repeated his visits in the same manner several times.

"Another time the man came, lifted him from the place where he lay, placed him on his feet, and endeavored to teach him to stand. This he repeated at several different times. The manner in which he effected this was the following: he seized him firmly around the breast, from behind, placed his feet behind Caspar's feet, and lifted these, as in stepping forward.

"Finally, the man appeared once again, placed Caspar's hands over his shoulders, tied them fast, and thus carried him on his back out of the prison. He was car-

* When he resided with Professor Daumer, a drop of opium in a glass of water was administered to him. After swallowing a mouthful, he exclaimed, "That water is nasty; it tastes exactly like the water I was sometimes obliged to drink in my cage."

ried up (or down) a hill. He knows not how he felt; all became night, and he was laid upon his back."—By the expression, "all became night," he meant that he fainted away. The little which Caspar was able to relate in regard to his journey is not of any particular interest, and we omit it here.

This is all that is known with any certainty of the early life of this unfortunate being. The conjectures to which it has given rise will be considered later. Let us first finish his history.

As was to be expected, Caspar Hauser's faculties developed very gradually. His mind was in a torpor, and, placed suddenly amid, to him, most exciting scenes, it was long before he could understand the simplest phenomena of Nature. The unfolding of his mind was exactly like that of a child. Feuerbach, in his book on Caspar Hauser, gives the main features of this gradual development. We can only pick out a few.

It is remarkable that in the same proportion as he advanced in knowledge and acquaintance with civilized life, the intensity of all his faculties diminished. It was so with his memory. He was at first able to exhibit most surprising feats. As an experiment, thirty, forty, and, on one occasion, forty-five names of persons were mentioned to him, which he afterwards repeated with all their titles, —to him, of course, entirely meaningless. So, too, with his power of sight. At first, he was able to see in the dark perfectly well, and much better than in the light of the sun, which was very painful to him. He very frequently amused himself at others groping in the dark, when he experienced not the slightest difficulty. On one occasion, in the evening, he read the name on a door-plate at the distance of one hundred and eighty paces. This keenness of vision did not, however, retain its entire vigor, but decreased as he became more accustomed to the sun. For some time after he made his appearance he had no idea of perspective, but would clutch like a child at objects far off. Nor had he any

conception of the beauties of Nature, which he afterwards explained by saying that it then appeared to him like a mass of colors jumbled together. Nothing was beautiful, unless it was red, except a starry heaven,—and the emotion which he felt, on first beholding this, was truly touching. Until then, he had invariably spoken of "the man with whom he had always been" with feelings of affection; he longed to return to him, and looked upon all his studies as merely a temporary thing; some day he would go back and show the man how much he had learned. But when he first looked upon the heavens, his tone became entirely changed, and he denounced the man severely for never having shown him such beautiful things.

All his senses were thus at first wonderfully keen. It was so with his hearing and smell. The latter was the source of most of his sufferings; for, being so exceedingly sensitive, even the most scentless things made him sick. He liked but one smell, that of bread, which had been his only food for seventeen years. It was a long time, indeed, before he could take any other food at all, and he only became accustomed to it very gradually.

The effect produced upon Caspar Hauser by contact with or proximity to animals was also very curious. He was able to detect their presence under singularly unfavorable circumstances. Metals, too, had a very powerful effect upon him, and possessed for him a strong magnetic power. But it is impossible to give all the details, however interesting; for them we must refer to Feuerbach.

His mind, as has been already said, was at first sunk in almost impenetrable darkness. He knew of but two divisions of earthly things,—man and beast, "*bua*" and "*ross*." The former was a word of his own. The latter, which is the German for *horse*, included everything not human, whether animate or inanimate. Between these he for a long time saw no difference. He could not understand why pictures and statues did not move, and he regarded his toy-horses as living

things. To inanimate things impelled by foreign forces he ascribed volition.

Religion he, of course, had none. He possessed naturally a very amiable character, and his thoughts and conduct were as pure as though guided by the soundest system of morality. But he knew nothing of a God, and one of the greatest difficulties Daumer had to encounter was instructing him on this point. His untutored mind could not master the doctrines of theology, and he was constantly puzzled by questions which he himself suggested, and which his instructor often found it impossible to answer satisfactorily.

Physically he was very weak. The shortest walk would fatigue him. At first he could scarcely shuffle along at all, on account of the tenderness of his feet, and because his body had always been kept in one position. He so far overcame this, however, as to be able to walk a little, though always with an effort. But on horseback he never became tired. From the first time that he mounted a horse, he showed a love for the exercise, and a power of endurance utterly at variance with all other exhibitions of his strength; and he very soon acquired a degree of skill which made him an object of envy to all the cavalry-officers stationed in the neighborhood. So inconsistent and incomprehensible was everything about Caspar Hauser!

In October, 1829, while residing in the family of Professor Daumer, an attempt was made upon his life, which was only so far successful as to give a very violent shock to his delicate constitution. The perpetrator of the crime was never discovered. Caspar was afterwards adopted by the Earl of Stanhope, and by him removed to Anspach. Feuerbach gives a very interesting description of him, as he appeared at this time.

"In understanding a man, in knowledge a little child, and in many things more ignorant than a child, the whole of his language and demeanor shows often a strangely contrasted mingling of manly and childish behavior. With a serious countenance and in a tone of great im-

portance, he often utters things which, coming from any other person of the same age, would be called stupid or silly, but which, coming from him, always force upon us a sad, compassionate smile. It is particularly farcical to hear him speak of the future plans of his life,—of the manner in which, after having learned a great deal and earned money, he intends to settle himself with his wife, whom he considers as an indispensable part of domestic furniture."

"Mild and gentle, without vicious inclinations, and without passions and strong emotions, his quiet mind resembles the smooth mirror of a lake in the stillness of a moonlight night. Incapable of hurting an animal, compassionate even to the worm, which he is afraid to tread upon, timid even to cowardice, he will nevertheless act regardless of consequences, and even without forbearance, according to his own convictions, whenever it becomes necessary to defend or to execute purposes which he has once perceived and acknowledged to be right. If he feels himself annoyed in any manner, he will long bear it patiently, and will try to get out of the way of the person who is thus troublesome to him, or will endeavor to effect a change in his conduct by mild expostulations; but, finally, if he cannot help himself in any other manner, as soon as an opportunity of doing so offers, he will very quietly slip off the bonds that confine him,—yet without bearing the least malice against him who may have injured him. He is obedient, obliging, and yielding; but the man who accuses him wrongfully, or asserts to be true what he believes to be untrue, need not expect, that, from mere complaisance, or from other considerations, he will submit to injustice or to falsehood; he will always modestly, but firmly, insist upon his right; or perhaps, if the other seems inclined obstinately to maintain his ground against him, he will silently leave him."

But the fate which had been pursuing this unfortunate being, and without which the tragedy of his life would have been

incomplete, overtook him at last. On the 15th of December, 1833, he was induced by some unknown person to meet him in a retired spot in the city of Anspach, under the pretence that he should then have the secret of his parentage revealed to him. The real object was his murder, and this time it was successful. Caspar was stabbed to the heart. He still had sufficient strength left to walk about a thousand paces; and, indeed, the wound was outwardly so insignificant, that it was at first believed to be a mere scratch. This strengthened an opinion which was then gradually gaining ground, that Caspar was an impostor; for it was firmly believed by some that he had inflicted this wound upon himself, as well as the one received in 1829, in order to quicken the somewhat languishing interest taken in him. Nor did they give up this opinion when the wound was found to be fatal. They then boldly asserted that he had wounded himself more severely than he had intended. And not content with simply maintaining this absurd opinion, they taunted him with it on his death-bed, so that he was not even allowed to die in peace. Nothing was wanting to fill his bitter cup. How terrible must have been the mental torture to wring from so resigned a soul the exclamation, "O God! O God! to die thus with contumely and disgrace!" The German is still more expressive, — "*Ach, Gott! ach, Gott! so abkratzen müssen mit Schimpf und Schande!*"

Such was the life of Caspar Hauser. For nearly seventeen years the inmate of a dreary prison, shut out from the light, without a single companion in his misery, drugged when it was necessary to change his linen, with no food but bread, — for seventeen years did he thus exist, — his mind a perfect blank. Suddenly cast upon the world, amid strange beings whom he could not understand and by whom he was not understood, he long knew scarcely a sensation save that of pain. And when at last he did become accustomed to civilized life, and the darkness which enshrouded him disappeared

before the rays of light that found entrance into his intellect, it was only to awake to a knowledge of the utter misery of his position. He then saw himself a helpless orphan, the inferior of all with whom he came in contact, and a dependant upon the charity of others for his support. He awoke to find that he had lost seventeen years of this beautiful life, seventeen years which he never could recall, — that he never could take his stand amongst men as their equal, but would always be regarded as an unhappy being meriting their pity, — much like that felt for the pains of some suffering brute. Nor was this all. During the few years that were granted him in our world, persecuted by some unknown person, against whom he was helpless, — knowing that his life was aimed at by some one, but unable to protect himself, and at last falling a victim to the threatened blow, — and, worst of all, charged on his death-bed with being an impostor, — such was the life of Caspar Hauser!

Among the different opinions which have existed in regard to his origin, the most noticeable are those advanced by Stanhope and Merker, and by Dätmer, Eschricht, and Feuerbach. The Earl of Stanhope's connection with Caspar Hauser was a rather peculiar one. He made his appearance in Nuremberg at the time the first attempt was made upon Caspar's life, but took no particular notice of him, and left without having shown any interest in him. On a second visit, about seven months later, he suddenly became passionately attached to Caspar, showed most unusual marks of fondness for him, and finally adopted him. He then removed him to Anspach, and remained his protector until his death in December, 1833. The day after his burial, Stanhope appeared in Anspach, and took particular pains to proclaim then, and subsequently at a judicial investigation in Munich, and in several tracts, his belief that Caspar was an impostor. This had already been maintained by Merker, the Prussian Counsellor of Police. The theory which Stanhope now advanced was, that Caspar

was a journeyman tailor or glover, from some small village on the Austrian side of the river Salzach. The reasons which he assigns for his belief in the imposture are all derived from Caspar's supposed want of integrity and veracity. They impeach the character of Caspar living, and not of Caspar dead. Why, then, did Stanhope wait for his death before he proclaimed the imposture? Why did he remain his protector, and thus make himself a party to the fraud? His conduct is not easily explained. On the other hand, there is little ground for Daumer's conclusions. These are given at length in his "Disclosures concerning Caspar Hauser," published in 1859, a book called forth by attacks made upon him by Eschricht. Considering Stanhope's conduct, and his endeavor after Caspar's death to induce Daumer to support his views as to the imposture, and, upon his indignant refusal, making him twice the object of a personal attack, Daumer thinks that there is reason to believe Stanhope personally interested. He thinks that Caspar was the legitimate heir to some great English estate and title, that he was removed in order to make way for some one else, and that his murder was intrusted to some person who had not the courage or the wickedness to perpetrate it, but removed him first to Hungary and afterwards to Germany, and supported him in the manner indicated, hoping that he would not long survive. When, however, he grew up, his support became irksome and he was cast upon the world. There he attracted so much attention, that the instigator of the crime, dreading a disclosure, sought his life again. When this proved unsuccessful, he was removed to Anspach; Feuerbach, who had shown the greatest determination to sound the mystery, was removed from the world, and at last the tragedy was made complete in Caspar's own death. All this points to Stanhope. And yet Daumer has not taken the trouble to inquire whether it agrees with the family history. It is possible that he may be right; but his story carries with it so

much the air of improbability, that we cannot give it credit without further proof.

In the seventh volume of Hitzig's "Annals of Criminal Jurisprudence," there is a communication from Lieutenant von Pireh, disclosing Caspar's acquaintance with certain Hungarian words. A little while before this announcement was made, a story had gone the rounds of the papers of Germany, that a governess residing in Pesth had fainted away, when the account of Caspar Hauser's appearance was related to her. All this naturally attracted attention to Hungary as the probable place of his birth; and it is for these reasons, that Feuerbach, Daumer, and others, suppose that he spent some part of his childhood in that country. After his death, Stanhope sent Lieutenant Hickel to Hungary to investigate the matter, but no traces were discovered, — a proof, as Stanhope has it, that these conclusions were groundless, and, according to Daumer, another proof of Stanhope's complicity. He believes that the very superficial search made by the order of Stanhope was intended to lull suspicion and prevent a more strict search being made.

To return to the opinion advanced by Merker, and subsequently adopted by Stanhope, — the thing is simply impossible. In the first place, it would have been impossible for an impostor to elude discovery. To trace him would have been the easiest thing in the world. With a vigilant police, in a thickly settled country, how could a man leave his place of abode, and travel, were it for ever so short a distance, without being known? But this is the least consideration. Caspar's whole life, his intellect, his body, the feats which he accomplished, when submitted to the most searching tests, were a refutation of the charge. But when it is added that he wounded himself in order to do away with suspicion, the accusation becomes so absurd as scarcely to merit refutation. It is answered by the fact, that it was proved, from the nature of the wounds, in both cases, that self-infliction was impossible. Nor is it con-

ceivable that any one should have been able so long to deceive people who were constantly with him and always on the alert. And it is remarkable that they who saw most of Caspar, and knew him best, were most firmly convinced of his integrity, — whilst his traducers were, almost without an exception, men who had never known him intimately. Feuerbach, Daumer, Binder, Meier, Fuhrmann, and many others, maintain his honesty in the strongest terms.

On the other hand, it is said, that it is equally impossible for a person to have been kept in any community in the manner in which it is asserted that he was kept; discovery was inevitable. But it must be remembered that this instance does not stand alone. If search were made, many cases of the same kind might be collected. It is by no means so rare an occurrence for persons to be kept secluded in such a manner as to conceal their existence from the world. Daumer mentions two similar cases which happened about the same time. The very year that Caspar Hauser appeared, the son of a lawyer, named Fleischmann, just deceased, was discovered in a retired chamber of the house. He was thirty-eight years old, and had been confined there since his twelfth year. The other case, also mentioned by Feuerbach, was still more distressing. Dr. Horn saw, in the infirmary at Salzburg, a girl, twenty-two years of age, who had been brought up in a pig-sty. One of her legs was quite crooked, from her having sat with them crossed; she grunted like a hog; and her actions were "brutishly unseemly in human dress." Daumer also relates a third case, which was made the subject of a romantic story published in a Nuremberg paper, but which, he says, lacks confirmation. It was the discovery, in a secret place, of the grown-up son of a clergyman by his housekeeper. Whether this be true or not, both Feuerbach and Daumer believe that many similar instances do exist, which never come to light. It is not impossible, therefore, that Caspar Hauser was confined in

a cellar to which none but his keeper sought entrance. Who would suspect the existence of a human being, taught to be perfectly submissive and quiet and to have no wants, in such a place, when even the existence of the subterranean prison itself was probably unknown? The cases mentioned above were certainly more singular in this respect.

But Eschricht's opinion is the most peculiar of all. In his "*Unverstand und schlechte Erziehung*," he maintains that Caspar was an idiot until he was brought to Nuremberg, that his mind was then strengthened and developed, and that he was then transformed from an idiot into an impostor. This is still more impossible than Stanhope's theory; for in this case Daumer, Feuerbach, Hiltel the jailer, Binder the mayor, and indeed all Caspar's earliest friends, instead of being victims of an imposture, are made partakers in the fraud. No one acquainted with the irreproachable character of these men could entertain the idea for a minute; and when we remember that it was not one, but many, who must have been parties to it, it becomes doubly impossible.

We come now to consider the opinion of Feuerbach; and we shall do it the more carefully, because in it, we feel confident, lies the true solution of the question. He was at the time President of the Court of Appeal of the Circle of Rezat. He had risen to this honorable position gradually, and it was the reward of his distinguished merit alone. His works on criminal jurisprudence, and the penal code which he drew up for the kingdom of Bavaria, and which was adopted by other states, had placed him in the first rank of criminal lawyers. It was he who conducted the first judicial investigations concerning Caspar Hauser. He was, therefore, intimately acquainted with all the circumstances of the case, and had ample opportunity to form a deliberate opinion. How the idea originated, that Caspar Hauser belonged to the House of Baden, it is difficult to say. Feuerbach never published

it to the world. In his book on Caspar Hauser he makes no mention of it; but in 1832 he addressed a paper to Queen Caroline of Bavaria, headed, "Who might Caspar Hauser be?" in which he endeavors to show that he was the son of the Grand-Duchess Stephanie. This paper was, we believe, first published in 1852, in his "Life and Works," by his son.* The first part of it treats of Caspar's rank and position in general, and he comes to the following conclusions. Caspar was a legitimate child. Had he been illegitimate, less dangerous and far easier means would have been resorted to for concealing his existence and suppressing a knowledge of his parentage. And here we may add, that the supposition has never prevailed that he was the offspring of a criminal connection, and that these means were taken for suppressing the mother's disgrace. A note which Caspar brought with him, when he appeared at Nuremberg, indicated that such was the case, but it was so evidently a piece of deception that it never obtained much credit. The second conclusion at which Feuerbach arrives is, that people were implicated who had command of great and unusual means,—means which could prompt an attempt at murder in a crowded city and in the open day, and which could over-bribe all rewards offered for a disclosure. Third, Caspar was a person on whose life or death great interests depended, else there would not have been such care to conceal his existence. Interest, and not revenge or hate, was the motive. He must have been a person of high rank. To prove this, Feuerbach refers to dreams of Caspar's. On one occasion, particularly, he dreamt that he was conducted through a large castle, the appearance of which he imagined that he recognized, and afterwards minutely described. This Feuerbach thinks was only the awakening of

past recollections. It would be interesting to know whether any palace corresponding to the description given exists. In the absence of such knowledge, this point of Feuerbach's argument appears a rather weak one. From the above propositions he concludes that Caspar was the legitimate child of princely parents, who was removed in order to open the succession to others, in whose way he stood.

The second division of the paper relates to the imprisonment, and here he takes a ground entirely opposed to the opinions of others. He believes that he was thus kept as a 'protection against some greater evil. His wants were supplied, he was well taken care of, and his keeper is therefore to be looked upon as his protector. Daumer sees in the keeper nothing but a hired murderer, whose courage or whose wickedness failed him. It is certainly difficult to imagine a kind friend immuring one in a dark subterranean vault, feeding one on bread, excluding light, fellowship, amusement, thoughts,—never saying a word, but studiously allowing one's mind to become a dreary waste. It is a friendship to which "most of us would prefer death. We are therefore inclined to think that Daumer is here in the right. But whatever the nature of his imprisonment, the principal argument does not lose its force.

In the third place, Feuerbach speaks of the family to which Caspar must have belonged. Just about the time of Caspar's birth, the eldest son of the Grand-Duchess of Baden died an infant. His death was followed in a few years by that of his only brother, leaving several sisters, who could not inherit the duchy. By these deaths the old House of the Zähringer became extinct, and the offspring of a morganatic marriage became the heirs to the throne. It was, therefore, for their interest that the other branch should die out. In addition to this, the mother of the new house was a woman of unbounded ambition and determined character, and had a bitter hatred for the Grand-Duchess. Without laying too much

* ANSELM RITTER VON FEUERBACH'S *Leben und Wirken, aus seinen ausgedruckten Briefen, Tagebüchern, Vorträgen und Denkschriften, veröffentlicht von seinem Sohne, LUDWIG FEUERBACH.* Leipzig, 1852.

stress, then, upon the nearness in date of the elder child's death and Caspar's birth, as given in the letter, there is reason to suppose that they were the same person. There was every feeling of interest to prompt the deed, there was the opportunity of sickness to accomplish it in, and there was an unscrupulous woman to take advantage of it. Is it, then, impossible that she, having command of the household, should have been able to substitute a dead for the living child? Accept the proposition, and the mystery is solved; reject it, and we are still groping in the dark. Nevertheless, there are circumstances which, even then, are incapable of explanation; but it is the most satisfactory theory, and certainly has less objections than the others. Feuerbach came to this conclusion early; for his paper addressed to Queen Caroline of Bavaria was written in 1832, the year before Caspar's death. Delicacy forbade the open discussion of the question; but, even at the time, this theory found many supporters. Some even went so far as to say that Feuerbach's sudden death the same year was owing to the indefatigable zeal with which he was ferreting out the mystery.

Of all the different explanations, then, which have been given, that of Feuerbach seems to be the most satisfactory. At the same time, like the rest, it is founded on conjecture. Its truth may never be proved. They whose interest it was to suppress the matter thirty years ago, and who resorted to such extreme measures in doing so, no doubt took ample precaution that every trace should be erased. It is barely possible that some confession or the discovery of some paper may cast light upon the subject; but the length of time which has elapsed renders it exceedingly improbable, and the mystery of Caspar Hauser, like the mysteries of the Iron Mask and Junius, will always remain a fruitful source of conjecture only.

It may not be uninteresting to close this sketch with the consideration of a point of law raised by Feuerbach in connection with the subject. It will be rec-

ollected that he calls his book "Caspar Hauser. An Example of a Crime against the Life of Man's Soul." The crime committed against Caspar Hauser was, according to the Bavarian code, twofold. There was the crime of *illegal imprisonment*, and the crime of *exposure*. And here Feuerbach advances the doctrine, that it was not only the actual confinement which amounted to illegal imprisonment, but that "we must incontestably, and, indeed, principally, regard as such the cruel withholding from him of the most ordinary gifts which Nature with a liberal hand extends even to the most indigent,—the depriving him of all the means of mental development and culture,—the unnatural detention of a human soul in a state of irrational animality." "An attempt," he says, "by artificial contrivances, to seclude a man from Nature and from all intercourse with rational beings, to change the course of his human destiny, and to withdraw from him all the nourishment afforded by those spiritual substances which Nature has appointed for food to the human mind, that it may grow and flourish, and be instructed and developed and formed,—such an attempt must, even quite independently of its actual consequences, be considered as, in itself, a highly criminal invasion of man's most sacred and most peculiar property,—of the freedom and the destiny of his soul. . . . Inasmuch as the whole earlier part of his life was thus taken from him, he may be said to have been the subject of a partial soul-murder." This crime, if recognized, would, according to Feuerbach, far outweigh the mere crime of illegal imprisonment, and the latter would be merged in it.

Tittmann, in his "Hand-Book of Penal Law," also speaks of crimes against the intellect, and particularly mentions the separation of a person from all human society, if practised upon a child before it has learned to speak and until the intellect has become sealed up, as well as the intentional rearing of a person to ignorance, as reducible to this head. This was written

before Caspar's case had occurred. He says, also, that they are similar to cases of homicide; because the latter are punished for destroying the rational being, and not the physical man. Murder and the destruction of the intellect are, therefore, equally punishable. The one merits the punishment of death as well as the other. Nor are we to take the possibility of a cure into consideration, any more than we do the possibility of extinguishing a fire. But where the law does not prescribe the punishment of death irrespectively of the possibility of recovery, the punishment would rarely exceed ten years in the House of Correction. We must understand Tittmann's remarks, however, to refer entirely to the law of Saxony,—that being the government under which he lived, and the only one in whose criminal code this crime is recognized.

Feuerbach wished to have this murder of the soul inserted in the criminal code of Bavaria as a punishable crime; but he was unsuccessful, and the whole doctrine has subsequently been condemned. Mittermaier, in a note to his edition of Feuerbach's "Text-Book of German Criminal Law," denies that there is any foundation for the distinction taken by him and Tittmann. He says, that, in the first place, it has not such an actual existence as is capable of proof; and, secondly, all crimes under it can easily be reached by some other law. The last objection does not, however, seem to be a very serious

one. If, as Feuerbach says, the crime against the soul is more heinous than that against the body, it certainly deserves the first attention, even if the one is not merged in the other. The crime being greater, the punishment would be greater; and the demands of justice would no more be satisfied by the milder punishment than if a murderer were prosecuted as a nuisance. The fact, therefore, that the crime is reducible to some different head, is not an objection. We meet with the most serious difficulty when we consider the possibility of proof. Taking it for granted that the crime does exist in the abstract, the only question is, whether it is of such a nature that it would be expedient for government to take cognizance of it. The soul being in its nature so far beyond the reach of man, and the difficulty of ever proving the effect of human actions upon it, would seem to indicate that it were better to allow a few exceptional cases to pass unnoticed than to involve the criminal courts in endless and fruitless inquiry. Upon the ground of expediency only should the crime go unnoticed, and not because it can be reached in some other way. For proof that it does exist, we can point to nothing more convincing than the life of Caspar Hauser itself. No one can doubt that his soul was the victim of a crime, for which the perpetrator, untouched by human laws, stands accused before the throne of God.

PAMPENEA.

AN IDYL.

LYING by the summer sea,
I had a dream of Italy.

Chalky cliffs and miles of sand,
Ragged reefs and salty caves,
And the sparkling emerald waves
Faded; and I seemed to stand,

Myself a languid Florentine,
In the heart of that fair land.
And in a garden cool and green,
Boccaccio's own enchanted place,
I met Pampenea face to face,—
A maid so lovely that to see
Her smile is to know Italy.

Her hair was like a coronet
Upon her Grecian forehead set,
Where one gem glistened sunnily,
Like Venice, when first seen at sea.
I saw within her violet eyes
The starlight of Italian skies,
And on her brow and breast and hand
The olive of her native land.

And knowing how, in other times,
Her lips were ripe with Tuscan rhymes
Of love and wine and dance, I spread
My mantle by an almond-tree :
“ And here, beneath the rose,” I said,
“ I'll hear thy Tuscan melody !”

I heard a tale that was not told
In those ten dreamy days of old,
When Heaven, for some divine offence,
Smote Florence with the pestilence,
And in that garden's odorous shade
The dames of the Decameron,
With each a happy lover, strayed,
To laugh and sing, at sorest need,
To lie in the lilies, in the sun,
With glint of plume and golden brede.

And while she whispered in my ear,
The pleasant Arno murmured near,
The dewy, slim chameleons run
Through twenty colors in the sun,
The breezes broke the fountain's glass,
And woke Æolian melodies,
And shook from out the scented trees
The bleached lemon-blossoms on the grass.

The tale ? I have forgot the tale !—
A Lady all for love forlorn ;
A Rosebud, and a Nightingale
That bruised his bosom on a thorn ;
A pot of rubies buried deep ;
A glen, a corpse, a child asleep ;
A Monk, that was no monk at all,
T' the moonlight by a castle-wall ;—

Kaleidoscopic hints, to be
Worked up in farce or tragedy.

Now while the sweet-eyed Tuscan wove
The gilded thread of her romance,
(Which I have lost by grievous chance,)
The one dear woman that I love,
Beside me in our seaside nook,
Closed a white finger in her book,
Half-vexed that she should read, and weep
For Petrarch, to a man asleep.
And scorning me, so tame and cold,
She rose, and wandered down the shore,
Her wine-dark drapery, fold in fold,
Imprisoned by an ivory hand;
And on a ridge of granite, half in sand,
She stood, and looked at Appledore.

And waking, I beheld her there
Sea-dreaming in the moted air,
A Siren sweet and debonair,
With wristlets woven of colored weeds,
And oblong lucent amber beads
Of sea-kelp shining in her hair.
And as I mused on dreams, and how
The something in us never sleeps,
But laughs or sings or moans or weeps,
She turned,—and on her breast and brow
I saw the tint that seemed not won
From kisses of New England sun;
I saw on brow and breast and hand
The olive of a sunnier land!
She turned,—and lo! within her eyes
The starlight of Italian skies!

Most dreams are dark, beyond the range
Of reason; oft we cannot tell
If they be born of heaven or hell;
But to my soul it seems not strange,
That, lying by the summer sea,
With that dark woman watching me,
I slept, and dreamed of Italy!

THE PROFESSOR'S STORY.

CHAPTER XXV.

THE PERILOUS HOUR.

UP to this time Dick Venner had not decided on the particular mode and the precise period of relieving himself from the unwarrantable interference which threatened to defeat his plans. The luxury of feeling that he had his man in his power was its own reward. One who watches in the dark, outside, while his enemy, in utter unconsciousness, is illuminating his apartment and himself so that every movement of his head and every button on his coat can be seen and counted, especially if he holds a loaded rifle in his hand, experiences a peculiar kind of pleasure, which he naturally hates to bring to its climax by testing his skill as a marksman upon the object of his attention.

Besides, Dick had two sides in his nature, almost as distinct as we sometimes observe in those persons who are the subjects of the condition known as *double consciousness*. On his New England side he was cunning and calculating, always cautious, measuring his distance before he risked his stroke, as nicely as if he were throwing his lasso. But he was liable to intercurrent fits of jealousy and rage, such as the light-hued races are hardly capable of conceiving, — blinding paroxysms of passion, which for the time overmastered him, and which, if they found no ready outlet, transformed themselves into the more dangerous forces that worked through the instrumentality of his cool craftiness.

He had failed as yet in getting any positive evidence that there was any relation between Elsie and the schoolmaster other than such as might exist unsuspected and unblamed between a teacher and his pupil. A book, or a note, even, did not prove the existence of any sentiment. At one time he would be devoured by suspicions, at another he would try

to laugh himself out of them. And in the mean while he followed Elsie's tastes as closely as he could, determined to make some impression upon her, — to become a habit, a convenience, a necessity, — whatever might aid him in the attainment of the one end which was now the aim of his life.

It was to humor one of her tastes already known to the reader, that he said to her one morning, — "Come, Elsie, take your castanets, and let us have a dance."

He had struck the right vein in the girl's fancy, for she was in the mood for this exercise, and very willingly led the way into one of the more empty apartments. What there was in this particular kind of dance which excited her it might not be easy to guess; but those who looked in with the old Doctor, on a former occasion, and saw her, will remember that she was strangely carried away by it, and became almost fearful in the vehemence of her passion. The sound of the castanets seemed to make her alive all over. Dick knew well enough what the exhibition would be, and was almost afraid of her at these moments; for it was like the dancing mania of Eastern devotees, more than the ordinary light amusement of joyous youth, — a convulsion of the body and the mind, rather than a series of voluntary modulated motions.

Elsie rattled out the triple measure of a saraband. Her eyes began to glitter more brilliantly, and her shape to undulate in freer curves. Presently she noticed that Dick's look was fixed upon her necklace. His face betrayed his curiosity; he was intent on solving the question, why she always wore something about her neck. The chain of mosaics she had on at that moment displaced itself at every step, and he was peering with malignant, searching eagerness to see if an unsunned ring of fairer hue than the rest of the surface, or any less easily ex-

plained peculiarity, were hidden by her ornaments.

She stopped suddenly, caught the chain of mosaics and settled it hastily in its place, flung down her castanets, drew herself back, and stood looking at him, with her head a little on one side, and her eyes narrowing in the way he had known so long and well.

"What is the matter, Cousin Elsie? What do you stop for?" he said.

Elsie did not answer, but kept her eyes on him, full of malicious light. The jealousy which lay covered up under his surface-thoughts took this opportunity to break out.

"You wouldn't act so, if you were dancing with Mr. Langdon,— would you, Elsie?" he asked.

It was with some effort that he looked steadily at her to see the effect of his question.

Elsie *colored*,— not much, but still perceptibly. Dick could not remember that he had ever seen her show this mark of emotion before, in all his experience of her fitful changes of mood. It had a singular depth of significance, therefore, for him; he knew how hardly her color came. Blushing means nothing, in some persons; in others, it betrays a profound inward agitation,— a perturbation of the feelings far more trying than the passions which with many easily moved persons break forth in tears. All who have observed much are aware that some men, who have seen a good deal of life in its less chastened aspects and are anything but modest, will blush often and easily, while there are delicate and sensitive women who can turn pale, or go into fits, if necessary, but are very rarely seen to betray their feelings in their cheeks, even when their expression shows that their inmost soul is blushing scarlet.

Presently she answered, abruptly and scornfully,—

"Mr. Langdon is a gentleman, and would not vex me as you do."

"A gentleman!" Dick answered, with the most insulting accent,— "a gentleman! Come, Elsie, you've got the Dud-

ley blood in your veins, and it doesn't do for you to call this poor, sneaking schoolmaster a gentleman!"

He stopped short. Elsie's bosom was heaving, the faint flush on her cheek was becoming a vivid glow. Whether it were shame or wrath, he saw that he had reached some deep-lying centre of emotion. There was no longer any doubt in his mind. With another girl these signs of confusion might mean little or nothing; with her they were decisive and final. Elsie Venner loved Bernard Langdon.

The sudden conviction, absolute, overwhelming, which rushed upon him, had wellnigh led to an explosion of wrath, and perhaps some terrible scene which might have fulfilled some of Old Sophy's predictions. This, however, would never do. Dick's face whitened with his thoughts, but he kept still until he could speak calmly.

"I've nothing against the young fellow," he said; "only I don't think there's anything quite good enough to keep the company of people that have the Dudley blood in them. You a'n't as proud as I am. I can't quite make up my mind to call a schoolmaster a gentleman, though this one may be well enough. I've nothing against him, at any rate."

Elsie made no answer, but glided out of the room and slid away to her own apartment. She bolted the door and drew her curtains close. Then she threw herself on the floor, and fell into a dull, slow ache of passion, without tears, without words, almost without thoughts. So she remained, perhaps, for a half-hour, at the end of which time it seemed that her passion had become a sullen purpose. She arose, and, looking cautiously round, went to the hearth, which was ornamented with curious old Dutch tiles, with pictures of Scripture subjects. One of these represented the lifting of the brazen serpent. She took a hair-pin from one of her braids, and, insinuating its points under the edge of the tile, raised it from its place. A small leaden box lay under the tile, which she opened, and, taking from it a little white powder, which she folded

in a scrap of paper, replaced the box and the tile over it.

Whether Dick had by any means got a knowledge of this proceeding, or whether he only suspected some unmentionable design on her part, there is no sufficient means of determining. At any rate, when they met, an hour or two after these occurrences, he could not help noticing how easily she seemed to have got over her excitement. She was very pleasant with him, — too pleasant, Dick thought. It was not Elsie's way to come out of a fit of anger so easily as that. She had contrived some way of letting off her spite; that was certain. Dick was pretty cunning, as Old Sophy had said, and, whether or not he had any means of knowing Elsie's private intentions, watched her closely, and was on his guard against accidents.

For the first time, he took certain precautions with reference to his diet, such as were quite alien to his common habits. On coming to the dinner-table, that day, he complained of headache, took but little food, and refused the cup of coffee which Elsie offered him, saying that it did not agree with him when he had these attacks.

Here was a new complication. Obviously enough, he could not live in this way, suspecting everything but plain bread and water, and hardly feeling safe in meddling with them. Not only had this school-keeping wretch come between him and the scheme by which he was to secure his future fortune, but his image had so infected his cousin's mind that she was ready to try on him some of those tricks which, as he had heard hinted in the village, she had once before put in practice upon a person who had become odious to her.

Something must be done, and at once, to meet the double necessities of this case. Every day, while the young girl was in these relations with the young man, was only making matters worse. They could exchange words and looks, they could arrange private interviews, they would be stooping together over the same book, her

hair touching his cheek, her breath mingling with his, all the magnetic attractions drawing them together with strange, invisible effluences. As her passion for the schoolmaster increased, her dislike to him, her cousin, would grow with it, and all his dangers would be multiplied. It was a fearful point he had reached. He was tempted at one moment to give up all his plans and to disappear suddenly from the place, leaving with the schoolmaster, who had come between him and his object, an anonymous token of his personal sentiments which would be remembered a good while in the history of the town of Rockland. This was but a momentary thought; the great Dudley property could not be given up in that way.

Something must happen at once to break up all this order of things. He could think of but one Providential event adequate to the emergency, — an event foreshadowed by various recent circumstances, but hitherto floating in his mind only as a possibility. Its occurrence would at once change the course of Elsie's feelings, providing her with something to think of besides mischief, and remove the accursed obstacle which was thwarting all his own projects. Every possible motive, then, — his interest, his jealousy, his longing for revenge, and now his fears for his own safety, — urged him to regard the happening of a certain casualty as a matter of simple necessity. This was the self-destruction of Mr. Bernard Langdon.

Such an event, though it might be surprising to many people, would not be incredible, nor without many parallel cases. He was poor, a miserable fag, under the control of that mean wretch up there at the school, who looked as if he had sour buttermilk in his veins instead of blood. He was in love with a girl above his station, rich, and of old family, but strange in all her ways, and it was conceivable that he should become suddenly jealous of her. Or she might have frightened him with some display of her peculiarities which had filled him with a sudden repugnance in the place of love. Any of these things were credible, and would

make a probable story enough,—so thought Dick over to himself with the New-England half of his mind.

Unfortunately, men will not always take themselves out of the way when, so far as their neighbors are concerned, it would be altogether the most appropriate and graceful and acceptable service they could render. There was at this particular moment no special reason for believing that the schoolmaster meditated any violence to his own person. On the contrary, there was good evidence that he was taking some care of himself. He was looking well and in good spirits, and in the habit of amusing himself and exercising, as if to keep up his standard of health, especially of taking certain evening-walks, before referred to, at an hour when most of the Rockland people had "retired," or, in vulgar language, "gone to b-d."

Dick Venner settled it, however, in his own mind, that Mr. Bernard Langdon must lay violent hands upon himself. He even went so far as to determine the precise hour, and the method in which the "rash act," as it would undoubtedly be called in the next issue of "The Rockland Weekly Universe," should be committed. Time,—*this evening*. Method,—asphyxia, by suspension. It was, unquestionably, taking a great liberty with a man to decide that he should become *felo de se* without his own consent. Such, however, was the decision of Mr. Richard Venner with regard to Mr. Bernard Langdon.

If everything went right, then, there would be a coroner's inquest to-morrow upon what remained of that gentleman, found suspended to the branch of a tree somewhere within a mile of the Apollinian Institute. The "Weekly Universe" would have a startling paragraph announcing a "SAD EVENT!!!" which had "thrown the town into an intense state of excitement. Mr. Barnard Langden, a well known teacher at the Appollinian Institute, was found, etc., etc. The vital spark was extinct. The motive to the rash act can only be conjectured, but is

supposed to be disappointed affection. The name of an accomplished young lady of *the highest respectability* and great beauty is mentioned in connection with this melancholy occurrence."

Dick Venner was at the tea-table that evening, as usual.—No, he would take green tea, if she pleased,—the same as her father drank. It would suit his headache better.—Nothing,—he was much obliged to her. He would help himself,—which he did in a little different way from common, naturally enough, on account of his headache. He noticed that Elsie seemed a little nervous while she was rinsing some of the teacups before their removal.

"There's something going on in that witch's head," he said to himself. "I know her,—she'd be savage now, if she hadn't got some trick in hand. Let's see how she looks to-morrow!"

Dick announced that he should go to bed early that evening, on account of this confounding headache which had been troubling him so much. In fact, he went up early, and locked his door after him, with as much noise as he could make. He then changed some part of his dress, so that it should be dark throughout, slipped off his boots, drew the lasso out from the bottom of the contents of his trunk, and, carrying that and his boots in his hand, opened his door softly, locked it after him, and stole down the back-stairs, so as to get out of the house unnoticed. He went straight to the stable and saddled the mustang. He took a rope from the stable with him, mounted his horse, and set forth in the direction of the Institute.

Mr. Bernard, as we have seen, had not been very profoundly impressed by the old Doctor's cautions,—enough, however, to follow out some of his hints which were not troublesome to attend to. He laughed at the idea of carrying a loaded pistol about with him; but still it seemed only fair, as the old Doctor thought so much of the matter, to humor him about it. As for not going about when and where he liked, for fear he might have

some lurking enemy, that was a thing not to be listened to nor thought of. There was nothing to be ashamed of or troubled about in any of his relations with the school-girls. Elsie, no doubt, showed a kind of attraction towards him, as did perhaps some others; but he had been perfectly discreet, and no father or brother or lover had any just cause of quarrel with him. To be sure, that dark young man at the Dudley mansion-house looked as if he were his enemy, when he had met him; but certainly there was nothing in their relations to each other, or in his own to Elsie, that would be like to stir such malice in his mind as would lead him to play any of his wild Southern tricks at his, Mr. Bernard's, expense. Yet he had a vague feeling that this young man was dangerous, and he had been given to understand that one of the risks he ran was from that quarter.

On this particular evening, he had a strange, unusual sense of some impending peril. His recent interview with the Doctor, certain remarks that had been dropped in his hearing, but above all an unaccountable impression upon his spirits, all combined to fill his mind with a foreboding conviction that he was very near some overshadowing danger. It was as the chill of the ice-mountain towards which the ship is steering under full sail. He felt a strong impulse to see Helen Darley and talk with her. She was in the common parlor, and, fortunately, alone.

"Helen," he said, — for they were almost like brother and sister now, — "I have been thinking what you would do, if I should have to leave the school at short notice, or be taken away suddenly by any accident."

"Do?" she said, her cheek growing paler than its natural delicate hue, — "why, I do not know how I could possibly consent to live here, if you left us. Since you came, my life has been almost easy; before, it was getting intolerable. You must not talk about going, my dear friend; you have spoiled me for my place. Who is there here that I can have any

true society with, but you? You would not leave us for another school, would you?"

"No, no, my dear Helen," Mr. Bernard said; "if it depends on myself, I shall stay out my full time, and enjoy your company and friendship. But everything is uncertain in this world; I have been thinking that I might be wanted elsewhere, and called when I did not think of it; — it was a fancy, perhaps, — but I can't keep it out of my mind this evening. If any of my fancies should come true, Helen, there are two or three messages I want to leave with you. I have marked a book or two with a cross in pencil on the fly-leaf; — these are for you. There is a little hymn-book I should like to have you give to Elsie from me; — it may be a kind of comfort to the poor girl."

Helen's eyes glistened as she interrupted him, —

"What do you mean? You must not talk so, Mr. Langdon. Why, you never looked better in your life. Tell me now, you are not in earnest, are you, but only trying a little sentiment on me?"

Mr. Bernard smiled, but rather sadly.

"About half in earnest," he said. "I have had some fancies in my head, — superstitions, I suppose, — at any rate, it does no harm to tell you what I should like to have done, if anything should happen, — very likely nothing ever will. Send the rest of the books home, if you please, and write a letter to my mother. And, Helen, you will find one small volume in my desk enveloped and directed, you will see to whom; — give this with your own hands; it is a keepsake."

The tears gathered in her eyes; she could not speak at first. Presently, —

"Why, Bernard, my dear friend, my brother, it cannot be that you are in danger? Tell me what it is, and, if I can share it with you, or counsel you in any way, it will only be paying back the great debt I owe you. No, no, — it can't be true, — you are tired and worried, and your spirits have got depressed. I know what that is; — I was sure, one

winter, that I should die before spring; but I lived to see the dandelions and buttercups go to seed. Come, tell me it was nothing but your imagination."

She felt a tear upon her cheek, but would not turn her face away from him; it was the tear of a sister.

"I am really in earnest, Helen," he said. "I don't know that there is the least reason in the world for these fancies. If they all go off and nothing comes of them, you may laugh at me, if you like. But if there should be any occasion, remember my requests. You don't believe in presentiments, do you?"

"Oh, don't ask me, I beg you," Helen answered. "I have had a good many frights for every one real misfortune I have suffered. Sometimes I have thought I was warned beforehand of coming trouble, just as many people are of changes in the weather, by some unaccountable feeling,—but not often, and I don't like to talk about such things. I wouldn't think about these fancies of yours. I don't believe you have exercised enough;—don't you think it's confinement in the school has made you nervous?"

"Perhaps it has; but it happens that I have thought more of exercise lately, and have taken walks late in the evening, besides playing my old gymnastic tricks every day."

They talked on many subjects, but through all he said Helen perceived a pervading tone of sadness, and an expression as of a dreamy foreboding of unknown evil. They parted at the usual hour, and went to their several rooms. The sadness of Mr. Bernard had sunk into the heart of Helen, and she mingled many tears with her prayers that evening, earnestly entreating that he might be comforted in his days of trial and protected in his hour of danger.

Mr. Bernard stayed in his room a short time before setting out for his evening walk. His eye fell upon the Bible his mother had given him when he left home, and he opened it in the New Testament at a venture. It happened that the first words he read were these,—"*Lest, coming*

suddenly, he find you sleeping." In the state of mind in which he was at the moment, the text startled him. It was like a supernatural warning. He was not going to expose himself to any particular danger this evening; a walk in a quiet village was as free from risk as Helen Darley or his own mother could ask; yet he had an unaccountable feeling of apprehension, without any definite object. At this moment he remembered the old Doctor's counsel, which he had sometimes neglected, and, blushing at the feeling which led him to do it, he took the pistol his suspicious old friend had forced upon him, which he had put away loaded, and, thrusting it into his pocket, set out upon his walk.

The moon was shining at intervals, for the night was partially clouded. There seemed to be nobody stirring, though his attention was unusually awake, and he could hear the whirr of the bats overhead, and the pulsating croak of the frogs in the distant pools and marshes. Presently he detected the sound of hoofs at some distance, and, looking forward, saw a horseman coming in his direction. The moon was under a cloud at the moment, and he could only observe that the horse and his rider looked like a single dark object, and that they were moving along at an easy pace. Mr. Bernard was really ashamed of himself, when he found his hand on the butt of his pistol. When the horseman was within a hundred and fifty yards of him, the moon shone out suddenly and revealed each of them to the other. The rider paused for a moment, as if carefully surveying the pedestrian, then suddenly put his horse to the full gallop, and dashed towards him, rising at the same instant in his stirrups and swinging something round his head,—what, Mr. Bernard could not make out. It was a strange manœuvre,—so strange and threatening in aspect that the young man forgot his nervousness in an instant, cocked his pistol, and waited to see what mischief all this meant. He did not wait long. As the rider came rushing towards him, he made

a rapid motion and something leaped five-and-twenty feet through the air, in Mr. Bernard's direction. In an instant he felt a ring, as of a rope or thong, settle upon his shoulders. There was no time to think,—he would be lost in another second. He raised his pistol and fired,—not at the rider, but at the horse. His aim was true; the mustang gave one bound and fell lifeless, shot through the head. The lasso was fastened to his saddle, and his last bound threw Mr. Bernard violently to the earth, where he lay motionless, as if stunned.

In the mean time, Dick Venner, who had been dashed down with his horse, was trying to extricate himself,—one of his legs being held fast under the animal, the long spur on his boot having caught in the saddle-cloth. He found, however, that he could do nothing with his right arm, his shoulder having been in some way injured in his fall. But his Southern blood was up, and, as he saw Mr. Bernard move as if he were coming to his senses, he struggled violently to free himself.

"I'll have the dog, yet," he said,—*only let me get at him with the knife!*"

He had just succeeded in extricating his imprisoned leg, and was ready to spring to his feet, when he was caught firmly by the throat, and, looking up, saw a clumsy barbed weapon, commonly known as a hay-fork, within an inch of his breast.

"Hold on there! What 'n thunder 'r y' abaout, y' darned Portagee?" said a voice, with a decided nasal tone in it, but sharp and resolute.

Dick looked from the weapon to the person who held it, and saw a sturdy, plain man standing over him, with his teeth clinched, and his aspect that of one all ready for mischief.

"Lay still, naow!" said Abel Stebbins, the Doctor's man; "f y' don't, I'll stick ye, 'z sure 'z y' 'r alive! I been aafter ye f'r a week, 'n' I got y' naow! I knowed I'd ketch ye at some darned trick or 'nother 'fore I'd done 'ith ye!"

Dick lay perfectly still, feeling that he

was crippled and helpless, thinking all the time with the Yankee half of his mind what to do about it. He saw Mr. Bernard lift his head and look around him. He would get his senses again in a few minutes, very probably, and then he, Mr. Richard Venner, would be done for.

"Let me up! let me up!" he cried, in a low, hurried voice,—*"I'll give you a hundred dollars in gold to let me go. The man a'n't hurt,—don't you see him stirring? He'll come to himself in two minutes. Let me up! I'll give you a hundred and fifty dollars in gold, now, here on the spot,—and the watch out of my pocket; take it yourself, with your own hands!"*

"I'll see y' darned fust! Ketch me lett'n' go!" was Abel's emphatic answer. "Yeou lay still, 'n' wait t'll that man comes tew."

He kept the hay-fork ready for action at the slightest sign of resistance.

Mr. Bernard, in the mean time, had been getting, first his senses, and then some few of his scattered wits, a little together.

"What is it?"—he said. "Who 's hurt? What 's happened?"

"Come along here 'z quick 'z y' ken," Abel answered, "'n' haalp me fix this fellah. Y' been hurt, y'rself, 'n' the 's murder come pooty nigh happenin'."

Mr. Bernard heard the answer, but presently stared about and asked again, "*Who 's hurt? What 's happened?*"

"Y' 'r hurt, y'rself, I tell ye," said Abel; "'n' the 's been a murder, pooty nigh."

Mr. Bernard felt something about his neck, and, putting his hands up, found the loop of the lasso, which he loosened, but did not think to slip over his head, in the confusion of his perceptions and thoughts. It was a wonder that it had not choked him, but he had fallen forward so as to slacken it.

By this time he was getting some notion of what he was about, and presently began looking round for his pistol, which had fallen. He found it lying near him, cocked it mechanically, and walked, somewhat unsteadily, towards the two men,

who were keeping their position as still as if they were performing in a *tableau*.

"Quick, naow!" said Abel, who had heard the click of cocking the pistol, and saw that he held it in his hand, as he came towards him. "Gi' me that pistol, and yeou fetch that 'ere rope layin' there. I 'll have this here fellah fixed 'n less 'n two minutes."

Mr. Bernard did as Abel said,—stupidly and mechanically, for he was but half right as yet. Abel pointed the pistol at Dick's head.

"Naow hold up y'r hands, yeou fellah," he said, "'n' keep 'em up, while this man puts the rope raound y'r wrists."

Dick felt himself helpless, and, rather than have his disabled arm roughly dealt with, held up his hands. Mr. Bernard did as Abel said; he was in a purely passive state, and obeyed orders like a child. Abel then secured the rope in a most thorough and satisfactory complication of twists and knots.

"Naow get up, will ye?" he said; and the unfortunate Dick rose to his feet.

"*Who's hurt? What's happened?*" asked poor Mr. Bernard again, his memory having been completely jarred out of him for the time.

"Come, look here naow, yeou, don't stan' aaskin' questions over 'n' over;—'t beats all! ha'n't I tol' y' a dozen times?"

As Abel spoke, he turned and looked at Mr. Bernard.

"Hullo! What 'n thunder's that 'ere raoun' y'r neck? Ketched ye 'ith a slippernoose, hey? Wal, if that a'n't the craowner! Hol' on a minute, Cap'n, 'n' I 'll show ye what that 'ere halter 's good for."

Abel slipped the noose over Mr. Bernard's head, and put it round the neck of the miserable Dick Venner, who made no sign of resistance, — whether on account of the pain he was in, or from mere helplessness, or because he was waiting for some unguarded moment to escape, — since resistance seemed of no use.

"I 'm go'n' to kerry y' home," said Abel; "th' ol' Doctor, he 's got a gre't cu-

r'osity t' see ye. Jes' step along naow, — off that way, will ye? — 'n' I 'll hol' on t' th' bridle, f' fear y' sh'd run away."

He took hold of the leather thong, but found that it was fastened at the other end to the saddle. This was too much for Abel.

"Wal, naow, yeou *be* a pooty chap to hev raound! A fellah's neck in a slippernoose at one eend of a halter, 'n' a hoss on th' full spring at t'other eend!"

He looked at him from head to foot as a naturalist inspects a new specimen. His clothes had suffered in his fall, especially on the leg which had been caught under the horse.

"Hullo! look o' there, naow! What 's that 'ere stickin' aout o' y'r boot?"

It was nothing but the handle of an ugly knife, which Abel instantly relieved him of.

The party now took up the line of march for old Doctor Kittredge's house, Abel carrying the pistol and knife, and Mr. Bernard walking in silence, still half-stunned, holding the hay-fork, which Abel had thrust into his hand. It was all a dream to him as yet. He remembered the horseman riding at him, and his firing the pistol; but whether he was alive, and these walls around him belonged to the village of Rockland, or whether he had passed the dark river, and was in a suburb of the New Jerusalem, he could not as yet have told.

They were in the street where the Doctor's house was situated.

"I guess I 'll fire off one o' these here berrils," said Abel.

He fired.

Presently there was a noise of opening windows, and the nocturnal head-dresses of Rockland flowered out of them like so many developments of the Night-blooming Cereus. White cotton caps and red bandanna handkerchiefs were the prevailing forms of efflorescence. The main point was that the village was waked up. The old Doctor always waked easily, from long habit, and was the first among those who looked out to see what had happened.

"Why, Abel!" he called out, "what

have you got there? and what's all this noise about?"

"We've ketched the Portagee!" Abel answered, as laconically as the hero of Lake Erie in his famous dispatch. "Go in there, you fellah!"

The prisoner was marched into the house, and the Doctor, who had bewitched his clothes upon him in a way that would have been miraculous in anybody but a physician, was down in presentable form as soon as if it had been a child in a fit that he was sent for.

"Richard Venner!" the Doctor exclaimed. "What is the meaning of all this? Mr. Langdon, has anything happened to you?"

Mr. Bernard put his hand to his head.

"My mind is confused," he said. "I've had a fall. — Oh, yes! — wait a minute and it will all come back to me."

"Sit down, sit down," the Doctor said. "Abel will tell me about it. Slight concussion of the brain. Can't remember very well for an hour or two, — will come right by to-morrow."

"Been stunded," Abel said. "He can't tell nothin'."

Abel then proceeded to give a Napoleonic bulletin of the recent combat of cavalry and infantry and its results, — none slain, one captured.

The Doctor looked at the prisoner through his spectacles.

"What's the matter with your shoulder, Venner?"

Dick answered sullenly, that he didn't know, — fell on it when his horse came down. The Doctor examined it as carefully as he could through his clothes.

"Out of joint. Untie his hands, Abel."

By this time a small alarm had spread among the neighbors, and there was a circle around Dick, who glared about on the assembled honest people like a hawk with a broken wing.

When the Doctor said, "Untie his hands," the circle widened perceptibly.

"Isn't it a leetle rash to give him the use of his hands? I see there's females and children standin' near."

This was the remark of our old friend,

Deacon Soper, who retired from the front row, as he spoke, behind a respectable-looking, but somewhat hastily dressed person of the defenceless sex, the female help of a neighboring household, accompanied by a boy, whose unsmoothed shock of hair looked like a last-year's crow's-nest.

But Abel untied his hands, in spite of the Deacon's considerate remonstrance.

"Now," said the Doctor, "the first thing is to put the joint back."

"Stop," said Deacon Soper, — "stop a minute. Don't you think it will be safer — for the women-folks — jest to wait till mornin', afore you put that j'int into the socket?"

Colonel Sprowle, who had been called by a special messenger, spoke up at this moment.

"Let the women-folks and the deacons go home, if they're scared, and put the fellah's j'int in as quick as you like. I'll resk him, j'int in or out."

"I want one of you to go straight down to Dudley Venner's with a message," the Doctor said. "I will have the young man's shoulder in quick enough."

"Don't send that message!" said Dick, in a hoarse voice; — "do what you like with my arm, but don't send that message! Let me go, — I can walk, and I'll be off from this place. There's nobody hurt but I. Damn the shoulder! — let me go! You shall never hear of me again!"

Mr. Bernard came forward.

"My friends," he said, "I am not injured, — seriously, at least. Nobody need complain against this man, if I don't. The Doctor will treat him like a human being, at any rate; and then, if he will go, let him. There are too many witnesses against him here for him to want to stay."

The Doctor, in the mean time, without saying a word to all this, had got a towel round the shoulder and chest and another round the arm, and had the bone replaced in a very few moments.

"Abel, put Cassia into the new chaise," he said, quietly. "My friends and neighbors, leave this young man to me."

"Colonel Sprowle, you're a justice of

the peace," said Deacon Soper, "and you know what the law says in cases like this. I a'n't so clear that it won't have to come afore the Grand Jury, whether we will or no."

"I guess we 'll set that j'int to-morrow mornin'," said Colonel Sprowle, — which made a laugh at the Deacon's expense, and virtually settled the question.

"Now trust this young man in my care," said the old Doctor, "and go home and finish your naps. I knew him when he was a boy, and, I 'll answer for it, he won't trouble you any more. The Dudley blood makes folks proud, I can tell you, whatever else they are."

The good people so respected and believed in the Doctor that they left the prisoner with him.

Presently, Cassia, the fast Morgan mare, came up to the front-door, with the wheels of the new, light chaise flashing behind her in the moonlight. The Doctor drove Dick forty miles at a stretch that night, out of the limits of the State.

"Do you want money?" he said, before he left him.

Dick told him the secret of his golden belt.

"Where shall I send your trunk after you from your uncle's?"

Dick gave him a direction to a seaport town to which he himself was going, to take passage for a port in South America.

"Good-bye, Richard," said the Doctor. "Try to learn something from to-night's lesson."

The Southern impulses in Dick's wild blood overcame him, and he kissed the old Doctor on both cheeks, crying as only the children of the sun can cry, after the first hours in the dewy morning of life. So Dick Venner disappears from this story. An hour after dawn, Cassia pointed her fine ears homeward, and struck into her square, honest trot, as if she had not been doing anything more than her duty during her four hours' stretch of the last night.

Abel was not in the habit of questioning the Doctor's decisions.

"It 's all right," he said to Mr. Bernard. "The fellah 's Squire Venner's relation, anyhaow. Don't you want to wait here, jest a little while, till I come back? The 's a consid'able nice saddle 'n' bridle on a dead hoss that 's layin' daown there in the road, 'n' I guess the 'a'n't no use in lettin' on 'em spile, — so I 'll jest step aout 'n' fetch 'em along. I kind o' calc'late 't won't pay to take the cretur's shoes 'n' hide off to-night, — 'n' the ' won't be much iron on that hoss's huffs an haour after daylight, I 'll bate ye a quarter."

"I 'll walk along with you," said Mr. Bernard; — "I feel as if I could get along well enough now."

So they set off together. There was a little crowd round the dead mustang already, principally consisting of neighbors who had adjourned from the Doctor's house to see the scene of the late adventure. In addition to these, however, the assembly was honored by the presence of Mr. Principal Silas Peckham, who had been called from his slumbers by a message that Master Langdon was shot through the head by a highway-robber, but had learned a true version of the story by this time. His voice was at that moment heard above the rest, — sharp, but thin, like bad cider-vinegar.

"I take charge of that property, I say. Master Langdon 's actin' under my orders, and I claim that hoss and all that 's on him. Hiram! jest slip off that saddle and bridle, and carry 'em up to the Institoot, and bring down a pair of pinchers and a file, — and — stop — fetch a pair of shears, too; there 's hoss-hair enough in that mane and tail to stuff a bolster with."

"You let that hoss alone!" spoke up Colonel Sprowle. "When a fellah goes out huntin' and shoots a squirrel, do you think he 's go'n' to let another fellah pick him up and kerry him off? Not if he 's got a double-berril gun, and t'other berril ha'n't been fired off yet! I should like to see the mahn that 'll take off that saddle 'n' bridle, excep' the one th't hez a fair right to the whole concern!"

Hiram was from one of the lean streaks in New Hampshire, and, not being overfed in Mr. Silas Peckham's kitchen, was somewhat wanting in stamina, as well as in stomach, for so doubtful an enterprise as undertaking to carry out his employer's orders in the face of the Colonel's defiance.

Just then Mr. Bernard and Abel came up together.

"Here they be," said the Colonel. "Stan' beck, gentlemen!"

Mr. Bernard, who was pale and still a little confused, but gradually becoming more like himself, stood and looked in silence for a moment.

All his thoughts seemed to be clearing themselves in this interval. He took in the whole series of incidents: his own frightful risk; the strange, instinctive, nay, Providential impulse which had led him so suddenly to do the one only thing which could possibly have saved him; the sudden appearance of the Doctor's man, but for which he might yet have been lost; and the discomfiture and capture of his dangerous enemy.

It was all past now, and a feeling of pity rose in Mr. Bernard's heart.

"He loved that horse, no doubt," he said,— "and no wonder. A beautiful, wild-looking creature! Take off those things that are on him, Abel, and have them carried to Mr. Dudley Venner's. If he does not want them, you may keep them yourself, for all that I have to say. One thing more. I hope nobody will lift his hand against this noble creature to mutilate him in any way. After you have taken off the saddle and bridle, Abel, bury him just as he is. Under that old beech-tree will be a good place. You'll see to it,—won't you, Abel?"

Abel nodded assent, and Mr. Bernard returned to the Institute, threw himself in his clothes on the bed, and slept like one who is heavy with wine.

Following Mr. Bernard's wishes, Abel at once took off the high-peaked saddle and the richly ornamented bridle from the mustang. Then, with the aid of two or three others, he removed him to the place indicated. Spades and shovels were soon procured, and before the moon had set, the wild horse of the Pampas was at rest under the turf at the wayside, in the far village among the hills of New England.

THE TEST.

Musa loquitur.

I HUNG my verses in the wind;
Time and tide their faults may find.
All were winnowed through and through;
Five lines lasted sound and true;
Five were smelted in a pot
Than the South more fierce and hot.
These the Siroc could not melt,
Fire their fiercer flaming felt,
And their meaning was more white
Than July's meridian light.
Sunshine cannot bleach the snow,
Nor Time unmake what poets know.
Have you eyes to find the five
Which five thousand could survive?

RECOLLECTIONS OF KEATS.

BY AN OLD SCHOOL-FELLOW.

IN the village of Enfield, in Middlesex, ten miles on the north road from London, was my father, John Clarke's school. The house had been built by a West India merchant, in the latter end of the seventeenth or beginning of the eighteenth century. It was of the better character of the domestic architecture of that period,—the whole front being of the purest red brick, wrought, by means of moulds, into rich designs of flowers and pomegranates, with heads of cherubim over two niches in the centre of the building. The elegance of the design and the perfect finish of the structure were such as to secure its protection, when a branch railway was brought from the Ware and Cambridge line to Enfield. The old school-house was converted into the station-house, and the railway company had the good taste to leave intact one of the few remaining specimens of the graceful English domestic architecture of long-gone days. Any of my readers who may happen to have a file of the London "*Illustrated News*," may find in No. 360, March 3, 1849, a not prodigiously enchanting wood-cut of the edifice.

Here it was that John Keats all but commenced and did complete his school-education. He was born on the 29th of October, 1795; and I think he was one of the little fellows who had not wholly emerged from the child's costume upon being placed under my father's care. It will be readily conceived difficult to recall from the "dark backward and abysm" of nearly sixty years the general acts of perhaps the youngest individual in a corporation of between seventy and eighty youngsters; and very little more of Keats's child-life can I remember than that he had a brisk, winning face, and was a favorite with all, particularly with my mother.

His maternal grandfather, Jennings, was proprietor of a large livery-stable, called "*The Swan and Hoop*," on the pavement in Moorfields, opposite the entrance into Finsbury Circus. He had two sons at my father's school. The elder was an officer in Duncan's ship in the fight off Camperdown. After the battle, the Dutch Admiral, De Winter, pointing to young Jennings, told Duncan that he had fired several shots at that young man, and always missed his mark;—no credit to his steadiness of aim; for Jennings, like his own admiral, was considerably above the ordinary dimensions of stature.

Keats's father was the principal servant at the Swan and Hoop Stables,—a man of so remarkably fine a common-sense and native respectability, that I perfectly remember the warm terms in which his demeanor used to be canvassed by my parents after he had been to visit his boys. He was short of stature and well-knit in person, (John resembling him both in make and feature,) with brown hair and dark hazel eyes. He was killed by a fall from his horse, in returning from a visit to the school. John's two brothers, George, older, and Thomas, younger than himself, were like the mother,—who was tall, of good figure, with large, oval face, sombre features, and grave in behavior. The last of the family was a sister,—Fanny, I think, much younger than all,—of whom I remember my mother once speaking with much fondness, for her pretty, simple manners, while she was walking in the garden with her brothers. She married Mr. Llanos, a Spanish refugee, the author of "*Don Estéban*," and "*Sandoval, the Free-Mason*." He was a man of liberal principles, attractive manners, and more than ordinary accomplishments.—This is the amount of my knowledge and recollection of the family.

In the early part of his school-life, John gave no extraordinary indications of intellectual character; but it was remembered of him afterwards, that there was ever present a determined and steady spirit in all his undertakings; and, although of a strong and impulsive will, I never knew it misdirected in his required pursuit of study. He was a most orderly scholar. The future ramifications of that noble genius were then closely shut in the seed, and greedily drinking in the moisture which made it afterwards burst forth so kindly into luxuriance and beauty.

My father was in the habit, at each half-year's vacation, of bestowing prizes upon those pupils who had performed the greatest quantity of voluntary extra work; and such was Keats's indefatigable energy for the last two or three successive half-years of his remaining at school, that, upon each occasion, he took the first prize by a considerable distance. He was at work before the first school-hour began, and that was at seven o'clock; almost all the intervening times of recreation were so devoted; and during the afternoon-holidays, when all were at play, I have seen him in the school,—almost the only one,—at his Latin or French translation; and so unconscious and regardless was he of the consequences of this close and persevering application, that he never would have taken the necessary exercise, had he not been sometimes driven out by one of us for the purpose.

I have said that he was a favorite with all. Not the less beloved was he for having a highly pugnacious spirit, which, when roused, was one of the most picturesque exhibitions—off the stage—I ever saw. One of the transports of that marvellous actor, Edmund Kean—whom, by the way, he idolized—was its nearest resemblance; and the two were not very dissimilar in face and figure. I remember, upon one occasion, when an usher, on account of some impertinent behavior, had boxed his brother Tom's ears, John rushed up, put him-

self in the received posture of offence, and, I believe, struck the usher,—who could have put him into his pocket. His passions at times were almost ungovernable; his brother George, being considerably the taller and stronger, used frequently to hold him down by main force, when he was in “one of his moods” and was endeavoring to beat him. It was all, however, a wisp-of-straw conflagration; for he had an intensely tender affection for his brothers, and proved it upon the most trying occasions. He was not merely the “favorite of all,” like a pet prize-fighter, for his terrier courage; but his high-mindedness, his utter unconsciousness of a mean motive, his placability, his generosity, wrought so general a feeling in his behalf, that I never heard a word of disapproval from any one who had known him, superior or equal.

The latter part of the time—perhaps eighteen months—that he remained at school, he occupied the hours during meals in reading. Thus his *whole* time was engrossed. He had a tolerably retentive memory, and the quantity that he read was surprising. He must in those last months have exhausted the school-library, which consisted principally of abridgments of all the voyages and travels of any note; Mavor's Collection; also his Universal History; Robertson's Histories of Scotland, America, and Charles the Fifth; all Miss Edgeworth's productions; together with many other works, equally well calculated for youth, not necessary to be enumerated. The books, however, that were his constantly recurrent sources of attraction were Tooke's “Pantheon,” Lemprière's “Classical Dictionary,” which he appeared to *learn*, and Spence's “Polymetis.” This was the store whence he acquired his perfect intimacy with the Greek mythology; here was he “suckled in that creed outworn”; for his amount of classical attainment extended no farther than the “Æneid”; with which epic, indeed, he was so fascinated, that before leaving school he had *voluntarily* translated in writing a considerable portion. And yet

I remember that at that early age,—mayhap under fourteen,—notwithstanding and through all its incidental attractiveness, he hazarded the opinion to me that there was feebleness in the structure of the work. He must have gone through all the better publications in the school-library, for he asked me to lend him some of my own books; and I think I now see him at supper, (we had all our meals in the school-room,) sitting back on the form, and holding the folio volume of Burnet's "History of his own Time" between himself and the table, eating his meal from beyond it. This work, and Leigh Hunt's "Examiner" newspaper,—which my father took in, and I used to lend to Keats,—I make no doubt laid the foundation of his love of civil and religious liberty. He once told me, smiling, that one of his guardians, being informed what books I had lent him to read, declared, that, if he had fifty children, he would not send one of them to my father's school.

When he left us,—I think at fourteen years of age,—he was apprenticed to Mr. Thomas Hammond, a medical man, residing in Church Street, Edmonton, and exactly two miles from Enfield. This arrangement appeared to give him satisfaction; and I fear that it was the most placid period of his painful life; for now, with the exception of the duty he had to perform in the surgery, and which was by no means an onerous one, his whole leisure hours were employed in indulging his passion for reading and translating. It was during his apprenticeship that he finished the latter portion of the "Æneid."

The distance between our residences being so short, I encouraged his inclination to come over, when he could be spared; and in consequence, I saw him about five or six times a month, commonly on Wednesdays and Saturdays, those afternoons being my own most leisure times. He rarely came empty-handed; either he had a book to read, or brought one with him to be exchanged. When the weather permitted, we always sat in

an arbor at the end of a spacious garden, and, in Boswellian phrase, "we had good talk."

I cannot at this time remember what was the spark that fired the train of his poetical tendencies,—I do not remember what was the first signalized poetry he read; but he must have given me unmistakable tokens of his bent of taste; otherwise, at that early stage of his career, I never could have read to him the "Epithalamion" of Spenser; and this I perfectly remember having done, and in that (to me) hallowed old arbor, the scene of many bland and graceful associations,—all the substances having passed away. He was at that time, I should suppose, fifteen or sixteen years old; and at that period of life he certainly appreciated the general beauty of the composition, and felt the more passionate passages; for his features and exclamations were ecstatic. How often have I in after-times heard him quote these lines:—

"Behold, whiles she before the altar stands,
Hearing the holy priest that to her speaks,
And blesses her with his two happy hands,
How the red roses flush up in her cheeks!
And the pure snow, with goodly vermil stain,
Like crimson dyed in grain,
That even the angels, which continually
About the sacred altar do remain,
Forget their service, and about her fly,
Of peeping in her face, that seems more fair,
The more they on it stare;
But her sad eyes, still fastened on the ground,
Are governèd with goodly modesty,
That suffers not one look to glance awry,
Which may let in a little thought unsound."

That night he took away with him the first volume of the "Faery Queen," and went through it, as I told his biographer, Mr. Monckton Milnes, "as a young horse would through a spring meadow,—ramping!" Like a true poet, too,—a poet "born, not manufactured,"—a poet in grain,—he especially singled out the epithets, for that felicity and power in which Spenser is so eminent. He hoisted himself up, and looked burly and dominant, as he said,— "What an image that is,— 'Sea-shouldering whales'!"

It was a treat to see as well as hear

him read a pathetic passage. Once, when reading the "Cymbeline" aloud, I saw his eyes fill with tears, and for some moments he was unable to proceed, when he came to the departure of Posthumus, and Imogen's saying she would have watched him

"till the diminution

Of space had pointed him sharp as my needle;
Nay, followed him till he had melted from
The smallness of a gnat to air; and then
Have turned mine eye and wept."

I cannot quite reconcile the time of our separating at this stage of his career,—which of us first went to London; but it was upon an occasion when I was walking thither, and, I think, to see Leigh Hunt, who had just fulfilled his penalty of confinement in Horsemonger-Lane Prison for the trivial libel upon the Prince Regent, that Keats, who was coming over to Enfield, met me, and, turning, accompanied me back part of the way to Edmonton. At the last field-gate, when taking leave, he gave me the sonnet entitled, "Written on the Day that Mr. Leigh Hunt left Prison." Unless I am utterly mistaken, this was the first proof I had received of his having committed himself in verse; and how clearly can I recall the conscious look with which he hesitatingly offered it! There are some momentary glances of beloved friends that fade only with life. I am not in a position to contradict the statement of his biographer, that "the lines in imitation of Spenser,

'Now Morning from her orient chamber
came,

And her first footsteps touched a verdant
hill,' etc.,

are the earliest known verses of his composition"; from the subject being the inspiration of his first love—and such a love!—in poetry, it is most probable; but certainly his first published poem was the sonnet commencing,

'O Solitude! if I must with thee dwell";

and that will be found in the "Examiner," some time, as I conjecture, in 1816,—for I have not the paper to refer to,

and, indeed, at this distance, both of time and removal from the means of verification, I would not be dogmatical.

When we both had come to London,—he to enter as a student of St. Thomas's Hospital,—he was not long in discovering that my abode was with my brother-in-law, in Little Warner Street, Clerkenwell; and just at that time I was installed housekeeper, and was solitary. He, therefore, would come and revive his loved gossip, till, as the author of the "Urn Burial" says, "we were acting our antipodes,—the huntsmen were up in America, and they already were past their first sleep in Persia." At this time he lived in his first lodging upon coming to London, near to St. Thomas's Hospital. I find his address in a letter which must have preceded my appointing him to come and lighten my darkness in Clerkenwell. At the close of the letter, he says,— "Although the Borough is a beastly place in dirt, turnings, and windings, yet No. 8, Dean Street, is not difficult to find; and if you would run the gauntlet over London Bridge, take the first turning to the left, and then the first to the right, and, moreover, knock at my door, which is nearly opposite a meeting, you would do me a charity, which, as St. Paul saith, is the father of all the virtues. At all events, let me hear from you soon: I say, at all events, not excepting the gout in your fingers." I have little doubt that this letter (which has no other date than the day of the week, and no post-mark) preceded our first symposium; and a memorable night it was in my life's career.

A copy, and a beautiful one, of the folio edition of Chapman's Homer had been lent me. It was the property of Mr. Alsager, the gentleman who for years had contributed no small share of celebrity to the great reputation of the "Times" newspaper, by the masterly manner in which he conducted the money-market department of that journal. At the time when I was first introduced to Mr. Alsager, he was living opposite Horsemonger-Lane Prison; and upon Mr. Leigh Hunt's being sentenced for

the libel, his first day's dinner was sent over by Mr. Alsager. He was a man of the most studiously correct demeanor, with a highly cultivated taste and judgment in the fine arts and music. He succeeded Hazlitt, (which was no insignificant honor,) and for some time contributed the critiques upon the theatres, but ended by being the reporter of the state of the money-market. He had long been accustomed to have the first trial at his own house of the best-reputed new foreign instrumental music, which he used to import from Germany.

Well, then, we were put in possession of the Homer of Chapman, and to work we went, turning to some of the "famous-est" passages, as we had scrappily known them in Pope's version. There was, for instance, that perfect scene of the conversation on Troy wall of the old Senators with Helen, who is pointing out to them the several Greek captains, with that wonderfully vivid portrait of an orator, in Ulysses, in the Third Book, beginning at the 237th line,—

"But when the prudent Ithacus did to his counsels rise";

the helmet and shield of Diomed, in the opening of the Fifth Book; the prodigious description of Neptune's passage in his chariot to the Achive ships, in the opening of the Thirteenth Book,—

"The woods, and all the great hills near,
trembled beneath the weight
Of his immortal moving feet."

The last was the whole of the shipwreck of Ulysses in the Fifth Book of the "Odyssey." I think his expression of delight, during the reading of those dozen lines, was never surpassed:—

"Then forth he came, his both knees faltering, both
His strong hands hanging down, and all with froth
His cheeks and nostrils flowing, voice and breath
Spent to all use, and down he sunk to death.
The sea had soaked his heart through; all his veins
His toils had racked t' a laboring woman's pains.
Dead weary was he."

On an after-occasion I showed him the couplet of Pope's upon the same passage:—

"From mouth and nose the briny torrent ran,
And lost in lassitude lay all the man."

Chapman supplied us with many an after-feast; but it was in the teeming wonderment of this, his first introduction, that, when I came down to breakfast the next morning, I found upon my table a letter with no other inclosure than his famous sonnet, "On first looking into Chapman's Homer." We had parted, as I have already said, at day-spring; yet he contrived that I should receive the poem, from a distance of nearly two miles, before 10, A.M. In the published copy of this sonnet he made an alteration in the seventh line:—

"Yet did I never breathe its pure serene."

The original, which he sent me, had the phrase,

"Yet could I never tell what men could mean";

which he said was bald, and too simply wondering. No one could more earnestly chastise his thoughts than Keats. His favorite among Chapman's Hymns of Homer was the one to Pan, and which he himself rivalled in the "Endymion."

In one of our conversations about this period, I alluded to his position at St. Thomas's Hospital,—coasting and reconnoitring, as it were, that I might discover how he got on, and, with the total absorption that had evidently taken place of every other mood of his mind than that of imaginative composition, what was his bias for the future, and what his feeling with regard to the profession that had been *chosen for him*,—a circumstance I did not know at that time. He made no secret, however, that he could not sympathize with the science of anatomy, as a main pursuit in life; for one of the expressions that he used, in describing his unfitness for its mastery, was perfectly characteristic. He said, in illustration of his argument,—“The other day, for instance, during the lecture,

there came a sunbeam into the room, and with it a whole troop of creatures floating in the ray; and I was off with them to Oberon and Fairy-land." And yet, with all this self-styled unfitness for the pursuit, I was afterwards informed, that at his subsequent examination he displayed an amount of acquirement which surprised his fellow-students, who had scarcely any other association with him than that of a cheerful, crochety rhymester.

It was about this period, that, going to call upon Mr. Leigh Hunt, who then occupied a pretty little cottage in the "Vale of Health," on Hampstead Heath, I took with me two or three of the poems I had received from Keats. I did expect that Hunt would speak encouragingly, and indeed approvingly, of the compositions,—written, too, by a youth under age; but my partial spirit was not prepared for the unhesitating and prompt admiration which broke forth before he had read twenty lines of the first poem. Mr. Horace Smith happened to be there, on the occasion, and was not less demonstrative in his praise of their merits. The piece which he read out, I remember, was the sonnet,—

"How many bards gild the lapses of time!" marking with particular emphasis and approbation the last six lines:—

"So the unnumbered sounds that evening store,—

The songs of birds, the whispering of the leaves,

The voice of waters, the great bell that heaves

With solemn sound, and thousand others more,

That distance of recognizance bereaves,—

Make pleasing music, and not wild uproar."

Smith repeated, with applause, the line in Italics, saying, "What a well-condensed expression!" After making numerous and eager inquiries about him, personally, and with reference to any peculiarities of mind and manner, the visit ended in my being requested to bring him over to the Vale of Health. That was a red-letter day in the young poet's life,—and

one which will never fade with me, as long as memory lasts. The character and expression of Keats's features would unfailingly arrest even the casual passenger in the street; and now they were wrought to a tone of animation that I could not but watch with intense interest, knowing what was in store for him from the bland encouragement, and Spartan deference in attention, with fascinating conversational eloquence, that he was to receive and encounter. When we reached the Heath, I have present the rising and accelerated step, with the gradual subsidence of all talk, as we drew towards the cottage. The interview, which stretched into three "morning calls," was the prelude to many after-scenes and saunterings about Caen Wood and its neighborhood; for Keats was suddenly made a familiar of the household, and was always welcomed.

It was in the library at Hunt's cottage, where an extemporary bed had been made up for him on the sofa, that he composed the framework and many lines of the poem on "Sleep and Poetry,"—the last sixty or seventy being an inventory of the art-garniture of the room. The sonnet,

"Keen, fitful gusts are whispering here and there,"

he gave me the day after one of our visits, and very shortly after his installation at the cottage.

"Give me a golden pen, and let me lean," was another, upon being compelled to leave "at an early hour." But the occasion that recurs to me with the liveliest interest was the evening when, some observations having been made upon the character, habits, and pleasant associations of that revered denizen of the hearth, the cheerful little fireside grasshopper, Hunt proposed to Keats the challenge of writing, then, there, and to time, a sonnet "On the Grasshopper and the Cricket." No one was present but myself, and they accordingly set to. I, absent with a book at the end of the sofa, could not avoid furtive glances, every now and then, at the emulants. I cannot say how long the

trial lasted; I was not proposed umpire, and had no stop-watch for the occasion: the time, however, was short, for such a performance; and Keats won, as to time. But the event of the after-scrutiny was one of many such occurrences which have riveted the memory of Leigh Hunt in my affectionate regard and admiration, for unaffected generosity and perfectly unpretentious encouragement: his sincere look of pleasure at the first line, —

"The poetry of earth is never dead";

"Such a prosperous opening!" he said; and when he came to the tenth and eleventh lines, —

"On a lone winter evening, *when the frost
Has wrought a silence*";

"Ah! that's perfect! bravo, Keats!" — and then he went on in a dilation upon the dumbness of all Nature during the season's suspension and torpidity. With all the kind and gratifying things that were said to him, Keats protested to me, as we were afterwards walking home, that he preferred Hunt's treatment of the subject to his own.

He had left the neighborhood of the Borough, and was now living with his brothers in apartments on the second floor of a house in the Poultry, over the passage leading to the Queen's Head Tavern, and opposite one of the City Companies' Halls, — the Ironmongers', if I mistake not. I have the associating reminiscence of many happy hours spent in this lodging. Here was determined upon, in great part written, and sent forth to the world, the first little, but vigorous, offspring of his brain: —

POEMS

BY

JOHN KEATS.

"What more felicity can fall to creature
Than to enjoy delight with liberty?"
Fate of the Butterfly. — SPENSER.

LONDON:

PRINTED FOR
O. AND J. OLLIER, 3, WELBECK STREET,
CAVENDISH SQUARE.

1817.

Here, on the evening that the last proof-sheet was brought from the printer, and, as his biographer has recorded, upon being informed, if he purposed having a Dedication to the book, that it must be sent forthwith, he went to a side-table, and, in the midst of mixed conversation, (for there were several friends in the room,) he brought to Charles Ollier, the publisher, the Dedication-Sonnet to Leigh Hunt. If the original manuscript of that poem — a legitimate sonnet, with every restriction of rhyme and metre — could now be produced, and the time recorded in which it was written, it would be pronounced an extraordinary performance; added to which, the non-alteration of a single word in the poem (a circumstance noted at the time) claims for it, I should suppose, a merit without a parallel.

"The poem which commences the volume," says Mr. Monckton Milnes, "was suggested to Keats by a delightful summer's day, as he stood beside the gate that leads from the battery on Hampstead Heath into a field by Caen Wood"; and the lovely passage beginning,

"Linger awhile upon some bending planks," and which contains the description of the "swarms of minnows that show their little heads," Keats told me was the recollection of our having frequently loitered over the rail of a foot-bridge that spanned a little brook in the last field upon entering Edmonton. He himself thought the picture was correct, and liked it; and I do not know who could improve it.

Another example of his promptly suggestive imagination, and uncommon facility in giving it utterance, occurred one day upon his returning home and finding me asleep upon the sofa, with my volume of Chaucer open at the "Flower and the Leaf." After expressing his admiration of the poem, which he had been reading, he gave me the fine testimony of that opinion, in pointing to the sonnet he had written at the close of it, which was an extempore effusion, and it has not the alteration of a single word. It lies before me now, signed, "J. K., Feb., 1817."

If my memory does not betray me, this charming out-door fancy-scene was Keats's first introduction to Chaucer. Certain I am that the "*Troilus and Cresseide*" was an after-acquaintance; and clearly do I remember his approbation of the favorite passages that I had marked. I desired him to retrace the poem, and with his pen confirm and denote those which were congenial with his own feeling and judgment. These two circumstances, connected with the literary career of this cherished object of his friend's esteem and love, have stamped a priceless value upon that friend's miniature 18mo copy of Chaucer.

The little first volume of Keats's *Muse* was launched amid the cheers and fond anticipations of all his circle. Every one of us expected that it would create a sensation in the literary world; and we calculated upon, at least, a succession of reprints. Alas! it might have emerged in Timbuctoo with stronger chance of fame and favor. It never passed to a second edition; the first was but a small one, and that was never sold off. The whole community, as if by compact, determined to know nothing about it. The word had been passed that its author was a Radical; and in those blessed days of "Bible-Crown-and-Constitution" supremacy, he might with better chance of success have been a robber,—there were many prosperous public ones,—if he had also been an Anti-Jacobin. Keats had made no demonstration of political opinion; but he had dedicated his book to Leigh Hunt, a Radical news-writer, and a dubbed partisan of the French ruler, because he did not call him the "Corsican monster," and other disgusting names. Verily, "the former times were *not* better than these." Men can now write the word "Liberty" without being chalked on the back and hounded out.

Poor Keats! he little anticipated, and as little deserved, the cowardly and scoundrel treatment that was in store for him upon the publication of his second composition, the "*Endymion*." It was in the interval of the two productions that he had moved from the Poultry, and had

taken a lodging in Well Walk, Hampstead,—in the first or second house, on the right hand, going up to the Heath. I have an impression that he had been some weeks absent at the sea-side before settling in this domicile; for the "*Endymion*" had been begun, and he had made considerable advances in his plan. He came to me one Sunday, and I walked with him, spending the whole day in Well Walk. His constant and enviable friend Severn, I remember, was present on the occasion, by the circumstance of our exchanging looks upon Keats's reading to us portions of his new work that had pleased himself. One of these, I think, was the "*Hymn to Pan*"; and another, I am sure, was the "*Bower of Adonis*," because his own expression of face will never pass from me (if I were a Reynolds or a Gainsborough, I could now stamp it forever) as he read the description of the latter, with the descent and ascent of the car of Venus. The "*Hymn to Pan*" occurs early in the First Book:—

"O thou, whose mighty palace-roof doth hang
From jagged trunks," etc.

And the "*Bower of Adonis*," in the Second Book, commences,—

"After a thousand mazes overgone,"

Keats was indebted for his introduction to Mr. Severn to his school-fellow Edward Holmes, who also had been one of the child-scholars at Enfield; for he came to us in the frock-dress. They were sworn companions at school, and remained friends through life. Mr. Holmes ought to have been an educated musician from his first childhood; for the passion was in him. I used to amuse myself with the piano-forte after supper, when all had gone to bed. Upon some sudden occasion, leaving the parlor, I heard a scuffle on the stairs, and discovered that my young gentleman had left his bed to hear the music. At other times, during the day, and in the intervals of school-hours, he would stand under the window, listening. He at length intrusted to me his heart's secret, that he should like to learn music. So I taught him his notes; and he soon

knew and could do as much as his tutor. Upon leaving Enfield, he was apprenticed to the elder Seeley, a bookseller in Fleet Street; but, hating his occupation, left it, I believe, before he was of age. He had not lost sight of me; and I introduced him to Mr. Vincent Novello, who had made himself a friend to me, and who not merely, with rare profusion of bounty, gave Holmes instruction, but received him into his house, and made him one of his family. With them he resided some years. I was also the fortunate means of recommending him to the chief proprietor of the "Atlas" newspaper; and to that journal, during a long period, he contributed a series of essays and critiques upon the science and practice of music, which raised the journal into a reference and an authority in the art. He wrote for the proprietors of the "Atlas" that elegant little book of dilettante criticism, "A Ramble among the Musicians in Germany." He latterly contributed to the "Musical Times" a whole series of masterly essays and analyses upon the Masses of Haydn, Mozart, and Beethoven. But the work upon which his reputation will rest was a "Life of Mozart," which was purchased by Chapman and Hall.

I have said that Holmes used to listen on the stairs. In after-years, when Keats was reading to me his "Eve of St. Agnes," (and what a happy day was that! I had come up to see him from Rams-gate, where I then lived,) at the passage where Porphyro in Madeleine's chamber is fearfully listening to the hubbub of the dancing and the music in the hall below, and the verse says, —

"The boisterous midnight festive clarion,
The kettle-drum and far-heard clarinet,
Affray his ears, though but in dying tone:
The hall-door shuts again, and all the noise is gone," —

"That line," said he, "came into my head when I remembered how I used to listen, in bed, to your music at school." Interesting would be a record of the germs and first causes of all the greatest poets' conceptions! The elder Brunel's first

hint for his "shield," in constructing the tunnel under the Thames, was taken from watching the labor of a sea-insect, which, having a projecting hood, could bore into the ship's timber, unmolested by the waves.

I fancy it was about this time that Keats gave that signal example of his courage and stamina, in the recorded instance of his pugilistic contest with a butcher-boy. He told me — and in his characteristic manner — of their "passage of arms." The brute, he said, was tormenting a kitten, and he interfered, when a threat offered was enough for his mettle, and they set to. He thought he should be beaten; for the fellow was the taller and stronger; but, like an authentic pugilist, my young poet found that he had planted a blow which "told" upon his antagonist. In every succeeding round, therefore, (for they fought nearly an hour,) he never failed of returning to the weak point; and the contest ended in the hulk being led or carried home. In all my knowledge of my fellow-beings, I never knew one who so thoroughly combined the sweetness with the power of gentleness and the irresistible sway of anger as Keats. His indignation would have made the boldest grave; and those who have seen him under the influence of tyranny, injustice, and meanness of soul will never forget the expression of his features, — "the form of his visage was changed."

He had a strong sense of humor; yet, so to speak, he was not, in the strict sense of the term, a humorist. His comic fancy lurked in the outermost and most unlooked-for images of association, — which, indeed, may be said to be the components of humor; nevertheless, I think they did not extend beyond the *quaint*, in fulfillment and success. But his perception of humor, with the power of transmitting it by imitation, was both vivid and irresistibly amusing. He once described to me his having gone to see a bear-baiting, — the animal, the property of a Mr. Tom Oliver. The performance not having begun, Keats was near to and watched

a young aspirant, who had brought a younger under his wing to witness the solemnity, and whom he oppressively patronized, instructing him in the names and qualities of all the magnates present. Now and then, in his zeal to manifest and impart his knowledge, he would forget himself, and stray beyond the prescribed bounds, into the ring, — to the lashing resentment of its comptroller, Mr. William Soames; who, after some hints of a practical nature, to “keep back,” began laying about him with indiscriminate and unmitigable vivacity, — the Peripatetic signifying to his pupil, — “My eyes! Bill Soames giv’ me sich a licker!” — evidently grateful, and considering himself complimented, upon being included in the general dispensation. Keats’s entertainment with this minor scene of low life has often recurred to me. But his subsequent description of the baiting, with his position, of his legs and arms bent and shortened, till he looked like Bruin on his hind-legs, dabbing his fore-paws hither and thither, as the dogs snapped at him, and now and then acting the gasp of one that had been suddenly caught and hugged, his own capacious mouth adding force to the personation, was a memorable display. I am never reminded of this amusing relation, but it is associated with that forcible picture in Shakspeare, (and what subject can we not associate with him?) in the “Henry VI.”:—

“as a bear encompassed round with dogs,
“Who having *pinched* a few and *made them cry*,
“The rest stand all aloof and bark at him.”

Keats also attended a prize-fight between two of the most skilful and enduring “light-weights,” — Randal and Turner. It was, I believe, at that remarkable wager, when, the men being so equally matched and accomplished, they had been sparring for three-quarters of an hour before a blow had been struck. In describing the rapidity of Randal’s blows while the other was falling, Keats tapped his fingers on the window-pane.

I make no apology for recording these

events in his life; they are characteristics of the natural man, — and prove, moreover, that the indulgence in such exhibitions did not for one moment blunt the gentler emotions of his heart, or vulgarize his inborn love of all that was beautiful and true. His own line was the axiom of his moral existence, his political creed: — “A thing of beauty is a joy forever”; and I can fancy no coarser consociation able to win him from this faith. Had he been born in squalor, he would have emerged a gentleman. Keats was not an easily swayable man; in differing with those he loved, his firmness kept equal pace with the sweetness of his persuasion; but with the rough and the unlovable he kept no terms, — within the conventional precincts, I mean, of social order.

From Well Walk he moved to another quarter of the Heath, — Wentworth Place the name, if I recollect. Here he became a sharing inmate with Mr. Charles Armitage Brown, a gentleman who had been a Russia merchant, and had retired to a literary leisure upon an independence. I do not know how they became acquainted; but Keats never had a more zealous, a firmer, or more practical friend and adviser than Brown. His robust eagerness and zeal, with a headstrong determination of will, led him into an undue prejudice against the brother, George, respecting some money-transactions with John, which, however, the former redeemed to the perfect satisfaction of all the friends of the family. After the death of Keats, Armitage Brown went to reside in Florence, where he remained some few years; then he settled at Plymouth, and there brought out a work entitled, “Shakspeare’s Autobiographical Poems. Being his Sonnets clearly developed; with his Character, drawn chiefly from his Works.” It cannot be said that in this work the author has clearly educed his theory; but, in the face of his failure upon that main point, the book is interesting, for the heart-whole zeal and homage with which he has gone into his subject. Brown was no half-meas-

ure man; "whatsoever his hand found to do, he did it with his might." His last stage-scene in life was passed in New Zealand, whither he emigrated with his son, having purchased some land,—or, as his own letter stated, having been thoroughly defrauded in the transaction. Brown accompanied Keats in his tour in the Hebrides, a worthy event in the poet's career, seeing that it led to the production of that magnificent sonnet to "Ailsa Rock." As a passing observation, and to show how the minutest circumstance did not escape him, he told me, that, when he first came upon the view of Loch Lomond, the sun was setting; the lake was in shade, and of a deep blue; and at the farther end was "a slash across it, of deep orange." The description of the traceried window in the "Eve of St. Agnes" gives proof of the intensity of his feeling for color.

It was during his abode in Wentworth Place that the savage and vulgar attacks upon the "Endymion" appeared in the "Quarterly Review," and in "Blackwood's Magazine." There was, indeed, ruffian, low-lived work,—especially in the latter publication, which had reached a pitch of blackguardism, (it used to be called "Blackguard's Magazine,") with *personal abuse*,—ABUSE,—the only word,—that would damage the sale of any review at this day. The very reverse of its present management. There would not now be the *inclination* for such rascal bush-fighting; and even then, or indeed at any period of the Magazine's career, the stalwart and noble mind of John Wilson would never have made itself editorially responsible for such trash. As to him of the "Quarterly," a thimble would have been "a mansion, a court," for his whole soul. The style of the articles directed against the Radical writers, and those especially whom the party had nicknamed the "Cockney school" of poetry, may be conceived by its provoking the following observation from Hazlitt to me:—"To pay those fellows, Sir, in *their own coin*, the way would be, to begin with Walter Scott, and have

at his *clump-foot*." "Verily, the former times were not better than these."

To say that these disgusting misrepresentations did not affect the consciousness and self-respect of Keats would be to underrate the sensitiveness of his nature. He felt the insult, but more the injustice of the treatment he had received; he told me so, as we lay awake one night, when I slept in his brother's bed. They had injured him in the most wanton manner; but if they, or my Lord Byron, ever for one moment supposed that he was crushed or even cowed in spirit by the treatment he had received, never were they more deluded. "Snuffed out by an article," indeed! He had infinitely more magnanimity, in its fullest sense, than that very spoiled, self-willed, and mean-souled man,—and I have authority for the last term. To say nothing of personal and private transactions, pages 204–207 in the first volume of Mr. Monckton Milnes's life of our poet will be full authority for my estimate of his Lordship. "Johnny Keats" had, indeed, "a little body with a mighty heart," and he showed it in the best way: not by fighting the ruffians,—though he could have done that,—but by the resolve that he would produce brain-work which not one of their party could approach; and he did.

In the year 1820 appeared the "Lamia," "Isabella," "Eve of St. Agnes," and "Hyperion," etc. But, alas! the insidious disease which carried him off had made its approach, and he was going to, or had already departed for, Italy, attended by his constant and self-sacrificing friend, Severn. Keats's mother died of consumption; and he nursed his younger brother in the same disease, to the last,—and, by so doing, in all probability, hastened his own summons. Upon the publication of the last volume of poems, Charles Lamb wrote one of his own finely appreciative and cordial critiques in the "Morning Chronicle." This was sent to me in the country, where I had for some time resided. I had not heard of the dangerous state of Keats's

health,—only that he and Severn were going to Italy; it was, therefore, an unprepared shock which brought me the news that he had died in Rome.

Mr. Monckton Milnes has related the anecdote of Keats's introduction to Wordsworth, with the latter's appreciation of the "Hymn to Pan," which its author had been desired to repeat, and the Rydal Mount poet's snow-capped comment upon it,—“Uhm! a pretty piece of Paganism!” Mr. Milnes, with his genial and placable nature, has made an amiable defence for the apparent coldness of Wordsworth's appreciation,—“That it was probably intended for some slight rebuke to his youthful compeer, whom he saw absorbed in an order of ideas that to him appeared merely sensuous, and would have desired that the bright traits of Greek mythology should be sobered down by a graver faith.” Keats, like Shakspeare, and every other true poet, put his whole soul into what he imagined, portrayed, or embodied; and hence he appeared the young Greek, “suckled in that creed outworn.” The wonder is, that Mr. Wordsworth forgot to quote himself. From Keats's description of his Mentor's manner, as well as behavior, that evening, I cannot but believe it to have been one of the usual ebullitions of the egoism, not to say of the uneasiness, known to those who were accustomed to hear the great moral philosopher discourse upon his own productions and descant upon those of a contemporary. During this same visit, he was dilating upon some question in poetry, when, upon Keats's insinuating a confirmatory suggestion to his argument, Mrs. Wordsworth put her hand upon his arm, saying,—“Mr. Wordsworth is never interrupted.” Again, during the same interview, some one had said that the next Waverley novel was to be “Rob Roy”; when Mr. Wordsworth took down his volume of Ballads, and read to the company “Rob Roy's Grave,”—then, returning it to the shelf, observed, “I do not know what more Mr. Scott can have to say upon the subject.” When Leigh Hunt had his first interview with

Wordsworth, the latter lectured to him—finely, indeed—upon his own writings; and repeated the entire sonnet,

“Great men have been among us,”—

which Hunt said he did “in a grand and earnest tone.” Some one in a company quoting the passage from “Henry V.”—

“So work the honey-bees,”

and each “picking out his pet plum” from that perfect piece of natural history, Wordsworth objected to the line,

“The singing masons building roofs of gold,”

because, he said, of the unpleasant repetition of the “ing” in it! Where were his ears and judgment on that occasion? But I have more than once heard it said that Wordsworth had not a genuine love of Shakspeare,—that, when he could, he always accompanied a “pro” with his “con,” and, Atticus-like, would “just hint a fault and hesitate dislike.” Truly, indeed, we are all of “a mingled yarn, good and ill together.”

I can scarcely conceive of anything more unjust than the account which that ill-ordered being, Haydon, left behind him in his “Diary,” respecting the idolized object of his former intimacy, John Keats. At his own eager request, after reading the manuscript specimens I had left with Leigh Hunt, I had introduced their author to him; and for some time subsequently I had frequent opportunities of seeing them together, and can testify to the laudations that Haydon trowelled on to the young poet. Before I left London, however, it had been said that things and opinions had changed,—and, in short, that Haydon had abjured all acquaintance with, and had even ignored, such a person as the author of the sonnet to him, and those “On the Elgin Marbles.” I say nothing of the grounds of their separation; but, knowing the two men, and knowing, I believe, to the core, the humane principle of the poet, I have such faith in his steadfastness of friendship, that I am sure he would never have left behind him an unfavorable *truth*, while nothing could have induced him to ut-

ter a *calumny* of one who had received pledges of his former regard and esteem. Haydon's detraction was the more odious because its object could not contradict the charge, and because it supplied his old critical antagonists (if any remained) with an authority for their charge against him of Cockney ostentation and display. The most mean-spirited and trumpery twaddle in the paragraph was, that Keats was so far gone in sensual excitement as to put Cayenne pepper upon his tongue, when taking his claret! Poor fellow! he never purchased a bottle of claret, within my knowledge of him; and, from such observation as could not escape me, I am bound to assert that his domestic expenses never could have occasioned him a regret or a self-reproof.

When Shelley left England for Italy, Keats told me that he had received from him an invitation to become his guest, — and, in short, to make one of his household. It was upon the purest principle that Keats declined the noble proffer; for he entertained an exalted opinion of Shelley's genius, in itself an inducement; he also knew of his deeds of bounty; and lastly, from their frequent intercourse, he had full faith in the sincerity of his proposal; for a more crystalline heart than Shelley's never beat in human bosom. He was incapable of an untruth or of a deceit in any ill form. Keats told me, that, in declining the invitation, his sole motive was the consciousness, which would be ever prevalent with him, of his not being, in its utter extent, a free agent, — even within such a circle as Shelley's, — himself, nevertheless, the most unrestricted of beings. Mr. Trelawney, a familiar of the family, has confirmed the unwavering testimony to Shelley's bounty of nature, where he says, "Shelley was a being absolutely without selfishness." The poorest cottagers knew and benefited by the thoroughly *practical* and unselfish character of his Christianity, during his residence at Marlow, when he would visit them, and, having gone through a course of study in medicine, in order that he might assist them with his advice, would

commonly administer the tonic which such systems usually require, — a good basin of broth, or pea-soup. And I believe I am infringing on no private domestic delicacy, when I repeat, that he has been known, upon a sudden and immediate emergency, to purloin ("*convey the wise it call*") a portion of the warmest of Mrs. Shelley's wardrobe, to protect some poor starving sister. One of the richer residents of Marlow told me that "*they all* considered him a madman." I wish he had bitten the whole squad.

"No settled senses of the world can match
The 'wisdom' of that madness."

Shelley's figure was a little above the middle height, slender, and of delicate construction, which appeared the rather from a lounging or waving manner in his gait, as though his frame was compounded merely of muscle and tendon, and that the power of walking was an achievement with him, and not a natural habit. Yet I should suppose that he was not a valetudinarian, although that has been said of him, on account of his spare and vegetable diet: for I have the remembrance of his scampering and bounding over the gorse-bushes on Hampstead Heath, late one night, — now close upon us, and now shouting from the height, like a wild school-boy. He was both an active and an enduring walker, — feats which do not accompany an ailing and feeble constitution. His face was round, flat, pale, with small features; mouth beautifully shaped; hair, bright-brown and wavy; and such a pair of eyes as are rarely seen in the human or any other head, — intensely blue, with a gentle and lambent expression, yet wonderfully alert and engrossing: nothing appeared to escape his knowledge.

Whatever peculiarity there might have been in Shelley's religious faith, I have the best authority for believing that it was confined to the early period of his life. The *practical* result of its course of *action*, I am sure, had its source from the "Sermon on the Mount." There is not one clause in that divine code which

his conduct towards his fellow-mortals did not confirm, and substantiate him to be a follower of Christ. Yet, when the news arrived in London of the death of Shelley and Captain Williams by drowning, the "Courier" newspaper — an evening journal of that day — capped the intelligence with the following remark: — "He will now know whether there is a hell or not!" — I believe that there are still one or two public fanatics who would *think* that surmise, but not one would dare to utter it in his journal. So much for the progress of liberality, and the power of opinion.

At page 100 of the "Life of Keats," Vol. I., Mr. Monckton Milnes has quoted a literary portrait of him, which he received from a lady who used to see him at Hazlitt's lectures at the Surrey Institution. The building was on the south or right-hand side, and close to Blackfriars' Bridge. I believe that the whole of Hazlitt's lectures, on the British Poets, the Writers of the Time of Elizabeth, and the Comic Writers, were delivered in that Institution, during the years 1817 and 1818; shortly after which time the establishment appears to have been broken up. The lady's remark upon the character and expression of Keats's features is both happy and true. She says, — "His countenance lives in my mind as one of singular beauty and brightness; it had an expression *as if he had been looking on some glorious sight.*" That's excellent. — "His mouth was full, and less intellectual than his other features." True again. But when our artist pronounces that "his eyes were large and *blue*," and that "his hair was *auburn*," I am naturally reminded of the fable of the "Chameleon": — "They're *brown*, Ma'am, — *brown*, I assure you!" The fact is, the lady was enchanted — and I cannot wonder at it — with the whole character of that beaming face; and "blue" and "auburn" being the favorite tints of the human front divine, in the lords of the creation, the poet's eyes consequently became "*blue*," and his hair "*auburn*." Colors, however, vary with the prejudice or partiality of the

spectator; and, moreover, people do not agree even upon the most palpable prismatic tint. A writing-master whom we had at Enfield was an artist of more than ordinary merit; but he had one dominant defect: he could not distinguish between true blue and true green. So that, upon one occasion, when he was exhibiting to us a landscape he had just completed, I hazarded the critical question, why he painted his trees so *blue*? "*Blue!*" he replied, — "what do you call green?" — Reader, alter in your copy of Monckton Milnes's "Life of Keats," Vol. I., page 103, "*eyes*" *light hazel*, "*hair*" *lightish-brown and wavy*.

The most perfect, and withal the favorite portrait of him, was the one by Severn, published in Leigh Hunt's "Lord Byron and his Contemporaries," and which I remember the artist's sketching in a few minutes, one evening, when several of Keats's friends were at his apartments in the Poultry. The portrait prefixed to the "Life," also by Severn, is a most excellent one-look-and-expression likeness, — an every-day, and of "the earth, earthy" one; — and the last, which the same artist painted, and which is now in the possession of Mr. John Hunter, of Craig Crook, Edinburgh, may be an equally felicitous rendering of one look and manner; but I do not intimately recognize it. There is another, and a *curiously unconscious* likeness of him, in the charming Dulwich Gallery of Pictures. It is in the portrait of Wouvermans, by Rembrandt. It is just so much of a resemblance as to remind the friends of the poet, — though not such a one as the immortal Dutchman would have made, had the poet been his sitter. It has a plaintive and melancholy expression, which, I rejoice to say, I do not associate with him.

There is one of his attitudes, during familiar conversation, which, at times, (with the whole earnest manner and sweet expression of the man) presents itself to me, as though I had seen him only last week. The attitude I speak of was that of cherishing one leg over

the knee of the other, smoothing the instep with the palm of his hand. In this action I mostly associate him in an eager parley with Leigh Hunt, in his little cottage in the "Vale of Health." This position, if I mistake not, is in the last portrait of him at Craig Crook; if not, it is in a reminiscent one, painted after his death.

His stature could have been very little more than five feet; but he was, withal, compactly made and well-proportioned; and before the hereditary disorder which carried him off began to show itself, he was active, athletic, and enduringly strong,—as the fight with the butcher gave full attestation.

The critical world,—by which term I mean the censorious portion of it; for many have no other idea of criticism than that of censure and objection,—the critical world have so gloated over the feeble, or, if they will, the defective side of Keats's genius, and his friends, his glorying partial friends, have so amply justified him, that I feel inclined to add no more to the category of opinions than to say, that the only fault in his poetry I could discover was a redundancy of imagery,—that exuberance, by-the-by, being a quality of the greatest promise, seeing that it is the constant accompaniment of a young and teeming genius. But his steady friend, Leigh Hunt, has rendered the amplest and truest record of his mental accomplishment in the Preface to the "Foliage," quoted at page 150 of the first volume of the "Life of Keats"; and his biog-

rapher has so zealously, and, I would say, so amiably, summed up his character and intellectual qualities, that I can add no more than my assent.

Keats's whole course of life, to the very last act of it, was one routine of unselfishness and of consideration for others' feelings. The approaches of death having come on, he said to his untiring nurse-friend,—*"Severn,—I,—lift me up,—I am dying:—I shall die easy; don't be frightened;—be firm, and thank God it has come."*

There are constant indications through the memoirs, and in the letters of Keats, of his profound reverence for Shakespeare. His own intensity of thought and expression visibly strengthened with the study of his idol; and he knew but little of him till he himself had become an author. A marginal note by him in a folio copy of the Plays is an example of the complete absorption his mind had undergone during the process of his matriculation;—and, through life, however long with any of us, we are all in progress of matriculation, as we study the "myriad-minded's" system of philosophy. The note that Keats made was this:—*"The genius of Shakespeare was an innate universality; wherefore he laid the achievements of human intellect prostrate beneath his indolent and kingly gaze: he could do easily men's utmost; his plan of tasks to come was not of this world. If what he proposed to do hereafter would not in the idea answer the aim, how tremendous must have been his conception of ultimates!"*

THE EUROPEAN CRISIS.

It is not long since we listened to an interesting discussion of this question:—Which was the more important year to Europe,—1859 or 1860? The question is one that may be commended to the attention of those ingenuous young gentlemen, in debating-societies assembled, who have not yet settled whether Brutus, Cassius, & Co. were right in assassinating “the mighty Julius,” or whether Mary Stuart was a martyred saint or a martyred sinner, or whether the cold chop to which Cromwell treated Charles I. on a memorable winter-day was either a just or a politic mode of touching for the king’s evil. It would have the merit of novelty,—and Americans are as fond of new things in their day of power as ever were the Athenians in the day of their decline. A yet rarer merit it would have, in the fact that a great deal could justly be said on both sides of the question. An umpire would probably decide in favor of 1859,—because, he might say, had the events of that year been different, those of 1860 must have undergone a complete change.

The romantic conquest of Sicily by Garibaldi, and his successes in Naples, whereby a junior branch of the Bourbon family has been sent to “enjoy” that exile which has so long been the lot of the senior branch,—and the destruction of the *Papalini* by the Italian army of Victor Emanuel II., which asserted the superiority of the children of the soil over the bands of foreign ruffians assembled by De Merode and Lamoricière for the oppression of the Peninsula in the name of the venerable head of the Church of Rome,—these are events even more striking than those by which the iron sceptre of Austria was cut through in the earlier year, because they have been accomplished by Italian genius and courage, the few foreigners in the army of Garibaldi not counting for much in the contest. They prove the regeneration of Italy. But it

is evident that nothing of the kind could have been done in 1860, if 1859 had been as quiet a year for Italy as its immediate predecessor. Before the leaders and the soldiers of Italy could obtain the indispensable place whereon to stand, it was imperatively necessary that the power of Austria should be broken down, through the defeat and consequent demoralization of her army. For a period of forty-four years, Austria had had her own way in the Peninsula. From the fall of Napoleon’s Italian dominion, in 1814, to the day when the third Napoleon’s army entered Sardinia, there was, virtually, no other rule in Italy but that which Austria approved. The events of 1848, which at one time promised to remove “the barbarians,” had for their conclusion the re-establishment of her ascendancy in greater force than ever; and the last ten years of that ascendancy will always be remembered as the period when its tyrannical character was most fully developed. The hoary proconsul of the Lorraines, Radetzky, if not personally cruel, was determined to do for his masters what Castilian lieutenants had done for the Austro-Burgundian monarchs of Spain and her dependencies, the fairest portions of Italy being among those dependencies, in the sixteenth and seventeenth centuries,—to destroy the public spirit of Italy. Could he have completed a century of life, or had there been no European nation ready to prevent the success of the Germanic policy under which Italy was to wither to provincial worthlessness, he might have been successful. But Austria lost her best man, the only one of her soldiers who had shown himself capable of upholding her Italian position, when he had reached to more than ninety years; and it pleased Providence to raise up a friend to Italy in a quarter to which most men had ceased to look for anything good.

Well has it been said, that “it is not

the best tools that shape out the best ends; if so, Martin Luther would not have been selected as the master-spirit of the Reformation." Napoleon III. may deserve all that is said against him by men of the extreme right and by men of the extreme left, — by Catholics and infidels, — by *Whites*, and *Reds*, and *Blues*, — but it cannot be denied that he gave to the Italians that assistance without which they never could have obtained even partial deliverance from the Austrian yoke, and which they could have procured from no other potentate or power. Bankrupt though she was, Austria's force was so superior to anything that Italy could present in the shape of an army, that Sardinia must have been conquered, if she had contended alone with her enemy; and a war between Austria and Sardinia was inevitable, and would probably have broken out long before 1859, had the former country been assured of the neutrality of France.

There has been a great inkshed, and a large expenditure of oratory, on the question of the origin of the Italian war of 1859; and, as usual, much nonsense has been written and said of and concerning the ambition of France and the encroachments of Sardinia. But that war was brought about neither by French ambition nor by Sardinian desire for territorial aggrandizement. That it occurred in 1859 was undoubtedly owing to the action of France, which country merely chose its own time to drub its old foe; but the point at issue was, whether Austrian or Sardinian ideas should predominate in the government of Italy. Austria's purpose never could be accomplished so long as a constitutional polity existed in the best, because the best governed and the best organized, of all the Italian States; and Sardinia's purpose never could be accomplished so long as Austria was in a condition to dictate to the Italians the manner in which they should be ruled. A war between the two nations was, as we have said, inevitable. The only point about which there could be any dispute was, whether Sardinia

would have to fight the battle of Italy unaided, or be backed by some power beyond the mountains.

It shows how much men respect a military monarchy, how deferential they are to the sword, that even those persons who assumed that France must espouse the Sardinian cause were far from feeling confident that Austria would be overmatched by an alliance of the two most liberal of the Catholic nations of Europe. That monarchy is the type of force to all minds; and though she has seldom won any splendid successes in the field over the armies of enlightened nations, and has been repeatedly beaten by Prussia and France, men cling to old ideas, and give her great advantages at the beginning of every war in which she engages. The common opinion, in the spring of 1859, was, that Austria would crush Sardinia before the French could reach the field in force, and that her soldiers, flushed by successes over the Italians, would hurl their new foes out of the country, or leave them in its soil. As before, Italy was to be the grave of the French, — only that their grave was to be dug at the very beginning of the war, instead of being made, as in other days, at its close. But it was otherwise ordered. The Austrians lost the advantage which certainly was theirs at the opening of the contest, and, that lost, disaster after disaster befell their arms, until the "crowning mercy" of Solferino freed Italy from their rule, if it did not entirely banish them from her land. That Solferino was not so great a victory to the Allies as it was claimed to be at the time, that it resembled less Austerlitz than Wagram, may be admitted, and yet its importance remain unquestioned; for its decision gained for Italy the only thing that it was necessary she should have in order to work out her own salvation. Henceforth, she was not to tremble at the mere touch of the hilt of the sword worn by the Viceroy at Milan, but was to have the chance, at least, of ordering her own destinies. If not thoroughly free, she was no longer utterly enslaved.

The peace of Villafranca surprised ev-

ery one, from the Czar on the Neva to the gold-gatherers on the Sacramento. Strange as had been the doings—the world called them tricks—of Napoleon III., no man was prepared for that; and even now, though seventeen eventful months have rolled away since the first shock of it was experienced, the summer-day it was received seems more like one of those days we see in dreams than like a day of real life. Doubt, laughter, astonishment, and disgust followed each other through the minds of millions of men. If curses could kill, the man who had escaped the bombs of Orsini and the bullets of the Austrians would certainly have died in the month that followed the interview he had flogged his imperial brother into granting him. In America,—where we are always doing so much (on paper) for the cause of freedom, and for the deliverance of “oppressed nationalities” of the proper degrees and shades of whiteness, in the firm conviction that the free man is the better customer,—in America the reaction of opinion was overwhelming; and there were but few persons in the United States who would not have shouted over news that Henri Cinq was in Paris, and that the French Empire had a third time made way for the Kingdom of France. Time has not altogether removed the impression then created; for, if it has not justified the belief that the French Emperor had abandoned the Italian cause, it has convinced the world that he lost a noble opportunity to effect the destruction of Austria. There may be—most probably there are—facts yet unknown to the public, knowledge of which would partially justify the conduct of the victor toward the vanquished, in 1859; but, if we judge from what we know, which is all that any monarch can demand of the formers of opinion, Napoleon III. was guilty of a monstrous political and military blunder when he forced a truce upon Francis Joseph.

There is no evidence that any European power was about to interfere in behalf of Austria. Prussia, it is true,

had taken a stern attitude, and showed a disposition to place herself at the head of those German States which were for beginning a march upon Paris at once, though M. le Maréchal Duc de Malakoff was ready with two hundred thousand men to receive them, and Paris itself was not the feeble place it had been in 1814 and 1815. It is altogether likely that Prussia was, as is usual with her at every European crisis, shamming. She had no interest in the maintenance of Austria's territorial integrity, and it was rather late in the day to assume that Berlin was affected by the mortifications of Vienna. Could the hearts of kings and the counsels of cabinets be known with that literal exactness which is so desirable in politics, and yet so unattainable, we should probably find that Prussia's apparent readiness to lead Germany was owing to her determination that German armies should be led nowhere to the assistance of Austria. England had just changed her Ministry, the Derby Cabinet giving way to Lord Palmerston's, which was recognized on all sides as a great gain to the cause of Italian independence; and Lord John Russell had written one of those crusty notes to the Prussian government for which he is so famous, and which was hardly less Italian in its sentiments than that in which, written in October last, he upheld the course of Garibaldi and Victor Emanuel. Russia had evinced no disposition to interfere in behalf of Austria, and perhaps the news of Magenta and Solferino was as agreeable to the dwellers in St. Petersburg and Moscow as it was to the citizens of New York and Boston. She was, indeed, believed to be backing France. Politically, so far as we can judge, there was no cause or occasion for the throwing up of the cards by the French, after Solferino.

Nor were the military reasons for the cessation of warlike operations of a nature to convince men of their irresistible weightiness. A great deal was said about the strength of “the Quadrilateral,” and of the impregnability of the position

which it formed,—as if there ever had existed a military position which could not be carried or turned, or out of which its defenders could not be bought, or forced, or starved! The strength of the Quadrilateral was as well known to the Emperor in January as it was in July, and he must have counted its powers of resistance before he resolved upon war. Victory he had organized, like Carnot; and victory in Lombardy was sure to take his army to the Mincio. Verona and Venetia were to be the complement of Milan. Then there was the story that he frightened the Kaiser into giving his consent to the truce by proving to him that the fortresses upon which he relied were not in good defensible condition, his commissaries having placed the funds in their pockets that should have been devoted to the purchase of stores,—a story that wears a very probable air, in view of the discovery subsequently made of the malversations of some of the highest persons at Vienna, and which had much to do with the suicide of the Minister of Finance. It is known, too, that the force which Napoleon III. had assembled in the Adriatic was very strong, and could have been so used as to have promoted an Hungarian insurrection in a sense not at all pleasant to the Austrians, to have attacked Dalmatia and Istria, and to have aided in the deliverance of Venice. That force was largely naval in its character, and the French navy was burning to distinguish itself in a war that had been so productive of glory to the sister-service: it would have had a Magenta and a Palestro of its own, won where the Dorias and the Pisani had struggled for fame and their countries' ascendancy. Instead of the Quadrilateral being a bar to the French, it would have been a trap to the Austrians, who would have been taken there after the manner in which Napoleon I. took their predecessors at Ulm. After the war was over, it came out that Verona was not even half armed.

If Napoleon III. was bent upon carrying that imitation of his uncle, of which he is so fond, to the extent of granting a mag-

nanimous peace to a crushed foe, he may be said to have caricatured that which he sought to imitate. The first Napoleon's magnanimity after Austerlitz has been attributed to the craft of the beaten party,—he allowing the Russians to escape when they had extricated themselves from the false position in which their master's folly had caused them to be placed. But the third Napoleon did allow the Austrians to avoid the consequences of their defeat, and so disappointed Italy and the world. He *was* magnanimous, and most astonishing to the minds of men was his magnanimity. Most people called it stupidity, and strange stories were told of his nervous system having been shattered by the sights and sounds of those slaughter-fields which he had planned and fought and won!

We live rapidly in this age, when nations are breaking up all around us, when unions are dissolving, when dynasties disappear before the light like ghosts at cock-crowing, and when emperors and kings rely upon universal suffrage, once so terrible a bugbear in their eyes, for the titles to their crowns. Opinion is rapidly formed, and is as rapidly dismissed. We may be as much astonished now at the peace of Villafranca as we were on the day when first it was announced, and while looking upon it only as a piece of diplomacy intended to put an end to a contest costly in blood and gold; but we cannot say, as it was common then to say, that the war which it closed has decided nothing. That war established the freedom and nationality of Italy, and the peace so much condemned was the means of demonstrating to the world the existence of an *Italian People*. How far the French Emperor was self-deceived, and to what extent he believed in the practicability of the arrangements made at Villafranca and Zürich, are inscrutable mysteries. *Que sais-je?* might be the form of his own answer, were any one entitled to question him concerning his own opinion on his own acts of 1859. But of the effects of his attack on Austria there can be no doubt. That Lor-

raines and Bourbons have ceased to reign in Italy,—that the Kingdom of Victor Emanuel has increased from six millions of people to twenty-four millions,—that the same constitutional monarch who ruled at Turin is now acknowledged in Milan, in Ancona, in Florence, in Naples, and in Palermo, being King of Lombards, and Tuscans, and Romans, and Neapolitans, and Sicilians,—and that the Austrians are no longer the rulers of the Peninsula,—these things are all due to the conduct of the French Emperor. Had the peace of Europe not been broken by France, the Austrian power in Italy would have been unbroken at this moment, and Naples have been still under the dominion of that mad tyrant whose supreme delight it was to offend the moral sense of the world, and who found even in the remonstrances of his brother-despots occasion for increasing the weight of the chains of his victims, and of adding to the intensity and the exquisiteness of their tortures.

These solid advantages to Italy, this freedom of hers from domestic despotism and foreign control, are the fruits of French intervention; and they could have been obtained in no other way. There was no nation but France to which Italy could look for aid, and to France she did not look in vain. Of the motives of her ally it would be idle to speak, as there is no occasion to go beyond consequences; and those consequences are just as good as if the French Emperor were as pure-minded and unselfish as the most perfect of those paladins of romance who went about redressing one class of wrongs by the creation of another. What Italy desired, what alone she needed, was freedom from foreign intervention; and that she got through the interposition of French armies, and that she could have got from no other human source. This single fact is an all-sufficient answer to the myriads of sneers that were called forth by the failure of Napoleon III. to redeem his pledge to make Italy free from the Alps to the Adriatic. What other

potentate did anything for that country in 1859, or has done anything for it since that memorable year? Neither prince nor people, leaving Napoleon III. and the French aside, has so much as lifted a hand to promote the regeneration of Italy. America has enough to do in the way of attending to domestic slavery, without concerning herself about the freedom of foreigners; and she has given the Italians her—sympathies, which are of as much real worth to her as would be a treatise on the Resolutions of '98 to a man who should happen to tumble into the Niagara, with the Falls close upon him. England would have had Italy submit to that Austrian rule which had been established over her by English influence in 1814, when even the perverse, pig-headed Francis II. could see sound objections to it; and all because want of submission on her part would disturb the equilibrium of Europe, and might tend to the aggrandizement of France,—two things which she by no means desired to see happen. Russia, like America, gave Italy her sympathies; but she had a better excuse than we had for being prudent, as her monarch was engaged in planning at least the freedom of the serfs. If the Russians desired the overthrow of the Austrians, it was not because they loved the Italians, but from hatred of their oppressors; and that hatred had its origin in the refusal of Austria to join Russia when she was so hard pressed by France and England, Turkey and Piedmont. Prussia, as we have seen, sided with Austria; and though it is impossible to believe in her sincerity, her moral power, so far as it went, was adverse to the Italian cause. The other European nations were of no account, having no will of their own, and being influenced only by the action of the members of the Pentarchy. Save France, Italy had no friend possessed of the disposition and the ability to afford her that assistance without which she must soon have become in name, as she was fast becoming in fact, a mere collection of Austrian provinces.

We dwell upon these well-known facts because an opinion seems to prevail that no nation or government shall interfere for the protection of the weak against the strong, unless it shall be able to show that it is perfect itself, and that its intentions are of the most unselfish nature. Peoples are to be delivered from oppression only as the Israelites were delivered, by the direct and immediate interposition of Heaven in human affairs; and the delivering agent must be as high-minded and generous as Moses, who was allowed merely to gaze upon the Promised Land. Men who thus reason about human action, and the motives of actors on the great stage of life, must have read history to very little purpose, and have observed the making of history round about them to no purpose at all. The instruments of Providence are seldom perfect men, and the broad light in which they live brings out their faults in full force. Napoleon III. is not above the average morality of his time; and if he had been so, probably he never would have become Emperor of the French. But in this respect differs he much from those men who have wrought great things for the world, and whom the world is content to reverence? Robert Bruce, who saved Scotland from the misery that befell Ireland; Henry IV., who renewed the life of France; Maurice of Saxony, who prevented the Reformation from proving a stupendous failure; and William III., without whose aid the Constitutionalists of England must have gone down before the Stuarts: not one of these men was perfect; and yet what losses the world would have experienced, if they had never lived, or had failed in their great labors! It has been claimed for Gustavus Adolphus that he was the only pure conqueror that ever lived; but his purity may safely be placed to the account of the balls of Lützen: he was not left unto temptation. We should extend to Napoleon III. the same charity that we extend to men who have long been historical characters, and judge him by his actions and their results, and

not criticize him by the canons of faction.

Italy was delivered by the war of 1859, and that war was terminated by the peace of Villafranca. For the moment, it seemed as if there were to be a restoration of the petty princes who had fled from Tuscany and Parma and Modena, and that an Italian Confederation had been resolved upon, in which the noxious influences of Austria and Naples and Papal Rome should stifle the pure principles upheld by Sardinia. A few months sufficed to show that these evils existed in apprehension only. The Italians, by the withdrawal of the French, were thrown upon their own resources, and by their conduct they dissipated the belief that they were unequal to the emergency. Had the war been continued, had Venetia been conquered, and had the last of the Austrians been driven beyond the Isonzo, Italy would have been the prize of French valor and genius; for all this must have been done on the instant, and before the Italians, less the Sardinians, could have taken an effective part in the war. The most devoted believer in the patriotism and bravery of the Italians must perforce admit that they had little to do with the war of 1859. Leaving the Sardinians aside, the Italian element in that contest was scarcely appreciable. This we say without meaning any reflection on the Italians. There were many good reasons why they should remain quiet. In common with the rest of the world, even France herself, the war took them by surprise, Austria bringing it on weeks, if not months, before Napoleon III. had meant it to begin. They, too, had seen their country so often abused by those who had conquered there, that they had some excuse for waiting the progress of events. The most industrious and studied efforts had been made to convince them that the object of the ruler of France was the realization of another Napoleonic idea, namely, the restoration of that Kingdom of Italy which perished in 1814; and though the rule of Napoleon I. was the best that

Italy had known for three hundred years, it was hardly worth while to enter upon a doubtful fight for its restoration. Hence the majority of the people of Italy were not so active as they might have been; and their coolness is said to have had much effect on the mind of the victor, who must have thought that the people he had come to deliver were taking things very easily, and who could not have felt much flattered, when assured, in the politest terms, that those people believed him to be a selfish liar. His work, therefore, was but partially performed. Instead of halting on the shores of the historical Adriatic, his armies drew up on the banks of the classic Mincius. France had done her part; let Italy do the rest, if it were to be done. Thus abdicating his original purpose, and probably feeling much as William III. felt when the English were so slow in joining him that he talked of returning to his ships, Napoleon III. gave up his power to dictate the future of Italy. He had no right, thereafter, to say that the Bourbons should continue to govern in the Two Sicilies, that the Dukes should be restored to their Duchies, and that Venetia should be guarantied to Austria. He felt this, as the terms of the treaties that were made very clearly show; for he was careful to abstain from pledging himself to anything of a definite character. If he had perfected his original work, and been possessed of the power to effect a new settlement of Italy, he would, we presume, have stipulated for the continuance of the Bourbon power in the southern portion of the Peninsula and in Sicily; while the much talked-of purpose of creating an Italian Kingdom or Duchy for Prince Napoleon would probably have been carried out, and that gentleman have been established on the Arno. To the Sardinian monarchy would have been assigned the spoils taken from Austria, — Venice and Lombardy. The change in his political plans was the consequence of the change in his military plan, — though either change may be pronounced the cause or the effect, accord-

ing to the point from which the observer views the entire series of transactions. Thus the peace of 1859 may be considered to have been a benefit to Italy, just as the war it terminated had been. The war freed her from Austrian dominion; the peace, from its character, and from the circumstances under which it was made, left her people at liberty to act as they pleased in the fair field that had been won for their exertions by the skill and courage of the French and Sardinian armies.

The destinies of Italy being placed in her own hands, the Italians were as prompt as politic considerations would allow them to be in promoting the unification of their country. Central Italy soon became a part of the constitutional monarchy which had grown up under the shadow of the Alps. This could not have happened, if Napoleon III. had chosen to *veto* the proceedings of the Italians, which had virtually nullified one of his purposes. That he consented to this large addition to the power of Sardinia on the condition of receiving Savoy and Nice is by no means unlikely; and we do not think that Victor Emanuel was either unwise or wanting in patriotism in parting with those countries for the benefit of Italy. Taking advantage of the troubles in Sicily, Garibaldi led a small expedition to that island, which there landed, and began those operations which had their appropriate termination, in five months, in the addition of all the territories of the wretched Francis II., except Gaëta, to the dominions of the Sardinian King. The importance of Garibaldi's undertaking it is quite impossible to overrate; but of what account could it have been, if the Austrians had stood to Italy in the same position that they held at the opening of 1859? Of none at all. Garibaldi is preeminently a man of sense, and he would never have thought of moving against Francis II., if Francis Joseph had been at liberty to assist that scandalous caricature of kings. Or, if he had been tempted to enter upon the project, he would have been "snuffed out" as easily as was Mu-

rat, when, in 1815, he sought to recover the Neapolitan throne. If Austrian ships had not prevented him from landing in Sicily, Austrian troops would have destroyed him in that island. Nay, it is but reasonable to believe that Bomba's navy and army would have been amply sufficient to do their master's work. That his men were not wanting in courage and conduct has been proved by their deeds since the tyrant left his capital, on the Volturino and around Capua and at Gaëta. It was not want of bravery that led to their failure in Sicily, but the belief that their employer's system had failed, and that he and they were given up to the vengeance of Italy, supposing the Italians to be strong enough to do justice on them. They took courage when European circumstances led them to conclude that Austria would be advised, at the Warsaw Conference, to use her forces for the restoration of the old order of things in Italy, and receive the support of Russia and Prussia. To deserve such aid from the North, the Neapolitan army struggled hard, but in vain. The Absolutist cause was lost in Naples when the sovereigns met in the Polish capital; and though, forty years earlier, this would have been held an additional reason for the entrance of the barbarians into Italy, the successes of the patriots must have had their proper weight with the Prince Regent of Prussia and the Czar, who are understood to have been as deaf as adders to the charming of their young brother from Vienna. What was resolved upon at Warsaw the world has no positive means of knowing, and but little reliance is to be placed upon the rumors that have been so abundant; but, as Austria has not moved against the Italians, and as the instructions to her new commander-in-chief in Venetia (Von Benedek) are reported to be strong on the point of non-intervention, we are at liberty to infer that she accepts all that has been done as accomplished facts, and means to stand upon the defensive, in the hope of gaining moral support by her moderation in being outwardly content with less than half

the spoil which was given to her at the expense of Italy, when Europe was "settled," for the time, four-and-forty years ago.

The action of the Sardinian government, in sending its soldiers against the legal banditti whom Lamoricière had sought to drill into the semblance of an army, which was a direct attack on the Pope, and the subsequent employment of those soldiers, and of the Sardinian fleet, against the forces of Francis II., were model pieces of statesmanship, and worthy of the great man whose name and fame have become indissolubly associated with the redemption of Italy. The decision thus to act could not have been taken without the consent of Napoleon III. having first been had and obtained; and there is probably much truth in the story, that, when Lamoricière had the coolness to threaten his conquerors with the vengeance of the Emperor, they told him, half-laughingly, that they had planned the campaign with that illustrious personage at Chambéry, which must have convinced him that the cause of the Keys had nothing to expect from France beyond the sort of police aid which General Goyon was affording to it in the name of his master. Lamoricière also expected help from Austria, and professed to be able to number the few days at the expiration of which the white-coats would be at Alessandria, which would have been a diversion in his favor, that, had it been made, must have saved him from the mortification of surrendering to men whom he affected to despise, but who brought him and his army under the yoke. The faith of the commander of the rabble of the Faith in Austrian assistance was a Viennese inspiration, and was meant to induce him to resist to the last. Nor was it altogether false; for the Kaiser and Count Rechberg appear to have believed that they could induce the governments of Russia and Prussia to support them in a crusade in behalf of Rome and Naples, which was to rely upon Lutherans and supporters of the

Eastern Church for the salvation of the Western Church and its worst members. The first interview between Rechberg and Gortschakoff, if we can believe a despatch from Warsaw, led quickly to a quarrel, which must have taken place not long after their chiefs, the Kaiser and the Czar, had been locked in each other's arms at the railway-station. It is but just to the Austrians to state, that they probably had received from St. Petersburg some promises of assistance, which Alexander found himself unable to redeem, so determined was Russian opinion in its expression of aversion to Austria when its organs began to suspect that the old game was to be renewed, and that Alexander contemplated doing in 1861 what Nicholas had done in 1849,—to step between Francis Joseph and humiliation, perhaps destruction. If it be true that the Czar has ordered all Russians to leave Italy, that piece of pitiful spite would show how he hates the Italian cause, and also that it is not in his power seriously to retard its progress at present. Instead of ordering Russians from Italy, he would send them to that country in great masses, could he have his way in directing the foreign policy of his empire.

The entire success of Victor Emanuel and Garibaldi has brought Italian matters to a crisis. Carrying out the policy of Cavour, the King and the Soldier have all but completed the unification of their country, at the very time when the United States are threatened with disunion. The Kingdom of Italy exists at this time, virtually, if not in terms, and contains about twenty-four million people. It comprises the original territories of Victor Emanuel, *minus* Savoy and Nice, the Two Sicilies, Lombardy, almost the whole of the Papal States, and Tuscany, Parma, and Modena. If we except the fragment of his old possessions yet held by the Pope, and the Austrian hold on Venetia, all Italy now acknowledges the rule of Victor Emanuel, who is to meet an *Italian* Parliament in January, 1861. No political change of our century has been more

remarkable than this, whether we look to its extent, or have regard to the agencies by which it has been brought about. Two years ago, there was more reason to believe that the King of Sardinia would be an exile than that the Bourbon King of Naples would be on his travels. No man would have dared to prophesy that the former would be reigning over seven-eighths of the Italians, while the latter should be reduced to one town, garrisoned by foreign mercenaries. That these changes should be wrought by universal suffrage, had it been predicted, would have been thought too much to be related as a dream. Yet it is the voice of the Italian People, speaking under a suffrage-system apparently more liberal than ever has been known in America, which has accomplished all that has been done since the summer of 1859 in the Peninsula and in Sicily. It was because Napoleon III. would not place himself in opposition to the opinion of the people of Central Italy, that the petty monarchs of that country were not restored to their thrones, and that they became subjects of Victor Emanuel; and the voting in Sicily and Naples has confirmed the decision of arms, and made it imperative on the reactionists to attack the people, should their policy lead them to seek a reversal of the decrees of 1860. The new monarch of the Italians expressly bases his title to reign on the will of the people, expressed through the exercise of the least restricted mode of voting that ever has been known among men; and the people of Southern Italy never could have had the opportunity to vote their crown to him, if Garibaldi had not first freed them from the savage tyranny of Francis II.; and Garibaldi himself could not have acted for their deliverance, if Italy had not previously been delivered from the Austrians by France. Thus we have the French Emperor, designated as a *parvenu* both in England and America, and owing his power to his name,—the democrat Garibaldi, whose power is from his deeds, and whose income is not equal to that of an Irish

laborer in the United States,—the rich and noble Cavour, whose weekly revenues would suffice to purchase the fee-simple of Garibaldi's island-farm,—the King of Sardinia, representing a race that was renowned before the Normans reigned in England,—and the masses of the Italian people,—all acting together for the redemption of a country which needs only justice to enable it to assume, as near as modern circumstances will permit, its old importance in the world's scale. That there should have been such a concurrence of foreign friendship, democratic patriotism, royal sagacity, aristocratic talent, and popular good sense, for Italy's benefit, must help to strengthen the belief that the Italians are indeed about to become a new *Power* in Europe, and in the world, and that their country is no more to be rated as a mere "geographical expression."

The Italian crisis is a European crisis; for matters have now reached a pass in which the foreigner must have something to say of Italy's future: and it will be well for the general peace, if he shall use only the words of justice, in giving his decision; for his right to speak at all in the premises is derived only from an act of usurpation, long acquiescence in which has clothed it with a certain show of legality. In all that the Italians have thus far done, since the conclusion of the war with Austria, they have not necessarily been brought into conflict with any foreign nation, though they may have terribly offended those legitimate sovereigns who have been accustomed either to give law to Europe or to see public opinion defer considerably to their will. Not a single acquisition thus far made by Victor Emanuel can be said to have proceeded from any act at which Europe could complain with justice. Lombardy was given to him by his ally of France, whose prize it was, and who had an undoubted right to dispose of it, and who did dispose of it in a most righteous manner. That Central Italy was acquired by him was due partly to the cowardice of the old rulers thereof, and partly to

the intelligence, activity, and patriotism of its people. No foreign rights, conventional or otherwise, were assailed or disregarded when it passed under the Sardinian sceptre. When so much of the Pope's temporal possessions were taken from him by the people themselves, who had become weary of the worst system of misgovernment known to the west of Bokhara, no doubt many pious Catholics were shocked; but, if they knew anything of the history of the Papal temporal rule and power, they could not complain at what was done, on the score of illegality; and the deeds of Cialdini and Fanti and Persano were performed against foreigners who had intruded themselves into Italy, and who were employed to uphold the political supremacy of a few persons at Rome, while they had no more connection with the religion of the ancient Church than they had with that of Thibet. The King of the Two Sicilies, by his tyranny, and by his persistence in the offensive course of his house, had become an outlaw, as it were, and every *Italian* at least was fairly authorized to attack him; and in doing so he could not be said to assail European order, nor could any European power send assistance to a monarch who had refused to listen even to the remonstrances of Austria against his cruelties. The staunchest of English conservatives, while they said they must regard Garibaldi as a freebooter, did not hesitate to express the warmest wishes for the freebooter's success. When the Sardinians marched to Garibaldi's aid, they did so in the interest of order, which has been promptly restored to Southern Italy through their energetic course.

Thus far, that which has been done in Italy has been of a local character; but nothing more can be done, in the way of completing the independence and unity of Italy, without bringing the patriots into conflict with Austria. That power still is supreme in Venetia, which is one of the best portions of Italy, and which can be held by no foreign sovereign without endangering the whole Pen-

insula. Were there no other reason for seeking to redeem Venetia from Austrian oppression, the safety of the rest of Italy would demand that that redemption should be accomplished. Venetia, as she now is, is a place of arms for the chief, we may say the only, foreign enemy that the Italian Kingdom has or can have; and that enemy has a deep and a peculiar interest in seeking occasion to bring about the new kingdom's destruction. If Austria should succeed in conciliating the Hungarians, — which she might do, if she were to act justly toward them, — and a change of government were to take place in France, — and changes in the French government have occurred so often since 1789 as not to be improbable now, — she would, through possession of Venetia, be enabled to commence a new Italian war with the chances of success greatly in her favor. The Italians, therefore, are compelled to round and complete their work, in getting possession of Venetia, by that desire for safety and for self-preservation which actuates all men and all communities. A nobler feeling, too, moves them. They feel the obligation that exists to extend to the Venetians that freedom which is now enjoyed by all Italians except the Venetians and a small portion of the Pope's subjects. They would be recreant to the dictates of duty, and disregardful of those of honor, were they to leave Venetia in the hands of Austria. What their feelings on this momentous subject are may be gathered from Garibaldi's address to his companions-in-arms, when, having completed his immediate work, he withdrew from active service for the time, in November last. His words point as directly to an attack on Venetia as his landing in Sicily indicated his intention to overthrow Francis II.; and that attack, according to the Patriot Soldier, is to be made under the lead of the Patriot King, Victor Emanuel. A million of Italians are called for, that it may be successfully made; and that number ought to be raised, if so vast a host shall be found necessary to perfect the independence of Italy. After what we have seen

done by the Italians, we should not distrust their power to do even more, if no delay should be permitted, and full advantage be taken of the spirit of enthusiastic patriotism which now animates them. That Garibaldi means no delay is proved by his naming next March as the date for the renewal of the mighty crusade in the course of which already such miracles have been wrought.

That Italy, as she stands to-day, would be found more than the equal of Austria, no doubt can be felt by any one who is acquainted with the condition of the two powers. Italy would enter upon a contest with Austria under circumstances of peculiar advantage. She would have so decided a naval superiority, that the Austrian flag would disappear from the Mediterranean and the Adriatic, and she would be able to operate powerfully from the sea against Venice. It is a military axiom, that, wherever there is a sea-side, there is a weak side; and Venetia presents this to an assailing force in quite a striking manner. Command of the Adriatic and the neighboring waters would enable the Italians to threaten many points of the Austrian territory, which would require to be watched by large collections of soldiers; and aid could be sent to the Hungarians, should they rise, by the way of Fiume. Italy could raise a larger army to attack Venetia than Austria could employ for its defence, with Hungary on the eve of revolution, Bohemia discontented, Croatia not the loyal land it was in '48, and even the Tyrol no longer a model of subserviency to the Imperial House. The Italians are at any time the equals of the Austrians as soldiers, and at this time their minds are in an exalted state, under the dominion of which they would be found superior to any men who could be brought against them, if well led; and among the Imperial commanders there is no man, unless Von Benedek be an exception, who is to be named with the generals who have led the way in the work we have seen done since last spring. In a military sense, and in a moral sense, Italy is the superior of

the beaten, bankrupt monarchy of Austria, and capable of wresting Venetia from the intrusive race, which holds it as much in defiance of common sense as of common right.

But would Italy be permitted to settle her quarrel with her old oppressor without foreign intervention? We fear that she would not. Venetia is held by Austria in virtue of the Vienna settlement of Europe, in the first place, and then under the treaty that followed the war of 1859. Some English statesmen would appear to be of opinion that Venetia must remain among the possessions of Austria, without reference to the interests of Italy, the party most concerned in the business. In his first note to Sir James Hudson, British Minister at Turin, which note was to be read to Count Cavour, Lord John Russell, Foreign Secretary, writes more like an Austrian than an Englishman, going even to the astounding length of declaring that a war to defend her right to Venetia would be on Austria's part a patriotic war, — such a war, we presume the Honorable Secretary of State must have meant, as Wallace waged against Edward I., or that which the first William of Orange carried on against Philip II. Lord Palmerston seems inclined to indorse his colleague's views; for he referred directly to this very note in terms of approbation, in the speech which he made at the dinner of the "Worshipful Company of Salters," on the 14th of November. It is true, that, in a later note from Lord John Russell to Sir James Hudson, extreme ground in favor of what had been done in Naples by the Sardinians is taken, and sustained with eminent ability; and in the speech of Lord Palmerston referred to, the object of the first note was said to be the prevention of a rash course that "might have blighted all the best hopes of Italian freedom." We do not for a moment suppose that the English people would ever allow their government to do anything to help Austria to maintain possession of Venetia; but the relations between Austria and England are of old date, and an opinion

prevails in the latter country that the former should be kept strong, in order that she may be preserved as a counterpoise, on the one side to Russia, and on the other to France. England has a difficult part to play, and her course, or rather that of her government, sometimes makes considerable demand on the charitable construction of the world; but her people are sound, and for a long series of years their weight has been felt on the right side of European contests. The Italian cause is popular with all classes of Englishmen, and their country will never do anything to the prejudice of that cause. But it may refuse aid at a time when such aid shall be much needed, and when even France may stand aloof, and refrain from finishing the business which she commenced.

There is said to be an opinion growing up in France that Italy may be made too strong for the good of her friend and ally. A new nation of twenty-seven million souls — which would be Italy's strength, should Rome and Venetia be gained for her — might become a potent enemy even to one of its chief creators; and the taking of Savoy and Nice has caused ill-feeling between the two countries, in which Garibaldi heartily shares. Napoleon III. might be depended upon, himself, to support Italy hereafter against any foreign enemy, but it is by no means clear that France would support him in such a course; and he must defer to the opinion of his subjects to a considerable extent, despotic though his power is supposed to be. It is opinion, in the last resort, that governs everywhere, — under an absolute monarchy quite as determinedly as under a liberal polity like ours or England's. There is a large party in France, composed of the most incongruous materials, which has the profoundest interest in misrepresenting the policy of the Imperial government, and which is full of men of culture and intellect, — men whose labors, half-performed though they are, must have considerable effect on the French mind. The first Napoleon had the ground honeycombed under him by

his enemies, who could not be suppressed, nor their labors be made to cease, even by his stern system of repression. It may be so with the present Emperor, who knows that one false step might upset his dynasty as utterly as it was twice overthrown by the armies of combined Europe. What was then done by the lions and the eagles might now be done by the moles. The worms that gnawed through the Dutch dykes did Holland more damage than she experienced from the armies of Louis XIV. Let the French mind become possessed with the idea that the Emperor is helping Italy at the expense of France, and we may see a third Restoration in that country, or even a third République. The elder Bourbons were driven out because they were as a monument in Paris to Leipzig and Vittoria and Waterloo, erected by the victors on those fatal fields. The Orléans dynasty broke down because it had become an article in the belief of most Frenchmen that it was disgracing France by the corruption of its domestic policy and the subserviency of its foreign policy. Napoleon III. could no more sustain himself against the belief that he was using France for the benefit of Italy than the King of the French could sustain himself against the conviction that he was abusing the country he ruled over for the advancement of his family. He has already offended the Catholic clergy by what he has done for Italy, which they regard as having been done against their Church; and as they helped to make him,

so they may be able to unmake him. To satisfy grumblers, he took Savoy and Nice. For some time past, rumor has been busy in attributing to him the design of demanding the island of Sardinia. If he should ask for Sardinia, and receive it, might he not ask also for Sicily, the country of which he offered to become King in 1848, and did not receive one vote, an incident that may still weigh upon the imperial heart, no man ever forgetting a contemptuous slight? If he should make these demands, or either of them, would the other European Powers permit the Italians to comply with them? These are questions not to be answered hurriedly, but they closely concern the Italian question, a solution of which must soon be had, for the world's peace.

The third act of the drama approaches, and 1861 may be a more important year to Italy than was either 1859 or 1860. The successful antagonist of Austria she can be; but could she, without foreign aid, withstand an alliance that should be formed against her in the name of order, while her former ally should remain quiet and refuse to take any part in the war? Austria, it has been intimated, might be induced to sell Venetia to Italy, and this is possible, though such a settlement of the question in dispute would be an extraordinary confession of weakness on the part of the aristocratical military monarchy of the Lorraines, and a proceeding of which it would be more ashamed than it would be even of a generous action.

A VISIT TO THE ASYLUM FOR AGED AND DECAYED PUNSTERS.

HAVING just returned from a visit to this admirable Institution in company with a friend who is one of the Directors, we propose giving a short account of what we saw and heard. The great

O. W. Holmes
success of the Asylum for Idiots and Feeble-minded Youth, several of the scholars from which have reached considerable distinction, one of them being connected with a leading Daily Paper in

this city, and others having served in the State and National Legislatures, was the motive which led to the foundation of this excellent Charity. Our late distinguished townsman, Noah Dow, Esquire, as is well known, bequeathed a large portion of his fortune to this establishment,—“being thereto moved,” as his will expressed it, “by the desire of *N. Dow*ing some public Institution for the benefit of Mankind.” Being consulted as to the Rules of the Institution and the selection of a Superintendent, he replied, that “all Boards must construct their own Platforms of operation. Let them select *anyhow* and he should be pleased.” N. E. Howe, Esq., was chosen in compliance with this delicate suggestion.

The Charter provides for the support of “One hundred aged and decayed Gentlemen-Punsters.” On inquiry if there was no provision for *females*, my friend called my attention to this remarkable psychological fact, namely:—

THERE IS NO SUCH THING AS A FEMALE PUNSTER.

This remark struck me forcibly, and on reflection I found that *I never knew nor heard of one*, though I have once or twice heard a woman make a *single detached* pun, as I have known a hen to crow.

On arriving at the south gate of the Asylum grounds, I was about to ring, but my friend held my arm and begged me to rap with my stick, which I did. An old man with a very comical face presently opened the gate and put out his head.

“So you prefer *Cane* to *A bell*, do you?” he said,—and began chuckling and coughing at a great rate.

My friend winked at me.

“You’re here still, Old Joe, I see,” he said to the old man.

“Yes, yes,—and it’s very odd, considering how often I’ve *bolted*, nights.”

He then threw open the double gates for us to ride through.

“Now,” said the old man, as he pulled the gates after us, “you’ve had a long journey.”

“Why, how is that, Old Joe?” said my friend.

“Don’t you see?” he answered; “there’s the *East hinges* on one side of the gate, and there’s the *West hinges* on t’other side,—haw! haw! haw!”

We had no sooner got into the yard than a feeble little gentleman, with a remarkably bright eye, came up to us, looking very seriously, as if something had happened.

“The town has entered a complaint against the Asylum as a gambling establishment,” he said to my friend, the Director.

“What do you mean?” said my friend.

“Why, they complain that there’s a *lot o’ rye* on the premises,” he answered, pointing to a field of that grain,—and hobbled away, his shoulders shaking with laughter, as he went.

On entering the main building, we saw the Rules and Regulations for the Asylum conspicuously posted up. I made a few extracts which may be interesting.

SECT. I. OF VERBAL EXERCISES.

5. Each Inmate shall be permitted to make Puns freely from eight in the morning until ten at night, except during Service in the Chapel and Grace before Meals.

6. At ten o’clock the gas will be turned off, and no further Puns, Conundrums, or other play on words, will be allowed to be uttered, or to be uttered aloud.

9. Inmates who have lost their faculties and cannot any longer make Puns shall be permitted to repeat such as may be selected for them by the Chaplain out of the work of Mr. *Joseph Miller*.

10. Violent and unmanageable Punsters, who interrupt others when engaged in conversation, with Puns or attempts at the same, shall be deprived of their *Joseph Millers*, and, if necessary, placed in solitary confinement.

SECT. III. OF DEPARTMENT AT MEALS.

4. No Inmate shall make any Pun, or attempt at the same, until the Blessing has been asked and the company are decently seated.

7. Certain Puns having been placed

on the *Index Expurgatorius* of the Institution, no Inmate shall be allowed to utter them, on pain of being debarred the perusal of *Punch* and *Vanity Fair*, and, if repeated, deprived of his *Joseph Miller*.

Among these are the following:—

Allusions to *Attic salt*, when asked to pass the salt-cellar.

Remarks on the Inmates being *mustered*, etc., etc.

Associating baked beans with the *benefactors* of the Institution.

Saying that beef-eating is *befitting*, etc., etc.

The following are also prohibited, excepting to such Inmates as may have lost their faculties and cannot any longer make Puns of their own:—

“— your own *hair* or a wig”; “it will be *long enough*,” etc., etc.; “little of its age,” etc., etc.;—also, playing upon the following words: *hospital*; *mayor*; *pun*; *pitied*; *bread*; *sauce*, etc., etc., etc. See INDEX EXPURGATORIUS, printed for use of Inmates.

The subjoined Conundrum is not allowed:—Why is Hasty Pudding like the Prince? Because it comes attended by its *sweet*;—nor this variation to it, *to wit*: Because the *lasses runs after it*.

The Superintendent, who went round with us, had been a noted punster in his time, and well known in the business-world, but lost his customers by making too free with their names,—as in the famous story he set afloat in '29 of *four Jerries* attaching to the names of a noted Judge, an eminent Lawyer, the Secretary of the Board of Foreign Missions, and the well-known Landlord at Springfield. One of the *four Jerries*, he added, was of gigantic magnitude. The play on words was brought out by an accidental remark of Solomons, the well-known Banker. “*Capital punishment!*” the Jew was overheard saying, with reference to the guilty parties. He was understood as saying, *A capital pun is meant*, which led to an investigation and the relief of the greatly excited public mind.

The Superintendent showed some of his old tendencies, as he went round with us.

“Do you know”—he broke out all at once—“why they don’t take steppes in Tartary for establishing Insane Hospitals?”

We both confessed ignorance.

“Because there are *nomad* people to be found there,” he said, with a dignified smile.

He proceeded to introduce us to different Inmates. The first was a middle-aged, scholarly man, who was seated at a table with a Webster’s Dictionary and a sheet of paper before him.

“Well, what luck to-day, Mr. Mowzer?” said the Superintendent.

“Three or four only,” said Mr. Mowzer. “Will you hear ‘em now,—now I’m here?”

We all nodded.

“Don’t you see Webster *ers* in the words center and theater?”

“If he spells leather *lether*, and feather *fether*, isn’t there danger that he’ll give us a *bad spell of weather*?”

“Besides, Webster is a resurrectionist; he does not allow *u* to rest quietly in the *mould*.

“And again, because Mr. Worcester inserts an illustration in his text, is that any reason why Mr. Webster’s publishers should hitch one on in their appendix? It’s what I call a *Connect-a-cut* trick.

“Why is his way of spelling like the floor of an oven? Because it is *under bread*.

“Mowzer!” said the Superintendent,—“that word is on the Index!”

“I forgot,” said Mr. Mowzer;—“please don’t deprive me of *Vanity Fair*, this one time, Sir.

“These are all, this morning. Good day, Gentlemen. Then to the Superintendent,—Add you, Sir!”

The next Inmate was a semi-idiotic-looking old man. He had a heap of block-letters before him, and, as we came up, he pointed, without saying a word, to the arrangements he had made with them on the table. They were evident-

ly anagrams, and had the merit of transposing the letters of the words employed without addition or subtraction. Here are a few of them:—

TIMES.	SMITE!
POST.	STOP!
TRIBUNE.	TRUE NIB.
WORLD.	DR. OWL.
ADVERTISER.	{ RES VERI DAT.
	{ IS TRUE. READ!

ALLOPATHY. ALL O' TH' PAY.

HOMOEOPATHY. O, THE——! O! O, MY! PAH!

The mention of several New York papers led to two or three questions. Thus: Whether the Editor of the Tribune was *H. G. really*? If the complexion of his politics were not accounted for by his being *an eager* person himself? Whether Wendell *Fillips* were not a reduced copy of John *Knocks*? Whether a New York *Feuilletoniste* is not the same thing as a *Fellow down East*?

At this time a plausible-looking, bald-headed man joined us, evidently waiting to take a part in the conversation.

"Good morning, Mr. Riggles," said the Superintendent. "Anything fresh this morning? Any Conundrum?"

"I haven't looked at the cattle," he answered, dryly.

"Cattle? Why cattle?"

"Why, to see if there's any *corn under'em*!" he said; and immediately asked, "Why is Douglas like the earth?"

We tried, but couldn't guess.

"Because he was *flattened out at the polls*!" said Mr. Riggles.

"A famous politician, formerly," said the Superintendent. "His grandfather was a *seize-Hessian-ist* in the Revolutionary War. By the way, I hear the *freeze-oil* doctrines don't go down at New Bedford.

The next Inmate looked as if he might have been a sailor formerly.

"Ask him what his calling was," said the Superintendent.

"Followed the sea," he replied to the question put by one of us. "Went as mate in a fishing-schooner."

"Why did you give it up?"

"Because I didn't like working for *two mast-ers*," he replied.

Presently we came upon a group of elderly persons, gathered about a venerable gentleman with flowing locks, who was propounding questions to a row of Inmates.

"Can any Inmate give me a motto for M. Berger?" he said.

Nobody responded for two or three minutes. At last one old man, whom I at once recognized as a Graduate of our University, (Anno 1800,) held up his hand.

"Rem *a cue* tetigit."

"Go to the head of the Class, Josse-lyn," said the venerable Patriarch.

The successful Inmate did as he was told, but in a very rough way, pushing against two or three of the Class.

"How is this?" said the Patriarch.

"You told me to go up *jostlin*," he replied.

The old gentlemen who had been shoved about enjoyed the Pun too much to be angry.

Presently the Patriarch asked again,—

"Why was M. Berger authorized to go to the dances given to the Prince?"

The Class had to give up this, and he answered it himself:—

"Because every one of his carroms was a *tick-it* to the ball."

"Who collects the money to defray the expenses of the last campaign in Italy?" asked the Patriarch.

Here again the Class failed.

"The war-cloud's rolling *Dun*," he answered.

"And what is mulled wine made with?"

Three or four voices exclaimed at once,—

"*Sizzle-y* Madeira!"

Here a servant entered, and said, "Luncheon-time." The old gentlemen, who have excellent appetites, dispersed at once, one of them politely asking us if we would not stop and have a bit of bread and a little mite of cheese.

"There is one thing I have forgotten

to show you," said the Superintendent,— "the cell for the confinement of violent and unmanageable Punsters."

We were very curious to see it, particularly with reference to the alleged absence of every object upon which a play of words could possibly be made.

The Superintendent led us up some dark stairs to a corridor, then along a narrow passage, then down a broad flight of steps into another passage-way, and opened a large door which looked out on the main entrance.

"We have not seen the cell for the confinement of 'violent and unmanageable' Punsters," we both exclaimed.

"This is the *sell*!" he exclaimed, pointing to the outside prospect.

My friend, the Director, looked me in the face so good-naturedly that I had to laugh.

"We like to humor the Inmates," he said. "It has a bad effect, we find, on their health and spirits to disappoint them of their little pleasantries. Some of the jests to which we have listened are not new to me, though I dare say you may not have heard them often before. The same thing happens in general society, with this additional disadvantage, that there is no punishment

provided for 'violent and unmanageable' Punsters, as in our Institution."

We made our bow to the Superintendent and walked to the place where our carriage was waiting for us. On our way, an exceedingly decrepit old man moved slowly towards us, with a perfectly blank look on his face, but still appearing as if he wished to speak.

"Look!" said the Director,—"that is our Centenarian."

The ancient man crawled towards us, cocked one eye, with which he seemed to see a little, up at us, and said,—

"Sarvant, young Gentlemen. Why is a—a—a—like a—a—a—? Give it up? Because it's a—a—a—a—."

He smiled a pleasant smile, as if it were all plain enough.

"One hundred and seven last Christmas," said the Director. "He lost his answers about the age of ninety-eight. Of late years he puts his whole Conundrums in blank,—but they please him just as well."

We took our departure, much gratified and instructed by our visit, hoping to have some future opportunity of inspecting the Records of this excellent Charity and making extracts for the benefit of our Readers.

THE QUESTION OF THE HOUR.

DEAN SWIFT, in a letter to Lord Bolingbroke, says that he does not "remember to have ever heard or seen one great genius who had long success in the ministry; and recollecting a great many in my memory and acquaintance, those who had the smoothest time were, at best, men of middling degree in understanding." However true this may be in the main,—and it undoubtedly is true that in ordinary times the speculative and innovating temper of an original mind is less safe than the patience of routine and

persistence in precedent of a commonplace one,—there are critical occasions to which intellect of the highest quality, character of the finest fibre, and a judgment that is inspired rather than confused by new and dangerous combinations of circumstances, are alone equal. Tactics and an acquaintance with the highest military authorities were adequate enough till they were confronted with General Bonaparte and the new order of things. If a great man struggling with the storms of fate be the sublimest spec-

tacle, a mediocre man in the same position is surely the most pitiful. Deserted by his presence of mind, which, indeed, had never been anything but an absence of danger,—baffled by the inapplicability of his habitual principles of conduct, (if that may be called a principle, which, like the act of walking, is merely an unconscious application of the laws of gravity,) —helpless, irresolute, incapable of conceiving the flower Safety in the nettle Danger, much more of plucking it thence, —surely here, if anywhere, is an object of compassion. When such a one is a despot who has wrought his own destruction by obstinacy in a traditional evil policy, like Francis II. of Naples, our commiseration is outweighed by satisfaction that the ruin of the man is the safety of the state. But when the victim is a so-called statesman, who has malversated the highest trusts for selfish ends, who has abused constitutional forms to the destruction of the spirit that gave them life and validity, who could see nothing nobler in the tenure of high office than the means it seemed to offer of prolonging it, who knows no art to conjure the spirit of anarchy he has evoked but the shifts and evasions of a second-rate attorney, and who has contrived to involve his country in the confusion of principle and vacillation of judgment which have left him without a party and without a friend,—for such a man we have no feeling but contemptuous reprobation. Panurge in danger of shipwreck is but a faint type of Mr. Buchanan in face of the present crisis; and that poor fellow's craven abjuration of his "*former friend*," Friar John, is magnanimity itself, compared with his almost-ex-Excellency's treatment of the Free States in his last Message to Congress. There are times when mediocrity is a dangerous quality, and a man may drown himself as effectually in milk-and-water as in Malmsey.

The question, whether we are a Government or an Indian Council, we do not propose to discuss here; whether there be a right of secession tempered by a right of coercion, like a despotism by assassi-

nation, and whether it be expedient to put the latter in practice, we shall not consider: for it is not always the part of wisdom to attempt a settlement of what the progress of events will soon settle for us. Mr. Buchanan seems to have no opinion, or, if he has one, it is a halting between two, a bat-like cross of sparrow and mouse that gives timidity its choice between flight and skulking. [Nothing shocks our sense of the fitness of things more than a fine occasion to which the man is wanting. Fate gets her hook ready, but the eye is not there to clinch with it, and so all goes at loose ends. Mr. Buchanan had one more chance offered him of showing himself a commonplace man, and he has done it full justice. Even if they could have done nothing for the country, a few manly sentences might have made a pleasing exception in his political history, and rescued for him the fag-end of a reputation.

Mr. Buchanan, by his training in a system of politics without a parallel for intrigue, personality, and partisanship, would have unfitted himself for taking a statesmanlike view of anything, even if he had ever been capable of it. His nature has been subdued to what it worked in. We could not have expected from him a Message around which the spirit, the intelligence, and the character of the country would have rallied. But he might have saved himself from the evil fame of being the first of our Presidents who could never forget himself into a feeling of the dignity of the place he occupied. He has always seemed to consider the Presidency as a retaining-fee paid him by the slavery-propagandists, and his Message to the present Congress looks like the last juiceless squeeze of the orange which the South is tossing contemptuously away.

Mr. Buchanan admits as real the assumed wrongs of the South Carolina revolutionists, and even, if we understand him, allows that they are great enough to justify revolution. But he advises the secessionists to pause and try what can be done by negotiation. He sees in the internal history of the country only a se-

ries of injuries inflicted by the Free upon the Slave States; yet he affirms, that, so far as Federal legislation is concerned, the rights of the South have never been assailed, except in the single instance of the Missouri Compromise, which gave to Slavery the unqualified possession of territory which the Free States might till then have disputed. Yet that bargain, a losing one as it was on the part of the Free States, having been annulled, can hardly be reckoned a present grievance. South Carolina had quite as long a list of intolerable oppressions to resent in 1832 as now, and not one of them, as a ground of complaint, could be compared with the refusal to pay the French-Spoliation claims of Massachusetts. The secession movement then, as now, had its origin in the ambition of disappointed politicians. If its present leaders are more numerous, none of them are so able as Mr. Calhoun; and if it has now any other object than it had then, it is to win by intimidation advantages that shall more than compensate for its loss in the elections.

In 1832, General Jackson bluntly called the South Carolina doctrines treason, and the country sustained him. That they are not characterized in the same way now does not prove any difference in the thing, but only in the times and the men. They are none the less treason because James Buchanan is less than Andrew Jackson, but they are all the more dangerous.

It has been the misfortune of the United States that the conduct of their public affairs has passed more and more exclusively into the hands of men who have looked on politics as a game to be played rather than as a trust to be administered, and whose capital, whether of personal consideration or of livelihood, has been staked on a turn of the cards. A general skepticism has thus been induced, exceedingly dangerous in times like these. The fatal doctrine of rotation in office has transferred the loyalty of the numberless servants of the Government, and of those dependent on or influenced by them, from the nation to a party. For thousands of fam-

ilies every change in the National Administration is as disastrous as revolution, and the Government has thus lost that influence which the idea of permanence and stability would exercise in a crisis like the present. At the present moment, the whole body of office-holders at the South is changed from a conservative to a disturbing element by a sense of the insecurity of their tenure. Their allegiance having always been to the party in power at Washington, and not to the Government of the Nation, they find it easy to transfer it to the dominant faction at home.

The subservience on the question of Slavery, which has hitherto characterized both the great parties of the country, has strengthened the hands of the extremists at the South, and has enabled them to get the control of public opinion there by fostering false notions of Southern superiority and Northern want of principle. We have done so much to make them believe in their importance to us, and given them so little occasion even to suspect our importance to them, that we have taught them to regard themselves as the natural rulers of the country, and to look upon the Union as a favor granted to our weakness, whose withdrawal would be our ruin. Accordingly, they have grown more and more exacting, till at length the hack politicians of the Free States have become so imbued with the notion of yielding, and so incapable of believing in any principle of action higher than temporary expedients to carry an election, or any object nobler than the mere possession of office for its own sake, that Mr. Buchanan gravely proposes that the Republican party should pacify South Carolina by surrendering the very creed that called it into existence and holds it together, the only fruit of its victory that made victory worth having. Worse than this, when the Free States by overwhelming majorities have just expressed their conviction, that slavery, as the creature of local law, can claim no legitimate extension beyond the limits of that law,

he asks their consent to denationalize freedom and to nationalize slavery by an amendment of the Federal Constitution that shall make the local law of the Slave States paramount throughout the Union. Mr. Buchanan would stay the yellow fever by abolishing the quarantine hospital and planting a good virulent case or two in every village in the land.

We do not underestimate the gravity of the present crisis, and we agree that nothing should be done to exasperate it; but if the people of the Free States have been taught anything by the repeated lessons of bitter experience, it has been that submission is not the seed of conciliation, but of contempt and encroachment. The wolf never goes for mutton to the mastiff. It is quite time that it should be understood that freedom is also an institution deserving some attention in a Model Republic, that a decline in stocks is more tolerable and more transient than one in public spirit, and that material prosperity was never known to abide long in a country that had lost its political morality. The fault of the Free States in the eyes of the South is not one that can be atoned for by any yielding of special points here and there. Their offence is that they are free, and that their habits and prepossessions are those of Freedom. Their crime is the census of 1860. Their increase in numbers, wealth, and power is a standing aggression. It would not be enough to please the Southern States that we should stop asking them to abolish slavery,—what they demand of us is nothing less than that we should abolish the spirit of the age. Our very thoughts are a menace. It is not the North, but the South, that forever agitates the question of Slavery. The seeming prosperity of the cotton-growing States is based on a great mistake and a great wrong; and it is no wonder that they are irritable and scent accusation in the very air. It is the stars in their courses that fight against their system, and there are those who propose to make everything comfortable by Act of Congress.

It is almost incredible to what a pitch

of absurdity the Slave-holding party have been brought by the weak habit of concession which has been the vice of the Free States. Senator Green of Missouri, whose own State is rapidly gravitating toward free institutions, gravely proposes an armed police along the whole Slave frontier for the arrest of fugitives. Already the main employment of our navy is in striving to keep Africans out, and now the whole army is to mount guard to keep them in. This is but a trifle to the demands that will be made upon us, if we yield now under the threats of a mob,—for men acting under passion or terror, or both, are a mob, no matter what their numbers and intelligence.

A dissolution of the Union would be a terrible thing, but not so terrible as an acquiescence in the theory that Property is the only interest that binds men together in society, and that its protection is the highest object of human government. Nothing could well be more solemn than the thought of a disruption of our great and prosperous Republic. Even if peaceful, the derangement consequent upon it would cause incalculable suffering and disaster! Already the mere threat of it, assisted by the efforts of interested persons, has caused a commercial panic. But would it be wisdom in the Free States to put themselves at the mercy of such a panic whenever the whim took South Carolina to be discontented? That would be the inevitable result of a craven spirit now. Let the Republican party be mild and forbearing,—for the opportunity to be so is the best reward of victory, and taunts and recriminations belong to boys; but, above all, let them be manly. The moral taint of once submitting to be bullied is a scrofula that will never out of the character.

We do not believe that the danger is so great as it appears. Rumor is like one of those multiplying-mirrors that make a mob of shadows out of one real object. The interests of three-fifths of the Slave-holding States are diametrically opposed to secession; so are those of five-sixths of the people of the seceding States, if they

did but know it. The difficulties in the way of organizing a new form of government are great, almost insuperable; the expenses enormous. As the public burdens grow heavier, the lesson of resistance and rebellion will find its aptest scholars in the non-slave-owning majority who will be paying taxes for the support of the very institution that has made and keeps them poor. Men are not long in arriving at just notions of the value of what they pay for, especially when it is for other people. Taxes are a price that people are slowest to pay for a cat in a bag. If matters are allowed to take their own course for a little longer, the inevitable reaction is sure to set in. The Hartford Convention gave more uneasiness to the Government and the country than the present movement in the South, but the result of it was the ruin of the Federal Party, and not of the Federal Union.

Even if the secessionists could accomplish their schemes, who would be the losers? Not the Free States, certainly, with their variety of resources and industry. The laws of trade cannot be changed, and the same causes which have built up their agriculture, commerce, and manufactures will not cease to be operative. The real wealth and strength of states, other things being equal, depends upon homogeneousness of population and variety of occupation, with a common interest and common habits of thought. The cotton-growing States, with their single staple, are at the mercy of chance. India, Australia, nay, Africa herself, may cut the thread of their prosperity. Their population consists of two hostile races, and their bone and muscle, instead of being the partners, are the unwilling tools of their capital and intellect. The logical consequence of this political theory is despotism, which the necessity of coercing the subject race will make a military one. Already South Carolina is discussing a standing army. If history is not a lying gossip, the result of the system of labor will be Jamaica,

and that of the system of polity, Mexico. Instead of a stable government, they will have a whirligig of *pronunciamientos*, or stability will be purchased at a cost that will make it intolerable. They have succeeded in establishing among themselves a fatal unanimity on the question of Slavery, — fatal because it makes the office of spy and informer honorable, makes the caprice of a mob the arbiter of thought, speech, and action, and debases public opinion to a muddy mixture of fear and prejudice. In peace, the majority of their population will be always looked on as conspirators; in war, they would become rebels.

It is time that the South should learn, if they do not begin to suspect it already, that the difficulty of the Slavery question is slavery itself, — nothing more, nothing less. It is time that the North should learn that it has nothing left to compromise but the rest of its self-respect. Nothing will satisfy the extremists at the South short of a reduction of the Free States to a mere police for the protection of an institution whose danger increases at an equal pace with its wealth.

It was the deliberate intention of Mr. Calhoun that the compact should be broken the moment the absolute control of Government passed out of the hands of the slaveholding clique. He was willing to wait till we had stolen Texas and paid a hundred millions for Cuba; but if the game seemed to be up, then secede at once. In a hasty moment, he started his revolution, when there was a stronger man than he to confront him. South Carolina was to all appearance as united then as now. But a few months brought a reaction, and no one was more relieved than Mr. Calhoun that matters stopped where they did. Whether the stirrers of the present excitement, which finds vacillation in the Executive and connivance in the Cabinet, will be wise enough to let it go out in the same way, remains to be seen; but the greatest danger of disunion would spring from a want of self-possession and spirit in the Free States.

REVIEWS AND LITERARY NOTICES.

Collection of Rare and Original Documents and Relations concerning the Discovery and Conquest of America, chiefly from the Spanish Archives. Published in the Original, with Translations, Illustrative Notes, Maps, and Biographical Sketches. By E. G. SQUIER, M. A., F. S. A., etc., etc. New York: Charles B. Norton. 1860.

No. I. *Carta dirigida al Rey de España, por el Licenciado Dr. Don DIEGO GARCIA DE PALACIO, Oydor de la Real Audiencia de Guatemala, Año 1576.* Being a Description of the Ancient Provinces of Guazacapan, Izalco, Cuscatlan, and Chiquimula, in the Audiencia of Guatemala: with an Account of the Languages, Customs, and Religion of their Aboriginal Inhabitants, and a Description of the Ruins of Copan. Square 8vo. pp. 132.

THIS tract is the first number of a series of Rare and Original Documents, relating to the first settlement of America by the Spaniards, which Mr. Squier proposes to edit and publish. The undertaking is one of interest to all students of American history, and deserves a generous encouragement from them. Its success must depend not on the usual machinery of bookselling so much as on the ready support of individuals.

Mr. Squier's proposed collection resembles in its scope the well-known "*Recueil des Documents et Mémoires Originaux*" of M. Ternaux-Compans. Familiar, by long residence and longer study, as few men are or ever have been, with those portions of our continent of which the Spaniards first took possession, acquainted with their antiquities and former condition, and a curious investigator of their present state and prospects, Mr. Squier is peculiarly fitted to select and edit with judgment such documents of historical interest as his unrivalled opportunities have enabled him to collect.

The Letter of Palacio is now for the first time published in the original, although it was largely used by Herrera in his "*Historia General*." "To me," says Mr. Squier,

"the relation has a special interest. I have been over a great part of the ground that was traversed by its author, and I am deeply impressed with the accuracy of his descriptions. . . . His memoir will always stand as one of the best illustrations of an interesting country, as it was at the period immediately succeeding the Conquest." It appears, that, under an order from the Crown, Palacio was deputed to visit a number of the Provinces of Guatemala, and to report upon them, especially in respect to the condition of their native inhabitants. The memoir now published relates chiefly to the territory comprised in the present Republic of San Salvador. It shows Palacio to have been an intelligent observer, and a kindly, well-disposed man,—not free from the superstitions of his time and race, but less credulous than many of his contemporaries. His report is full of matter of value to the historical inquirer, and of entertainment for the general reader. His stories of the manners of the people, and his accounts of the animals of the district are brief, but characteristic. But the most interesting part of his narrative is that which relates to the wonderful ruins of Copan. It is a remarkable fact, stated by Mr. Squier in his Prefatory Note, that these ruins do not appear to have been noticed by any of the chroniclers of the country down to the time of Fuentes, who wrote in 1689, more than one hundred years after Palacio. It was not, indeed, until 1841, when Stephens published his account of them, that an accurate description was given to the world of these most interesting and most puzzling remains of a forgotten people and an unknown antiquity. Even in Palacio's time, only vague traditions existed regarding them. His account has a permanent value from being the earliest known, and as proving that within fifty years after the Spanish Conquest they presented very nearly the same appearance as at present.

Mr. Squier has enriched Palacio's Letter with numerous and important notes. He claims a lenient judgment of his translation, which is printed side by side with the original, on account of the obscurities

of the manuscript, and the uncertainty as to the meaning of some of the writer's expressions. But, allowing for these difficulties, we regret that Mr. Squier did not bestow a little more pains on this part of his work. He has fallen into some slight errors, which might easily have been corrected, and he has, as we think, lost something of the spirit of the original by too free a version. The book is one which in typographic beauty would meet the demands of the most exacting bibliographer. We regret the more that the pages are disfigured with misprints, many of which are left uncorrected in the long list of *Errata*, while others occur in the very list itself.

1. *Le Panlatinisme, Confédération Gallo-Latine et Celto-Gauloise, Contre-Testament de Pierre le Grand et Contre-Panslavisme.* Paris : Passard, Libraire-Éditeur. 1860. 8vo. pp. 260.
2. *Testament de Pierre le Grand, ou Plan de Domination Européenne laissé par lui à ses Descendants et Successeurs au Trône de la Russie.* Édition suivie de Notes et de Pièces Justificatives. Paris : Passard. 1860. 8vo.

WE seem to be living in an age of pamphleteers. More than ever, both in France and Germany, are pamphlets the order of the day. In Paris alone, the year 1860 has given birth to hundreds of these writings of circumstance, — political squibs, visionary remodellings of European states, — vying with each other for ephemeral celebrity. They fill the windows of the book-shops, and are spread by scores along the stands in the numerous galleries which the Parisian population throngs of evenings. Those issued in the early part of the year have gradually descended from the rank of new publications, and may be found on every quay, spread out, for a few *centimes*, side by side with old weather-beaten books, odd volumes, refuse of libraries, which book-lovers daily finger through in the hope of finding some pearl, some rarity, in the worthless mass.

Thus we have seen the interminable Rhine question discussed in its every possible phase, — still more that of Italy. Between come the Druses, the Orient, the Turks. Then Italy again, Garibaldi, Naples, the Pope.

To state in general terms the tendency of these rockets of literature, or to arrive at the spirit which seems to pervade them, is not quite so easy as it would seem. They are written by authors of all party-colors, within certain impassable limits prescribed by the parental restrictions of Government. Still it seems to be the old story of soothing; and many a conclusion — as where England is smoothed down by a few flatteries and told that her most natural ally is France, or where Germany is heartily assured that she has nothing to fear, that all the changes proposed are for the good of the Teutonic race — reminds us very strongly of that widely known verse in child-literature, —

“Will you walk into my parlor,” etc.

We have before us, however, a work which, from its size and from the labor bestowed upon it, deserves to be ranked above the various productions that have scarcely called forth more than a passing notice in the daily press.

The pamphlet named at the head of this article, and which is but a complement to the volume, is one of the numerous reconstructions and rearrangements of European limits made in the quiet of the study. Were it this alone, it would deserve but little attention. It is more. The author bases his theories upon other than political reasons, having labored hard to establish many debatable points of Ethnography in the interesting notes appended to the work, and which form by far the most remarkable part of it. So we have the question of Races discussed at full length. There is certainly some philological legerdemain, as may be seen from some of the convenient conclusions of the author concerning the Celts and the Gauls. He is full of such paragraphs as this in his argumentation : —

“It has seemed to us proved, that the names, Volces, Volsks, Bolgs, Belgs, Belgians, Welsh, Welchs, Wael, Wuelchs or Walchs, Walls, Walloons, Valais, Valois, Vlaks, Wallachians, Galatians, Galtachs, Galls, Gaels or Cael, Gaelic, Galot, Gallegos, Gaul, and even Ola, Olatz, and Vallus, were but one and the same word under different forms.”

The point to be established at all hazards is, that the French, Spaniards, Portuguese, Italians, Belgians, and even the English and Greeks, form but one great family, of

one hundred and fifteen million individuals, — the Gallo-Roman. This Neo-Latin world the author would wish combined in one grand confederation, like the States of America. Hence his use of the term *Panlatinism*, in opposition to the so much debated one of *Panslavism*. The merit of the work under consideration is, that, though decidedly French in all its views, it condenses in a few paragraphs the present mooted question of race. The idea of Panslavism, or the uniting of eighty millions of Slavonians under one banner, was, in its origin, republican and federal, whatever it may have become since. Few words have acquired more diametrically opposite meanings, according as they were uttered by radical or conservative. Hence the confusion, hence the many strange phrases to be met with in the periodical press. The author of the present work has sought to throw some light on this important point. Leaving aside his prophetic fears of future shocks with American or Asiatic powers as visionary, we can say for the work that it presents in a clear light the question of races as referring to European politics. The notes are good, and no research seems to have been spared by the writer to establish the position he maintains.

1. *Ancient Danish Ballads*. Translated from the Originals, by R. C. ALEXANDER PRIOR, M. D.: London: Williams & Norgate. Leipzig: R. Hartmann. 1860. 3 vols. pp. lx., 400, 468, 500.
2. *Edinburgh Papers*. By ROBERT CHAMBERS, F. R. S. E., etc., etc. *The Romantic Scottish Ballads, their Epoch and Authorship*. W. & R. Chambers: London and Edinburgh. 1859. pp. 46.
3. *The Romantic Scottish Ballads, and the Lady Wardlaw Heresy*. By NORVAL CLYNE. Aberdeen: A. Brown & Co. 1859. pp. 49.

THE expectations raised by the title of Dr. Prior's volumes are in a great measure disappointed by their contents. The book is of value only because it gives for the first time, in English, the substance of a large number of Danish ballads, and points out the relations between them and similar productions in other languages. Of

the spirit and life of these remarkable poems a person hitherto unfamiliar with them would find but scanty indication in Dr. Prior's versions. He has merely done them into English in a somewhat mechanical way, and one scarcely gets a better notion of the more imaginative ones in his bald reproductions than of the "Iliad" from the analysis of that poem in the "Epistolæ Obscurorum Virorum." It seems to require almost as peculiar powers to translate an old ballad as to write a new one.

Dr. Prior complains of Jamieson, that his versions from the Danish are done in a broad Scotch dialect, almost as unintelligible to ordinary readers as the language of which they profess to give the meaning. But if any one compare Jamieson's rendering of "The Buried Mother" with Dr. Prior's, (Prior, vol. i. p. 368,) he will, we think, see cause to regret that Jamieson did not do what Dr. Prior has attempted, and that he has not left us a greater number of translations equally good. Jamieson's fault was not so much his broad Scotch as his over-fondness for archaisms, sometimes of mere spelling, which give rise to a needless obscurity. We think that he was theoretically right; but he should not have pushed his theory to the extent of puzzling the reader, where his aim was to give only that air of strangeness which allures the fancy. As respects ballads dealing with the supernatural, Jamieson's notion of the duty of a translator was certainly the true one. There is something almost ludicrous in a ghost talking the ordinary conversational language of every-day life, which might, to be sure, serve very well for some of Jung Stilling's spirits in bottle-green hunting-coats with brass buttons, but hardly for the majesty of buried Denmark. Dr. Prior may claim that his renderings are more literal; but it is the vice of literal translation, that the phrases of one language, if exactly reproduced in another, while they may have the same sense, convey a wholly different impression to the imagination. It is to such cases that the Italian proverb, *Traduttore traditore*, applies. Dryden, citing approvingly Denham's verses to Fanshawe, "They but preserve his ashes, thou his flame, True to his sense, but truer to his fame," says, with his usual pithiness, "Too faithfully is indeed pedantically."

In Dr. Prior's version of the "The Buried Mother" we find a case precisely in point. The Stepmother says to the poor Orphans, —

"In blind-house shall ye lie all night."

Jamieson gives it, —

"Says, 'Ye sall ligg i' the mirk all night.'"

Now, the object in all translations of ballad-poetry being to reproduce simple and downright phrases with equal simplicity and force, to give us the same effects and not the same words, we vastly prefer Jamieson's verse to Dr. Prior's, in spite of the affectation of *ligg* for *lie*. If *blind-house* be the equivalent for *dark* in the original, Dr. Prior should have told us so in a note, giving us the stronger (because simpler) English word in the text. He might as well write *hand-shoe* for *glove*, in a translation from the German. Elsewhere Jamieson errs in preferring *groff* to *great*, and the more that *groff* means more properly *coarse* than *large*.

The following couplet is also from Dr. Prior's translation of this ballad: —

"They cried one evening till the sound
Their mother heard beneath the ground."

Jamieson has it, —

"'Twas lang i' the night, and the bairnies
grat [cried],
Their mither she under the mools [mould]
heard that."

Again, Dr. Prior gives us, —

"Her eldest daughter then she sped
To fetch Child Dyring out of bed";

instead of Jamieson's —

"Till her eldest dochter syne [then] said she,
'Ye bid Child Dyring come here to me.'"

And, still worse, —

"Out from their chest she stretch'd her bones
And rent her way through earth and stones";
where Jamieson is not only more literal,
but more forcible, —

"Wi' her banes sae stark a bowt she gae
Hath riven both wall and marble gray."

The original is better than either, —

"She upward heaved her mighty bones
And rived both wall and gray marble-stones."

Jamieson had the true instinct of a translator, though his own verses defy the stanchest reader; and, reasoning by analogy, Dr. Prior's translations are so bad that he ought to be capable of very good original poetry.

However, with all its defects, Dr. Prior's book is of value for the information it gives. Under the dead ribs of his translations the reader familiar with old ballads can create a life for himself, and can form some conception of the spirit and strength of the originals.

Mr. Chambers's pamphlet is one that we should hardly have expected from the editor of the best collection of ballads in the language before that of Professor Child. Directly in the teeth of all probability, he attributes the bulk of the *romantic* Scottish ballads to Lady Wardlaw, who wrote "Hardyknute." This is one of those theories (like that of Lord Bacon being the author of Shakspeare's plays) which cannot be argued, but which every one familiar with the subject challenges peremptorily. Without going very deeply into the matter, Mr. Norval Clyne has put in a clever plea in arrest of judgment. The truth is, that, in the present state of our knowledge, "Hardyknute" could not pass muster as an antique better than "Vortigern," or the poems of "Master Rowley"; and the notion that Lady Wardlaw could have written "Sir Patrick Spens" will not hold water better than a sieve, when we consider how hopelessly inferior are the imitations of old ballads written by Scott, with fifty times her familiarity with the originals, and a man of genius besides.

Miss Gilbert's Career. An American Story.
By J. G. HOLLAND. New York: Charles Scribner.

THERE is scarcely a more hazardous experiment for any novelist than "a novel with a purpose." If the moral does not run away with the story, it is in most cases only because the author's lucky star has made the moral too feeble, in spite of his efforts, to do that or anything else, — in other words, because his book has fortunately defeated its own object. That any clever girl will be kept from the perilous paths of authorship by the warnings, however strongly inculcated, of any novel whatever, we are not prepared to assert: we venture to say no one will be deterred by the history of Miss Fanny Gilbert. If a woman's happiness is to be found in love,

and not in fame, the question nevertheless recurs,—What is she to do before the love comes? Our author only shows that his heroine's restless unhappiness was owing to her having to wait for her heart to be awakened: to prove what he desires to prove, he should demonstrate that it was owing to her having adopted authorship during the time of her waiting. During that time, Miss Fanny Gilbert wrote novels, and was unhappy: would she have been happy, if, in the interval, she had chronicled small beer? And even admitting that her authorship caused her unhappiness, we can scarcely believe Dr. Holland prepared to say, after having allowed his heroine a real talent, as one condition of the problem, that she ought to have concealed that talent in the decorous napkin of silence.

What the moral loses the story gains. Our author has lost nothing of that genuine love of Nature, of that quick perception of the comic element in men and things, of that delightful freshness and liveliness, which threw such a charm about the former writings of Timothy Titcomb. No story can be pronounced a failure which has vivacity and interest; and the volume before us adds to vivacity and interest vigorous sketches of character and scenery, droll conversation and incidents, a frequent and kindly humor, and, underlying all, a true, earnest purpose, which claims not only approval for the author, but respect for the man.

Dr. Holland describes admirably whatever he has himself seen. Unfortunately, he has not seen his hero or his heroine. About Arthur Blague there is nothing real or distinctive. There is a life and reality in many scenes of his experience; but the central figure of the group stands conventional and inanimate,—the ordinary walking gentleman of the stage,—the stereotyped hero of the novel,—hero only by virtue of his finally marrying the heroine. The one merit of the delineation—that it is a portrait of a delicate Christian gentleman—is sadly marred by the vulgar smartness of Arthur's repartees with the scampish New-Yorker. A victory in such a contest was by no means necessary to vindicate the hero's superiority; and if he so far forgot himself as to engage at all in the degrading warfare, a defeat would

have been more creditable. His retorts are undeniably smart; but "smartness" is the attribute of a "fellow," not of a "gentleman."

Miss Fanny Gilbert is a warm-hearted, high-spirited girl, clever and ambitious, and disposed at first to look contemptuously on poor Arthur, whose humble labors appear in most dingy and sordid colors, when contrasted with the fair Fanny's gorgeous dreams. She is not a very fascinating nor a very real heroine; but she is better than most of our heroines, and some of her experiences are very pleasantly told.

Arthur's miserly employer is very good, and his shrewd friend Cheek is capitally drawn. It was a peculiarly happy thought to make Cheek into a railroad-conductor, and finally into a "gentlemanly and efficient" superintendent. Nothing else would have suited his character half so well. The business-like religionists, Moustache and Breastpin, are not so good as the author meant to have them. The young bookseller is very well done, and Dr. Gilbert very natural and lifelike. The story of the Doctor's awakened interest in his daughter's success, and of his journey to New York, is very well told. We like especially the lesson which the triumphant authoress, in the full glory of her fame, receives, on finding that her father sets a higher value on his son's least achievement than on his daughter's highest success,—that, however a woman may deserve a man's place, the world will never award it to her. It would have been more effective, however, if Dr. Holland had not been quite so anxious that no one should fail to perceive the moral,—if he had had a little more confidence in his readers. But we can give unqualified praise to the scene between Miss Gilbert and the little crippled boy, which is one of the most beautiful and touching pictures ever yet presented.

It is a real satisfaction to find a book which one may venture to criticize fearlessly, knowing that it will bear the test,—especially at present, when one needs be as chary of trying any book fairly as Don Quixote was of proving his unlucky helmet. And an additional satisfaction is caused by the fact, that the book, not only in origin, but in essence, is American from cover to cover.

RECENT AMERICAN PUBLICATIONS

OUR ARTISTS IN ITALY.

WILLIAM PAGE.

AMONG artists, William Page is a painter.

This proposition may seem, to the great public which has so long and so well known him and his works, somewhat unnecessary. There are few who are not familiar with his paintings. Whether these seem great or otherwise, whether the Venus be pure or gross, we may not here discuss; the public has, and will have, many estimates; yet on one point there is no difference of opinion, apparently. The world willingly calls him whose hand wrought these pictures a painter. It has done so as a matter of course; and we accept the title.

But perhaps the title comes to us from this man's studio, charged with a significance elevating it above the simply self-evident, and rendering it worthy of the place we have given it as a germ proposition.

Not every one who uses pigments can say, "I also am a painter." To him who would make visible the ideal, there are presented the marble, the pencil, and the colors; and should he employ either of these, just in proportion to his obedience to the laws of each will he be a sculptor, a designer, or a painter; and

the revelations in stone, in light and shade, or on canvas, shall be his witnesses forevermore,—witnesses of him not only as an artist, in view of his relation to the ideal world, but as possessing a right to the especial title conferred by the means which he has chosen to be his interpreter.

The world has too much neglected these means of interpretation. It has condemned the science which would perfect the art, as if the false could ever become the medium of the true. The art of painting has suffered especially from the influence of mistaken views.

Nor could it be otherwise. Color-manifestation, of all art-utterance, is the least simple. It requires the fulfilment of a greater number of conditions than are involved in any other art. He who has selected colors as his medium cannot with impunity neglect form; light and shade must be to him as important as they are to the designer in *chiaro-scuro*; while above all are the mystery and power of color.

There is perplexity in this. The science of form seems to be vast enough for any man's genius. No more than he accomplishes is demanded of the genuine sculptor. His life has been grand with noble fulfilments. We, and all genera-

tions, hold his name in the sacred simplicity which has ever been the sign of the consummate. Men say, Phidias, Praxiteles, and know that they did greatly and sufficiently.

Yet with the science which these men had we combine elements equally great, and still truth demands the consummate. Hence success in painting has been the rarest success which the world has known. If we search its history page by page, the great canvas-leaves written over with innumerable names yield us less than a score of those who have overcome the difficulties of its science, through that, achieving art, and becoming painters.

Yes, many men have painted, many great artists have painted, without earning the title which excellence gives. Overbeck, the apostle artist, whose rooms are sacred with the presence of the divine, never earned that name. Nor did thousands who before him wrought patiently and earnestly.

We think that we have among us a man who *has* earned it.

What does this involve? Somewhat more than the ability critically to distinguish colors and to use them skilfully.

Although practice may discipline and develop this power, there must exist an underlying physiological fitness, or all study and experience will be unavailing. In many persons, the organization of the eye is such that there can be no correct perception of the value, relation, and harmony of hues. There exists often an utter inability to perceive differences between even the primary colors.

The late sculptor Bartholomew declared himself unable to decide which of two pieces of drapery, the one crimson and the other green, was the crimson. Nor was this the result of inexperience. He had been for years familiar not only with Nature's coloring, but with the works of the best schools of art, and had been in continual contact with the first living artists.

The instances of this peculiar blindness are exceptional, yet not more so than is the perfection of vision which en-

ables the eye to discriminate accurately the innumerable tints derived from the three primitives.

Nothing can be finer than the sense of identity and harmony resulting from this exquisite organization. We have been told that there is a workman at the Gobelins manufactory who can select twenty-two thousand tints of the material employed in the construction of its famous tapestries. This capability is, of course, almost wholly dependent upon rare physical qualifications; yet it is the basis, the very foundation of a painter's power.

Still, it is *but* the foundation. An "eye for color" never yet made any man a colorist.

Perhaps there can be no severer test of this faculty of perception than the copying of excellent pictures. And among the few successful copies which have been produced, Page's stand unsurpassed.

The ability to perceive Nature, when translated into art, is, however, a possession which this painter shares with many. Nor is he alone in the skill which enables him to realize upon his own canvas the effects which some master has rendered.

It is in the presence of Nature itself that a power is demanded with which mechanical superiority and physical qualifications have little to do. Here the man stands alone,—the only medium between the ideal and the outward world, wherefrom he must choose the signs which alone are permitted to become the language of his expression. None can help him, as before he was helped by the man whose success was the parent of his own. Here is no longer copying.

In the first place, is to be found the limit of the palette. Confining ourselves to the external, what, of all the infinitude of phenomena to which the vision is related, so corresponds to the power of the palette that it may become adequately representative thereof?

Passing over many minor points in which there seems to be an imperfect relation between Nature's effects and those of pigments, we will briefly refer to the great discrepancy occasioned by the lumi-

osity of light. In all the lower effects of light, in the illumination of Nature and the revelation of colored surfaces, in the exquisite play and power of reflected light and color, and in the depth and richness of these when transmitted, we find a noble and complete response on the palette. But somewhere in the ascending scale a departure from this happy relation begins to be apparent. The *color*-properties of light are no longer the first. Another element—an element the essential nature of which is absorbed in the production of the phenomena of color—now asserts itself. Hitherto the painter has dealt with light indirectly, through the mediatorship of substances. The rays have been given to him, broken tenderly for his needs;—ocean and sky, mountain and valley, draperies and human faces, all things, from stars to violets, have diligently prepared for him, as his demands have arisen, the precious light. And while he has restrained himself to the representation of Nature subdued to the limit of his materials, he has been victorious.

Turner, in whose career can be found almost all that the student needs for example and for warning, is perhaps the best illustration of wise temperance in the choice of Nature to be rendered into art. Nothing can be finer than some of those early works wrought out in quiet pearly grays,—the tone of Nature in her soberest and tenderest moods. In these, too, may be observed those touches of brilliant color,—bits of gleaming drapery, perhaps,—prophetic flecks along the gray dawn. Such pictures are like pearls; but art demands amber, also.

When necessity has borne the artist out of this zone, the peaceful domain of the imitator, he finds himself impelled to produce effects which are no longer the simple phases of color, but such as the means at his disposal fail to accomplish. In the simpler stages of coloring, when he desired to represent an object as blue or red, it was but necessary to use blue or red material. Now he has advanced to a point where this

principle is no longer applicable. The illuminative power of light compels new methods of manipulation.

As examples of a thorough comprehension of the need of such a change in the employment of means, of the character of that change, of the skill necessary to embody its principles, and of utter success in the result, we have but to suggest the name and works of Titian.

But the laws which Titian discovered have been unheeded for centuries; and they might have remained so, had not the mind of William Page felt the necessity of their revival and use. To him there could be no chance-work. Art must have laws as definite and immutable as those of science; indeed, the body in which the spirit of art is developed, and through which it acts, must be science itself. He saw, that, if exact imitation of Nature be taken as the law in painting, there must inevitably occur the difficulty to which we have before referred,—that, above a certain point, paint no longer undergoes transfiguration, thereby losing its character as mere coloring material,—that; if the ordinary tone of Nature be held as the legitimate key-note, the scope of the palette would be exhausted before success could be achieved.

Any one of Turner's latest pictures may serve to illustrate the nature of this difficulty. Although in his early practice he was remarkable for his judicious restraint, it is evident that the splendors of the higher phenomena of light had for him unlimited fascination; and he may be traced advancing cautiously through that period of his career which was marked by the influence of Claude, toward what he hoped would prove, and perhaps believed to be, a realization of such splendors.

It must have been observed by those who have studied his later pictures, that, while the low passages of the composition are wonderfully fine and representative, all the higher parts, those supposed or intended to stand for the radiance of dazzling light, fail utterly in rep-

representative capacity. There is an abundance of the most brilliant pigment, but it is still paint, — unmitigated ochre and white lead. The spectator is obliged to recede from the picture until distance enables the eye to transmute the offending material and reconcile the conflicting passages.

To accomplish the result of rendering the quality and effect of high light was one of the problems to which Mr. Page years ago turned his attention; and he found its solution in the transposition of the scale. The pitch of Nature could not be adopted as the immutable in art. That were impossible, unless art presumed to cope with Nature.

More than he, no man could respect the properties and qualities of the visible world. His ideas of the truthful rendering of that which became the subject of his pencil might seem preposterous to those who knew not the wonderful significance which he attached to individual forms and tints. Yet, in imitation, where is the limit? What is possible? Must there be any sacrifice?

Evidently there must be; and of course it follows that the less important must be sacrificed. Nature herself has taught the artist that the most variable of all her phenomena is that of *tone*. Other truths of Nature have a character of permanency which the artist cannot modify without violating the first principles of art. He is required to render the essential; and to render the essential of that which art cannot sacrifice, if it would, and continue art, he foregoes the non-essential and evanescent.

Not only is this permitted, — it is demanded. It is a law through which alone success is attainable. In obedience to it, Mr. Page adopts a key somewhat lower than that of Nature as a point of departure, using his degrees of color frugally, especially in the ascending scale. With this economy, when he approaches the luminous effects of Nature, he finds, just where any other palette would be exhausted, upon his own a reserve of high color. With this, seeking only a cor-

responding effect of light in that lower tone which assumes no rivalry with the infinite glory of Nature, he attains to a representation fully successful.

We would not have it understood that a mere transposition of the scale is all that is required to accomplish such a result; only this, — that in no other way can such a result be secured. To color well, to color so that forms upon the canvas give back tints like those of the objects which have served as models, is only half the work. Quality, as well as color, must be attained. Local, reflected, and transmitted color can be imitated; but as in the attempt to represent light its luminousness is the element which defeats the artist, so, throughout Nature, quality, texture, are the elements which most severely test his power.

Could any indispensable truth be considered secondary, it might be assumed that rendering truthfully the qualities of Nature is the first and highest of art. The forms and colors of objects vary infinitely. It might be said that the law of all existence is, in these two particulars, that of change. From the time a human being is born until it disappears in the grave, from the day when the first leaves break the mould to that which sees the old tree fall, the form of each has been modified hourly.

But that which differentiates objects more completely than any other property is quality. The sky over us, and the waters of the earth, are subject to infinite variations. Yet, whether in the tiny drop that trembles at the point of a leaf or in the vast ocean-globe of our planet, in the torpor of forest-ponds or in the wrath of cataracts, water never loses its quality of wetness, — the open sky never that of dryness. These two characteristics are of course entirely the reverse of each other, — as unlike as are the properties of transparency and opacity, which they involve.

So, throughout Nature, one truth, that of texture, is the distinguishing; and this distinctive element is that which cannot be sacrificed; for through it are Nature's

finest laws manifested. And the painter finds in his obedience to her demands his highest power over the material which serves him in his efforts to embody the true and the beautiful.

It is, then, this which compels us to estimate Mr. Page a painter,—a man especially organized for his profession,—chosen by its demands,—set apart, by his wonderful adaptation to its requirements, from all the world. In virtue of this specialty, the necessity arose early in his life to seek excellence in his department of art,—to search the depths of its philosophy and discover its vital principles,—to analyze its methods and expose its errors. It led him to investigate the relation between the phenomena of Nature and the effects of painting; it guided him to a clear perception of the laws of art-translation; above all, it compelled him to practise what he believed to be the true.

Thus much of the painter;—now what of the artist?

It does not necessarily follow, that, because a man is a great painter, he is also a great artist. Yet we may safely infer, that, if he has been true in one department of the several which constitute art, he cannot have been false in others. Should there be a shortcoming, it must be that of a man whose mission does not include that wherein he fails. Fidelity to himself is all we should demand. We say this for those who are disposed to depreciate what an artist actually accomplishes, because in some one point Turner or Overbeck surpasses him. Nor do we say it apologetically. The man, who, basing his action upon the evident purpose of the organization which God has given him, fulfils his destiny, requires no apology.

We have seen something of the faithfulness which has marked Mr. Page's pursuit of excellence in the external of his art. He has wrought that which proves his claim to a broader title than that of painter. Were it not for the vagueness which involves the appellation of historical painter, it might be that. Even were

we obliged to confine our interest and study to the portraiture which he has executed, we might, in view of its remarkable character, designate it as historical.

Than a really great portrait, no work of art can be more truly historical. We feel the subjectiveness of compositions intended to transmit facts to posterity,—and unless we know the artist, we are at a loss as to the degree of trust which we may place in his impressions. A true portrait is objective. The individuality of the one whom it represents was the ruling force in the hour of its production; and to the spirit of a household, a community, a kingdom, or an age, that individuality is the key. There is, too, in a genuine portrait an internal evidence of its authenticity. No artist ever was great enough to invent the combination of lines, curves, and planes which composes the face of a man. There is the accumulated significance of a lifetime,—subtle traces of failures or of victories wrought years ago. How these will manifest themselves, no experience can point out, no intuition can foresee or imagine. The modifications are infinite, and each is completely removed from the region of the accidental.

But, although details and their combinations in the human face and form cannot be wrought from the imagination, the truthfulness or falsity of their representation is instantly evident. It is because of this, that the unity of a portrait carries conviction of its truth and of the unimpeachability of its evidence, that this phase of art becomes so valuable as history. Compared with the worth of Titian's Philip II.,—the Madrid picture, of which Mr. Wild has an admirable study,—what value can be attached to any historical composition of its period?

It has not been the lot of Mr. Page to paint a mighty man, so inlocked with the rugged forces of his age. His sitters have come from more peaceful, nobler walks of life,—and their portraits are beloved even more than they are admired. Not yet are they the pride of pompous galleries, but the glory and saintliness of homes.

Could we enter these homes, and discuss freely the character of their treasures, we would gladly linger in the presence of the more precious. But so inseparably associated are they with their originals, so much more nearly related to them than to the artist, that no fitting analysis can be made of the representation without involving that of the individual represented.

Three portraits have, however, such wonderful excellence, and through this excellence have become so well known, that we may be forgiven for alluding to them. In a former paper, the writer spoke of the portrait of a man in his divinest development. The first of these three works is the representation of a woman, and is truly "somewhat miraculous." It is a face rendered impressive by the grandest repose,—a repose that pervades the room and the soul,—a repose not to be mistaken for serenity, but which is power in equilibrium. No brilliancy of color, no elaboration of accessories, no intricacy of composition attracts the attention of the observer. There is no need of these. But he who is worthy of the privilege stands suddenly conscious of a presence such as the world has rarely known. He feels that the embodiment before him is the record of a great Past, as well as the reflection of a proud Present,—a Past in which the soul has ever borne on through and above all obstacles of discouragement and temptation to a success which was its inheritance. He sees, too, the possibilities of the near Future; how from that fine equipoise the soul might pass out into rare manifestations, appearing in the sweetness and simplicity of a little child, in the fearful tumultuousness of a Lady Macbeth, in the passionate tenderness of a Romeo, or in the Gothic grandeur of a Scotch sorceress,—in the love of kindred, in the fervor of friendship, and in the nobleness of the truest womanhood.

Another portrait—can it have been painted in this century?—presents a widely different character. We have seen the rendering of a nature made too

solemn by the possession of genius to admit of splendor of coloring. This picture is that of ripe womanhood, manifesting itself in the fulness of summer's goldenest light. Color, in all its richness as color, in all its strength as a representative agent, in all its glory as the minister of light, in all its significance as the sign and expression of plenitude of life,—life at one with Nature;—thus we remember it, as it hung upon the wall of that noble room in the Roman home of Crawford.

A later portrait, and one artistically the finest of Mr. Page's productions, although executed in Rome, has found a home in Cambridge. Here no grave subdual of color was called for, nor was there any need of its fullest power,—but, instead thereof, we have color in the purity of its pearl expression. A mild lustre, inexpressibly clear, seems to pervade the picture, and beam forth the revelation of a white soul. Shadows there are none,—only still softer light, to carry back the receding forms. But interest in technicalities is lost in the nobler sense of sweet influences. We are at peace in the presence of a peace which passeth all understanding. We are holy in the ineffable light of immortal holiness. We are blessed in the consciousness of complete harmony.

Surely, none but a great painter could have achieved such success; surely, no mere painter could thus have appealed to us.

These works we have chosen to represent the artist's power in the direction of portraiture,—not only because of their wonderful merit as embodiments of individualism, but to illustrate a law which has not yet had its due influence in art, but which must be the very life of its next revival, when painting shall be borne up until it marks the century.

We refer to the expressional power of color,—not the conventional significance whereby certain colors have been associated arbitrarily with mental conditions. This last has often violated all the principles of natural relation; yet no fact is more generally accepted than this,—that

colors, from the intensity of the primitives to the last faint tints derived therefrom, bear fixed and demonstrable relations to the infinite moods and phases of human life. As among themselves the hues of the palette exist in immutable conditions of positive affinity or repulsion, so are they all related to the soul as definitely in harmony or in discord. There has been imperfect recognition of this at various times in the history of painting since the age of Giotto, — the most notable examples having occurred in the Venetian school.

But even in that golden age of art, this property of color was but rarely perceived and called into use under the guidance of principles. Still, the sense of the value and the harmonies of colors was so keen among the Venetian artists, that, intuitively, subjects were chosen which required an expression admitting of the most lavish use and magnificent display of color.

Paul Veronese, the splendor of whose conceptions seemed ever to select the pomp and wealth of banquets and ceremonies, — Giorgione, for whom the world revolved in an atmosphere of golden glory, — each had a fixed ideal of noble coloring; and it is questionable whether either ever modified that ideal for the sake of any expressional purpose.

Titian, from whom no property or capability of color was concealed, could not forego the power which he secured through obedience to the law of its relation to the human soul. Were we asked which among pictures is most completely illustrative of this obedience, we should answer, "The Entombment," in the Louvre. Each breadth of color mourns, — sky and earth and all the conscious air are laden with sorrow.

In portraiture, however, the great master was inclined to give the full perfection of the highest type of coloring. That rich glow which is bestowed by the Venetian sun did, indeed, seem typical of the life beneath it; and Titian may have been justified in bringing thither those who were the recipients of his favors.

One only did he not invite, — Philip II.; him he placed, dark and ominous, against a sky barred with blood.

Is it in virtue of conformity to law, and under the government of the principles of correspondence, that Mr. Page has wrought with mind and hand?

Otherwise it cannot be; for, in the three portraits to which allusion has been made, such subtle distinctions of character find expression in equally subtle differences of tint, that no touch could have been given from vague apprehensions of truth. No ambiguity perplexes the spectator; he beholds the inevitable.

Other works than those of portraiture have won for Mr. Page the attention of the world. This attention has elicited from individuals praise and dispraise, dealt out promptly, and with little qualification. But we have looked in vain for some truly appreciative notice of the so-called historical pictures executed by this artist. We do not object to the prompt out-speaking of the public. So much is disposed of, when the mass has given or withheld its approval. We know whether or not the work appeals to the hearts of human beings. Often, too, it is the most nearly just of any which may be rendered. Usually, the conclusions of the great world are correct, while its reasonings are absurd. Its decisions are immediate and clear; its arguments, subsequent and vague.

This measure, however, cannot be meted to all artists. A painter may appeal to some wide, yet superficial sympathy, and attain to no other excellence.

That Mr. Page might have found success in this direction will not be denied by any one who has seen the engraving of a girl and lamb, from one of his early works. It is as sweet and tenderly simple as a face by Francia. But not only did he refuse to confine himself to this style of art, as, when that engraving is before us, we wish he had done, — he passed out of and away from it. And those phases which followed have been such as are the least fitted to stand the trial of public exhibition. His pictures

do not command the eye by extraordinary combinations of assertive colors,—nor do they, through great pathos, deep tenderness, or any overcharged emotional quality, fascinate and absorb the spectator.

Much of the middle portion of this artist's professional life is marked by changes. It was a period of growth,—of continual development and of obvious transition. Not infrequently, the transition seemed to be from the excellent to the crude. Nevertheless, we doubt not, that, through all vicissitudes, there has been a steady and genuine growth of Mr. Page's best artistic power, and that he has been true to his specialty.

We should like to believe that the Venetian visit of 1853 was the closing of one period of transition, and the beginning of a new era in Mr. Page's artistic career. It is pleasant to think of the painter's pilgrimage to that studio of Titian, Venice,—for it was all his,—not in nebulous prophetic youth,—not before his demands had been revealed to his consciousness,—not before those twenty long years of solitary, hard, earnest work,—but in the full ripeness of manhood, when prophecy had dawned into confident fulfilment, when the principles of his science had been found, and when of this science his art had become the demonstration. It was fine to come then, and be for a while the guest of Titian.

There is evidence that he began after this visit to do what for years he had been learning to do,—yet, of course, as is ever the case with the earnest man, doing as a student, as one who feels all truth to be of the infinite.

The result has been a series of remarkable pictures. There are among these the specimens of portraiture, a few landscapes, and a number of ideal, or, as they have been called, historical works. Of these last named there is somewhat to be said; and those to which we shall refer are selected for the purpose of illustrating principles, rather than for that of description. These are all associated with

history. There are three representations of Venus, and several renderings of Scriptural subjects.

If these pictures are valuable, they are so in virtue of elements which can be appreciated. To present these elements to the world, to appeal to those who can recognize them, is, it is fair to assume, the object of exposition. Not merely praise, but the more wholesome meed of justice, is the desire of a true artist; and as we deal with such a one, we do not hesitate to speak of his works as they impress us.

First of all, in view of the artist's skill as a painter, it is well to regard the external of his work. Here, in both Scriptural and mythological subjects, there is little to condemn. The motives have been bravely and successfully wrought out; the work is nobly, frankly done. The superiority of methods which render the texture and quality of objects becomes apparent. There is no attempt at illusion; yet the representation of substances and spaces is faultless,—as, for instance, the sky of the “Venus leading forth the Trojans.” Nor have we seen that chaste, pearly lustre of the most beautiful human skin so well rendered as in the bosom of the figure which gleams against the blue.

But there is a pretension to more than technical excellence in the mythological works; there is a declaration of physical beauty in the very idea; in both these and the Scriptural there is an assumption of historical value.

While we believe that the problem of physical beauty can be solved and demonstrated, and the representations of Venus can be proved to possess or to lack the beautiful, we choose to leave now, as we should be compelled to do after discussion, the decision of the question to those who raise it. It is of little avail to prove a work of art beautiful,—of less, to prove it ugly. Spectators and generations cannot be taken one by one and convinced. But where the operation of judgment is from the reasoning rather than from the intuitive nature, facts, opin-

ions, and impressions may exert healthful influences.

The Venus of Page we cannot accept, —not because it may be unbeautiful, for that might be but a shortcoming, —not because of any technical failure, for, with the exception of weakness in the character of waves, nothing can be finer, —not because it lacks elevated sentiment, for this Venus was not the celestial, —but because it has nothing to do with the present, neither is it of the past, nor related in any wise to any imaginable future.

The present has no ideal of which the Venus of the ancients is a manifestation. Other creations of that marvellous Greek mind might be fitly used to symbolize phases of the present. Hercules might labor now; there are other stables than the Augean; and not yet are all Hydras slain. Armor is needed; and a Vulcan spirit is making the anvil ring beneath the earth-crust of humanity. But Venus, the voluptuous, the wanton, —no sensuousness pervading any religion of this era finds in her its fitting type and sign. She, her companions, and her paramours, with the magnificent religion which evolved them, were entombed centuries ago; and no angel has rolled the stone from the door of their sepulchre. They are dead; the necessity which called the Deistic ideal into existence is dead; the ideal itself is dead, since Paul preached in Athens its funeral sermon.

As history of past conditions, no value can be attached to representations produced in subsequent ages. In this respect all these pictures must be false. The best can only approximate truth. Yet his two pictures of Scriptural subjects—one from the remoteness of Hebrew antiquity, the other from the early days of Christianity —are most valuable even as history: not the history of the flight from Egypt, nor that of the flight into Egypt, but the history of what these mighty events have become after the lapse of many centuries.

Herein lies the difference between

Mythology and Christianity: the one arose, culminated, and perished, soul and body, when the shadow of the Cross fell athwart Olympus; the other is immortal, —immortal as is Christ, immortal as are human souls, of which it is the life. No century has been when it has not found, and no century can be when it will not find, audible and visible utterance. The music of the "Messiah" reveals the relation of its age to the great central idea of Christianity. Frà Angelico, Leonardo, Bach, Milton, Overbeck, were the revelators of human elevation, as sustained by the philosophy of which Christ was the great interpreter.

Therefore, to record that elevation, to be the historian of the present in its deepest significance, is the noblest occupation. Dwelling, as an artist must dwell, in the deep life of his theme, his work must go forth utterly new, alive, and startling.

Thus did we find the "Flight into Egypt" a picture full of the spirit of that marvellous age, hallowed by the sweet mystery which all these years have given. Who of those who were so fortunate as to see this work of Mr. Page will ever forget the solemn, yet radiant tone pervading the landscape of sad Egypt, along which went the fugitives? Nothing ever swallowed by the insatiable sea, save its human victims, is more worthy of lament than this lost treasure.

Thus, too, is the grandest work of Mr. Page's life, the Moses with hands upheld above the battle. Were we on the first page instead of the last, we could not refrain from describing it. Yet in its presence the impulse is toward silence. We feel, that, viewed even in its mere external, it is as simple and majestic as the Hebrew language. The far sky, with its pallid moon, —the deep, shadowy valley, with its ghostly warriors, —the group on the near mountain, with its superb youth, its venerable age, and its manhood too strong and vital for the destructive years; —in the presence of such a creation there is time for a great silence.

KNITTING SALE-SOCKS.

"HE 's took 'ith all the sym't'ns,— thet 's one thing sure! Dretful pain in hez back an' l'ins, legs feel 's ef they hed telegraph-wires inside 'em workin' fur dear life, head aches, face fevered, pulse at 2.40, awful stetch in the side, an' pressed fur breath. You guess it 's neuralogy, Lurindy? I do'no' nothin' about yer high-flyin' names fur rheumatiz. I don't guess so!"

"But, Aunt Mimy, what *do* you guess?" asked mother.

"I don't guess nothin' at all, — I nigh about know!"

"Well, — you don't think it 's" —

"I on'y wish it mebbe the verylaloud, — I on'y wish it mebbe. But that 's tew good luck ter happen ter one o' the name. No, Miss Ruggles, I — think — it 's — the raal article at first hand."

"Goodness, Aunt Mimy! what" —

"Yes, I du; an' you 'll all hev it stret through the famly, every one; you need-n't expect ter go scot-free, Emerline, 'ith all your rosy cheeks; an' you 'll all hev ter stay in canteen a month ter the least; an' ef you 're none o' yer pertected by vaticination, I reckon I" —

"Well, Aunt Mimy, if that 's your opinion, I 'll harness the filly and drive over for Dr. Sprague."

"Lor'! yer no need ter du *thet*, Miss Ruggles, — I kin kerry yer all through jest uz well uz Dr. Sprague, an' a sight better, ef the truth wuz knowed. I tuk Miss Deacon Smiler an' her hull famly through the measles an' hoopin'-cough, like a parcel o' pigs, this fall. They *du* say Jane 's in a poor way an' Nathan'l 's kind o' declinin'; but, uz I know they say it jest ter spite me, I don' so much mind. You *a'n't* gwine now, be ye?"

"There 's safety in a multitude of counsellors, you know, Aunt Mimy, and I think on the whole I had best."

"Wal! ef that 's yer delib'rate ch'ice betwixt Dr. Sprague an' me, ye kin du ez ye like. I never force my advice on

no one, 'xcept this, — I 'd advise Emerline there ter throw them socks inter the fire; there 'll never none o' them be fit ter sell, 'nless she wants ter spread the disease. Wal, I 'm sorry yer 've concluded ter hev thet old quack Sprague; never hed no more diplomy 'n I; don' b'lieve he knows cow-pox from kine, when he sees it. The poor young man 's hed his last well day, I 'm afeard. Good-day ter ye; say good-bye fur me ter Stephen. I 'll call ag'in, ef ye happen ter want any one ter lay him eout."

And, staying to light her little black pipe, she jerked together the strings of her great scarlet hood, wrapped her cloak round her like a sentinel at muster, and went puffing down the hill like a steam-boat.

Aunt Mimy Ruggles wasn't any relation to us, I wouldn't have you think, though our name was Ruggles, too. Aunt Mimy used to sell herbs, and she rose from that to taking care of the sick, and so on, till once Dr. Sprague having proved that death came through her ignorance, she had to abandon some branches of her art; and she was generally roaming round the neighborhood, seeking whom she could devour in the others. And so she came into our house just at dinner-time, and mother asked her to sit by, and then mentioned Cousin Stephen, and she went up to see him, and so it was.

Now it can't be pleasant for any family to have such a thing turn up, especially if there 's a pretty girl in it; and I suppose I was as pretty as the general run, at that time, — perhaps Cousin Stephen thought a trifle prettier; pink cheeks, blue eyes, and hair the color and shine of a chestnut when it bursts the burr, can't be had without one 's rather pleasant-looking; and then I 'm very good-natured and quick-tempered, and I 've got a voice for singing, and I sing in the choir, and a'n't afraid to open my

mouth. I don't look much like Lurindy, to be sure; but then Lurindy's an old maid,—as much as twenty-five,—and don't go to singing-school.—At least, these thoughts ran through my head as I watched Aunt Mimy down the hill.—Lurindy a'n't so very pretty, I continued to think,—but she's so very good, it makes up. At sewing-circle and quilting and frolics, I'm as good as any; but somehow I'm never any 'count at home; that's because Lurindy is by, at home. Well, Lurindy has a little box in her drawer, and there's a letter in it, and an old geranium-leaf, and a piece of black silk ribbon that looks too broad for anything but a sailor's necktie, and a shell. I don't know what she wants to keep such old stuff for, I'm sure.

We're none so rich,—I suppose I may as well tell the truth, that we're nearly as poor as poor can be. We've got the farm, but it's such a small one that mother and I can carry it on ourselves, with now and then a day's help or a bee,—but a bee's about as broad as it is long,—and we raise just enough to help the year out, but don't sell. We've got a cow and the filly and some sheep; and mother shears and cards, and Lurindy spins,—I can't spin, it makes my head swim,—and I knit, knit socks and sell them. Sometimes I have needles almost as big as a pipe-stem, and choose the coarse, uneven yarn of the thrums, and then the work goes off like machinery. Why, I can knit two pair, and sometimes three, a day, and get just as much for them as I do for the nice ones,—they're warm. But when I want to knit well, as I did the day Aunt Mimy was in, I take my best blue needles and my fine white yarn from the long wool, and it takes me from daybreak till sundown to knit one pair. I don't know why Aunt Jemimy should have said what she did about my socks; I'm sure Stephen hadn't been any nearer them than he had to the cabbage-bag Lurindy was netting, and there wasn't such a nice knitter in town as I, everybody will tell you. She always did seem to take particular pleas-

ure in hectoring and badgering me to death.

Well, I wasn't going to be put down by Aunt Mimy, so I made the needles fly while mother was gone for the doctor. By-and-by I heard a knock up in Stephen's room,—I suppose he wanted something,—but Lurindy didn't hear it, and I didn't so much want to go, so I sat still and began to count out loud the stitches to my narrowings. By-and-by he knocked again.

"Lurindy," says I, "a'n't that Steve a-knocking?"

"Yes," says she,—“why don't you go?”—for I had been tending him a good deal that day.

"Well," says I, “there's a number of reasons; one is, I'm just binding off my heel.”

Lurindy looked at me a minute, then all at once she smiled.

"Well, Emmy," says she, “if you like a smooth skin more than a smooth conscience, you're welcome,”—and went up-stairs herself.

I suppose I had ought to 'a' gone, and I suppose I'd ought to wanted to have gone, but somehow it wasn't so much fear as that I didn't want to see Stephen himself now. So Lurindy stayed up chamber, and was there when mother and the doctor come. And the doctor said he feared Aunt Mimy was right, and nobody but mother and Lurindy must go near Stephen, (you see, he found Lurindy there,) and they must have as little communication with me as possible. And his boots creaked down the back-stairs, and then he went.

Mother came down a little while after, for some water to put on Stephen's head, which was a good deal worse, she said; and about the middle of the evening I heard her crying for me to come and help them hold him,—he was raving. I didn't go very quick; I said, “Yes,—just as soon as I've narrowed off my toe”; and when at last I pushed back my chair to go, mother called in a disapproving voice and said that they'd got along without me and I'd better go to bed.

Well, after I was in bed I began to remember all that had happened lately. Somehow my thoughts went back to the first time Cousin Stephen came to our place, when I was a real little girl, and mother 'd sent me to the well and I had dropped the bucket in, and he ran straight down the green slippery stones and brought it up, laughing. Then I remembered how we 'd birds-nested together, and nitted, and come home on the hay-carts, and how we 'd been in every kind of fun and danger together; and how, when my new Portsmouth lawn took fire, at Martha Smith's apple-paring, he caught me right in his arms and squeezed out the fire with his own hands; and how, when he saw once I had a notion of going with Elder Hooper's son James, he stepped aside till I saw what a nincom Jim Hooper was, and then he appeared as if nothing had happened, and was just as good as ever; and how, when the ice broke on Deacon Smith's pond, and I fell in, and the other boys were all afraid, Steve came and saved my life again at risk of his own; and how he always seemed to think the earth wasn't good enough for me to walk on; and how I 'd wished, time and again, I might have some way to pay him back; and here it was, and I 'd failed him. Then I remembered how I 'd been to his place in Berkshire, — a rich old farm, with an orchard that smelled like the Spice Islands in the geography, with apples and pears and quinces and peaches and cherries and plums, — and how Stephen's mother, Aunt Emeline, had been as kind to me as one's own mother could be. But now Aunt Emeline and Uncle 'Siah were dead, and Stephen came a good deal oftener over the border than he 'd any right to. To-day, he brought some of those new red-streaks, and wanted mother to try them; next time, they 'd made a lot more maple-sugar on his place than he wanted; and next time, he thought mother's corn might need hoeing, or it was fine weather to get the grass in: I don't know what we should have done without him. Then I thought how Stephen looked, the

day he was pall-bearer to Charles Payson, who was killed sudden by a fall, — so solemn and pale, nowise craven, but just up to the occasion, so that, when the other girls burst out crying at sight of the coffin and at thought of Charlie, I cried, too, — but it was only because Stephen looked so beautiful. Then I remembered how he looked the other day when he came, his cheeks were so red with the wind, and his hair, those bright curls, was all blown about, and he laughed with the great hazel eyes he has, and showed his white teeth; — and now his beauty would be spoiled, and he 'd never care for me again, seeing I hadn't cared for him. And the wind began to come up; and it was so lonesome and desolate in that little bed-room down-stairs, I felt as if we were all buried alive; and I couldn't get to sleep; and when the sleet and snow began to rattle on the pane, I thought there wasn't any one to see me and I 'd better cry to keep it company; and so I sobbed off to dreaming at last, and woke at sunrise and found it still snowing.

Next morning, I heard mother stepping across the kitchen, and when I came out, she said Lurindy 'd just gone to sleep; they 'd had a shocking night. So I went out and watered the creatures and milked Brindle, and got mother a nice little breakfast, and made Stephen some gruel. And then I was going to ask mother if I 'd done so very wrong in letting Lurindy nurse Stephen, instead of me; and then I saw she wasn't thinking about that; and besides, there didn't really seem to be any reason why she shouldn't; — she was a great deal older than I, and so it was more proper; and then Stephen hadn't ever *said* anything to me that should give me a peculiar right to nurse him more than other folks. So I just cleared away the things, made everything shine like a pin, and took my knitting. I 'd no sooner got the seam set than I was called to send something up on a contrivance mother 'd rigged in the back-entry over a pulley. And then I had to make a red flag, and find a stick,

and hang it out of the window by which there were the most passers. Well, I did it; but I didn't hurry,—I didn't get the flag out till afternoon; somehow I hated to, it always seemed such a low-lived disease, and I was mortified to acknowledge it, and I knew nobody 'd come near us for so long,—though goodness knows I didn't want to see anybody. Well, when that was done, Lurindy came down, and I had to get her something to eat, and then she went up-stairs, and mother took her turn for some sleep; and there were the creatures to feed again, and what with putting on, and taking off, and tending fires, and doing errands, and the night's milking, and clearing the paths, I didn't knit another stitch that day, and was glad enough, when night came, to go to bed myself.

Well, so we went on for two or three days. I 'd got my second sock pretty well along in that time,—just think! half a week knitting half a sock!—and was setting the heel, when in came Aunt Mimy.

"I a'n't afeard on it," says she; "don't you be skeert. I jest stepped in ter see ef the young man wuz approachin' his eend."

"No," said I, "he isn't, any more than you are, Aunt Mimy."

"Any more 'n I be?" she answered. "Don't you lose yer temper, Emerline. We're all approachin' it, but some gits a leetle ahead; it a'n't no disgrace, ez I knows on. What yer doin' of? Knittin' sale-socks yet? and, my gracious! still ter work on the same pair! You 'll make yer fortin', Emerline!"

I didn't say anything, I was so provoked.

"I don't b'lieve you know heow ter take the turns w'en yer mother a'n't by to help," she continued. "Can't ye take up the heel? Widden ev'ry fourth. Here, let me! You won't? Wal, I alluz knowed you wuz mighty techy, Emerline Ruggles, but ye no need ter fling away in thet style. Neow I 'll advise ye ter let socks alone; they 're tew intricate fur sech ez you. Mitt'ns is jest

about 'ithin the compass uv your mind,—mitt'ns, men's single mitt'ns, put up on needles larger 'n them o' yourn be, an' by this rule. Seventeen reounds in the wrist,—tew an' one 's the best seam"——

"Now, Miss Jemimy, just as if I didn't know how to knit mittens!"

"Wal, it seems you don't," said she, "though I don't deny but you may know heow ter give 'em; an' ez I alluz like ter du w'at good I kin, I'm gwine ter show ye."

"Show away," says I; "but I 'll be bound, I've knit and sold and eaten up more mittens than ever you put your hands in!"

"Du tell! I'm glad to ha' heern you've got sech a good digestion," says she, hunting up a piece of paper to light her pipe. "Wal, ez I wuz sayin'," says she, "tew an' one 's the best seam, handiest an' 'lasticest; twenty stetches to a needle, cast up so loose thet the fust one 's ter one eend uv the needle an' the last ter t'other eend,—thet gives a good pull."

"I guess your smoke will hurt Stephen's head," said I, thinking to change her ideas.

"Oh, don't you bother about Stephen's head; ef it can't stan' thet, 't a'n't good fur much. Wal, an' then you set yer thumb an' knit plain, 'xcept a seam-stetch each side uv yer thumb; an' you widden tew stetches, one each side,—s'pose ye know heow ter widden? an' narry?—ev'ry third reound, tell yer 've got nineteen stetches acrost yer thumb; then ye knit, 'ithout widdenin', a matter uv seven or eight reounds more,——you listenin', Emerline?"

"Lor', Miss Jemimy, don't you know better than to ask questions when I'm counting? Now I've got to go and begin all over again."

"Highy-tighty, Miss! You're a weak sister, ef ye can't ceount an' chat, tew. Wal, ter make a long matter short, then ye drop yer thumb onter some thread an' cast up seven stetches an' knit reound fur yer hand, an' every other time you narry them seven stetches away ter one, fur the gore."

"Dear me, Aunt Mimy! do be quiet a minute! I believe mother's a-calling."

"I'll see," said Aunt Mimy,—and she stepped to the door and listened.

"No," says she, coming back on tiptoe,—"an' you didn't think you heern any one neither. It's ruther small work fur ter be foolin' an old woman. Hows'ever, I don't cherish grudges; so, ez I wuz gwine ter say, ye knit thirty-six reounds above wheer ye dropped yer thumb, an' then ye toe off in ev'ry fifth stetch, an' du it reg'lar, Emerline; an' then take up yer thumb on tew needles, an' on t'other you pick up the stetches I told yer ter cast up, an' knit twelve reounds, an' thumb off 'ith narryin' ev'ry third"—

"Well, Miss Jemimy, I guess I shall know how to knit mittens, now!"

"Ef ye don't, 't a'n't my fault. When you've fastened off the eends, you roll 'em up in a damp towel, an' press 'em 'ith a middlin' warm iron on the wrong side. There!"

After this, Miss Mimy smoked awhile in silence, satisfied and gratified. At last she knocked the ashes out of her pipe.

"Wal," says she, "I must be onter my feet. I'd liked ter seen yer ma, but I won't disturb her, an' you can du ez well. Yer ma promised me a mess o' tea, an' I guess I may ez well take it neow ez any day."

"Why, Miss Mimy," said I, "there a'n't above four or five messes left, and we can't get any more till I sell my socks."

"Wal, never mind, then, you can le' me take one, an' mebbe I kin make up the rest at Miss Smilers's."

So I went into the pantry to get it, and Aunt Mimy followed me, of course.

"Them's nice-lookin' apples," said she. "Come from Stephen's place? Poor young man, he won't never want 'em! S'pose he won't hev no objection ter my tryin' a dozen,"—and she dropped that number into her great pocket.

"Nice-lookin' butter, tew," said she. "Own churnin'? Wal, you kin du sunthin', Emerline. W'en I wuz a heouse-

keeper, I used ter keep the femily in butter an' sell enough to Miss Smith—she thet wuz Mary Breown—ter buy our shoes, all off uv one ceow. S'pose I take this pat?"

I was kind of dumfounded at first; I forgot Aunt Mimy was the biggest beggar in Rockingham County.

"No," says I, as soon as I got my breath, "I sha'n't suppose any such thing. You're as well able to make your butter as I am to make it for you."

"Wal, Emerline Ruggles! I alluz knowed you wuz close ez the bark uv a tree; it's jest yer father's narrer-contracted sperrit; you don't favor yer ma a speck. She's ez free ez water."

"If mother's a mind to give away her eye-teeth, it don't follow that I should," said I; "and I won't give you another atom; and you just clear out!"

"Wal, you kin keep yer butter, sence you're so sot on it, an' I'll take a leetle dust o' pork instead."

"Let's see you take it!" said I.

"I guess I'll speak 'ith yer ma. I shall git a consider'ble bigger piece, though I don't like ter add t' 'er steps."

"Now look here, Miss Mimy," says I,— "if you'll promise not to ask for another thing, and to go right away, I'll get you a piece of pork."

So I went down cellar, and fished round in the pork-barrel and found quite a respectable piece. Coming up, just as my head got level with the floor, what should I see but Miss Jemimy pour all the sugar into her bag and whip the bowl back on the shelf, and turn round and face me as innocent as Moses in the bulrushes. After she had taken the pork, she looked round a minute and said,—

"Wal, arter all, I nigh upon forgot my arrant. Here's a letter they giv' me fur Lurindy, at the post-office; ev'rybody else's afeard ter come up here";—and by-and-by she brought it up from under all she'd stowed away there. "Thet jest leaves room," says she.

"For what?" says I.

"Fur tew or three uv them eggs."

I put them into her bag and said,

"Now you remember your promise, Aunt Mimy!"

"Lor' sakes!" says she, "you're in a mighty herry ter git me off. Neow you've got all you kin out uv me, the letter, 'n' the mitt'ns, I may go, may I? I niver see a young gal so furrard 'ith her elders in all my born days! I think Stephen Lee's well quit uv ye, fur my part, ef he hed to die ter du it. I don't 'xpect ye ter thank me fur w'at instruction I gi'n ye;—there's some folks I niver du 'xpect nothin' from; you can't make a silk pus out uv a sow's ear. W'at ye got thet red flag out the keepin'-room winder fur? 'Cause Lurindy's 's nussin' Stephen? Wal, good-day!"

And so Aunt Mimy disappeared, and the pat of butter with her.

I called Lurindy and gave her the letter, and after a little while I heard my name, and Lurindy was sitting on the top of the stairs with her head on her knees, and mother was leaning over the banisters. Pretty soon Lurindy lifted up her head, and I saw she had been crying, and between the two I made out that Lurindy'd been engaged a good while to John Talbot, who sailed out of Salem on long voyages to India and China; and that now he'd come home, sick with a fever, and was lying at the house of his aunt, who wasn't well herself; and as he'd given all his money to help a shipmate in trouble, she couldn't hire him a nurse, and there he was; and, finally, she'd consider it a great favor, if Lurindy would come down and help her.

Now Lurindy'd have gone at once, only she'd been about Stephen, so that she'd certainly carry the contagion, and might be taken sick herself, as soon as she arrived; and mother couldn't go and take care of John, for the same reason; and there was nobody but me. Lurindy had a half-eagle that John had given her once to keep; and I got a little bundle together and took all the precautions Dr. Sprague advised; and he drove me off in his sleigh, and said, as he was going about sixteen miles to see a patient, he'd put me on the cars at the nearest

station. Well, he stopped a minute at the post-office, and when he came out he had another letter for Lurindy. I took it, and, after a moment, concluded I'd better read it.

"What are you about?" says the Doctor; "your name isn't Lurindy, is it?"

"I wish it was," says I, "and then I shouldn't be here."

"Oh! you're sorry to leave Stephen?" says he. "Well, you can comfort yourself with reflecting that Lurindy's a great deal the best nurse."

As if that was any comfort! If Lurindy was the best nurse, she'd ought to have had the privilege of taking care of her own lover, and not of other folks's. Besides, for all I knew, Stephen would be dead before ever I came back, and here I was going away and leaving him! Well, I didn't feel so very bright; so I read the letter. The Doctor asked me what ailed John Talbot. I thought, if I told him that Miss Jane Talbot wrote now so that Lurindy shouldn't come, and that he was sick just as Stephen was, he wouldn't let me go. So I said I supposed he'd burnt his mouth, like the man in the South, eating cold pudding and porridge; men always cried out at a scratch. And he said, "Oh, do they?" and laughed.

After about two hours' driving, there came a scream as if all the panthers in Coos County were let loose to yell, and directly we stopped at a little place where a red flag was hung out. I asked the Doctor if they'd got the small-pox here, too; but before he could answer, the thunder running along the ground deafened me, and in a minute he had put me inside the cars and was off.

I was determined I wouldn't appear green before so many folks, though I'd never seen the cars before; so I took my seat, and paid my fare to Old Salem, and looked about me. Pretty soon a woman came bustling in from somewhere, and took the seat beside me. There she fidgeted round so that I thought I should have flown.

"Miss," says she, at length, "will you

close your window? I never travel with a window open; my health's delicate."

I tried to shut it, but it wouldn't go up or down, till a gentleman put out his cane and touched it, and down it slid, like Signor Blitz. It did seem as if everything about the cars went by miracle. I thanked him, but I found afterward it would have been more polite not to have spoken. After that woman had done everything she could think of to plague and annoy the whole neighborhood, she got out at Ipswich, and somebody met her that looked just like our sheriff; and I shouldn't be a bit surprised to hear that she'd gone to jail. When she got out, somebody else got in, and took the same seat.

"Miss," says she, "will you have the goodness to open your window? this air is stifling."

And she did everything that the other woman didn't do. When she found I wouldn't talk, she turned to the young gentleman and lady that sat opposite, and that looked as if there was a great deal too much company in the cars, and found they wouldn't talk either, and at last she caught the conductor and made him talk.

All this while we were swooping over the country in the most terrific manner. I thought how frightened mother and Lurindy'd be, if they should see me. It was no use trying to count the cattle or watch the fences, and the birch-trees danced rigadoons enough to make one dizzy, and we dashed through everybody's back-yard, and ran so close up to the kitchens that we could have seen what they had for dinner, if we had stayed long enough; and finally I made up my mind that the engine had run away with the driver, and John Talbot would never have me to tend him; and I began to wonder, as I saw the sparks and cinders and great clouds of steam and smoke, if those tornadoes that smash round so out West in the newspapers weren't just passenger-trains, like us, off the track, when all at once it grew as dark as midnight.

"Now," says I to myself, "it's certain.

They've run the thing into the ground. However, we can't go long now."

And just as I was thinking about Kora and his troop, I remembered what the Doctor had told me about Salem Tunnel, and it began to grow lighter, and we began to go slower, and I picked up my wits and looked about me again. I had only time to notice that the young gentleman and lady looked very much relieved, and to shake my shawl from the clutch of the woman beside me, when we stopped at Salem, safe and sound.

I had a good deal of trouble to find Miss Talbot's house, but find it I did; and the first thing she gave me was a scolding for coming, thinking I was Lurindy, and her tongue wasn't much cooler when she found I wasn't; and then finally she said, as long as I was there, I might stay; and I went right up to see John, and a sight he was!

It was about three months I stayed and took the greater part of the care of him. Sometimes in the midnight, when he was quite beside himself, and dreaming out loud, it was about as good as a story-book to hear him. He told me of some great Indian cities where there were men in white, with skins swarthier than old red Guinea gold, and with great shawls all wrought in palm-leaves of gold and crimson bound on their heads, who could sink a ship with their laces of rupees; and of islands where the shores came down to the water's edge and unrolled like a green ribbon, and brooks came sparkling down behind them, and great trees hung above like banners, and beautiful women came off on rafts and skiffs loaded with fruit,—the islands set like jewels on the back of the sea, and the sky covered them with light and hung above them bluer than the hangings of the Tabernacle, and they sent long rivers of spice out on the air to entice the sailor back,—islands where night never came. Sometimes, when he talked on so, I remembered that I'd felt rather touched up when I found that Lurindy'd had a sweetheart all this time, and mother knew it, and they'd never told me, and

I wondered how it happened. Now it came across me, that, quite a number of years before, Lurindy had gone to Salem and worked in the mills. She didn't stay long, because it didn't agree with her,—the neighbors said, because she was lazy. Lurindy lazy, indeed! There a'n't one of us knows how to spell the first syllable of that word. But that 's where she must have got acquainted with John Talbot. He'd been up at our place, too; but I was over to Aunt Emeline's, it seems. But one night, about this time, I thought he was dying, he'd got so very low; and I thought how dreadful it was for Lurindy never to see him again, and how it was all my selfish fault, and how maybe he wouldn't 'a' died, if he'd had her to have taken care of him; and I suppose no convicted felon ever endured more remorse than I did, sitting and watching that dying man all that long and lonely night. But with the morning he was better,—they always are a great deal worse when they are getting well from it; he laughed when the doctor came, and said he guessed he'd weathered that gale; and by-and-by he got well.

He meant to have gone up and seen Lurindy, after all, but his ship was ready for sea just as he was; and I thought it was about as well, for he wasn't looking his prettiest. And so he declared I was the neatest little trimmer that ever trod water, and he believed he should know a Ruggles by the cut of her jib, (I wonder if he'd have known Aunt Mimy,) and if ever he went master, he'd name his ship for me, and call it the Sister of Charity. And he kissed me on both cheeks, and looked serious enough when he sent his love to Lurindy, and went away; and no sooner was he gone than Miss Talbot said I'd better have the doctor myself; and I didn't sit up again for about three weeks.

All this time I hadn't heard a word from home, and, for all I knew, Stephen might be dead and buried. I didn't feel so very light-hearted, you may be sure, when one day Miss Talbot brought me a letter. It was from mother, and it seemed

Stephen'd only had a bad fever, and had been up and gone home for more than a week. So I wrote back, as soon as I could, all about John, and how he'd gone to sea again, and how Miss Talbot, who set sights by John, was rather lonely, and I thought I'd keep her company a little longer, and try a spell in the mills, seeing that our neighbors didn't think a girl had been properly accomplished till she'd had a term or two in the factory. The fact was, I didn't want to go home just then; I thought, maybe, if I waited a bit, my face would get back to looking as it used to. So I worked in the piece-room, light work and good pay, sent mother and Lurindy part of my wages, and paid my board to Miss Talbot. She'd become quite attached to me, and I to her, for all she was such an old-maidish thing; but I'd got to thinking an old maid wasn't such a very bad thing, after all. Fourth of July came at last, and the mills were closed, and I went with some of the other girls on an excursion down the harbor; and when I got home, Miss Talbot told me my Cousin Stephen had been down to see me, and had been obliged to go home in the last train. I wondered why Stephen didn't stay, and then it flashed upon me that she'd told him all about it, and he didn't want to see me afterwards. I knew mother and Lurindy suspected why I didn't come home, and now, thinks I, they *know*; but I asked no questions.

When September came, I saw it wasn't any use delaying, and I might as well go back to knitting sale-socks then as any time. However, I didn't go till October. You needn't think I'd stayed away from the farm all that time, while the tender things were opening, the tiny top-heavy beans pushing up, the garden-sarse green-ing, the little grass-blades two and two,—while all the young creatures were coming forward, the chickens breaking the shell, and the gosling-storm brewing and dealing destruction,—while the strawberries were growing ripe and red up in the high field, and the hay and clover were getting in,—you needn't think

I'd stayed away from all that had been pleasant in my life, without many a good heart-ache; and when at last I saw the dear old gray house again, all weather-beaten and homely, standing there with its well-sweep among the elms, I fairly cried. Mother and Lurindy ran out to meet me, when they saw the stage stop, and after we got into the house it seemed as if they would never get done kissing me. And mother stirred round and made hot cream-biscuits for tea, and got the best china, and we sat up till high midnight, talking, and I had to tell everything John did and said and thought and looked, over and over again.

By-and-by I unpacked my trunk, and there was a little parcel in the bottom of it, and I pulled it up.

"There, Lurindy," says I, "John told me to tell you to have your wedding-dress ready against he came home,—he's gone mate,—and here it is." And I unrolled the neatest brown silk you ever saw, just fit for Lurindy, she's so pale and genteel, and threw it into her lap. I'd stayed the other month to get enough to buy it.

The first thing Lurindy did, by way of thanks, was to burst into tears and declare she never could take it, that she never should marry now; and the more I urged her, the more she cried. But at last she said she'd accept it conditionally,—and the condition was, I should be married when she was.

"Well," says I, "agreed, if you'll provide the necessary article; because I can't very well marry my shadow, and I don't know any one else that would be fool enough to have such a little fright."

At that Lurindy felt all the worse, and it took all the spirits I had to build up hers and mother's. I suppose I was sorry to see they felt so bad, (and they hadn't meant that I should,) because it gave the finishing stroke to my conviction; and after I was in bed, I grew sorrier still; and if I cried, 't wasn't on account of myself, but I saw how Lurindy'd always feel self-accused, though she hadn't ought to, whenever she looked at me, and how all

her life she'd feel my scarred face like a weight on her happiness, and think I owed it to John, and how intolerable such an obligation, though it was only a fancied one, would be; and I saw, too, that it all came from my not going up-stairs that first time when Stephen knocked,—because if I had gone, I should have been there when the doctor came, and Lurindy'd have gone to have taken care of John herself, and it would have been her face that was ruined instead of mine; and though it was a great deal better that it should be mine, still she'd have been easier in her mind;—and so thinking and worrying, I fell asleep.

Next day was baking-day, and Stephen was coming in the afternoon, and it was almost five o'clock when we got cleared up, and I went up-stairs to change my dress. I thought 't wasn't any use to trim myself out in bows and ruffles now, so I just put on my brown gingham and a white linen collar; but Lurindy came and tied a pink ribbon at my throat, and fixed my hair herself, and looked down and said,—

"Well, I don't see but you're about as pretty as ever you was."

That almost finished me; but I contrived to laugh, and got down-stairs. Mother'd run over to the village to get some yarn to knit up, for she'd used all our own wool. It was getting dark, and I had just brought in another log, and hung the kettle on the crane. The log hadn't taken fire yet, and there was only a light glimmer, from the coals, on the ceiling. I heard the back-door-latch click, and thought it was mother, and commenced humming in the middle of a tune, as if I'd been humming the rest and had just reached that part; but the figure standing there was a sight too tall for mother.

"Oh, Stephen," says I,—and my heart jumped in my throat, but I just swallowed it down, and thanked Heaven that the evening was so dark,— "is that you?"

"Yes," says he, stepping forward, and putting out his hands, and making as if he would kiss me. Just for a minute I

hung back, then I went and gave him my hand in a careless way.

"Yes," says he; "and I can't say that you seem so very glad to see me."

"Oh, yes," I answered, "I am glad. Did you drive over?"

"Well," says he, "maybe you are; but I should call it a mighty cool reception, after almost a year's absence. However, I suppose it's the best manners not to show any cordiality; you've had a chance to learn more politeness down at Salem than we have up here in the country."

I was a little struck up by Stephen's running on so,—he was generally so quiet, and said so little, and then in such short sentences. But in a minute I reckoned he thought I was nervous, and was trying to put me at my ease,—and he knew of old that the best way to do that was to rouse my temper.

"I ha'n't seen anybody at Salem better-mannered 'n mother and Lurindy," said I.

"Come home for Thanksgiving?" asked Stephen, hanging up his coat.

I kept still a minute, for I couldn't for the life of me see what I had to give thanks for. Then it came over me what a cheery, comfortable home this was, and how Stephen would always be my kind, warm-hearted friend, and how thankful I ought to be that my life had been spared, and that I was useful, that I'd made such good friends as I had down to Salem, and that I wasn't soured against all mankind on account of my misfortune.

"Yes, Stephen," says I, "I've come home for Thanksgiving; and I have a great deal to give thanks for."

"So have I," said he.

"Stephen," says I, "I don't exactly know, but I shouldn't wonder if I'd had a change of heart."

"Don't know of anybody that needed it less," says Stephen, warming his hands. "However, if it makes you any more comfortable, I sha'n't object; except the part of it that belongs to me,—I sha'n't have that changed."

The fire 'd begun to brighten now, and the room was red and pleasant-looking; still I knew he couldn't see me plain-

ly, and I waited a minute, and lingered round, pretending I was doing something, which I wasn't; I hated to break the old way of things; and then I took the tongs and blew a coal and lighted the dip and held it up, as if I was looking for something. Pretty soon I found it; it was a skein of linen thread I was going to wind for Lurindy. Then I got the swifts and came and sat down in front of the candle.

"There," says I, "the swifts is broken. What shall I do?"

"I'll hold the thread, if that's your trouble," says Stephen, and came and sat opposite to me while I wound.

I wondered whether he was looking at me, but I didn't durst look up,—and then I couldn't, if my life had depended upon it. At last we came to the end; then I managed to get a glance edgeways. He hadn't been looking at all, I don't believe, till that very moment, when he raised his eyes.

"Are folks always so sober, when they've had a change of heart?" he asked, with his pleasant smile.

"They are, when they've had a change of face," I was going to say; but just then mother came in with her bundle of yarn, and Lurindy came down, and there was such a deal of welcoming and talking, that I slipped round and laid the table and had the tea made before they thought of it. I'd about made up my mind now that Stephen would act as if nothing had happened, and pretend to like me just the same, because he was so tender-hearted and couldn't bear to hurt my feelings nor anybody's; and I'd made up my mind, too, that, as soon as he gave me a chance, I'd tell him I was set against marriage: leastwise, I wouldn't have him, because I wouldn't have any man marry me out of pity; and the more I cared for him, the more I couldn't hamper an ugly face on him forever. So, you see, I had quite resolved, that, cost me what it would, I'd say 'No,' if Stephen asked me. Well, it's a very good thing to make resolutions; but it's a great deal better to break them, sometimes.

Having come to my conclusions, I grew as merry as any of them; and when mother put two spoons into Stephen's cup, I told him he was going to have a present. And he said he guessed he knew what it was; and I said it must be a mitten, I 'd heard that Martha Smith had taken to knitting lately; and he confounded Martha Smith. Mother and Lurindy were very busy talking about the yarn, and how Mr. Fisher wanted the next socks knit; and Stephen asked me what that dish was beside me. I said, it was lemon-pie, and the top-crust was made of kisses, and would he have some? And he said, he didn't care for anybody's kisses but mine, and he believed he wouldn't. And I told him the receipt of this came from the Queen's own kitchen. And he said, he didn't know that the Queen of England was any better than the Queen of Hearts. Then I said, I supposed he remembered how the latter lady was served by the Knave of Hearts in 'Mother Goose'? And he replied, that he wasn't going to be Jack-at-a-pinch for anybody. And so on, till mother finished tea.

After tea, I sat up to the table and ended some barley-trimming that I 'd just learned how to make; and as the little kernels came tumbling out from under my fingers, Stephen sat beside and watched them as if it was a field of barley, growing, reaped, and threshed under his eyes. By-and-by I finished it; and then, rummaging round in the table-drawer, I found the sock that I was knitting, waiting at the very stitch where I left it, 'most a year ago.

"Well, if that isn't lucky!" said I. And I sat down on a stool by the fireside, determined to finish that sock that night; and no sooner had I set the needles to dancing, like those in the fairy-story, than open came the kitchen-door again, and in, out of the dark, stepped Aunt Mimy.

"Good-evenin', Miss Ruggles!" says she. "Heow d' ye du, Emerline? hope yer gwine ter stay ter hum a spell. Why, Stephen, 's this you? Quite a family-party, I declare fur 't! Wal, Miss Ruggles, I got kind o' tired settin' in the dark,

an', ez I looked out an' see the dips blazin' in yer winder, thinks I, I 'll jest run up an' see w'at 's ter pay."

"Why, there 's only one dip," says Lurindy.

"Wal, thet 's better 'n none," answered Miss Mimy.

I had enough of the old Adam left in me to be riled at her way of begging as much as ever I was; but I saw that Stephen was amused; he hadn't ever happened to be round, when Aunt Mimy was at her tricks.

"No, Miss Ruggles," continued she, "I thank the Lord I ha'n't got a complainin' sperrit, an' hed jest ez lieves see by my neighbor's dip ez my own, an', mebbe ye 'll say, a sight lieveser."

And then Miss Mimy pulled out a stocking without beginning or end, and began to knit as fast as she could rattle, after she 'd fixed one needle in a chicken-bone, and pinned the chicken-bone to her side.

"Wal, Emerline," says she, "I s'pose ye 've got so grand down ter the mills, thet, w'at 'ith yer looms an' machines an' tic-doloureux, ye won't hev nothin' ter say ter the old way uv knittin' socks."

"Does this look like it, Aunt Mimy?" says I, shaking my needles by way of answer. "I 'm going to finish this pair to-night."

"Oh," says she, "you be, be you? Wal, ef I don't e'en-a'most vum it 's the same one! ef ye ha'n't been nigh about a hull year a-knittin' one pair uv socks!"

"How do you know they 're the same pair?" asked I.

"By a mark I see you sot in 'em ter the top, ef ye want ter know, afore I thought it would be hangin' by the eyelids the rest uv yer days. Wal, I never 'xpected ye 'd be much help ter yer mother; ye 're tew fond uv hikin' reound the village."

"Indeed, Miss Mimy," said Lurindy, kind of indignant, "she's always been the greatest help to mother."

"I don't know how I should have made both ends meet this year, if it hadn't been for her wages," said mother.

Stephen was whittling Miss Mimy's

portrait on the end of a stick, and laughing. I was provoked with mother and Lurindy for answering the thing, and was just going to speak up, when I caught Stephen's eye, and thought better of it. Pretty soon Aunt Mimy produced a bundle of herbs from her pocket, and laid them on the table.

"Oh, thank you, Aunt Jemimy," says mother. "Pennyroyal and catnip's always acceptable."

"Yes," said Aunt Mimy. "An' I'll take my pay in some uv yer dried apples. Heow much does Fisher give fur socks, Miss Ruggles?" she asked, directly.

"Fifty cents and I find,—fifteen and he finds."

"An' ye take yer pay out uv the store? Varry reasonable. I wuz thinkin' uv tryin' my han' myself;—business's ruther dull, folks onkimmon well this fall. Heow many strings yer gwine ter give me fur the ya'bs?"

Then mother went up garret to get the apples and spread the herbs to dry, and Lurindy wanted some different needles, and went after her. Stephen 'd just heaped the fire, and the great blaze was tumbling up the chimney, and Miss Mimy lowered her head and looked over her great horn-bowed spectacles at me.

"Wal, Emerline Ruggles," says she, after a while, going back to her work, "you've lost all *your* pink cheeks!"

I suppose it took me rather sudden, for all at once a tear sprung and fell right down my work. I saw it glistening on the bright needles a minute, and then my eyes filmed so that I felt there was more coming, and I bent down to the fire and made believe count my narrowings. After all, Aunt Mimy was kind of privileged by everybody to say what she pleased. But Stephen didn't do as every one did, always.

"Emmie's beauty wasn't all in her pink cheeks, Miss Mimy," I heard him say, as I went into the back-entry to ask mother to bring down the mate of my sock.

"Wal, wherever it was, there's pre-

cious little of it left!" said she, angry at being took up, which maybe she never was before in her life.

"You don't agree with her friends," said he, cutting in the stick the great mole on the side of her nose; "*they* all think she's got more than ever she had."

Mother tossed me down the mate, and I went back.

"Young folks," says Aunt Mimy, after two or three minutes' silence, "did ye ever hear tell o' 'Miah Kemp?"

"Any connection of old Parson Kemp in the other parish?" asked Stephen.

"Yes," said Aunt Mimy,— "his brother. Wal, w'en I wuz a young gal, livin' ter hum,—my father wuz ez wealthy ez any farmer thereabouts, ye know,—I used ter keep company 'ith 'Miah Kemp. 'Miah wuz a stun-mason, the best there wuz in the deestrik, an' the harnsomet boy there tew,—though I say it thet shouldn't say it,—he hed close-curlin' black hair, an' an arm it done ye good ter lean on. Wal, one spring-night,—I mind it well,—we wuz walkin' deown the lane together, an' the wind wuz blowin', the laylocks wuz in bloom, an' all overhead the lane wuz rustlin' 'ith the great purple plumes in the moonlight, an' the air wuz sweeter 'ith their breath than any air I've ever taken sence, an' ez we wuz walkin', 'Miah wuz askin' me fur ter fix eour weddin'-day. Wal, w'en he left me at the bars, I agreed we'd be merried the fifteenth day uv July comin', an' I walked hum; an' I mind heow I wondered ef Eve wuz so happy in Paradise, or ef Paradise wuz half so beautiful ez thet scented lane. The nex' mornin', ez I wuz milkin', the ceow tuk fright an' begun ter cut up, an' she cut up so thet I run an' she arter me,—an' the long an' the short uv it wuz thet she tossed me, an' w'en they got me up they foun' I hedn't but one eye. Wal, uv course, my looks wuz sp'iled,—fur I'd been ez pretty 'z Emerline wuz,—you wuz pretty once, Emerline,—an' I sent 'Miah Kemp word I'd hev no more ter du 'ith him nor any one else neow. 'Miah, he come ter see me; but I wuz detarmined, an' I stuck

ter my word. He did an' said everything thet mortal man could,—thet he loved me better 'n ever, an' thet 't would be the death uv him, an' tuk on drefful. But w'en he 'd got through, I giv' him the same answer, though betwixt ourselves it a'most broke my heart ter say it. I kep' a stiff upper-lip, an' he grew desp'rate, an' tuk all sorts uv dangerous jobs, blastin' rocks an' haulin' stuns. One night,—'t wuz jest a year from the night I 'd walked 'ith him in thet lane,—I wuz stan'in' by the door, an' all ter once I heerd a noise an' crash ez ef all the thunderbolts in the Almighty's hand hed fallen together, an' I run deown the lane an' met the men bringin' up sunthin' on an old door. They hed been blastin' Elder Payson's rock, half-way deown the new well, an' the mine hedn't worked, an' 'Miah 'd gone deown ter see w'at wuz in it; an' jest ez he got up ag'in, off it went, an' here he wuz 'ith a great splinter in his chist,—ef the rest uv it wuz him. They couldn't kerry him no furdur, an' sot him deown; an' there wuz all the trees a-wavin' overhead ag'in, an' all the sweet scents a-beatin' abeout the air, jest uz it wuz a year ago w'en he parted from me so strong an' whole an' harnsome; all the fleowers wuz a-blossomin', all the winds wuz blowin', an' this lump uv torn flesh an' broken bones wuz 'Miah. I laid deown on the grass beside him, an' put my lips close to hisn, an' I could feel the breath jest stirrin' between; an' the doctor came an' said 't warn't no use; an' they threw a blanket over us, an' there I laid tell the sun rose an' sparkled in the dew an' the green leaves an' the purple bunches, an' the air came frolickin' fresh an' sweet abeout us; an' though I 'd knowed it long, layin' there in the dark, neow I see fur sartain thet there warn't no breath on them stiff lips, an' the forehead was cold uz the stuns beneath us, an' the eyes wuz fixed an' glazed in thet las' look uv love an' tortur' an' reproach thet he giv' me. They say I went distracted; an' I *du* b'lieve I 've be'n cracked ever sence."

Here Aunt Mimy, who had told her whole story without moving a muscle,

commenced rocking violently back and forth.

"I don't often remember all this," says she, after a little, "but las' spring it all flushed over me; an' w'en I heerd heow Emerline 'd be'n sick,—I hear a gre't many things ye do'no' nothin' abeout, children,—I thought I 'd tell her, fust time I see her."

"What made you think of it last spring?" asked Stephen.

"The laylocks wuz in bloom," said Miss Mimy,— "the laylocks wuz in bloom."

Just then mother came down with the apples, and some dip-candles, and a basket of broken victuals; and Miss Mimy tied her cloak and said she believed she must be going. And Stephen went and got his hat and coat, and said,—

"Miss Mimy, wouldn't you like a little company to help you carry your bundles? Come, Emmie, get your shawl."

So I ran and put on my things, and Stephen and I went home with Aunt Mimy.

"Emmie," says Stephen, as we were coming back, and he 'd got hold of my hand in his, where I 'd taken his arm, "what do you think of Aunt Mimy now?"

"Oh," says I, "I 'm sorry I 've ever been sharp with her."

"I don't know," said Stephen. "T'a'n't in human nature not to pity her; but then she brought her own trouble on herself, you see."

"Yes," said I.

"I don't know how to blast rocks," says Stephen, when we 'd walked a little while without saying anything,— "but I suppose there is something as desperate that I can do."

"Oh, you needn't go to threatening me!" thinks I; and, true enough, he hadn't any need to.

"Emmie," says he, "if you say 'No,' when I ask you to have me, I sha'n't ask you again."

"Well?" says I, after a step or two, seeing he didn't speak.

"Well?" says he.

"I can't say 'Yes' or 'No' either, till you ask me," said I.

He stopped under the starlight and looked in my eyes.

"Emmie," says he, "did you ever doubt that I loved you?"

"Once I thought you did," said I; "but it's different now."

"I *do* love you," said he, "and you know it."

"Me, Stephen?" said I, — "with my face like a speckled sparrow's egg?"

"Yes, you," said he; and he bent down and kissed me, and then we walked on.

By-and-by Stephen said, When would I come and be the life of his house and the light of his eyes? That was rather a speech for Stephen; and I said, I would go whenever he wanted me. And then we went home very comfortably, and Stephen told mother it was all right, and mother and Lurindy did what they'd got very much into the habit of doing, — cried; and I said, I should think I was going to be buried, instead of married; and Stephen took my knitting-work away, and said, as I had knit all our trouble and all our joy into that thing, he meant to keep it just as it was; and that was the end of my knitting sale-socks.

I suppose, now I've told you so far, you'd maybe like to know the rest. Well, Lurindy and John were married Thanksgiving morning; and just as they moved aside, Stephen and I stepped up and took John and Aunt Mimy rather by surprise by being married too.

"Wal," says Aunt Mimy, "ef ever you hang eout another red flag, 't won't be because Lurindy's nussin' Stephen!"

I don't suppose there's a happier little woman in the State than me. I should like to see her, if there is. I go over home pretty often; and Aunt Mimy makes just as much of my baby — I've named him John — as mother does; and that's enough to ruin any child that wasn't a cherub born. And Miss Mimy always has a bottle of some new nostrum of her own stilling every time she sees any of us; we've got enough to swim a ship, on the top-shelf of the pantry to-day, if it was all put together. As for Stephen, there he comes now through the huckleberry-pasture, with the baby on his arm; he seems to think there never was a baby before; and sometimes — Stephen's such a homebody — I'm tempted to think that maybe I've married my own shadow, after all. However, I wouldn't have it other than it is. Lurindy, she lives at home the most of the time; and once in a while, when Stephen and mother and I and she are all together, and as gay as larks, and the baby is creeping round, swallowing pins and hooks and eyes as if they were blueberries, and the fire is burning, and the kettle singing, and the hearth swept clean, it seems as if heaven had actually come down, or we'd all gone up without waiting for our robes; it seems as if it was altogether too much happiness for one family. And I've made Stephen take a paper on purpose to watch the ship-news; for John sails captain of a fruiter to the Mediterranean, and, sure enough, its little gilt figure-head that goes dipping in the foam is nothing else than the Sister of Charity.

SCUPPAUG.

THE crowd was decidedly a heterogeneous one on the edge of which I stood at eight o'clock, A. M., one scorching July morning, under an awning at the end of a rickety pier, waiting for the excursion-steamer which was to convey us to the distant sand-banks over which the clear waters lap, away down below the green-sloped highlands of Neversink,—sea-shoal banks, from which silvery fishes were warning us off with their waving fins.

Now the crowd, being a heterogeneous one, as I have said, had the vulgar element pervading it to a dominant extent. It consisted mainly of such "common people," indeed, that no person of exquisite refinement would have thought of feeling his way through it, unless his hands were protected by what Aminadab Sleek calls "little goat-gloves." And yet there is another style of mitten, a large, unshapely, bloated knuckle-fender, stuffed with curled hair, that might be far more appropriate to the operation of shouldering in among such "muscular Christians" as the majority around, on the occasion to which I refer.

In the resorts to which habitual tipplers have recourse for consolation of the spirituous kind, a cheap variety is usually on hand to meet exigencies,—the exigency of a commercial crisis, for instance, when the last lonely dime of the drinker is painfully extracted from the pocket, to be replaced by seven inconsiderable cents. This abomination is termed "all sorts" by the publican and his indispensable sinner. It is the accumulation of the drainage of innumerable gone drinks,—fancy and otherwise. The exquisite in the "little goat-gloves" would not hobnob with me in that execrable beverage; no more would I with him; and yet one of its components may be the aristocratic Champagne. In the social elements of a water-excursion-party may be found the "all sorts" of a particular kind of city-life,—the good of it and the bad of it, with

a dash of something that is very low. But I am going to talk about the thing as I found it,—the rough side of the social mill-stone; and, seeing that I have suffered nothing by contact with it, I suppose no harm will come to such as listen to the little I have got to say on the subject.

A benevolent desire to launch far and wide the already well-spread reputation of the New York rowdy impels the present writer to declare his conviction, that, should Physiology offer a premium for the production of a perfect and unmitigated specimen of *polisson*, Experience would seek for it among the choice representatives of the class in question,—ay, and find it, too. Nor would the ardor of search be chilled by the suggestion of scarcity conveyed in the practical sarcasm of the sly old cynic, when he scorched human nature with a horn lantern by instituting a search with it on the sun-bright highways for an unauthenticated type of man. And yet the rowdy, like many another ugly and repulsive thing, may have his use. In the East Indies, it is customary to keep a live turtle in the wayside water-tanks which are so precious in that thirsty land, the movements of the animal, as well as the industry with which it devours all noxious particles which chance may have conveyed into the waters, serving to keep them in a condition of purity and health. The rowdy is the turtle in the tank,—so far, at least, as being an ugly beast to look at and a great promoter of commotion,—by which latter service he keeps the community alive to the presence of impure particles in the social element, if he does not assist in getting rid of them. An alligator in an aquarium might furnish a better comparison for him in other respects.

Of this class there are many branches; but the one with which I have to deal at present is to be studied to most advantage by visiting some pier of the great river-frontage of New York, to which excursion-

sion-boats rush emulously at appointed hours, crossing and jostling each other with proper respect for their individual rights as free commoners of the well-tilled waters. Here, as, with audacious disregard of the chance-medley of smashed guards and obliterated paddle-boxes, the great water-wagons graze wheels upon the ripple-paved turnpike of the river, the steamboat-runner, squalidly red from the effects of last night's carouse, and reeking sensibly of the alcoholic "morning call," may be recognized by the native manner in which he makes the pier peculiarly his own,—by the inflammatory character which unremitting dissipation has imparted to the inhaling apparatus of his unclassical features,—by the filthy splendor of his linen, which a low-buttoning waistcoat, gorgeous and dirty likewise, unbosoms disadvantageously to the gaze of the beholder,—by the invariable "diamond" pin, of gift-book style, with which the juncture of the first-mentioned integument is effected, if not adorned,—and, above all, by the massive guards and guy-chains with which his watch is hitched on to the belaying arrangements of Chatham Street garments, the original texture and tint of which have long been superseded by predominant grease. Hand and elbow with the professional city-rowdy the steamboat-runner is ever to be found: at the cribs, where the second-rate men of the "fancy" hold their secret meetings; clinging about the doors of the Court of Sessions, where, as eavesdroppers,—for they are known to the door-keeper, and rejected from the friendship of that stern officer,—they strive, with ear at keyhole, to catch a word or two which may give them a clue to the probable fate of "Jim," who is in the dock there, on his trial for homicide or some such light peccadillo; loitering round the dog-pit institutions, where the quadrupeds look so amazingly like men and the men like quadrupeds,—especially in that one where the eye of taste may be gratified by the supernatural symmetry of the stuffed bull-terriers in glass cases, the enormity of which specimens is accounted for by the

gentlemanly proprietor, who tells us that "the man as stuffed 'em never stuffed anythink else afore, only howls."

I suppose it must have been the tacit acknowledgment of some superiority by me inappreciable, that accorded to one individual of the small assemblage of roughs under notice a decidedly influential position among the congenial spirits hovering around. The superior blanchness of this person's linen would seem to indicate that his association with mere runners was but occasional and for commercial ends. Also might that conclusion have been deduced from the immaculacy of his cream-white Panama hat. That was a jaunty article, with upturned brim, the pride of which was discernible in the very simplicity with which it sat, unadulterated by band or trimmings, upon the closely cropped, mole-colored head of the wearer. Thirty dollars, at least, must have been its marketable value. Instead of being fitted with chain-tackle, the watch of this superior person maintained its connection with the open air by means of a broad watered ribbon plummeted straight down his leg with a seal hardly inferior in size to a deep-sea lead. This daring recurrence to first principles is much to be observed, of late, among the choice spirits of the so-called "sporting" fraternity of New York.

This man, as I supposed, and as I subsequently heard from my friend Locus, of the police, who came upon the pier, was not a runner now, but had risen from that respectable rank by large exercise of the virtues so intimately associated with it. In attributing an exalted position to him I was right. He was the keeper of a house of entertainment for emigrants in one of the down-town tributaries to Broadway, where tickets could also be had for California and most other parts of the world, at an advance of not more than one-third on the rates charged at the regular steamboat-offices. Considering the respectability of this person's occupation, I was surprised when Locus referred to him, familiarly, as "Flashy Joe," adding that he was widely known,

if not respected, and that he would, probably, be entitled some day to have his portrait placed in a gallery of which he, Locus, knew, but into which my æsthetic researches have not hitherto led me.

There was another noticeable character in the rough part of the heterogeneous crowd. This man, while on a footing of the greatest intimacy with the runners, was far inferior to them in the matter of dress. Locus, in reply to my queries, informed me that he was a professional oyster-opener; but, judging from his appearance in general, I should have guessed that he was a professional oyster-catcher also,—a human dredge, employed chiefly at the bottom of the sea. A perfect Hercules in build, “Lobster Bob,” as Locus called him, made his appearance on the wharf with two enormous creels of oysters, one balanced on each hip, with the careless ease of unconscious strength. His costume consisted solely of a ragged blue cotton shirt and trousers, immense knobby cowskin boots white with age, and a mouldy drab felt hat. The buttonless blue shirt flapped widely open from his brawny chest; and his shirt-sleeves, rolled up to the shoulder, gave full display to a pair of arms of a mould not usually to be found outside the prize-ring, and but seldom within the sanctuary of that magic circle. As if in compensation for the merely nominal allowance of costume tolerated by this crustacean professor, his chest and arms were entirely covered with a wild arabesque of tattoo-work, in blue and red. Many and original artists must have been employed in the embellishment of Robert’s tawny hide. The one to whose sense of the fitness of things was intrusted the illustration of his right arm had seized boldly upon the oval protuberance of the biceps, a few skilfully disposed dots and dashes upon which had converted it into a face which was no bad reproduction of Bob’s own. On the broad flexors of his sun-bronzed fore-arm there blazed a grand device which might have puzzled a whole college of heralds to interpret,—a combination of eagles and banners and shields,

coruscating with stars and radiant with stripes. But more suggestive than any of these shams was the stern reality of a purple scar which ran round the back of his neck, from ear to ear. More than one man must have been hurt, when that scar was made.

Notwithstanding the bull-dog projection of this formidable giant’s lower jaw, there sometimes beamed on his face that good-natured expression often observable in men whose unusual muscular development places them on a footing of physical superiority to those with whom they shoulder along the road of life. When the runners “chaffed” him, nevertheless, it was in a mild way, and with manifest respect for his muscle,—a sentiment in no way diminished when he suddenly clutched one of the least cautious among them by the nape of the neck, and held him out at arm’s-length, for some seconds, over the drownny water that kept lazily licking at the green moss on the old stakes of the rickety pier.

Even unto the Prince of Darkness, saith proverbial philosophy, let us concede his due. If, then, a single ray of good illuminates at some happy moment the dark spirit of these roughs, let it be recorded with that bare, unfledged truth which is so much better a bird than uncandor with the finest of feathers upon him.

Feeling his way into the circle with a stick, there came a poor blind man, of diminutive stature, squeezing beneath his left arm a suffocating accordion, which, every now and then, as he stumbled against the uneven planks of the wharf, gave a querulous squeak, doleful in its cadence as the feeble quavers evoked by Mr. William Davidge, comedian, from the asthmatic clarinet of Jem Bags, in the farce of the “Wandering Minstrel.”

“Come, b’hoys!” cried Lobster Bob, “let’s have a squeeze of music from Billy, afore the boat comes up”; and, plumping down one of his creels in the middle of the crowd, he lifted up the musician, and seated him upon the rough, cold oysters,—a throne fitter, certainly, for a follower of Neptune than a votary of Apollo. One of the roughs danced an ungraceful meas-

ure to the music of the accordion, mimicking, as he did so, the queer contortions into which the musician twisted his features in perfect harmony with his woful strains. All of them were gentle to the blind man, though, as if *his* darkness had brought to them a ray of light; and presently one of them takes off the musician's cap, drops into it a silver dime, and goes the rounds of the throng with many jocose appeals in favor of the owner, to whom he presently returns it in a condition of silver lining analogous to, but more substantial than that of the poet's cloud.

But now the poor music of the accordion was quite extinguished by the bellying of the brazen horns of the "cotillon band" on the deck of our expected steamer, as she rounded to from the upper piers at which she had been taking in excursionists. This caused a stir in the crowd under the awning, many of whom were fathers of families taking their wives and children out for a rare holiday. The smallest babies had not been left at home, but were there in all their primary scarletude, set off by the whitest of lace-frilled caps trimmed with the bluest of ribbons. And now came the time for these small choristers to take up the "wondrous tale"; for the big horns had ceased to wrangle, and the crushing and rushing of the crowd woke up infancy to a sense of its wrongs and a consciousness of the necessity for action.

There were some nice-looking girls around, neatly dressed, too, though by no means in their Sunday-best; for *la petite New-Yorkaise* is aware of the mishaps to be encountered by those who venture far out to sea in ships. They had sweethearts with them, for the most part, or brothers, or cousins, mayhap: but they were sadly neglected by these protectors, as we stood under the awning on the pier; for the male mind was full of fishing, and the male hands were employed in making up tackle with a most unscientific kind of skill.

And now the final rush came, as the steamer made fast alongside the outermost of the boats already lying at the

pier, across the decks of which our heterogeneous crowd began to make its way with as little scrambling as possible, on account of the petticoat-hoops, which are capital monitors in a turmoil. Women swayed their babies like balancing-poles, as they tottered along the gangway-plank. Men tried to secure themselves from being brushed into eternity by the powerful sweep of skirts. My own personal reminiscence of this transit from the wharf to the gallant bark of our choice is melancholy and vague, being marked chiefly to memory by the complicated curse bestowed upon me by a hideous old Irish-woman, whose oranges I accidentally upset in the crowd, and by whom I was subsequently derided with buffo song and scurrilous dance as long as the steamer remained within hearing and sight.

Away we are steaming down the bay, at last, a motley party of men, women, and children of all sizes and sorts: husbands, wives, milliners and their lovers; young men who have brought no young women with them, because they have come for fishing and fishing only; and advanced fathers, who, making a virtue of having brought out wife and child for a holiday, now leave them a good deal to take care of themselves, and devote all their energies to being pleasant as remotely from them as circumstances will allow. Roughs, to the number of a dozen or so, mostly steamboat-runners and their congeners, are of the party, headed by Flashy Joe. Lobster Bob has set up his oyster-plank in a central situation. Venders of unfresh-looking refreshments have established themselves on board; and the bar-keeper, near the fore-castle, is preparing himself for the worst.

By-and-by I noticed a good-looking specimen of Young New York on board, and was introduced to him by a cigar. He was a handsome boy, with dark, oval face, and Arabian eyes. The silky black line that just marked the curve of his upper lip gave promise of a splendid moustache; his closely crisped black hair was but just visible below the rim of his jaunty straw hat, the band of which was

a tasselled cord of crimson silk; while his lithe figure was suggested rather than displayed by the waving lines of his loose brown jacket with tapering *gigot* sleeves. His low-cut shirt-collar and narrow silken neck-tie were in the style called "English," as quite decidedly, also, were his cross-barred trousers of balloony build; nor, although thus flinging himself for diversion into the vortex of the lower crowd, had he foregone the luxury of tan-colored kid gloves and patent-leather shoes. He was a bright boy, and precocious as a lady-killer; for, already, before we had left far behind us the pleasant slopes of Bay Ridge, with its peeping villa-parapets of brown and white, and its umbrageous masses of chromatic green, he had evidently engaged the affections of an *espiègle* little straw-bonnet-maker, who did her hair something like his own, in a close-curved crop, and had her pretty little person safely shut up in a high-necked dress.

That young lady had a suitor with her, who was clearly not a sweetheart, however, by a good deal, but merely a follower tolerated for the day, and on the score of convenience only. He was a tall, gaunt, pale young man, with long hands and feet, slouching shoulders and narrow chest, and a strange, indescribable nullity of expression dwelling upon his features. He did not appear to be encouraged much by little Straw-Goods, whose mind was probably occupied with prospective possibilities of being led out to the festive dance by Young New York. Altogether, he was an unsatisfactory-looking young man, his unfinished look reminding one of raw material, though it would have been hard to say for what.

But the band had now ceased mellowing out the favorite medley which begins with "Casta Diva" and runs over into the lovely cadences of "Gentle Annie"; and the abrupt transition from that mournful strain to a light cotillon air warned four hundred holiday-people that the festive dance was about to begin on the wide floor between the engine-room and the saloon. Cotillons are

a leading pastime among the people; and as the water was pretty smooth down the bay, and a splendid breeze rushed aft between-decks, many laughing girls and well-dressed matronly women now made their appearance on the floor. Dancing without noise is a luxury as yet uncalled for. Dancers must have music, we know, — and what is music, but wild noise caught and trained? But these cotillons were unnecessarily boisterous, on account of the roughs, who, looked upon as outsiders by the better-behaved portion of the throng, got up a wild war-step of their own on the skirts of the legitimate dance, dishonestly appropriating to their coarse movements the music intended for it alone, as they stamped and shouted, and wheeled round with a ludicrous affectation of grace, in the space between the dancers and the bulkheads of the deck. One of these roughs, a drunken young fellow of wiry build, whose hair, face, eyes, nose, ears, and hands were all of the color of tomato-catchup, might have made an excellent low comedian, had destiny led him upon the "boards." He had just been complaining to his companions that his hand had been refused for the dance by a girl at whom he pointed the red finger of wrath, — a pale, but very interesting seamstress, who was whirling about with a much decenter young man than the red one is ever likely to be. And then he nobly took his revenge by the clever, but unprincipled way in which he caricatured the rather remarkable dancing of the young man who was the object of his hate, and whose style of movement it would not be consistent with this writer's duty to deny was amenable to severity, and must, in any society, have subjected him who indulged in it to the scorn of the flouter and the contempt of all high-minded men.

All through the dance, it was a thing to be remembered, how superior in deportment the women were to the men. Probably it was from a natural instinct for grace, and abhorrence of the ludicrous, that they merely skimmed through

the figures, without any of the demonstrations displayed by their beaux. It was pleasant to look at the nice little straw-goods damsel with the boyish hair, and to mark the contrast between her kitten glidings and the premeditated atrocities of Raw Material, as he wove and unwove his ungainly legs before her, in a manner appalling to witness. She had only a common palm-leaf fan, I remarked,—worth, probably, about two cents. But Young New York, as he waited patiently for the deadly ocean-malady to fall upon Raw Material, who was unquestionably a subject for it, and was drinking, besides, drew tightly up his tan-colored gloves, and, twirling with finger and thumb the air just about where it must some day be displaced by the future tendrils of the coming moustache, affirmed upon oath his intention of presenting her with a fan more worthy of her well-kept little hand, ere kind Fortune could have time to drop another excursion-ticket into her work-basket.

Should the solemn question arise as to how I knew that one of these young women was in the straw-bonnet line, another a milliner, a third a dress-maker, and so forth, I will answer it by stating that the left forefinger of the seamstress, long since vulcanized into a little file, furnishes the infallible sign which indicates the class. To the practised eye, the varieties are known by many a token: by the smart little close-grained cereal bonnet which little Straw-Goods put away before she came into the dance; by the spicy creation of silk and ribbons which roosts demurely, like a cedar-bird, on the back hair of the pale girl, who is a milliner; by the superior manner in which the hoops are disguised in the structure surrounding that blonde young wife with the pink baby, who is a dress-maker. Let the lofty read studiously the signs that in the heavens are portentous of storm or of shine; I, who am of commoner clay, must content myself with deciphering those that are of earth.

But a “sea-change” was upon us. Last night there was a tornado of rain and thunder and wind, and the effects

of the latter were now perceptible, as we began to rock through the ground-swell off Sandy Hook, and down past the twin light-houses on the high, sunny ridges of Neversink. The music ceased, the dancers deserted the ’tween-decks floor, and, as the rocking of the boat increased, there arose in the direction of the ladies’ cabin audible suggestions of woe.

And now the twin beacon-towers of Neversink were far, far behind, having taken a position with regard to us which may be described, in military phrase, as an *échelon* movement upon our flank, and we went surging through a fleet of little green fishing-boats, manned each by a single fisherman in a red shirt, whose two horny hands appeared to be a couple too few for the hauling in of the violet and silver *porgies*, with which the well of his little green craft was alive and flapping. In the middle of this fleet we rounded to, the anchor was let go, and we were hard and fast upon the Fishing-Banks.

The first thing done, on these excursions, by those who come to fish,—which includes nearly all the men,—is to establish a claim somewhere along the railing of the steamer, by attaching to it a strong whip-cord fishing-line, with a leaden sinker and hook of moderate size,—the latter lashed on, in most instances, with a disregard for art which must be intensely disgusting to any man whose piscatorial memories are associated with the wily salmon and the epicurean trout. Triangular tin boxes are brought along by the fishermen to hold their bait, which consists of soft clams, liberally sprinkled with salt to keep them in a wholesome condition for the afternoon take. Attaching a line to any part of the rail or combings, or to any projecting point of the boat, establishes the *droit de pêche* at that particular spot,—a right respected with such rigorous etiquette, that the owner may then go his way with confidence, to inspect the resources of the bar, or join the gay throng of dancers between-decks.

There must be something singularly fascinating in this curious pastime of fish-

ing with a hand-line from the jumping-off places of a steamboat or pier. Doubtless it is from a defective sympathetic organization that the writer of these pages does not himself "seem to see it." Nevertheless, I look upon the illusion with a respect almost bordering upon fear, although not quite in that spirit of veneration which moves illogical savages to fall down and worship the stranger lunatic whom chance has led to their odorous residences. Dwelling one summer on the New Jersey shore, I used to loiter, day after day, upon a deserted wharf, at the end of which was ever to be seen a broad-beamed fisherman, sitting upon an uncomfortably wooden chair, from which he dabbled perpetually with his whip-cord line in the shallow water that washed the slimy face-timbers of the wharf. There he sat, day after day, and all day, and, for aught I know, all through the summer-night, a big-timbered, sea-worthy man, reading contentedly a daily paper of local growth, and pulling up never a better bit of sea-luck than the puny, mean-spirited fishling called by unscientific persons the *burgall*. I would at any time have freely given ten cents for the privilege of overhauling old broad-beam's carpet-bag, which he always placed before him on the string-piece, with a view, I suppose, of frustrating anything like a guerrilla plunder-movement upon his widely extended rear. Ay, there must be something strangely entrancing in dragging the shoal waters with a hand-line, for unsuspecting, easily duped members of the acanthopterygian tribe of fishes,—under which alarming denomination come, I believe, nearly all the finny fellows to be met with on these sand-banks, from the bluefish to the *burgall*. Only think how stuck up they would be above the lowly mollusks of the same waters, if they knew themselves as *Acanthopterygii*, and were aware that their great-grandfather was an *Acanthopteryx* before them, and so away back in the age of waters that once were over all! "Very ancient and fish-like" is their genealogy, to be sure!

In the far-away days, when Neversink

was, but the twin beacon-towers that now watch upon its heights were *not*,—when Sandy Hook was a hook only, and not a telegraph-station, from which the first glimpse of an inward-bound argosy is winked by lightning right in at the window of the down-town office where Mercator sits jingling the coins in his trousers' pockets,—in those days, the only excursion-boats that rocked upon the groundswell over the pale, sandy reaches of the Fishing-Banks were the tiny barklets that shot out on calm days from the sweeping coves, with their tawny tarred-and-feathered crews: for of such grotesque result of the decorative art of Lynch doth ever remind me the noble Indian warrior in his plumes and paint. Unfitted, by the circumscribed character of their sea-craft, their tackle, and their skill, for pushing their enterprise out into the deeper water, where the shark might haply say to the horse-mackerel,—“Come, old horse, let you and me hook ourselves on, and take these foolish tawny fellows and their brown cockle-shell down into the under-tow,”—they supplied their primitive wants by enticing from the shallows the beautiful, sunny-scaled shoal-fish, well named by ichthyologists *Argyrops*, the “silver-eyed.” But the poor Indian, who knew no Greek,—poor old savage, lament for him with a scholarly *cheu*!—called this shiner of the sea, in his own barbarous lingo, *Scuppaug*. Can any master of Indian dialects tell us whether that word, too, means “him of the silver eye”? If it does, revoke, O student, your shrill *cheu* for the Greekless and untrousered savage of the canoe, suppress your feelings, and go steadily into rhabdomancy with several divining-rods, in search of the Pierian spring which must surely exist somewhere among the guttural districts of the Ojibbeway tongue.

And here there is diversion for philologist as well as fisherman; for while the latter is catching the fish, the former may seize on the fact, that in this word, *Scuppaug*, is to be found the origin of the two separate names by which *Argyrops*, the silver-eyed, is miscalled in local vernacular. True to the national proclivity for

clipping names, the fishermen of Rhode Island appeal to him by the first syllable only of his Indian one, — for in the waters thereabout he is talked of by the familiar abbreviation, *Scup*. But to the excursionists and fishermen of New York he is known only as *Porgy*, or *Paugie*, a form as obviously derived from the last syllable of his Indian name as the emphatic “sir-ee” of our greatest orators is from the modest monosyllable “sir.” *Porgy* seems to be the accepted form of the word; but letters of the old, unphonetic kind are poor guides to pronunciation. And a beautiful, clean-scaled fish is *Porgy*, — whose *g*, by-the-by, as I learned from a funny man in the heterogeneous crowd, is pronounced “hard, as in ‘git eowt.’” A lovely fish is he, as he comes dripping up the side of the vessel from his briny pastures. Silver is the pervading gleam of his oval form; but while he is yet wet and fresh, the silver is flushed with a chromatic radiance of gold, and violet, and pale metallic green, all blending and harmonizing like the mother-o’-pearl lustre in some rare sea-shell. The true value of this fish is not of a commercial kind, for he cannot be deemed particularly exquisite in a gastronomic sense; neither is he staple as a provision of food. His virtue lies in the inducement offered to him by the citizen of moderate means, who, for a trifling outlay, can secure for himself and family the invigorating influence of the salt sea-breezes, by having a run down outside the Hook any fine day in summer, with an object. The average weight of the porgy of these banks may be set down at about a pound.

Five minutes after we came to anchor, there must have been at least two hundred and fifty whip-cord lines stretching out into the three-fathom water from every available rail and fender of the old boat. Most of the men had brought their tackle with them, and their tin canisters of bait. To those who had not, the articles were ready at hand; for speculators had mingled in the crowd, one of whom affixed his “shingle” to a post between-decks, setting forth, — “Fishing-

Lines and Hooks, with Sinkers and Bait,” — the latter consisting of clams in the shell, contained in a barrel big enough for the supply of the whole flotilla of green boats and red shirts, which still hung around us like swallows in the wake of an osprey. Two or three of our excursionists — men, perhaps, whose minds indulged in dear memories of a brook that babbles by a mill — had fishing-rods with them, and made great ado with scientific lunges and casts, producing much discord, indeed, by flicking away wildly outside their proper sea-limits. Most industrious among the hand-fishers I remarked a small, spare man, who, under the careful supervision of a buxom young wife in a “loud” tartan silk, baited no hook nor broke water with his lead until he had first folded and put carefully away between the handle and lid of the family prog-basket his tight little black frock-coat, and passed his small legs through the tough creases of a pair of stout blue “Denim” overalls. These, pulled up to his neck, and hitched on there with shoulder-straps, served for waistcoat and trousers and all, imparting to him the cool atmospheric effect so much admired in that curious picture of Gainsborough’s, known to connoisseurs as “The Blue Boy.” Then he fished the waters with a will; and it was but a scurvy remark of Flashy Joe, who said that “it was about an even chance whether *he* took porgy or porgy took *him*.” But it seems to me that this unskilled labor of fishing from a steam-boat must be epidemic, if not contagious; for even Young New York, who in the early forenoon doubted visibly his discretion at having got himself into such an ugly scrape as an “excursion-spree,” put off his delicate gloves, and set to hauling, hand over hand, as if for a bet.

But I believe I have committed a breach of etiquette in giving precedence to Scuppaug over the skipper, a very large and thoroughly pickled old man, who now bustled deliberately about the decks, with as few clothes on his broad back and stern-post legs as were consistent with decorum and with the require-

ments of those by-laws of society which extend even to Sandy Hook and the rest of the Jerseys, as well as to the fishing-banks that shoal out from the same. Strictly speaking, this old man of our part of the sea was not the captain of the boat, but the pilot, who takes command of her when she abandons her proper line on the rivers, and ventures to that "far Cathay" of city-navigators indefinitely spoken of as "outside the Hook." The smooth-water captain of the steamer, who was nobody to talk of now, was a slim, pale young man, in a black dress-coat, tall, silky hat, and shoes of a material which has long years ago been patented, on account of its matchless ability to shine. This commander remained permanently within the "office," where he was probably very poorly by himself during all this "high old time." The stout old pilot was the real skipper; and now that the vessel had come to anchor, he turned from his lighter duties to the grave pastime of the day, and fished earnestly through a large hole in the paddle-box, — the porgies that came to his allurements arriving at their destination by a series of flapping manœuvres from blade to blade of the wheel. For so burly a man, and one with such a chest for the stowage of sea-breezes and monsoons, the skipper was provided with a wonderfully small voice, suggesting, as he lectured upon sea-fishing to the novices who were getting into "snarls" with their tackle hard by where he sat, the circumstance of a tree-toad discoursing from the hollow of a brave old oak.

"If you want to ketch good fish," said he, sententiously, to Young New York, whose hook persisted in baiting itself with his thumb, — "if you want to ketch reel snorters, you must have a heavy line, heavy lead, and gimp tackle. Then take your own time, haul in, hand over hand, and no matter what the heft, you'll be sure to fetch him."

Young New York produced from his breast-pocket the blue enamelled case in which reposed his ivory tablets, and, seating himself upon the chain-box, wrote

down with golden pencil the dictum of the sage.

Notwithstanding the storm of yesterday, from which the discontented foreboded a stampede of the fish to deeper waters, porgies to an extraordinary amount were soon heaped on the decks, at the feet of each fisherman, the more careful of whom put them into baskets or barrels. But in general they were thrown carelessly on the deck, with a string passed through their gills to keep them from straying out of their proper lots. When these bright fishes are lying on the deck, it is curious to watch them flushing and gasping there, with that singular, dubious expression of mouth peculiar to fishes out of water, as if more struck by the absence of that element than by their novel position among the accessories of dry life. Now and then a blackfish was hauled in, — an event greeted with a loud cheer from all parts of the boat. When a very large one was announced, people came rushing from all quarters to see it; but the greatest tribute to largeness in a fish that I remember anywhere to have seen was the altered expression on the face of a baby some six months old, whose features settled permanently down into the collapse of imbecility, from the moment of the arrival on the upper deck of a blackfish two feet long.

By this time the scene on the fore-castle was quite a picture of the Dutch school. Grouped everywhere among the fish and fishers were matronly women and unbbonneted damsels, most of them with handkerchiefs tied upon their heads; for they had got over their sea-sickness, now, and were coming by twos and threes from the saloon, to breathe a little fresh air and look on at the sport. One pretty, Jewish-looking girl, wrapped in a red and white shawl, was sitting on the big anchor near the bows, and three or four others looked quite picturesque, as they reclined on the heavy coils of the great cable. More central to the picture than was at all advantageous to it sat our friend Raw Material, with his head jam-

med recklessly into the capstan, abandoning himself to his misery. For the inevitable malady had fallen upon him among the first; and as he sat there, helpless and without hope, upon one of those life-preserving stools that remind one, by their shape, of the "properties" of Saturn in the mythology of old, he looked like Languor on an hour-glass, timing the duration of Woe. All along the bulwarks on both sides of the boat, men and boys were crowding upon each other, casting out and hauling in their lines with unflagging spirit. Slim city-children, blistered wholesomely as to their legs, from knee to ankle, by the sun and the salt air, harnessed themselves to little heaps of fish, and were driven about the upper deck in various fashionable styles, including four-in-hand and tandem, by other slim city-children, whose lower extremities had been treated in the same beneficial manner by the same eminent physicians. The musicians had laid away their cornepeans and other cunningly twisted horns upon the broad disk of the big drum, in a dark alcove between-decks, and were fishing savagely in German and broken English, according to the nationality with which their affairs happened to get entangled. Even the colored *chef de cuisine*, a muscular mulatto, with a beard of a rash disposition, coming out on wrong parts of his face in little eruptive pustules of black wool, sported his lines out of the galley-air-holes, and his porgies were simmering in the pan while their memories were yet green in the submarine parishes from which they came. Have these finny creatures their full revenge upon fishermankind, when a smack sinks foundered into the swallowing deep? Do the midnight revellers in the sea-caverns call out in broad Scuppaug to the attendant mermaid for a "half-dozen large-sized jolter-heads on the half monkey-jacket?" To these queries I hope that Poetical Justice, if still living, will forward a reply at her earliest convenience. Porgy now began to pervade the air with an astringent perfume of the sea: none of your

Fulton Market smells of stagnating fish, but a clean, wholesome, coralline odor, such as we may imagine supplied to the Peris "beneath the dark sea" by the scaly fellows in the toilet line down there, who are likely to keep it for sale in conch-shells,—quarts and pints. Porgy prevailed to that extent, in fact, that it came to be talked of, by-and-by, as a circulating medium; and a hard-fisted mechanic averred his intention of compensating his landlady for his board with porgy, for the week that was passing away.

For some time, luck appeared to favor the starboard side of the boat, at which the take was much greater than at the other. Hence, discontent began to crawl in at the port-gangways, and the fishermen on that side were gradually edging over to the other, to look for a chance of stealing in their lines clandestinely between the ranks. This led to an interchange of bad compliments, as well as to a very perceptible slanting of the deck, and the captain piped out to the hands to shift the chain-box. And by this action was resolved for me a riddle with regard to the properties and uses of a prematurely stout man of fabulous girth, who had been dimly revealed to me, once or twice in the course of the voyage, through some long vista of the 'tween-decks, but seemed always to melt into air,—or, more probably, oil,—upon any advance being made to a closer inspection. Now, as a couple of the deck-hands hauled and howled unsuccessfully at the unwieldy chain-box, this mysterious person suddenly appeared, as if spirited up, and, throwing himself stomach on to the loaded vehicle, shot across with it to the other side of the deck with wonderful velocity, retiring, then, with a gliding movement, so as to preserve the rectitude of the deck, which now seemed inclined to slope rather too much the other way. I will not undertake to say, for certain, that the stout man was paid for doing this; but, as his hands were small and remarkably white, indications that he toiled not with *them*, and as he made his appearance on deck only when movable

ballast was wanted, I am bound to suppose that he secured a living by sitting heavily and throwing himself on for weight, in circumstances under which such actions command a standard value.

Three hours having gone by since we came to anchor, the healthful toil of fishing in the salt sea produced its natural result, — a ravenous appetite for food and drink; and a common consent to partake of refreshments now began to develop itself. The wives had much to do with this, as they detailed themselves along the railings, influencing their husbands with hints about the hamper and flask. For most of the family-people had brought their provisions with them; and, in many cases, the basket was flanked by a stone jar which looked as if it might contain lager-beer, — as, in several instances, it did. Where there were many small children in a party, however, I noticed that the beverage obtained from the jar was milk, — real Orange County cow-produce, let us hope, and none of that sickly town-abomination, the vending of which ought to be made by our legislators a felony, at least. Ham-sandwiches, greatly enhanced in flavor by the circumstance of their outer surfaces being impressed with a reverse of yesterday's news, from the contact of the pieces of newspaper in which they were wrapped up, formed the staple of the feast. Large bowls of the various seasonable berries were also in request; and all the shady places of the ship were soon occupied by families, who distributed themselves in independent groups, as people do in the sylvan localities dedicated to picnics. All were hungry and happy, all better in mind and body, — illustrating the wise providence of the instinct that whispers to the over-wrought artisan and bids him go sometimes forth on a summer's day to the woods and waters, — a move which the marine character of the subject impels me to speak of nautically, but reverently, as taking himself and family into the graving-dock of Nature, for the necessary repairs.

Some of the girls now stole slyly about

among the lines, and popped the baits timidly into the blue water. The pale seamstress, who has quite a rose-flush on her cheek now, has hooked a good-sized porgy, and her screams in this terrible predicament have brought several smart young men to her rescue. Another girl, pretty and well-dressed, — in the glove-making line, as I guess from the family she is with, all of whom, from paterfamilias to baby, are begloved in a manner entirely irrespective of expense, — is kneeling pensively on the stern-benches of the upper deck, paying out the line with confidence in herself, but evidently hoping for masculine assistance in the process of hauling it in.

And where were our dear friends, the roughs, all this time? and how came it that they were so quiet? They have been asleep, — snoring off the effects of last night's diversions, and fortifying their constitutions against the influences to come. Ever since the music ceased playing, these fellows have been rolled away, singly or in heaps, in crooked corners, into which they seem to fit naturally. But now they began to rally, waking up and stretching themselves and yawning, — the last two actions appearing to be the leading operations of a rowdy's toilet; and, gathering round Lobster Bob, who has been steadily employed in opening oysters for all who have a midsummer faith in those mollusks, they commenced rapidly swallowing great quantities of the various kinds, which they seasoned to an alarming extent with coarse black pepper and brownish salt. The fierce thirst, which, with these men, is not a consequence, because it is a thing that was and is and ever will be, was brought vividly to their minds by this unnecessary adstimulation; and now the bar-keeper, whose lager-beer was wellnigh exhausted, from its connection with ham-sandwiches, had enough to do to furnish them with whiskey, of which stimulant there was but too large a supply on hand. The consequence of this was soon apparent in the ugly hilarity with which the rowdies entered upon the enjoyment of

the afternoon. First, in spite of the remonstrances of the Teuton whose proper chattel it was, they seized upon the large drum, with which they made an astounding din in the public promenades of the vessel, abetted, I am sorry to say, by some who ought to have known better, — and did, probably, before the whiskey had curdled their wits. In this proceeding, as in all their movements, they were marshalled by Flashy Joe, whose comparatively spruce appearance, when he came on board in the morning, had been a good deal deteriorated by broken slumbers in places not remote from coals, and by the subsequent course of drinks. Quiet people were beginning to express some dissatisfaction with the noise made by these fellows, who, however, kept pretty much by themselves, as yet, and had got only to the musical stage of the proceedings, chorusing with unearthly yells a song contributed to the harmony of the afternoon by the first ruffian, the burden of which ran, —

“When this old hat was ny-oo, my boys,
When this old hat was ny-oo-ooo!”

No voice in this chorus dwelt more decidedly by itself than the shrill one belonging to the small, spare man already spoken of as having a buxom young wife and blue cotton overalls. During his wife's adjournment to the ladies' cabin, this person, I am obliged to record, had become boisterously drunk, — a condition in which the contradictory elements that make up the characters of most men are generally developed to an instructive extent. In his first paroxysm, the fighting man within him was all aroused, as is generally the case with diminutive men, when under the influence of drink. Already he had tucked his sleeves up to fight a large German musician, who could have put him into the bell of his brass-horn and played him out, without much trouble. But the song pacified him; and, with a misty sense of his importance in a convivial point of view, on account of the manner in which he had acquitted himself in the chorus, he now essayed a higher flight, and treated the party to a new

version of “The Pope,” oddly condensed into one verse, as follows: —

“The Pope, he leads a happy life,
He fears no married care nor strife,
His wives are many as he will:
I would the Sultan's place, then, fill!”

At this moment the buxom young wife descended suddenly from the upper deck by the forecastle-ladder, like Nemesis from a thunder-cloud, and, seizing upon the small warbler, to whom she administered a preliminary shake which must have sadly changed the current of his ideas, drove him ignominiously before her toward the stern of the vessel, rapping him occasionally about the ears with the hard end of her fan, to keep him on a straight course. Persons who traced the matter farther said that he was driven all the way to the upper deck, pushed with gentle violence into a state-room, the door locked upon him, and the key pocketed by the lady, who said triumphantly, as she walked away, — “That's the Sultan's place for *him*, I guess!” The moral to this little episode is but a horn-book one, and without any pretension to didactic force: That respectable citizens, like the small, spare man, would do well, on excursion-trips or elsewhere, to avoid whiskey and blackguards; and that wives might be saved a deal of trouble by keeping their eyes permanently on their husbands, when the latter are of uncertain ways.

This little domestic drama had hardly been played out, when a more serious one — almost a tragedy — was enacted on the forecastle. It originated in the misconduct of the red man, who, seized with a desire to catch porgies, went a short way to work for tackle, by snatching away the line of a peaceable, but stout Frenchman, who was paralyzed for a moment by the novelty of the thing, but, immediately recovering himself, expressed his dissent by smashing an earthen-ware dish, containing a great mess of raw clams for bait, upon the head of the red man, as he stooped over the railing to fish. This led to a general fight, in which blood flowed freely, and the roughs were getting rather the upper-

hand. Knives were drawn by some of the Germans and others in self-defence, and great consternation reigned in the afterpart of the boat and the neighborhood of the ladies' cabin. Then the slim captain of the boat—the one in the black dress-coat—hurriedly whispered something to Lobster Bob, who rushed away aft, where the fight was now agglomerating, headed by the red man and Flashy Joe, both covered with blood, and looking like demons, as they wrestled and bit through the crowd. Just as they hustled past a large chest intended for the stowage of life-preservers, Lobster Bob kicked the lid of it open with a bang, and, seizing up the red man, neck and crop, with his huge, tattooed hands, dropped him into it and shut down the lid, which was promptly sat upon by the large, stout, smiling man already favorably spoken of in these pages, who suddenly made his appearance from nowhere in particular. The picture of contentment, he sat there like one who knew how, caressing slowly his large knees with his short, plump hands, until the cries from the chest began to wax feeble, when he slowly arose, vanished, and I never saw him again. The red rowdy was then dragged, half-suffocated, from his imprisonment, and as much life as he ought ever to be intrusted with restored to him by the stout old skipper, who was at hand with a couple of buckets full of cold salt-water, with which he drenched him liberally, as he slunk away. A diversion thus effected, the disturbance was quelled. All was quiet in a short time, and the word was passed to heave the anchor and 'bout ship for home.

On the way back, we took a pleasant course inside the Hook, which brought the charming scenery of the Jersey shore and of Staten Island before us, as a pleasant drop-curtain on the melodrama just closed. The music again struck up, and dancing was resumed with fresh vigor,—the waltzing of all other couples being quite eclipsed by that of Young New York and little Straw-Goods, who had effectually got rid of her tipsy persecu-

tor ever since the ground-swell, and was keeping rather in the background of late, with a sober-minded lady whom she called "aunty." With the exception of the few who took to whiskey and bad company, all appeared contented, and the better for their sea-holiday. The very musicians played with greater spirit than they did before, owing, perhaps, to their remarkable success in the porgy-fishery. One of the horn-players, far too knowing to let his fish out of sight, has propped his music-book up against a pyramid of them, as upon a desk. The good-looking man who plays upon the double-bass is equally prudent with regard to his trophies, which he has hung up around the post on which is pinned the score to which he looks for directions when it becomes necessary to bind together with string-music the pensive interchanges of the sax-horn and bassoon.

And now, as our vessel neared the wharf from which we had started while the sun was yet in the east, I looked forward to see what signs of the times were astir on the forecastle. All had deserted it, and were tending aft, with their tackle, their fish, and their prog-baskets,—all, at least, except Raw Material, of whom we enjoyed now an uninterrupted view, as he sat in his old position, with his head jammed obstinately into the capstan. But how was this?—he was round at the opposite side of it now; and I puzzled myself for a moment, thinking whether this change of bearings could be accounted for by the fact of the boat being headed the other way.

But Young New York, who is far more nautical than I am, and has a big brother in one of the yacht-clubs, derided the idea, and said he must have gone round with the handspikes, when the anchor was hove.

And there he remained, as we went our way,—a modern Spartan slave in a kind of marine pillory,—conveying to the red-legged children of Gotham, as they toddled ashore, a useful lesson on the doubtful relations existing between whiskey and pleasure.

COBBLER KEEZAR'S VISION.

THE beaver cut his timber
With patient teeth that day,
The minks were fish-wards, and the cows
Surveyors of highway, —

When Keezar sat on the hillside
Upon his cobbler's form,
With a pan of coals on either hand
To keep his waxed-ends warm.

And there, in the golden weather,
He stitched and hammered and sung;
In the brook he moistened his leather,
In the pewter mug his tongue.

Well knew the tough old Teuton
Who brewed the stoutest ale,
And he paid the good-wife's reckoning
In the coin of song and tale.

The songs they still are singing
Who dress the hills of vine,
The tales that haunt the Brocken
And whisper down the Rhine.

Woodsy and wild and lonesome,
The swift stream wound away,
Through birches and scarlet maples
Flashing in foam and spray, —

Down on the sharp-horned ledges
Plunging in steep cascade,
Tossing its white-maned waters
Against the hemlock's shade.

Woodsy and wild and lonesome,
East and west and north and south;
Only the village of fishers
Down at the river's mouth;

Only here and there a clearing
With its farm-house rude and new,
And tree-stumps, swart as Indians,
Where the scanty harvest grew.

No shout of home-bound reapers,
No vintage-song he heard,
And on the green no dancing feet
The merry violin stirred.

"Why should folk be glum," said Keezar,
"When Nature herself is glad,
And the painted woods are laughing
At the faces so sour and sad?"

Small heed had the careless cobbler
What sorrow of heart was theirs
Who travailed in pain with the births of God,
And planted a state with prayers,—

Hunting of witches and warlocks,
Smiting the heathen horde,—
One hand on the mason's trowel,
And one on the soldier's sword!

But give him his ale and cider,
Give him his pipe and song,
Little he cared for church or state,
Or the balance of right and wrong.

"T is work, work, work," he muttered,—
"And for rest a snuffle of psalms!"
He smote on his leathern apron
With his brown and waxen palms.

"Oh for the purple harvests
Of the days when I was young!
For the merry grape-stained maidens,
And the pleasant songs they sung!

"Oh for the breath of vineyards,
Of apples and nuts and wine!
For an oar to row and a breeze to blow
Down the grand old river Rhine!"

A tear in his blue eye glistened
And dropped on his beard so gray.
"Old, old am I," said Keezar,
"And the Rhine flows far away!"

But a cunning man was the cobbler;
He could call the birds from the trees,
Charm the black snake out of the ledges,
And bring back the swarming bees.

All the virtues of herbs and metals,
All the lore of the woods he knew,
And the arts of the Old World mingled
With the marvels of the New.

Well he knew the tricks of magic,
And the lapstone on his knee
Had the gift of the Mormon's goggles
Or the stone of Doctor Dee.

For the mighty master Agrippa
Wrought it with spell and rhyme
From a fragment of mystic moonstone
In the tower of Nettesheim.

To a cobbler Minnesinger
The marvellous stone gave he,—
And he gave it, in turn, to Keezar,
Who brought it over the sea.

He held up that mystic lapstone,
He held it up like a lens,
And he counted the long years coming
By twenties and by tens.

"One hundred years," quoth Keezar,
"And fifty have I told:
Now open the new before me,
And shut me out the old!"

Like a cloud of mist, the blackness
Rolled from the magic stone,
And a marvellous picture mingled
The unknown and the known.

Still ran the stream to the river,
And river and ocean joined;
And there were the bluffs and the blue sea-line,
And cold north hills behind.

But the mighty forest was broken
By many a steeped town,
By many a white-walled farm-house
And many a garner brown.

Turning a score of mill-wheels,
The stream no more ran free;
White sails on the winding river,
White sails on the far-off sea.

Below in the noisy village
The flags were floating gay,
And shone on a thousand faces
The light of a holiday.

Swiftly the rival ploughmen
Turned the brown earth from their shares;
Here were the farmer's treasures,
There were the craftsman's wares.

Golden the good-wife's butter,
Ruby her currant-wine;
Grand were the strutting turkeys,
Fat were the beeves and swine.

Yellow and red were the apples,
And the ripe pears russet-brown,
And the peaches had stolen blushes
From the girls who shook them down.

And with blooms of hill and wild-wood,
That shame the toil of art,
Mingled the gorgeous blossoms
Of the garden's tropic heart.

"What is it I see?" said Keezar:
"Am I here, or am I there?
Is it a fête at Bingen?
Do I look on Frankfort fair?"

"But where are the clowns and puppets,
And imps with horns and tail?
And where are the Rhenish flagons?
And where is the foaming ale?"

"Strange things, I know, will happen,—
Strange things the Lord permits;
But that doughty folk should be jolly
Puzzles my poor old wits.

"Here are smiling manly faces,
And the maiden's step is gay;
Nor sad by thinking, nor mad by drinking,
Nor mopes, nor fools are they.

"Here 's pleasure without regretting,
And good without abuse,
The holiday and the bridal
Of beauty and of use.

"Here 's a priest and there is a Quaker,—
Do the cat and the dog agree?
Have they burned the stocks for oven-wood?
Have they cut down the gallows-tree?

"Would the old folk know their children?
Would they own the graceless town,
With never a ranter to worry
And never a witch to drown?"

Loud laughed the cobbler Keezar,
Laughed like a school-boy gay;
Tossing his arms above him,
The lapstone rolled away.

It rolled down the rugged hill-side,
It spun like a wheel bewitched,
It plunged through the leaning willows,
And into the river pitched.

There, in the deep, dark water,
The magic stone lies still,
Under the leaning willows
In the shadow of the hill.

But oft the idle fisher
Sits on the shadowy bank,
And his dreams make marvellous pictures
Where the wizard's moonstone sank.

And still, in the summer twilights,
When the river seems to run
Out from the inner glory,
Warm with the melted sun,

The weary mill-girl lingers
Beside the charmed stream,
And the sky and the golden water
Shape and color her dream.

Fair wave the sunset gardens,
The rosy signals fly;
Her homestead beckons from the cloud,
And love goes sailing by!

THE FIRST ATLANTIC TELEGRAPH.

"In the name of the Prophet: — Figs!"

"Ен, bien, Sare! wiz you Field and ze uzzers! Zey is ver' good men, sans doute, an' zey know how to make ze money; mais — gros matérialistes, I tell you, Sare! Vat zen? I sall sink I know, I! Oui, Monsieur, I, César Prévost, who has ze honneur to stand before you,—I am ze *original* inventeur of ze Télégraphique Communication wiz Europe!"

It was about the period when, with the fast world of cities, De Sauty was beginning to become type of an "ism"; already the attention of excitement-hunters had travelled far from Trinity Bay, and Cyrus Field had yielded his harvest. Nevertheless, to me, who had just come to town from a quiet country seclusion into which news made its entry teredofashion only, the performances of the Agamemnon and Niagara were matters of fresh and vivid interest. So I purchased Mr. Briggs's book, and went to Guy's, to cut the leaves over a steak and a bottle of Edinburgh ale. It was while I was thus engaged that the little Frenchman had accosted me, calling my attention to his wares with such perfect courtesy, such airy grace, that I was forced to look at his baskets. And looking, I was induced to lay down my book and examine them more closely; for they were really pretty,—made of extremely white and delicate wood, showing an exquisite taste in their design, and being neatly and carefully finished. Then it was, that, having apparently noticed the title of my book, M. César Prévost had used the language above quoted, and with such *empressement* of manner, that my attention was diverted from his wares to himself. I looked at him with some curiosity.

He was a little old Frenchman, lean as a haunch of dried venison, and scarcely less dark in complexion,—though his

color was nearer that of rappee snuff, and had not the rich blood-lined purple of venison. His face was wofully meagre, and seemed scored and overlaid with care-marks. Nevertheless, there was an energetic, nervous, almost humorsome mobility about his mouth; while his little beady black eyes, quick, warm, scintillant, had ten times the life one would have expected to find keeping company with his fifty years. In dress, he was very threadbare, and, sooth to say, not over-clean; yet he was jaunty, and moved with the air of a man much better clad. I was impressed with his appearance, and especially with his voice, which was vibrant, firm, and excellently intoned. It is my foible, perhaps, but I am always charmed with *bonhomie*, I class originality among the cardinal virtues, and I am as eager in the chase after eccentricity as a veteran fox-hunter is in pursuit of Reynard. M. César promised a compensative proportion of all three qualities, could I only "draw him out"; and besides, he was not like Mr. Canning's "Knife-Grinder,"—for, evidently, he *had* a story to tell.

Observing my scrutiny, he smiled; a singular, ironical smile it was, yet without a particle of bitterness or of cynicism.

"Eh, bien!" said he; "you stare, Monsieur! you sink me an excentrique. Vraiment! I am use to zat,—I am use to have persons smile reeseblement, to tap zere fronts, an' spek of ze strait-jackets. Never fear,—I am toujours harmless! Mais, Monsieur, it is true, vat I tell you: I am ze *original* inventeur of ze Atlantic Telegraph! You mus' not comprehend me, Sare, to intend somesing vat persons call ze Telegraph,—such like ze Electric Telegraph of Monsieur Morse,—a vulgaire sing of ze vire and ze acid. Mon Dieu, non! far more perfect,—far more

grrrand,—far more original! Ze acid may burn ze finger,—ze vire vill become rrusty,—ze isolation subject always to ze atmosphere. Ah, bah! Vat make you in zat event? As ze pure lustre of ze diamant of Golconde to ze distorted rays of a morsel of bottle-glass, so my grrrand invention to ze modes of ze telegraph in vogue at present!”

“Monsieur, you shall tell me about it,” said I, pointing to a seat on the other side of the table; “sit down there, and tell me about your invention, and in your native language,—that is, if you can spare the time to do so, and to drink a glass of Bordeaux with me.”

He accepted my invitation as a gentleman would, sipped his wine like a connoisseur, passed me a few compliments, such as any French gentleman might toss to you, if you had asked him to join you in a glass of wine in one of his city’s *cafés*, and then proceeded with his story. My translation gives but a faint echo of the impression made upon me by his life, vigor, and originality; but still I have striven to do him as little injustice as possible.

“Monsieur, it is ten years since I accomplished, put in practice, and evoked practical results from this international communication, which your two peoples have failed to establish, in spite of all their money, their great ships, and the united wisdom of their *savans*. I am a Frenchman, Monsieur,—and, you know, France is the congenial soil of Science. In that country, where they laugh ever and *se jouent de tout*, Science is sacred;—the Academy has even *pas* of the army; honors there are higher prized than the very wreaths of glory. Among the votaries of Science in France, César Prévost was the humblest,—*serviteur, Monsieur*. Nevertheless, though my place was only in the outermost porch of the temple, I was a faithful, devoted, self-sacrificing worshipper of the goddess; and therefore, because earnest fidelity has ever its crown of reward, it happened to me to make a grand discovery,—a dis-

covery more momentous, it may be, than that of gunpowder or the telescope,—ten million hundred times more worth than the vaunted great achievement of M. le Professeur Morse. Not that its whole import came to me at once. No, Monsieur, it is full twenty years now since the first light of it glimmered upon César Prévost’s mind, and he gave ten years of his life to it—ten faithful years—before it was perfect to his satisfaction. Ah, Monsieur, and ’tis more than one year now that I have been what you see me, in consequence of it. *Eh, bien!* I shall die so,—rightly,—but my discovery shall live forever.

“But pardon, Monsieur,—I see that you are impatient. You shall immediately hear all I have to say,—after I have, in a few words, given you a brief insight into the nature of my invention. Come, then!—Has it ever occurred to Monsieur to reflect upon that something which we call *Sympathy*? The philosophers, you know, and the physiologists, the followers of that *coquin*, Mesmer, and the *bêtes* Spiritualists, as they now dub themselves,—these have written, talked, and speculated much about it. I doubt not these fellows have aided Monsieur in perplexing his brain respecting the diverse, the world-wide ramifications of this physiological problem. The limits, indeed, of Sympathy have not been, cannot be, rightly set or defined; and there are those who embrace under such a capitulation half the dark mysteries that bother our heads when we think of Life’s under-current,—instinct,—clairvoyance,—trance,—ecstasy,—all the dim and inner sensations of the Spirit, where it touches the Flesh as perceptibly, but as unseen and unanalyzed, as the kiss of the breeze at evening. *Sans doute, Monsieur*, ’t is very wonderful, all this,—and then, also, ’t is very convenient. Our ships must have a steersman, you know. And, *par exemple*, unless we call it sympathetic, that strange susceptibility which we see in many persons, detect in ourselves sometimes, what name have we to give it at all? Unless we call it sympa-

thy, how shall we define those mysterious premonitions, shadowy warnings, solemn foretokens, that fall upon us now and then as the dew falls upon the grass-leaf, that make our blood to shiver and our flesh to quake, and will not by any means permit themselves to be passed by or nullified? 'T is a fact that is irrepressible; and, in persons with imagination of morbid tendency, this spontaneous sympathy takes a hold so strong as to present visibly the image about which there is concern,—and, behold! your veritable spectre is begotten! So, again, of your 'love at first sight,' *comme on dit*,—that inevitable attraction which one person exerts towards another, in spite, it may be, both of reason and judgment. If this be not child of sympathy, what parentage shall we assign it? And antipathy, Monsieur, the medal's reverse,—your *bête noire*, for instance,—expound me that! Why do you so shudder at sight of this or that innocent object? You cannot reason it away,—'t is always there; you cannot explain it, nor diagnose its symptoms,—'t is a part of you, governed by the same laws that govern your 'elective affinities' throughout. But note, Monsieur! You and I and man in general are not alone in this: the whole organic world—nay, some say the entire universe, inorganic as well as organic—is subject to these impalpable sympathetic forces. Is the hypothesis altogether fanciful of chemical election and rejection,—of the kiss and the kick of the magnet? Your Sensitive-Plant, your Dionea, your Rose of Jericho, your Orinoco-blossom that sets itself afloat in superb faith that the ever-moving waters will bring it to meet its mate and love,—are not these instances of sympathy? And tell me by what means your eye conquers the furious dog that would bite you,—tell me how that dog is able to follow your traces, and to find the quail or the fox for you,—tell me how the cat chills the bird it would spring upon,—how the serpent fascinates its victim with a flash of its glittering eye. Our 'dumb beasts' yet have a language of their own, unguessed of us, yet perfectly

intelligible to them,—how? We call this, Instinct. *Eh, bien, Monsieur!* what is Instinct, but Sympathy?

"Bah! it amounts to nothing, all this, if we only look at it in such relations. For centuries have *stupides* bothered their brains about such matters, seeking to account for them. As well devote one's time to puzzling over 'Ælia Lælia'! Mysteries were not meant to be put in the spelling-books, Monsieur. Ah, bah! a far different path did César Prévost pursue! He studied these phenomena, not to *explain* them,—being too wise to dream of living *par amours* with such barren virgins as are Whence and Why (your Bacon was very shrewd, Monsieur). What cared I about *causes*? Let Descartes, and Poincaré, and Reid, and Cudworth, *et id omne genus*, furnish themselves in this desert; but ask it not of César Prévost! He is always considerate to the impossible. He says this, always:—Here we have certain interesting phenomena; their causes are involved in mystery impenetrable; their esoteric nature is beyond the reach of any microscope;—what then? My Heaven! let us do what we *can* with them. Let us seek out their *relations*; let us investigate the laws regulating their interdependence,—if there *be* such laws; and *après*, let us inquire if there be any *practical results* obtainable from such relations and laws.

"You follow me, Monsieur? *Eh, bien!* This was the system, and César Prévost came speedily to *one* law,—a law so important, that, like Aaron's serpent, it put all the rest out of sight forever, engrossing thereafter his whole attention. This law, which pervades the entire animal economy, and is of course important in proportion to its universality, is as follows:—*The sympathetic harmony between animals, other things being equal, is IN INVERSE PROPORTION to their rank in that scale of comparison in which man is taken as the maximum of perfection.* Consequently, man is most deficient in this instinctive something, which, for lack of a better term, I have ventured to style

‘sympathetic harmony,’ while the simplest organization has it most developed. This last, you perceive, Monsieur, is only inductively true;—when we get below a certain stage in the scale, we find the difficulties of observation increase in a larger ratio than the augmented sympathy, and so we are not compensated; ’t is, for instance, like the telescope, where, after you have reached a certain power, the deficiency of light overbalances the degree of multiplication. Knowing this, my first aim was to find out what animal would suit best,—what one that could be easily observed was most susceptible, most sympathetic. ’T was a long labor, Monsieur; I shall not tire you with the details. Enough that I found in the *snail* the instrument I needed,—and in the snail of the Rocky Mountains the most perfect of his kind. You smile, Monsieur. *Eh, bien!* ’t is not philosophic to laugh at the means by which one achieves something. Smile how you will, ’t is a fact that in the snail which is so common and grows to such an enormous size in the valleys and on the slopes of your great Cordilleras I found an animal combining a maximum of sympathetic harmony with the greatest facility of being observed, the best health and habits, and the utmost simplicity of *prononcée* manifestation. But, you ask, what seek I, then? My Heaven, Monsieur! there was the grand Idea,—the Idea upon which I build my pride,—the Idea that is *mine!* When it came to me, Monsieur, this Idea, a great calm filled all my soul, and I felt then the spirit of Kepler, when he said he could wait during centuries to be recognized, since the laws he had demonstrated were eternal and immutable as the Great God Himself! Yes, Monsieur! For in that crude, undeveloped Idea were already germinating the wonders of an achievement grander than any of Schwartz, or Guttenberg, or Galileo. Oh, this beautiful, grand simplicity of Science, which was able, from the snail itself, the very type and symbol and byword of torpidity and inaction, to evolve what was to conquer

time and space,—to outrun the wildest imaginings of Puck himself!”

—What a coltish fire of enthusiasm pranced in the worthy little Frenchman’s veins, to be sure!

“*Eh, bien!* Now, distance made no matter; it was forever subdued. I could as soon send messages to the Sun itself as to my next-door neighbor! Smile on, Monsieur! César Prévost shall not be piqued at your incredulity. He also was amazed, prostrated, when all the stupendous consequences of his discovery first flashed upon his mind; and it was very long before he could rid his mind of the notion that he was become victim to the phantasms of a ridiculous dream. *Eh, bien!* ’t was very simple, once analyzed. Know one fact, and you have all. And this one fact, so simple, yet so grand, was just this:—*That a male and female snail, having been once, by contact, put in communication with one another, so as to become what magnetizers call en rapport the one with the other, continue ever after to sympathize, no matter what space may divide them.* ’T is in a nutshell, you perceive,—and giving me the entire principle of an unlimited telegraphic communication. All that was to do was to systematize it. Tedious work, you may conceive, Monsieur; yet I did not shrink from it, nor find it irksome, for my assured result was ever leading me onward. Ah, bah! what did I not dream then?—*Passons!*”

“I was not rich, and so, to save the trouble and expense of importing my snails to Paris,—vast trouble and expense, of course, since my experiments were so numerous,—I came across the Atlantic, and fixed myself at a point near St. Louis, where I could study in peace and have the subjects of my experiments close at hand. I used to pay the trappers liberally to get my snails for me, instructing them how to gather and how to transport them; and to divert all suspicion from my real objects, I pretended to be a *gourmet*, who used the snails solely for gastronomic purposes,—whereby, Monsieur,” said César Prévost, with a hu-

morous smile, "I was unfortunate enough to inspire the hearty *garçons* with a supreme contempt for me, and they used to say I 'was not bettaire zan one blarsted Digger Injun!' *Mon Dieu!* what martyrs the votaries of Science have been, always!

"*Eh, bien!* I shall not bother you with my experiments. In brief, let me give you only results, so as to be just comprehensible. Given my law, I had to find, *first*, the manner exactly in which snails manifest their sympathy, the one for the other,—*c'est à dire*, how Snail A tells you that something is happening to his comrade, Snail B. There was a constant law for this, hard to find, but I achieved it. *Second*, to make my telegraph perfect, and put my system beyond the touch of accident, I had to discover how to *destroy* the *rapport* between Snails A and B. Unless I could do this, I could never be sure my instruments were perfectly isolated, so to speak. 'T was a difficult task, Monsieur; for the snail is the most constant in its attachments of all the animal kingdom, and I have known them to die, time and again, because their mates had died,—

'Pining away in a green and yaller melancholie,'

as your grand poet has it, Monsieur. Still, I succeeded, and I am very proud to announce it;—'t was a great feat, indeed,—no less than to *subvert an instinct!* *Third*, I found out the way to keep them perfectly isolated, so as to prevent any subvention of a higher influence from weakening or destroying the previous *rapport*. *Fourth*, what sort of influence brought to bear upon Snail B would be sympathetically indicated most palpably in Snail A. So, Monsieur, you may fancy I had my hands full.

"But I succeeded, after long labor. Then I spent much time in seeking to perfect an Alphabetical System, and also a Recording Apparatus, capable of exactly setting forth the *quality* of the sympathy manifested, as well as the *number* of the manifestations. When these things were all perfected, I should have a complete

system of Telegraph, which no circumstances of time, distance, or atmosphere could impair, which would put on record its every step, and permit no opportunity for error or for accident.

"*Eh, bien!* Man proposes,—God disposes. Monsieur, when I began my experiments, when I devoted myself, my energies, and my life itself to developing and utilizing my discovery, my motives were purely, exclusively scientific. My sole aim was to win the position of an eminent *savant*, who, by conferring a signal benefit upon the race, should merit the common applause of mankind. But, as time wore on, as my labors began to be successful, as the grand possibilities of my achievement arrayed themselves before me, other dreams usurped my brain. I, the inventor of this thing, so glorious in its aspect, so incomputable in its results,—was I to permit myself to go without reward? Fame? Ah, bah! what bread would Fame butter? 'T was a bubble, a name, an empty, profitless sound, this *coquin* of Fame! '*Proximus sum egomet mihi*,' says Terence,—or, as your English proverb has it, 'Charity begins at home.' I bethought me of the usual fate of discoverers and inventors,—neglected, scoffed at, ill-used, left to starve. The blessing of the world with infinite riches must nibble his crust *au sixième*. Why, then? Because, in their sublime eagerness to serve others, they forget to care for themselves. *Eh, bien!* One must still keep his powder dry, said your great Protector. This discovery was to double the effectiveness of men's hands,—therefore, was grandly to enrich them. But could it not be also made a notable instrument for wealth in *one* man's hands? Ah! brave thought! How, if, none the less resolved to give man eventually the benefit of my Idea, I should yet keep it in abeyance, till I had made my own sufficient profit out of it? It could be done;—surely, to use it well were less difficult than to have invented it. So dreams of wealth and luxury began to fill my brain. I

would enrich myself till I had become a *power*, emphatically,—till all purchasable things were within my reach. Then I should likewise become a benefactor of the race; for my intentions were liberal, and intelligence sustained adequately can effect miracles. Then, when I had made myself veritably the Apostle of Riches, I would put the capstone to man's debt to me, by endowing him with knowledge in the uses of this great instrument whereby I had made myself so great. Ah, Monsieur, you see, Haroun Alraschid had set me on his throne for an hour by way of jest, and I imagined myself Caliph in Bagdad forever!

"Full of such purposes, and of the fiery impatience of yearning begotten of them, I hastened to bring my work to efficiency for use. I had worked in silence, alone, secretly; for I dreaded to have my discovery guessed, my aims anticipated and foreclosed upon. But, hasten how I would, the processes were too slow for my means,—and just when, like the alchemist, my crucible promised the grand projection, came the dreaded explosion. My money exhausted itself! I found myself, a stranger in a strange land, without a dollar. *Eh, bien, Monsieur!* 't is not in César Prévost to despair. Ah, in those days, especially, had I a heart big with the strength of hope! To accomplish my ends, a partner was needed at best, money or no money; so now it was only necessary for me to find one who to the essential qualities of heart and brain conjoined a purse of sufficient size. Before long, I came across the very man. Monsieur, when I recall the past, I behold many instances where I erred and was foolish; but the single bitter reflection I have is, that my own ruin involved the ruin of John Meavy, my partner and good comrade. I remember what he was when I found him,—happy, prosperous, large-hearted,—in every sense a noble man. I ruined him! Ah, could I but — *Eh, bien!* 't is too late, now; he is dead; *requiescat!* I have the bliss to know he found no fault with the end. — *Passons!*

"When I first knew John Meavy, he was a merchant, living with the quiet ease of a well-to-do bachelor. Though he had been brought up to trade, the stain of money was not upon him. Generous, charitable, liberal of thought, he was the gentlest enthusiast in other men's behalf that ever the sun shone on. It was the fact that he possessed fifty thousand dollars and was trustworthy that first drew me towards him; but I had not known him long ere I gave him my ardent love, and thereafter thoughts of wealth were pleasant to me as much for his sake as for my own. John was a student, and a lover of Science, as well as a man of trade; and, in the first moments of our intercourse, I took care to let drop words that I knew would attract his curiosity and interest. Like all you Americans, John Meavy was a man of perfect faith in all that regarded 'Progress,' and especially did he believe in the infinite perfectibility of Science in the hands of an energetic people. This was the chord upon which I played, and the responsive note was easily evoked. He sought me out, came to me eagerly, and, by degrees, I divulged to him all my plans. He was ambitious to work for mankind, and I convinced him that I could give him the means to do so. My faith, Monsieur! that John Meavy had not one least morsel of selfishness in all his character! How far was he from dreaming of wealth for its own sake, and for the voluptuous surroundings with which my fancy enlarged upon it! No, indeed,—my invention to John Meavy was nothing; but, as a means to profit you and me and the rest of us, 't was a thing of the grandest import. So, at first, he would not have had us keep our secret for a day; but I—by a sophistry that is only sophistic when we add to the consideration man's impotent and easily perverted will—brought him into my plans, showing him what an instrument for good vast riches would be in his hands. And he was the more easily persuaded because of the very grand purity of his nature. *Sans doute*, he felt it to be alto-

gether true, what I told him, that, in his hands, a hundred million dollars would be worth more to mankind at large than the whole French kingdom. *Mais, Monsieur*, you cannot own a hundred millions and be good. As well expect to find the same virtue in London that prevails in a quiet country-town. You cannot filter oceans, *Monsieur*, and the dead fish in them *will* cause a stink. But I did not know this till afterwards.

"So, having inoculated John, I bestowed upon him my confidence without reserve; for I knew he was one to appreciate such treatment, and would repay me in kind. 'Here it all is, *mon ami*,' said I; 'this is my invention; these the means for reducing it to practice; money is all I need. If you will join me, and provide the funds required, we will enter into a partnership for ten years, enrich ourselves, and then give it to all the world.'

"Ten years! must the world wait so long?"

"The world has waited six thousand years for this century, *camarade*. We shall require so long to enrich ourselves. And then, remember,—the longer they are kept out of it, the more perfect will our invention be, and, consequently, the greater their profit from it. Science has suffered too much already by its seven-months' children, my good friend. *Eh, bien!* What say you? Will you be my partner?"

"Yes, *César*. 'Tis a noble scheme, such as only a noble man could originate. But, *Prévost*, do not speak to me of an equal partnership. I must not pattern after my country's way of overlooking the inventor. Let us go into business upon this basis:—*Prévost* one share, *John Meavy* one share, *Invention* one share.'

"Bah! *John Meavy!* I cried. 'If I have discovered something, so also have you, namely: a pocket deep enough, a heart honest enough, and a faith strong enough to make that something available;—I expected sooner to find the philosopher's-stone than all these, good friend. No, *John Meavy*,—if you share with me,

you share equally. Then I shall be sure that you are equally interested with myself; so we shall succeed.'

"*Eh, bien!* We arranged it; and that very day, after I had pointed out to John the state of my experiments, my noble comrade took me with him to his place of business, put all his books open before me, explained exactly the condition of his affairs, and concluded by giving me a check for five thousand dollars. 'There,' said he, 'take that, pay your debts, provide for yourself, and go on and reduce your invention to the practical working you speak about. Meantime, I will wind up my business in readiness to join you. Six months from now, the firm of *Prévost and Meavy*, established to-day, will begin business together.'

"*Mon pauvre John Meavy!*"

"*Eh bien, Monsieur!*" resumed the little Frenchman, after a short pause,— "one cannot help one's self, after it is too late. *Allons, donc!*—I had lately, thinking over the matter in the light of my intense desire to begin a career, and under the pressure of urgent poverty, given up the notion of bringing my invention to absolute perfection as a system of telegraphing. Instead of elaborating a complete alphabet, I proposed to carry into effect a substitute already perfected, one simple almost beyond belief, needing few preparations, involving trifling cost, and capable of being made immediately operative. Further experience has taught me that the very same means, aided by a little deeper generalization, and an arbitrary set of signals, would have given me an entire alphabet. But just now I had no time to extend my experiments, needing all my time to make sure and acquire skill in what was already achieved. I must insure against the chance of mistake; for when we were applying our invention to the acquisition of money, any error would necessarily be fatal.

"The six months went rapidly by, and before they were over I was all ready. But John said, 'Wait!' He saw no need of hurry; and his affairs were not quite

settled. *Eh, bien!* I tranquillized my eager, impatient soul by gaining an insight into the art of book-keeping and the theory and practice of trade. At last the probationary period expired, and, prompt to the hour, my comrade announced his readiness to begin our business. The friends of John Meavy were reluctant to have him leave St. Louis. They did not know what enterprise he was about to join in; but they heard that I had some share in it, and they did not scruple to hint that I might be an adventurer, who would 'diddle' him out of his money. However, John only smiled, and told me all they said, in his frank way, as if it were some good joke. So, finally, we took leave of St. Louis, and came to New York, to organize the great house of Meavy & Prévost: John bearing his share in the concern, forty odd thousand dollars, with many letters to persons of eminence and influence; and I carefully seeing to *my* share, — a few scientific works, some valuable chemical apparatus, and two dozen jars full of Rocky Mountain snails! *Eh, bien, Monsieur!* my stock in trade was *magnifique*, in comparison with that with which my compatriot Girard commenced business.

"By John's advice, we began our operations in a plain, quiet way, as exporters of breadstuffs. This we did, first, that the firm might make itself well enough known, and gain the confidence of the Bourse, so that the doors might be open to our subsequent operations; that I, secondly, might learn the business, and secure the proper recognition as John's partner. Meantime, John was making himself familiar with the way to practise my invention; and both of us, gaining daily assurance of our power by reason of the discovery, were also daily increasing in love and confidence for each other. Happy days, those, *Monsieur!* *Eh, bien!* had the invention only proved a fiction then!

"In another six months we had matured our plans, and, as our present business seemed lamentably slow in the light of my gigantic projects, I was eager

enough to begin work in earnest. I had proved our telegraph thoroughly, and, ere I set out for London, to establish there a branch of the house of John Meavy & Co., I advised my good comrade to venture largely, so as to turn our capital over as often as possible, for there was no room for doubt or fear. But John did not guess how high I dreamed of rising in fortune; *he* had no ambition to rival the Rothschilds.

"Monsieur, let me explain to you now the system of work we had agreed upon, and each slightest detail of which was perfectly familiar to us from constant manipulation, so that mistake or mishap, from any conceivable cause, was utterly impossible.

"Our business, nominally the buying of breadstuffs for exportation, was really one of speculation upon the New York market *as affected* by the European markets, — a species of brokerage, which, ostensibly and in the eyes of the world attended by great risk, was really a thing of specifically safe and certain profits, thanks to the telegraphic system, the secret of which we alone possessed. In our tentative efforts, we fixed upon *flour* as the best-adapted subject for our experiments, being a commodity simple to deal with, and requiring fewer complications in our arrangements than anything else. But, in my own private mind, I had resolved, that, as soon as our capital had grown large enough, and our credit was become sufficiently extensive, we would change our business to that of buying and selling cotton, as a better speculative; or, perhaps, would enter upon that grand arena of sudden fortune and sudden ruin, the stock-market. For the present, however, flour suited us well enough. It is well known, that, at that time, much more than at present, the price of breadstuffs in New York was regulated by the price in Liverpool. But Monsieur is not a merchant, I think? *Eh, bien!* — then I must take care to make myself intelligible. You know, Monsieur, that, in the stock-market especially, and more or less in every other kind of spec-

ulation, the greater part of the transactions are *fictitious*, to a certain extent. *Par exemple*: you buy or you sell so many barrels of flour, at such a price, *on time*, as it is called,—that is, you engage to receive, or to deliver, so many barrels, at the prices and in the times agreed upon, in the hope, that, before the period of your contract comes round, prices will have so varied as to enable you to buy, or sell, the quantity bargained for, upon terms that will give you a profit. In a word, you simply agree to *run the risk* of a change of prices such as to give you a profitable return. The operation is identical with that of betting that such a card will be turned, or that such a horse will win in a race, or such a candidate be elected President. On 'Change we are charitable enough to suppose each speculator possessed of *data* such as to make his venture seem reasonable to himself. This is the system, and, though very like gambling, it has the advantage of presenting to men of small means the chance of large profits, provided they are willing to run the risk; since, while with a capital of ten thousand dollars I could make an *actual* purchase of only two thousand barrels of flour at five dollars a barrel, the profit on which, at an advance of twenty-five cents per barrel, would be very small,—by risking *all* my money upon a single venture, and leaving myself a 'margin' of fifty cents to cover the greatest probable decline in price per barrel, I may purchase 'on time' all of twenty thousand barrels, the profit upon which, at the same rate, would be equal to fifty per cent. of my entire capital. This is the legitimate system by which such rapid fortunes are made and lost upon 'Change. Now suppose, that, operating in this way, you are in possession of a secret means of intelligence, instantaneous, to be relied on, peculiar to yourself,—does not Monsieur perceive that it insures one a fortune incalculable, and to be made within the shortest time? If I to-day learn that to-morrow's steamer will bring news that cotton has advanced one cent

a pound, of course I am justified in buying cotton to the utmost extent that my capital and credit will afford me means, being sure of selling it to-morrow at a higher price; and if I am continually in the receipt of similar information, I can turn my capital over fifty times in a year, and double it every time. There is actually *no limit* to the possible fortune of a man who is so favored, provided he conjoins prudence and boldness to his manner of transacting business. The supplying of such secret and unshared information to the firm of John Meavy & Co. was the end of my invention, Monsieur. I was to go to Liverpool, and act as signaller, while he was to stay in New York, receive the information, and buy or sell in accordance with it.

"Our apparatus was very simple. At each terminus of our line, so to speak, we had a room, inaccessible save to ourselves. These rooms, darkened, and carefully kept at a fixed temperature, contained nothing, save, in one corner of each, a chronometer regulated with precision, and, in opposite corners, a set of boxes, containing each a snail. At the signalling end, at a fixed hour, which the chronometer gives with the greatest accuracy, and when I know that my partner, by agreement, will be present at the other end to receive intelligence, I go into my room, informed as to the condition of the Liverpool market, and prepared to transmit particulars of the same to him. Here are two boxes, divided into three compartments each, and a *male* snail in each compartment. If flour is down, offering a chance for profit in New York upon 'time' sales, I approach the box marked *minus*, the three snails of which are called *x*, *y*, and *z*. I take up a little tube,—such a one as is used by chemists to drop infinitesimal portions of any liquid; I dip this into a vial marked *No. 1*, containing a solution of salt in water,—there is a row of these vials, the solution in each being of a different strength,—and then, with the moistened tube, I touch snail *x*, or snail *y*, or snail *z*, or any two of them, or all three, once, twice, three

times, or repeatedly, according to the news I wish to signal, — noting the effect of the poison, and recording the particulars in a book kept for the purpose, — recording them with a nicety of intelligent discrimination such as can be obtained only by long and practised observation. I send an abstract of this record by every mail to my partner, so as to verify our results and to detect immediately any derangement. At *his* end of our line the brave John Meavy waits before two similar boxes, in each compartment of which is a *female* snail. He is a skilled observer, and his quick eye beholds snails *a, b, c* exactly (through sympathy) *repeating* the effects I am producing in *x, y, z*, — though the distance between them is over three thousand miles! He knows the meaning of these slight effects, and, going upon 'Change, buys or sells with a perfect assurance of profit.

Such was my telegraph, in its rudest outline; but I had systematized it to a degree of far greater nicety. I provided entirely against man's imperfect and defective powers of observation. These movements and squirmings, which, in snails *x, y, z*, were the effect of a physical cause, (salt-water,) were, in snails *a, b, c*, the result of sympathy for *x, y, z*, as I have said, — a result constant, determinate, and always to be depended upon. That is the *law* of their *rapport*, — not a *theory*, but a *law*, established by long, exhaustive, and conclusive experimentation. The *reason* for it I cannot assign, — did not pretend to investigate; but the *fact* I had ascertained: *x, y, z*, so touched, squirm, contract, and expand their articulations, and exude from their pores a certain slimy sweat, of agony it may be, — anyhow, a slimy exudation comes from them, — and, *simultaneously*, and *just as much* in kind, degree, quality, everything, snails *a, b, c* repeat the process. Such is the *law*, constant as gravitation. Consequently, all that the *operator* has to concern himself about is, to understand that so many touches, with fluid of such intensity, to so many snails, and repeated so often, produce such and such an effect upon

them, as, collectively considered, to convey, through *a, b, c*, a certain piece of information. Knowing this, skill in manipulation and accurate memory are all the qualities he requires to conjoin to such knowledge. But the *observer* has a much more delicate office to perform, and, until I invented my recording apparatus, the functions of this post could be discharged only roughly and imperfectly, so evanescent and complex the manifestations. But I discovered a *chemical* observer, employing tests that nothing could escape, nor anything deceive. The clock that indicates the hour for receipt of news puts in motion the filaments of certain delicate machinery connected with the boxes wherein are *a, b, c*. These snails are placed upon a gauze-like substance, which, though firm enough to support them undisturbed, permits both their natural excretions, and their exudations under excitement, to filter through readily. As soon as the hour comes, the machinery moves, and there begins to pass the *recording paper*, so to speak, which I invented, — a paper not meant to receive any vulgar mechanical impression, but one which, to the instructed eye, and by the aid of the microscope, sets forth in *plain language* the nature of the functional disturbance in each snail, its quality, its intensity, and its duration. I do not exaggerate, Monsieur. This paper, in a word, is chemically prepared, saturated in a substance that renders it perfectly sympathetic to whatever fluid exudes from the snail, and thus, and by means of its motion, it records the quantity and quality of the impression with unvarying accuracy. The observing hour over, the clock-work stops, the paper is examined, and the result recorded carefully. *Par exemple*: I touch snail *x*, once, twice, three times, with the weak solution, No. 1; John Meavy, receiving this fact, through the sympathetic report of snail *a*, the chemical paper, and the microscope, reads, as plainly as if it had been printed in pica type: '*Flour declined threepence.*' If the fluid used is stronger, the touches more numerous,

and bestowed upon *y* and *z* also, — then the decline or advance is proportionately great. Is it not a grandly simple thing, this telegraph of mine, Monsieur ? ”

— I was dazzled, perplexed, — so entirely new, strange, incredible was all this to me ; but I expressed to the little Frenchman, in what terms I could command, my profound sense of his genius and originality.

“ *Eh, bien !* I went to Europe,” resumed he, “and John Meavy, my brave comrade, stayed in New York, buying and selling flour, and turning over his capital with a rapidity of success that surprised everybody ; while his modest demeanor, his chivalry of manner, and his noble generosity won the admission of all, that Prosperity chose well, when she elected John for her favorite.

“At the end of a year we were worth nearly half a million of dollars, and our credit was perfect. Then, however, John wrote for me to come home. He was engaged to be married, he said, wanted me to be present at the ceremony, and wished my aid in effecting some changes in our mode of business. I was not unwilling, for I also had some suggestions to make. I was tired of my place as operator ; I yearned to quit my post of simple spectator, and to plunge head-foremost into the strife of money-getting. Apart from my irksome position, I felt myself more fit for John’s post than he was. As the capital we worked with increased, John waxed cautious, and, most illogically, announced himself afraid to venture, — as if his risk were not as great with ten thousand as with a million ! This did not suit me. I felt myself capable of using money as mere counters, I divested it of all the terrors of magnitude, and thus I knew I could do as much in proportion with five million dollars as with five dollars. And the result, I was perfectly aware, would be to those achieved by John as the elephant in his normal strength compares with the elephant whose strength is to his size as the flea’s strength to *his* size. John could take the flea’s leap with five dollars, but was satisfied with

the elephant’s leap with five million dollars.

“So I took the next steamer, reached New York safely, and was most cordially welcomed by my noble John Meavy, who seemed exuberant with the happiness in store for him. Before he would say a word about business, he insisted upon taking me to his betrothed’s, and introduced me to his lovely Cornelia. He had chosen well, Monsieur : his bride was worthy a throne ; she was worthy John Meavy himself, — a woman refined, charming, entirely perfect. At John’s solicitation, I was his groomsman ; I accompanied him upon his wedding-tour ; and mine was the last hand he clasped, as he stood on the steamer’s deck, on his way to Europe to take my place at the head of the Liverpool house. How many kind words he lavished upon me ! how many a good and kindly piece of advice he murmured in my ear at that farewell moment ! Ah ! I do not think John wished to go thither ; he was ever a home-body ; and I am sure his wife disliked it much. But they saw it was my desire, they seemed to regard me as the builder-up of their fortunes, and they yielded without a murmur. *Bête* that I was ! Yet I was not selfish, Monsieur. Building up in dreams my fortune Babel-high, I built up also ever the fortune of John Meavy and his peerless wife to a point just as near the clouds. *Eh, bien !* it amounted to nothing in the end, all this ; but — I was not selfish !

“Our business was nominally the old one ; but, in fact, in accordance with the new arrangements John and I had agreed upon, I was to begin cotton-speculation, and John was to keep me informed regarding the fluctuations of the Liverpool market in that staple. My first efforts, though successful of necessity, were small. I wished John to gain confidence in my mode of conducting the business, before I ventured upon more extensive operations.

“Meantime, John’s letters put me in continual fine spirits. He kept his telegraphic apparatus at home, and so was

much with Cornelia. He and his wife, he said, were very happy; people could not love one another more than they did. He blessed me a thousand times, because my invention had taken him to New York, and so had enabled him to meet Cornelia. But—ah, these ‘buts,’ Monsieur!—if you will search long enough the brightest, the clearest blue sky, you will always find some little speck, some faint film of cloud,—’t is your ‘but,’ Monsieur!—John fancied his wife was not altogether so happy as it was possible for her to be. She did not like the cold, colorless Liverpool, nor the foggy people there. She pined a little, perhaps, for old home-associations, wrote John. Could I not think of some means to increase her content? I knew the human heart so well; I was such a genius, moreover. Ah, bah! Monsieur, ’t is the old song: I felt myself capable of sweeping the little cloud from the sky also, as I had done everything else,—I, this sublime genius! Monsieur, a moment look upon him, this genius, this triple blind fool! *Eh, bien!* I considered:—Cornelia, like all tender, susceptible people, owes much to *little things*. She will not have to remain there long; meantime, can I not revive in her mind the associations to which she is used, and so both make her happy and bless my good comrade, John Meavy? How, then? Once, during John’s wedding-trip, we had stopped one evening in a little country-town, and while we were there, talking pleasantly by the open window, a mocking-bird, caged before a house across the way, had struck up a perfect symphony of his rich and multitudinous song. Cornelia was delighted beyond measure, and seemed to yearn for the bird. John tried to buy it; but it was a pet; its owners were well-to-do, and would not sell: so Cornelia had to go away without it, and I fancied she was greatly chagrined, though, of course, she said nothing, and seemed soon to forget it. So now the notion came to me:—I will send Cornelia a mocking-bird. Its music will charm her,—its notes will recall a thousand sounds of home,—it will give her occupation, some-

thing to think about and to care for, until more important cares intervene,—and so it will help to banish this *triste* mood of *ennui*. *Eh, bien!* I soon had a very fine bird. Ah, Monsieur, I cannot tell you what a fine bird was that fellow,—*Don Juan* his name,—such an arch-rascal! such a merry eye he had! such a proud, Pompadour throat! such volumes of song! such splendid powers of mimicry! I kept him with me a week to test his gifts, and I began to envy Cornelia her treasure,—he was so tame, so bold, so intelligent. In that week, by whistling to him in my leisure hours, I taught him to perform almost perfectly that lively *aria* of Meyerbeer’s, ‘*Folle è quei che l’oro aduna,*’ and also to mimic beautifully the chirping of a cricket. Well, I sent *Don Juan* out, and received due information of his safe arrival. The medicine acted like a charm. Cornelia wrote me a grateful letter, full of enthusiastic praises of ‘her pet, her darling, the dearest, sweetest, cutest little bird that ever anybody owned.’ And I was more than rewarded by the heartfelt thanks of my noble John Meavy. *Diantre!* had I only wrung the thing’s neck!

“*Eh, bien!* The period upon which I calculated for my grand speculative *coup* had nearly arrived. Owing to a variety of circumstances, the cotton-market had for some months been in a very perturbed condition; and I, who had closely scrutinized its aspects, felt sure that before long there would be some decided movement that would make itself felt to all the financial centres. This movement I resolved to profit by, in order to achieve riches at a single stroke. I had recommended John to increase his observations, and keep me carefully preadvised of every change. But I did not tell him how extensively I meant to operate, for I knew ’t would make him anxious, and, moreover, I wished to dazzle him with a sudden magnificent achievement. Well, things slowly drew towards the point I desired. There was a certain war in embryo, I thought, the inevitable result of which would be to beat down the price of cotton to a

minimum. Would the war come off? A steamer arrived with such news as made it certain that another fortnight would settle the question. How anxiously, how tremulously I watched my telegraph then,—noting down all the fluctuations so faithfully reported to me by John Meavy,—all my brain on fire with visions of unwonted, magnificent achievement! For two days the prices wavered and rippled to and fro, like the uncertain rippling of the waters at turning of the tide. Then, on the morning of the third day, the long-expected change was announced, and in a way that startled me, prepared though I was,—so violent was the decline. Down, down, down, down to the very lowest! reported my faithful snails. I did not need to consult the sympathetic paper, for the agonized writhings of the poor animals spoke plainly enough to the naked eye. I seized my hat, rushed to my office, and began my *grand coup*. *Eh, bien!* I shall not go into details. Suffice it to say, for three days I was in communication with cotton men all over the country; and, without becoming known abroad as the party at work, I sold ‘on time’ such a quantity of ‘the staple’ that my operations had the effect to put down the prices everywhere; and if John Meavy’s report were correct, our profits during those three days would exceed three millions of dollars! Having now done all I could, and feeling completely worn out, I went home, for the first time since the news, flung myself upon a bed, and slept an unbroken sleep during twenty-four hours. After that, refreshed and gay, I went once more to the operating-room to see what further reports had arrived since I had received the decisive intelligence. Decisive, indeed! Monsieur, when I looked through the glass lids into the boxes, there lay my snails, stiff and dead! Not only my faithful ones, *a, b, c*, but likewise the *plus* ones, *d, e, f!* Yes, there they lay, *plus* and *minus*, each in his compartment, convulsed and distorted, as if their last agonies had been terrible to endure! Stiff and dead! *Mon Dieu, Monsieur!* and I

had pledged the name and credit of the house of John Meavy and Co. to an extent from which there *could* be no recovery, if aught untoward had happened! *Eh, bien, Monsieur!* César Prévost is fortunate in a very elastic temperament. Yet I did not dare think of John Meavy. However, if the thing was done, it was too late for remedy now. *Eh, bien!* I would wait. Meantime, I carefully examined to see if any cause was discoverable to have produced these deaths. None. ’T was irresistible, then, that the cause was at John’s end. What? An accident,—perhaps, nervous, he had dosed them too heavily; but—I dared not think about it,—I would only—wait!

“*Eh, bien, Monsieur!* It would be seven days yet before I could get news. I waited,—waited calmly and composedly. *Mon Dieu!* they talk of heroism in leading a forlorn hope,—César Prévost was a hero for those eight days. I do not think about them even now.

“On the third day came a steamer with news of uncertain import, but on the whole favorable. By the same advice a letter reached me from my old comrade, John Meavy: his affairs were prosperous, he and his wife very happy, and *Don Juan* more charming than ever.

“Monsieur, the fourth day came,—the fifth,—the sixth,—the seventh,—finding me still waiting. No one, to see me, could have guessed I had not slept for a week. *Eh, bien!* I will not dwell upon it!

“The morning of the eighth day came. I breakfasted, read my paper, smoked my cigar, and walked leisurely to my counting-room. I answered the letters. I sauntered round to bank, paid a note that had fallen due, got a check cashed, and, having counted the money and secured it in my pocket-book, I walked out and stood upon the bank-steps, talking with a business-friend, who inquired after John Meavy. ’T was a pleasant theme to converse about, this,—for me!

“A news-boy came running down Wall Street, with papers under his arm. ‘Here you are!’ he cried. ‘Extray! Steamer

just in! Latest news from Europe! All 'bout the new alliance! Consols firm,—cotton riz! Extray, Sir?

"I bought one, and the boy ran off as I paid him and snatched the paper from his hand.

"You gave that rascal a gold dollar for a half-dime," said my friend.

"Did I?"

"A gold dollar! I wondered very quaintly what he would say, when, in a few days, he heard of the failure of John Meavy & Co. for three millions of dollars. A gold dollar!

"*Eh, bien, Monsieur!* I shall not dwell upon it. Enough,—we were ruined. I had played my grand *coup*, and lost. For myself, nothing. But—John Meavy! Oh, Monsieur, I could not think! I went to my office, and sat there all day, stupid, only twirling my watch-key, and repeating to myself,—'A gold dollar! a gold dollar!' The afternoon had nearly gone when one of my clerks roused me:—'A letter for you, Mr. Prévost; it came by the steamer to-day.'

"Monsieur," said the little Frenchman, producing a well-worn pocket-book, and taking out from it a tattered, yellow sheet, which he unfolded before me,—"*Monsieur, you shall read that letter.*"

It was this:—

"MY DEAR CESAR:—

"You must blame me and poor *Don Juan* for the suspension of your Telegraph. I write, myself, to tell you how careless I have been; for poor John is in such a state of agitation, and seems to fear such calamities, that I will not let him write;—though what evil can come of it, beyond the inconvenience, I cannot see, nor will he tell me. You must answer this immediately, so as to prove to John that nothing has gone wrong; and so give me a chance to scold this good husband of mine for his vain and womanish apprehensions. But let me tell you how it happened to the poor snails.—*Don Juan* is so tame, that I do not pretend to keep him shut up in his cage, but let him fly about our sitting-room,

just as he pleases. The next room to this, you know, is the one where we kept the snails. I have been helping John with these for some time, and it is my custom, when he goes on 'Change, to look after the ugly creatures, and especially to open the boxes and give them air. Well, this morning,—you must not scold me, César, for I have wept enough for my carelessness, and as I write am trembling all over like a leaf,—this morning, I went into the snail-room as usual, opened the boxes, noted how well all six looked, and then, going to the window, stood there for some minutes, looking out at the people across the way preparing for the illumination to-night, (for we are going to have peace at last, and every one is so rejoiced!) and forgetting entirely that I had left open both the door of this room and that of the sitting-room also, until I heard the flutter of *Don Juan's* wings behind me. I turned, and was horror-stricken to find him perched on the boxes, and pecking away at the poor snails, as if they were strawberries! I screamed, and ran to drive him off, but I was too late,—for, just as I caught him, the greedy fellow picked up and swallowed the last one of the entire six! I felt almost like killing him, then; but I could not,—nor could you have done it, César, had you but seen the arch defiance of his eye, as he fluttered out of my hands, flew back to his cage, and began to pour forth a whole world of melody!

"My dear César, I know my carelessness was most culpable, but it *cannot* be so bad as John fears. Oh, if anything should happen now, by my fault, when we are so prosperous and happy, I could never forgive myself! Do write to me as soon as possible, and relieve the anxiety of

"Affectionately yours,

"CORNELIA."

The little Frenchman looked at me with a glance half sad, half comical, as I returned the letter to him.

"*Eh, bien, Monsieur!*" said he, shrug-

ging his shoulders, — “you ’ve heard my story. ’T was fate, — what could one do?”

“But that is not all, — John Meavy,” — said I.

The little Frenchman looked very grave and sad.

“Monsieur, my brave *camarade*, John Meavy, had been brought up in a stern school. His ideas of credit and of mercantile honor were pitched very high indeed. He imagined himself disgraced forever, and — he did not survive it.”

“You do not mean” —

“I mean, Monsieur, that I lost the bravest and truest and most generous friend that ever man had, when John Meavy died. And that dose of Prussic Acid should properly have gone to me, whose fault it all was, instead of to him, so innocent. *Eh, bien, Monsieur!* his lot was the happiest, after all.”

“But Cornelia?” said I, after a pause.

The little Frenchman rose, with a quiet and graceful air, full of sadness, yet of courtesy; and I knew then that he was no longer my guest and entertainer, but once more the chapman with his wares.

“Monsieur, Cornelia is under my protection. You will comprehend that — after *that* — she has not escaped with impunity. Some little strings snapped in the harp. She is *touchée*, here,” said he, resting one finger lightly upon his forehead, — “but ’tis all for the best, *sans doute*. She is quiet, peaceable, — and she does not remember. She sits in my house, working, and the bird sings to her

ever. ’Tis a gallant bird, Monsieur. And though I am poor, I can yet make some provision for her comfort. She has good taste, and is very industrious. These baskets are all of her make; when I have no other employ, I sell them about, and use the money for her. *Eh, bien!* ’tis a small price, — fifty cents; if Monsieur will purchase one, he will possess a basket really handsome, and will have contributed something to the comfort of one of the Good God’s *protégées*. *Mille remerciements, Monsieur*, — for this purchase, — for your entertainment, — for your courtesy!

“*Bon jour, Monsieur!*”

About half an hour after this, I had occasion to traverse one of the corridors of Barnum’s Hotel, when I saw a group of gentlemen, most of whom sported “Atlantic Cable Charms” on their watch-chains, gathered about a person who had secured their rapt attention to some story he was narrating.

“*Eh, bien, Messieurs!*” I heard him say, in a peculiar *naïve* broken English, “it would be yet seven days before I could get ze news, — and — I wait. *Oui!* *calmie*, composed*lie*, with insouciance beyond guess, I wait” —

“I wonder,” said I to myself, as I passed on, “I wonder if M. César Prévost’s account of his remarkable invention of the First Atlantic Telegraph have not some subtle connection with his desire to find as speedy and remunerative a sale as possible for his pretty baskets!”

LADY BYRON.

It is seldom that a woman becomes the world's talk but by some great merit or fault of her own, or some rare qualification so bestowed by Nature as to be incapable of being hidden. Great genius, rare beauty, a fitness for noble enterprise, the venturous madness of passion, account for ninety-nine cases in the hundred of a woman becoming the subject of general conversation and interest. Lady Byron's was the hundredth case. There was a time when it is probable that she was spoken of every day in every house in England where the family could read; and for years the general anxiety to hear anything that could be told of her was almost as striking in Continental society and in the United States as in her own country. Yet she had neither genius, nor conspicuous beauty, nor "a mission," nor any quality of egotism which could induce her to brave the observation of the world for any personal aim. She had good abilities, well cultivated for the time when she was young; she was rather pretty, and her countenance was engaging from its expression of mingled thoughtfulness and brightness; she was as lady-like as became her birth and training; and her strength of character was so tempered with modesty and good taste that she was about the last woman that could have been supposed likely to become celebrated in any way, or, yet more, to be passionately disputed about and censured, in regard to her temper and manners: yet such was her lot. No breath of suspicion ever dimmed her good repute, in the ordinary sense of the expression: but to this day she is misapprehended, wherever her husband's genius is adored; and she is charged with precisely the faults which it was most impossible for her to commit. For the original notoriety she was not answerable; but for the protracted misapprehension of her character she was. She early decided that it was not necessary or

desirable to call the world into council on her domestic affairs; her husband's doing it was no reason why she should; and for nearly forty years she preserved a silence, neither haughty nor sullen, but merely natural, on matters in which women usually consider silence appropriate. She never inquired what effect this silence had on public opinion in regard to her, nor countenanced the idea that public opinion bore any relation whatever to her private affairs and domestic conduct. Such independence and such reticence naturally quicken the interest and curiosity of survivors; and they also stimulate those who knew her as she was to explain her characteristics to as many as wish to understand them, after disputing about them for the lifetime of a whole generation.

Anne Isabella Noel Milbanke (that was her maiden name) was an only child. Her father, Sir Ralph Milbanke, was the sixth baronet of that name. Her mother was a Noel, daughter of Viscount and Baron Wentworth, and remotely descended from royalty, — that is, from the youngest son of Edward I. After the death of Lady Milbanke's father and brother, the Barony of Wentworth was in abeyance between the daughter of Lady Milbanke and the son of her sister till 1856, when, by the death of that cousin, Lord Scarsdale, Lady Byron became possessed of the inheritance and title. During her childhood and youth, however, her parents were not wealthy; and it was understood that Miss Milbanke would have no fortune till the death of her parents, though her expectations were great. Though this want of immediate fortune did not prove true, the report of it was probably advantageous to the young girl, who was sought for other things than her fortune. When Lord Byron thought of proposing, the friend who had brought him to the point of submitting to marriage objected to Miss Milbanke on two grounds, — that she had no

fortune, and that she was a learned lady. The gentleman was as wrong in his facts as mischievous in his advice to the poet to marry. Miss Milbanke had fortune, and she was not a learned lady. Such men as the two who held a consultation on the points, whether a man entangled in intrigues and overwhelmed with debts should release himself by involving a trusting girl in his difficulties, and whether the girl should be Miss Milbanke or another, were not likely to distinguish between the cultivated ability of a sensible girl and the pedantry of a blue-stockings; and hence, because Miss Milbanke was neither ignorant nor silly, she was called a learned lady by Lord Byron's associates. He bore testimony, in due time, to her agreeable qualities as a companion, — her brightness, her genial nature, her quiet good sense; and we heard no more of her "learning" and "mathematics," till it suited her enemies to get up a theory of incompatibility of temper between her and her husband. The fact was, she was well-educated, as education was then, and had the acquirements which are common in every house among the educated classes of English society.

She was born in 1792, and passed her early years chiefly on her father's estates of Halaaby, near Darlington, Yorkshire, and Seaham, in Durham. She retained a happy recollection of her childhood and youth, if one may judge by her attachment to the old homes, when she had lost the power of attaching herself, in later life, to any permanent home. When an offer of service was made to her, some years since, by a person residing on the Northumberland coast, the service she asked was that a pebble might be sent her from the beach at Seaham, to be made into a brooch, and worn for love of the old place.

Her father, as a Yorkshire baronet, spent his money freely. A good deal of it went in election-expenses, and the hospitality of the house was great. It was too orderly and sober and old-fashioned for Lord Byron's taste, and he quizzed it accordingly; but he admitted

the kindness of it, and the amiability which made guests glad to go there and sorry to come away. His special records of Miss Milbanke's good-humor, spirit, and pleasantness indicate the source of subsequent misrepresentations of her. Till he saw it, he could not conceive that order and dutifulness could coexist with liveliness and great charms of mind and manners; and when the fact was out of sight, he went back to his old notion, that affectionate parents and dutiful daughters must be dull, prudish, and tiresome.

"Bell" was beloved as only daughters are, but so unspoiled as to be sought in marriage as eagerly as if she had been a merry member of a merry tribe. Lord Byron himself offered early, and was refused, like many other suitors. Her feelings were not the same, however, to him as to others. It is no wonder that a girl not out of her teens should be captivated by the young poet whom the world was beginning to worship for his genius as very few men are worshipped in their prime, and who could captivate young and old, man, woman, and child, when he chose to try. As yet, his habits of life and mind had not told upon his manners, conversation, and countenance as they did afterwards. The beauty of his face, the reserved and hesitating grace of his manner, and the pith and strength of such conversation as he was tempted into might well win the heart of a girl who was certainly far more fond of poetry than of mathematics. Yet she refused him. Perhaps she did not know him enough. Perhaps she did not know her own feelings at the moment. She afterwards found that she had always loved him. His renewed offers at the close of two years made her very happy. She was drawing near the end of her portion of life's happiness; and she seems to have had no suspicion of the baselessness of her natural and innocent bliss. It is probable that nobody about her knew, any more than herself, how and why Lord Byron offered to her a second time, till Moore published the facts in his "Life" of the poet. The thrill of disgust which

ran through every good heart, on reading the story, made all sympathizers ask how she could bear to learn how she had been treated in the confidences of profligates. Perhaps she had known it long before, as her husband had repeatedly tried his powers of terrifying and depressing her; but, at all events, she could bear anything,—not only with courage and in silence, but with calmness and inexhaustible mercy. According to Moore's account, a friend of Byron's urged him to marry, as a remedy for the melancholy restlessness and disorder of his life; "and, after much discussion, he consented." The next proceedings were in character with this "consent." Byron named Miss Milbanke: the friend objected, on the grounds of her possession of learning and supposed want of fortune; and Byron actually commissioned his adviser to propose for him to the lady he did not prefer. She refused him; and then future proceedings were determined by his friend's admiration of the letter he had got ready for Miss Milbanke. It was such a pretty letter, it would be a pity not to send it. So it was sent.

If she could have known, as she hung over that letter, what eyes had read lines that should have been her own secret property, and as what kind of alternative the letter had been prepared, what a different life might hers have been! But she could not dream of being laid hold of as a speculation in that style, and she was happy,—as women are for once in their lives, and as she deserved to be. There was another alternative, besides that of two ladies to be weighed in the balance. Byron was longing to go abroad again, and he would have preferred that to marrying; but the importunity of his friends decided him for marriage. In a short time, and for a short time, Miss Milbanke's influence was too strong for his wayward nature and his pernicious friends to resist. His heart was touched, his mind was soothed, and he thought better of women, and perhaps of the whole human race, than he had ever done before. He wrote to

Moore, who owned he had "never liked her," and who boded evil things from the marriage, that she was so good that he wished he was better,—that he had been quite mistaken in supposing her of "a very cold disposition." These gentlemen had heard of her being regarded as "a pattern lady in the North"; and they had made up an image of a prude and a blue in their own minds, which Byron presently set himself to work to pull down. He wrote against Moore's notion of her as "strait-laced," in a spirit of justice awakened by his new satisfactions and hopes: but there are in the narrative no signs of love on his part,—nothing more than an amiable complacency in the discovery of her attachment to him.

The engagement took place in September, 1814, and the marriage in the next January. Moore saw him in the interval, and had no remaining hope, from that time, that Byron could ever make or find happiness in married life. He was satisfied that love was, in Byron's case, only an imagination; and he pointed to a declaration of Byron's, that, when in the society of the woman he loved, even at the happiest period of his attachment, he found himself secretly longing to be alone. Secretly during the courtship, but not secretly after marriage.

"Tell me, Byron," said his wife, one day, not long after they were married, and he was moodily staring into the fire,—"am I in your way?"

"Damnably," was the answer.

It will be remembered by all readers that the reason he assigned for the good terms on which he remained with his half-sister, Mrs. Leigh, was that they seldom or never saw each other.

When Moore saw him in London, he was in a troubled state of mind about his affairs. His embarrassments were so pressing that he meditated breaking off the match; but it was within a month of the wedding-day, and he said he had gone too far to retract. How it was that Sir Ralph Milbanke did not make it his business to ascertain all the conditions of a union with a man of Byron's reputation

it is difficult to imagine. Every movement of the idolized poet was watched, anecdotes of his life and ways were in all mouths; and a prudent father, if encouraging his addresses at all, should naturally have ascertained the chances of his daughter having an honorable and happy home. Sir Ralph probably thought so, when there were ten executions in the house in the first few months after the marriage. These difficulties, however, did not affect the happiness of the marriage unfavorably. The wife was not the less of the heroic temperament for being "a pattern young lady." She was one whose spirit was sure to rise under pressure, and who was always most cheerful when trouble called forth her energies on behalf of others. Liberal with her own property, making light of privation, full of clear and practical resource in emergency, she won her husband's admiration in the midst of the difficulties into which he had plunged her. For a time he was not ashamed of that admiration; and his avowals of it are happily on record.

They were married on the second of January. The wedding-day was miserable. Byron awoke in one of his melancholy moods, and wandered alone in the grounds till called to be married. His wayward mind was full of all the associations that were least congenial with the day. His thoughts were full of Mary Chaworth, and of old scenes in his life, which he fancied he loved because he was now leaving them behind. He declared that his poem of "The Dream" was a true picture of his wedding-morning; and there are circumstances, not told in his "Life," which render this probable. After the ceremony and breakfast, the young couple left Seaham for Sir Ralph's seat at Halmaby. Towards dusk of that winter-day, the carriage drove up to the door, where the old butler stood ready to receive his young lady and her bridegroom. The moment the carriage-door was opened, the bridegroom jumped out and walked away. When his bride alighted, the old servant was aghast. She

came up the steps with the listless gait of despair. Her face and movements expressed such utter horror and desolation, that the old butler longed to offer his arm to the lonely young creature, as an assurance of sympathy and protection. Various stories got abroad as to the cause of this horror, one probably as false as another; and, for his own part, Byron met them by a false story of Miss Milbanke's lady's-maid having been stuck in, bodkin-wise, between them. As Lady Byron certainly soon got over the shock, the probability is that she satisfied herself that he had been suffering under one of the dark moods to which he was subject, both constitutionally and as the poet of moods.

It is scarcely possible at our time of day to make sufficient allowance for such a woman having entered upon such a marriage, in spite of the notoriety of the risks. Byron was then the idol of much more than the literary world. His poetry was known by heart by multitudes of men and women who read very little else; and one meets, at this day, elderly men, who live quite outside of the regions of literature, who believe that there never could have been such a poet before, and would say, if they dared, that there will never be such another again. He appeared at the moment when society was restless and miserable, and discontented with the Fates and the universe and all that it contained. The general sensibility had not for long found any expression in poetry. Literature seemed something quite apart from experience, and with which none but a particular class had any concern. At such a time, when Europe lay desolate under the ravage and incessant menace of the French Empire,—when England had an insane King, a profligate Regent, an atrocious Ministry, and a corrupt Parliament,—when the war drained the kingdom of its youth, and every class of its resources,—when there was chronic discontent in the manufacturing districts, and hunger among the rural population, with a perpetual extension of pauperism,

swallowing up the working and even the middle classes,—when everybody was full of anxiety, dread, or a reactionary recklessness,—there suddenly appeared a new strain of poetry which seemed to express every man's mood. Every man took up the song. Byron's musical woe resounded through the land. People who had not known exactly what was the matter with them now found that life was what Byron said it was, and that they were sick of it. I can well remember the enthusiasm,—the better, perhaps, for never having shared it. At first I was too young, and afterwards I found too much of moods and too little of matter to create any lasting attachment to his poetry. But the music of it rang in all ears, and the rush of its popularity could not be resisted by any but downright churlish persons. I remember how ladies, in morning calls, recited passages of Byron to each other,—and how gentlemen, in water-parties, whispered his short poems to their next neighbor. If a man was seen walking with his head down and his lips moving, he was revolving Byron's last romance; and children who began to keep albums wrote, in double lines on the first page, some stanza which caught them by its sound, if they were not up to its sense. On some pane in every inn-window there was a scrap of Byron; and in young ladies' portfolios there were portraits of the poet, recognizable, through all bad drawing and distortion, by the cast of the beautiful features and the Corsair style. Where a popularity like this sprang up, there must be sufficient reason for it to cause it to involve more or less all orders of minds; and the wisest and most experienced men, and the most thoroughly trained scholars, fell into the general admiration, and keenly enjoyed so melodious an expression of a general state of feeling, without asking too pertinaciously for higher views and deeper meanings. Old Quakers were troubled at detecting hidden copies and secret studies of Byron among young men and maidens who were to be preserved from all stimulants to the passions;

and they were yet more troubled, when, looking to see what the charm was which so wrought upon the youth of their sect, they found themselves carried away by it, beyond all power to forget what they had read. The idolatry of the poet, which marked that time, was an inevitable consequence of the singular aptness of his utterance. His dress, manners, and likings were adopted, so far as they could be ascertained, by hundreds of thousands of youths who were at once satiated with life and ambitious of fame, or at least of a reputation for fastidious discontent; young ladies declared that Byron was everything that was great and good; and even our best literature of criticism shows how respectful and admiring the hardest reviewers grew, after the poet had become the pet and the idol of all England. At such a time, how should "Bell" Milbanke resist the intoxication,—even before the poet addressed himself particularly to her? A great reader in the quietness of her home, where all her tastes were indulged,—a lover of poetry, and so genial and sympathizing as to be always sure to be filled with the spirit of her time,—how could she fail to idolize Byron as others did? And what must have been her exaltation, when he told her that the welfare of his whole life depended upon her! Between her exaltation, her love, her sympathy, and her admiration, she might well make allowance for his eccentricities first, and for worse afterwards. Thus, probably, it was that she got over the shock of that wedding-drive, and was again the bright, affectionate, trusting and winning woman whom he had described before and was to describe again to his skeptical friend Moore.

Before six weeks were over, he wrote to Moore (after some previous hankerings) that he should go abroad soon, "and alone, too." He did not go then. In April the death of Lord Wentworth occurred, causing Sir Ralph and Lady Milbanke to take the name of Noel, according to Lord Wentworth's will, and assuring the prospect of ultimate acces-

sion of wealth. Meantime, the new expenses of his married life, entered upon without any extrication from old debts, caused such embarrassment, that, after many other humiliations had been undergone, he offered his books for sale. As Lady Byron maintained a lifelong silence about the sufferings of her married life, little is known of that miserable year beyond what all the world saw: executions in the house; increasing gloom and recklessness in the husband; a bright patience and resoluteness in the wife; and an immense pity felt by the poet's admirers for his trials by a persecuting Fate. During the summer and autumn, his mention of his wife to his correspondents became less frequent and more formal. His tone about his approaching "papaship" tells nothing. He was not likely to show to such men any good or natural feelings on the occasion. In December, his daughter, Augusta Ada, was born; and early in January, he wrote to Moore so melancholy a "Heigho!" on occasion of his having been married a year, as to incite that critical observer to write him an inquiry about the state of his domestic spirits. The end was near, and the world was about to see its idol and his wife tested in moral action of a very stringent kind.

By means of the only publication ever made or authorized by Lady Byron on the subject of her domestic life, her vindication of her parents, contained in the Appendix of Moore's "Life" of the poet, we know, that, during her confinement, Lord Byron's nearest relatives were alarmed by tokens of eccentricity so marked, that they informed her, as soon as she was recovered, that they believed him insane. His confidential servant bore the same testimony; and she naturally believed it, when she resumed her place in the household, and saw how he was going on. On the sixth of January, the day after he wrote the "Heigho!" to Moore, he desired his wife, in writing, to go to her parents on the first day that it was possible for her to travel. Her physicians would not let her go earlier

than the fifteenth; and on that day she went. She never saw her husband again.

She had, in agreement with his family, consulted Dr. Baillie on her husband's behalf; and he, supposing the insanity to be real, advised, before seeing Lord Byron, that she should obey his wish about absenting herself, as an experiment,—and that, in the interval, she should converse only on light and cheerful topics. She observed these directions, and, in the spirit of them, wrote two letters, on the journey, which bore no marks of the trouble which existed between them. These letters were afterwards used, even circulated, to create a belief that Lady Byron had been suddenly persuaded to desert her husband, though he at least was well aware that the fact was not so. It soon appeared that he was not insane. Such was the decision of physicians, relatives, and presently of Lady Byron herself. While there was any room for supposing disease to be the cause of his conduct, she and her parents were anxious to use all tenderness with him, and devote themselves to his welfare; but when it became necessary to consider him sane, his wife declared that she could not return to him.

It is not necessary to dwell on the imputations Lord Byron spread abroad at the time, and his biographer afterwards, against the parents of his wife, and everybody belonging to them who could be supposed to have the slightest influence over Lady Byron's views or feelings. Those allegations were publicly shown by her to be false, nearly thirty years ago. I refer to them now solely because they were the occasion of the only public disclosure Lady Byron ever voluntarily made on any part of the subject of her married life. It is needless to exhibit how different in this respect was the conduct of her husband and his friends.

It became known by that statement, after some years, that, when Lady Noel went to London, to see what could and ought to be done, she obtained good legal opinions on the case, so far as she

knew it. Those opinions declared Lady Byron fully justified in refusing to re-join her husband. The parents, however, never knew the whole; and it was on yet more substantial grounds that Lady Byron formed her resolution. The facts were submitted, as the world has since known, as an A. B. case, to Dr. Lushington and Sir Samuel Romilly; and those able lawyers and good men peremptorily decided, that the wife, whoever she might be, must never see her husband again. When they learned whose case it was, they not only gave their full sanction to her refusal to return, but declared that they would never countenance in any way a change in that resolution. Dr. Lushington's statement to this effect appears in the Appendix to Moore's "Life," as a part of Lady Byron's vindication of her parents.

It was very hard on her to be compelled to speak at all. For six years she had kept silence utterly, bearing all imputations without reply. But when it was brought to her notice that her parents were charged with the gravest offences by her husband's biographer, after the death of both, and when no other near relative was in existence, she had no choice. She must exonerate them. The testimony was, as she said, "extorted" from her. The respect which had been felt for her during the first years of silence was not impaired by this disclosure; but it was by one which occurred a few years later. A statement on her domestic affairs was published, in her name, in a magazine of large circulation.* It did not really explain anything, while it seemed to break through a dignified reserve which had won a high degree of general esteem. It was believed that feminine weakness had prevailed at last; and her reputation suffered accordingly with many who had till then regarded her with favor and even reverence.

This was the climax of the hardship of her case. She had no concern whatever

with this act of publication. It was one of poor Campbell's disastrous pranks. He could not conceive how he could have done such a thing, and was desperately sorry; but there was little good in that. The mischief was done which could never be thoroughly repaired. She once more suffered in silence; for she was not weak enough to complain of irremediable evils. Nine years afterwards she wrote to a friend, who had been no less unjustifiably betrayed,—“I am grieved for you, as regards the actual position; but it will come right. I was myself made to *appear* responsible for a publication by Campbell, most unfairly, some years ago; so that, if I had not imagination enough to enter into your case, experience would have taught me to do so.”

Those who are old enough to remember the year 1816 will easily recall the fluctuations of opinion which took place as to the merits of the husband and the wife, whose separation was as interesting to ten thousand households as any family event of their own. Then, and for a few years after, was Lady Byron the world's talk,—innocently, most reluctantly, and unavoidably.

At first, while her influence left its impression on his mind, Lord Byron did her some sort of justice,—fitful and partial, but very precious to her then, no doubt,—and almost as precious now to the friends who understood her. It was not till he was convinced that she would never return, not till he began to quail under the world's ill opinion, and especially, not till he felt secure that he might rely on his wife's fidelity and mercy, her silence and magnanimity, that he changed his tone to one of aspersion and contempt, and his mode of attack to that of charming, amusing, or inflaming the public with verses against her and her friends. We have his own testimony to her domestic merits in the interval between the parting and his lapse into a state of malignant feeling. In March, 1816, within two months after her leaving him, Byron wrote thus to Moore:—

* *New Monthly Magazine*, 1836.

"I must set you right in one point, however. The fault was *not* — no, nor even the misfortune — in my 'choice' (unless in choosing at all); for I do not believe — and I must say it, in the very dregs of all this bitter business — that there ever was a better, or even a brighter, a kinder, or a more amiable and agreeable being than Lady B. I never had, nor can have, any reproach to make her, while with me. Where there is blame, it belongs to myself; and, if I cannot redeem, I must bear it."

To us, this is enough; and nothing that he wrote afterwards, in angry and spiteful moods, can have the slightest effect on our impression of her: but the case was otherwise at the time. Lord Byron's praise of her to Moore was not known till the "*Life*" appeared; whereas pieces like "*The Charity Ball*," coming out from time to time, made the world suppose that Lady Byron was one of those people, satirized in all literatures, who violate domestic duty, and make up for it by philanthropic effort and display. It is the prevalence of this impression to this day which makes it necessary to present the reality of the case after the lapse of many years. During Lady Byron's life, no one had a right to speak, if she chose to be silent; but the more modest and shrinking she was in regard to her own vindication, the stronger is the appeal to the fidelity of her friends to see that her reputation does not suffer through her magnanimity. We have guidance here in her own course in the case of her parents. Abhorrent as all publicity was to her, she felt and avowed the obligation to publish those facts of her life in which their reputation was concerned. The duty is far more easy, but not less imperative, to practise the same fidelity in regard to her, now that the truth can be told of her without shocking her modesty. We may hear some commonplaces about the feelings of the dead and the sensibilities of survivors, as always happens in such cases: but the sensibilities of survivors ought to relate, in the first place, to the

fair fame of the dead; and the feelings of the dead, having been duly respected during life, merge after death into the general beauty of the self-sacrificing character which would not utter the word by which the adverse judgment of the world might have been reversed in a moment. While, at this day, she is regarded as the cause of her husband's sins, by her coldness, formality, and what not, — fidelity and love to her memory absolutely require, not fresh disclosures of a private character, but a new presentment of the evidence long ago given to the world by herself and by her husband's very partial biographer. This is what I have done, after thirty years more of life have proved the quality of her mind and heart.

As she loved early, she loved steadily and forever. It was through that love that her magnanimity was so transcendent. When Lord Byron was dying, he said to his confidential servant, Fletcher, "Go to Lady Byron, — you will see her, and say" — and here his voice faltered, and for nearly twenty minutes he muttered words which it was impossible to catch. The man was obliged to tell him that he had not understood a syllable. Byron's distress was great; but, as he said, it was too late. Fletcher, on his return to England, did "go to Lady Byron," and did see her: but she could only pace the room in uncontrollable agitation, striving to obtain voice to ask the questions which were surging in her heart. She could not speak, and he was obliged to leave her. To those with whom she conversed freely, and to whom she wrote familiarly, it was strangely interesting to hear, or to read, lines and phrases from Byron's poems dropped, like native speech, from her tongue or her pen. Those well-remembered lines or phrases seemed new, and were wonderfully moving, when coming from her to whom they must have been so much more than to any one else. How she surmounted such acts as the publication of "*Fare thee well!*" and certain others of his safe appeals to the public, no one

could exactly understand. That she forgave them, and loved him to the end, is enough for us to know; for our interest is in the greatness of her heart, and not in the littleness of his.

Her life thenceforth was one of unremitting bounty to society, administered with as much skill and prudence as benevolence. As we have seen, her parents died a few years after her return to them for protection. She lived in retirement, changing her abode frequently, partly for the benefit of her child's education and the promotion of her benevolent schemes, and partly from a restlessness which was one of the few signs of injury received from the spoiling of associations with *home*. She felt a satisfaction which her friends rejoiced in, when her daughter married Lord King, at present the Earl of Lovelace, in 1835; and when grief upon grief followed in the appearance of mortal disease in her only child, her quiet patience stood her in good stead; as before. She even found strength to appropriate the blessings of the occasion, and took comfort, as did her dying daughter, in the intimate friendship which grew closer as the time of parting drew nigh. Lady Lovelace died in 1852; and for her few remaining years, Lady Byron was devoted to her grandchildren. But nearer calls never lessened her interest in remoter objects. Her mind was of the large and clear quality which could comprehend remote interests in their true proportions, and achieve each aim as perfectly as if it were the only one. Her agents used to say that it was impossible to mistake her directions; and thus her business was usually well done. There was no room, in her case, for the ordinary doubts, censures, and sneers about the misapplication of bounty. Her taste did not lie in the "Charity Ball" direction; her funds were not lavished in encouraging hypocrisy and improvidence among the idle and worthless; and the quality of her charity was, in fact, as admirable as its quantity. Her chief aim was the extension and improvement of popular

education; but there was no kind of misery that she heard of that she did not palliate to the utmost, and no kind of solace that her quick imagination and sympathy could devise that she did not administer. In her methods, she united consideration and frankness with singular success. For one instance among a thousand:—A lady with whom she had had friendly relations some time before, and who became impoverished in a quiet way by hopeless sickness, preferred poverty, with an easy conscience, to a competency attended by some uncertainty about the perfect rectitude of the resource. Lady Byron wrote to an intermediate person exactly what she thought of the case. Whether the judgment of the sufferer was right or mistaken was nobody's business but her own: this was the first point. Next, a voluntary poverty could never be pitied by anybody: that was the second. But it was painful to others to think of the mortification to benevolent feelings which attends poverty; and there could be no objection to arresting that pain. Therefore she, Lady Byron, had lodged in a neighboring bank the sum of one hundred pounds, to be used for benevolent purposes; and in order to preclude all outside speculation, she had made the money payable to the order of the intermediate person, so that the sufferer's name need not appear at all. Five-and-thirty years of unremitting secret bounty like this must make up a great amount of human happiness: but this was only one of a wide variety of methods of doing good. It was the unconcealable magnitude of her beneficence, and its wise quality, which made her a second time the theme of English conversation in all honest households within the four seas. Years ago, it was said far and wide, that Lady Byron was doing more good than anybody else in England; and it was difficult to imagine how anybody could do more. Lord Byron spent every shilling that the law allowed him out of her property, while he lived, and left away from her every shilling that he could deprive her of by his will; yet she had

eventually a large income at her command. In the management of it she showed the same wise consideration that marked all her practical decisions. She resolved to spend her whole income, seeing how much the world needed help at the moment. Her care was for the existing generation, rather than for a future one, which would have its own friends. She usually declined trammelling herself with annual subscriptions to charities, preferring to keep her freedom from year to year, and to achieve definite objects by liberal bounty, rather than to extend partial help over a large surface which she could not herself superintend.

It was her first industrial school that awakened the admiration of the public, which had never ceased to take an interest in her, while sorely misjudging her character. We hear much now — and everybody hears it with pleasure — of the spread of education in “common things.” But, long before Miss Coutts inherited her wealth, long before a name was found for such a method of training, Lady Byron had instituted the thing, and put it in the way of making its own name. She was living at Ealing, in Middlesex, in 1834; and there she opened one of the first industrial schools in England, if not the very first. She sent out a master to Switzerland, to be instructed in De Fellenburg’s method. She took on lease five acres of land, and spent several hundred pounds in rendering the buildings upon it fit for the purposes of the school. A liberal education was afforded to the children of artisans and laborers, during the half of the day when they were not employed in the field or garden. The allotments were rented by the boys, who raised and sold produce which afforded them a considerable yearly profit, if they were good workmen. Those who worked in the field earned wages, — their labor being paid by the hour, according to the capability of the young laborer. They kept their accounts of expenditure and receipts, and acquired good habits of business, while learning the occupation of their lives. Some me-

chanical trades were taught, as well as the arts of agriculture. Part of the wisdom of the management lay in making the pupils pay. Of one hundred pupils, half were boarders. They paid little more than half the expense of their maintenance; and the day-scholars paid three-pence per week. Of course, a large part of the expense was borne by Lady Byron, besides the payments she made for children who could not otherwise have entered the school. The establishment flourished steadily till 1852, when the owner of the land required it back for building-purposes. During the eighteen years that the Ealing schools were in action, they did a world of good in the way of incitement and example. The Poor-Law Commissioners pointed out their merits. Land-owners and other wealthy persons visited them, and went home and set up similar establishments. During those years, too, Lady Byron had herself been at work in various directions, to the same purpose.

A more extensive industrial scheme was instituted on her Leicestershire property; and not far off, she opened a girls’ school, and an infant school; and when a season of distress came, as such seasons are apt to befall the poor Leicestershire stocking-weavers, Lady Byron fed the children for months together, till they could resume their payments. These schools were opened in 1840. The next year, she built a school-house on her Warwickshire property; and five years later, she set up an iron school-house on another Leicestershire estate. By this time, her educational efforts were costing her several hundred pounds a year in the mere maintenance of existing establishments; but this is the smallest consideration in the case. She has sent out tribes of boys and girls into life fit to do their part there with skill and credit and comfort. Perhaps it is a still more important consideration, that scores of teachers and trainers have been led into their vocation, and duly prepared for it, by what they saw and learned in her schools. As for the best and the worst of the Ealing boys, —

the best have, in a few cases, been received into the Battersea Training School, whence they could enter on their career as teachers to the greatest advantage; and the worst found their school a true reformatory, before reformatory schools were heard of. At Bristol she bought a house for a reformatory for girls; and there her friend, Miss Carpenter, faithfully and energetically carries out her own and Lady Byron's aims, which were one and the same.

There would be no end, if I were to catalogue the schemes of which these are a specimen. It is of more consequence to observe that her mind was never narrowed by her own acts, as the minds of benevolent people are so apt to be. To the last, her interest in great political movements, at home and abroad, was as vivid as ever. She watched every step won in philosophy, every discovery in science, every token of social change and progress, in every shape. Her mind was as liberal as her heart and hand. No diversity of opinion troubled her; she was respectful to every sort of individuality, and indulgent to all constitutional peculiarities. It must have puzzled those who kept up the notion of her being "strait-laced," to see how indulgent she was even to epicurean tendencies,—the remotest of all from her own.

But I must stop; for I do not wish my honest memorial to degenerate into panegyric. — Among her latest known acts were her gifts to the Sicilian cause, and her manifestations on behalf of the anti-slavery cause in the United States. Her kindness to William and Ellen Craft must be well known there; and it is also related in the newspapers that she bequeathed a legacy to a young American, to assist him under any disadvantages he might suffer as an abolitionist.

All these deeds were done under a heavy burden of ill-health. Before she had passed middle life, her lungs were believed to be irreparably injured by partial ossification. She was subject to

attacks so serious, that each one for many years was expected to be the last. She arranged her affairs in correspondence with her liabilities; so that the same order would have been found, whether she died suddenly or after long warning.

She was to receive one more accession of outward greatness before she departed. She became Baroness Wentworth in November, 1856. This is one of the facts of her history; but it is the least interesting to us, as probably to her. We care more to know that her last days were bright in honor, and cheered by the attachment of old friends, worthy to pay the duty she deserved. Above all, it is consoling to know that she who so long outlived her only child was blessed with the unremitting and tender care of her granddaughter. She died on the sixteenth of May, 1860.

The portrait of Lady Byron, as she was at the time of her marriage, is probably remembered by some of my readers. It is very engaging. Her countenance afterwards became much worn; but its expression of thoughtfulness and composure was very interesting. Her handwriting accorded well with the character of her mind. It was clear, elegant, and womanly. Her manners differed with circumstances. Her shrinking sensitiveness might embarrass one visitor, while another would be charmed with her easy, significant, and vivacious conversation. It depended much on whom she talked with. The abiding certainty was, that she had strength for the hardest of human trials, and the composure which belongs to strength. For the rest, it is enough to point to her deeds, and to the mourning of her friends round the chasm which her departure has made in their life, and in the society in which it is spent. All that could be done in the way of personal love and honor was done while she lived; it only remains now to see that her name and fame are permitted to shine forth at last in their proper light.

GETTING HOME AGAIN.

It is a good thing, said an aged Chinese Travelling Philosopher, for every man, sooner or later, to get back again to his own tea-cup. And Ling Ching Ki Hi Fum (for that was the name of the profound old gentleman who said it) was right. Travel may be "the conversion of money into mind,"—and happy the man who has turned much coin into that precious commodity,—but it is a good thing, after being tossed about the world from the Battery to Africa,—that dry nurse of lions, as Horace calls her,—to anchor once more beside the old familiar tea-urn on the old familiar tea-table. This is the only "steamy column" worth hailing with a glad welcome after long absence from home, and fully entitled to be heartily applauded for its "bubbling and loud-hissing" propensities.

We are not a Marco Polo or a William de Rubruquis, and we have no wonders to tell of the Great Mogul or the Great Cham. We did not sail for Messrs. Pride, Pomp, Circumstance, and Company; consequently, we have no great exploits to recount. We have been wrecked at sea only once in our many voyages, and, so far as we know our own tastes, do not care to solicit aid again to be thrown into the same awkward situation. But for a time we have been

"Placed far amid the melancholy main," and now we are among our own tea-cups. This is happiness enough for a cold winter's night. Mid-ocean, and mid tea-cups! Stupendous change, let us tell you, worthy friend, who never yet set sail where sharks and other strange sea-cattle bob their noses above the brine,—who never lived forty days in the bowels of a ship, unable to hold your head up to the captain's bluff "good morning" or the steward's cheery "good night." Sir Philip Sidney discourses of a riding-master he encountered in Vienna, who spoke so eloquently of the noble animal he had to deal with, that he almost persuaded Sir

Philip to wish himself a horse. We have known ancient mariners expatiate so lovingly on the frantic enjoyments of the deep sea, that very youthful listeners have for the time resolved to know no other existence. If the author of the "Arcadia" had been permitted to become a prancing steed, he might, after the first exhilarating canter, have lamented his equine state. How many a first voyage, begun in hilarious impatience, has caused a bitter repentance! The sea is an over-rated element, and we have nothing to say in its favor. Because we are out of its uneasy lap to-night, we almost resemble in felicity Richter's *Walt*, who felt himself so happy, that he was transported to the third heaven, and held the other two in his hand that he might give them away. To-morrow morning we shall not hear that swashing, scaring sound directly over-head on the wet deck, which has so often murdered our slumbers. Delectable the sensation that we don't care a rope's-end "how many knots" we are going, and that our ears are so far away from that eternal "Ay, ay, Sir!" "The whales," says old Chapman, speaking of Neptune, "exulted under him, and knew their mighty king." Let them exult, say we, and be blowed, and all due honor to their salt sovereign! but of their personal acquaintance we are not ambitious. We have met them now and then in the sixty thousand miles of their watery playing-places we have passed over, and they are not pretty to look at. Roll on, et cetera, et cetera,—and so will we, for the present, at least, as far out of *your* reach as possible.

Yes, wise denizen of the Celestial Empire, it is a good, nay, a great thing, to return even to so small a home-object as an old tea-cup. As we lift the bright brim to our so long absent lips, we repeat it. As we pour out our second, our third, and our fourth, we say it again. Ling Ching, you were right!

And now, as the rest of the household have all gone up bed-ward, and left us with their good-night tones, "Like flowers' voices, if they could but speak," we dip our pen into the cocked hat of the brave little bronze warrior who has fed us many a year with ink from the place where his brains ought to be. Pausing before we proceed to paper, we look around on our household gods. The coal bursts into crackling fits of merriment, as we thrust the poker between the iron ribs of the grate. It seems to say, in the jolliest possible manner of which it is capable, "Oh, go no more a-roaming, a-roaming, across the windy sea!" How odd it seems to be sitting here again, listening to the old clock out there in the entry! Often we seemed to hear it during the months that have flown away, when we knew that "our ancient" was standing sentinel for Time in another hemisphere. One night, dark and stormy on the Mediterranean, as we lay wakeful and watchful in the little steamer that was bearing us painfully through the noisy tempest towards Saint Peter's and the Colosseum, suddenly, above the tumult of the voyage, our household monitor began audibly and regularly, we thought, to mark the seconds. Then it must have been only fancy. Now it is something more, and we know that our mahogany friend is really wagging his brassy beard just outside the door. We remember now, as we lay listening that rough night at sea, how Milton's magic sounding line came to us beating a sad melody with the old clock's imagined tramp,—

"The Lars and Lemures moan with midnight plaint."

Let the waves bark to-night far out on "the desolate, rainy seas,"—the old clock is all right in the entry!

Landed, and all safe at last! our much-abused, lock-broken, unhinged portmanteau unpacked and laid ignobly to rest under the household eaves! Stay a moment,—let us pitch our inky passport into the fire. How it writhes and grows black in the face! And now it will trouble its owner no more forever. It was a fool-

ish, extravagant companion, and we are glad to be rid of it. One little blazing fragment lifts itself out of the flame, and we can trace on the smouldering relic the stamp of Austria. Go back again into the grate, and perish with the rest, dark blot!

We look round our quiet apartment, and wonder if it be all true, this getting home again. We stir the fire once more to assure ourselves that we are not somewhere else,—that the street outside our window is not known as Jermyn Street in the Haymarket,—or the Via Babuino near the Pincio,—or Princes Street, near the Monument. How do we determine that we are not dreaming, and that we shall not wake up to-morrow morning and find ourselves on the Arno? Perhaps we are *not* really back again where there are no

"Eremites and friars,
White, black, and gray, with all their trim-
pery."

Perhaps we are a flamingo, a banyan-tree, or a mandarin. But there stands the tea-cup, and our identity is sure!

Here at last, then, for a live certainty! But how strange it all seems, resting safely in our easy slippers, to recall some of the far-off scenes so lately present to us! Yesterday was it, or a few weeks ago, that this "excellent canopy," our modest roof, dwelt three thousand miles away to the westward of us? At this moment stowed away in a snuggerly called our own; and then—how brief a period it seems! what a small parenthesis in time!—putting another man's latch-key into another man's door, night after night, in a London fog, and feeling for the unfamiliar aperture with all the sensation of an innocent housebreaker! Muffled here in the oldest of dressing-gowns, that never lifted its blessed arms ten rods from the spot where it was born; and only a few weeks ago lolling out of C. R.'s college-window at Oxford, counting the deer, as they nibbled the grass, and grouped themselves into beautiful pictures on the sward of ancient Magdalen!

As we look into the red fire in the grate, we think of the scarlet coats we saw not

long ago in Stratford, when E. F., kindest of men and merriest of hosts, took us to the "meet." We gaze round the field again, and enjoy the enlivening scene. White-haired and tall, our kind-hearted friend walks his glossy mare up and down the turf. His stalwart sons, with sport imbrowned, proud of their sire, call our attention to the sparkle in the old man's eye. We are mounted on a fiery little animal, and are half-frightened at the thought of what she may do with us when the chase is high. Confident that a roll is inevitable, and that, with a dislocated neck, enjoyment would be out of the question, we pull bridle, and carefully dismount, hoping not to attract attention. Whereat all our jolly English cousins beg to inquire, "What's the row?" We whisper to the red-coated brave prancing near us, that "we have changed our mind, and will not follow the hunt to-day, — another time we shall be most happy, — just now we are not quite up to the mark, — next week we shall be all right again," etc., etc. One of the lithe hounds, who seems to have steel springs in his hind legs, looks contemptuously at the American stranger, and turns up his long nose like a moral insinuation. Off they fly! we watch the beautiful cavalcade bound over the brook and sweep away into the woodland passes. Then we saunter down by the Avon, and dream away the daylight in endless visions of long ago, when sweet Will and his merry comrades moved about these pleasant haunts. Returning to the hall, we find we have walked ten miles over the breezy country, and knew it not, — so pleasant is the fragrant turf that has been often pressed by the feet of Nature's best-beloved high-priest! Round the mahogany tree that night we hear the hunters tell the glories of their sport, — how their horses, like Homer's steeds,

"Devoured up the plain";

and we can hear now, in imagination, the voices of the deep-mouthed hounds rising and swelling among the Warwick glens.

Neither can we forget, as we sit here musing, whose green English carpet, down

in Kent, we so lately rested on under the trees, — nor how we wandered off with the lord of that hospitable manor to an old castle hard by his grounds, and climbed with him to the turret-tops, — nor how we heard him repeople in fancy the aged ruin, as we leaned over the wall and looked into the desolate court-yard below. The world has given audience to this man, thought we, for many a year; but one who has never heard the sound of his laughing voice knows not half his wondrous power. When he reads his "Christmas Carol," go far to hear him, judicious friend, if you happen to be in England, and let us all hope together that we shall have that keen gratification next year in America. To know him is to love and esteem him tenfold more than if you only read of him.

Let us bear in mind, too, how happily the hours went by with us so recently in the vine-embowered cottage of dear L. H., the beautiful old man with silver hair, —

"As hoary frost with spangles doth attire
The mossy branches of an oak."

The sound of the poet's voice was like the musical fall of water in our ears, and every sentence he uttered then is still a melody. As we sit dreamily here, he speaks to us again of "life's morning march, when his bosom was young," and of his later years, when his struggles were many and keen, and only his pen was the lever which rolled poverty away from his door. We can hear him, as we pause over this leaf, as we heard the old clock that night at sea. He tells us of his cherished companions, now all gone, — of Shelley, and Keats, and Charles Lamb, whom he loved, — of Byron, and Coleridge, and the rest. As we sit at his little table, he hands us a manuscript, and says it is the "Endymion," John Keats's gift to himself. He reads to us from it some of his favorite lines, and the tones of his voice are very tender over his dead friend's poem. As we pass out of his door that evening, the moon falls on his white locks, his thin hand rests for a moment on our shoulder, and we hear him say very kindly, "God bless you!"

In London, not long after this, we meet again the bard of "Rimini," and his discourse is still sweet as any dulcimer. Another old man is with him, a poet also, whose songs are among the bravest in England's Helicon. We observe how these two friends love each other, and as they stand apart in the ante-room, the eldest with his arm around his brother bard, we think it is a very pleasant sight, and not to be forgotten ever. And when, a few months later, we are among the Alpine hills, and word comes to us that L. H. is laid to rest in Kensal Green Churchyard, we are grateful to have looked upon his cheerful countenance, and to have heard him say, "God bless you!"

We cry your mercy, gayest of cities, with your bright Bois de Boulogne, and your splendid *cafés*! We do not much affect your shows, but we cannot dismiss forever the cheerful little room, cloud-environed almost, up to which we have so often toiled, after days of hard walking among the gaudy streets of the French capital. One pleasant scene, at least, rises unbidden, as we recall the past. It is a brisk, healthy morning, and we walk in the direction of the Tuileries. Bending our steps toward the Palace, (it is yet early, and few loiterers are abroad in the leafy avenues,) we observe a group of three persons, not at all distinguished in their appearance, having a roystering good time in the Imperial Garden. One of them is a little boy, with a chubby, laughing face, who shouts loudly to his father, a grave, thoughtful gentleman, who runs backwards, endeavoring to out-race his child. The mother, a fair-haired woman, with her bonnet half loose in the wind, strives to attract the boy's attention and win him to her side. They all run and leap in the merry morning-air, and, as we watch them more nearly, we know them to be the royal family out larking before Paris is astir. Play on, great Emperor, sweet lady, and careless boy-prince! You have hung up a picture in our gallery of memory, very pleasant to look at, this

cold night in America. May you always be as happy as when you romped together in the garden!

The days that are fled still knock at the door and enter. We are walking on the banks of the Esk, toward a friendly dwelling in Lasswade,—*Mavis Bush* they call the pretty place at the foot of the hill. A slight figure, clad in black, waits for us at the garden-gate, and bids us welcome in accents so kindly, that we, too, feel the magic influence of his low, sweet voice,—an effect which Wordsworth described to us years before as eloquence set to music. The face of our host is very pale, and, when he puts his thin arm within ours, we feel how frail a body may contain a spirit of fire. We go into his modest abode and listen to his wonderful talk, wishing all the while that the hours were months, that we might linger there, spellbound, day and night, before the master of our English tongue. He proposes a ramble across the meadows to Roslin Chapel, and on the way he discourses of the fascinating drug so painfully associated with his name in literature,—of Christopher North, in whose companionship he delighted among the Lakes,—of Elia, whom he recalled as the most lovable man among his friends, and whom he has well described elsewhere as a Diogenes with the heart of a Saint John. In the dark evening he insists upon setting out with us on our return to Edinburgh. When it grows late, and the mists are heavy on the mountains, we stand together, clasping hands of farewell in the dim road, the cold Scotch hills looming up all about us. As the small figure of the English Opium-Eater glides away into the midnight distance, our eyes strain after him to catch one more glimpse. The Esk roars, and we hear his footsteps no longer.

The scene changes, as the clock strikes in the entry. We are lingering in the piazza of the Winged Lion, and the bronze giants in their turret overlooking the square raise their hammers and beat the solemn march of Time. As we float away through the watery streets, old

Shylock shuffles across the bridge,—black barges glide by us in the silent canals,—groups of unfamiliar faces lean from the balconies,—and we hear the plashing waters lap the crumbling walls of Venice, with its dead Doges and decaying palaces.

Again we stir the fire, and feel it is home all about us. But we like to sit here and think of that rosy evening, last summer, when we came walking into Interlachen, and beheld the ghost-like figure of the Jungfrau issuing out of her cloudy palace to welcome the stars,—of a cool, bright, autumnal morning on the

western battlements overlooking Genoa, the blue Mediterranean below mirroring the silent fleet that lay so motionless on its bosom,—of a midnight visit to the Colosseum with a band of German students, who bore torches in and out of the time-worn arches, and sang their echoing songs to the full moon,—of days, how many and how magical! when we awoke every morning to say, “We are in Rome!”

But it grows late, and it is time now to give over these reflections. So we wind up our watch, and put out the candle.

A DRY-GOODS JOBBER IN 1861.

WHAT is a dry-goods jobber? No wonder you ask. You have been hunting, perhaps, for our peripatetic post-office, and have stumbled upon Milk Street and Devonshire Street and Franklin Street. You are almost ready to believe in the lamp of Aladdin, that could build palaces in a night. Looking up to the stately and costly structures which have usurped the place of once familiar dwellings, and learning that they are, for the most part, tenanted by dry-goods jobbers, you feel that for such huge results there must needs be an adequate cause, and so you ask, What is a dry-goods jobber?

It is more than a curious question. For parents desirous of finding their true sphere for promising and for unpromising sons, it is eminently a practical question. It is a question comprehensive of dollars and cents,—also of bones and sinews, of muscles, nerves, and brains, of headache, heartache, and the cyclopædia of being, doing, and enduring. An adequate answer to such a question must needs ask your indulgence, for it cannot be condensed into a very few words.

A dry-goods jobber is a wholesale buy-

er and seller, for cash or for approved credit, of all manner of goods, wares, and materials, large and small, coarse and fine, foreign and domestic, which pertain to the clothing, convenience, and garnishing, by night and by day, of men, women, and children: from a button to a blanket; from a calico to a carpet; from stockings to a head-dress; from an inside handkerchief to a waterproof; from a piece of tape to a thousand bales of shirtings; not forgetting linen, silk, or woollen fabrics, for drapery or upholstery, for bed or table, including hundreds of items which time would fail me to recite. All these the dry-goods jobber provides for his customer, the retailer, who in his turn will dispense them to the consumer.

A really competent and successful dry-goods jobber, in the year of grace, one thousand, eight hundred and sixty-one, is a new creation. He is begotten of the times. Of him, as truly as of the poet, and with yet more emphasis, it must be said, He is born, not made. He is a poet, a philosopher, an artist, an engineer, a military commander, an advocate, an attorney, a financier, a steam-engine, a telegraph-operator, a servant-of-all-work, a Job,

a Hercules, and a Bonaparte, rolled into one.

"Exaggeration!" do you say? Not at all. — You asked for information? You shall have it, to your heart's content.

To a youth, for a time interrupted in his preparation for college, I said, —

Never mind; this falls in exactly with my well-considered plan. You shall go into a dry-goods store till your eyes recover strength; it will be the best year's schooling of your life.

"How so?" was the dubious answer; "what can I learn there?"

Learn? Everything, — common sense included, which is generally excluded from the University curriculum: for example, time, place, quantity, and the worth of each. You shall learn length, breadth, and thickness; hard and soft; pieces and yards; dozens and the fractions thereof; order and confusion, cleanliness and dirt, — to love the one and hate the other; materials, colors, and shades of color; patience, manners, decency in general; system and method, and the relation these sustain to independence; in short, that there is a vast deal more out of books than in books; and, finally, that the man who knows only what is in books is generally a lump of conceit, and of about as much weight in the scales of actual life as the ashes of the Alexandrian library, or the worms in any parchments that may have survived that conflagration.

"Whew!" was his ejaculation; "I didn't know there was so much."

I dare say not. Most of your limited days have passed under the training of men who are in the like predicament, — whose notion of the chief end of man is, to convert lively boys into thick dictionaries, — and who honestly believe that the chief want of the age is your walking dictionary. Any other type of humanity, they tell us, "won't pay." Much they know of what will and what won't pay! This comes of partial education, — of one-sided, of warped, and biased education. It puts one out of patience, this arrogance of the University, this presum-

ing upon the ignorance of the million, this assertion of an indispensable necessity to make the boy of the nineteenth century a mere expert in some subdivision of one of the sciences. The obstinacy of an hereditary absolutism, which the world has outgrown, still lingers in our schools of learning. Let us admit the divine right of Science, admit the fitness of a limited number of our youth to become high-priests in her temple, but no divine right of fossil interpreters of Science to compel the entire generation to disembowel their sons and make of these living temples mere receptacles of Roman, Grecian, or Egyptian relics. We don't believe that "mummy is medicinal," the Arabian doctor Haly to the contrary notwithstanding. If it ever was, its day has gone by. Therefore let all sensible people pray for a Cromwell, — not to pull down University Science, but to set up the Commonwealth of Common Sense, to subordinate the former to the latter, and to proclaim an education for our own age and for its exigencies. Your dry-goods jobber stands in violent contrast to your University man in the matter of practical adaptation. His knowledge is no affair of dried specimens, but every particle of it a living knowledge, ready, at a moment's warning, for all or any of the demands of life.

You are perhaps thinking, — "Yes, that is supposable, because the lessons learned by the jobber are limited to the common affairs of daily life, are not prospective; because, belonging only to the passing day, they are easily surveyed on all sides, and their full use realized at once; in short, a mere matter of buying and selling goods: a very inferior thing, as compared with the dignified and scholarly labors of the student."

How mistaken this estimate is will appear, as we advance to something like a comprehensive survey of the dry-goods jobber's sphere.

First, then, he is a buyer of all manner of goods, wares, and materials proper to his department in commerce. He is minutely informed in the history of

raw materials. He knows the countries from which they come,—the adaptation of soils and climates to their raising,—the skill of the cultivators,—the shipping usages,—the effect of transportation by land and sea on raw materials, and on manufactured articles,—with all the mysteries of insurance allowances and usages, the debentures on exportation, and the duties on importation, in his own and in other lands. His forecast is taxed to the utmost, as to what may be the condition of his own market, six, twelve, or eighteen months from the time of ordering goods, both as to the quantity which may be in market, and as to the fashion, which is always changing,—and also as to the condition of his customers to pay for goods, which will often depend upon the fertility of the season. As respects home-purchases, he is compelled to learn, or to suffer for the want of knowing, that the difference between being a skilful, pleasant buyer and the opposite is a profit or loss of from five to seven and a half or ten per cent.,—or, in other words, the difference, oftentimes, between success and ruin, between comfort and discomfort, between being a welcome and a hated visitor, between being honored as an able merchant and condemned as a mean man or an unmitigated bore.

Is your curiosity piqued to know wherein buyers thus contrasted may differ? They differ endlessly, like the faces you meet on the street. Thus, one man is born to an open, frank, friendly, and courteous manner; another is cold, reserved, and suspicious. One is prompt, hilarious, and provocative of every good feeling, whenever you chance to meet; the other is slow, morose, and fit to waken every dormant antipathy in your soul. An able buyer is, or becomes, observing to the last degree. He knows the slightest differences in quality and in style, and possesses an almost unerring taste,—knows the condition of the market,—knows every holder of the article he wants, and the lowest price of each. He knows the peculiarities of the seller,

—his strong points and his weak points, his wisdom and his foibles, his very temperament, and how it is acted upon by his dinner or the want of it. He knows the estimate put upon his own note by that seller. He knows what his note will sell for in the street. He knows to a feather's weight the influence of each of these items upon the mind of the seller of whom he wishes to make a purchase. Talk about diplomacy!—there's not a man in any court in Europe who knows his position, his fulcrum, and his lever, and the use he can make of them, as this man knows. He can unravel any combination, penetrate any disguise, surmount any obstacle. Beyond all other men, he knows when to talk, and when to refrain from talking,—how to throw the burden of negotiation on the seller,—how to get the goods he wants at his own price, not at *his* asking, but on *the suggestion of the seller*, prompted by his own politely obvious unwillingness to have the seller part with his merchandise at any price not entirely acceptable to himself.

The incompetent man, on the other hand, is presuming, exacting, and unfeeling. He not only desires, but asserts the desire, in the very teeth of the seller, to have something which that seller has predetermined that he shall not have. He fights a losing game from the start. He will probably begin by depreciating the goods which he knows, or should know, that the seller has reason to hold in high esteem. He will be likely enough to compare them to some other goods which he knows to be inferior. He will thus arouse a feeling of dislike, if not of anger, where his interest should teach him to conciliate and soothe; and if he sometimes carry his point, his very victory is in effect a defeat, since it procures him an increased antipathy. This the judicious buyer never does. He repudiates, as a mere half-truth, and a relic of barbarism, the maxim, "There is no friendship in trade."

"But," you are asking, "do only those succeed who are born to these extraordinary endowments? And those who do

succeed, are they, in fact, each and all of them, such wonderfully capable men as you have described?"

If by success you mean mere money-making, it is not to be denied that some men do that by an instinct, little, if at all, superior to that of the dog who smells out a bone. There are exceptions to all rules; and there are chances in all games, even in games of skill. Lord Timothy Dexter, as he is facetiously called, shipped warming-pans to the West Indies, in defiance of all geographical objections to the venture, and made money by the shipment,—not because warming-pans were wanted there, but because the natives mistook and used them for molasses-ladles. It must be owned that a portion of the successful ones are *lucky*,—that a portion of them use the blunt weapon of an indomitable will, as an efficient substitute for the finer edge of that nice tact and good manners which they lack. Their very rudeness seems to commend them to the rude natures which confound refinement with trickery and assume that brutality must needs be honest.

But there are other things to be said of buying. The dry-goods jobber frequents the auction-room. If you have never seen a large sale of dry-goods at auction, you have missed one of the remarkable incidents of our day. You are not yet aware of how much an auctioneer and two or three hundred jobbers can do and endure in the short space of three hours. You must know that fifty or a hundred thousand dollars' worth of goods may easily change owners in that time. You are not to dream of the leisurely way of disposing of somebody's household-furniture or library, which characterizes the doings of one or two of our fellow-citizens who manage such matters within speaking distance of King's Chapel: but are rather to picture to yourself a congregation of three hundred of the promptest men in our Atlantic cities, with a sprinkling of Westerners quite as wide awake for bargains, each of them having marked his catalogue; an auctioneer who considers the sale of a hundred

lots an hour his proper rôle, and who is able to see the lip, eye, or finger of the man whose note he covets, in spite of all sounds, signs, or opaque bodies. The man of unquiet nerves or of exacting lungs would do well to leave that arena to the hard-heads and cool-bloods who can pursue their aim and secure their interests undisturbed either by the fractional rat-a-tat-tat of the auctioneer's "Twenty-seven af—naf—naf—naf,—who'll give me thirty?" or by the banter and comicalities which a humor-loving auctioneer will interject between these bird-notes, without changing his key, or arresting his sale a moment. If you would see the evidence of comprehensive and minute knowledge, of good taste, quick wit, sound judgment, and electrical decision, attend an auction-sale in New York some morning. There will be no lack of fun to season the solemnity of business, nor of the mixture of courtesy and selfishness usual in every gathering, whether for philanthropic, scientific, or commercial purposes. Many dry-goods jobbers will attend the sale with no intention of buying, but simply to note the prices obtained, and, having traced the goods to their owners, to get the same in better order and on better terms; the commission paid to the auctioneer being divided, or wholly conceded by the seller to the buyer, according to his estimate of the note.

A dry-goods buyer will sometimes spend a month in New York, the first third or half of which he will devote to ascertaining what goods are in the market, and what are to arrive; also to learning the mood of the English, French, and Germans who hold the largest stocks. Sometimes these gentlemen will make an early trial of their goods at auction. Unsatisfactory results will rouse their phlegm or fire, and they declare they will not send another piece of goods to auction, come what may. For local or temporary reasons, buyers sometimes persist in holding back till the season is so far advanced that the foreign gentlemen become alarmed. Their credits in London, Paris, and Amsterdam are running out; they are

anxious to make remittances; and then ensues one of those dry-goods panics so characteristic of New York and its mixed multitude; an avalanche of goods descends upon the auction-rooms, and prices drop ten, twenty, forty per cent., it may be, and the unlucky or short-sighted men who made early purchases are in desperate haste to run off their stocks before the market is irreparably broken down. Whether, therefore, to buy early or late, in large or in small quantities, at home or abroad,—are questions beset with difficulty. He who imports largely may land his goods in a bare market and reap a golden harvest, or in a market so glutted with goods that the large sums he counts out to pay the duties may be but a fraction of the loss he knows to be inevitable.

In addition to the problems belonging to time and place of purchasing, to quantities and prices, there is a host of other problems begotten of styles, of colors, of assortments, of texture and finish, of adaptation to one market or another. The profit on a case of goods is often sacrificed by the introduction or omission of one color or figure, the presence or absence of which makes the merchandise desirable or undesirable. Little less than omniscience will suffice to guard against the sometimes sudden, and often most unaccountable, freaks of fashion, whose fiat may doom a thing, in every respect admirably adapted to its intended use, to irretrievable condemnation and loss of value. And when you remember that the purchases of dry-goods must be made in very large quantities, from a month to six or even twelve months before the buyer can sell them, and that his sales are many times larger than his capital, and most of them on long credit, you have before you a combination of exigencies hardly to be paralleled elsewhere.

The crisis of 1857 brought a general collapse. Scores and scores of jobbers failed; very few dared to buy goods. Mills were compelled to run on short time, or to cease altogether. The country became bare of the common necessa-

ries of life. In process of time trade rallied. Manufacturing recommenced; orders for goods poured in; and for a twelve-month and more the manufacturer has had it all his own way. His goods are all sold ahead, months ahead of his ability to manufacture. He makes his own price, and chooses his customer. This operates not unkindly on the jobbers who are wealthy and independent; but for those who have but lately begun to mount the hill of difficulty, it offers one more impediment. For, to men who have a great many goods to sell, it is a matter of moment to secure the customers who can buy in large quantities, and whose notes will bring the money of banks or private capitalists as soon as offered. Against such buyers, men of limited means and of only average business-ability have but a poor chance. There will always be some articles of merchandise in the buying or selling of which they cannot compete.

When a financial crisis overtakes the community, we hear much and sharp censure of all *speculation*. Speculators, one and all, are forthwith consigned to an abyss of obloquy. The virtuous public outside of trade washes its hands of all participation in the iniquity. This same virtuous public knows very little of what it is talking about. What is speculation? Shall we say, in brief and in general, that it consists in running risks, in taking extra-hazardous risks, on the chance of making unusually large profits? Is it that men have abandoned the careful ways of the fathers, and do not confine themselves to small stores, small stocks, and cash transactions? And do you know who it is that has compelled this change? That same public who denounce speculation in one breath, and in the next clamor for goods at low prices, and force the jobber into large stores and large sales at small profits as the indispensable condition of his very existence.

Those who thus rail at speculation are generally quite unaware that their own inexorable demand for goods at low prices is one of the principal efficient causes

of that of which they complain. They do not know that the capacious maw of the insatiable public is yearly filled with millions on millions of shirtings and sheetings, and other articles of prime necessity, without one farthing of profit to the jobber. The outside world reason from the assumption, that the jobber might, but will not, avoid taking considerable risks. They do not consider, for they do not know, how entirely all is changed from the days and circumstances in which a very small business would suffice to maintain the merchant. They do not consider, that, an immense amount of goods being of compulsion sold without profit, a yet other huge amount must be so sold as to compensate for this. Nor do they consider that the possibility of doing this is often contingent upon the buyer's carefully calculated probability of a rise in the article he is purchasing. Many a time is the jobber enabled and inclined to purchase largely only by the assurance that from the time of his purchase the price will be advanced.

The *selling* of dry-goods is another department in high art about which the ignorance of outsiders is ineffable. I was once asked, in the way of courtesy and good neighborhood, to call on a clergyman in our vicinity, — which I did. Desirous of doing his part in the matter of good fellowship and smooth conversation, he began thus: —

"Well, now, Mr. Smith, you know all about business: I suppose, if I were to go into a store to buy goods, nineteen men out of twenty would cheat me, if they could; wouldn't they?"

"No, Sir!" I answered, with a swelling of indignation at the injustice, a mingling of pity for the ignorance, and a foreboding of small benefit from the preaching of a minister of the gospel who knew so little of the world he lived in. "No, Sir; nineteen men in twenty would not cheat you, if they could; for the best of all reasons, — it would be dead against their own interest."

Not a day passes but the question is asked by our youths who are being ini-

tiated in the routine of selling goods, — "Is this honest? Is that honest? Is it honest to mark your goods as costing more than they do cost? Is it honest to ask one man more than you ask another? Ought not the same price to be named to every buyer? Isn't it cheating to get twenty-five per cent. profit? Can a man sell goods without lying? Are men compelled to lie and cheat a little in order to earn an honest living?"

What is the reason that these questions will keep coming up? That they can no more be laid than Banquo's ghost? Here are some of the reasons. First, and foremost, multitudes of young men, whose parents followed the plough, the loom, or the anvil, have taken it into their heads, that they will neither dig, hammer, nor ply the shuttle. To soil their hands with manual labor they cannot abide. The sphere of commerce looks to their longing eyes a better thing than lying down in green pastures, or than a peaceful life beside still waters, procured by laborious farming, or by any mechanical pursuit. Clean linen and stylish apparel are inseparably associated in their minds with an easy and elegant life, and so they pour into our cities, and the ranks of the merchants are filled, and over-filled, many times. Once, the merchant had only to procure an inviting stock, and his goods sold themselves. He did not go after customers; they came to him; and it was a matter of favor to them to supply their wants. Now, all that is changed. There are many more merchants than are needed; buyers are in request; and buyers whose credit is the best, to a very great extent, dictate the prices at which they will buy. The question is no longer, How large a profit can I get? but, How small a profit shall I accept? The competition for customers is so fierce that the seller hardly dares ask any profit, for fear his more anxious neighbor will undersell him. In order to attract customers, one thing after another has been made "a leading article," a bait to be offered at cost or even less than cost, — that being oftentimes the condition on

which alone the purchaser will make a beginning of buying.

"Jenkins," cried an anxious seller, "you don't buy anything of me, and I can sell you as cheap as any. Here 's a bale of sheetings now, at eight cents, will do you good."

"How many have you got?"

"Oh, plenty."

"Well, how many?"

"Fifteen bales."

"Well, I 'll take them."

"Come in and buy something more."

"No, nothing more to-day."

There was a loss of seventy-five dollars, and he did not dare buy more.

It will be obvious that the selling a part of one's goods at less than cost enhances the necessity of getting a profit on the rest. But how to do this, under the sharp scrutiny of a buyer who knows that his own success, not to say his very existence, depends upon his paying no profit possible to be avoided,—no profit, at all events, not certainly paid by some sharp neighbor who is competing with him for the same trade?

"But is there anything in all this," you are asking, "to preclude the jobber's telling the truth?" Nothing. "Anything to preclude strict honesty?" Nothing. "Why, then, do the questions you have quoted continually recur?"

I answer: In order to get his share of the best custom in his line, the dry-goods jobber has taken a store in the best position in town, at a rent of from three to fifty thousand dollars a year; has hired men and boys at all prices, from fifty dollars to five thousand,—and enough of these to result in an aggregate of from five to fifty thousand dollars a year for help, without which his business cannot be done. Add to this the usual average for store-expenses of every name, and for the family-expenses of two, five, or seven partners, and you find a dry-goods firm under the necessity of getting out of their year's sales somewhere from fifteen to a hundred and fifty thousand dollars profit, before they shall have saved one cent to meet the losses of an unfavorable season.

Now, though there is nothing even in all these urgencies to justify a single lie or fraud, there is much to sharpen a man's wits to secure the sale of his goods,—much to educate him in all manner of expedients to baffle the inquiries of customers who would be offended, if they could discover that he ever charged them the profit without which he could never meet his expenses. And the jobber's problem is complicated by the folly, universally prevalent among buyers, of expecting some partiality or peculiarity of favor over their neighbors who are just as good as themselves. Every dry-goods jobber knows that his customer's foolish hope and expectation often demand three absurdities of him: first, the assurance that he has the advantage over all other jobbers in a better stock of goods, better bought; secondly, that he has a peculiar friendship for himself; and thirdly, that, though of other men he must needs get a profit, in his special instance he shall ask little or none; and that, such is his regard for him, it is a matter of no moment whether he live in Lowell or Louisiana, in New Bedford or Nebraska, or whether he pay New England bank-notes within thirty days, or wild-cat money and wild lands, which may be converted into cash, with more or less expense and loss, somewhere between nine months and nine-and-twenty years.

And yet the uninitiated "can't understand how an honest merchant can have two prices for the same goods." An honest man has but one price for the same goods, and that is the cash price. All outside of that is barter,—goods for notes. His first inquiry is, What is the market-value of the note offered? True, he knows that many of the notes he takes cannot be sold at all; but he also knows that the notes he is willing to take will in the aggregate be guaranteed by a reservation of one, two, or three per cent., and that the note of the particular applicant for credit will tend to swell or to diminish the rate; and he cannot afford to exchange his goods for any note, except at a profit which will guaranty its

payment when due, — which, in other words, will make the note equal in value to cash.

Now it is just because all business-contingencies cannot be worked into an unvarying form, as regular as the multiplication-table, and as plain to the apprehension of all men, that a vast amount of lying and of dishonesty is imputed, where it does not exist. Merchants are much like other men, — wise and unwise, far-sighted and short-sighted, selfish and unselfish, honest and dishonest. But that they are as a class more dishonest than other men is so far from being true, that I much doubt if we should overstrain the matter, if we should affirm that they are the most honest class of men in the community. There is much in their training which contributes directly, and most efficiently, to this result. Their very first lessons are in feet and inches, in pounds and ounces, in exact calculations, in accounts and balances. Carelessness, mistakes, inaccuracies, they are made to understand, are unpardonable sins. The boy who goes into a store learns, for the first time, that half a cent, a quarter of a cent, an eighth of a cent, may be a matter of the gravest import. He finds a thorough book-keeper absolutely refusing himself rest till he has detected an error of ten cents in a business of six months. And every day's experience enforces the lesson. It is giving what is due, and claiming what is due, from year's end to year's end. Among merchants it is matter of common notoriety, that the prompt and exact adherence to orders insisted on by merchants, and prompt advice of receipt of business and of progress, cannot be expected from our worthy brethren at the bar. (The few honorable exceptions are respectfully informed that they are not referred to.) We do not expect them to weigh or measure the needless annoyance to which they often subject us, because they have never been, like ourselves, trained to the use of weights and measures; and therefore we are not willing to stigmatize them as dishonest, though they do, in fact, often steal our

time and strength and patience, by withholding an answer to a business-letter.

None but those who are in the business know the assiduous attention with which the dry-goods jobber follows up his customers. None but they know the urgent necessity of doing this. The jobber may have travelled a thousand miles to make his customer's acquaintance, and to prevail upon him to come to Boston to make his purchases; and some neighbor, who boards at the hotel he happens to make his resting-place, lights upon him, shows him attention, tempts him with bargains not to be refused, prevails upon him to make the bulk of his purchases of him, before his first acquaintance even hears of his arrival. To guard against disappointments such as this, the jobber sends his salesmen to live at hotels, haunts the hotels himself, studies the hotel-register far more assiduously than he can study his own comfort, or the comfort of his wife and children. Of one such jobber it was said, facetiously, — "He goes the round of all the hotels every morning with a lantern, to wake up his customers." I had an errand one day at noon to such a devotee. Inquiring for him in the counting-room, I was told by his book-keeper to follow the stairs to the top of the store, and I should find him. I mounted flight after flight to the attic, and there I found, not only the man, but also one or two of his customers, surrounding a huge packing-case, upon which they had extemporized a dinner, cold turkey and tongue, and other edibles, taken standing, with plenty of fun for a dessert. The next time we happened to meet, I said, — "So you take not only time, but also customers, by the forelock!"

"Yes, to be sure," was his answer; "let 'em go to their hotel to dinner in the middle of a bill, and somebody lights upon 'em, and carries 'em off to buy elsewhere; or they begin to remember that it is a long way home, feel homesick, slip off to New York as being so far on the way, and that's the last you see of 'em. No, we're bound to see 'em

through, and no let-up till they 've bought all they 've got on their memorandum."

We have not yet touched the question of credit. To whom shall the jobber sell his goods? It is the question of questions. Many a man who has bought well, who in other respects has sold well, who possessed all the characteristics which recommend a man to the confidence and to the good-will of his fellows, has made shipwreck of his fortunes because of his inability to meet this question. He sold his goods to men who never paid him. To say that in this the most successful jobbers are governed by an instinct, by an intuitive conviction which is superior to all rules of judgment, would be to allege what it would be difficult to prove. It would be less difficult to maintain that every competent merchant, however unconscious of the fact, has a standard of judgment by which he tries each applicant for credit. There are characteristics of men who can safely be credited, entirely familiar to his thoughts. He looks upon the man and instantly feels that he is or is not the man for him. He thinks his decision an instinct, or an intuition, because, through much practice, these mental operations have become so rapid as to defy analysis. Not being infallible, he sometimes mistakes; and when he so mistakes, he will be sure to say,—I made that loss because I relied too much upon this characteristic, or because I did not allow its proper weight to the absence of some other,—because I thought his shrewdness or his honesty, his enterprise or his economy, would save him: implying that he had observed some non-conformity to his standard, but had relied upon some excellency in excess to make up for it.

What are the perplexities which beset the question, To whom shall the jobber sell his goods? They are manifold; and some of them are peculiar to our country. Our territory is very extensive; our population very heterogeneous; the economy and close calculation which recommend a man in Massachusetts may discredit him in Louisiana. The very

countenance is often a sure indication of character and of capacity, when it is one of a class and a region whose peculiarities we thoroughly understand; but coming to us from other classes and regions, we are often at fault,—more especially in these latter days, when all strong-mindedness is presumed to be foreshadowed in a stiff beard. Time was when something could be inferred from a lip, a mouth, a chin,—when character could be found in the contour and color of a cheek; but that time has passed. The time was, when, among a homogeneous people, a few time-honored characteristics were both relied on and insisted on: for example, good parentage, good moral character, a thorough training, and superior capacity, joined to industry, economy, sound judgment, and good manners. But Young America has learned to make light of some of these, and to dispense altogether with others of them.

Once the buyer was required to prove himself an honest, worthy, and capable man. If he wanted credit, he must humbly sue for it, and prove himself deserving of it; and no man thought of applying for it who was not prepared to furnish irrefragable evidence. Once, a reference to some respectable acquaintance would serve the purpose; and neighbors held themselves bound to tell all they knew. The increase of merchants, and fierce competition for customers, have changed this. Men now regard their knowledge of other men as a part of their capital or stock-in-trade. Their knowledge has been acquired at much cost of labor and money; and they hold themselves absolved from all obligation to give away what they have thus expensively acquired. Moreover, their confidence has sometimes been betrayed, and their free communications have been remorselessly used to their disadvantage. Alas, it cannot be denied that even dry-goods jobbers, with all their extraordinary endowments, are not quite perfect! for some of them will "state the thing that is not," and others "convey" their neighbor's property into their own coffers: men who

prefer gain to godliness, and mistake much money for respectability.

There are very few men, in certain sections of the country, who will absolutely refuse to give a letter of introduction to a neighbor on the simple ground of ill-desert. Men dread the ill-will of their neighbor, and particularly the ill-will of an unscrupulous neighbor; so, when such a neighbor asks a letter, they give it. I remember such a one bringing a dozen or more letters, some of which contained the highest commendation. The writer of one of these letters sent a private note, through the mail, warning one of the persons addressed against the bearer of his own commendatory letter. Those who had no warning sold, and lost. It would be difficult to find a man, however unworthy, who could not, from some quarter, obtain a very respectable letter of introduction. One of the greatest rogues that ever came to Boston brought letters from two of the foremost houses in New York to two firms second to none in Boston. Neither of these gentlemen was in fault in the matter; the train had been laid by some obliging cousin in a banking-house in London.

In making up our account of the difficulties with which a dry-goods jobber has to deal, in conducting a successful business, it must be distinctly stated, that on no man can he count for information which will, however remotely or slightly, compromise the interest of the one inquired of. Never, perhaps, was it so true as now, that "the seller has need of a hundred eyes." The competent jobber uses his eyes first of all upon the person of the man who desires to buy of him. He questions him about himself, with such directness or indirectness as instinct and experience dictate. He learns to discriminate between the sensitiveness of the high-toned honest man and the sensitiveness of the rogue. Many men of each class are inclined to resent and resist the catechism. Strange as it may seem, the very men who would inexorably

refuse a credit to those who should decline to answer their inquiries are the men most inclined to resent any inquiry about themselves. While they demand the fullest and most particular information from their customers, they wonder that others will not take them on their own estimate of themselves.

The jobber next directs his attention to the buyer's knowledge of goods: of their quality, their style, their worth in market, and their fitness for his own market; all of which will come to light, as he offers to his notice the various articles he has for sale. He will improve the opportunity to draw him out in general conversation, so guiding it as to touch many points of importance, and yet not so as to betray a want of confidence. He sounds him as to his knowledge of other merchants at home and in the city; takes the names of his references,—of several, if he can get them; puts himself in communication with men who know him, both at his home and in the city. If he can harmonize the information derived from all these sources into a consistent and satisfactory whole, he will then do his utmost to secure his customer, both by selling him his goods at a profit so small that he need have little fear of any neighbor's underselling him, and also by granting every possible accommodation as to the time and manner of payment.

A moderately thoughtful man will by this time begin to think the elements of toil and of perplexity already suggested sufficient for the time and strength of any man, and more than he would wish to undertake. But experience alone could teach him in how many ways indulged customers can and do manage to make the profit they pay so small, and the toil and vexation they occasion so great, that the jobber is often put upon weighing the question, Should I not be richer without them? Thus, for example, some of them will affect to doubt that the jobber wishes to sell to them, and propose, as a test, that he shall let them have some choice article at the

cost, or at less than the cost, now on one pretext, and now on another,—intimating an indisposition to buy, if they cannot be indulged in that one thing. If they carry their point, that exceptional price is thenceforth claimed as the rule. Another day the concession will be asked on something else; and by extending this game so as to include a number of jobbers, these shrewd buyers will manage to lay in an assorted stock on which there will have been little or no profit to the sellers. To cap the climax of vexation, these persons will very probably come in, after not many days, and propose to cash their notes at double interest off. Only an official of the Inquisition could turn the thumb-screw so many times, and so remorselessly.

But we have yet to consider the collection of debts. The jobber who has not capital so ample as to buy only for cash is expected invariably to settle his purchases by giving his note, payable at bank on a fixed day. He pays it when due, or fails. Not so with his customers: multitudes of them shrink from giving a note payable at bank, and some altogether refuse to do so. They wish to buy on open account; or to give a note to be paid at maturity, if convenient,—otherwise not. The number of really prompt and punctual men, as compared with those who are otherwise, is very small. The number of those who never fail is smaller still. The collection-laws are completely alike, probably, in no two States. Some of them appear to have been constructed for the accommodation, not of honest creditors, but of dishonest debtors. In others, they are such as to put each jobber in fear of every other,—a first attachment taking all the property, if the debt be large enough, leaving little or nothing, usually, for those who have been willing to give the debtor such indulgence as might enable him to pay in full, were it granted by all his creditors.

No jobber can open his letters in the morning in the certainty of finding no tidings of a failure. No jobber, leaving his breakfast-table, can assure his wife and

children, sick or well, that he will dine or sup with them; any one of a dozen railroad-trains may, for aught he knows, be sweeping him away to some remote point, to battle with the mischances of trade, the misfortunes of honest men, or the knavery of rogues and the meshes of the law. Once in the cars, he casts his eye around in uneasy expectation of finding some one or more of his neighbors bound on the same errand. While yet peering over the seats in front of him, he is unpleasantly startled by a slap on the shoulder, and, "Ah, John! bound East? What's in the wind? Any ducks in these days?" "Why,—yes,—no,—that is, I'm going down along,—little uncertain how far,—depends on circumstances." "So, so,—I see,—mum's the word." Well, neither is quite ready to trust the other,—neither quite ready to know the worst; so long as a blow is suspended, it may not fall; and so, with desperate exertions, they change the subject, converse on things indifferent,—or subside into more or less moody meditations upon their respective chances and prospects.

Any jobber who has seen service will tell you stories without number of these vexatious experiences, sometimes dashed with the comical in no common measure. He will tell you of how they arrived at the last town on the railroad, some six or seven of them; of how not a word had been lisped of their destination; of the stampede from the railroad-station to the tavern; of the spirited bids for horses and wagons; of the chop-fallen disappointment of the man for whom no vehicle remained; of his steeple-chase a-bare-back; and of their various successes with writs and officers, in their rush for the store of the delinquent debtor. Of three such Jehus, the story goes, that, two of them having bought the monopoly of the inside of the only vehicle; and, in so doing, as they thought, having utterly precluded any chance for the third, their dauntless competitor instantly mounted with the driver, commenced negotiations for the horse, which speedily resulted in a purchase, and thereupon detached the

horse from the vehicle, drove on, and effected a first attachment, which secured his debt.

The occurrence of "a bad year" compels many a jobber to abandon his store and home for one, two, or three months together, and visit his customers scattered all over the land, to make collections. Then it is that the power of persuasion, if possessed, is brought into efficient use; discrimination, too, is demanded; good judgment, and power of combination. For a debt that cannot be paid in money may possibly be paid partly in money, or in merchandise of some sort, and in part secured; and, among the securities offered, to choose those which will involve the least delay is generally no easy matter.

To those who, without experience, are commencing a jobbing-business, a capital of thirty, forty, or fifty thousand dollars seems an inexhaustible fund. Experience teaches that an incautious and unskilful man may easily bury even the largest of these sums in a single season. If not actually lost, it has in effect ceased to be capital, because it cannot be collected, and the notes he has taken are such as will not be discounted.

Success in the jobbing-business makes such demand on talent and capacity as outsiders seldom dream of. Half-a-dozen Secretaries of State, with a Governor and a President thrown in, would not suffice to constitute a first-class jobbing-firm. The general or special incompetency of these distinguished functionaries in their several spheres may probably be covered by the capacity of their subordinates. The President of these United States — of late years, at all events — is not supposed to be in a position to know whether the will is or is not "a self-determining power." But no jobbing-firm can thus cloak its deficiencies, or shirk its responsibilities. Goods must be bought, and sold, and paid for; and a master-spirit in each department, capable of penetrating to every particular, and of controlling every subordinate, cannot be dispensed with. He must know that every man to whom he delegates any por-

tion of his work is competent and trustworthy. He must be able to feel that the thing which he deposes to each will be as surely and as faithfully done as though done by his own hand. No criticism is more common or more depreciatory than that "Such a one will not succeed, because he has surrounded himself with incompetent men."

It is much to be regretted that it cannot be said, that no man can succeed in the jobbing-business who is not a model of courtesy. Unhappily, our community has not yet reached that elevation. But this may with truth be affirmed, — that many a man fails for the want of courtesy, and for the want of that good-will to his fellows from which all real courtesy springs. There is small chance for any man to succeed who does not command his own spirit. There is no chance whatever for an indolent man; and, in the long run, little or no chance for the dishonest man. The same must be said for the timid and for the rash man. Nor can we offer any encouragement to the intermittent man. From year's end to year's end, the dry-goods jobber finds himself necessitated to be studying his stock and his ledger. He knows, that, while men sleep, the enemy will be sowing tares. In his case, the flying moments are the enemy, and bad stock and bad debts are the tares. To weed out each of these is his unceasing care. And as both the one and the other are forever choking the streams of income which should supply the means of paying his own notes, his no less constant care is to provide such other conduits as shall insure him always a full basin at the bank. Nobody but a jobber can know the vexation of a jobber who cannot find money to cash his notes when they are beginning to be thrown into the market at a price a shade lower than his neighbor's notes are sold at.

In conclusion, a few material facts should be stated.

As a general proposition, it is not to be denied, that those who are in haste to get rich will find in the dry-goods

jobbing-business many temptations and snares into which one may easily fall. A young man who is not fortified by a faithful home-training, and by sound religious principle, will be likely enough to degenerate into a heartless money-maker.

While the young man who has been well trained at home, who appreciates good manners, good morals, and good books, will derive immense advantage in acquiring that quick discernment, that intuitive apprehension of the rights and of the pleasure of others, and that nice tact, which characterize the highest style of merchants,—he who has not been thus prepared will be more than likely to mistake *brusquerie* for manliness, and brutality for the sublime of independence. As in a great house there are vessels unto honor and also unto dishonor, so in the purlieus of the dry-goods trade there are gentlemen who would honor and adorn any society, and also men whose manners would shame Hottentots, — whose language, innocent of all preference for Worcester or Webster, a terror to all decent ideas, like scarecrows in corn-fields, is dressed in the cast-off garments of the refuse of all classes.

Success in retailing does not necessarily qualify a man to succeed in the dry-goods jobbing-business. The game is played on a much larger scale; it includes other chances, and demands other qualifications, natural and acquired. Instances are not wanting of men who, in the smaller towns, had made to them-

selves a name and acquired an honorable independence, sinking both capital and courage in their endeavors to manage the business of a city-jobber.

It should be well remembered, that, while it is not indispensable to success in the jobbing-business that each partner should be an expert in every department of the business, in buying, selling, collecting, paying, and book-keeping, it is absolutely necessary that each should be such in his own department,—and that the firm, as a unit, should include a completely competent man for each and every one of these departments. The lack of the qualities which are indispensable to any one of these may, and probably will, prove an abyss deep enough to engulf the largest commercial ship afloat.

Finally, to avoid disappointment, the man who would embark in the dry-goods trade, should make up his mind to meet every variety of experience known to mortals, and to be daunted by nothing. He will assuredly find fair winds and head winds, clear skies and cloudy skies, head seas and cross seas as well as stern seas. A wind that justifies studding-sails may change, without premonition, to a gale that will make ribbons of top-sails and of storm-sails. The best crew afloat cannot preclude all casualties, or exclude sleepless nights and cold sweats now and then; but a quick eye, a cool head, a prompt hand, and indomitable perseverance will overcome almost all things.

THE OLD HOMESTEAD.

THE wet trees hang above the walks
Purple with damps and earthish stains,
And strewn by moody, absent rains
With rose-leaves from the wild-grown stalks.

Unmown, in heavy, tangled swaths,
The ripe June-grass is wanton blown ;
Snails slime the untrodden threshold-stone,
Along the sills hang drowsy moths.

Down the blank visage of the wall,
Where many a wavering trace appears
Like a forgotten trace of tears,
From swollen eaves the slow drops crawl.

Where everything was wide before,
The curious wind, that comes and goes,
Finds all the latticed windows close,
Secret and close the bolted door.

And with the shrewd and curious wind,
That in the archèd doorway cries,
And at the bolted portal tries,
And harks and listens at the blind,—

Forever lurks my thought about,
And in the ghostly middle-night
Finds all the hidden windows bright,
And sees the guests go in and out,—

And lingers till the pallid dawn,
And feels the mystery deeper there
In silent, gust-swept chambers, bare,
With all the midnight revel gone ;

But wanders through the lonesome rooms,
Where harsh the astonished cricket calls,
And, from the hollows of the walls
Vanishing, stare unshapen glooms ;

And lingers yet, and cannot come
Out of the drear and desolate place,
So full of ruin's solemn grace,
And haunted with the ghost of home.

THE PROFESSOR'S STORY.

CHAPTER XXVI.

THE NEWS REACHES THE DUDLEY MANSION.

EARLY the next morning Abel Stebbins made his appearance at Dudley Venner's, and requested to see the maän o' the haouse abaout somethin' o' consequence. Mr. Venner sent word that the messenger should wait below, and presently appeared in the study, where Abel was making himself at home, as is the wont of the republican citizen, when he hides the purple of empire beneath the apron of domestic service.

"Good mornin', Squire!" said Abel, as Mr. Venner entered. "My name 's Stebbins, 'n' I 'm stoppin' f'r a spell 'ith ol' Doctor Kittredge."

"Well, Stebbins," said Mr. Dudley Venner, "have you brought any special message from the Doctor?"

"Y' ha'n't heerd nothin' abaout it, Squire, d' ye mean t' say?" said Abel, —beginning to suspect that he was the first to bring the news of last evening's events.

"About what?" asked Mr. Venner, with some interest.

"Dew tell, naow! Waäl, that beats all! Why, that 'ere Portagee relation o' yourn 'z been tryin' t' ketch a fellah 'n a slippernoose, 'n' got ketched himself, —that 's all. Y' ha'n't heerd noth'n' abaout it?"

"Sit down," said Mr. Dudley Venner, calmly, "and tell me all you have to say."

So Abel sat down and gave him an account of the events of the last evening. It was a strange and terrible surprise to Dudley Venner to find that his nephew, who had been an inmate of his house and the companion of his daughter, was to all intents and purposes guilty of the gravest of crimes. But the first shock was no sooner over than he began to think what effect the news would have on Elsie. He

imagined that there was a kind of friendly feeling between them, and he feared some crisis would be provoked in his daughter's mental condition by the discovery. He would wait, however, until she came from her chamber, before disturbing her with the evil tidings.

Abel did not forget his message with reference to the equipments of the dead mustang.

"The' was some things on the hoss, Squire, that the man he ketched said he didn' care no gre't abaout; but perhaps you 'd like to have 'em fetched to the mansion-haouse. Ef y' *didn'* care abaout 'em, though, I shouldn' min' keepin' on 'em; they might come handy some time or 'nother: they say, holt on t' anything for ten year 'n' there 'll be some kin' o' use for 't."

"Keep everything," said Dudley Venner. "I don't want to see anything belonging to that young man."

So Abel nodded to Mr. Venner, and left the study to find some of the men about the stable to tell and talk over with them the events of the last evening. He presently came upon Elbridge, chief of the equine department, and driver of the family-coach.

"Good mornin', Abe," said Elbridge. "What 's fetched y' daown here so all-fired airy?"

"You 're a darned pooty lot daown here, you be!" Abel answered. "Better keep your Portagees t' home nex' time, ketchin' folks 'ith slippernooses raoun' their necks, 'n' kerryin' knives 'n their boots!"

"What 'r' you jawin' abaout?" Elbridge said, looking up to see if he was in earnest, and what he meant.

"Jawin' abaout? You 'll find aout 'z soon 'z y' go into that 'ere stable o' yourn! Y' won't curry that 'ere long-tailed black hoss no more; 'n' y' won't set y'r eyes on the fellah that rid him, ag'in, in a hurry!"

Elbridge walked straight to the stable, without saying a word, found the door unlocked, and went in.

"Th' critter 's gone, sûre enough!" he said. "Glad on 't! The darndest, kickin'est, bitin'est beast th't ever I see, 'r ever wan' t' see ag'in! Good reddance! Don' wan' no snappin'-turkles in my stable! Whar 's the man gone th't brought the critter?"

"Whar he 's gone? Guess y' better go 'n' aask my ol' man; he kerried him off laàs' night; 'n' when he comes back, mebbe he 'll tell ye whar he 's gone tew!"

By this time Elbridge had found out that Abel was in earnest, and had something to tell. He looked at the litter in the mustang's stall, then at the crib.

"Ha'n't eat b't haalf his feed. Ha'n't been daown on his straw. Must ha' been took aout somewhere abaout ten 'r 'leven o'clock. I know that 'ere critter's ways. The fellah 's had him aout nights afore; b't I never thought nothin' o' no mischief. He 's a kin' o' haalf Injin. What is 't the chap 's been a-doin' on? Tell 's all abaout it."

Abel sat down on a meal-chest, picked up a straw and put it into his mouth. Elbridge sat down at the other end, pulled out his jackknife, opened the penknife-blade, and began sticking it into the lid of the meal-chest. The Doctor's man had a story to tell, and he meant to get all the enjoyment out of it. So he told it with every luxury of circumstance. Mr. Venner's man heard it all with open mouth. No listener in the gardens of Stamboul could have found more rapture in a tale heard amidst the perfume of roses and the voices of birds and tinkling of fountains than Elbridge in following Abel's narrative, as they sat there in the aromatic amoniacal atmosphere of the stable, the grinding of the horses' jaws keeping evenly on through it all, with now and then the interruption of a stamping hoof, and at intervals a ringing crow from the barnyard.

Elbridge stopped a minute to think, after Abel had finished.

"Who 's took care o' them things that was on the hoss?" he said, gravely.

"Waäl, Langden, he seemed to kin' o' think I 'd ought to have 'em,—'n' the Squire, he didn' seem to have no 'bjection; 'n' so,—waäl, I call'ate I sh'll jes' holt on to 'em myself; they a'n't good f'r much, but they 're cur'ous t' keep t' look at."

Mr. Venner's man did not appear much gratified by this arrangement, especially as he had a shrewd suspicion that some of the ornaments of the bridle were of precious metal, having made occasional examinations of them with the edge of a file. But he did not see exactly what to do about it, except to get them from Abel in the way of bargain.

"Waäl, no,—they a'n't good for much 'xcep' to look at. 'F y' ever rid on that saddle once, y' wouldn' try it ag'in, very spry,—not 'f y' e'd haalp y'rsaälf. I tried it,—darned 'f I sot daown f'r th' nex' week,—eat all my victuals stan'in'. I sh'd like t' hev them things wal enough to heng up 'n the stable; 'f y' want t' trade some day, fetch 'em along daown."

Abel rather expected that Elbridge would have laid claim to the saddle and bridle on the strength of some promise or other presumptive title, and thought himself lucky to get off with only promising that he would think abaout tradin'.

When Elbridge returned to the house, he found the family in a state of great excitement. Mr. Venner had told Old Sophy, and she had informed the other servants. Everybody knew what had happened, excepting Elsie. Her father had charged them all to say nothing about it to her; he would tell her, when she came down.

He heard her step at last,—a light, gliding step,—so light that her coming was often unheard, except by those who perceived the faint rustle that went with it. She was paler than common this morning, as she came into her father's study.

After a few words of salutation, he said, quietly,—

"Elsie, my dear, your cousin Richard has left us."

She grew still paler, as she asked, —
“*Is he dead?*”

Dudley Venner started to see the expression with which Elsie put this question.

“He is living, — but dead to us from this day forward,” said her father.

He proceeded to tell her, in a general way, the story he had just heard from Abel. There could be no doubting it; — he remembered him as the Doctor’s man; and as Abel had seen all with his own eyes, — as Dick’s chamber, when unlocked with a spare key, was found empty, and his bed had not been slept in, he accepted the whole account as true.

When he told of Dick’s attempt on the young schoolmaster, (“You know Mr. Langdon very well, Elsie, — a perfectly inoffensive young man, as I understand,”) Elsie turned her face away and slid along by the wall to the window which looked out on the little grass-plot with the white stone standing in it. Her father could not see her face, but he knew by her movements that her dangerous mood was on her. When she heard the sequel of the story, the discomfiture and capture of Dick, she turned round for an instant, with a look of contempt and of something like triumph upon her face. Her father saw that her cousin had become odious to her. He knew well, by every change of her countenance, by her movements, by every varying curve of her graceful figure, the transitions from passion to repose, from fierce excitement to the dull languor which often succeeded her threatening paroxysms.

She remained looking out at the window. A group of white fan-tailed pigeons had lighted on the green plot before it and clustered about one of their companions who lay on his back, fluttering in a strange way, with outspread wings and twitching feet. Elsie uttered a faint cry; these were her special favorites, and often fed from her hand. She threw open the long window, sprang out, caught up the white fan-tail, and held it to her bosom. The bird stretched himself out, and then lay still, with open eyes, life-

less. She looked at him a moment, and, sliding in through the open window and through the study, sought her own apartment, where she locked herself in, and began to sob and moan like those that weep. But the gracious solace of tears seemed to be denied her, and her grief, like her anger, was a dull ache, longing, like that, to finish itself with a fierce paroxysm, but wanting its natural outlet.

This seemingly trifling incident of the death of her favorite appeared to change all the current of her thought. Whether it were the sight of the dying bird, or the thought that her own agency might have been concerned in it, or some deeper grief, which took this occasion to declare itself, — some dark remorse or hopeless longing, — whatever it might be, there was an unwonted tumult in her soul. To whom should she go in her vague misery? Only to Him who knows all His creatures’ sorrows, and listens to the faintest human cry. She knelt, as she had been taught to kneel from her childhood, and tried to pray. But her thoughts refused to flow in the language of supplication. She could not plead for herself as other women plead in their hours of anguish. She rose like one who should stoop to drink, and find dust in the place of water. Partly from restlessness, partly from an attraction she hardly avowed to herself, she followed her usual habit and strolled listlessly along to the school.

Of course everybody at the Institute was full of the terrible adventure of the preceding evening. Mr. Bernard felt poorly enough; but he had made it a point to show himself the next morning, as if nothing had happened. Helen Darley knew nothing of it all until she had risen, when the gossiping matron of the establishment made her acquainted with all its details, embellished with such additional ornamental appendages as it had caught up in transmission from lip to lip. She did not love to betray her sensibilities, but she was pale and tremulous and very nearly tearful when Mr. Bernard entered the sitting-room, showing on his

features traces of the violent shock he had received and the heavy slumber from which he had risen with throbbing brows. What the poor girl's impulse was, on seeing him, we need not inquire too curiously. If he had been her own brother, she would have kissed him and cried on his neck; but something held her back. There is no galvanism in kiss-your-brother; it is copper against copper: but alien bloods develop strange currents, when they flow close to each other, with only the films that cover lip and cheek between them. Mr. Bernard, as some of us may remember, violated the proprieties and laid himself open to reproach by his enterprise with a bouncing village-girl, to whose rosy cheek an honest smack was not probably an absolute novelty. He made it all up by his discretion and good behavior now. He saw by Helen's moist eye and trembling lip that her woman's heart was off its guard, and he knew, by the infallible instinct of sex, that he should be forgiven, if he thanked her for her sisterly sympathies in the most natural way, — expressive, and at the same time economical of breath and utterance. He would not give a false look to their friendship by any such demonstration. Helen was a little older than he was, but the aureole of young womanhood had not yet begun to fade from around her. She was surrounded by that enchanted atmosphere into which the girl walks with dreamy eyes, and out of which the woman passes with a story written on her forehead. Some people think very little of these refinements; they have not studied magnetism and the law of the square of the distance.

So Mr. Bernard thanked Helen for her interest without the aid of the twenty-seventh letter of the alphabet, — the love labial, — the limping consonant which it takes two to speak plain. Indeed, he scarcely let her say a word, at first; for he saw that it was hard for her to conceal her emotion. No wonder; he had come within a hair's-breadth of losing his life, and he had been a very kind friend and a very dear companion to her.

There were some curious spiritual experiences connected with his last evening's adventure, which were working very strongly in his mind. It was borne in upon him irresistibly that he had been *dead* since he had seen Helen, — as dead as the son of the Widow of Nain before the bier was touched and he sat up and began to speak. There was an interval between two conscious moments which appeared to him like a temporary annihilation, and the thoughts it suggested were worrying him with strange perplexities.

He remembered seeing the dark figure on horseback rise in the saddle and something leap from its hand. He remembered the thrill he felt as the coil settled on his shoulders, and the sudden impulse which led him to fire as he did. With the report of the pistol all became blank, until he found himself in a strange, bewildered state, groping about for the weapon, which he had a vague consciousness of having dropped. But, according to Abel's account, there must have been an interval of some minutes between these recollections, and he could not help asking, Where was the mind, the soul, the thinking principle, all this time?

A man is stunned by a blow with a stick on the head. He becomes unconscious. Another man gets a harder blow on the head from a bigger stick, and it kills him. Does he become unconscious, too? If so, *when does he come to his consciousness?* The man who has had a slight or moderate blow comes to himself when the immediate shock passes off and the organs begin to work again, or when a bit of the skull is pried up, if that happens to be broken. Suppose the blow is hard enough to spoil the brain and stop the play of the organs, what happens then?

A British captain was struck by a cannon-ball on the head, just as he was giving an order, at the Battle of the Nile. Fifteen months afterwards he was trephined at Greenwich Hospital, having been insensible all that time. Immediately after the operation his conscious-

ness returned, and he at once began carrying out the order he was giving when the shot struck him. Suppose he had never been trephined, when would his intelligence have returned? When his breath ceased and his heart stopped beating?

When Mr. Bernard said to Helen, "I have been dead since I saw you," it startled her not a little; for his expression was that of perfect good faith, and she feared that his mind was disordered. When he explained, not as has been done just now, at length, but in a hurried, imperfect way, the meaning of his strange assertion, and the fearful Sadduceeisms which it had suggested to his mind, she looked troubled at first, and then thoughtful. She did not feel able to answer all the difficulties he raised, but she met them with that faith which is the strength as well as the weakness of women,—which makes them weak in the hands of man, but strong in the presence of the Unseen.

"It is a strange experience," she said; "but I once had something like it. I fainted, and lost some five or ten minutes out of my life, as much as if I had been dead. But when I came to myself, I was the same person every way, in my recollections and character. So I suppose that loss of consciousness is not death. And if I was born out of unconsciousness into infancy with many *family*-traits of mind and body, I can believe, from my own reason, even without help from Revelation, that I shall be born again out of the unconsciousness of death with my *individual* traits of mind and body. If death is, as it should seem to be, a loss of consciousness, that does not shake my faith; for I have been put into a body once already to fit me for living here, and I hope to be in some way fitted after this life to enjoy a better one. But it is all trust in God and in his Word. These are enough for me; I hope they are for you."

Helen was a minister's daughter, and familiar from her childhood with this class of questions, especially with all the doubts and perplexities which are sure to assail every thinking child bred in any inor-

ganic or not thoroughly vitalized faith,—as is too often the case with the children of professional theologians. The kind of discipline they are subjected to is like that of the Flat-Head Indian papposes. At five or ten or fifteen years old they put their hands up to their foreheads and ask, What are they strapping down my brains in this way for? So they tear off the sacred bandages of the great Flat-Head tribe, and there follows a mighty rush of blood to the long-compressed region. This accounts, in the most lucid manner, for those sudden freaks with which certain children of this class astonish their worthy parents at the period of life when they are growing fast, and, the frontal pressure beginning to be felt as something intolerable, they tear off the holy compresses.

The hour for school came, and they went to the great hall for study. It would not have occurred to Mr. Silas Peckham to ask his assistant whether he felt well enough to attend to his duties; and Mr. Bernard chose to be at his post. A little headache and confusion were all that remained of his symptoms.

Later, in the course of the forenoon, Elsie Venner came and took her place. The girls all stared at her,—naturally enough; for it was hardly to have been expected that she would show herself, after such an event in the household to which she belonged. Her expression was somewhat peculiar, and, of course, was attributed to the shock her feelings had undergone on hearing of the crime attempted by her cousin and daily companion. When she was looking on her book, or on any indifferent object, her countenance betrayed some inward disturbance, which knitted her dark brows, and seemed to throw a deeper shadow over her features. But, from time to time, she would lift her eyes toward Mr. Bernard, and let them rest upon him, without a thought, seemingly, that she herself was the subject of observation or remark. Then they seemed to lose their cold glitter, and soften into a strange, dreamy tenderness. The deep instincts of woman-

hood were striving to grope their way to the surface of her being through all the alien influences which overlaid them. She could be secret and cunning in working out any of her dangerous impulses, but she did not know how to mask the unwonted feeling which fixed her eyes and her thoughts upon the only person who had ever reached the spring of her hidden sympathies.

The girls all looked at Elsie, whenever they could steal a glance unperceived, and many of them were struck with this singular expression her features wore. They had long whispered it around among each other that she had a liking for the master; but there were too many of them of whom something like this could be said, to make it very remarkable. Now, however, when so many little hearts were fluttering at the thought of the peril through which the handsome young master had so recently passed, they were more alive than ever to the supposed relation between him and the dark school-girl. Some had supposed there was a mutual attachment between them; there was a story that they were secretly betrothed, in accordance with the rumor which had been current in the village. At any rate, some conflict was going on in that still, remote, clouded soul, and all the girls who looked upon her face were impressed and awed as they had never been before by the shadows that passed over it.

One of these girls was more strongly arrested by Elsie's look than the others. This was a delicate, pallid creature, with a high forehead, and wide-open pupils, which looked as if they could take in all the shapes that flit in what, to common eyes, is darkness,—a girl said to be *clair-voyant* under certain influences. In the *recess*, as it was called, or interval of suspended studies in the middle of the forenoon, this girl carried her autograph-book,—for she had one of those indispensable appendages of the boarding-school miss of every degree,—and asked Elsie to write her name in it. She had an irresistible feeling, that, sooner or later, and perhaps very soon, there would attach an

unusual interest to this autograph. Elsie took the pen and wrote, in her sharp Italian hand,

Elsie Venner, Infelix.

It was a remembrance, doubtless, of the forlorn queen of the “*Æneid*”; but its coming to her thought in this way confirmed the sensitive school-girl in her fears for Elsie, and she let fall a tear upon the page before she closed it.

Of course, the keen and practised observation of Helen Darley could not fail to notice the change of Elsie's manner and expression. She had long seen that she was attracted to the young master, and had thought, as the old Doctor did, that any impression which acted upon her affections might be the means of awakening a new life in her singularly isolated nature. Now, however, the concentration of the poor girl's thoughts upon the one object which had had power to reach her deeper sensibilities was so painfully revealed in her features, that Helen began to fear once more, lest Mr. Bernard, in escaping the treacherous violence of an assassin, had been left to the equally dangerous consequences of a violent, engrossing passion in the breast of a young creature whose love it would be ruin to admit and might be deadly to reject. She knew her own heart too well to fear that any jealousy might mingle with her new apprehensions. It was understood between Bernard and Helen that they were too good friends to tamper with the silences and edging proximities of love-making. She knew, too, the simply human, not masculine, interest which Mr. Bernard took in Elsie; he had been frank with Helen, and more than satisfied her that with all the pity and sympathy which overflowed his soul, when he thought of the stricken girl, there mingled not one drop of such love as a youth may feel for a maiden.

It may help the reader to gain some understanding of the anomalous nature of Elsie Venner, if we look with Helen into Mr. Bernard's opinions and feelings with reference to her, as they had shap-

ed themselves in his consciousness at the period of which we are speaking.

At first he had been impressed by her wild beauty, and the contrast of all her looks and ways with those of the girls around her. Presently a sense of some ill-defined personal element, which half attracted and half repelled those who looked upon her, and especially those on whom she looked, began to make itself obvious to him, as he soon found it was painfully sensible to his more susceptible companion, the lady-teacher. It was not merely in the cold light of her diamond eyes, but in all her movements, in her graceful postures as she sat, in her costume, and, he sometimes thought, even in her speech, that this obscure and exceptional character betrayed itself. When Helen had said, that, if they were living in times when human beings were subject to *possession*, she should have thought there was something not human about Elsie, it struck an unsuspected vein of thought in his own mind, which he hated to put in words, but which was continually trying to articulate itself among the dumb thoughts which lie under the perpetual stream of mental whispers.

Mr. Bernard's professional training had made him slow to accept marvellous stories and many forms of superstition. Yet, as a man of science, he well knew that just on the verge of the demonstrable facts of physics and physiology there is a nebulous border-land which what is called "common sense" perhaps does wisely not to enter, but which uncommon sense, or the fine apprehension of privileged intelligences, may cautiously explore, and in so doing find itself behind the scenes which make up for the gazing world the show which is called Nature.

It was with something of this finer perception, perhaps with some degree of imaginative exaltation, that he set himself to solving the problem of Elsie's influence to attract and repel those around her. His letter already submitted to the reader hints in what direction his thoughts were disposed to turn. Here was a magnificent organization, superb in vigorous

womanhood, with a beauty such as never comes but after generations of culture; yet through all this rich nature there ran some alien current of influence, sinuous and dark, as when a clouded streak seams the white marble of a perfect statue.

It would be needless to repeat the particular suggestions which had come into his mind, as they must probably have come into those of the reader who has noted the singularities of Elsie's tastes and personal traits. The images which certain poets had dreamed of seemed to have become a reality before his own eyes. Then came that unexplained adventure of The Mountain, — almost like a dream in recollection, yet assuredly real in some of its main incidents, — with all that it revealed or hinted. This girl did not fear to visit the dreaded region, where danger lurked in every nook and beneath every tuft of leaves. Did the tenants of the fatal ledge recognize some mysterious affinity which made them tributary to the cold glitter of her diamond eyes? Was she from her birth one of those frightful children, such as he had read about, and the Professor had told him of, who form unnatural friendships with cold, writhing ophidians? There was no need of so unwelcome a thought as this; she had drawn him away from the dark opening in the rock at the moment when he seemed to be threatened by one of its malignant denizens; that was all he could be sure of; the counter-fascination might have been a dream, a fancy, a coincidence. All wonderful things soon grow doubtful in our own minds, as do even common events, if great interests prove suddenly to attach to their truth or falsehood.

— I, who am telling of these occurrences, saw a friend in the great city, on the morning of a most memorable disaster, hours after the time when the train which carried its victims to their doom had left. I talked with him, and was for some minutes, at least, in his company. When I reached home, I found that the story had gone before that he was among

the lost, and I alone could contradict it to his weeping friends and relatives. I did contradict it; but, alas! I began soon to doubt myself, penetrated by the contagion of their solicitude; my recollection began to question itself; the order of events became dislocated; and when I heard that he had reached home in safety, the relief was almost as great to me as to those who had expected to see their own brother's face no more.

Mr. Bernard was disposed, then, not to accept the thought of any odious personal relationship of the kind which had suggested itself to him when he wrote the letter referred to. That the girl had something of the feral nature, her wild, lawless rambles in forbidden and blasted regions of The Mountain at all hours, her familiarity with the lonely haunts where any other human foot was so rarely seen, proved clearly enough. But the more he thought of all her strange instincts and modes of being, the more he became convinced that whatever alien impulse swayed her will and modulated or diverted or displaced her affections came from some impression that reached far back into the past, before the days when the faithful Old Sophy had rocked her in the cradle. He believed that she had brought her ruling tendency, whatever it was, into the world with her.

When the school was over and the girls had all gone, Helen lingered in the school-room to speak with Mr. Bernard.

"Did you remark Elsie's ways this forenoon?" she said.

"No, not particularly; I have not noticed anything as sharply as I commonly do; my head has been a little queer, and I have been thinking over what we were talking about, and how near I came to solving the great problem which every day makes clear to such multitudes of people. What about Elsie?"

"Bernard, her liking for you is growing into a passion. I have studied girls for a long while, and I know the difference between their passing fancies and their real emotions. I told you, you remember, that Rosa would have to leave

us; we barely missed a scene, I think, if not a whole tragedy, by her going at the right moment. But Elsie is infinitely more dangerous to herself and others. Women's love is fierce enough, if it once gets the mastery of them, always; but this poor girl does not know what to do with a passion."

Mr. Bernard had never told Helen the story of the flower in his Virgil, or that other adventure which he would have felt awkwardly to refer to; but it had been perfectly understood between them that Elsie showed in her own singular way a well-marked partiality for the young master.

"Why don't they take her away from the school, if she is in such a strange, excitable state?" said Mr. Bernard.

"I believe they are afraid of her," Helen answered. "It is just one of those cases that are ten thousand thousand times worse than insanity. I don't think, from what I hear, that her father has ever given up hoping that she will outgrow her peculiarities. Oh, these peculiar children for whom parents go on hoping every morning and despairing every night! If I could tell you half that mothers have told me, you would feel that the worst of all diseases of the moral sense and the will are those which all the Bedlams turn away from their doors as not being the subjects of insanity!"

"Do you think her father has treated her judiciously?" said Mr. Bernard.

"I think," said Helen, with a little hesitation, which Mr. Bernard did not happen to notice,—"I think he has been very kind and indulgent, and I do not know that he could have treated her otherwise with a better chance of success."

"He must of course be fond of her," Mr. Bernard said; "there is nothing else in the world for him to love."

Helen dropped a book she held in her hand, and, stooping to pick it up, the blood rushed into her cheeks.

"It is getting late," she said; "you must not stay any longer in this close school-room. Pray, go and get a little fresh air before dinner-time."

CHAPTER XXVII.

A SOUL IN DISTRESS.

THE events told in the last two chapters had taken place toward the close of the week. On Saturday evening the Reverend Chauncy Fairweather received a note which was left at his door by an unknown person who departed without saying a word. Its words were these:—

“One who is in distress of mind requests the prayers of this congregation that God would be pleased to look in mercy upon the soul that he has afflicted.”

There was nothing to show from whom the note came, or the sex or age or special source of spiritual discomfort or anxiety of the writer. The handwriting was delicate and might well be a woman's. The clergyman was not aware of any particular affliction among his parishioners which was likely to be made the subject of a request of this kind. Surely neither of the Venners would advertise the attempted crime of their relative in this way. But who else was there? The more he thought about it, the more it puzzled him; and as he did not like to pray in the dark, without knowing for whom he was praying, he could think of nothing better than to step into old Doctor Kittredge's and see what he had to say about it.

The old Doctor was sitting alone in his study when the Reverend Mr. Fairweather was ushered in. He received his visitor very pleasantly, expecting, as a matter of course, that he would begin with some new grievance, dyspeptic, neuralgic, bronchitic, or other. The minister, however, began with questioning the old Doctor about the sequel of the other night's adventure; for he was already getting a little Jesuitical, and kept back the object of his visit until it should come up as if accidentally in the course of conversation.

“It was a pretty bold thing to go off alone with that reprobate, as you did,” said the minister.

“I don't know what there was bold about it,” the Doctor answered. “All he wanted was to get away. He was not quite a reprobate, you see; he didn't like the thought of disgracing his family or facing his uncle. I think he was ashamed to see his cousin, too, after what he had done.”

“Did he talk with you on the way?”

“Not much. For half an hour or so he didn't speak a word. Then he asked where I was driving him. I told him, and he seemed to be surprised into a sort of grateful feeling. Bad enough, no doubt,—but might be worse. Has some humanity left in him yet. Let him go. God can judge him,—I can't.”

“You are too charitable, Doctor,” the minister said. “I condemn him just as if he had carried out his project, which, they say, was to make it appear as if the schoolmaster had committed suicide. That's what people think the rope found by him was for. He has saved his neck,—but his soul is a lost one, I am afraid, beyond question.”

“I can't judge men's souls,” the Doctor said. “I can judge their acts, and hold them responsible for those,—but I don't know much about their souls. If you or I had found our soul in a half-breed body, and been turned loose to run among the Indians, we might have been playing just such tricks as this fellow has been trying. What if you or I had inherited all the tendencies that were born with his cousin Elsie?”

“Oh, that reminds me,”—the minister said, in a sudden way,—“I have received a note, which I am requested to read from the pulpit to-morrow. I wish you would just have the kindness to look at it and see where you think it came from.”

The Doctor examined it carefully. It was a woman's or girl's note, he thought. Might come from one of the school-girls who was anxious about her spiritual condition. Handwriting was disguised; looked a little like Elsie Venner's, but not characteristic enough to make it certain. It would be a new thing, if she had asked public prayers for herself, and a very fa-

vorable indication of a change in her singular moral nature. It was just possible Elsie might have sent that note. Nobody could foretell her actions. It would be well to see the girl and find out whether any unusual impression had been produced on her mind by the recent occurrence or by any other cause.

The Reverend Mr. Fairweather folded the note and put it into his pocket.

"I have been a good deal exercised in mind lately, myself," he said.

The old Doctor looked at him through his spectacles, and said, in his usual professional tone,—

"Put out your tongue."

The minister obeyed him in that feeble way common with persons of weak character,—for people differ as much in their mode of performing this trifling act as Gideon's soldiers in their way of drinking at the brook. The Doctor took his hand and placed a finger mechanically on his wrist.

"It is more spiritual, I think, than bodily," said the Reverend Mr. Fairweather.

"Is your appetite as good as usual?" the Doctor asked.

"Pretty good," the minister answered; "but my sleep, my sleep, Doctor,—I am greatly troubled at night with lying awake and thinking of my future,—I am not at ease in mind."

He looked round at all the doors, to be sure they were shut, and moved his chair up close to the Doctor's.

"You do not know the mental trials I have been going through for the last few months."

"I think I do," the old Doctor said. "You want to get out of the new church into the old one, don't you?"

The minister blushed deeply; he thought he had been going on in a very quiet way, and that nobody suspected his secret. As the old Doctor was his counsellor in sickness, and almost everybody's confidant in trouble, he had intended to impart cautiously to him some hints of the change of sentiments through which he had been passing. He was too late with his information, it appeared, and there was nothing

to be done but to throw himself on the Doctor's good sense and kindness, which everybody knew, and get what hints he could from him as to the practical course he should pursue. He began, after an awkward pause,—

"You would not have me stay in a communion which I feel to be alien to the true church, would you?"

"Have you stay, my friend?" said the Doctor, with a pleasant, friendly look,—
"have you stay? Not a month, nor a week, nor a day, if I could help it. You have got into the wrong pulpit, and I have known it from the first. The sooner you go where you belong, the better. And I'm very glad you don't mean to stop half-way. Don't you know you've always come to me when you've been dyspeptic or sick anyhow, and wanted to put yourself wholly into my hands, so that I might order you like a child just what to do and what to take? That's exactly what you want in religion. I don't blame you for it. You never liked to take the responsibility of your own body; I don't see why you should want to have the charge of your own soul. But I'm glad you're going to the Old Mother of all. You wouldn't have been contented short of that."

The Reverend Mr. Fairweather breathed with more freedom. The Doctor saw into his soul through those awful spectacles of his,—into it and beyond it, as one sees through a thin fog. But it was with a real human kindness, after all. He felt like a child before a strong man; but the strong man looked on him with a father's indulgence. Many and many a time, when he had come desponding and bemoaning himself on account of some contemptible bodily infirmity, the old Doctor had looked at him through his spectacles, listened patiently while he told his ailments, and then, in his large parental way, given him a few words of wholesome advice, and cheered him up so that he went off with a light heart, thinking that the heaven he was so much afraid of was not so very near, after all. It was the same thing now. He felt, as feeble natures

always do in the presence of strong ones, overmastered, circumscribed, shut in, humbled; but yet it seemed as if the old Doctor did not despise him any more for what he considered weakness of mind than he used to despise him when he complained of his nerves or his digestion.

Men who see *into* their neighbors are very apt to be contemptuous; but men who see *through* them find something lying behind every human soul which it is not for them to sit in judgment on, or to attempt to sneer out of the order of God's manifold universe.

Little as the Doctor had said out of which comfort could be extracted, his genial manner had something grateful in it. A film of gratitude came over the poor man's cloudy, uncertain eye, and a look of tremulous relief and satisfaction played about his weak mouth. He was gravitating to the majority, where he hoped to find "rest"; but he was dreadfully sensitive to the opinions of the minority he was on the point of leaving.

The old Doctor saw plainly enough what was going on in his mind.

"I sha'n't quarrel with you," he said,—"you know that very well; but you mustn't quarrel with me, if I talk honestly with you; it isn't everybody that will take the trouble. You flatter yourself that you will make a good many enemies by leaving your old communion. Not so many as you think. This is the way the common sort of people will talk:—'You have got your ticket to the feast of life, as much as any other man that ever lived. Protestantism says,—'Help yourself; here 's a clean plate, and a knife and fork of your own, and plenty of fresh dishes to choose from.' The Old Mother says,—'Give me your ticket, my dear, and I 'll feed you with my gold spoon off these beautiful old wooden trenchers. Such nice bits as those good old gentlemen have left for you!'" There is no quarrelling with a man who prefers broken victuals.' That 's what the rougher sort will say; and then, where one scolds, ten will laugh. But, mind you, I don't either scold or laugh. I don't feel sure that you

could very well have helped doing what you will soon do. You know you were never easy without some medicine to take when you felt ill in body. I'm afraid I've given you trashy stuff sometimes, just to keep you quiet. Now, let me tell you, there is just the same difference in spiritual patients that there is in bodily ones. One set believes in wholesome ways of living, and another must have a great list of specifics for all the soul's complaints. You belong with the last, and got accidentally shuffled in with the others."

The minister smiled faintly, but did not reply. Of course, he considered that way of talking as the result of the Doctor's professional training. It would not have been worth while to take offence at his plain speech, if he had been so disposed; for he might wish to consult him the next day as to "what he should take" for his dyspepsia or his neuralgia.

He left the Doctor with a hollow feeling at the bottom of his soul, as if a good piece of his manhood had been scooped out of him. His hollow aching did not explain itself in words, but it grumbled and worried down among the unshaped thoughts which lie beneath them. He knew that he had been trying to reason himself out of his birthright of reason. He knew that the inspiration which gave him understanding was losing its throne in his intelligence, and the almighty Majority-Vote was proclaiming itself in its stead. He knew that the great primal truths, which each successive revelation only confirmed, were fast becoming hidden beneath the mechanical forms of thought, which, as with all new converts, engrossed so large a share of his attention. The "peace," the "rest," which he had purchased, were dearly bought to one who had been trained to the arms of thought, and whose noble privilege it might have been to live in perpetual warfare for the advancing truth which the next generation will claim as the legacy of the present.

The Reverend Mr. Fairweather was getting careless about his sermons. He must wait the fitting moment to declare

himself; and in the mean time he was preaching to heretics. It did not matter much what he preached, under such circumstances. He pulled out two old yellow sermons from a heap of such, and began looking over that for the forenoon. Naturally enough, he fell asleep over it, and, sleeping, he began to dream.

He dreamed that he was under the high arches of an old cathedral amidst a throng of worshippers. The light streamed in through vast windows, dark with the purple robes of royal saints, or blazing with yellow glories around the heads of earthly martyrs and heavenly messengers. The billows of the great organ roared among the clustered columns, as the sea breaks amidst the basaltic pillars which crowd the great cavern of the Hebrides. The voice of the alternate choirs of singing boys swung back and forward, as the silver censer swung in the hands of the white-robed children. The sweet cloud of incense rose in soft, fleecy mists, full of penetrating suggestions of the East and its perfumed altars. The knees of twenty generations had worn the pavement; their feet had hollowed the steps; their shoulders had smoothed the columns. Dead bishops and abbots lay under the marble of the floor in their crumbled vestments; dead warriors, in their rusted armor, were stretched beneath their sculptured effigies. And all at once all the buried multitudes who had ever worshipped there came thronging in through the aisles. They choked every space, they swarmed into all the chapels, they hung in clusters over the parapets of the galleries, they clung to the images in every niche, and still the vast throng kept flowing and flowing in, until the living were lost in the rush of the returning dead who had reclaimed their own. Then, as his dream became more fantastic, the huge cathedral itself seemed to change into the wreck of some mighty antediluvian vertebrate; its flying-buttresses arched round like ribs, its piers shaped themselves into limbs, and the sound of the organ-blast changed to the wind whistling through its thousand-jointed skeleton.

And presently the sound lulled, and softened and softened, until it was as the murmur of a distant swarm of bees. A procession of monks wound along through an old street, chanting, as they walked. In his dream he glided in among them and bore his part in the burden of their song. He entered with the long train under a low arch, and presently he was kneeling in a narrow cell before an image of the Blessed Maiden holding the Divine Child in her arms, and his lips seemed to whisper, —

Sancta Maria, ora pro nobis !

He turned to the crucifix, and, prostrating himself before the spare, agonizing shape of the Holy Sufferer, fell into a long passion of tears and broken prayers. He rose and flung himself, worn-out, upon his hard pallet, and, seeming to slumber, dreamed again within his dream. Once more in the vast cathedral, with throngs of the living choking its aisles, amidst jubilant peals from the cavernous depths of the great organ, and choral melodies ringing from the fluty throats of the singing boys. A day of great rejoicings, — for a prelate was to be consecrated, and the bones of the mighty skeleton-minster were shaking with anthems, as if there were life of its own within its buttressed ribs. He looked down at his feet; the folds of the sacred robe were flowing about them: he put his hand to his head; it was crowned with the holy mitre. A long sigh, as of perfect content in the consummation of all his earthly hopes, breathed through the dreamer's lips, and shaped itself, as it escaped, into the blissful murmur, —

Ego sum Episcopus !

One grinning gargoyle looked in from beneath the roof through an opening in a stained window. It was the face of a mocking fiend, such as the old builders loved to place under the eaves to spout the rain through their open mouths. It looked at him, as he sat in his mitred chair, with its hideous grin growing broader and broader, until it laughed out aloud, —

such a hard, stony, mocking laugh, that he awoke out of his second dream through his first into his common consciousness, and shivered, as he turned to the two yellow sermons which he was to pick over and weed of the little thought they might contain, for the next day's service.

The Reverend Chauncy Fairweather was too much taken up with his own bod-

ily and spiritual condition to be deeply mindful of others. He carried the note requesting the prayers of the congregation in his pocket all day; and the soul in distress, which a single tender petition might have soothed, and perhaps have saved from despair or fatal error, found no voice in the temple to plead for it before the Throne of Mercy!

THE GREAT LAKES.

IF, as is believed by many statisticians, the census of 1860 should show that the centre of population and power in these United States is steadily advancing westward, and that by the year 1880 it will be at some point on the Great Lakes, then, certainly, the history and resources of those inland seas cannot fail to be interesting to the general reader.

It happens that the Indian traditions of this region possess more of the coherence of history than those of other parts of the country; and, as preserved by Schoolcraft and embalmed in the poetry of Longfellow, they show well enough by the side of the early traditions of other primitive peoples. The conquest of the Lake-shore region by San-ge-man and his Ojibwas may be as trustworthy a tale as the exploits of Romulus and Remus; and when we emerge into the light of European record, we find the Jesuit missionaries preaching the gospel at St. Ignace and the Sault St. Mary almost as early as the so-called Cavaliers were planting tobacco at Jamestown, or the Pilgrims smiting the heathen at Plymouth.

The first white persons who penetrated into the Upper Lake region were two young fur-traders who left Montreal for that purpose in 1654, and remained two years among the Indian tribes on those shores. We are not informed of the details of this journey; but it appears that

they returned with information relative to Lake Superior, and perhaps Lake Michigan and Green Bay; for in 1659 the fur-traders are known to have extended their traffic to that bay. The first settlement of Wisconsin may be dated in 1665, when Claude Allouez established a mission at La Pointe on Lake Superior. This was before Philadelphia was founded by William Penn.

The first account we have of a voyage on Lake Michigan was by Nicholas Perrot, who, accompanied by some Pottawatemies, passed from Green Bay to Chicago, in 1670. Two years afterwards the same voyage was undertaken by Allouez and Dablon. They stopped at the mouth of the Milwaukee River, then occupied by Kickapoo Indians. In 1673, Fathers Marquette and Joliet went from Green Bay to the Neenah or Fox River, and, descending the Wisconsin, discovered the Mississippi on the 17th of June.

In 1679, La Salle made his voyage up the Lakes in the Griffin, the first vessel built above the Falls of Niagara. This vessel, the pioneer of the great fleet which now whitens those waters, was about sixty tons burden, and carried five guns and thirty-four men. La Salle loaded her at Green Bay with a cargo of furs and skins, and she sailed on the 18th of September for Niagara, where she never arrived, nor was any news of her ever received. The Griffin, with her cargo, was valued

at sixty thousand livres. Thus the want of harbors on Lake Michigan began to be felt nearly two hundred years ago; and the fate of the Griffin was only a precursor of many similar calamities since.

About 1760 was the end of what may be called the religious epoch in the history of the Northwest, when the dominion passed from French to English hands, and the military period commenced. This lasted about fifty years, during which time the combatants were French, English, Indians, and Americans. Much blood was shed in desultory warfare. Detroit, Mackinac, and other posts were taken and retaken; in fact, there never was peace in that land till after the naval victory of Perry in 1813, when the command of the Lakes passed to the Americans.

Our military and naval expeditions in the Northwest were, however, remarkably unfortunate in that war. For want of a naval force on the Lakes,—a necessity which had been pointed out to the Government by William Hull, then Governor of the Northwest Territory, before the declaration of war,—the posts of Chicago, Mackinac, and Detroit were taken by the British and their Indian allies in 1812, and kept by them till the next year, when the energy and perseverance of Perry and his Rhode-Islanders created a fleet upon Lake Erie, and swept the British vessels from that quarter.

In 1814, an American squadron of six brigs and schooners sailed from Lake Erie to retake the post of Mackinac. Colonel Croghan commanded the troops, which were landed under cover of the guns of the squadron. They were attacked in the woods on the back of the island by the British and Indians. Major Holmes, who led the Americans, was killed, and his men retreated in confusion to the ships, which took them on board and sailed away. The attack having failed, Captain Sinclair, who commanded the squadron, returned to Lake Erie with the brigs Niagara and Saint Lawrence and the schooners Caledonia and Ariel, leaving the Scorpion and Tigress to operate against the enemy on Lake Huron. The

British schooner Nancy, being at Nattawasaga, under the protection of a block-house mounting two twenty-four pounders, the American schooners proceeded to attack her, and, after a short action, destroyed the vessel and the block-house, the British escaping in their boats. Soon after, the American schooners returned to the neighborhood of St. Joseph, where they were seen by some Indians, who reported at Mackinac that they were about five leagues apart. An expedition was directly fitted out to capture them; and Major Dickson, commander of the post, and Lieutenant Worsley, who had retreated from the block-house above-mentioned, started with one hundred men in four boats.

On the third of September, at six o'clock, P. M., they found the Tigress at anchor, and came within one hundred yards unobserved, when a smart fire of grape and musketry was opened upon them. They advanced, and, two boats boarding her on each side, she was carried, after a short contest, in which the British lost seven men, killed and wounded, and the Americans, out of a crew of twenty-eight, had three killed and two wounded. The prisoners having been sent to Mackinac, the Tigress was got under way the next day, still keeping the American colors flying, and proceeded in search of the Scorpion. On the fifth, they came in sight of her, and, as those on board knew nothing of what had happened to the Tigress, were suffered to approach within two miles. At daylight the next morning, the Tigress was again got under way, and running alongside her late consort, the British carried her by boarding, after a short scuffle, in which four of the Scorpion's crew were killed and wounded, and one of the British wounded. The schooners were fine new vessels, of one hundred tons burden each, and had on board large quantities of arms and ammunition.

This account of the earliest naval action on the Upper Lakes is taken from a British source; for, as may well be imagined, it has never found its way into

any American Naval History or Fourth of July Oration.

It appears as if the American Government, during the War of 1812, either from ignorance of the value of the Northwest, or, as some think, from a fear lest it might, if conquered, become free territory, were very inefficient in their efforts in that direction. As, however, the same imbecility was displayed in other quarters, for example, at Washington, where they allowed the capital to be taken by a handful of British troops, and as the Yankee who was in the fight said, "They didn't seem to take no interest," we must acquit the administration of Mr. Madison of anything worse than going to war without adequate preparation.

After the War of 1812 was over, the Northwestern Territory was held by our Government by a kind of military occupation for some twenty years, when, the Indian title having been extinguished, white settlers began to occupy Northern Illinois and Wisconsin. The Sacs and Foxes, having repented of their surrender of this fair country, reëntered it in 1832, but after a short contest were expelled and driven westward, and the working period commenced. Large cities have sprung up on the Lake shores, and the broad expanse of Lake Michigan is now whitened by a thousand sails; and even the rocky cliffs of Superior echo the whistle of the propeller, instead of the scream of the bald eagle.

Perhaps the ship-owners of the Atlantic cities are hardly aware of the growth of this Lake commerce within the last twenty years, and that it is now nearly equal in amount to the whole foreign trade of the country. Before entering on the statistics of this trade, however, we will give a brief description of the Lakes themselves.*

Lake Superior, the largest expanse of fresh water on the globe, is 355 miles in length, 160 in breadth, with a depth of 900 feet. It contains 32,000 square miles

of surface, which is elevated 627 feet above the surface of the ocean, while portions of its bed are several hundred feet below it. Its coast is 1500 miles in extent, with irregular, rocky shores, bold headlands, and deep bays. It contains numerous islands, one of which, Isle Royale, has an area of 230 square miles. The shores of this lake are rock-bound, sometimes rising into lofty cliffs and pinnacles, twelve or thirteen hundred feet high. Where the igneous rocks prevail, the coast is finely indented; where the sandstones abound, it is gently curved. Lake Superior occupies an immense depression, for the most part excavated out of the soft and yielding sandstone. Its configuration on the east and north has been determined by an irregular belt of granite, which forms a rim, effectually resisting the further action of its waters. The temperature of the water in summer is about 40°.

Lake Huron connects with Superior by the St. Mary's River, and is 260 miles long and 160 broad; its circumference is 1100 miles, its area 20,400. Georgian Bay, 170 miles long and 70 broad, forms the northeast portion, and lies within British jurisdiction. Saginaw, a deep and wide-mouthed bay, is the principal indentation on the western coast. The rim of this lake is composed mostly of detrital rocks, which are rarely exposed. In the northern portion of the lake, the trap-rocks on the Canada side intersect the coast. The waters are as deep as those of Superior, and possess great transparency. They rarely attain a higher temperature than 50°, and, like those of Superior, have the deep-blue tint of the ocean. The northern coast of Lake Huron abounds in clusters of islands; Captain Bayfield is said to have landed on 10,000 of them, and to have estimated their number at 30,000.

Lake Michigan, called by the early voyagers Lac des Illinois, is next in size to Superior, being 320 miles in length and 100 in breadth, with a circumference, including Green Bay, of 1300 miles. It contains 22,000 miles of surface, with a

* We are indebted for our facts and details to Lapham's *Wisconsin*, Foster and Whitney's *Report*, Agassiz's *Lake Superior*, and works of similar character.

depth of 900 feet in the deeper parts, though near the shore it grows gradually shoal. The rocks which compose its rim are of a sedimentary nature, and afford few indentations for harbors. The shores are low, and lined in many places with immense sand-banks. Green Bay, or Baie des Puans of the Jesuits, on the west coast, is 100 miles long and 20 broad. Great and Little Traverse Bays occur on the eastern coast, and Great and Little Bays des Noquets on the northern. One cluster of islands is found at the outlet of the main lake, and another at that of Green Bay. Lake Michigan is the only one of the Great Lakes which lies wholly within American jurisdiction.

Lake Erie is 240 miles in length, 60 in breadth, and contains an area of 9,600 square miles. It lies 565 feet above the sea-level, and is the shallowest of all the Lakes, being only 84 feet in mean depth. Its waters, in consequence, have the green color of the sea in shallow bays and harbors. It is connected with Lake Huron by the St. Clair River and Lake, a shallow expanse of water, twenty miles wide, and by Detroit River.

Lake Ontario is 180 miles in length and 55 in breadth, containing 6,300 square miles. It is connected with Lake Erie by the Niagara River, and also by the Welland Canal, which admits the passage of vessels of large burden. This lake lies at a lower level than the others, being only 230 feet above the sea. It is, however, about 500 feet in depth.

The whole area of these lakes is over 90,000 miles, and the area of land drained by them, 335,515 miles.

The presence of this great body of water modifies the range of the thermometer, lessening the intensity of the cold in winter and of the heat in summer, and gives a temperature more uniform on the Lake coasts than is found in a corresponding latitude on the Mississippi.

The difference between the temperature of the air and that of the Lakes gives rise to a variety of optical illusions, known as *mirage*. Mountains are seen with inverted cones; headlands project

from the shore where none exist; islands clothed with verdure, or girt with cliffs, rise up from the bosom of the lake, remain awhile, and disappear. Hardly a day passes, during the summer, without a more or less striking exhibition of this kind. The same phenomena of rapidly varying refraction may often be witnessed at sunset, when the sun, sinking into the lake, undergoes a most striking series of changes. At one moment it is drawn out into a pear-like shape; the next it takes an elliptical form; and just as it disappears, the upper part of its disk becomes elongated into a ribbon of light, which seems to float for a moment upon the surface of the water.

Thunder-storms of great violence are not unusual, and sudden gusts of wind spring up on the Lakes, and those who navigate them pass sometimes instantaneously from a current of air blowing briskly in one direction into one blowing with equal force from the opposite quarter. The lower sails of a vessel are sometimes becalmed, while a smart breeze fills the upper.

The storms which agitate the Lakes, though less violent than the typhoons of the Indian Ocean or the hurricanes of the Atlantic, are still very dangerous to mariners; and, owing to the want of sea-room, and the scarcity of good harbors, shipwrecks are but too common, and frequently attended with much loss of life. A short, ugly sea gets up very quickly after the wind begins to blow hard, and subsides with equal celerity when the wind goes down.

The fluctuations in the level of the waters of these lakes have attracted much attention among scientific observers; and as early as 1670, Father Dablon, in his "Relations," says, — "As to the tides, it is difficult to lay down any correct rule. At one time we have found the motion of the waters to be regular, and at others extremely fluctuating. We have noticed, however, that at full moon and new moon the tides change once a day for eight or ten days, while during the remainder of the time there is hardly any change

perceptible. . . . Three things are remarkable: 1st. That the currents set almost constantly in one direction, namely, towards the Lake of the Illinois, [Michigan,] which does not prevent their ordinary rise and fall; 2d. That they almost invariably set *against* the wind, — sometimes with as much force as the tides at Quebec, — and we have seen ice moving against the wind as fast as boats under full sail; 3d. That among these currents we have discovered the emission of a quantity of water which seems to spring up from the bottom.”

Father Dablon is of opinion that the waters of Lake Superior enter into the Straits by a subterranean passage. This theory, he says, is necessary to explain two things, namely: 1st. Without such a passage, it is impossible to say what becomes of the waters of Lake Superior. This vast lake has but one visible outlet, namely, the River of St. Mary; while it receives the waters of a large number of rivers, some of which are of greater dimensions than the St. Mary. What, then, becomes of the surplus water? 2d. The difficulty of explaining whence come the waters of Huron and Michigan. Very few rivers flow into these lakes, and their volume of water is such as to fortify the belief that it must be supplied through the subterranean river entering the Straits.

A large number of facts have been collected by Messrs. Foster and Whitney on the subject of these oscillations of the Lake level; and, in fact, these phenomena have been for a long time familiar to the residents on the Lake shores. They are generally attributed by scientific men to atmospheric disturbances, which, by increasing or diminishing the atmospheric pressure, produce a corresponding rise or fall in the water-level. These are the sudden and irregular fluctuations.

The gradual fluctuations are probably caused by the variable amount of rain which falls in the vast area of country drained by the Lakes. Thus, at Fort Brady, where the mean of five years' observations is 29.68 inches, the extremes are 36.92 and 22.44.

An idea has been long prevalent among the old residents, derived from the Indians, that there is a variation of the Lake surface which extends over a period of fourteen years, — that is, the Lakes rise for seven years, and fall for seven years. The records kept by accurate observers at various points on the Lakes for the last ten years do not seem to confirm this theory; but it has been well established by the recent observations of Colonel Graham, at both ends of Lake Michigan, that there is a semi-diurnal lunar tide on that lake of at least one third of a foot.

The evaporation from this great water-surface must be immense. It has been estimated at 11,800,000,000,000 cubic feet per annum; and in this way alone can we account for the difference between the volume of water which enters the Lakes and that which leaves them at the Falls of Niagara. Immense as is the quantity of water which pours over the Falls, it is small in comparison with the floods which combine to make up the Upper Lakes.

In the year 1832, about the close of the Black Hawk War, the tonnage of the Lakes was only 7,000 tons. In 1845 it had increased to 132,000 tons, and in 1858 it was 404,301 tons. Or, if we take Chicago, the chief city of the Lakes, we find that her imports and exports were, —

	Imports.	Exports.
In 1836, . . .	\$ 325,203	\$ 1,000
“ 1851, . . .	24,410,400	5,395,471
“ 1859, estimated	60,000,000	24,280,890

In the year 1858, there were on the Lakes, —

American vessels, 1,194.	Tonnage, 399,443
Canadian “ 321.	“ 59,580
Value of American tonnage on the Lakes,	\$ 16,000,000
Value of Lake commerce, imports and exports,	\$ 600,000,000
Number of seamen employed,	13,000

Taking the island of Mackinac as the geographical centre of this navigation, we find the distances as follows: —

	Miles.
From Mackinac to head of Lake Superior	550
“ “ “ Chicago . . .	350
“ “ “ East end of Georgian Bay . . .	300
“ “ “ Buffalo . . .	700
“ “ “ Gulf of St. Lawrence	1,600

Or ninety thousand miles of lakes and rivers, extending half across the continent.

The following table shows the amount of tonnage belonging to different cities in 1857:—

	Tons.		Tons.
New York,	1,377,424	Charleston,	56,480
Boston,	447,966	Detroit,	57,707
Bath,	189,932	New Bedford,	152,799
Baltimore,	191,618	New Orleans,	173,167
Providence,	15,152	Cleveland,	63,361
Philadelphia,	211,380	Chicago,	67,316
Buffalo,	100,226	Milwaukie,	22,339

This shows that Chicago had in 1857, being then twenty-five years old, a larger tonnage than Charleston, the capital of the Palmetto Kingdom; and Milwaukie, still younger than Chicago, owned a larger amount of tonnage than the old and wealthy city of Providence.

In 1857, the export of grain from the Lake ports was sixty-five million bushels; in 1860, it was estimated at one hundred millions.

The coal-trade of Cleveland, in 1858, was 129,000 tons. A large amount was also shipped from Erie.

In 1858, the salt-trade of the Lakes amounted to more than six hundred thousand barrels, most of which was shipped from the port of Oswego on Lake Ontario.

The lumber received at Chicago in 1858 amounted to: Boards, 273,000,000 feet; shingles, 254,000,000; lath, 45,000,000; worth \$2,442,500.

The present navigable outlets to this great commerce are three in number. First, the Erie Canal, from Buffalo to Albany, which, in its enlarged form, takes probably two-thirds of the productions of the Lake regions. Second, the River St. Lawrence, which, by means of the Welland Canal, secures a good share of the trade. Third, the Illinois and Michigan Canal, which conveys large quantities of

lumber, salt, and other heavy goods to the Illinois River and the Mississippi. Of course, more or less produce is taken to the seaboard by the railroads; but, even if they could compete in price with water-carriage, it is evident that they are incapable of moving the surplus grain of the Northwest, as it now is. Another great navigable outlet to the Lakes is needed, so that vessels of the largest class may sail from the elevators of Chicago to the Liverpool docks without breaking bulk; and in reference to this, a survey has recently been made by Thomas C. Clarke, under the direction of the Canadian Government, for a ship-navigation between Montreal and Lake Huron, by way of the Ottawa River, Lake Nipissing, and French River. The Report shows that the cost of the work for vessels of one thousand tons burden would be twelve million dollars,—and that it would cut off a distance nearly equal to the whole length of Lakes Erie and Ontario, thus saving from three hundred and fifty to four hundred miles of navigation. In view of the fact that the navigation of St. Clair and Erie is the most troublesome and dangerous part of the voyage, this plan certainly deserves attention.

It is easy to see what a prolific nursery of seamen this Lake commerce must be, and how valuable a resource in a war with any great naval power. It is a resource which was wholly wanting to us in the War of 1812, when Commodore Perry had to bring his sailors from the seaboard with great difficulty and expense. In any future war with England, supposing such an unhappy event to take place, our great numerical superiority upon the Lakes in both vessels and sailors would not only insure our supremacy there, but also afford a large surplus of men for our ocean marine.

But it may be said that these men are only fresh-water sailors, after all, and are not to be relied upon for ocean-navigation. We know there used to be a notion prevailing, that neither Lake vessels nor Lake men would do for salt water; but in 1856, the schooner *Dean Rich-*

mond took a cargo of wheat from Chicago to Liverpool, beating a large fleet of ocean craft from Quebec across the Atlantic, and otherwise behaving so well as to cause the sale of the vessel in England. This voyage encouraged others to try the experiment, and in 1859 from thirty to forty Lake vessels loaded for ocean ports.

That this trade will be very much increased there is no doubt, since it affords occupation for the Lake marine in the winter, when the Lake ports are closed by ice.

On the western shore of Lake Michigan there are large settlements of Norwegians and Swedes, many of whom follow the Lakes as fishermen and sailors. Descendants of the old Northern seakings, they are as hardy and adventurous here as in their Scandinavian homes, and run their vessels earlier and later in the season than other men are willing to do.

Science might have anticipated, however, that vessels built for fresh-water navigation, and loaded at Lake ports, would have an advantage on the ocean over those loaded on salt water. As is the density of the water of any sea, so is the displacement, or the sinking of the vessel therein. Therefore a vessel can carry a larger cargo in salt water than she can in fresh; and so, a Lake craft, loading at Chicago as deep as she can swim, will find herself, when she reaches the ocean, much more buoyant and lively. So, also, as, the more sail a vessel carries, the deeper she penetrates the water, it follows, that, the more dense the water, the more sail she can carry.

In proof of these statements, the "Merchants' Magazine" tells us, that English vessels bound up the Black Sea take smaller cargoes than those going to the Mediterranean, because, the former being much less salt than the latter, vessels are less buoyant thereon, and can carry less. This difference in buoyancy will probably be enough to offset the higher seas and rougher weather of the Atlantic.

Thus it appears that this great basin extends through so many degrees of latitude that its lakes and streams connect

with the mineral regions and pine forests of the North, the wheat- and corn-lands and cattle-ranges of the Middle States, and the cotton- and sugar-plantations of the South.

The pine forests of Maine, it is well known, have been for some time failing, under the great demand upon them; and the only resource will soon be in those of Wisconsin, Minnesota, and Michigan, from which many cargoes have been already sent to the Atlantic ports. The amount of lumber made in these pineries in 1860 is estimated at twelve hundred million feet, worth between eight and nine millions of dollars. Most of this goes to the country west of the Lakes,—to Chicago, to St. Louis, and even down the river to New Orleans. Since railroads have penetrated the great prairies and made them habitable, the demand for pine lumber has greatly increased both for building and fencing; and it has been estimated, that, if every quarter-section of land in Iowa and Illinois were surrounded with a "three-board" fence, it would consume every foot of pine-timber in Michigan.

As to the copper and iron mines of Lake Superior, many dabblers in fancy stocks are but too well acquainted with them, and many burned fingers testify against those investments of capital. Still, the amount of mineral is immense, and the quality of the purest; and these mines will no doubt pay well, if worked with skill and capital.

Since 1845, one hundred and sixteen copper-mining companies have been organized in Michigan, under the general law of the State; and the amount of capital invested in them is estimated at six millions of dollars. Most of this is lost. On the other hand, the "Cliff" and "Minnesota" mines have returned over two millions of dollars in dividends. The latter is said to have paid, in 1858, a dividend of \$300,000 on a paid-up capital of \$66,000. Mining is a lottery, and this brilliant prize cannot conceal the fact that blanks fall to the lot of by far the more numerous part of the ticket-holders.

The opening of the Sault Canal has very much aided in developing the resources of the Upper Peninsula. In 1845, the Lake Superior fleet consisted of three schooners. In 1860, one hundred vessels passed through the canal, loaded with supplies for the mining country, and returned with cargoes of copper and iron ore and fish. The copper is smelted in Detroit, Cleveland, and Boston. In 1859, 3,000 tons were landed in Detroit, producing from 60 to 70 per cent. of ingot copper, being among the purest ores in the world.

The iron ore of this region is also of extraordinary purity; and for all purposes where great strength and tenacity are required, it is unrivalled, as the following table, showing the relative strength, per square inch, as compared with other kinds of iron, will prove:—

Best Swedish	58.184
English cable	59.105
Essex Co., N. Y.	59.962
Lancaster, Pa.	58.661
Common English	30.000
Best Russia	76.069
Lake Superior	89.582

With such iron to be had of American manufacture, why should we use a rotten English article for car-wheels and boiler-plates, and so sacrifice the lives of thousands every year? Because, by an unwise legislation, the foreign article is made a little cheaper to the American consumer.

There are ten large forges in operation in Michigan, with a capital of over two millions of dollars; and the shipments of ore from Marquette in 1859 were over 75,000 tons. The country back of Marquette is full of mountains of iron ore, yielding 60 or 70 per cent. of pure metal, sufficient to supply the world for ages.

Traces have been found, through the whole of this copper-region, of a rude species of mining practised here long before it became known to the whites. The existing races of Indians had not even a tradition by whom it was done; and the excavations were unknown to

them, until pointed out by the white man. Messrs. Foster and Whitney, in their survey of the copper-lands, found a pine-stump ten feet in circumference, which must have grown, flourished, and died since the mound of earth upon which it stood was thrown out. Mr. Knapp discovered, in 1848, a deserted mine or excavation, in which, under eighteen feet of rubbish, he found a mass of native copper weighing over six tons, resting on billets of oak supported by sleepers of the same material. The ancient miners had evidently raised the mass about five feet, and then abandoned it. Around it, among the accumulation of rubbish, were found a large number of stone hammers, and some copper chisels, but no utensils of iron. In some instances, explorers have been led to select valuable mining-sites by the abundance of these stone hammers found about the ground. Traces of tumuli have also been found in these regions, which would seem to indicate some connection between these ancient miners and the mound-builders of the Mississippi Valley,—especially as in those western mounds copper rings have frequently been found.

The economical value of the Lake fisheries is considerable. The total catch of white-fish, trout, and pickerel, the only kinds which are packed, to any extent, was estimated for 1859 at 110,000 barrels, worth about \$880,000. These find a market through the States of Ohio, Kentucky, Indiana, and Illinois; besides a large quantity which are consumed in a fresh state, in the Lake cities and towns.

The White-Fish, (*Coregonus Albus*), which is the most valuable of all, somewhat resembles the shad in appearance and taste. It is taken in seines and other nets,—never with the hook. The white-fish of Lake Superior are larger, fatter, and of finer flavor than any others. In this lake they have sometimes been taken weighing fifteen pounds. At the Sault they are taken in the rapids with dip-nets, by the Chippewas who live in that vicinity, and are of very fine flavor; those of Detroit River and the Straits

of Mackinac are also very good; but when you go south, into Lake Erie or Michigan, the quality of the fish deteriorates. Few travellers ever taste a white-fish in perfection. As eaten upon hotel-tables at Buffalo or Chicago, it is a poor and tasteless fish. But, as found at the old French boarding-houses at Mackinac or the Sault, or, better still, cooked fresh from the icy waters on the rocky shores of Superior, it is, to our thinking, the best fish that swims, — better than the true salmon or brook-trout. The famous fish once so plenty in Otsego Lake, but now nearly extinct, was a *Coregonus*, and first cousin to this one of the Great Lakes.

So Sebago Lake, near Portland, some fifty years ago, boasted of a delicious red-fleshed trout, of large size, which has in these latter times, from netting or some other improper fishing, nearly or quite disappeared from those waters; leaving upon the palates of old anglers the remembrance of a flavor higher and richer than anything now remaining.

The Lake Trout, or Mackinac Salmon, is the largest of the family of *Salmonidæ*, growing, it is said, sometimes to the weight of one hundred pounds. From twenty to thirty pounds is not uncommon, which is much larger than the average of *Salmo Salar*, the true salmon. Truth compels us to add, however, that our salmon of the Lakes is inferior to his kinsman of the salt water; though, as in the case of the white-fish, he has been slandered by ignorant people, such as newspaper letter-writers, and the like. When taken from the clear, cold waters of Lake Huron or the Straits, and boiled as nearly alive as humanity will permit, *Salmo Namaycush* is nearly equal to the true salmon; but after two or three days in ice, "how stale, flat, and unprofitable!"

The Muskellunge (*Esox Estor*) is peculiar to this basin, and is the largest of the pickerels, weighing from ten to eighty pounds. It is a very handsome and game fish, and is the king, or tyrant, of the water, devouring without mercy everything smaller than itself; though its favorite food is the white-fish, which, per-

haps, accounts for the superior flavor of this huge pike, which is one of the very best of fresh-water fishes.

Another excellent fish for the table is the Pike-Perch, (*Lucio-Perca*), or Glass-Eyed Pike, from his large, brilliant eyes. In Ohio, it is called the salmon, and by the Canadians the pickerel, while, with singular perversity, they persist in calling our pickerel a pike. It is a very firm, well-flavored fish, weighing from two to ten pounds, and is found in all the Great Lakes.

Professor Agassiz was the first to describe a large and valuable species of pike, which he found in Lake Superior, — the Northern Pike (*Esox Boreus*). This is the most common species of pike in the St. Lawrence basin, though usually confounded with the common pickerel (*Esox Reticulatus*). It grows to the size of fifteen or twenty pounds, and is a better table-fish than *Esox Reticulatus*. It may be distinguished by the rows of spots on its sides, of a lighter color than the ground upon which they are arranged. It differs from the Muskellunge in having the lower jaw full of teeth; whereas in the Muskellunge the anterior half of the lower jaw is toothless.

All the streams which empty into Lake Superior, those of the north shore of Lake Huron, the west shore of Lake Michigan as far as Lake Winnebago, and all the streams of Lake Ontario, contain the Speckled Trout (*Salmo Fontinalis*); while they are not found in the streams on the southern coasts of Lake Michigan, or (so far as we know) in the streams of Lake Erie. What can determine this limitation of the range of the species? It cannot be latitude, since trout are found in Pennsylvania and Virginia. It is not longitude, since they occur in the head-waters of the Iowa rivers. So Professor Agassiz found that Lake Superior contained species which were not to be found in the other lakes, and that the other lakes, again, contained species which did not occur in Lake Superior. He says, in his work on Lake Superior, p. 248, —

"It is the great question of the unity or plurality of creations; it is not less the question of the origin of animals from single pairs or in large numbers; and, strange to say, a thorough examination of the fishes of Lake Superior, compared with those of the adjacent waters, is likely to throw more light upon such questions, than all traditions, however ancient, however near in point of time to the epoch of Creation itself."

In Lake Superior is likewise found that remarkable salmon, the Siscowet, — which is so fat and luscious as to be uneatable in a fresh state, and requires to be salted to render it fit for food. It commands a much higher price by the barrel than the lake-trout or white-fish, and is rarely to be met with out of the Lake cities.

In this basin is also found the Gar-Pike, (*Lepidosteus*.) a singular animal, which is the only living representative of the fishes that existed in the early ages of the earth's history,—and which, by its formidable array of teeth, its impenetrable ar-

mor, and its swiftness and voracity, gives us some idea of the terrible creatures which peopled the waters of that period.

We have thus hastily sketched the character and indicated the resources of that great Northwest, which, little more than fifty years ago a wilderness, is now a cluster of republics holding more than the balance of power in the Union. Idle speculatists, terrified by the violence of South Carolina, and believing that on her withdrawal the sky is to fall, are already predicting the dismemberment of East and West. But we think the chance of it is growing less, year by year. The two are now bound indissolubly together by lines of railroad, which, during a part of the year, are the most convenient outlet of the West toward the sea. Those States, just as they are arriving at a controlling influence in the affairs of a great and powerful nation, are hardly likely to seclude themselves from the rest of the world in what would, from its position, be at best an insignificant republic.

E PLURIBUS UNUM.

WE do not believe that any government—no, not the Rump Parliament on its last legs—ever showed such pitiful inadequacy as our own during the past two months. Helpless beyond measure in all the duties of practical statesmanship, its members or their dependants have given proof of remarkable energy in the single department of speculation; and there, not content with the slow methods of the old-fashioned defaulter, who helped himself only to what there was, they have contrived to steal what there was going to be, and have speculated in advance by a kind of official post-obit. So thoroughly has the credit of the most solvent nation in the world been shaken, that an administration which still talks of paying a hun-

dred millions for Cuba is unable to raise a loan of five millions for the current expenses of Government. Nor is this the worst; the moral bankruptcy at Washington is more complete and disastrous than the financial, and for the first time in our history the Executive is suspected of complicity in a treasonable plot against the very life of the nation.

Our material prosperity for nearly half a century has been so unparalleled, that the minds of men have become gradually more and more absorbed in matters of personal concern; and our institutions have practically worked so well and so easily, that we have learned to trust in our luck, and to take the permanence of our government for granted. The coun-

try has been divided on questions of temporary policy, and the people have been drilled to a wonderful discipline in the manœuvres of party-tactics; but no crisis has arisen to force upon them a consideration of the fundamental principles of our system, or to arouse in them a sense of national unity, and make them feel that patriotism was anything more than a pleasing sentiment,—half Fourth of July and half Eighth of January,—a feeble reminiscence, rather than a living fact with a direct bearing on the national well-being. We have had long experience of that unmemorable felicity which consists in having no history, so far as history is made up of battles, revolutions, and changes of dynasty; but the present generation has never been called upon to learn that deepest lesson of politics which is taught by a common danger, throwing the people back on their national instincts, and superseding party-leaders, the peddlers of chicane, with men adequate to great occasions and dealers in destiny. Such a crisis is now upon us; and if the virtue of the people make up for the imbecility of the Executive, as we have little doubt that it will, if the public spirit of the whole country be awakened in time by the common peril, the present trial will leave the nation stronger than ever, and more alive to its privileges and the duties they imply. We shall have learned what is meant by a government of laws, and that allegiance to the sober will of the majority, concentrated in established forms and distributed by legitimate channels, is all that renders democracy possible, its only conservative principle, the only thing that has made and can keep us a powerful nation instead of a brawling mob.

The theory, that the best government is that which governs least, seems to have been accepted literally by Mr. Buchanan, without considering the qualifications to which all general propositions are subject. His course of conduct has shown up its absurdity, in cases where prompt action is required, as effectually as Buckingham turned into ridicule the famous verse,—

"My wound is great, because it is so small," by instantly adding,—

"Then it were greater, were it none at all."

Mr. Buchanan seems to have thought, that, if to govern little was to govern well, then to do nothing was the perfection of policy. But there is a vast difference between letting well alone and allowing bad to become worse by a want of firmness at the outset. If Mr. Buchanan, instead of admitting the right of secession, had declared it to be, as it plainly is, rebellion, he would not only have received the unanimous support of the Free States, but would have given confidence to the loyal, reclaimed the wavering, and disconcerted the plotters of treason in the South.

Either we have no government at all, or else the very word implies the right, and therefore the duty, in the governing power, of protecting itself from destruction and its property from pillage. But for Mr. Buchanan's acquiescence, the doctrine of the right of secession would never for a moment have bewildered the popular mind. It is simply mob-law under a plausible name. Such a claim might have been fairly enough urged under the old Confederation; though even then it would have been summarily dealt with, in the case of a Tory colony, if the necessity had arisen. But the very fact that we have a National Constitution, and legal methods for testing, preventing, or punishing any infringement of its provisions, demonstrates the absurdity of any such assumption of right now. When the States surrendered their power to make war, did they make the single exception of the United States, and reserve the privilege of declaring war against them at any moment? If we are a congeries of mediæval Italian republics, why should the General Government have expended immense sums in fortifying points whose strategic position is of continental rather than local consequence? Florida, after having cost us nobody knows how many millions of dollars and thousands of lives to render the holding of slaves possible to her, coolly proposes to withdraw her-

self from the Union and take with her one of the keys of the Mexican Gulf, on the plea that her slave-property is rendered insecure by the Union. Louisiana, which we bought and paid for to secure the mouth of the Mississippi, claims the right to make her soil French or Spanish, and to cork up the river again, whenever the whim may take her. The United States are not a German Confederation, but a unitary and indivisible nation, with a national life to protect, a national power to maintain, and national rights to defend against any and every assailant, at all hazards. Our national existence is all that gives value to American citizenship. Without the respect which nothing but our consolidated character could inspire, we might as well be citizens of the toy-republic of San Marino, for all the protection it would afford us. If our claim to a national existence was worth a seven-years' war to establish, it is worth maintaining at any cost; and it is daily becoming more apparent, that the people, so soon as they find that secession means anything serious, will not allow themselves to be juggled out of their rights, as members of one of the great powers of the earth, by a mere quibble of Constitutional interpretation.

We have been so much accustomed to the Buncombe style of oratory, to hearing men offer the pledge of their lives, fortunes, and sacred honor on the most trivial occasions, that we are apt to allow a great latitude in such matters, and only smile to think how small an advance any intelligent pawn-broker would be likely to make on securities of this description. The sporadic eloquence that breaks out over the country on the eve of election, and becomes a chronic disease in the two houses of Congress, has so accustomed us to dissociate words and things, and to look upon strong language as an evidence of weak purpose, that we attach no meaning whatever to declamation. Our Southern brethren have been especially given to these orgies of loquacity, and have so often solemnly assured us of their own courage, and of the warlike propensities,

power, wealth, and general superiority of that part of the universe which is so happy as to be represented by them, that, whatever other useful impression they have made, they insure our never forgetting the proverb about the woman who talks of her virtue. South Carolina, in particular, if she has hitherto failed in the application of her enterprise to manufacturing purposes of a more practical kind, has always been able to match every yard of printed cotton from the North with a yard of printed fustian, the product of her own domestic industry. We have thought no harm of this, so long as no Act of Congress required the reading of the "Congressional Globe." We submitted to the general dispensation of long-windedness and short-meaningness as to any other providential visitation, endeavoring only to hold fast our faith in the divine government of the world in the midst of so much that was past understanding. But we lost sight of the metaphysical truth, that, though men may fail to convince others by a never so incessant repetition of sonorous nonsense, they nevertheless gradually persuade themselves, and impregnate their own minds and characters with a belief in fallacies that have been uncontradicted only because not worth contradiction. Thus our Southern politicians, by dint of continued reiteration, have persuaded themselves to accept their own flimsy assumptions for valid statistics, and at last actually believe themselves to be the enlightened gentlemen, and the people of the Free States the peddlers and sneaks they have so long been in the habit of fancying. They have argued themselves into a kind of vague faith that the wealth and power of the Republic are south of Mason and Dixon's line; and the Northern people have been slow in arriving at the conclusion that treasonable talk would lead to treasonable action, because they could not conceive that anybody should be so foolish as to think of rearing an independent frame of government on so visionary a basis. Moreover, the so often recurring necessity, incident to our system,

of obtaining a favorable verdict from the people, has fostered in our public men the talents and habits of jury-lawyers at the expense of statesmanlike qualities; and the people have been so long wonted to look upon the utterances of popular leaders as intended for immediate effect and having no reference to principles, that there is scarcely a prominent man in the country so independent in position and so clear of any suspicion of personal or party motives, that they can put entire faith in what he says, and accept him either as the leader or the exponent of their thoughts and wishes. They have hardly been able to judge with certainty from the debates in Congress whether secession were a real danger, or only one of those political feints of which they have had such frequent experience.

Events have been gradually convincing them that the peril was actual and near. They begin to see how unwise, if nothing worse, has been the weak policy of the Executive in allowing men to play at Revolution till they learn to think the coarse reality as easy and pretty as the vaudeville they have been acting. They are fast coming to the conclusion that the list of grievances put forward by the secessionists is a sham and a pretence, the veil of a long-matured plot against republican institutions. And it is time the traitors of the South should know that the Free States are becoming every day more united in sentiment and more earnest in resolve, and that, so soon as they are thoroughly satisfied that secession is something more than empty bluster, a public spirit will be aroused that will be content with no half-measures, and which no Executive, however unwilling, can resist.

The country is weary of being cheated with plays upon words. The United States are a nation, and not a mass-meeting; theirs is a government, and not a caucus,—a government that was meant to be capable, and is capable, of something more than the helpless *please don't* of a village constable; they have executive and administrative officers that are not

mere puppet-figures to go through the motions of an objectless activity, but arms and hands that become supple to do the will of the people so soon as that will becomes conscious and defines its purpose. It is time that we turned up our definitions in some more trustworthy dictionary than that of avowed disunionists and their more dangerous because more timid and cunning accomplices. Rebellion smells no sweeter because it is called Secession, nor does Order lose its divine precedence in human affairs because a knave may nickname it Coercion. Secession means chaos, and Coercion the exercise of legitimate authority. You cannot dignify the one nor degrade the other by any verbal charlatanism. The best testimony to the virtue of coercion is the fact that no wrongdoer ever thought well of it. The thief in jail, the mob-leader in the hands of the police, and the murderer on the drop will be unanimous in favor of this new heresy of the unconstitutional-ity of Constitutions, with its Newgate Calendar of confessors, martyrs, and saints. Falstaff's famous regiment would have volunteered to a man for its propagation or its defence. Henceforth let every unsuccessful litigant have the right to pronounce the verdict of a jury sectional, and to quash all proceedings and retain the property in controversy by seceding from the court-room. Let the planting of hemp be made penal, because it squints toward coercion. Why, the first great Secessionist would doubtless have preferred to divide Heaven peaceably, would have been willing to send Commissioners, must have thought Michael's proceedings injudicious, and could probably even now demonstrate the illegality of hell-fire to any five-year-old imp of average education and intelligence. What a fine world we should have, if we could only come quietly together in convention, and declare by unanimous resolution, or even by a two-thirds' vote, that edge-tools should hereafter cut everybody's fingers but his that played with them,—that, when two men ride on one horse, the hindmost shall always sit in front,—and that, when a man

tries to thrust his partner out of bed and gets kicked out himself, he shall be deemed to have established his title to an equitable division, and the bed shall be thenceforth his as of right, without detriment to the other's privilege in the floor!

If secession be a right, then the moment of its exercise is wholly optional with those possessing it. Suppose, on the eve of a war with England, Michigan should vote herself out of the Union and declare herself annexed to Canada, what kind of a reception would her Commissioners be likely to meet in Washington, and what scruples should we feel about coercion? Or, to take a case precisely parallel to that of South Carolina,—suppose that Utah, after getting herself admitted to the Union, should resume her sovereignty, as it is pleasantly called, and block our path to the Pacific, under the pretence that she did not consider her institutions safe while the other States entertained such unscriptural prejudices against her special weakness in the patriarchal line. Is the only result of our admitting a Territory on Monday to be the giving it a right to steal itself and go out again on Tuesday? Or do only the original thirteen States possess this precious privilege of suicide? We shall need something like a Fugitive Slave Law for runaway republics, and must get a provision inserted in our treaties with foreign powers, that they shall help us catch any delinquent who may take refuge with them, as South Carolina has been trying to do with England and France. It does not matter to the argument, except so far as the good taste of the proceeding is concerned, at what particular time a State may make her territory foreign, thus opening one gate of our national defences and offering a bridge to invasion. The danger of the thing is in her making her territory foreign under any circumstances; and it is a danger which the Government must prevent, if only for self-preservation. Within the limits of the Constitution two sovereignties cannot coexist; and yet what practical odds does it make, if a State becomes sovereign by simply de-

claring herself so? The legitimate consequence of secession is, not that a State becomes sovereign, but that, so far as the General Government is concerned, she has outlawed herself, nullified her own existence as a State, and become an aggregate of riotous men who resist the execution of the laws.

We are told that coercion will be civil war; and so is a mob civil war, till it is put down. In the present case, the only coercion called for is the protection of the public property and the collection of the federal revenues. If it be necessary to send troops to do this, they will not be sectional, as it is the fashion nowadays to call people who insist on their own rights and the maintenance of the laws, but federal troops, representing the will and power of the whole Confederacy. A danger is always great so long as we are afraid of it; and mischief like that now gathering head in South Carolina may soon become a danger, if not swiftly dealt with. Mr. Buchanan seems altogether too wholesale a disciple of the *laissez-faire* doctrine, and has allowed activity in mischief the same immunity from interference which is true policy only in regard to enterprise wisely and profitably directed. He has been naturally reluctant to employ force, but has overlooked the difference between indecision and moderation, forgetting the lesson of all experience, that firmness in the beginning saves the need of force in the end, and that forcible measures applied too late may be made to seem violent ones, and thus excite a mistaken sympathy with the sufferers by their own misdoing. The feeling of the country has been unmistakably expressed in regard to Major Anderson, and that not merely because he showed prudence and courage, but because he was the first man holding a position of trust who did his duty to the nation. Public sentiment unmistakably demands, that, in the case of Anarchy *vs.* America, the cause of the defendant shall not be suffered to go by default. The proceedings in South Carolina, parodying the sublime initiative of our own Revolution with a Declaration

of Independence that hangs the franchise of human nature on the kink of a hair, and substitutes for the visionary right of all men to the pursuit of happiness the more practical privilege of some men to pursue their own negro,—these proceedings would be merely ludicrous, were it not for the danger that the men engaged in them may so far commit themselves as to find the inconsistency of a return to prudence too galling, and to prefer the safety of their pride to that of their country.

It cannot be too distinctly stated or too often repeated, that the discontent of South Carolina is not one to be allayed by any concessions which the Free States can make with dignity or even safety. It is something more radical and of longer standing than distrust of the motives or probable policy of the Republican Party. It is neither more nor less than a disbelief in the very principles on which our government is founded. So long as they practically retained the government of the country, and could use its power and patronage to their own advantage, the plotters were willing to wait; but the moment they lost that control, by the breaking up of the Democratic Party, and saw that their chance of ever regaining it was hopeless, they declared openly the principles on which they have all along been secretly acting. Denying the constitutionality of special protection to any other species of property or branch of industry, and in 1832 threatening to break up the Union unless their theory of the Constitution in this respect were admitted, they went into the late Presidential contest with a claim for extraordinary protection to a certain kind of property already the only one endowed with special privileges and immunities. Defeated overwhelmingly before the people, they now question the right of the majority to govern, except on their terms, and threaten violence in the hope of extorting from the fears of the Free States what they failed to obtain from their conscience and settled convictions of duty. Their quarrel is not with the Republican Party, but with the theory of Democracy.

The South Carolina politicians have hitherto shown themselves adroit managers, shrewd in detecting and profiting by the weaknesses of men; but their experience has not been of a kind to give them practical wisdom in that vastly more important part of government which depends for success on common sense and business-habits. The members of the South Carolina Convention have probably less knowledge of political economy than any single average Northern merchant whose success depends on an intimate knowledge of the laws of trade and the world-wide contingencies of profit and loss. Such a man would tell them, as the result of invariable experience, that the prosperity of no community was so precarious as that of one whose very existence was dependent on a single agricultural product. What divinity hedges cotton, that competition may not touch it,—that some disease, like that of the potato and the vine, may not bring it to beggary in a single year, and cure the overweening conceit of prosperity with the sharp medicine of Ireland and Madeira? But these South Carolina economists are better at vamping than at calculation. They will find to their cost that the figures of statistics have little mercy for the figures of speech, which are so powerful in raising enthusiasm and so helpless in raising money. The eating of one's own words, as they must do, sooner or later, is neither agreeable nor nutritious; but it is better to do it before there is nothing else left to eat. The secessionists are strong in declamation, but they are weak in the multiplication-table and the ledger. They have no notion of any sort of logical connection between treason and taxes. It is all very fine signing Declarations of Independence, and one may thus become a kind of panicle hero for a week or two, even rising to the effigial martyrdom of the illustrated press; but these gentlemen seem to have forgotten, that, if their precious document should lead to anything serious, they have been signing promises to pay for the State of South Carolina to an

enormous amount. It is probably far short of the truth to say that the taxes of an autonomous palmetto republic would be three times what they are now. To speak of nothing else, there must be a military force kept constantly on foot; and the ministers of King Cotton will find that the charge made by a standing army on the finances of the new empire is likely to be far more serious and damaging than can be compensated by the glory of a great many such "spirited charges" as that by which Colonel Pettigrew and his gallant rifles took Fort Pinckney, with its garrison of one engineer officer and its armament of no guns. Soldiers are the most costly of all toys or tools. The outgo for the army of the Pope, never amounting to ten thousand effective men, in the cheapest country in the world, has been half a million of dollars a month. Under the present system, it needs no argument to show that the Non-slaveholding States, with a free population considerably more than double that of the Slave-holding States, and with much more generally distributed wealth and opportunities of spending, pay far more than the proportion predicable on mere preponderance in numbers of the expenses of a government supported mainly by a tariff on importations. And it is not the burden of this difference merely that the new Cotton Republic must assume. They will need as large, probably a larger, army and navy than that of the present Union; as numerous a diplomatic establishment; a postal system whose large yearly deficit they must bear themselves; and they must assume the main charges of the Indian Bureau. If they adopt free trade, they will alienate the Border Slave-States, and even Louisiana; if a system of customs, they have cut themselves off from the chief consumers of foreign goods. One of the calculations of the Southern conspirators is to render the Free States tributary to their new republic, by adopting free trade and smuggling their imported goods across the border. But this is all moonshine; for, even if smuggling could not be prevented as easi-

ly as it now is from the British Provinces, how long would it be before the North would adapt its tariff to the new order of things? And thus thrown back upon direct taxation, how many years would it take to open the eyes of the poorer classes of Secessia to the hardship of their position and its causes? Their ignorance has been trifled with by men who cover treasonable designs with a pretence of local patriotism. Neither they nor their misleaders have any true conception of the people of the Free States, of those "white slaves" who in Massachusetts alone have a deposit in the Savings Banks whose yearly interest would pay seven times over the four hundred thousand dollars which South Carolina cannot raise.

But even if we leave other practical difficulties out of sight, what chance of stability is there for a confederacy whose very foundation is the principle that any member of it may withdraw at the first discontent? If they could contrive to establish a free-trade treaty with their chief customer, England, would she consent to gratify Louisiana with an exception in favor of sugar? Some of the leaders of the secession movement have already become aware of this difficulty, and accordingly propose the abolition of all State lines,—the first step toward a military despotism; for, if our present system have one advantage greater than another, it is the neutralization of numberless individual ambitions by adequate opportunities of provincial distinction. Even now the merits of the Napoleonic system are put forward by some of the theorists of Alabama and Mississippi, who doubtless have as good a stomach to be emperors as ever Bottom had to a bottle of hay, when his head was temporarily transformed to the likeness of theirs,—and who, were they subjects of the government that looks so nice across the Atlantic, would, ere this, have been on their way to Cayenne, a spot where such red-peppery temperaments would find themselves at home.

The absurdities with which the telegraphic column of the newspapers has been daily crowded, since the vagaries of

South Carolina finally settled down into unmistakable insanity, would give us but a poor opinion of the general intelligence of the country, did we not know that they were due to the necessities of "Our Own Correspondent." At one time, it is Fort Sumter that is to be bombarded with floating batteries mounted on rafts behind a rampart of cotton-bales; at another, it is Mr. Barrett, Mayor of Washington, announcing his intention that the President-elect shall be inaugurated, or Mr. Buchanan declaring that he shall cheerfully assent to it. Indeed! and who gave them any choice in the matter? Yesterday, it was General Scott who would not abandon the flag which he had illustrated with the devotion of a lifetime; to-day, it is General Harney or Commodore Kearney who has concluded to be true to the country whose livery he has worn and whose bread he has eaten for half a century; to-morrow, it will be Ensign Stebbins who has been magnanimous enough not to throw up his commission. What are we to make of the extraordinary confusion of ideas which such things indicate? In what other country would it be considered creditable to an officer that he merely did not turn traitor at the first opportunity? There can be no doubt of the honor both of the army and navy, and of their loyalty to their country. They will do their duty, if we do ours in saving them a country to which they can be loyal.

We have been so long habituated to a kind of local independence in the management of our affairs, and the Central Government has fortunately had so little occasion for making itself felt at home and in the domestic concerns of the States, that the idea of its relation to us as a power, except for protection from without, has gradually become vague and alien to our ordinary habits of thought. We have so long heard the principle admitted, and seen it acted on with advantage to the general weal, that the people are sovereign in their own affairs, that we must recover our presence of mind before we see the fallacy of the assumption,

that the people, or a bare majority of them, in a single State, can exercise their right of sovereignty as against the will of the nation legitimately expressed. When such a contingency arises, it is for a moment difficult to get rid of our habitual associations, and to feel that we are not a mere partnership, dissolvable whether by mutual consent or on the demand of one or more of its members, but a nation, which can never abdicate its right, and can never surrender it while virtue enough is left in the people to make it worth retaining. It would seem to be the will of God that from time to time the manhood of nations, like that of individuals, should be tried by great dangers or by great opportunities. If the manhood be there, it makes the great opportunity out of the great danger; if it be not there, then the great danger out of the great opportunity. The occasion is offered us now of trying whether a conscious nationality and a timely concentration of the popular will for its maintenance be possible in a democracy, or whether it is only despotisms that are capable of the sudden and selfish energy of protecting themselves from destruction.

The Republican Party has thus far borne itself with firmness and moderation, and the great body of the Democratic Party in the Free States is gradually being forced into an alliance with it. Let us not be misled by any sophisms about conciliation and compromise. Discontented citizens may be conciliated and compromised with, but never open rebels with arms in their hands. If there be any concessions which justice may demand on the one hand and honor make on the other, let us try if we can adjust them with the Border Slave-States; but a government has already signed its own death-warrant, when it consents to make terms with law-breakers. First reestablish the supremacy of order, and then it will be time to discuss terms; but do not call it a compromise, when you give up your purse with a pistol at your head. This is no time for sentimentalisms about the empty chair at the national hearth; all

the chairs would be empty soon enough, if one of the children is to amuse itself with setting the house on fire, whenever it can find a match. Since the election of Mr. Lincoln, not one of the arguments has lost its force, not a cipher of the statistics has been proved mistaken, on which the judgment of the people was made up. Nobody proposes, or has proposed, to interfere with any existing rights of property; the majority have not assumed to decide upon any question of the righteousness or policy of certain social arrangements existing in any part of the Confederacy; they have not undertaken to constitute themselves the conscience of their neighbors; they have simply endeavored to do their duty to their own posterity, and to protect them from a system which, as ample experience has shown, and that of our present difficulty were enough to show, fosters a sense of irresponsibleness to all obligation in the governing class, and in the governed an ignorance and a prejudice which may be misled at any moment to the peril of the whole country.

But the present question is one altogether transcending all limits of party and all theories of party-policy. It is a question of national existence; it is a question whether Americans shall govern America, or whether a disappointed clique shall nullify all government now, and render a stable government difficult hereafter; it is a question, not whether we shall have civil war under certain contingencies, but whether we shall prevent it under any. It is idle, and worse than idle, to talk about Central Republics that can never be formed. We want neither Central Republics nor Northern Republics, but our own Republic and that of our fathers, destined one day to gather the whole continent under a flag that shall be the most august in the world. Having once known what it was to be members of a grand and peaceful constellation, we shall not believe, without further proof, that the laws of our gravitation are to be abolished, and we flung forth into chaos, a hurlyburly of jostling and splintering stars, whenever Robert

Toombs or Robert Rhett, or any other Bob of the secession kite, may give a flirt of self-importance. The first and greatest benefit of government is that it keeps the peace, that it insures every man his right, and not only that, but the permanence of it. In order to this, its first requisite is stability; and this once firmly settled, the greater the extent of conterminous territory that can be subjected to one system and one language and inspired by one patriotism, the better. That there should be some diversity of interests is perhaps an advantage, since the necessity of legislating equitably for all gives legislation its needful safeguards of caution and largeness of view. A single empire embracing the whole world, and controlling, without extinguishing, local organizations and nationalities, has been not only the dream of conquerors, but the ideal of speculative philanthropists. Our own dominion is of such extent and power, that it may, so far as this continent is concerned, be looked upon as something like an approach to the realization of such an ideal. But for slavery, it might have succeeded in realizing it; and in spite of slavery, it may. One language, one law, one citizenship over thousands of miles, and a government on the whole so good that we seem to have forgotten what government means,—these are things not to be spoken of with levity, privileges not to be surrendered without a struggle. And yet while Germany and Italy, taught by the bloody and bitter and servile experience of centuries, are striving toward unity as the blessing above all others desirable, we are to allow a Union, that for almost eighty years has been the source and the safeguard of incalculable advantages, to be shattered by the caprice of a rabble that has outrun the intention of its leaders, while we are making up our minds what coercion means! Ask the first constable, and he will tell you that it is the force necessary for executing the laws. To avoid the danger of what men who have seized upon forts, arsenals, and other property of the United States, and continue to

hold them by military force, may choose to call civil war, we are allowing a state of things to gather head which will make real civil war the occupation of the whole country for years to come, and establish it as a permanent institution. There is no such antipathy between the North and the South as men ambitious of a consolidation in the new republic, which their talents and character have failed to secure them in the old, would fain call into existence by asserting that it exists. The misunderstanding and dislike between them is not so great as they were within living memory between England and Scotland, as they are now between England and Ireland. There is no difference of race, language, or religion. Yet, after a dissatisfaction of near a century, and two rebellions, there is no part of the British dominion more loyal than Scotland, no British subjects who would be more loath to part with the substantial advantages of their imperial connection than the Scotch; and even in Ireland, after a longer and more deadly feud, there is no sane man who would consent to see his country irrevocably cut off from power and consideration to obtain an independence which would be nothing but Donnybrook Fair multiplied by every city, town, and village in the island. The same considerations of policy and advantage which render the union of Scotland and Ireland with England a necessity apply with even more force to the several States of our Union. To let one, or two, or half a dozen of them break away in a freak of anger or unjust suspicion, or, still worse, from mistaken notions of sectional advantage, would be to fail in our duty to ourselves and our country, would be a fatal blindness to the lessons which immemorial history has been tracing on the earth's surface, either with the beneficent furrow of the plough, or, when that was unheeded, the fruitless gash of the cannon-ball.

When we speak of coercion, we do not mean violence, but only the assertion of constituted and acknowledged authority. Even if seceding States could be conquered back again, they would not be

worth the conquest. We ask only for the assertion of a principle which shall give the friends of order in the discontented quarters a hope to rally round, and the assurance of the support they have a right to expect. There is probably a majority, and certainly a powerful minority, in the seceding States, who are loyal to the Union; and these should have that support which the prestige of the General Government can alone give them. It is not to the North or to the Republican Party that the malcontents are called on to submit, but to the laws, and to the benign intentions of the Constitution, as they were understood by its framers. What the country wants is a permanent settlement; and it has learned, by repeated trial, that compromise is not a cement, but a wedge. The Government did not hesitate to protect the doubtful right of property of a Virginian in Anthony Burns by the exercise of coercion, and the loyalty of Massachusetts was such that her own militia could be used to enforce an obligation abhorrent, and, as there is reason to believe, made purposely abhorrent, to her dearest convictions and most venerable traditions; and yet the same Government tampers with armed treason, and lets *I dare not wait upon I would*, when it is a question of protecting the acknowledged property of the Union, and of sustaining, nay, preserving even, a gallant officer whose only fault is that he has been too true to his flag. While we write, the newspapers bring us the correspondence between Mr. Buchanan and the South Carolina "Commissioners," and surely never did a government stoop so low as ours has done, not only in consenting to receive these ambassadors from Nowhere, but in suggesting that a soldier deserves court-martial who has done all he could to maintain himself in a forlorn hope, with rebellion in his front and treachery in his rear. Our Revolutionary heroes had old-fashioned notions about rebels, suitable to the straightforward times in which they lived, — times when blood was as freely shed to secure our national existence as milk-and-water is now to destroy it. Mr. Buchanan

might have profited by the example of men who knew nothing of the modern arts of Constitutional interpretation, but saw clearly the distinction between right and wrong. When a party of the Shays rebels came to the house of General Pomeroy, in Northampton, and asked if he could accommodate them,—the old soldier, seeing the green sprigs in their hats, the badges of their treason, shouted to his son, “Fetch me my hanger, and I’ll accommodate the scoundrels!” General Jackson, we suspect, would have accommodated rebel commissioners in the same peremptory style.

While our government, like Giles in the old rhyme, is wondering whether it is a government or not, emissaries of treason are cunningly working upon the fears and passions of the Border States, whose true interests are infinitely more on the side of the Union than of Slavery. They are luring the ambitious with visionary promises of Southern grandeur and prosperity, and deceiving the ignorant into the belief that the principles and practice of the Free States were truly represented by John Brown. All this might have been prevented, had Mr. Buchanan in his Message thought of the interests of his country instead of those of his party. It is not too late to check and neutralize it now. A decisively national and patriotic policy is all that can prevent excited men from involving themselves so deeply that they will find “returning as tedious as go o’er,” and be more afraid of cowardice than of consequences.

Slavery is no longer the matter in debate, and we must beware of being led off upon that side-issue. The matter now in hand is the reëstablishment of order, the reaffirmation of national unity, and the settling once for all whether there can be such a thing as a government without the right to use its power in self-defence. The Republican Party has done all it could lawfully do in limiting slavery once more to the States in which it exists, and in relieving the Free States from forced complicity with an odious system. They can be patient, as Providence is often pa-

tient, till natural causes work that conviction which conscience has been unable to effect. They believe that the violent abolition of slavery, which would be sure to follow sooner or later the disruption of our Confederacy, would not compensate for the evil that would be entailed upon both races by the abolition of our nationality and the bloody confusion that would follow it. More than this, they believe that there can be no permanent settlement except in the definite establishment of the principle, that this government, like all others, rests upon the everlasting foundations of just Authority,—that that authority, once delegated by the people, becomes a common stock of Power to be wielded for the common protection, and from which no minority or majority of partners can withdraw its contribution under any conditions,—that this Power is what makes us a nation, and implies a corresponding duty of submission, or, if that be refused, then a necessary right of self-vindication. We are citizens, when we make laws; we become subjects, when we attempt to break them after they are made. Lynch-law may be better than no law in new and half-organized communities, but we cannot tolerate its application in the affairs of government. The necessity of suppressing rebellion by force may be a terrible one, but its consequences, whatever they may be, do not weigh a feather in comparison with those that would follow from admitting the principle that there is no social compact binding on any body of men too numerous to be arrested by a United States Marshal.

As we are writing these sentences, the news comes to us that South Carolina has taken the initiative, and chosen the arbitrament of war. She has done it because her position was desperate, and because she hoped thereby to unite the Cotton States by a complicity in blood, as they are already committed by a unanimity in bravado. Major Anderson deserves more than ever the thanks of his country for his wise forbearance. The foxes in Charleston, who have already lost their tails in the trap of Secession, wished to

throw upon him the responsibility of that second blow which begins a quarrel, and the silence of his guns has balked them. Nothing would have pleased them so much as to have one of his thirty-two-pound shot give a taste of real war to the boys who are playing soldier at Morris's Island. But he has shown the discretion of a brave man. South Carolina will soon learn how much she has undervalued the people of the Free States. Because they prefer law to bowie-knives and revolvers, she has too lightly reckoned on their caution and timidity. She will find, that, though slow to kindle, they are as slow to yield, and that they are willing to risk their lives for the defence of law, though not for the breach of it. They are beginning to question the value of a peace that is forced on them at the point of the bayonet, and is to be obtained only by an abandonment of rights and duties.

When we speak of the courage and power of the Free States, we do not wish to be understood as descending to the vulgar level of meeting brag with brag. We speak of them only as among the elements to be gravely considered by the fanatics who may render it necessary for those who value the continued existence of this Confederacy as it deserves to be valued to kindle a back-fire, and to use the desperate means which God has put into their hands to be employed in the last extremity of free institutions. And when we use the term Coercion, nothing is farther from our thoughts than the carrying of blood and fire among those whom

we still consider our brethren of South Carolina. These civilized communities of ours have interests too serious to be risked on a childish wager of courage,—a quality that can always be bought cheaper than day-labor on a railway-embankment. We wish to see the Government strong enough for the maintenance of law, and for the protection, if need be, of the unfortunate Governor Pickens from the anarchy he has allowed himself to be made a tool of for evoking. Let the power of the Union be used for any other purpose than that of shutting and barring the door against the return of misguided men to their allegiance. At the same time we think legitimate and responsible force prudently exerted safer than the submission, without a struggle, to unlawful and irresponsible violence.

Peace is the greatest of blessings, when it is won and kept by manhood and wisdom; but it is a blessing that will not long be the housemate of cowardice. It is God alone who is powerful enough to let His authority slumber; it is only His laws that are strong enough to protect and avenge themselves. Every human government is bound to make its laws so far resemble His, that they shall be uniform, certain, and unquestionable in their operation; and this it can do only by a timely show of power, and by an appeal to that authority which is of divine right, inasmuch as its office is to maintain that order which is the single attribute of the Infinite Reason that we can clearly apprehend and of which we have hourly example.

REVIEWS AND LITERARY NOTICES.

Personal History of Lord Bacon. From Unpublished Papers. By WILLIAM HEPPORTH DIXON, of the Inner Temple. Boston: Ticknor & Fields. 12mo. pp. 424.

THE life of Bacon, as it has been ordinarily written, presents contrasts so strange, that thoughtful readers have been

compelled either to doubt the accuracy of the narrative, or to admit that in his case Nature departed from her usual processes, and embodied antithesis in a man. The character suggested by the events of his life has long been in direct opposition to the character impressed on his writings; and Macaulay, who gave to the popular

opinion its most emphatic and sparkling expression, increased this difference by exaggerating the opposite elements of the human epigram, and ended in manufacturing the most brilliant monstrosity that ever bore the name of a person. Lord Campbell followed with a biography having all the appearance of conscientious research and judicial impartiality, but which was really nothing more than a weak translation of Macaulay's vivid sentences into such English "as it had pleased God to endow him withal." Bacon, to all inquiring men, still remained outside of the statements of both; and after the lapse of nearly two centuries, the slight biographical sketch by his chaplain, Dr. Rawleigh, conveyed a juster idea of the man than all the biographies by which it had been succeeded, but not superseded.

Mr. Dixon's "Personal History of Lord Bacon" is the first attempt to vindicate his fame by original research into unpublished documents. It is a mortifying reflection to all who speak the English tongue, that this task should have been deferred so long. There has been no lack of such research in regard to insignificant individuals who have been accidentally connected with events which come within the cognizance of English historians; but the greatest Englishman among all English politicians and statesmen since the Norman Conquest has heretofore been honored with no biographer who considered him worthy the labor which has been lavished on inferior men. The readers of Macaulay's four volumes of English history have often expressed their amazement at his minute knowledge of the political mediocrities of the time of James II. and William III. He spared neither time nor labor in collecting and investigating facts regarding comparatively unknown persons who happened to be connected with his subject; but in his judgment of a man who, considered simply as a statesman, was infinitely greater than Halifax or Danby, he depends altogether on hearsay, and gives that hearsay the worst possible appearance. In his article on Bacon, he not merely evinces no original research, but he so combines the loose statements he takes for granted, that, in his presentation of them, they make out a stronger case against Bacon than is warranted by their fair interpretation. Indeed, leaving out the facts which Macaulay

suppresses or is ignorant of, and taking into account only those which he includes, his judgment of Bacon is still erroneous. Long before we read Mr. Dixon's book, we had reversed Macaulay's opinion merely by scrutinizing, and restoring to their natural relations, Macaulay's facts.

But Mr. Dixon's volume, while in style and matter it is one of the most interesting and entertaining books of the season, is especially valuable for the new light it sheds on the subject by the introduction of original materials. These materials, to be sure, were within the reach of any person who desired to write an impartial biography; but Mr. Dixon no less deserves honor for withstanding the prejudice that Bacon's moral character was unquestionably settled as base, and for daring to investigate anew the testimony on which the judgment was founded. And there can be no doubt that he has dispelled the horrible chimera, that the same man can be thoroughly malignant or mean in his moral nature and thoroughly beneficent or exalted in his intellectual nature. While we do not doubt that depravity and intelligence can make an unholy alliance, we do doubt that the intelligence thus prompted can exhibit, to an eye that discerns spirits, all the vital signs of benevolence. If, in the logic of character, Iago or Jerry Sneak be in the premises, it is impossible to find Bacon in the conclusion.

The value of Mr. Dixon's book consists in its introduction of new facts to illustrate every questionable incident in Bacon's career. It is asserted, for instance, that Bacon, as a member of Parliament, was impelled solely by interested motives, and opposed the government merely to force the government to recognize his claims to office. Mr. Dixon brings forward facts to prove that his opposition is to be justified on high grounds of statesmanship; that he was both a patriot and a reformer; that great constituencies were emulous to make him their representative; that in wit, in learning, in reason, in moderation, in wisdom, in the power of managing and directing men's minds and passions, he was the first man in the House of Commons; that the germs of great improvements are to be found in his speeches; that, when he was overborne by the almost absolute power of the Court, his apparent sycophancy was merely the wariness of a wise statesman;

that Queen Elizabeth eventually acknowledged his services to the country, and, far from neglecting him, repeatedly extended to him most substantial marks of her favor. This portion of Mr. Dixon's volume, founded on state-papers, will surprise both the defamers and the eulogists of Bacon. It contains facts of which both Macaulay and Basil Montagu were ignorant.

Of Bacon's relations with Essex we never had but one opinion. All the testimony brought forward to convict Bacon of treachery to Essex seemed to us inconclusive. The facts, as stated by Macaulay and Lord Campbell, do not sustain their harsh judgment. A parallel may be found in the present political condition of our own country. Let us suppose Senator Toombs so fortunate as to have had a wise counselor, who for ten years had borne to him the same relation which Bacon bore to Essex. Let us suppose that it was understood between them that both were in favor of the Union and the Constitution, and that nothing was to be done to forward the triumph of their party which was not strictly legal. Then let us suppose that Mr. Toombs, from the impulses of caprice and passion, had secretly established relations with desperate disunionists, and had thus put in jeopardy not only the interests, but the lives, of those who were equally his friends and the friends of the Constitution. Let us further suppose that he had suddenly placed himself at the head of an armed force to overturn the United States government at Washington, while he was still a Senator from Georgia, sworn to support the Constitution of the United States, and that his cheated friend and counsellor had just left the President of the United States, after a long conference, in which he had attempted to show, to an incredulous listener, that Senator Toombs was a devoted friend to the Union, though dissatisfied with some of the members of the Administration. This is a very faint illustration of the political relations between Essex and Bacon, admitting the generally received facts on which Bacon is execrated as false to his friend. Mr. Dixon adduces new facts which completely justify Bacon's conduct. If Bacon, like Essex, had been ruled by his passions, he would have been a far fiercer denouncer of Essex's treason. He had every reason to be enraged. He was a wise man duped by a foolish one.

He was in danger of being implicated in a treason which he abhorred, through the perfidy of a man who was generally considered as his friend and patron, and who was supposed to act from his advice. As Bacon doubtless knew what we now for the first time know, every candid reader must be surprised at the moderation of his course. Essex would not have hesitated to shoot or stab Bacon, had Bacon behaved to him as he had behaved to Bacon. But we pardon, it seems, the most hateful and horrible selfishness which springs from the passions; our moral condemnation is reserved for that faint form of selfishness which may be suspected to have its source in the intellect.

In regard to the other charges against Bacon, we think that Mr. Dixon has brought forward evidence which must materially modify the current opinions of Bacon's personal character. He has proved that Bacon, as a practical statesman, was in advance of his age, rather than behind it. He has proved that his philosophy penetrated his politics, and that he gave wise advice, and recommended large, liberal, and humane measures to a generation which could not appreciate them. He has proved that he did everything that a man in his situation could do for the cause of truth and justice which did not necessitate his retirement from public life. The abuses by which he may have profited he not only did not defend, but tried to reform. Among the statesmen of his day he appears not only intellectually superior, but conventionally respectable,—a fact which would seem to be established by the bare statement, that he died wretchedly poor, while most of them died enormously rich.

But Mr. Dixon, in his advocacy of Bacon, overlooks the circumstance, that no man could hold high office under James I., without complying with abuses calculated to damage his reputation with posterity. We have no doubt that Bacon's compliance was connected with considerations which Mr. Dixon entirely ignores. Far from discriminating between Bacon the philosopher and Bacon the politician, we have always thought that they were intimately connected. Bacon's Method, the thing on which, as a philosopher, he especially prided himself, was defective. It left out that power by which all discoveries have since his time been made, namely, scientific genius. Its successful work-

ing depended on an immense collection of facts, which no individual, and no society of individuals, could possibly make. He himself was never weary of asserting that the Method could never produce its beneficent effects, unless it were assisted by the revenues of a nation. Of the course which physical science really followed he had no prevision. Copernicus, Kepler, Galileo, Gilbert, he never appreciated. He was an intellectual autocrat, who had matured his own scheme of interpreting Nature, and thought, that, if it were systematically carried out, the inmost secrets of Nature could be mastered. His desire to be Lord Chancellor of England was subsidiary to his larger desire to be Lord Chancellor of Nature herself. He hoped, by managing James and Buckingham, to flatter them into aiding, by the revenues of the State, his grand philosophical scheme. Combine the facts which Mr. Dixon has disinterred with the facts which every thoughtful reader of Bacon's philosophical works already knows, and the vindication of Bacon as a man is complete.

We are inclined to think that he failed in both of the objects of his highest ambition. His philosophic Method is demonstrably a failure; his attempt to convert James and Buckingham to his views resulted in his own unjust disgrace with contemporaries and posterity. The truth is, that, cool, serene, comprehensive, and unimpassioned as he appears, he was from his youth actuated by a fanaticism which seems less intense than the fanaticism of a man like Cromwell only because it was infinitely more broad. Had he succeeded in the design he proposed to himself, his intellectual domination would not be confined to England, or the kingdoms of the civilized world, but would be commensurate with the whole domain of Nature and man.

We are so grateful to Mr. Dixon for what he has done, that we are not disposed to quarrel with him for what he has left undone. He has added such a mass of incontrovertible facts to the materials which must enter into the future biography of Bacon, that his book cannot fail to exact cordial praise from the most captious critics. Bacon, in his aspirations and purposes, was a very much greater man than he appears in Mr. Dixon's biography; but still to Mr. Dixon belongs the credit of rescuing his personal reputation from un-

deserved ignominy. If we add to this his vivid pictures of the persons and events of the Elizabethan age, and his bright, sharp, and brief way of flashing his convictions and discoveries on the mind of the reader, we indicate merits which will make his volume generally and justly popular. The letters of Lady Ann Bacon, the mother of the philosopher and statesman—letters for which we are indebted to Mr. Dixon's exhaustive research—would alone be sufficient to justify the publication of his interesting book.

Autobiography of Dr. Alexander Carlyle, Minister of Inveresk. With Memorials of the Men and Events of his Time. Boston: Ticknor & Fields. 12mo. pp. 480.

Who was he? and what was he like?—Sir Walter Scott answered these interrogatories more than thirty years ago, in this wise. He says, in his "Review of the Life and Works of John Home,"—"Dr. Carlyle was, for a long period, clergyman of Musselburgh; his character was as excellent as his conversation was amusing and instructive; his person and countenance, even at a very advanced age, were so lofty and commanding, as to strike every artist with his resemblance to the Jupiter Tonans of the Pantheon."

Sixty years ago, this old Scottish clergyman sat down, one January day, in Musselburgh, and began to write his "Autobiography." He had lived seventy-nine years among scenes of great interest, and had known men of remarkable genius. He wrote and died. The manuscript he left has been often read and enjoyed by clever men and women, who in their turn have gone to the churchyard to sleep with the venerable old man the story of whose life they had perused. Sir Walter himself once caught a glimpse of the time-stained sheets. All are now dead who could by any chance be pained by the publication of facts in which their relatives took part long years ago. So the world has now another volume to add to the store of biography, and the future historian will have another treasury of facts from which to illumine his pages.

Himself the son of a clergyman, Alexander Carlyle had a good school-drilling in Prestonpans, where he was born. One of

the stories of his childhood is very amusing, inasmuch as it pictures a dozen old women listening to young Alexander, aged six, who reads the Song of Solomon to them in a graveyard, he all the while perched on a tombstone. My Lord Grange was the principal man in Prestonpans parish; and Master Carlyle, with his excellent father, had great reverence for the patron who had been the cause of the family's transplantation from Annandale. My Lady was a very lively person, daughter of the man who shot President Lockhart in the dark because he had infuriated him in an arbitration case in the court. This great family attracted the boyish wonder of young Carlyle, and some of the gossiping stories that he heard in his father's house made his juvenile ears tingle. Poor Lady Grange! Quarrelling with her husband one day, on his return from London, where pretty Fanny Lindsay, who kept a coffee-house in the Haymarket, had bewitched him, she never knew peace again. Her temper, never very soothing or placable, got entire possession of her life, and she rained stormy gusts of passion on her guilty lord. He trembled and endured, till he found a razor concealed under his wife's pillow, and then he determined to remove his violent helpmeet to a safe seclusion. By main force, with the aid of accomplices, he seized the lady in his house in Edinburgh, and bore her through Stirling to the Highlands. Thence she was taken to St. Kilda's desolate island, far off in the Western Ocean, and there kept for the remainder of her days, scantily furnished with only the coarsest fare. Her condition was most wretched to the last. In those days, licentiousness and religious enthusiasm were not incompatible associates, and Lord Grange frequently spent his evenings with the Minister of Prestonpans, praying, and settling high points of Calvinism with the old pastor. Good Mrs. Carlyle used to complain that they did not part without wine, and that late hours were consequent upon the claret they liberally imbibed after their pious discussions.

Dr. Doddridge's famous Colonel Gardiner came to reside in Minister Carlyle's parish, and told the story of his remarkable conversion, with his own lips, to the clergyman. The book which turned him from his wicked career was Gurnall's "*Christian Armor*," a volume placed many years before, by a mother's hand, in his trunk, and

until then neglected. Young Carlyle heard Gardiner tell the story of his change of life several times to different sets of people, and he thought Doddridge had marred the tale by introducing the incident of a blaze of light, which the Colonel himself never spoke of having seen, when he related his conversion.

When Alexander was eleven years old, he took a little journey with his father and another clergyman by the name of Jardine; and the two pious, elderly gentlemen, having a great turn for fun and buffoonery, made sport wherever they went. Turning their wigs hind-part foremost, and making faces, they delighted in diverting the children they encountered on the way.

Of many of the incidents of the Porteous Mob young Carlyle was a witness. He was in the Tolbooth Church, at Edinburgh, when Robertson, a condemned smuggler, who was brought in to listen to the discourse and prayers before execution, made his escape. The congregation were coming into church while all the bells were ringing, when the criminal, watching his opportunity, sprang suddenly over a pew, and was next heard of in Holland. When, a few weeks afterwards, Wilson, another smuggler, was executed, Carlyle, with some of his school-fellows, was in a window on the north side of the Grass-Market, and heard Porteous order his guard to fire on the people. A young lad, who had been killed by a slug entering his head, was brought into the house where the boys were on that occasion.

In the summer of 1737, young Carlyle might have been seen during the evening-hours walking anxiously about the Prestonpans fields. That season he had lost one of his fellow-pupils and dearest friends, and they had often agreed together that whichever might die first should appear there to the other, and reveal the secrets beyond the barrier. And so the survivor paced the meadows, hoping to meet his old companion, who never appeared. In November of that year he was at college, and his acquaintance with Robertson, afterwards the eminent historian, then began. John Home, celebrated at a later period as the author of "*Douglas*," also became an intimate friend. He now decided to choose a profession, and had well-nigh concluded an agreement with two surgeons to study theirs, when he became

disgusted with the meanness of the doctors, who had bought for dissection the body of a child of a poor tailor for six shillings, the price asked being six shillings and sixpence, from which they made the needy man abate the sixpence. Turning from the niggardly surgeons, he enrolled his name as a student of divinity, and was frequently in Edinburgh attending the lectures at Divinity Hall. Wonderfully cheap was the living in those days, when, at the Edinburgh ordinaries, a good dinner could be had for fourpence, small beer included. John Witherspoon, years after a member of the American Congress, then a frank, generous young fellow, was a companion of Carlyle at this period, and they often went fishing together in the streams near Gifford Hall.

The city of Glasgow, whither young Carlyle had gone to pursue his studies, was at this time far inferior in point of commerce to what it afterwards became. The tobacco-trade with the American colonies and the traffic in sugar and rum with the West Indies were the chief branches of business. Carlyle did not find the merchants of those days interesting or learned people, though they held a weekly club, where they discussed the nature and principles of trade, and invited Alexander to join it. But he found life in Glasgow very dull, and was constantly complaining that there was neither a teacher of French nor of music in the town. There was but one concert during the two winters he spent there. Post-chaises, and hackney-coaches were unknown, their places being supplied by three or four old sedan-chairs, which did a brisk business in carrying midwives about in the night, and old ladies to church and the dancing-assemblies. The principal merchants began their business early in the morning, and took dinner about noon with their families at home. Afterwards they resorted to the coffee-house, to read the newspapers and enjoy a bowl of punch. Until an arch fellow from Dublin came to be master of the chief coffee-house, nine o'clock was the hour for these worthy mercantile gentlemen to be at home in the evening. The seductive Irish stranger began his wiles by placing a few nice cold relishing things on the table, and so gradually led the way to hot suppers and midnight symposia. Towards the end of his college-session, Carlyle was

introduced to a club which gave him great satisfaction. The principal member was Robert Simson, the celebrated mathematician. Simson was a great humorist, and was particularly averse to the company of ladies. Matthew Stewart, afterwards Professor of Mathematics at Edinburgh, was a constant attendant at this club.

On the breaking out of the Rebellion of 1745, the young divinity-student, having returned to Edinburgh, joined the Volunteers, and entered warmly into all the bustle and business of those exciting days. In the Battle of Prestonpans he took part, and was active to the end. When Prince Charles Edward issued a proclamation of pardon to the Volunteers, Carlyle went down to the Abbey Court to see him. The Prince mounted his horse, while the young man stood by, and rode away to the east side of Arthur's Seat. Charles was at that time a good-looking gentleman, of about five feet ten inches, with dark red hair and black eyes.

One Monday morning in October, a hundred and fifteen years ago, young Carlyle set out for Rotterdam, on his way to Leyden, to join the British students there. Among them he found Charles Townshend and John Wilkes, names afterwards famous in English politics. With Wilkes he became intimate, and many a spirited talk they had together in their daily rambles.

But we cannot dwell upon the incidents of Carlyle's student-life on the Continent. Soon after his return to Scotland he made acquaintance with Smollett, whose lively, agreeable manners rendered him universally popular. Thomson, the author of "The Seasons," and Armstrong the poet, were also at this time among his friends. In 1746 he preached his first sermon before the Presbytery of Haddington, and got "universal approbation," especially from one young lady, to whom he had been long attached. Robertson the historian and Home the dramatist were now among his neighbors, and no doubt used their influence in getting the young clergyman a living. He finally settled at Inveresk, where his life was a very pleasant round of cares and duties. Hume, Adam Smith, Blair, Smollett, and Robertson now figure largely in his personal record, so that he had no lack of genial companions. Adam Smith he describes as "a very absent man in society, moving his

lips, talking to himself, and smiling, in the midst of large companies." Robertson was a very different person, and held all the conversation-threads in his own fingers,—forgetting, alas! sometimes, that he had not been present in many a scene which he described as an eye-witness.

Carlyle went some distance on the way toward London with Home, when he carried his tragedy of "Douglas" for examination to the critics. Six other clergymen accompanied the precious manuscript on that expedition, and the fun was prodigious. Garrick read the play and pronounced it totally unfit for the stage! "Douglas" was afterwards brought out in Edinburgh with unbounded success. David Hume ran about crying it up as the first performance the world had seen for half a century.

Carlyle's visit to Shenstone is very graphically described in the "Autobiography." The poet was then "a large, heavy, fat man, dressed in white clothes and silver lace." One night in Edinburgh, Dr. Robertson gave a small supper-party to "the celebrated Dr. Franklin," and Carlyle met him that evening at table. They came together afterwards several times.

But we must refer our readers to the book itself, our limits not allowing more space for a glance at one of the most entertaining works in modern biography.

The Laws of Race, as connected with Slavery.

By the Author of "The Law of the Territories," "Rustic Rhymes," etc. Philadelphia: W.P. Hazard. 1860. 8vo. pp.70.

THERE is no lack of talk and writing among us on political topics; but there is great lack of independent and able thought concerning them. The disputes and the manoeuvres of parties interfere with the study and recognition of the active principles which silently mould the national character and history. The double-faced platforms of conventions, the loose manifestoes of itinerant candidates for the Presidency, the rhetorical misrepresentations of "campaign documents," form the staple of our political literature.

The writer of the pamphlet before us is one of the few men who not only think for themselves, but whose thoughts deserve attention. His essay on "The Law of the Territories" was distinguished not more

by its sound reasoning than by the candor of its statements and the calmness of its tone and temper. If his later essay, on "The Laws of Race, as connected with Slavery," be on the whole less satisfactory, this is to be attributed, not to any want in it of the same qualities of thought and style as were displayed in his earlier work, but to the greater complexity and difficulty of the subject itself. The question of Race, so far as it affects actual national conditions, is one of the deepest and most intricate which can be presented to the student of politics. It is impossible to investigate it without meeting with difficulties which in the present state of knowledge cannot be solved, or without opening paths of speculation which no human foresight can trace to their end. This is, indeed, no reason for not attempting its discussion; and Mr. Fisher, in treating it in its relation to Slavery, has done good work, and has brought forward important, though much neglected considerations. He endeavors to place the whole subject of the relations of the white and the black races in this country on philosophic grounds, and to deduce the principles which must govern them from the teachings of ethnological science, or, in other words, from natural laws which human device can neither abrogate nor alter.

From these teachings he derives the three following conclusions.

"The white race must of necessity, by reason of its superiority, govern the negro, wherever the two live together.

"The two races can never amalgamate, and form a new species of man, but must remain forever distinct,—though mulattoes and other grades always exist, because constantly renewed.

"Each race has a tendency to occupy exclusively that portion of the country suited to its nature."

If true, these conclusions are of the utmost importance. They are higher laws, which "must rule our politics and our destiny, either by the Constitution or over it, either with the Union or without it; and no wit or force of man is strong enough to resist them." It is to the exposition of the results which follow from these conclusions, assuming them to be true, that the larger part of the present essay is devoted.

That these propositions express, or at least point the way to essential truths, we are fully persuaded. But we are not ready

to accept all the inferences which the author draws from them, or to admit that they afford sufficient basis for some of his minor assumptions.

Arguing from his first conclusion, the author draws the inference that "slavery is the necessary result" of the nature of the black and of the white man. "The negro is by nature indolent and improvident." "He is also ignorant." "He requires restraint and guidance"; "otherwise he would sink into helpless, hopeless vice, idleness, and misery." But in these words, and in others to the same purport, Mr. Fisher assumes that the nature of the black is incapable of such improvement as to make what he calls the necessary condition of servitude needless in the interest of either race. We are surprised that so good a reasoner should speak of the ignorance of the black as a natural disqualification for independence, and the more so, because, in another passage, Mr. Fisher says, with truth, "We darken his mind with ignorance." That some form of subjection of the negro may be necessary for a time that extends far into the future is a point we will not dispute; but that slavery, as that word is generally understood, is the necessary result of his nature and of our nature we believe to be utterly untrue. The whole history of American slavery, far from exhibiting the negro as incapable of improvement, shows him making a slow and irregular advance in the development of intellectual and moral qualities, under circumstances singularly unfavorable. It is the plea of the advocates of the slave-trade, that the black is civilized by contact with the white. The plea is not without truth. It is the universal testimony of slave-owners, and the common observation of travellers, that the city and house slaves, that is, those who are brought into most constant and close relations with the whites, show higher mental development than those who are confined to the fields. The experiment of education, continued for more than one generation, has never been tried. The black is in many of his endowments inferior to the white; but until he and his children and his children's children have shown an incapacity to be raised by a suitable training, honestly given, to an intellectual and moral condition that shall fit them for self-dependence, we have no right to assert that slavery is a necessary con-

dition, if in the meaning of necessary we include the idea of permanence. It is not needful to present here other objections to this sweeping assertion. They are old, well-known, and unanswerable.

But leaving this and other points on which we find ourselves at issue with Mr. Fisher, we come to what we regard as the most important part of his pamphlet, — the results which he shows to follow from the law, that "each race has a tendency to occupy exclusively that portion of the country suited to its nature." In the States that lie on the Gulf of Mexico the negro "has found a congenial climate and obtained a permanent foothold." "The negro multiplies there; the white man dwindles and decays." We should be glad to quote at length the striking pages in which Mr. Fisher shows the prospect of the ultimate and not distant ascendancy of the black race in this new Africa. The considerations he presents are of vital consequence to the South, of consequence only less than vital to the North. But by the side of "New Africa" are States and Territories in which the black race has little or no foothold. Free, civilized, and prosperous communities are brought face to face, as it were, with the mixed and degenerating populations of the Slave country. In the Free States the white race is increasing in numbers and advancing in prosperity with unexampled rapidity. In the Slave States the black race is growing in far greater proportion than the white, the most important elements of prosperity are becoming exhausted, and the forces of civilization are incompetent to hold their own against the ever-increasing weight of barbarism. Shall this new Africa push its boundaries beyond their present limits? Shall more territory be yielded to the already wide-spread African race? It is not the question, whether the unoccupied spaces of the South and West shall be settled by Northern white emigrants with their natural property, or by Southern white emigrants with their legal property, — and there an end; but it is the question, whether New England or New Africa shall extend her limits, — whether the country shall be occupied a century hence by a civilized or by a barbarous race. Every rood of ground yielded to the pretensions of the masters of slaves is so much of the heirloom of freedom and of civilization lost without hope of recovery. Slavery is trans-

ent. As an institution, such as it has developed itself in our Southern States, it has already-given tokens of decay. But the qualities of race are so slowly affected by change as to admit of being called constant and permanent. The predominant influence of the blacks in the Cotton States is already (even putting aside the results of slavery) exhibiting itself in the lowering of the whites. These States are becoming uninhabitable for the whites,—not by reason of climate, or of slavery as an institution, but by reason of the operation of the inevitable increase of the slaves. They must have the land, and the stronger race will be driven out by the weaker, on account of the preponderance of their numbers and the *vis inertiae* of their natures. There is no room in the United States, or in any of their unsettled territory, for the expansion of this transatlantic Africa. Where the black race is now settled it will stay, but it must be confined within its present limits.

We do not look upon the simple secession of the Slave States, or of any one of them, as dangerous, so far as the extension of slavery is concerned,—rather, on the contrary, as likely to end the great debate by securing all unoccupied territory to the North, to freedom, and to the white races. It is only, if an attempt should be made, for the sake of what is miscalled peace, and for the sake of the Union, to conciliate the misguided and unfortunate people of the South by compromise or concession, that we fear the consequences.

The responsibility under which we are to act is not for our own moral convictions alone, but also for the happiness of all future times. There is no room for concession, no space for compromise, in the settlement of the question of the prevalence of the black or of the white race on this continent,—in other words, the prevalence of liberty and Christianity and all their attendant blessings, or that of ignorance and barbarism with their train. “We will decide this question,” says Mr. Fisher, whose words were written before the necessity for decision was so distinctly presented as at present, “we will decide it, if we can, as a united people; but if we cannot, if cotton and slavery and the negro have already weakened our Southern brethren by their spells and enchantments, so that the South cannot decide accord-

ing to the traditions and impulses of our race, then we of the North will still decide it, as by right we may,—by right of reason, of race, and of law.”

The Conduct of Life. By R. W. EMERSON.
Boston: Ticknor & Fields. 16mo. pp. 288.

It is a singular fact, that Mr. Emerson is the most steadily attractive lecturer in America. Into that somewhat cold-waterish region adventurers of the sensation kind come down now and then with a splash, to become disregarded King Logs before the next season. But Mr. Emerson always draws. A lecturer now for something like a quarter of a century, one of the pioneers of the lecturing system, the charm of his voice, his manner, and his matter has never lost its power over his earlier hearers, and continually winds new ones in its enchanting meshes. What they do not fully understand they take on trust, and listen, saying to themselves, as the old poet of Sir Philip Sidney,—

“A sweet, attractive, kind of grace,
A full assurance given by looks,
Continual comfort in a face,
The lineaments of gospel books.”

We call it a singular fact, because we Yankees are thought to be fond of the spread-eagle style, and nothing can be more remote from that than his. We are reckoned a practical folk, who would rather hear about a new air-tight stove than about Plato; yet our favorite teacher's practicality is not in the least of the Poor Richard variety. If he have any Buncombe constituency, it is that unrealized commonwealth of philosophers which Plotinus proposed to establish; and if he were to make an almanac, his directions to farmers would be something like this:—“OCTOBER: *Indian Summer*; now is the time to get in your early Vedas.” What, then, is his secret? Is it not that he out-Yankees us all? that his range includes us all? that he is equally at home with the potato-disease and original sin, with pegging shoes and the Oversoul? that, as we try all trades, so has he tried all cultures? and above all, that his mysticism gives us a counterpoise to our super-practicality?

There is no man living to whom, as a writer, so many of us feel and thankfully

acknowledge so great an indebtedness for ennobling impulses,—none whom so many cannot abide. What does he mean? ask these last. Where is his system? What is the use of it all? What the deuce have we to do with Brahma? Well, we do not propose to write an essay on Emerson at the fag-end of a February "Atlantic," with Secession longing for somebody to hold it, and Chaos come again in the South Carolina teapot. We will only say that we have found grandeur and consolation in a starlit night without caring to ask what it meant, save grandeur and consolation; we have liked Montaigne, as some ten generations before us have done, without thinking him so systematic as some more eminently tedious (or shall we say tediously eminent?) authors; we have thought roses as good in their way as cabbages, though the latter would have made a better show in the witness-box, if cross-examined as to their usefulness; and as for Brahma, why, he can take care of himself, and won't bite us at any rate.

The bother with Mr. Emerson is, that, though he writes in prose, he is essentially a poet. If you undertake to paraphrase what he says, and to reduce it to words of one syllable for infant minds, you will make as sad work of it as the good monk with his analysis of Homer in the "Epistolæ Obscurorum Virorum." We look upon him as one of the few men of genius whom our age has produced, and there

needs no better proof of it than his masculine faculty of fecundating other minds. Search for his eloquence in his books and you will perchance miss it, but meanwhile you will find that it has kindled all your thoughts. For choice and pith of language he belongs to a better age than ours, and might rub shoulders with Fuller and Browne,—though he does use that abominable word, *reliable*. His eye for a fine, telling phrase that will carry true is like that of a backwoodsman for a rifle; and he will dredge you up a choice word from the ooze of Cotton Mather himself. A diction at once so rich and so homely as his we know not where to match in these days of writing by the page; it is like homespun cloth-of-gold. The many cannot miss his meaning, and only the few can find it. It is the open secret of all true genius. What does he mean, quotha? He means inspiring hints, a divining-rod to your deeper nature, "plain living and high thinking."

We meant only to welcome this book, and not to review it. Doubtless we might pick our quarrel with it here and there; but all that our readers care to know is, that it contains essays on Fate, Power, Wealth, Culture, Behavior, Worship, Considerations by the Way, Beauty, and Illusions. They need no invitation to Emerson. "Would you know," says Goethe, "the ripest cherries? Ask the boys and the blackbirds." He does not advise you to inquire of the crows.

VOL. VII.—MARCH, 1861.—NO. XLI.

GERMAN UNIVERSITIES.

THE PROFESSORS.

"WHICH of the German universities would be the best adapted to my purpose?" is the question of many an American student, who, having gone through the usual course in the United States, looks abroad for the completion of his scientific or liberal studies. Of Göttingen and Heidelberg he will often have read and heard; the reputation of the comparatively new university of Berlin will not be unfamiliar to him; but of Tübingen, Würzburg, Erlangen, Halle, or Bonn, even, he will perhaps know little more than the name. In the majority of the last-named places, foreigners, especially his own countrymen, are rare; none of his friends have studied there; they have followed the current, since the last century, and spent their time in Göttingen or Heidelberg, perhaps a winter in Berlin. They have found these institutions good, and affording every facility for study; but would not Munich, or Leipzig, or Jena, or any other one of the twenty-six universities of Germany, better answer the purpose of many a student?

During the last winter, in many conversations with a retired professor in Berlin, who manifested a special interest in American institutions, mainly in

the American educational system, he was very particular in inquiring as to what we meant by our term *College*. He had read the work of the historian Raumer on America, and declared that from this he could get no notion whatever as to what the term meant with us. The very same thing occurs daily in the United States in regard to foreign, or, more properly, the Continental universities. Accustomed as we are to the prevalence of the tutorial system, the use of text-books,—in many parts of the Union not defining clearly the difference between the terms University, College, Institute, and Academy, giving the first name often to institutions having but one faculty, and that at times incomplete, with no theological, and often no law or medical department, forgetting that the University should, from its very name, be as universal as possible in its teachings, comprehending in its list of studies the combined scientific and literary pursuits of the age,—we are apt to look upon foreign schools of learning as similar in nature and purpose to our own, differing not in the quality or specific character of the teaching, but rather in the scope and extent of the branches taught. Yet nothing is farther from the truth. The result is, that many a one starts for Europe full of hope, to seek

what he would have found better at home, — or, when prepared and mature for European travel, is left to chance or one-sided advice in the choice of a locality in which to prosecute further studies. Often with only book-knowledge of the language of the country, accident will lead him to the very university the least adequate to his purpose.

Having now spent some time in four of the leading German universities, and contemplating a longer stay for the purpose of visiting others, the writer has thought that some general remarks might call attention to points often disregarded, and serve to give some insight into the nature of the institutions of learning of the country, — rather aiming to characterize the system of higher education as it now exists than to give detailed historical notices, including something of student-life, and the professors, — in fine, such observations as would not be likely to be made by a general tourist, and such as native writers deem it unnecessary to make, presupposing a knowledge of the facts in their own readers.

The German universities are the culminating point of German culture. They concentrate within themselves the intellectual pith of the country. Dating their foundation as far back as the fourteenth century, as Prague, Vienna, and Heidelberg, — or established but of late years in the nineteenth, as Berlin, Bonn, and Munich, — they attract to themselves the mental strength of the land, forming a focus from which radiates, whether in Theology, Science, Literature, or Art, the new world of thought, which finds its way to remotest regions, often filtered and unacknowledged. They number among their professors the most distinguished men of the century, whether poets, philosophers, or divines. All who lay claim to authorship find in the lecture-room a firm stand and rank in society, as Government is ever ready to insure a life-position to distinguished scholars. To mention only a few examples of men who would scarcely be thought of in a professional career, — Schiller was Professor of

History in Jena, Rückert Professor in Berlin, Uhland in Tübingen.

In nothing can Germany manifest a better-grounded feeling of national pride than in this, its university system. Politically inert, divided into petty states, powerless, the ever-ready prey of more active or ambitious neighbors, it has played a pitiful rôle in the world's history, with annals made up of petty feuds and jealousies and tyrannical meannesses, never working as one people, save when driven to extremity. With countless differences of dialect, manners, customs, it is one and national in nothing save in its literature, and feels, that, through the high culture of its scholars, through the new paths its men of science have opened, through the profound investigations of the learned in every sphere, it holds its place at the head of every intellectual movement of the age. It feels that its universities are the laboratories whence issue the thoughts whose significance the world is ever more and more ready to acknowledge. France even, selfish and proud of its past supremacy in all things, has within the last quarter of a century laid aside much of its exclusiveness, and a Germanic infusion is perceptible through all the mannerism of the latest and best productions of the French school. Comparatively of late years is it, that the English mind has fairly come in contact with this German culture. Its first loud manifestation may be heard in the prose of Carlyle and his school; yet even now its influence has permeated our whole literature so much, that, when reading some of our latest poetry, tones and melodies will come like distant echoes from the groves on the hillsides where warble the nightingales of Germany.

A most unpractical people, however, the Germans, who have been so active in almost every possible field of speculation, have produced nothing which could give one unacquainted with their university system a true notion of its workings and actual state. Much has been written on Pedagogy, its history general and special, the common schools and gym-

nasia; but until 1854 there was not even a general work on the history of the universities. To Karl von Raumer, former Minister of Public Worship in Prussia, we owe the first *Beitrag*, as he modestly calls it, the fourth volume of his "History of Pedagogy" being devoted exclusively to these. Partly made up of historical sketches, partly narrations of the writer's personal experience as student from 1801, as professor in various places from 1811, it does not aim and is but little calculated to give a clear idea of the system itself. Special works, as the one of Tomek on Prague, and of Klüpfel on Tübingen, do exist, but otherwise nothing but personal observation can be made use of. Statistics, every information, in fine, concerning the present intellectual wealth of the nation, must be acquired either orally, or from the catalogues, programmes, and hundreds of local pamphlets that are issued yearly. The work of the Rev. Dr. Schaff, "Germany, its Universities, Theology, and Religion," (Philadelphia, 1857,) rather aims to characterize the nature and tendency of German theology, the latter part being taken up with interesting and well-written sketches of the leading divines.

Before proceeding to these high-schools themselves, let us glance at the general system of German education. In spite of political differences, there exists much uniformity in this throughout the Confederation. The German States are exceedingly *paternal* in the care they take of their subjects. They extend their parental supervision even to the family interior, every relation of life is regulated by fixed laws, and even after death the inhumation must be conducted in the forms and with the precautions prescribed. The new-born child *must* be baptized within six weeks after birth. If the parents neglect it, Government sees to it,—unless they claim the privileges of Israelites, in which case the rites of their religion must be followed. Between his sixth and seventh year the child *must* enter some school or receive elementary instruction at home. So far

is education compulsory; beyond, it is optional. When duly prepared, he enters, if the parents desire it, the Government Gymnasium or Lyceum, answering pretty much to our College; it fits the youth for entering the University. It confers no degrees; only, at the conclusion of the studies, an *Examen Maturitatis* takes place. The youth is then declared ripe for matriculation. Without having undergone this examination, he can never become a regular student. Even should he have attended regularly any of the many private academies, or the *Realschule*, where thorough instruction is given, but with less special, though no slight attention to Latin and Greek, and more to mathematics and practical branches, even then he must acquire from one of the gymnasia the exemption-and-maturity-right. In the slang of student-life, the gymnasiast is styled a *Frog*, the school itself a *Pond*; between the time of his declaration of maturity and his reception as student, he is called a *Mule*.

The course is no light one the candidate has gone through,—nine or ten years of classical training, Latin the whole time, Greek the last six or seven years, Hebrew the last four, generally optional, though in many cases required at future examinations. The modern languages have not been neglected: French he has pursued seven years, English or Italian the last three or four. Beside all these, the elements of Philosophy, Moral and Natural, History, Mathematics, etc. In fine, the certificate of maturity would in most cases equal, in many surpass, what in our colleges is styled the degree of A. M. Of course, the parallel must not be understood as existing with respect to many of the older institutions in the United States, which presuppose, in the entering freshman, a preparatory course of several years.

The classical training so strictly required of natives who enter these high-schools is not so rigidly inquired into in the case of foreigners,—though in this respect the regulations differ in various states. In Prussia and generally, the

passport is all-sufficient; but in Würtemberg, a diploma or some certificate of former studies must be exhibited before admission. The officers of some of the universities, as Tübingen, for instance, are very particular in enforcing all the rules, inquiring of the applicant, whatever be his age or nationality, whether he has a written permission from his parents to study abroad and in their university, whether he has the money necessary to pay the debts he may contract, and such other minute questions as will strike an American especially as particularly impertinent. The precaution is carried so far, that, when no positive information is given as to means of subsistence, the letter of credit must be delivered into the hands of the beadle as security. Yet such little incidents are but slight annoyances at most, which a little good-humor and desire to conform to the habits and ways of doing of the country will remove. He who goes abroad always ready to bristle up against what does not exactly conform to his preconceived ideas of propriety, measuring and weighing all things with his own national weights and measures, will be continually making himself disagreeable and unhappy, and in the end profit little by his absence from home.

The conclusion of the training-system in the gymnasia usually occurs before the nineteenth or twentieth year. With the reception of the certificate of maturity the youth may be said to have donned the virile toga. He enjoys during his university years a degree of liberty such as he never enjoyed before, never will enjoy again when his student-days are over. Having taken out his matriculation-papers, and given the *Handschlag* (taken the oath) to obey the laws of the land and the statutes of the university, he has become a student, — a *Fox*, as the freshman is styled, — he chooses his own career, his own professors, hears the lectures he pleases, attends or omits as he pleases, leads the life of a god for a triennium or a quadrennium, fights his duels, drinks his beer, sings his club- and corps-songs. — But of student-life more in

due time. — There is no check, no constraint whatever, during the whole time the studies last. At the expiration of three or four, sometimes even five years, an examination takes place before the degree of Doctor can be conferred, — not a severe one by any means, confined as it is to the special branch to which the candidate wishes to devote himself. In the Medical and Law Departments it is more serious than in the Philosophical. This examination is followed by a public discussion in presence of the dean and professors of the faculty, held in Latin, on some thesis that has been treated and printed in the same language by the candidate. His former fellow-students, and any one present that wishes, stand as opponents. This disputation, whatever may have been its merits in former days, has degenerated in the present into a mere piece of acted mummery, where the partakers not only stutter and stammer over bad Latin, but even help themselves, when their memory fails utterly, with the previously written notes of their extempore objections and answers. The principal requisite for the attainment of the Doctor's degree, when the necessary amount of time has been given, in the Philosophical Faculty at least, is the fees, which often mount quite high.

From the ranks of such as have attained this *tite*, for so it should be called, every office of any importance in the State is filled. Through every ramification of the complicated system of government, recommendations and testimonials play the greatest rôle, — the first necessary step for advancement being the completion of the university studies. And by public functionaries must not be understood merely those holding high civil or military grades. Every minister of the Church, every physician, chemist, pharmacist, law-practitioner of any grade, every professor and teacher, all, in fact, save those devoting themselves to the merely mechanical arts or to commercial pursuits, and even these, though with other regulations, receive their appointment or permission to exercise their profession from the State. It is

one huge clock-work, every wheel working into the next with the utmost precision. To him who has gone so far, and received the Doctorate, several privileges are granted. He has claims on the State, claims for a position that will give him a means of subsistence, if only a scanty one. With talent and industry and much enduring toil, he may reach the highest places. He belongs to the aristocracy of learning,—a poor, penniless aristocracy, it may be, yet one which in Germany yields in point of pride to none.

We proceed to the Professors. It is within the power of all to attain the position of Lecturer in a university. The diploma once obtained, the farewell-dinner, the *comitat*, and general leave-taking over, the man's career has commenced in earnest. If he turn his attention to education, he may find employment in some of the many schools of the State. Does he look more directly to the University, he undergoes, when duly prepared on the branches to which he wishes to devote himself, the *Examen Rigorosum*, delivers a trial-lecture in presence of his future colleagues, and is entitled to lecture in the capacity of a *Privat-Do-cent*. As such he receives no remuneration whatever from Government; his income depends upon what he receives from his hearers, two to six dollars the term from each. All who aspire to the dignity of Professor must have passed through this stage; rarely are men called directly from other ranks of life,—though eminent scholars, physicians, or jurists have been sometimes raised immediately to an academical seat. After a few years, five or more, the *Privat-Do-cent* who has met with a reasonable degree of success may hope for a professorship,—though many able men have remained in this inferior position for long years, some even for life. If their hearers are but few, they resort to private lessons, to book-making, anything that will aid them in maintaining their position, always with the hope that "something must turn up."

The *Privat-Do-cent* system, though condemned by some, has been much extolled by many German writers. It is, say the latter, a warranty for the freedom of teaching, no slight point in a country where all is subservient to the political rulers, forming men for the professorship, and giving them a confidence in their own powers, as they must rely exclusively for their support on the income they receive from their hearers. From among their number are chosen those constituting the regular faculties; and thus there are ever at hand men ready to fill the highest places upon any vacancy, men not new or inexperienced, but whose whole life has been one training for the position they may be called to occupy.

The *Privat-Do-cent* may be raised directly to a seat in the faculty, but more generally he passes through the intermediate stage of *Professor Extraordinarius*. The Professors Extraordinary receive no, or at most a very small, income from the State; they are merely titled lecturers, and nothing more; yet in their ranks, as well as among the more modest *Privatim-Do-centes*, are often found men of the greatest learning, whose names are known abroad, whose contributions to science are universally acknowledged, whose lecture-rooms are thronged with students, while the halls of some of the regular professors may be left empty. No vacancy may have occurred in their department,—or, as is unfortunately oftener the case, some political reasons may be the occasion of their non-advancement.

We come to the regular faculty of the university, the *Professores Ordinarii*. They enjoy the fullest privileges, are appointed for life, and receive beside the tuition-fees regular incomes. They may be elected to the Academic Senate and to the Rectorship, the Rector or Chancellor not being appointed for life, but changing yearly,—the various faculties being represented in turn. He is styled *Rector Magnificus*.

The faculties are usually four in number. In several universities, of late, a fifth has been created,—the *Staatswissen-*

schaftliche, or Cameralistic; so that in institutions where both Catholic and Protestant Theology are represented, there are in fact six faculties. The Philosophical Department stretches over so wide a field, that, were it separated into its real divisions, as Philosophy proper, Philology, History, the Mathematical and Natural Sciences, the faculties would extend far beyond the present number. In France, it is divided into a *Faculté des Lettres* and a *Faculté des Sciences*. The present comprehensive use of the term is but an extension of the Middle-Age division of the liberal arts into the Trivium,—Grammar, Rhetoric, Dialectics,—and the Quadrivium,—Arithmetic, Music, Geometry, and Astronomy,—as expressed in the verse,—

“Lingua, tropus, ratio, numerus, tenor, angulus, astra.”

The term *Magister Artium Liberalium*, so often met with, refers to these. Those pursuing these studies were denominated *Artisti*. As the number of studies increased, the name was changed, and the department now includes all branches not ranged under one of the heads of Theology, Law, or Medicine; so that every student, whatever his pursuits may be, if he does not confine himself exclusively to them, will wish to hear one or more courses of lectures in this faculty.

The Professors Ordinary and Extraordinary, together with the *Privat-Doctents*, form the active force of the German university. In Tübingen are *Repetenten*, who lecture or comment on classical and Biblical writers and form classes in the ancient or modern languages. Those teaching the modern languages exclusively are styled *Lectors*. The title, *Professor Honorarius*, as of Gervinus in Heidelberg, is conferred merely as a mark of honor, the bearer lecturing only when he pleases. To complete this enumeration, it may not be unnecessary to state, that connected with each university are masters for riding, fencing, swimming, gymnastics, and dancing, regular places appointed for these exercises, beside access to muse-

ums, the university library, scientific collections, etc.

The number of professors—and under this name we include the three divisions of lecturers—varies from forty to one hundred and seventy and upwards, according to the size and importance of the institution. In Berlin, last winter, there were one hundred and sixty-nine; in Erlangen, but forty-four; in Munich, one hundred and eleven. The University of Kiel, with not one hundred and thirty students, numbers fifty professors. These each deliver at least one course of lectures; most deliver more,—some as many as four or five. In Prussia, each is required by law to read one course, at least, gratis (*publice*); otherwise the lectures are *privatim*, a fee being paid by the hearer,—say four or five dollars on the average for the term. The *privatisime* are private lessons or lectures, the when and where to be settled with the lecturer himself.

The year is divided into two terms, varying somewhat in different places. The summer session is the shorter of the two, lasting from near the middle of April till August, when the long vacation takes place. The winter semester usually commences in October and lasts till the latter part of March.

As to the scope and variety of the lectures, it is unlimited, and varies yearly. In Berlin, during the winter semester of 1859–60, there were no less than three hundred and forty-six courses in all, besides the clinics, demonstrative and practical courses, philological exercises, and the like. These were divided as follows:—

In Theology	38
“ Law	56
“ Medicine	78
“ Philosophy	174

In the latter department there were,—

In Philosophy proper	18
“ Mathematical Sciences	19
“ Natural “	45
“ Political Economy, etc.	10
“ History and Geography	12
“ Æsthetics	19
“ Philology	51

But Berlin is by far the most complete university in Germany, however much it may be surpassed in many points by others. Lesser institutions do not exhibit half this number of courses, though there are always enough to satisfy the student who does not devote himself to a narrow speciality. Private tuition can always be resorted to.

Beside the lectures, there are also occasionally *Seminaren*, mostly conducted in Latin, where classical or Biblical authors are explained and read by the students, or where discussions take place, in presence of a professor, on philosophical, historical, or philological subjects, — resembling, however, in nothing our debating-societies.

It is only since the middle of the last century that instruction in the higher branches has been usually carried on in German. Latin was formerly in general use; it is now seldom made a medium. There is occasionally a course delivered in English, Italian, or French, — in Berlin often in one of the Slavonic languages. Modern Literature and Philology are by no means extensively cultivated. Lectures on the Provençal, the Langue d'Oïl, the Old-German, the Cyrillic, are not uncommon, though but poorly attended. The study of the modern languages themselves must be pursued with private teachers. A knowledge of these, as well as a thorough preparatory training in Latin and Greek, is presupposed. Modern History, on the contrary, has of late years become an important branch of study. The "Period of Revolutions" is fully treated every semester, and always draws crowds of students. The spirit that animates them is the unity of the Fatherland. Classical studies, though not holding the same undisputed ascendancy as in former times, are yet very actively pursued, embracing Greek and Roman history and antiquities, comments on classical authors, lectures, critical and minute in the extreme, where every line is made the subject of microscopic investigation, and different readings are weighed and compared, with often an unlimited amount of abuse of

editors who have differed in opinion from the lecturer. The German philologists are not remarkable for mildness when speaking of each other; and many a one, as Haupt in Berlin, will enrich his vocabulary with ever-varying, new-coined epithets to characterize the ridiculousness, tameness, and stupidity of emendations proposed; and that, too, when speaking of such men as Orelli and Kirchner, his own colleagues in the profession. A laugh raised at the expense of a brother is enough to justify the severest slash. Comparative Philology, which owes its existence and progress to the labors of German scholars, and whose first representative, Bopp, is still living and teaching in Berlin, is more and more pursued of late. Sanscrit is now taught universally; and lectures are delivered on the affinities of the Indo-Germanic languages with each other and with the mother-tongue of all. A perceptible movement is being felt to introduce this study into the preparatory departments. Such a change would result in a complete revolution of the methods formerly employed in elementary classical tuition. The higher laws of affinity, as applied to the Romanic languages, are also daily more a matter of investigation. Diez and Delius, in Bonn, are at the head of this movement. In Philosophy, properly so called, the list of studies is often very full, comprising lectures on Logic, the Encyclopedia of Science, Metaphysics, Anthropology and Psychology, Ethics, the Philosophy of Nature, of Law, of History, of Religion, the History of Philosophy, general and special, and the Philosophy of Art, or *Æsthetics*, — the latter general, or branching into specialities, as Music, Painting, Sculpture, Ancient and Modern Art. Special points are also treated, — as the Philosophy of Aristotle, of Kant, of Hegel, etc. Mathematics and the Natural Sciences are not always cultivated to the same extent as the above-named branches. They are made the subject of particular attention, however, in the numerous Polytechnic Schools, the most celebrated being those of Hanover and Carlsruhe. They have

risen in reputation and attendance of late to such a degree, that in the Grand Duchy of Baden, for instance, a perceptible diminution is felt in university attendance, while new appropriations have been made for the enlargement of the Carlsruhe school.

The Theological Faculty ranks the highest, and comprises a wide range of study. We quote from Dr. Schaff:—

“In modern times the field has been greatly enlarged by the addition of Oriental Philology, Biblical Criticism, Hermeneutics, Antiquities, Church-History and Doctrine-History, Homiletics, Catechetics, Liturgies, Pastoral Theology, and Theory of Church-Government. No theological faculty is considered complete now which has not separate teachers for the exegetical, historical, systematic, and practical branches of divinity. The German professors, however, are not confined to their respective departments, as is the case in our American seminaries, but may deliver lectures on any other branch, as far as it does not interfere with their immediate duties. Schleiermacher, for instance, taught, at different times, almost every branch of theology and philosophy.”

The Law Department, to which the celebrated school of Bologna served as a first model, extends over a far wider field than similar institutions elsewhere. Starting from the Roman Law, it embraces lectures on the History of Jurisprudence, the Pandects, Civil, Criminal, and Common Law, and Natural Rights, besides History and Philosophy, as applied to legal studies,—branching into specialities for German Law and Practice, local and general. To Americans, of course, only the first part of these studies would be at all desirable. Moreover, the advantages are not all of a practical nature.

The Medical Faculty embraces all the studies pursued in our medical colleges, more specialities being treated,—the time required being scarcely ever less than five years for the course, often more. Examinations are severe. The faculties of Berlin, Munich, and Würzburg are in especial repute,—Vienna also affording

many advantages. In some of the smaller university towns the means of study are limited for the advanced student, extensive collections and large hospitals being wanting. Medical studies are attended with more expense than any other.

The *Cameralistische Facultät* is devoted to those preparing themselves for practical statesmanship. It is new, and established only of late years in a few of the universities. In others, the branches taught are still comprehended under the philosophical. Munich is in especial repute. It comprises lectures on Political Economy in all its branches, Mining, Engineering,—in fact, whatever is necessary to fit one for service in the State.

Let no one, from the above comprehensive list of studies, form the idea, that the outward incarnation of the German intellect, in speech or deed, corresponds to its inner worth and solidity. The name *Dryasdust* must cling to many a learned professor more firmly than to the most chronological of the old historians. Germany is not the land of outward form. To one accustomed to public speaking, the lecturers will often appear far below the standard of mediocrity in their manner. Though such men as Lasaulx in Munich, Häusser in Heidelberg, Droysen and Werder in Berlin deliver their lectures in a style that would grace the lecture-room of any country, yet the great majority are far, very far, from any eloquence in their delivery. Timid and bashful often to an extreme, they ascend their rostrum with a shuffling, ambling gait, the very opposite of manly grace and bearing, and, prefacing their discourse with the short address, “*Meine Herren,*” keep on in one long, never-varying, monotonous strain, from beginning to end,—reading wholly or in part, often so slowly that the hearer can write down *every* word, often only the heads and substance of paragraphs, definitions and the like,—and that so indistinctly, so carelessly of all but the very words themselves, that it is not only unpleasant, at first, but even repulsive to many. This dictating of every word, a relic of the

times when printing was yet unknown, is fast dying away. Many, both students and professors, are loud against it, yet the tedious method is still pursued in many places. The introductory remark of a celebrated lecturer is characteristic. Seeing all his hearers, on the first day of the course, ready with pen and paper, he began,—"Gentlemen, I will not dictate: if that were necessary, I should send my maid-servant with my manuscript, and you yours with pen and paper; my servant would dictate, yours would write, and we in the mean while could enjoy a pleasant walk." This is, however, not the only point that will be likely to produce an unfavorable impression. To see a man whose name you have met in your reading as the highest authority, whose works you have so often admired, his style energetic, fiery, and impressive,—to see him ascend his rostrum with every mark of negligence, uncouth and awkward in his appearance, with every possible mannerism, talking through his nose, indistinctly and unsteadily mumbling over his sentences, careless of all outward form and polish, awakens anything but pleasant feelings, as the preconceived ideal must give way to the living reality. And yet so it is with many!

It may have contributed not a little to the reputation of Göttingen and Heidelberg with foreigners, that a good and clear German is spoken in both places by the professors. In Tübingen, on the contrary, even in Munich, to a great extent, the local dialect prevails to such a degree, that students from Northern Germany, many of whom frequent these cities in the summer session, find it difficult, nay, almost impossible, to understand at first, especially the broad Suabian of Tübingen. Here, however, as the system of dictation prevails, the slowness of utterance compensates in a measure for its indistinctness and incorrectness.

In some places, where academic freedom, as the students style it, exists to a high degree, a general scraping of the feet admonishes the lecturer to repeat his words or be more distinct and clear

in his enunciation. This pedal language, though often disregarded, still does not fail in the end in producing the desired effect.

With such characteristics, it cannot be a matter of wonder, if some time be required to be spent in hearing lectures daily before the full benefit can be fairly appreciated. Many will appear slow in the extreme; and the constant recourse to notes, and the tedious manner, will create a feeling of weariness hard to overcome. However, these peculiarities are soon forgotten in the excellence of the matter, and their disagreeableness is scarcely noticed after a few weeks, except in extreme cases. The mannerism fades away, and the hearer learns to follow from thought to thought under the guidance of an experienced leader, whose living words he hears, whose thought he feels as it is communicated directly to him.

Not so much from the actual things heard, the actual facts mastered, is the lecture-system valuable to the student, as for the method of study which he derives from it. He is no longer like an automaton, a school-boy guided by his teacher and text-book, but is spoken to as an independent thinker. Authorities are quoted, which he may consult at his leisure. No subject is exhausted,—it is only touched upon. He learns to teach himself.

Far different is the mental training thus acquired from that gained in the same amount of time spent in mere reading. Thought is stimulated to a far greater degree. The lecture-room becomes a laboratory, where the mind of the hearer, in immediate contact with that of a man mature in the ways of study, of one whose whole life seems to have prepared him for the present hour, assimilates to itself more than knowledge. The lecturer gives what no books can give, his own force to impel his own words. His mind is ever active while he speaks. The hearer feels its workings, and his own is stirred into action by the contact. It is not given to all to enjoy the conversation and intercourse of the master-minds of the age: in the lecture-room they speak to us im-

mediately; we feel the current of their life-blood; it pulsates through all they say.

That seeming exceptions may occur, as in the case of professors who year after year deliver the same written course, can have no weight against the system. The tone and gesture, the very look, must animate the whole;—and these very written lectures, read and delivered so often, are no dead stalk, but a living stem, which puts forth new leaves and blossoms every spring.

Nor is the hearer himself without his corresponding influence. His attention and eager desire for knowledge stimulate new thought in the speaker day by day, hour by hour; and many a German scholar must have felt with Friedrich August Wolf, when he says,—“I am one who has been long accustomed to the gentle charm which lies in the momentaneous unfolding of thought in the presence of attentive hearers, to that living reaction softly felt by the teacher, whereby a perennial mental harmony is awakened in his soul, which far surpasses the labors in the study, before blank walls and the feelingless paper.”

THE STUDIES.

THE first entrance into a German auditorium or *Hörsaal*, as the lecture-rooms in the universities are called, will show much that is characteristic. But little care is bestowed on the decoration of the apartment. Whatever æsthetic culture the nation may have, it finds little manifestation in the things of daily life, and elegance seems little less than banished from the precincts of the learned world. The academic halls present to the view nothing but dingy walls, rough floors coated with the dust and mud of days or weeks, and, winter and summer, the huge porcelain stove in one corner,—that immovable article of cheerless German furniture, where wood is put in by the pound, and no bright glow ever discloses the presence of that warmest friend of man, a good fire. For the students there are coarse,

long wooden desks and benches, with places all numbered, cut up and disfigured to an extent which will soon convince one that whittling is not a trait of American destructiveness exclusively. Here are carved names and intertwined lettering, arabesque masterpieces of penknife-ingenueity, with a general preponderance of feminine appellatives, bold incisures, at times, of some worthy professor in profile,—the whole besmudged with ink, and dotted with countless punctures, the result of the sharp spike with which every student's ink-horn is armed, that he may steady it upon the slanting board. The preceding lecture ended when the university-clock struck the hour; the next should begin within ten or fifteen minutes. One by one the students drop in and take their places,—high and low, rich and poor, all on the same straight-backed pine benches. The days are over, even in title-loving Germany, though not long since, when the young counts and barons sat foremost, on a privileged, raised, and cushioned seat, and were addressed by their title.

As the hearers thus assemble, they present a motley appearance,—being, in the larger cities especially, from all lands, all ranks of society, and of every age. Side by side with the young freshman in his first semester, the *Fat Fox*, as he is called, who has just made a leap from the strict discipline of the gymnasium to the unbounded freedom of the university, will be a gray-haired man, to whom the academic title of *Juvenis Studiosus* will no longer apply. Here sits, with his gaudy watch-guard, the colors of his corps, one of those students by profession who have been inscribed year after year so long that they have acquired the name of *Bemossed Heads*. Were his scientific attainments measured by his capacities for beer-drinking and sword-slashing, he would long ago have been dubbed a Doctor in all the faculties. He hears a lecture now and then for form's sake, though it is rather an unusual thing for him. By his side, but retiring and earnest, may be one of the younger profes-

sors, who the hour before stood as a teacher, and now sits among some of his former hearers to profit by the experience of his older professional brother. Where the court resides and many officers are garrisoned, the hall presents a spangled appearance of bright epaulettes and glittering uniforms. It is no unusual thing for young men during their years of service to attend the courses regularly. The uncomfortable sword is laid on the knee, where it may not dangle and clink with every motion of the wearer,—no easy task in the very narrow space left between desk and desk. In the last century, it was a universal custom for all students to wear the sword; but this academic privilege, as it was considered, leading to numerous abuses, laws were enacted against it, as well as other eccentricities in dress.

The regular students are provided with portfolios, or rather, soft leathern pouches, which they can fold and pocket, containing the *heft* or quire of paper on which the lecture is transcribed by them wholly or in part. These *hefts* are often the object of much care and labor. Each plants his ink-horn firmly in front of him. As the time approaches, and all are in readiness with pen in hand, there is a universal buzz throughout the room. Though, when the auditory is large, many nations are represented, as well as the various provinces of the Confederation, still the language heard is predominantly that of the country. Though Poles and Greeks, English and Russians, may be in abundance, still they rarely congregate in nationalities,—save the Poles, who speak their own language at all times and places, and cling the more fondly to their own idiom since they have been robbed of everything else. After some fifteen minutes of expectation the professor enters. All is still in an instant. He advances with hasty strides and bent-down head to his rostrum, an elevated platform, on which stands a plain, high, pine desk. He unfolds his notes, looks over the rim of his spectacles at the attentive hearers, who sit ready to write down the words of

wisdom he is about to utter, and begins with the short address, "*Meine Herren.*" There is then an uninterrupted gliding of pens for three-quarters of an hour, until, above the monotony, rarely the eloquence, of the speaker, the great clock in the centre of the building gives the significant sound of relief to busy fingers and rest to ear and brain unaccustomed to such slow, entangled, lisping, laborious, in rare instances manly delivery. The lecture is at an end, and each prepares to enter another auditorium, or wends his way home, to study out the notes taken, consult the authorities quoted, complete or even copy his work anew. In the study of these *hefts* consists the main preparation for future examinations, as text-books are rarely used, save in Austria, and the examiners are the professors themselves, who will not ask the candidate much beyond what they have embraced in their own lessons.

With a remarkable degree of skill, the practised German student can take down, even when the delivery is by no means slow, the pith and essence of a whole lecture. Yet there is much abuse in this; and it has called forth, ever since the invention of printing has made the multiplication of books by transcription unnecessary, much just, though at times unjust criticism. A German writer has said, that the man of genius takes his notes on a slip of paper, he of good abilities on a half-page, while the dunce must fill a whole sheet. Now the reverse would be quite as true in many cases. For though thoughtless writing may be little more than wasted labor, yet there is nothing that can fix more steadily thoughts and facts in the mind than the precision and constant attention required in following a lecture with the pen, especially when the words of the professor are not taken down with slavish exactitude, but when, as is most generally the case, merely the thoughts are noted in the hearer's own language. The ideas thus gained have been assimilated and become the listener's own property. There is thus generated a steady

transfusion, the surest remedy against flagging mental activity. Many a foreigner writes down the lecture in his own tongue, and values highly this training of constant translation, though, before many months, the mere transposition from one language into the other must become purely mechanical. It is amusing to see the puzzled expression of countenance of some Swiss student who takes his notes in French, when one of those long German compounds, involving some bold figure of speech, is uttered. What circumlocutions must he not use, if he wish to give the full force of the idea!

A real abuse, however, is the perpetual dictation-system still used by some. For these, the three worthies in profile on the title-page of old Elzevir editions are as if they had never existed; they teach as they have been taught, perpetuating the methods in use in the days of Abelard, when books were dearer than time. All that has been said and written against the custom will do less towards abolishing it than the recent introduction of lessons in phonography, or stenography rather, which is now taught in several universities. The question is agitated of introducing this study into the preparatory schools. The system is different from the English or American, being based on the etymological nature of the language. It is fast coming into use, though as yet not general. The old slow delivery seems little better than spelling to those that have mastered it. The students have usually special abbreviations of their own, and so find no difficulty in taking down all the important points, even when the utterance is rapid.

Not all, by any means, go through this labor of transcription. Many of the wealthier and high-titled attend but irregularly, and when they do, sit impatient listeners. In Berlin may be seen many a youth who, from the exquisite fit and finish of his dress, if he be not an American just from Paris, must at least be a German count. The young *Graf* plays with his lips on the ivory head of his bamboo, as he holds it with his kid-gloved hand, sit-

ting carefully the while, lest the elbow of his French coat should be soiled by contact with a desk ignorant of duster for many a month. He is condemned, however, to hear, day by day, over and over, many a truth that will scarcely flatter his noble ears. The *heft* and the toil of writing down a lecture are unknown to him. He pays a reasonable sum to some poor scholar who sits behind and copies it all afterwards, while he takes his afternoon-ride towards Charlottenburg, or saunters along Unter-den-Linden, ogling the pretty English girls, and spying every chance of saluting, whenever a royal equipage, preceded by a monkey-looking lackey, rolls by. These are, of course, exceptions, rarer in the present than formerly. In Padua, in the sixteenth century, it became notorious that the richer students never attended in person, but always sent one of their servants who wrote a good hand. Laws were enacted to prevent the evil, yet long after this there were still many promotions of these paper-doctors.

Many, in taking their notes, abandon the German script as too illegible, and make use of the Latin letters. A word or two on this subject, as connected with general education. The German script, which any one may learn in a few hours, is a constant source of vexation to a foreigner. To write, and write fast, too, is easy enough; but then to read one's own handwriting, not to mention the crumpled notices of the professors tacked on the blackboard in the *Aula*, is almost impossible without much practice. Why the Germans should have kept their Gothic lettering and peculiar script, when all other European nations, save the Russian, have adopted the Roman, it is difficult to say, unless it be with them a matter of national pride. And they have been unnational in so many things! That the Russians should have their own alphabet is natural enough; they have sounds and letters and combinations which neither the Germanic nor the Romanic group of languages possess. And yet both in Polish and Zechish, where the same sounds

exist to a great extent, the deficiencies are made up by accented and dotted letters. So, though we have a universal standard of spelling for names and places on the Continent, we find in our most popular histories and geographies a divergence in the lesser known Russian names, not far removed from that we daily meet in the nomenclature of the gods of Hindoo mythology.

The like plea of necessity cannot be urged in regard to the Teutonic or Scandinavian languages. Within the last quarter of a century, the chief scientific works issued in Northern Germany, and many even in Southern, have been printed in the Roman character. Were there no other argument in favor of its universal adoption, it has been found less trying to the eyes. It can be read by all nations; and the other is at best but an additional difficulty for the learner, even in the case of native children, who are plagued with two alphabets and two diametrically opposite systems of penmanship in their earliest years. The result is evident: a good hand is a rare thing in Germany. It is a good sign, that of late years public acts and records, works of learning, all the higher literature, in fact, not purely national, as poetry and romance, are all printed in the Roman character. Nor will any look upon this as a servile imitation. Some of the most national of German writers and scholars, as the brothers Grimm, have pronounced themselves loudly in favor of the change. The tendency of the age is towards universality. It will occur to none to talk of French imitation because chemists make use of the excellent and universally applicable system of the decimal French weights and measures.

What has been said above is not altogether irrelevant as characterizing the tendency of the higher institutions of learning. Every movement in Germany, even the least, since the Reformation, whose chief propagators were professors in the universities,—Luther, Reuchlin, Melancthon,—every permanent and pervading conquest of the new and good

over the old and worn-out, has issued from the lecture-room. Whatever sticklers for old forms and crab-like progress may be found, there is always an overbalancing power. The unity of Germany as one nation has never stood a better chance of being realized than now, when the very men who were students and flocked as volunteers when the iron hand of Napoleon I. weighed heavily on their Fatherland stand as lecturers in the days of Napoleon III., warning of the past, and preaching louder than Schiller or Körner or Arndt for the brotherhood of Prussian and Bavarian, of those that dwell on the Rhine and those that inhabit the regions of the Danube.

Thanks, not to her statesmen, not to her nobility, not to her princes even, that Germany has at last fairly shaken off the self-imposed yoke of servile French imitation, but thanks to her scholars who centre in her twenty-six universities! There was a time, and that not a century ago, when the German language was considered to be of too limited circulation for works of general scientific interest. Lectures were all delivered in Latin, until Thomasius broke open a new path, and now lessons otherwise than in the vernacular tongue are exceptions. French was long the universal medium. Even Humboldt wrote most of his works in that language; and it is not two years since one of the most distinguished Egyptian scholars of Prussia published his *History of Egypt* in French. The last representatives of this tendency are dying off. The days are over, when every petty German prince must create in his domains a servile imitation of the stiff parks of Versailles,—the days of powdered wigs and long cues,—when French ballet-dancers gave the tone, and French actors strutted on every stage,—when Boileau was the great canon of criticism, and Racine and Molière perpetuated in tragedy and comedy a pseudo-classicism. They are far, those times when Frederick the Great wrote French at which Voltaire laughed, and could find no better occupation for his leisure hours at Sans-Souci than the

discussion of the materialistic philosophy of the Encyclopedists, while he affected to despise his own tongue, rejecting every effort towards the popularization of a national literature. Well is it for Germany that other ideas now prevail,—well, that Goethe in his old age overcame the Galomania, which for a while possessed him, of translating all his works, and thenceforth writing only in French. The iron hand of Goetz of Berlichingen would burst the seams of a Paris kid-glove. The bold lyric and dramatic poesy of a language whose figures well up in each word with primitive freshness can ill be contained in an idiom *blasé* by conventionality and frozen into crystal rigidity by the academy of the illustrious forty,—in an idiom in which an unfortunate pun or allusion can destroy the effect of a whole piece. We need but call to mind that Shakspeare's "Othello" was laughed off the stage of the Odéon, owing to the ridiculous ideas the word "napkin" or "handkerchief" called up in the auditory.

Nor is the influence of the university in Germany exerted in matters of great national interest only. It pervades the social, literary, and political organization of the people. The least part of what characterizes an individual nation ever comes into its books. Here it finds its way from mouth to mouth to the remotest corners of the land. When Luther, the Professor of Wittenberg, spoke against indulgences, it was more than priest or monk that was heard. The voice of the monk would not have echoed beyond his cell, and the influence of the priest would have been arrested and checked before it could have been exerted beyond the limits of his parish or town. But the Professor Luther addressed himself to a more influential audience. His words were carried before many years into every part of the Empire.

Setting aside the Austrian universities, which are no longer what they were formerly, the teaching in these higher schools, whatever the State restrictions may be, is eminently free,—freer than

in France,—freer than in England,—in many respects even, however it may sound, freer than in the United States. As a result, the land is a hot-bed of the boldest philosophical systems and the wildest theological aberrations. There is no branch of speculation that does not find its representative. In law, in medicine, in philology, in history, the old methods of study and research have been revolutionized. But the State stands before the innovators, firm and conservative in its practice. And in the end it has been found, that, whatever wild theories may spring up in theology and in philosophy, the corrective is nigh at hand, and truth will make its way when the field is open to all.

It must be remembered that the German university is no preparatory school; those who enter it have gone through studies and a mental training that have made them capable of judging for themselves. They hear whom they please. Their chief study, whatever they acquire in the lecture-room, is done when alone. They attend on an average for three or four hours a day, spending as much time in the libraries, from which they have the privilege of taking out books. As a completion to their lectures, the professors generally have *Seminaren* once or twice a week, or *Exercitationes* in history, philology, etc., in which the Socratic method of teaching in dialogue is made use of. Museums and scientific collections are richly provided in the larger institutions. In some of these lectures are held: thus, Lepsius explains Egyptian archæology in the Egyptian halls in Berlin. The libraries provided by the State, and to which all have access, are often considerable: thus, Göttingen has 350,000 volumes; Berlin, 600,000; Munich, 800,000.

As for the expenses of study, they are inconsiderable; thirty or thirty-five dollars the term will cover them, as there are generally several courses public. The students often attend for months as guests, *hospitanten*. As they say,—“The Fox pays for more than he hears, and the

Bursch hears more than he pays for." The lecturers take no notice of those present; and, provided the matriculation-papers have been taken out, the beadle has nothing to say. There is the fullest liberty of wandering from room to room, and hearing, if only once or twice, any one of the professors. As for the expenses of living, they vary. To one who would be satisfied with German student-fare and comforts, four hundred dollars a year will answer every purpose, even in the dearest cities: many do with much less. In Southern Germany, life is simpler and cheaper than in Northern, and the saying is true in Munich, that a *Gulden* there will go as far as a *Thaler* in Prussia. There are poorer students, who are exempted from college-fees, and support themselves by *Stipendia*, whose outlay never exceeds a hundred dollars a year.

When several hundred or thousand young men are thus thrown together, with their time all their own, and none to whom they are responsible for their actions, it may easily be supposed that many abuses and irregularities will occur. Yet the great mass are better than they have been represented; though regular attendance upon lectures is true only of those who *ox* it at home, as the phrase goes, and who by the rioting, beer-drinking *Burschen* are styled *Philistines* or *Camels*. These same quiet individuals, whom the Samsons affect to despise, will be found to be by far in preponderance, when the statistics of *Corps*, *Landmannschaften*, and all such clubs, are looked into; though the characteristic of the latter, always to be seen at public places of amusement with their colored caps, gaudy watch-guards, or cannon-boots, would lead one to suppose that German student-life was one round of beer-drinking, sword-slashing, and jolly existence, as represented, or rather, misrepresented, by William Howitt, in the halo of poetry he throws around it. No,—the fantastically dressed fellows whom the tourist may notice at Jena, and the groups of starers who stop every narrow passage-

way in front of the confectionery-shops of Heidelberg, or amuse themselves of summer-afternoons with their trained dogs, diverting the attention of the temporary guest of "Prince Carl" from the contemplation of the old ruined castle of the Counts-Palatine,—these are but a fraction of the German students. From among them may be chosen those tight-laced officers who make the court-residences of Europe look like camps; or, as they are often the sons of noblemen or rich parents, they may reach some of the sinecures in the State. They make their student-years but a pretext for a life of rough debauchery, from which they issue with a bought diploma; and, in many cases, satiated and disgusted with their own lives, they dwindle down into the timeserving reactionaries, the worst enemies of free development, because they themselves have abused in youth the little liberty they enjoyed.

If the numbers be counted of those who lead the life so much extolled by William Howitt,—who, by the way, has left out some of its roughest traits,—they will be found, even where most numerous, as in the smaller towns, never to exceed one-fourth of those inscribed as students. The linguists and philosophers of Germany, her historians and men of letters, her professors and *savans*, have come from the ranks of that stiller and more numerous class whom the stranger will never notice: for their triennium is spent mostly in the lecture-room or at home; and their conviviality—for there are neither disciples nor apostles of temperance in this beer-drinking land—is of a nature not to divert them from their earnest pursuits.

Truth and earnestness are the distinguishing traits of the German character; and these qualities show no less strongly in the youth who frequent the universities than in the professors themselves. The latter, conscientious to a nicety in exposing the fullest fruits of their laborious researches, are ever faithful to the trust reposed in them. Placed by the State in a position beyond ordinary ambi-

tion and above pecuniary cares, they can devote themselves exclusively to their calling, concentrating their powers in one channel, — to raise, to ennoble, to educate. It contributes not a little to their success, that their hearers are permeated, whatever wild and unbridled freaks they may fall into at times, with the fullest sense of honor and manly worth, with an ardent love for knowledge and science for their own sake, not for future utility. Their sympathies are awake for the good everywhere, their minds receptive of the highest teachings. Their loves and likes

are great and strong, — as it behooves, when the first bubbleings of mental and physical activity are manifested in action. They abandon themselves, body and soul, to the occupation of the moment, be it study, be it pleasure. Their gatherings and feasts and excursions are ennobled by vocal music from the rich store of healthy, vigorous German song, — from which they learn, in the words of one of their most popular melodies, to honor “woman’s love, man’s strength, the free word, the bold deed, and the FATHERLAND!”

THE PROFESSOR’S STORY.

CHAPTER XXVIII.

THE SECRET IS WHISPERED.

THE Reverend Chauncy Fairweather’s congregation was not large, but select. The lines of social cleavage run through religious creeds as if they were of a piece with position and fortune. It is expected of persons of a certain breeding, in some parts of New England, that they shall be either Episcopalians or Unitarians. The mansion-house gentry of Rockland were pretty fairly divided between the little chapel with the stained window and the trained rector, and the meeting-house where the Reverend Mr. Fairweather officiated.

It was in the latter that Dudley Vener worshipped, when he attended service anywhere, — which depended very much on the caprice of Elsie. He saw plainly enough that a generous and liberally cultivated nature might find a refuge and congenial souls in either of these two persuasions, but he objected to some points of the formal creed of the older church, and especially to the mechanism which renders it hard to get free from its outworn and offensive formulæ, — remembering how Archbishop Tillotson wished in vain

that it could be “well rid of” the Athanasian Creed. This, and the fact that the meeting-house was nearer than the chapel, determined him, when the new rector, who was not quite up to his mark in education, was appointed, to take a pew in the “liberal” worshippers’ edifice.

Elsie was very uncertain in her feeling about going to church. In summer, she loved rather to stroll over The Mountain on Sundays. There was even a story, that she had one of the caves before mentioned fitted up as an oratory, and that she had her own wild way of worshipping the God whom she sought in the dark chasms of the dreaded cliffs. Mere fables, doubtless; but they showed the common belief, that Elsie, with all her strange and dangerous elements of character, had yet strong religious feeling mingled with them. The hymn-book which Dick had found, in his midnight invasion of her chamber, opened to favorite hymns, especially some of the Methodist and Quietist character. Many had noticed, that certain tunes, as sung by the choir, seemed to impress her deeply; and some said, that at such times her whole expression would change, and her stormy

look would soften so as to remind them of her poor, sweet mother.

On the Sunday morning after the talk recorded in the last chapter, Elsie made herself ready to go to meeting. She was dressed much as usual, excepting that she wore a thick veil, turned aside, but ready to conceal her features. It was natural enough that she should not wish to be looked in the face by curious persons who would be staring to see what effect the occurrence of the past week had had on her spirits. Her father attended her willingly; and they took their seats in the pew, somewhat to the surprise of many, who had hardly expected to see them, after so humiliating a family development as the attempted crime of their kinsman had just been furnishing for the astonishment of the public.

The Reverend Mr. Fairweather was now in his coldest mood. He had passed through the period of feverish excitement which marks a change of religious opinion. At first, when he had begun to doubt his own theological positions, he had defended them against himself with more ingenuity and interest, perhaps, than he could have done against another; because men rarely take the trouble to understand anybody's difficulties in a question but their own. After this, as he began to draw off from different points of his old belief, the cautious disentangling of himself from one mesh after another gave sharpness to his intellect, and the tremulous eagerness with which he seized upon the doctrine which, piece by piece, under various pretexts and with various disguises, he was appropriating, gave interest and something like passion to his words. But when he had gradually accustomed his people to his new phraseology, and was really adjusting his sermons and his service to disguise his thoughts, he lost at once all his intellectual acuteness and all his spiritual fervor.

Elsie sat quietly through the first part of the service, which was conducted in the cold, mechanical way to be expected. Her face was hidden by her veil; but her father knew her state of feeling, as well

by her movements and attitudes as by the expression of her features. The hymn had been sung, the short prayer offered, the Bible read, and the long prayer was about to begin. This was the time at which the "notes" of any who were in affliction from loss of friends, the sick who were doubtful of recovery, those who had cause to be grateful for preservation of life or other signal blessing, were wont to be read.

Just then it was that Dudley Venner noticed that his daughter was trembling, — a thing so rare, so unaccountable, indeed, under the circumstances, that he watched her closely, and began to fear that some nervous paroxysm, or other malady, might have just begun to show itself in this way upon her.

The minister had in his pocket two notes. One, in the handwriting of Deacon Soper, was from a member of this congregation, returning thanks for his preservation through a season of great peril, — supposed to be the exposure which he had shared with others, when standing in the circle around Dick Venner. The other was the anonymous one, in a female hand, which he had received the evening before. He forgot them both. His thoughts were altogether too much taken up with more important matters. He prayed through all the frozen petitions of his expurgated form of supplication, and not a single heart was soothed or lifted, or reminded that its sorrows were struggling their way up to heaven, borne on the breath from a human soul that was warm with love.

The people sat down as if relieved when the dreary prayer was finished. Elsie alone remained standing until her father touched her. Then she sat down, lifted her veil, and looked at him with a blank, sad look, as if she had suffered some pain or wrong, but could not give any name or expression to her vague trouble. She did not tremble any longer, but remained ominously still, as if she had been frozen where she sat.

— Can a man love his own soul too well? Who, on the whole, constitute the

nobler class of human beings? those who have lived mainly to make sure of their own personal welfare in another and future condition of existence, or they who have worked with all their might for their race, for their country, for the advancement of the kingdom of God, and left all personal arrangements concerning themselves to the sole charge of Him who made them and is responsible to Himself for their safe-keeping? Is an anchorite, who has worn the stone floor of his cell into basins with his knees bent in prayer, more acceptable than the soldier who gives his life for the maintenance of any sacred right or truth, without thinking what will specially become of him in a world where there are two or three million colonists a month, from this one planet, to be cared for? These are grave questions, which must suggest themselves to those who know that there are many profoundly selfish persons who are sincerely devout and perpetually occupied with their own future, while there are others who are perfectly ready to sacrifice themselves for any worthy object in this world, but are really too little occupied with their exclusive personality to think so much as many do about what is to become of them in another.

The Reverend Chauncy Fairweather did not, most certainly, belong to this latter class. There are several kinds of believers, whose history we find among the early converts to Christianity.

There was the magistrate, whose social position was such that he preferred a private interview in the evening with the Teacher to following him with the street-crowd. He had seen extraordinary facts which had satisfied him that the young Galilean had a divine commission. But still he cross-questioned the Teacher himself. He was not ready to accept statements without explanation. That was the right kind of man. See how he stood up for the legal rights of his Master, when the people were for laying hands on him!

And again, there was the government official, intrusted with public money,

which, in those days, implied that he was supposed to be honest. A single look of that heavenly countenance, and two words of gentle command, were enough for him. Neither of these men, the early disciple nor the evangelist, seems to have been thinking primarily about his own personal safety.

But now look at the poor, miserable turnkey, whose occupation shows what he was like to be, and who had just been thrusting two respectable strangers, taken from the hands of a mob, covered with stripes and stripped of clothing, into the inner prison, and making their feet fast in the stocks. His thought, in the moment of terror, is for himself: first, suicide; then, what he shall do,—not to save his household,—not to fulfil his duty to his office,—not to repair the outrage he has been committing,—but to secure his own personal safety. Truly, character shows itself as much in a man's way of becoming a Christian as in any other!

—Elsie sat, statue-like, through the sermon. It would not be fair to the reader to give an abstract of that. When a man who has been bred to free thought and free speech suddenly finds himself stepping about, like a dancer amidst his eggs, among the old addled majority-votes which he must not tread upon, he is a spectacle for men and angels. Submission to intellectual precedent and authority does very well for those who have been bred to it; we know that the underground courses of their minds are laid in the Roman cement of tradition, and that stately and splendid structures may be reared on such a foundation. But to see one laying a platform over heretical quicksands, thirty or forty or fifty years deep, and then beginning to build upon it, is a sorry sight. A new convert from the reformed to the ancient faith may be very strong in the arms, but he will always have weak legs and shaky knees. He may use his hands well, and hit hard with his fists, but he will never stand on his legs in the way the man does who inherits his belief.

The services were over at last, and Dudley Venner and his daughter walked

home together in silence. He always respected her moods, and saw clearly enough that some inward trouble was weighing upon her. There was nothing to be said in such cases, for Elsie could never talk of her griefs. An hour, or a day, or a week of brooding, with perhaps a sudden flash of violence: this was the way in which the impressions which make other women weep, and tell their griefs by word or letter, showed their effects in her mind and acts.

She wandered off up into the remoter parts of The Mountain, that day, after their return. No one saw just where she went, — indeed, no one knew its forest-recesses and rocky fastnesses as she did. She was gone until late at night; and when Old Sophy, who had watched for her, bound up her long hair for her sleep, it was damp with the cold dews.

The old black woman looked at her without speaking, but questioning her with every feature as to the sorrow that was weighing on her.

Suddenly she turned to Old Sophy.

"You want to know what there is troubling me," she said. "Nobody loves me. I cannot love anybody. What is love, Sophy?"

"It's what poor Ol' Sophy's got for her Elsie," the old woman answered. "Tell me, darlin', — don't you love somebody? — don't you love — ? you know, — oh, tell me, darlin', don't you love to see the gen'l'man that keeps up at the school where you go? They say he's the pootiest gen'l'man that was ever in the town here. Don't be 'fraid of poor Ol' Sophy, darlin', — she loved a man once, — see here! Oh, I've showed you this often enough!"

She took from her pocket a half of one of the old Spanish silver coins, such as were current in the earlier part of this century. The other half of it had been lying in the deep sea-sand for more than fifty years.

Elsie looked her in the face, but did not answer in words. What strange intelligence was that which passed between them through the diamond eyes and the

little beady black ones? — what subtle intercommunication, penetrating so much deeper than articulate speech? This was the nearest approach to sympathetic relations that Elsie ever had: a kind of dumb intercourse of feeling, such as one sees in the eyes of brute mothers looking on their young. But, subtle as it was, it was narrow and individual; whereas an emotion which can shape itself in language opens the gate for itself into the great community of human affections; for every word we speak is the medal of a dead thought or feeling, struck in the die of some human experience, worn smooth by innumerable contacts, and always transferred warm from one to another. By words we share the common consciousness of the race, which has shaped itself in these symbols. By music we reach those special states of consciousness which, being without *form*, cannot be shaped with the mosaics of the vocabulary. The language of the eyes runs deeper into the personal nature, but it is purely individual, and perishes in the expression. If we consider them all as growing out of the consciousness as their root, language is the leaf, music is the flower; but when the eyes meet and search each other, it is the uncovering of the blanched stem through which the whole life runs, but which has never taken color or form from the sunlight.

For three days Elsie did not return to the school. Much of the time she was among the woods and rocks. The season was now beginning to wane, and the forest to put on its autumnal glory. The dreamy haze was beginning to soften the landscape, and the most delicious days of the year were lending their attraction to the scenery of The Mountain. It was not very singular that Elsie should be lingering in her old haunts, from which the change of season must soon drive her. But Old Sophy saw clearly enough that some internal conflict was going on, and knew very well that it must have its own way and work itself out as it best could. As much as looks could tell Elsie had told her. She had said in words,

to be sure, that she could not love. Something warped and thwarted the emotion which would have been love in another, no doubt; but that such an emotion was striving with her against all malign influences which interfered with it the old woman had a perfect certainty in her own mind.

Everybody who has observed the working of emotions in persons of various temperaments knows well enough that they have periods of *incubation*, which differ with the individual, and with the particular cause and degree of excitement, yet evidently go through a strictly self-limited series of evolutions, at the end of which, their result — an act of violence, a paroxysm of tears, a gradual subsidence into repose, or whatever it may be — declares itself, like the last stage of an attack of fever and ague. No one can observe children without noticing that there is a *personal equation*, to use the astronomer's language, in their tempers, so that one sulks an hour over an offence which makes another a fury for five minutes, and leaves him or her an angel when it is over.

At the end of three days, Elsie braided her long, glossy, black hair, and shot a golden arrow through it. She dressed herself with more than usual care, and came down in the morning superb in her stormy beauty. The brooding paroxysm was over, or at least her passion had changed its phase. Her father saw it with great relief; he had always many fears for her in her hours and days of gloom, but, for reasons before assigned, had felt that she must be trusted to herself, without appealing to actual restraint, or any other supervision than such as Old Sophy could exercise without offence.

She went off at the accustomed hour to the school. All the girls had their eyes on her. None so keen as these young misses to know an inward movement by an outward sign of adornment: if they have not as many signals as the ships that sail the great seas, there is not an end of ribbon or a turn of a ringlet which is not a hieroglyphic with a hidden meaning to

these little cruisers over the ocean of sentiment.

The girls all looked at Elsie with a new thought; for she was more sumptuously arrayed than perhaps ever before at the school; and they said to themselves that she had come meaning to draw the young master's eyes upon her. That was it; what else could it be? The beautiful, cold girl with the diamond eyes meant to dazzle the handsome young gentleman. He would be afraid to love her; it couldn't be true, that which some people had said in the village; she wasn't the kind of young lady to make Mr. Langdon happy. Those dark people are never safe: so one of the young blondes said to herself. Elsie was not literary enough for such a scholar: so thought Miss Charlotte Ann Wood, the young poetess. She couldn't have a good temper, with those scowling eyebrows: this was the opinion of several broad-faced, smiling girls, who thought, each in her own snug little mental *sacrum*, that, if, etc., etc., she could make him so happy!

Elsie had none of the still, wicked light in her eyes, that morning. She looked gentle, but dreamy; played with her books; did not trouble herself with any of the exercises, — which in itself was not very remarkable, as she was always allowed, under some pretext or other, to have her own way.

The school-hours were over at length. The girls went out, but she lingered to the last. She then came up to Mr. Bernard, with a book in her hand, as if to ask a question.

"Will you walk towards my home with me to-day?" she said, in a very low voice, little more than a whisper.

Mr. Bernard was startled by the request, put in such a way. He had a pre-sentiment of some painful scene or other. But there was nothing to be done but to assure her that it would give him great pleasure.

So they walked along together on their way toward the Dudley mansion.

"I have no friend," Elsie said, all at once. "Nothing loves me but one old

woman. I cannot love anybody. They tell me there is something in my eyes that draws people to me and makes them faint. Look into them, will you?"

She turned her face toward him. It was very pale, and the diamond eyes were glittering with a film, such as beneath other lids would have rounded into a tear.

"Beautiful eyes, Elsie," he said,—"sometimes very piercing,—but soft now, and looking as if there were something beneath them that friendship might draw out. I am your friend, Elsie. Tell me what I can do to render your life happier."

"Love me!" said Elsie Venner.

What shall a man do, when a woman makes such a demand, involving such an avowal? It was the tenderest, cruellest, humblest moment of Mr. Bernard's life. He turned pale, he trembled almost, as if he had been a woman listening to her lover's declaration.

"Elsie," he said, presently, "I so long to be of some use to you, to have your confidence and sympathy, that I must not let you say or do anything to put us in false relations. I do love you, Elsie, as a suffering sister with sorrows of her own,—as one whom I would save at the risk of my happiness and life,—as one who needs a true friend more than any of all the young girls I have known. More than this you would not ask me to say. You have been through excitement and trouble lately, and it has made you feel such a need more than ever. Give me your hand, dear Elsie, and trust me that I will be as true a friend to you as if we were children of the same mother."

Elsie gave him her hand mechanically. It seemed to him that a cold *aura* shot from it along his arm and chilled the blood running through his heart. He pressed it gently, looked at her with a face full of grave kindness and sad interest, then softly relinquished it.

It was all over with poor Elsie. They walked almost in silence the rest of the way. Mr. Bernard left her at the gate of the mansion-house, and returned with sad forebodings. Elsie went at once to

her own room, and did not come from it at the usual hours. At last Old Sophy began to be alarmed about her, went to her apartment, and, finding the door unlocked, entered cautiously. She found Elsie lying on her bed, her brows strongly contracted, her eyes dull, her whole look that of great suffering. Her first thought was that she had been doing herself a harm by some deadly means or other. But Elsie saw her fear, and reassured her.

"No," she said, "there is nothing wrong, such as you are thinking of; I am not dying. You may send for the Doctor; perhaps he can take the pain from my head. That is all I want him to do. There is no use in the pain, that I know of; if he can stop it, let him."

So they sent for the old Doctor. It was not long before the solid trot of Cautic, the old bay horse, and the crashing of the gravel under the wheels, gave notice that the physician was driving up the avenue.

The old Doctor was a model for visiting practitioners. He always came into the sick-room with a quiet, cheerful look, as if he had a consciousness that he was bringing some sure relief with him. The way a patient snatches his first look at his doctor's face, to see whether he is doomed, whether he is reprieved, whether he is unconditionally pardoned, has really something terrible about it. It is only to be met by an imperturbable mask of serenity, proof against anything and everything in a patient's aspect. The physician whose face reflects his patient's condition like a mirror may do well enough to examine people for a life-insurance office, but does not belong to the sick-room. The old Doctor did not keep people waiting in dread suspense, while he stayed talking about the case,—the patient all the time thinking that he and the friends are discussing some alarming symptom or formidable operation which he himself is by-and-by to hear of.

He was in Elsie's room almost before she knew he was in the house. He came

to her bedside in such a natural, quiet way, that it seemed as if he were only a friend who had dropped in for a moment to say a pleasant word. Yet he was very uneasy about Elsie until he had seen her; he never knew what might happen to her or those about her, and came prepared for the worst.

"Sick, my child?" he said, in a very soft, low voice.

Elsie nodded, without speaking.

The Doctor took her hand, — whether with professional views, or only in a friendly way, it would have been hard to tell. So he sat a few minutes, looking at her all the time with a kind of fatherly interest, but with it all noting how she lay, how she breathed, her color, her expression, all that teaches the practised eye so much without a single question being asked. He saw she was in suffering, and said presently, —

"You have pain somewhere; where is it?"

She put her hand to her head.

As she was not disposed to talk, he watched her for a while, questioned Old Sophy shrewdly a few minutes, and so made up his mind as to the probable cause of disturbance and the proper means to be used.

Some very silly people thought the old Doctor did not believe in medicine, because he gave less than certain poor half-taught creatures in the smaller neighboring towns, who took advantage of people's sickness to disgust and disturb them with all manner of ill-smelling and ill-behaving drugs. To tell the truth, he hated to give anything noxious or loathsome to those who were uncomfortable enough already, unless he was very sure it would do good, — in which case, he never played with drugs, but gave good, honest, efficient doses. Sometimes he lost a family of the more boorish sort, because they did not think they got their money's worth out of him, unless they had something more than a taste of everything he carried in his saddle-bags.

He ordered some remedies which he thought would relieve Elsie, and left her,

saying he would call the next day, hoping to find her better. But the next day came, and the next, and still Elsie was on her bed, — feverish, restless, wakeful, silent. At night she tossed about and wandered, and it became at length apparent that there was a settled attack, something like what they called formerly a "nervous fever."

On the fourth day she was more restless than common. One of the women of the house came in to help to take care of her; but she showed an aversion to her presence.

"Send me Helen Darley," she said, at last.

The old Doctor told them, that, if possible, they must indulge this fancy of hers. The caprices of sick people were never to be despised, least of all of such persons as Elsie, when rendered irritable and exacting by pain and weakness.

So a message was sent to Mr. Silas Peckham, at the Apollinean Institute, to know if he could not spare Miss Helen Darley for a few days, if required, to give her attention to a young lady who attended his school and who was now lying ill, — no other person than the daughter of Dudley Venner.

A mean man never agrees to anything without deliberately turning it over, so that he may see its dirty side, and, if he can, sweating the coin he pays for it. If an archangel should offer to save his soul for sixpence, he would try to find a sixpence with a hole in it. A gentleman says yes to a great many things without stopping to think: a shabby fellow is known by his caution in answering questions, for fear of compromising his pocket or himself.

Mr. Silas Peckham looked very grave at the request. The dooties of Miss Darley at the Institoot were important, very important. He paid her large sums of money for her time, — more than she could expect to get in any other institootion for the edoocation of female youth. A deduction from her salary would be necessary, in case she should retire from the sphere of her dooties for a season. He

should be put to extrý expense, and have to perform additional labors himself. He would consider of the matter. If any arrangement could be made, he would send word to Squire Venner's folks.

"Miss Darley," said Silas Peckham, "the' 's a message from Squire Venner's that his daughter wants you down at the mansion-house to see her. She 's got a fever, so they inform me. If it 's any kind of ketchin' fever, of course you won't think of goin' near the mansion-house. If Doctor Kittredge says it 's safe, perfectly safe, I can't objec' to your goin', on sech conditions as seem to be fair to all concerned. You will give up your pay for the whole time you are absent,—portions of days to be caounted as whole days. You will be charged with board the same as if you eat your victuals with the household. The victuals are of no use after they 're cooked but to be eat, and your bein' away is no savin' to our folks. I shall charge you a reasonable compensation for the demage to the school by the absence of a teacher. If Miss Crabs undertakes any dooties belongin' to your department of instruction, she will look to you for sech pecooniary considerations as you may agree upon between you. On these conditions I am willin' to give my consent to your temporary absence from the post of dooty. I will step down to Doctor Kittredge's, myself, and make inquiries as to the natur' of the complaint."

Mr. Peckham took up a rusty and very narrow-brimmed hat, which he cocked upon one side of his head, with an air peculiar to the rural gentry. It was the hour when the Doctor expected to be in his office, unless he had some special call which kept him from home.

He found the Reverend Chauncy Fairweather just taking leave of the Doctor. His hand was on the pit of his stomach, and his countenance expressive of inward uneasiness.

"Shake it before using," said the Doctor; "and the sooner you make up your mind to speak right out, the better it will be for your digestion."

"Oh, Mr. Peckham! Walk in, Mr.

Peckham! Nobody sick up at the school, I hope?"

"The haalth of the school is fust-rate," replied Mr. Peckham. "The sitooation is uncommonly favorable to saloobrity." (These last words were from the Annual Report of the past year.) "Providence has spared our female youth in a remarkable measure. I 've come with reference to another consideration. Dr. Kittredge, is there any ketchin' complaint goin' about in the village?"

"Well, yes," said the Doctor, "I should say there was something of that sort. Measles. Mumps. And Sin,—that 's always catching."

The old Doctor's eye twinkled; once in a while he had his little touch of humor.

Silas Peckham slanted his eye up suspiciously at the Doctor, as if he was getting some kind of advantage over him. That is the way people of his constitution are apt to take a bit of pleasantry.

"I don't mean sech things, Doctor; I mean fevers. Is there any ketchin' fevers—bilious, or nervous, or typus, or whatever you call 'em—now goin' round this village? That 's what I want to ascertain, if there 's no impropriety."

The old Doctor looked at Silas through his spectacles.

"Hard and sour as a green cider-apple," he thought to himself. "No," he said,— "I don't know any such cases."

"What 's the matter with Elsie Venner?" asked Silas, sharply, as if he expected to have him this time.

"A mild feverish attack, I should call it in anybody else; but she has a peculiar constitution, and I never feel so safe about her as I should about most people."

"Anything ketchin' about it?" Silas asked, cunningly.

"No, indeed!" said the Doctor,— "catching?—no,—what put that into your head, Mr. Peckham?"

"Well, Doctor," the conscientious Principal answered, "I naterally feel a graät responsibility, a very graäät responsibility, for the noomerous and lovely young ladies committed to my charge. It has

been a question, whether one of my assistants should go, accordin' to request, to stop with Miss Venner for a season. Nothin' restrains my givin' my full and free consent to her goin' but the fear lest contagious maladies should be introduced among those lovely female youth. I shall abide by your opinion, — I understand you to say distinctly, her complaint is not ketchin' ? — and urge upon Miss Darley to fulfil her dooties to a sufferin' fellow-creature at any cost to myself and my establishment. We shall miss her very much ; but it is a good cause, and she shall go, — and I shall trust that Providence will enable us to spare her without permanent damage to the interests of the Institution."

Saying this, the excellent Principal departed, with his rusty narrow-brimmed hat leaning over, as if it had a six-knot breeze abeam, and its gunwale (so to speak) was dipping into his coat-collar. He announced the result of his inquiries to Helen, who had received a brief note in the mean time from a poor relation of Elsie's mother, then at the mansion-house, informing her of the critical situation of Elsie and of her urgent desire that Helen should be with her. She could not hesitate. She blushed as she thought of the comments that might be made ; but what were such considerations in a matter of life and death ? She could not stop to make terms with Silas Peckham. She must go. He might fleece her, if he would ; she would not complain, — not even to Bernard, who, she knew, would bring the Principal to terms, if she gave him the least hint of his intended extortions.

So Helen made up her bundle of clothes to be sent after her, took a book or two with her to help her pass the time, and departed for the Dudley mansion. It was with a great inward effort that she undertook the sisterly task which was thus forced upon her. She had a kind of terror of Elsie ; and the thought of having charge of her, of being alone with her, of coming under the full influence of those diamond eyes, — if, indeed, their light were not dimmed by suffer-

ing and weariness, — was one she shrank from. But what could she do ? It might be a turning-point in the life of the poor girl ; and she must overcome all her fears, all her repugnance, and go to her rescue.

"Is Helen come ?" said Elsie, when she heard, with her fine sense quickened by the irritability of sickness, a light foot-fall on the stair, with a cadence unlike that of any inmate of the house.

"It's a strange woman's step," said Old Sophy, who, with her exclusive love for Elsie, was naturally disposed to jealousy of a new-comer. "Let Ol' Sophy set at th' foot o' th' bed, if th' young missis sets by th' pillar, — won' y', darlin' ? The' 's nobody that 's white can love y' as th' ol' black woman does ; — don' sen' her away, now, there 's a dear soul !"

Elsie motioned her to sit in the place she had pointed to, and Helen at that moment entered the room. Dudley Venner followed her.

"She is your patient," he said, "except while the Doctor is here. She has been longing to have you with her, and we shall expect you to make her well in a few days."

So Helen Darley found herself established in the most unexpected manner as an inmate of the Dudley mansion. She sat with Elsie most of the time, by day and by night, soothing her, and trying to enter into her confidence and affections, if it should prove that this strange creature was really capable of truly sympathetic emotions.

What was this unexplained something which came between her soul and that of every other human being with whom she was in relations ? Helen perceived, or rather felt, that she had, folded up in the depths of her being, a true womanly nature. Through the cloud that darkened her aspect, now and then a ray would steal forth, which, like the smile of stern and solemn people, was all the more impressive from its contrast with the expression she wore habitually. It might well be that pain and fatigue had changed her aspect ; but, at any rate, Helen looked into her eyes without that nervous

agitation which their cold glitter had produced on her when they were full of their natural light. She felt sure that her mother must have been a lovely, gentle woman. There were gleams of a beautiful nature shining through some ill-defined medium which disturbed and made them flicker and waver, as distant images do when seen through the rippling upward currents of heated air. She loved, in her own way, the old black woman, and seemed to keep up a kind of silent communication with her, as if they did not require the use of speech. She appeared to be tranquillized by the presence of Helen, and loved to have her seated at the bedside. Yet something, whatever it was, prevented her from opening her heart to her kind companion; and even now there were times when she would lie looking at her, with such a still, watchful, almost dangerous expression, that Helen would sigh, and change her place, as persons do whose breath some cunning orator has been sucking out of them with his spongy eloquence, so that, when he stops, they must get some air and stir about, or they feel as if they should be half-smothered and palsied.

It was too much to keep guessing what was the meaning of all this. Helen determined to ask Old Sophy some questions which might probably throw light upon her doubts. She took the opportunity one evening when Elsie was lying asleep and they were both sitting at some distance from her bed.

"Tell me, Sophy," she said, "was Elsie always as shy as she seems to be now, in talking with those to whom she is friendly?"

"Always jes' so, Miss Darlin', ever sence she was little chil'. When she was five, six year old, she lisp some,—call me *Thophy*; that make her kin' o' 'shamed, perhaps: after she grow up, she never lisp, but she kin' o' got the way o' not talkin' much. Fac' is, she don' like talkin' as common gals do, 'keep' jes' once in a while with some partic'lar folks,—n'then not much."

"How old is Elsie?"

"Eighteen year this las' September."

"How long ago did her mother die?" Helen asked, with a little trembling in her voice.

"Eighteen year ago this October," said Old Sophy.

Helen was silent for a moment. Then she whispered, almost inaudibly,—for her voice appeared to fail her,—

"What did her mother die of, Sophy?"

The old woman's small eyes dilated until a ring of white showed round their beady centres. She caught Helen by the hand and clung to it, as if in fear. She looked round at Elsie, who lay sleeping, as if she might be listening. Then she drew Helen towards her and led her softly out of the room.

"'Sh!—'sh!" she said, as soon as they were outside the door. "Don' never speak in this house 'bout what Elsie's mother died of!" she said. "Nobody never says nothin' 'bout it. Oh, God has made Ugly Things wi' death in their mouths, Miss Darlin', an' He knows what they're for; but my poor Elsie!—to have her blood changed in her before—— It was in July Mistress got her death, but she liv' till three week after my poor Elsie was born."

She could speak no more. She had said enough. Helen remembered the stories she had heard on coming to the village, and among them one referred to in an early chapter of this narrative. All the unaccountable looks and tastes and ways of Elsie came back to her in the light of an ante-natal impression which had mingled an alien element in her nature. She knew the secret of the fascination which looked out of her cold, glittering eyes. She knew the significance of the strange repulsion which she felt in her own intimate consciousness underlying the inexplicable attraction which drew her towards the young girl in spite of this repugnance. She began to look with new feelings on the contradictions in her moral nature,—the longing for sympathy, as shown by her wishing for Helen's company, and the impossibility of passing beyond the cold circle of iso-

lation within which she had her being. The fearful truth of that instinctive feeling of hers, that there was something not human looking out of Elsie's eyes, came upon her with a sudden flash of penetrating conviction. There were two warring principles in that superb organization and proud soul. One made her a woman, with all a woman's powers and longings. The other chilled all the currents of outlet for her emotions. It made her tearless and mute, when another woman would have wept and pleaded. And it infused into her soul something—it was cruel now to call it malice—which was still and watchful and dangerous,—which waited its opportunity, and then shot like an arrow from its bow out of the coil of brooding premeditation. Even those who had never seen the white scars on Dick Venner's wrist, or heard the half-told story of her supposed attempt to do a graver mischief, knew well enough by looking at her that she was one of the creatures not to be tampered with,—silent in anger and swift in vengeance.

Helen could not return to the bedside at once after this communication. It was with altered eyes that she must look on the poor girl, the victim of such an unheard-of fatality. All was explained to her now. But it opened such depths of solemn thought in her awakened consciousness, that it seemed as if the whole mystery of human life were coming up again before her for trial and judgment. "Oh," she thought, "if, while the will lies sealed in its fountain, it may be poisoned at its very source, so that it shall flow dark and deadly through its whole course, who are we that we should judge our fellow-creatures by ourselves?" Then came the terrible question, how far the elements themselves are capable of perverting the moral nature: if valor, and justice, and truth, the strength of man and the virtue of woman, may not be poisoned out of a race by the food of the Australian in his forest,—by the foul air and darkness of the Christians cooped up in the "tenement-houses close by those who live in the palaces of the great cities?"

She walked out into the garden, lost in thought upon these dark and deep matters. Presently she heard a step behind her, and Elsie's father came up and joined her. Since his introduction to Helen at the distinguished tea-party given by the Widow Rowens, and before her coming to sit with Elsie, Mr. Dudley Venner had in the most accidental way in the world met her on several occasions: once after church, when she happened to be caught in a slight shower and he insisted on holding his umbrella over her on her way home;—once at a small party at one of the mansion-houses, where the quick-eyed lady of the house had a wonderful knack of bringing people together who liked to see each other;—perhaps at other times and places; but of this there is no certain evidence.

They naturally spoke of Elsie, her illness, and the aspect it had taken. But Helen noticed in all that Dudley Venner said about his daughter a morbid sensitiveness, as it seemed to her, an aversion to saying much about her physical condition or her peculiarities,—a wish to feel and speak as a parent should, and yet a shrinking, as if there were something about Elsie which he could not bear to dwell upon. She thought she saw through all this, and she could interpret it all charitably. There were circumstances about his daughter which recalled the great sorrow of his life; it was not strange that this perpetual reminder should in some degree have modified his feelings as a father. But what a life he must have been leading for so many years, with this perpetual source of distress which he could not name! Helen knew well enough, now, the meaning of the sadness which had left such traces in his features and tones, and it made her feel very kindly and compassionate towards him.

So they walked over the crackling leaves in the garden, between the lines of box breathing its fragrance of eternity;—for this is one of the odors which carry us out of time into the abysses of the unbeginning past; if we ever lived on another ball of stone than this, it

must be that there was box growing on it. So they walked, finding their way softly to each other's sorrows and sympathies, each meeting some counterpart to the other's experience of life, and startled to see how the different, yet parallel, lessons they had been taught by suffering had led them step by step to the same serene acquiescence in the orderings of that Supreme Wisdom which they both devoutly recognized.

Old Sophy was at the window and saw them walking up and down the garden-alleys. She watched them as her grandfather the savage watched the figures that moved among the trees when a hostile tribe was lurking about his mountain.

"There 'll be a weddin' in the ol'

house," she said, "before there 's roses on them bushes ag'in. But it won' be my poor Elsie's weddin', 'n' Ol' Sophy won' be there."

When Helen prayed in the silence of her soul that evening, it was not that Elsie's life might be spared. She dared not ask that as a favor of Heaven. What could life be to her but a perpetual anguish, and to those about her an ever-present terror? Might she but be so influenced by divine grace, that what in her was most truly human, most purely woman-like, should overcome the dark, cold, unmentionable instinct which had pervaded her being like a subtle poison: that was all she could ask, and the rest she left to a higher wisdom and tenderer love than her own.

GYMNASTICS.

So your zeal for physical training begins to wane a little, my friend? I thought it would, in your particular case, because it began too ardently and was concentrated too exclusively on your one hobby of pedestrianism. Just now you are literally under the weather. It is the equinoctial storm. No matter, you say; did not Olmsted foot it over England under an umbrella? did not Wordsworth regularly walk every guest round Windermere, the day after arrival, rain or shine? So, the day before yesterday, you did your four miles out, on the Northern turnpike, and returned splashed to the waist; and yesterday you walked three miles out, on the Southern turnpike, and came back soaked to the knees. To-day the storm is slightly increasing, but you are dry thus far, and wish to remain so; exercise is a humbug; you will give it all up, and go to the Chess-Club. Don't go to the Chess-Club; come with me to the Gymnasium.

Chess may be all very well to tax with

tough problems a brain otherwise inert, to vary a monotonous day with small events, to keep one awake during a sleepy evening, and to arouse a whole family next morning for the adjustment over the breakfast-table of that momentous state-question, whether the red king should have castled at the fiftieth move or not till the fifty-first. But for an average American man, who leaves his place of business at nightfall with his head a mere furnace of red-hot brains and his body a pile of burnt-out cinders, utterly exhausted in the daily effort to put ten dollars more of distance between his posterity and the poor-house,—for such a one to kindle up afresh after office-hours for a complicated chess-problem seems much as if a wood-sawyer, worn out with his week's work, should decide to order in his saw-horse on Saturday evening, and saw for fun. Surely we have little enough recreation at any rate, and, pray, let us make that little un-intellectual. True, something can be said in favor of

chess,—for instance, that no money can be made out of it, and that it is so far profitable to us overworked Americans: but even this is not enough. For this once, lock your brains into your safe, at nightfall, with your other valuables; don't go to the Chess-Club; come with me to the Gymnasium.

Ten leaps up a steep, worn-out stairway, through a blind entry to another stairway, and yet another, and we emerge suddenly upon the floor of a large lighted room, a mere human machine-shop of busy motion, where Indian clubs are whirling, dumb-bells pounding, swings vibrating, and arms and legs flying in all manner of unexpected directions. Henderson sits with his big proportions quietly rested against the weight-boxes, pulling with monotonous vigor at the fifty-pound weights,—“the Stationary Engine” the boys call him. For a contrast, Draper is floating up and down between the parallel bars with such an airy lightness, that you think he must have hung up his body in the dressing-room, and is exercising only in his arms and clothes. Parsons is swinging in the rings, rising to the ceiling before and behind; up and down he goes, whirling over and over, converting himself into a mere tumbler-pigeon, yet still bound by the long, steady vibration of the human pendulum. Another is running a race with him, if sitting in the swing be running; and still another is accompanying their motion, clinging to the *trapèze*. Hayes, meanwhile, is spinning on the horizontal bar, now backward, now forward, twenty times without stopping, pinioned through his bent arms, like a Fakir on his iron. See how many different ways of ascending a vertical pole these boys are devising!—one climbs with hands and legs, another with hands only, another is crawling up on all-fours in Feegee fashion, while another is pegging his way up by inserting pegs in holes a foot apart,—you will see him sway and tremble a bit, before he reaches the ceiling. Others are at work with a spring-board and leaping-cord; higher and higher the cord is moved, one by one the competi-

tors step aside defeated, till the field is left to a single champion, who, like an India-rubber ball, goes on rebounding till he seems likely to disappear through the chimney, like a Ravel. Some sturdy young visitors, farmers by their looks, are trying their strength, with various success, at the sixty-pound dumb-bell, when some quiet fellow, a clerk or a tailor, walks modestly to the hundred-pound weight, and up it goes as steadily as if the laws of gravitation had suddenly shifted their course, and worked upward instead of down. Lest, however, they should suddenly resume their original bias, let us cross to the dressing-room, and, while you are assuming flannel shirt or complete gymnastic suit, as you may prefer, let us consider the merits of the Gymnasium.

Do not say that the public is growing tired of hearing about physical training. You might as well speak of being surfeited with the sight of apple-blossoms, or bored with roses,—for these athletic exercises are, to a healthy person, just as good and refreshing. Of course, any one becomes insupportable who talks all the time of this subject, or of any other; but it is the man who fatigues you, not the theme. Any person becomes morbid and tedious whose whole existence is absorbed in any one thing, be it playing or praying. Queen Elizabeth, after admiring a gentleman's dancing, refused to look at the dancing-master, who did it better. “Nay,” quoth her bluff Majesty,—“’t is his business,—I’ll none of him.” Professionals grow tiresome. Books are good,—so is a boat; but a librarian and a ferryman, though useful to take you where you wish to go, are not necessarily enlivening as companions. The annals of “Boxiana” and “Pedestriana” and “The Cricket-Field” are as pathetic records of monomania as the bibliographical works of Mr. Thomas Dibdin. Margaret Fuller said truly, that we all delight in gossip, and differ only in the department of gossip we individually prefer; but a monotony of gossip soon grows tedious, be the theme horses or octavos.

Not one-tenth part of the requisite amount has yet been said of athletic exercises as a prescription for this community. There was a time when they were not even practised generally among American boys, if we may trust the foreign travellers of a half-century ago, and they are but just being raised into respectability among American men. Motley says of one of his Flemish heroes, that "he would as soon have foregone his daily tennis as his religious exercises,"—as if ball-playing were then the necessary pivot of a great man's day. Some such pivot of physical enjoyment we must have, for no other race in the world needs it so much. Through the immense inventive capacity of our people, mechanical avocations are becoming almost as sedentary and intellectual as the professions. Among Americans, all hand-work is constantly being transmuted into brain-work; the intellect gains, but the body suffers, and needs some other form of physical activity to restore the equilibrium. As machinery becomes perfected, all the coarser tasks are constantly being handed over to the German or Irish immigrant,—not because the American cannot do the particular thing required, but because he is promoted to something more intellectual. Thus transformed to a mental laborer, he must somehow supply the bodily deficiency. If this is true of this class, it is of course true of the student, the statesman, and the professional man. The general statement recently made by Lewes, in England, certainly holds not less in America:—"It is rare to meet with good digestion among the artisans of the brain, no matter how careful they may be in food and general habits." The great majority of our literary and professional men could echo the testimony of Washington Irving, if they would only indorse his wise conclusion:—"My own case is a proof how one really loses by over-writing one's self and keeping too intent upon a sedentary occupation. I attribute all my present indisposition, which is losing me time, spirits, everything, to two fits of close application and neglect of all exer-

cise while I was at Paris. I am convinced that he who devotes two hours each day to vigorous exercise will eventually gain those two and a couple more into the bargain."

Indeed, there is something involved in the matter far beyond any merely physical necessity. All our natures need something more than mere bodily exertion; they need bodily enjoyment. There is, or ought to be, in all of us a touch of untamed gypsy nature, which should be trained, not crushed. We need, in the very midst of civilization, something which gives a little of the zest of savage life; and athletic exercises furnish the means. The young man who is caught down the bay in a sudden storm, alone in his boat, with wind and tide against him, has all the sensations of a Norway sea-king,—sensations thoroughly uncomfortable, if you please, but for the thrill and glow they bring. Swim out after a storm at Dove Harbor, topping the low crests, diving through the high ones, and you feel yourself as veritable a South-Sea Islander as if you were to dine that day on missionary instead of mutton. Tramp, for a whole day, across hill, marsh, and pasture, with gun, rod, or whatever the excuse may be, and camp where you find yourself at evening, and you are as essentially an Indian on the Blue Hills as among the Rocky Mountains. Less depends upon circumstances than we fancy, and more upon our personal temperament and will. All the enjoyments of Browning's "Saul," those "wild joys of living" which make us happy with their freshness as we read of them, are within the reach of all, and make us happier still when enacted. Every one, in proportion as he develops his own physical resources, puts himself in harmony with the universe, and contributes something to it; even as Mr. Pecksniff, exulting in his digestive machinery, felt a pious delight after dinner in the thought that this wonderful apparatus was wound up and going.

A young person can no more have too much love of adventure than a mill can

have too much water-power; only it needs to be worked, not wasted. Physical exercises give to energy and daring a legitimate channel, supply the place of war, gambling, licentiousness, highway-robbery, and office-seeking. De Quincey, in like manner, says that Wordsworth made pedestrianism a substitute for wine and spirits; and Emerson thinks the force of rude periods "can rarely be compensated in tranquil times, except by some analogous vigor drawn from occupations as hardy as war." The animal energy cannot and ought not to be suppressed; if debarred from its natural channel, it will force for itself unnatural ones. A vigorous life of the senses not only does not tend to sensuality in the objectionable sense, but it helps to avert it. Health finds joy in mere existence; daily breath and daily bread suffice. This innocent enjoyment lost, the normal desires seek abnormal satisfactions. The most brutal prize-fighter is compelled to recognize the connection between purity and vigor, and becomes virtuous when he goes into training, as the heroes of old observed chastity, in hopes of conquering at the Olympic Games. The very word *ascetic* comes from a Greek word signifying the preparatory exercises of an athlete. There are spiritual diseases which coil poisonously among distorted instincts and disordered nerves, and one would be generally safer in standing sponsor for the soul of the gymnast than of the dyspeptic.

Of course, the demand of our nature is not always for continuous exertion. One does not always seek that "rough exercise" which Sir John Sinclair asserts to be "the darling idol of the English." There are delicious languors, Neapolitan repose, Creole siestas, "long days and solid banks of flowers." But it is the birthright of the man of the temperate zones to alternate these voluptuous delights with more heroic ones, and sweeten the reverie by the toil. So far as they go, the enjoyments of the healthy body are as innocent and as ardent as those of the soul. As there is no ground of

comparison, so there is no ground of antagonism. How compare a sonata and a sea-bath, or measure the Sistine Madonna against a gallop across country? The best thanksgiving for each is to enjoy the other also, and educate the mind to ampler nobleness. After all, the best verdict on athletic exercises was that of the great Sully, when he said, "I was always of the same opinion with Henry IV. concerning them: he often asserted that they were the most solid foundation, not only of discipline and other military virtues, but also of those noble sentiments and that elevation of mind which give one nature superiority over another."

We are now ready, perhaps, to come to the question, How are these athletic enjoyments to be obtained? The first and easiest answer is, By taking a long walk every day. If people would actually do this, instead of forever talking about doing it, the object might be gained. To be sure, there are various defects in this form of exercise. It is not a play, to begin with, and therefore does not withdraw the mind from its daily cares; the anxious man recurs to his problems on the way; and each mile, in that case, brings fresh weariness to brain as well as body. Moreover, there are, according to Dr. Grau, "three distinct groups of muscles which are almost totally neglected where walking alone is resorted to, and which consequently exist only in a crippled state, although they are of the utmost importance, and each stands in close *rapport* with a number of other functions of the greatest necessity to health and life." These he afterwards classifies as the muscles of the shoulders and chest, having a bearing on the lungs,—the abdominal muscles, bearing on the corresponding organs,—and the spinal muscles, which are closely connected with the whole nervous system.

But the greatest practical difficulty is, that walking, being the least concentrated form of exercise, requires a larger appropriation of time than most persons are willing to give. Taken liberally, and in connection with exercises which are more

concentrated and have more play about them, it is of great value, and, indeed, indispensable. But so far as I have seen, instead of these other pursuits taking the place of pedestrianism, they commonly create a taste for it; so that, when the sweet spring-days come round, you will see our afternoon gymnastic class begin to scatter literally to the four winds; or they look in for a moment, on their way home from the woods, their hands filled and scented with long wreaths of the trailing arbutus.

But the gymnasium is the normal type of all muscular exercise,—the only form of it which is impartial and comprehensive, which has something for everybody, which is available at all seasons, through all weathers, in all latitudes. All other provisions are limited: you cannot row in winter nor skate in summer, spite of parlor-skates and ice-boats; ball-playing requires comrades; riding takes money; everything needs daylight: but the gymnasium is always accessible. Then it is the only thing which trains the whole body. Military drill makes one prompt, patient, erect, accurate, still, strong. Rowing takes one set of muscles and stretches them through and through, till you feel yourself turning into one long spiral spring from finger-tips to toes. In cricket or base-ball, a player runs, strikes, watches, catches, throws, must learn quickness of hand and eye, must learn endurance also. Yet, no matter which of these may be your special hobby, you must, if you wish to use all the days and all the muscles, seek the gymnasium at last,—the only thorough panacea.

The history of modern gymnastic exercises is easily written: it is proper to say modern,—for, so far as apparatus goes, the ancient gymnasiums seem to have had scarcely anything in common with our own. The first institution on the modern plan was founded at Schnepfenthal, near Gotha, in Germany, in 1785, by Salzmann, a clergyman and the principal of a boys' school. After eight years of experience, his assistant, Gutsmuths, wrote a book upon the subject, which

was translated into English, and published at London in 1799 and at Philadelphia in 1800, under the name of "Salzmann's Gymnastics." No similar institution seems to have existed in either country, however, till those established by Voelckers, in London, in 1824, and by Dr. Follen, at Cambridge, Mass., in 1826. Both were largely patronized at first, and died out at last. The best account of Voelckers's establishment will be found in Hone's "Every-Day Book"; its plan seems to have been unexceptionable. But Dr. James Johnson, writing his "Economy of Health" ten years after, declared that these German exercises had proved "better adapted to the Spartan youth than to the pallid sons of pampered cities, the dandies of the desk, and the squalid tenants of attics and factories," and also adds the epitaph, "This ultra-gymnastic enthusiast did much injury to an important branch of hygiene by carrying it to excess, and consequently by causing its desuetude." And Dr. Jarvis, in his "Practical Physiology," declares the unquestionable result of the American experiment to have been "general failure."

Accordingly, the English, who are reputed kings in all physical exercises, have undoubtedly been far surpassed by the Germans, and even by the French, in gymnastics. The writer of the excellent little "Handbook for Gymnastics," George Forrest, M. A., testifies strongly to this deficiency. "It is curious that we English, who possess perhaps the finest and strongest figures of all European nations, should leave ourselves so undeveloped bodily. There is not one man in a hundred who can even raise his toes to a level with his hands, when suspended by the latter members; and yet to do so is at the very beginning of gymnastic exercises. We, as a rule, are strong in the arms and legs, but weak across the loins and back, and are apparently devoid of that beautiful set of muscles that run round the entire waist, and show to such advantage in the ancient statues. Indeed, at a bathing-place, I can pick

out every gymnast merely by the development of those muscles."

It is the Germans and the military portion of the French nation, chiefly, who have developed gymnastic exercises to their present elaboration, while the working out of their curative applications was chiefly due to Lång, a Swede. In the German manuals, such, for instance, as Eiselen's "*Turnübungen*," are to be found nearly all the stock exercises of our institutions. Until within a few years, American skill has added nothing to these, except through the medium of the circus; but the present revival of athletic exercises is rapidly placing American gymnasts in advance of the *Turners*, both in the feats performed and in the style of doing them. Never yet have I succeeded in seeing a thoroughly light and graceful German gymnast, while again and again I have seen Americans who carried into their severest exercise such an airy, floating elegance of motion, that all the beauty of Greek sculpture appeared to return again, and it seemed as if plastic art might once more make its studio in the gymnasium.

The apparatus is not costly. Any handful of young men in the smallest country-village, with a very few dollars and a little mechanical skill, can put up in any old shed or shoe-shop a few simple articles of machinery, which will, through many a winter evening, vary the monotony of the cigar and the grocery-bench by an endless variety of manly competitions. Fifteen cents will bring by mail from the publishers of the "*Atlantic*" Forrest's little sixpenny "*Handbook*," which gives a sufficient number of exercises to form an introduction to all others; and a gymnasium is thus easily established. This is just the method of the simple and sensible Germans, who never wait for elegant upholstery. A pair of plain parallel bars, a movable vaulting-bar, a wooden horse, a spring-board, an old mattress to break the fall, a few settees where sweethearts and wives may sit with their knitting as spectators, and there is a *Turnhalle* com-

plete,—to be henceforward filled, two or three nights in every week, with cheery German faces, jokes, laughs, gutturals, and gambols.

But this suggests that you are being kept too long in the anteroom. Let me act as cicerone through this modest gymnastic hall of ours. You will better appreciate all this oddly shaped apparatus, if I tell you in advance, as a connoisseur does in his picture-gallery, precisely what you are expected to think of each particular article.

You will notice, however, that a part of the gymnastic class are exercising without apparatus, in a series of rather grotesque movements which supple and prepare the body for more muscular feats: these are calisthenic exercises. Such are being at last introduced, thanks to Dr. Lewis and others, into our common schools. At the word of command, as swiftly as a conjuror twists his puzzle-paper, these living forms are shifted from one odd resemblance to another, at which it is quite lawful to laugh, especially if those laugh who win. A series of windmills,—a group of inflated balloons,—a flock of geese all asleep on one leg,—a circle of ballet-dancers, just poised to begin,—a band of patriots just kneeling to take an oath upon their country's altar,—a senate of tailors,—a file of soldiers,—a whole parish of Shaker worshippers,—a Japanese embassy performing *Ko-tow*: these all in turn come like shadows,—so depart. This complicated attitudinizing forms the preliminary to the gymnastic hour. But now come and look at some of the apparatus.

Here is a row of Indian clubs, or sceptres, as they are sometimes called,—tapering down from giants of fifteen pounds to dwarfs of four. Help yourself to a pair of dwarfs, at first; grasp one in each hand, by the handle; swing one of them round your head quietly, dropping the point behind as far as possible,—then the other,—and so swing them alternately some twenty times. Now do the same back-handed, bending the wrist outward, and carrying the club be-

hind the head first. Now swing them both together, crossing them in front, and then the same back-handed; then the same without crossing, and this again backward, which you will find much harder. Place them on the ground gently after each set of processes. Now, can you hold them out horizontally at arm's length, forward and then sideways? Your arms quiver and quiver, and down come the clubs thumping at last. Take them presently in a different and more difficult manner, holding each club with the point erect instead of hanging down; it tries your wrists, you will find, to manipulate them so, yet all the most graceful exercises have this for a basis. Soon you will gain the mastery of heavier implements than you begin with, and will understand how yonder slight youth has learned to handle his two heavy clubs in complex curves that seem to you inexplicable, tracing in the air a device as swift and tangled as that woven by a swarm of gossamer flies above a brook, in the sultry stillness of the summer noon.

This row of masses of iron, laid regularly in order of size, so as to resemble something between a musical instrument and a gridiron, consists of dumb-bells weighing from four pounds to a hundred. These playthings, suited to a variety of capacities, have experienced a revival of favor within a few years, and the range of exercises with them has been greatly increased. The use of very heavy ones is, so far as I can find, a peculiarly American hobby, though not originating with Dr. Windship. Even he, at the beginning of his exhibitions, used those weighing only ninety-eight pounds; and it was considered an astonishing feat, when, a little earlier, Mr. Richard Montgomery used to "put up" a dumb-bell weighing one hundred and one pounds. A good many persons, in different parts of the country, now handle one hundred and twenty-five, and Dr. Windship has got much farther on. There is, of course, a knack in using these little articles, as in every other feat, yet it takes good extensor muscles to get beyond the fifties. The easiest way of

elevating the weight is to swing it up from between the knees; or it may be thrown up from the shoulder, with a simultaneous jerk of the whole body; but the only way of doing it handsomely is to put it up from the shoulder with the arm alone, without bending the knee, though you may bend the body as much as you please. Dr. Windship now puts up one hundred and forty-one pounds in this manner, and by the aid of a jerk can elevate one hundred and eighty with one arm. This particular movement with dumb-bells is most practised, as affording a test of strength; but there are many other ways of using them, all exceedingly invigorating, and all safe enough, unless the weight employed be too great, which it is very apt to be. Indeed, there is so much danger of this, that at Cambridge it has been deemed best to exclude all beyond seventy pounds. Nevertheless, the dumb-bell remains the one available form of home or office exercise: it is a whole athletic apparatus packed up in the smallest space; it is gymnastic peimican. With one fifty-pound dumb-bell, or a pair of half that size, — or more or less, according to his strength and habits, — a man may exercise nearly every muscle in his body in half an hour, if he has sufficient ingenuity in positions. If it were one's fortune to be sent to prison, — and the access to such retirement is growing more and more facile in many regions of our common country, — one would certainly wish to carry a dumb-bell with him, precisely as Dr. Johnson carried an arithmetic in his pocket on his tour to the Hebrides, as containing the greatest amount of nutriment in the compactest form.

Apparatus for lifting is not yet introduced into most gymnasiums, in spite of the recommendations of the Roxbury Hercules: beside the fear of straining, there is the cumbrous weight and cost of iron apparatus, while, for some reason or other, no cheap and accurate dynamometer has yet come into the market. Running and jumping, also, have as yet been too much neglected in our institu-

tions, or practised spasmodically rather than systematically. It is singular how little pains have been taken to ascertain definitely what a man can do with his body, — far less, as Quetelet has observed, than in regard to any animal which man has tamed, or any machine which he has invented. It is stated, for instance, in Walker's "Manly Exercises," that six feet is the maximum of a high leap, with a run, — and certainly one never finds in the newspapers a record of anything higher; yet it is the English tradition, that Ireland, of Yorkshire, could clear a string raised fourteen feet, and that he once kicked a bladder at sixteen. No spring-board would explain a difference so astounding. In the same way, Walker fixes the limit of a long leap without a run at fourteen feet, and with a run at twenty-two, — both being large estimates; and Thackeray makes his young Virginian jump twenty-one feet and three inches, crediting George Washington with a foot more. Yet the ancient epitaph of Phayllus the Crotonian claimed for him nothing less than fifty-five feet, on an inclined plane. Certainly the story must have taken a leap also.

These ladders, aspiring indefinitely into the air, like Piranesi's stairways, are called technically peak-ladders; and dear banished T. S. K., who always was puzzled to know why Mount Washington kept up such a pique against the sky, would have found his joke fit these ladders with great precision, so frequent the disappointment they create. But try them, and see what trivial appendages one's legs may become, — since the feet are not intended to touch these polished rounds. Walk up backward on the under side, hand over hand, then forward; then go up again, omitting every other round; then aspire to the third round, if you will. Next grasp a round with both hands, give a slight swing of the body, let go, and grasp the round above, and so on upward; then the same, omitting one round, or more, if you can, and come down in the same way. Can you walk up on *one* hand? It is not an easy thing,

but a first-class gymnast will do it, — and Dr. Windship does it, taking only every third round. Fancy a one-armed and legless hodman ascending the under side of a ladder to the roof, and reflect on the conveniences of gymnastic habits.

Here is a wooden horse; on this noble animal the Germans say that not less than three hundred distinct feats can be performed. Bring yonder spring-board, and we will try a few. Grasp these low pommels and vault over the horse, first to the right, then again to the left; then with one hand each way. Now spring to the top and stand; now spring between the hands forward, now backward; now take a good impetus, spread your feet far apart, and leap over it, letting go the hands. Grasp the pommels again and throw a somerset over it, — coming down on your feet, if the Fates permit. Now vault up and sit upon the horse, at one end, knees the same side; now grasp the pommels and whirl yourself round till you sit at the other end, facing the other way. Now spring up and bestride it, whirl round till you bestride it the other way, at the other end; do it once again, and, letting go your hand, seat yourself in the saddle. Now push away the spring-board and repeat every feat without its aid. Next, take a run and spring upon the end of the horse astride; then walk over, supporting yourself on your hands alone, the legs not touching; then backward, the same. It will be hard to balance yourself at first, and you will careen uneasily one way or the other; no matter, you will get over it somehow. Lastly, mount once more, kneel in the saddle, and leap to the ground. It appears at first ridiculously impracticable, the knees seem glued to their position, and it looks as if one would fall inevitably on his face; but falling is hardly possible. Any novice can do it, if he will only have faith. You shall learn to do it from the horizontal bar presently, where it looks much more formidable.

But first you must learn some simpler exercises on this horizontal bar: you ob-

serve that it is made movable, and may be placed as low as your knee, or higher than your hand can reach. This bar is only five inches in circumference; but it is remarkably strong and springy, and therefore we hope secure, though for some exercises our boys prefer to substitute a larger one. Try and vault it, first to the right, then to the left, as you did with the horse; try first with one hand, then see how high you can vault with both. Now vault it between your hands, forward and backward: the latter will baffle you, unless you have brought an unusual stock of India-rubber in your frame, to begin with. Raise it higher and higher, till you can vault it no longer. Now spring up on the bar, resting on your palms, and vault over from that position with a swing of your body, without touching the ground; when you have once managed this, you can vault as high as you can reach: double-vaulting this is called. Now put the bar higher than your head; grasp it with your hands, and draw yourself up till you look over it; repeat this a good many times: capital practice this, as is usually said of things particularly tiresome. Take hold of the bar again, and with a good spring from the ground try to curl your body over it, feet foremost. At first, in all probability, your legs will go angling in the air convulsively, and come down with nothing caught; but ere long we shall see you dispense with the spring from the ground and go whirling over and over, as if the bar were the axle of a wheel and your legs the spokes. Now spring upon the bar, supporting yourself on your palms, as before; put your hands a little farther apart, with the thumbs forward, then suddenly bring up your knees on the bar and let your whole body go over forward: you will not fall, if your hands have a good grasp. Try it again with your feet outside your hands, instead of between them; then once again flinging your body off from the bar and describing a long curve with it, arms stiff: this is called the Giant's Swing. Now hang to the bar by the knees,—by both knees;

do not try it yet with one; then seize the bar with your hands and thrust the legs still farther and farther forward, pulling with your arms at the same time, till you find yourself sitting unaccountably on the bar itself. This our boys cheerfully denominate “skinning the cat,” because the sensations it suggests, on a first experiment, are supposed to resemble those of pussy with her skin drawn over her head; but, after a few experiments, it seems like stroking the fur in the right direction, and grows rather pleasant.

Try now the parallel bars, the most invigorating apparatus of the gymnasium, and in its beginnings “accessible to the meanest capacity,” since there are scarcely any who cannot support themselves by the hands on the bars, and not very many who cannot walk a few steps upon the palms, at the first trial. Soon you will learn to swing along these bars in long surges of motion, forward and backward; to go through them, in a series of springs from the hand only, without a jerk of the knees; to turn round and round between them, going forward or backward all the while; to vault over them and under them in complicated ways; to turn somersets in them and across them; to roll over and over on them as a porpoise seems to roll in the sea. Then come the “low-standing” exercises, the grasshopper style of business; supporting yourself now with arms not straight, but bent at the elbow, you shall learn to raise and lower your body and to hold or swing yourself as lightly in that position as if you had not felt pinioned and paralyzed hopelessly at the first trial; and whole new systems of muscles shall seem to shoot out from your shoulder-blades to enable you to do what you could not have dreamed of doing before. These bars are magical,—they are conduits of power; you cannot touch them, you cannot rest your weight on them in the slightest degree, without causing strength to flow into your body as naturally and irresistibly as water into the aqueduct-pipe when you turn it on. Do you but give the opportunity, and

every pulsation of blood from your heart is pledged for the rest.

These exercises, and such as these, are among the elementary lessons of gymnastic training. Practise these thoroughly and patiently, and you will in time attain evolutions more complicated, and, if you wish, more perilous. Neglect these, to grasp at random after everything which you see others doing, and you will fail like a bookkeeper who is weak in the multiplication-table. The older you begin, the more gradual the preparation must be. A respectable middle-aged citizen, bent on improving his *physique*, goes into a gymnasium, and sees slight, smooth-faced boys going gayly through a series of exercises which show their bodies to be a triumph, not a drag, and he is assured that the same might be the case with him. Off goes the coat of our enthusiast and in he plunges; he gripes a heavy dumb-bell and strains one shoulder, hauls at a weight-box and strains the other, vaults the bar and bruises his knee, swings in the rings once or twice till his hand slips and he falls to the floor. No matter, he thinks the cause demands sacrifices; but he subsides, for the next fifteen minutes, into more moderate exercises, which he still makes immoderate by his awkward way of doing them. Nevertheless, he goes home, cheerful under difficulties, and will try again to-morrow. To-morrow finds him stiff, lame, and wretched; he cannot lift his arm to his face to shave, nor lower it sufficiently to pull his boots on; his little daughter must help him with his shoes, and the indignant wife of his bosom must put on his hat, with that ineffectual one-sidedness to which alone the best-regulated female mind can attain, in this difficult part of costuming. His sorrows increase as the day passes; the gymnasium alone can relieve them, but his soul shudders at the remedy; and he can conceive of nothing so absurd as a first gymnastic lesson, except a second one. But had he been wise enough to place himself under an experienced adviser at the very beginning, he would have been put through a

few simple movements which would have sent him home glowing and refreshed and fancying himself half-way back to boyhood again; the slight ache and weariness of next day would have been cured by next day's exercise; and after six months' patience, by a progress almost imperceptible, he would have found himself, in respect to strength and activity, a transformed man.

Most of these discomforts, of course, are spared to boys; their frames are more elastic and less liable to ache and strain. They learn gymnastics, as they learn everything else, more readily than their elders. Begin with a boy early enough, and if he be of a suitable temperament, he can learn in the gymnasium all the feats usually seen in the circus-ring, and could even acquire more difficult ones, if it were worth his while to try them. This is true even of the air-somersets and hand-springs which are not so commonly cultivated by gymnasts; but it is especially true of all exercises with apparatus. It is astonishing how readily our classes pick up any novelty brought into town by a strolling company,—holding the body out horizontally from an upright pole, or hanging by the back of the head, or touching the head to the heels, though this last is oftener tried than accomplished. They may be seen practising these antics, at all spare moments, for weeks, until some later hobby drives them away. From Blondin downwards, the public feats derive a large part of their wonder from the imposing height in the air at which they are done. Many a young man who can swing himself more than his own length on the horizontal ladder at the gymnasium has yet shuddered at *l'échelle périlleuse* of the Hanlons; and I noticed that even the simplest of their performances, such as holding by one hand, or hanging by the knees, seemed perfectly terrific when done at a height of twenty or thirty feet in the air, even to those who had done them a hundred times at a lower level. It was the nerve that was astounding, not the strength or skill; but the eye found it hard to draw

the distinction. So when a gymnastic friend of mine, crossing the ocean lately, amused himself with hanging by one leg to the mizzen-topmast-stay, the boldest sailors shuddered, though the feat itself was nothing, save to the imagination.

Indeed, it is almost impossible for an inexperienced spectator to form the slightest opinion as to the comparative difficulty or danger of different exercises, since it is the test of merit to make the hardest things look easy. Moreover, there may be a distinction between two feats almost imperceptible to the eye;—a change, for instance, in the position of the hands on a bar,—which may at once transform the thing from a trifle to a wonder. An unpractised eye can no more appreciate the difficulty of a gymnastic exercise by seeing it executed, than an inexperienced ear, of the perplexities of a piece of music by hearing it played.

The first effect of gymnastic exercise is almost always to increase the size of the arms and the chest; and new-comers may commonly be known by their frequent recourse to the tape-measure. The average increase among the students of Harvard University during the first three months of the gymnasium was nearly two inches in the chest, more than one inch in the upper arm, and more than half an inch in the fore-arm. This was far beyond what the unassisted growth of their age would account for; and the increase is always very marked for a time, especially with thin persons. In those of fuller habit the loss of flesh may counterbalance the gain in muscle, so that size and weight remain the same; and in all cases the increase stops after a time, and the subsequent change is rather in texture than in volume. Mere size is no index of strength: Dr. Windship is scarcely larger or heavier now than when he had not half his present powers.

In the vigor gained by exercise there is nothing false or morbid; it is as reliable as hereditary strength, except that it is more easily relaxed by indolent habits. No doubt it is aggravating to see some robust, lazy giant come into the gymna-

sium for the first time, and by hereditary muscle shoulder a dumb-bell which all your training has not taught you to handle. No matter; it is by comparing yourself with yourself that the estimate is to be made. As the writing-master exhibits with triumph to each departing pupil the uncouth copy which he wrote on entering, so it will be enough to you, if you can appreciate your present powers with your original inabilities. When you first joined the gymnastic class, you could not climb yonder smooth mast, even with all your limbs brought into service; now you can do it with your hands alone. When you came, you could not possibly, when hanging by your hands to the horizontal bar, raise your feet as high as your head,—nor could you, with any amount of spring from the ground, curl your body over the bar itself; now you can hang at arm's length and fling yourself over it a dozen times in succession. At first, if you lowered yourself with bent elbows between the parallel bars, you could not by any manœuvre get up again, but sank to the ground a hopeless wreck; now you can raise and lower yourself an indefinite number of times. As for the weights and clubs and dumb-bells, you feel as if there must be some jugglery about them,—they have grown so much lighter than they used to be. It is you who have gained a double set of muscles to every limb; that is all. Strike out from the shoulder with your clenched hand; once your arm was loose-jointed and shaky; now it is firm and tense, and begins to feel like a natural arm. Moreover, strength and suppleness have grown together; you have not stiffened by becoming stronger, but find yourself more flexible. When you first came here, you could not touch your fingers to the ground without bending the knees, and now you can place your knuckles on the floor; then you could scarcely bend yourself backward, and now you can lay the back of your head in a chair, or walk, without crouching forward, under a bar less than three feet from the ground. You have found, indeed, that almost every feat is done

originally by sheer strength, and then by agility, requiring very little expenditure of force after the precise motion is hit upon; at first labor, puffing, and a red face, — afterwards ease and the graces.

To a person who begins after the age of thirty or thereabouts, the increase of strength and suppleness, of course, comes more slowly; yet it comes as surely, and perhaps it is a more permanent acquisition, less easily lost again, than in the softer frame of early youth. There is no doubt that men of sixty have experienced a decided gain in strength and health by beginning gymnastic exercises even at that age, as Socrates learned to dance at seventy; and if they have practised similar exercises all their lives, so much is added to their chance of preserving physical youthfulness to the last. Jerome and Gabriel Ravel are reported to have spent near three-score years on the planet which their winged feet have so lightly trod; and who will dare to say how many winters have passed over the head of the still young and graceful Papanti?

Dr. Windship's most important experience is, that strength is to a certain extent identical with health, so that every increase in muscular development is an actual protection against disease. Americans, who are ashamed to confess to doing the most innocent thing for the sake of mere enjoyment, must be cajoled into every form of exercise under the plea of health. Joining, the other day, in a children's dance, I was amused by a solemn parent who turned to me, in the midst of a Virginia reel, still conscientious, though breathless, and asked if I did not consider dancing to be, on the whole, a *healthy* exercise? Well, the gymnasium is healthy; but the less you dwell on that fact, the better, after you have once entered it. If it does you good, you will enjoy it; and if you enjoy it, it will do you good. With body, as with soul, the highest experience merges duty in pleasure. The better one's condition is, the less one has to think about growing better, and the more unconsciously one's natural instincts guide the right way.

When ill, we eat to support life; when well, we eat because the food tastes good. It is a merit of the gymnasium, that, when properly taken, it makes one forget to think about health or anything else that is troublesome; "a man remembereth neither sorrow nor debt"; cares must be left outside, be they physical or metaphysical, like canes at the door of a museum.

No doubt, to some it grows tedious. It shares this objection with all means of exercise. To be an American is to hunger for novelty; and all instruments and appliances, especially, require constant modification: we are dissatisfied with last winter's skates, with the old boat, and with the family pony. So the zealot finds the gymnasium insufficient long before he has learned half the moves. To some temperaments it becomes a treadmill, and that, strangely enough, to diametrically opposite temperaments. A lethargic youth, requiring great effort to keep himself awake between the exercises, thinks the gymnasium slow, because he is; while an eager, impetuous young fellow, exasperated because he cannot in a fortnight draw himself up by one hand, finds the same trouble there as elsewhere, that the laws of Nature are not fast enough for his inclinations. No one without energy, no one without patience, can find permanent interest in a gymnasium; but with these qualities, and a modest willingness to live and learn, I do not see why one should ever grow tired of the moderate use of its apparatus. For one, I really never enter it without exhilaration, or leave it without a momentary regret: there are always certain special new things on the docket for trial; and when those are settled, there will be something more. It is amazing what a variety of interest can be extracted from those few bits of wood and rope and iron. There is always somebody in advance, some "man on horseback" on a wooden horse, some India-rubber hero, some slight and powerful fellow who does with ease what you fail to do with toil, some terrible Dr. Windship with an ever-wax-

ing dumb-bell. The interest becomes semi-professional. A good gymnast enjoys going into a new and well-appointed establishment, precisely as a sailor enjoys a well-rigged ship; every rope and spar is scanned with intelligent interest; "we know the forest round us as seamen know the sea." The pupils talk gymnasium as some men talk horse. A particularly smooth and flexible horizontal pole, a desirable pair of parallel bars, a remarkably elastic spring-board,—these are matters of personal pride, and described from city to city with loving enthusiasm. The gymnastic apostle rises to eloquence in proportion to the height of the hand-swings, and points his climax to match the peak-ladders.

An objection frequently made to the gymnasium, and especially by anxious parents, is the supposed danger of accident. But this peril is obviously inseparable from all physical activity. If a man never leaves his house, the chances undoubtedly are, that he will never break his leg, unless upon the stairway; but if he is always to stay in the house, he might as well have no legs at all. Certainly we incur danger every time we go outside the front-door; but to remain always on the inside would prove the greatest danger of the whole. When a man slips in the street and dislocates his arm, we do not warn him against walking, but against carelessness. When a man is thrown from his horse and gratifies the surgeons by a beautiful case of compound fracture, we do not advise him to avoid a riding-school, but to go to one. Trivial accidents are not uncommon in the gymnasium, severe ones are rare, fatal ones almost unheard-of,—which is far more than can be said of riding, driving, hunting, boating, skating, or even "coasting" on a sled. Learning gymnastics is like learning to swim,—you incur a small temporary risk for the sake of acquiring powers that will lessen your risks in the end. Your increased strength and agility will carry you past many unseen perils hereafter, and the invigorated tone of your system will make accidents less impor-

tant, if they happen. Some trifling sprain causes lameness for life, some slight blow brings on wasting disease, to a person whose health is merely negative, not positive,—while a well-trained frame throws it off in twenty-four hours. It is almost proverbial of the gymnasium, that it cures its own wounds.

A minor objection is, that these exercises are not performed in the open air. In summer, however, they may be, and in winter and in stormy weather it is better that they should not be. Extreme cold is not favorable to them; it braces, but stiffens; and the bars and ropes become slippery and even dangerous. In Germany it is common to have a double set of apparatus, out-doors and in-doors; and this would always be desirable, but for the increased expense. Moreover, the gymnasium should be taken in addition to out-door exercise, giving, for instance, an hour a day to each, one for training, the other for oxygen. I know promising gymnasts whose pallid complexions show that their blood is not worthy of their muscle, and they will break down. But these cases are rare, for the reason already hinted,—that nothing gives so good an appetite for out-door life as this indoor activity. It alternates admirably with skating, and seduces irresistibly into walking or rowing when spring arrives.

My young friend Silverspoon, indeed, thinks that a good trot on a fast horse is worth all the gymnastics in the world. But I learn, on inquiry, that my young friend's mother is constantly imploring him to ride in order to air her horses. It is a beautiful parental trait; but for those born horseless, what an economical substitute is the wooden quadruped of the gymnasium! Our Autocrat has well said, that the livery-stable horse is "a profligate animal"; and I do not wonder that the Centaurs of old should be suspected of having originated spurious coin. Undoubtedly it was to pay for the hire of their own hoofs.

For young men in cities, too, the facilities for exercise are limited not only by money, but by time. They must com-

monly take it after dark. It is every way a blessing, when the gymnasium divides their evenings with the concert, the book, or the public meeting. Then there is no time left, and small temptation, for pleasures less pure. It gives an innocent answer to that first demand for evening excitement which perils the soul of the homeless boy in the seductive city. The companions whom he meets at the gymnasium are not the ones whose pursuits of later nocturnal hours entice him to sin. The honest fatigue of his exercises calls for honest rest. It is the nervous exhaustion of a sedentary, frivolous, or joyless life which madly tries to restore itself by the other nervous exhaustion of debauchery. It is an old prescription,—

*"Multa tulit fecitque puer, sudavit et alsit,
Abstinuit venere et vino."*

There is another class of critics whose cant is simply can't, and who, being unable or unwilling to surrender themselves to these simple sources of enjoyment, are grandiloquent upon the dignity of manhood, and the absurdity of full-grown men in playing monkey-tricks with their bodies. Full-grown men? There is not a person in the world who can afford to be a "full-grown man" through all the twenty-four hours. There is not one who does not need, more than he needs his dinner, to have habitually one hour in the day when he throws himself with boyish eagerness into interests as simple as those of boys. No church or state, no science or art, can feed us all the time; some morsels there must be of simpler diet, some moments of unadulterated play. But dignity? Alas for that poor soul whose dignity must be "preserved,"—preserved in the right culinary sense, as fruits which are growing dubious in their natural state are sealed up in jars to make their acidity presentable! "There's beggary in the love that can be reckoned," and degradation in the dignity that has to be preserved. Simplicity is the only dignity. If one has not the genuine article, no affluence of starch, no snow-drift of white-linen decency, will furnish any substitute. If one has

it, he will retain it, whether he stand on his head or his heels. Nothing is really undignified but affectation or conceit; and for the total extinction and annihilation of every vestige of these, there are few things so effectual as athletic exercises.

Still another objection is that of the medical men, that the gymnasium, as commonly used, is not a specific prescription for the special disease of the patient. But setting aside the claims of the system of applied gymnastics, which Ling and his followers have so elaborated, it is enough to answer, that the one great fundamental disorder of all Americans is simply nervous exhaustion, and that for this the gymnasium can never be misdirected, though it may be used to excess. Of course one can no more cure over-work of brain by over-work of body than one can restore a wasted candle by lighting it at the other end. But by subtracting an hour a day from the present amount of purely intellectual fatigue, and inserting that quantum of bodily fatigue in its place, you begin an immediate change in your conditions of life. Moreover, the great object is not merely to get well, but to keep well. The exhaustion of over-work can almost always be cured by a water-cure, or by a voyage, which is a salt-water cure; but the problem is, how to make the whole voyage of life perpetually self-curative. Without this, there is perpetual dissatisfaction and chronic failure. Emerson well says, "Each class fixes its eye on the advantages it has not,—the refined on rude strength, the democrat on birth and breeding." This is the aim of the gymnasium, to give to the refined this rude strength, or its better substitute, refined strength. It is something to secure to the student or the clerk the strong muscles, hearty appetite, and sound sleep of the sailor and the ploughman,—to enable him, if need be, to out-row the fisherman, and out-run the mountaineer, and lift more than his porter, and to remember head-ache and dyspepsia only

as he recalls the primeval whooping-cough of his childhood. I am one of those who think that the Autocrat rides his hobby of the pavements a little too far; but it is useless to deny, that, within the last few years of gymnasiums and boat-clubs, the city has been gaining on the country, in physical development. Here in our town we had all the city- and college-boys assembled in July to see the regattas, and all the country-boys in September to see the thousand-dollar base-ball match; and it was impossible to deny, whatever one's theories, that the physical superiority lay for the time being with the former.

The secret is, that, though the country offers to farmers more oxygen than to anybody in the city, yet not all dwellers in the country are farmers, and even those who are such are suffering from other causes, being usually the very last to receive those lessons of food and clothing and bathing and ventilation which have their origin in cities. Physical training is not a mechanical, but a vital process: no bricks without straw; no good *physique* without good materials and conditions. The farmer knows, that, to rear a premium colt or calf, he must oversee every morsel that it eats, every motion it makes, every breath it draws,—must guard against over-work and under-work, cold and heat, wet and dry. He remembers it for the quadrupeds, but he forgets it for his children, his wife, and himself: so his cattle deserve a premium, and his family does not.

Neglect is the danger of the country; the peril of the city is in living too fast. All mental excitement acts as a stimulant, and, like all stimulants, debilitates when taken in excess. This explains the unnatural strength and agility of the insane, always followed by prostration; and even moderate cerebral excitement produces similar results, so far as it goes. Quetelet discovered that sometimes after lecturing, or other special intellectual action, he could perform gymnastic feats impossible to him at other times. The fact is unquestionable; and it is also

certain that an extreme in this direction has precisely the contrary effect, and is fatal to the physical condition. One may spring up from a task of moderate mental labor with a sense of freedom like a bow let loose; but after an immoderate task one feels like the same bow too long bent, flaccid, nerveless, all the elasticity gone. Such fatigue is far more overwhelming than any mere physical exhaustion. I have lounged into the gymnasium, after an afternoon's skating, supposing myself quite tired, and have found myself in excellent condition; and I have gone in after an hour or two of some specially concentrated anxiety or thought, without being aware that the body was at all fatigued, and found it good for nothing. Such experiences are invaluable; all the libraries cannot so illustrate the supremacy of immaterial forces. Thought, passion, purpose, expectation, absorbed attention even, all feed upon the body's powers; let them act one atom too intensely or one moment too long, and this wondrous physical organization finds itself drained of its forces to support them. It does not seem strange that strong men should have died by a single-ecstasy of emotion too convulsive, when we bear within us this tremendous engine whose slightest pulsation so throbs in every fibre of our frame.

The relation between mental culture and physical powers is a subject of the greatest interest, as yet but little touched, because so few of our physiologists have been practical gymnasts. Nothing is more striking than the tendency of all athletic exercises, when brought to perfection, to eliminate mere brute bulk from the competition, and give the palm to more subtle qualities, agility, quickness, a good eye, a ready hand,—in short, superior fineness of organization. Any clown can learn the military manual exercise; but it needs brain-power to drill with the Zouaves. Even a prize-fight tests strength less than activity and "science." The game of base-ball, as played in our boyhood, was a simple,

robust, straightforward contest, where the hardest hitter was the best man; but it is every year becoming perfected into a sleight-of-hand, like cricket; mere strength is now almost valueless in playing it, and it calls rather for the qualities of the billiard-player. In the last champion-match at Worcester, nearly the whole time was consumed in skilful feints and parryings, and it took five days to make fifty runs. And these same characteristics mark gymnastic exercises above all; men of great natural strength are very apt to be too slow and clumsy for them, and the most difficult feats are usually done by persons of comparatively delicate *physique* and a certain artistic organization. It is this predominance of the nervous temperament which is yet destined to make American gymnasts the foremost in the world.

Indeed, the gymnasium is as good a place for the study of human nature as any. The perpetual analogy of mind and body can be appreciated only where both are trained with equal system. In both departments the great prizes are not won by the most astounding special powers, but by a certain harmonious adaptation. There is a physical tact, as there is a mental tact. Every process is accomplished by using just the right stress at just the right moment; but no two persons are alike in the length of time required for these little discoveries. Gymnastic genius lies in gaining at the first trial what will cost weeks of perseverance to those less happily gifted. And as the close elastic costume which is worn by the gymnast, or should be worn, allows no merit or defect of figure to be concealed, so the close contact of emulation exhibits all the varieties of temperament. One is made indolent by success, and another is made ardent; one is discouraged by failure, and another aroused by it; one does everything best the first time and slackens ever after, while another always begins at the bottom and always climbs to the top.

One of the most enjoyable things in

these mimic emulations is this absolute genuineness in their gradations of success. In the great world outside, there is no immediate and absolute test for merit. There are cliques and puffings and jealousies, quarrels of authors, tricks of trade, caucusing in politics, hypocrisy among the deacons. We distrust the value of others' successes, they distrust ours, and we all sometimes distrust our own. There are those who believe in Shakespeare, and those who believe in Tupper. All merit is measured by sliding scales, and each has his own theory of the sliding. In a dozen centuries it will all come right, no doubt. In the mean time there is vanity in one half the world and vexation of spirit in the other half, and each man joins each half in turn. But once enter the charmed gate of the gymnasium, and you leave shams behind. Though you be saint or sage, no matter, the inexorable laws of gravitation are around you. If you flinch, you fail; if you slip, you fall. That bar, that rope, that weight shall test you absolutely. Can you handle it, it is well; but if not, stand aside for him who can. You may have every other gift and grace, it counts for nothing; he, not you, is the man for the hour. The code of Spanish aristocracy is slight and flexible compared with this rigid precedence. It is Emerson's *Astræa*. Each registers himself, and there is no appeal. No use to kick and struggle, no use to apologize. Do not say that to-night you are tired, last night you felt ill. These excuses may serve for a day, but no longer. A slight margin is allowed for moods and variations, but it is not great after all. One revels in this Palace of Truth. Defeat itself is a satisfaction, before a tribunal of such absolute justice.

This contributes to that healthful ardor with which, in these exercises, a man forgets the things which are behind and presses forward to fresh achievements. This perpetually saves from vanity; for everything seems a trifle, when you have once attained to it. The aim which yesterday filled your whole gymnastic hori-

zon you overtake and pass as a boat passes a buoy: until passed, it was a goal; when passed, a mere speck in the horizon. Yesterday you could swing yourself three rounds upon the horizontal ladder; to-day, after weeks of effort, you have suddenly attained to the fourth, and instantly all that long laborious effort vanishes, to be formed again between you and the fifth round: five, five is the only goal for heroic labor to-day; and when five is attained, there will be six, and so on while the Arabic numerals hold out. A childish aim, no doubt; but is not this what we all recognize as the privilege of childhood, to obtain exaggerated enjoyment from little things? When you have come to the really difficult feats of the gymnasium,—when you have conquered the “barber’s curl” and the “peg-pole,”—when you can draw yourself up by one arm, and perform the “giant’s swing” over and over, without changing hands, and vault the horizontal bar as high as you can reach it,—when you can vault across the high parallel bars between your hands backward, or walk through them on your palms with your feet in the vicinity of the ceiling,—then you will reap the reward of your past labors, and may begin to call yourself a gymnast.

It is pleasant to think, that, so great is the variety of exercises in the gymnasium, even physical deficiencies and deformities do not wholly exclude from its benefits. I have seen an invalid girl, so lame from childhood that she could not stand without support, whose general health had been restored, and her bust and arms made a study for a sculptor, by means of gymnastics. Nay, there are odd compensations of Nature by which even exceptional formations may turn to account in athletic exercises. A squinting eye is a treasure to a boxer, a left-handed batter is a prize in a cricketing eleven, and one of the best gymnasts in Chicago is an individual with a wooden leg, which he takes off at the commencement of affairs, thus economizing weight and stowage, and

performing achievements impossible except to unipeds.

In the enthusiasm created by this emulation, there is necessarily some danger of excess. Dr. Windship approves of exercising only every other day in the gymnasium; but as most persons take their work in a more diluted form than his, they can afford to repeat it daily, unless warned by headache or languor that they are exceeding their allowance. There is no good in excess; our constitutions cannot be hurried. The law is universal, that exercise strengthens as long as nutrition balances it, but afterwards wastes the very forces it should increase. We cannot make bricks faster than Nature supplies us with straw.

It is one good evidence of the increasing interest in these exercises, that the American gymnasiums built during the past year or two have far surpassed all their predecessors in size and completeness, and have probably no superiors in the world. The Seventh Regiment Gymnasium in New York, just opened by Mr. Abner S. Brady, is one hundred and eighty feet by fifty-two, in its main hall, and thirty-five feet in height, with nearly a thousand pupils. The beautiful hall of the Metropolitan Gymnasium, in Chicago, measures one hundred and eight feet by eighty, and is twenty feet high at the sides, with a dome in the centre, forty feet high, and the same in diameter. Next to these probably rank the new gymnasium at Cincinnati, the Tremont Gymnasium at Boston, and the Bunker-Hill Gymnasium at Charlestown, all recently opened. Of college institutions the most complete are probably those at Cambridge and New Haven,—the former being eighty-five feet by fifty, and the latter one hundred feet by fifty, in external dimensions. The arrangements for instruction are rather more systematic at Harvard, but Yale has several valuable articles of apparatus—as the rack-bars and the series of rings—which have hardly made their appearance, as yet, in Massachusetts, though considered indispensable in New York.

Gymnastic exercises are as yet but very sparingly introduced into our seminaries, primary or professional, though a great change is already beginning. Frederick the Great complained of the whole Prussian school-system of his day, because it assumed that men were originally created for students and clerks, whereas his Majesty argued that the very shape of the human body rather proved them to be meant by Nature for postilions. Until lately all our educational plans have assumed man to be a merely sedentary being; we have employed teachers of music and drawing to go from school to school to teach those elegant arts, but have had none to teach the art of health. Accordingly, the pupils have exhibited more complex curves in their spines than they could possibly portray on the black-board, and acquired such discords in their nervous systems as would have utterly disgraced their singing. It is something to have got beyond the period when active sports were actually prohibited. I remember when there was but one boat owned by a Cambridge student,—the owner was the first of his class, by the way, to get his name into capitals in the “Triennial Catalogue” afterwards,—and that boat was soon reported to have been suppressed by the Faculty, on the plea that there was a college law against a student’s keeping domestic animals, and a boat was a domestic animal within the meaning of the statute. Manual labor was thought less reprehensible; but schools on this basis have never yet proved satisfactory, because either the hands or the brains have always come off second-best from the effort to combine: it is a law of Nature, that after a hard day’s work one does not need more work, but play. But in many of the German common-schools one or two hours are given daily to gymnastic exercises with apparatus, with sometimes the addition of Wednesday or Saturday afternoon; and this was the result, as appears from Gutsmuth’s book, of precisely the same popular reaction against a purely intellectual system which is visible in our community now. In the French

military school at Joinville, the degree of Bachelor of Agility is formally conferred; but Horace Mann’s remark still holds good, that it is seldom thought necessary to train men’s bodies for any purpose except to destroy those of other men. However, in view of the present wise policy of our leading colleges, we shall have to stop croaking before long, especially as enthusiastic alumni already begin to fancy a visible improvement in the *physique* of graduating classes on Commencement Day.

It would be unpardonable, in this connection, not to speak a good word for the hobby of the day,—Dr. Lewis, and his system of gymnastics, or, more properly, of calisthenics. Aside from a few amusing games, there is nothing very novel in the “system,” except the man himself. Dr. Windship had done all that was needed in apostleship of severe exercises, and there was wanting some man with a milder hobby, perfectly safe for a lady to drive. The Fates provided that man, also, in Dr. Lewis,—so hale and hearty, so profoundly confident in the omnipotence of his own methods and the uselessness of all others, with such a ready invention, and such an inundation of animal spirits that he could flood any company, no matter how starched or listless, with an unbounded appetite for ball-games and bean-games. How long it will last in the hands of others than the projector remains to be seen, especially as some of his feats are more exhausting than average gymnastics; but, in the mean time, it is just what is wanted for multitudes of persons who find or fancy the real gymnasium to be unsuited to them. It will especially render service to female pupils, so far as they practise it; for the accustomed gymnastic exercises seem never yet to have been rendered attractive to them, on any large scale, and with any permanency. Girls, no doubt, learn as readily as boys to row, to skate, and to swim,—any muscular inferiority being perhaps counterbalanced in swimming by their greater physical buoyancy, in skating by their dancing-school experience, and in rowing by their music-less-

sons enabling them more promptly to fall into regular time,—though these suggestions may all be fancies rather than facts. The same points help them, perhaps, in the lighter calisthenic exercises; but when they come to the apparatus, one seldom sees a girl who takes hold like a boy: it, perhaps, requires a certain ready capital of muscle, at the outset, which they have not at command, and which it is tedious to acquire afterwards. Yet there seem to be some cases, as with the classes of Mrs. Molineaux at Cambridge, where a good deal of gymnastic enthusiasm is created among female pupils, and it may be, after all, that the deficiency lies thus far in the teachers.

Experience is already showing that the advantages of school-gymnasiums go deeper than was at first supposed. It is not to be the whole object of American education to create scholars or idealists, but to produce persons of a solid strength,—persons who, to use the most expressive Western phrase that ever was coined into five monosyllables, “will do to tie to”; whereas to most of us it would be absurd to tie anything but the Scriptural millstone. In the military school of Brienne, the only report appended to the name of the little Napoleon Bonaparte was “Very healthy”; and it is precisely this class of boys for whom there is least place in a purely intellectual institution. A child of immense animal activity and unlimited observing faculties, personally acquainted with every man, child, horse, dog, in the township,—intimate in the families of oriole and grasshopper, pickerel and turtle,—quick of hand and eye,—in short, born for practical leadership and victory,—such a boy finds no provision for him in most of our seminaries, and must, by his constitution, be either truant or torment. The theory of the institution ignores such aptitudes as his, and recognizes no merits save those of some small sedentary linguist or mathematician,—a blessing to his teacher, but an object of watchful anxiety to the family physician, and whose career was endangering not only his health, but his humility. Intro-

duce now some athletic exercises as a regular part of the school-drill, instantly the rogue finds his legitimate sphere, and leads the class; he is no longer an outcast, no longer has to look beyond the school for companions and appreciation; while, on the other hand, the youthful pedant, no longer monopolizing superiority, is brought down to a proper level. Presently comes along some finer fellow than either, who cultivates all his faculties, and is equally good at spring-board and black-board; and straightway, since every child wishes to be a Crichton, the whole school tries for the combination of merits, and the grade of the juvenile community is perceptibly raised.

What is true of childhood is true of manhood also. What a shame it is that even Kingsley should fall into the cant of deploring maturity as a misfortune, and declaring that our freshest pleasures come “before the age of fourteen”! Health is perpetual youth,—that is, a state of positive health. Merely negative health, the mere keeping out of the hospital for a series of years, is not health. Health is to feel the body a luxury, as every vigorous child does,—as the bird does when it shoots and quivers through the air, not flying for the sake of the goal, but for the sake of the flight,—as the dog does when he scours madly across the meadow, or plunges into the muddy blissfulness of the stream. But neither dog nor bird nor child enjoys his cup of physical happiness—let the dull or the worldly say what they will—with a felicity so cordial as the educated palate of conscious manhood. To “feel one’s life in every limb,” this is the secret bliss of which all forms of athletic exercise are merely varying disguises; and it is absurd to say that we cannot possess this when character is mature, but only when it is half-developed. As the flower is better than the bud, so should the fruit be better than the flower.

We need more examples of a mode of living which shall not alone be a success in view of some ulterior object, but which shall be, in its nobleness and healthful-

ness, successful every moment as it passes on. Navigating a wholly new temperament through history, this American race must of course form its own methods and take nothing at second-hand; but the same triumphant combination of bodily and mental training which made human life beautiful in Greece, strong in Rome, simple and joyous in Germany, truthful and brave in England, must yet be

moulded to a higher quality amid this varying climate and on these low shores. The regions of the world most garlanded with glory and romance, Attica, Provence, Scotland, were originally more barren than Massachusetts; and there is yet possible for us such an harmonious mingling of refinement and vigor, that we may more than fulfil the world's expectation, and may become classic to ourselves.

LAND-LOCKED.

BLACK lie the hills, swiftly doth daylight flee,
And, catching gleams of sunset's dying smile,
Through the dusk land for many a changing mile
The river runneth softly to the sea.

O happy river, could I follow thee !
O yearning heart, that never can be still !
O wistful eyes, that watch the steadfast hill,
Longing for level line of solemn sea !

Have patience ; here are flowers and songs of birds,
Beauty and fragrance, wealth of sound and sight,
All summer's glory thine from morn till night,
And life too full of joy for uttered words.

Neither am I ungrateful. But I dream
Deliciously, how twilight falls to-night
Over the glimmering water, how the light
Dies blissfully away, until I seem

To feel the wind sea-scented on my cheek,
To catch the sound of dusky flapping sail,
And dip of oars, and voices on the gale,
Afar off, calling softly, low and sweet.

O Earth, thy summer-song of joy may soar
Ringing to heaven in triumph ! I but crave
The sad, caressing murmur of the wave
That breaks in tender music on the shore.

TWO OR THREE TROUBLES.

IF there are only two or three, I am pretty sure of a sympathetic hearing. If there were two-and-twenty, I should be much more doubtful: for only last night, on being introduced to a tall lady in deep mourning, and assured that she had been "a terrible sufferer," that her life, indeed, had been "one long tragedy," I may as well confess, that, so far from being interested in this tall long tragedy, merely as such, I stepped a little aside on the instant, on some frivolous pretence, and took an early opportunity to get out of the way. Why this was I leave to persons who understand the wrong side of human nature. I am ashamed of it; but there it is,—neither worse nor better. And I can't expect others to be more compassionate than I am myself.

One of my troubles grew out of a pleasure, but was not less a trouble for the time. The other was not an excrescence, but ingrained with the material: not necessarily, indeed,—far from it; but, from the nature of the case, hopelessly so.

The penny-postman had brought me a letter from my Aunt Allen, from Albany. This letter contained, in three lines, a desire that her dear niece would buy something with the inclosed, and accept it as a wedding-gift, with the tenderest wishes for her life-long happiness, from the undersigned.

"The inclosed" fell on the floor, and Laura picked it up.

"Fifty dollars!—hum!—Metropolitan Bank."

"Oh, now, that is charming! Good old soul she is!"

"Yes. Very well. I'm glad she sent it in money."

"So am I. 'T isn't a butter-knife, anyhow."

"How do you mean?" inquired Laura.

"Why, Mr. Lang was telling last night about his clerk. He said he bought

a pair of butter-knives for his clerk Hillman, hearing that he was to be married, and got them marked. A good substantial present he thought it was,—cost only seven dollars for a good article, and couldn't fail to be useful to Hillman. He took them himself, so as to be doubly gracious, and met his clerk at the store-door.

"Good morning!—good morning! Wish you joy, Hillman! I've got a pair of butter-knives for your wife.—Hey? got any?"

"Eleven, Sir."

"Eleven butter-knives! and all marked *Marcia Ann Hillman, from A. B., from C. D.,* and so on!"

Laura laughed, and said she hoped my friends would all be as considerate as Aunt Allen, or else consult her. Suppose eleven tea-pots, for instance, or eleven silver salvers, all in a row! Ridiculous!

"Now, Del, I will tell you what it is," said Laura, gravely.

Laura was the sensible one, like Laura in Miss Edgeworth's "Moral Tales," and never made any mistake. I was like the naughty horse that is always rearing and jumping, but kept on the track by the good steady one. Of course, I was far more interesting, and was to be married in three weeks.

"Now, Del, I'll tell you what it is. Are you going to have all your presents paraded on the study-table, for everybody to pull over and compare values,—and have one mortified, and another elated, and all uncomfortable?"

"Why, what can I do?"

"I know what I wouldn't do."

"You wouldn't do it, Laura?" said I, looking steadily at the fifty-dollar note.

"Never, Del! I told Mrs. Harris so, when we were coming home from Ellis Hall's wedding. It looked absolutely vulgar."

We all swore by Mrs. Harris in that

part of Boynton, and it was something to know that Mrs. Harris had received the shock of such a heterodox opinion.

"And what did Mrs. Harris say, Laura?"

"She said she agreed with me entirely."

"Did she really?" said I, drawing a good long breath.

"Yes,—and she said she would as soon, and sooner, go to a silversmith's and pull over all the things on the counter. There were knives and forks, tea-spoons and table-spoons, fish-knives and pie-knives, strawberry-shovels and ice-shovels, large silver salvers and small silver salvers and medium silver salvers. Everything useful, and nothing you want to look at. There wasn't a thing that was in good taste to show, but just a good photograph of the minister that married them,—and a beautiful little wreath of sea-weed, that one of her Sunday-school scholars made for her. As to everything else, I would, as far as good taste goes, have just as soon had a collection of all Waterman's kitchen-furniture."

Laura stopped at last, indignant, and out of breath.

"There was a tremendous display of silver, I allow," said I; "the piano and sideboard were covered with it."

"Yes, and thoroughly vulgar, for that reason. A wedding-gift should be something appropriate,—not merely useful. As soon as it is only that, it sinks at once. It should speak of the bride, or to the bride, or of and from the friend,—intimately associating the gift with past impressions, with personal tastes, and future hopes felt by both. The gift should always be a dear reminder of the giver; a picture,—Evangeline or Beatrice; something you have both of you loved to look at, or would love to. But think of the delight of cutting your meat with Edward's present! forking ditto with Mary's! a crumb-scraper reminding you of this one, table-bell of that one; large salver, Uncle,—rich; small salver, Uncle,—mean;

gold thimble, Cousin,—meanest of all. Table cleared, ditto mind and memory, of the whole of them—till next meal, *perhaps!*"

Laura ceased talking, but rocked herself swiftly to and fro in her chair. It is not necessary to say we were in our chambers,—as, since our British cousins have ridiculed our rocking-chairs, they are all banished from the parlor. Consequently we remain in our chambers to rock and be useful, and come into the parlor to be useless and uncomfortable in *fauteuils*, made, as the chair-makers tell us, "after the line of beauty." Laura and I both detest them, and Polly says, "Nothing can be worse for the spine of a person's back." To be

"Stretched on the rack of a too-easy chair,"

let anybody try a modern drawing-room. So Laura and I have cane sewing-chairs, which, it is needless to add, rock,—rock eloquently, too. They wave, as the boat waves with the impetus of the sea, gently, calmly, slowly,—or, as conversation grows animated, as disputes arise, as good stories are told, one after another, so do the sympathizing and eloquent rocking-chairs keep pace with our conversation, stimulating or soothing, as it chances.

And now I come to my first trouble,—first, and, as it happened, of long standing now; inasmuch that, when Laura asked me once, gravely, why I had not made it a vital objection, in the first place, I had not a word to reply, but just—rocked.

She, Laura, was stitching on some shirts for "him." They were intended as a wedding-gift from herself, and were beautifully made. Laura despised a Wheeler-and-Wilson, and all its kindred,—and the shirts looked like shirts, consequently.

I linger a little, shivering on the brink. Somehow I always say "*him*,"—nowadays, of course, Mr. Sampson,—but then I always said "he" and "him." I know why country-folk say so, now. Though sentimentalists say, it is because there is only one "he" for "her," I don't believe it. It is because their names are Jotham,

or Adoniram, or Jehiel, or Asher, or some of those names, and so they say "he," for short. But there was no short for me. So I may as well come to it. "His" name was America, — America Sampson. It is four years and a half since I knew this for a fact, yet my surprise is not lessened. Epithets are weak trash for such an occasion, or I should vituperate even now the odious practice of saddling children with one's own folly or prejudice in the shape of names.

There was no help for it. There was no hope. My lover had not received his name from any rich uncle, with the condition of a handsome fortune; so he had no chance of indignantly asserting his choice to be Herbert barefoot rather than Hog's-flesh with gold shoes. His father and mother had given his name, — not at the baptismal font, for they were Baptists, and didn't baptize so, — but they had given it to him. They were both alive and well, and so were seventeen uncles and aunts who would all know, — in good health, and bad taste, all of them.

"He" had four brothers to keep him in countenance, all with worse names than his: Washington, Philip Massasoit, Scipio, and Hiram Yaw Byron! There was the excuse, in this last name, of its being a family one, as far as Yaw went; but — However, as I said, language is wholly inadequate and weak for some purposes. There was a lower deep than America, — that was some comfort.

Hiram Yaw wasn't sent to college, but to Ashtabula, wherever that is, and I never wish to see him. But to college was America sent, — to be "hazed," and taunted, and called "E Plury," and his beak and claws inquired after, through the freshman year. I never knew how he went through, — I mean, with what feelings. Of course, he was the first scholar. But that, even, must have been but a small consolation.

The worst of all was, he was sensitive about his name, — whether because it had been used to torment him, and so, like poor worn-out Nessus, he wrapped more closely his poisoned scarf, (I like scarf

better than shirt,) — or whether he had, in the course of his law-studies and men-studies, come to think it really mattered very little what a man's name was in the beginning; at all events, he had no notion of dismissing his own.

My own secret hope had been, that, by an Act of the Legislature, which that very season had changed Pontifex Parker to Charles Alfred Parker, Mr. Sampson might be accommodated with a name less unspeakably national. Dear me! Alfred, Arthur, Albert, — if he must begin with A.

"A was an Archer, and shot at a frog."

I should even prefer Archer. It needn't be Insatiate Archer. So I kept turning over and over the painful subject, one evening, — I mean, of course, in my mind, for I had not really broached this matter of legislative action. Luckily, "he" had brought in the new edition of George Herbert's Works. We were reading aloud, and "he" read the chapter of "The Parson in Sacraments." At the foot was an extract from "The Parish Register" of Crabbe, which he read, unconscious of the way in which I mentally applied it. Indeed, I think he scarcely thought of his own name at that time. But I did, twenty-four times in every day. This was the note: —

"Pride lives with all; strange names our rustics give

To helpless infants, that their own may live;

Pleased to be known, they'll some attention claim,

And find some by-way to the house of fame.

'Why Lonicera wilt thou name thy child?'

I asked the gardener's wife, in accents mild.

'We have a right,' replied the sturdy dame;
And Lonicera was the infant's name.'

He stopped reading just here, to look at the evening paper, which had been brought in. I read something in it, and then we all went to sit on the piazza, with the street-lamp shining through the bitter-sweet vine, as good as the moon, and the conversation naturally and easily turned on odd names. I told what I

had read in the paper: that our country rivalled Dickens's in queer names, and that it wasn't for a land that had Boggs and Bigger and Bragg for governors, and Stubbs, Snoggles, Scroggs, and Pugh among its respectable citizens, to accuse Dickens of caricature. I turned, a little tremulously, I confess, to "him," saying,—

"If you had been so unfortunate as to have for a name Darius Snoggles, now, for instance, wouldn't you have it changed by the Legislature?"

I shivered with anxiety.

"Certainly not," he replied, with perfect unconsciousness. "Whatever my name might be, I would endeavor to make it a respectable one while I bore it."

Laura sat the other side of me, and softly touched me. So I only asked, if that great star up there was Lyra; but all the time Anodyne, Ambergris, Abner, Albion, Alpheus, and all the names that begin with A, rolled through my memory monotonously and continually.

After we went up-stairs that night, and while I was trying in vain to do up my hair so as to make a natural wave in front, (sometimes everything goes wrong,) Laura said,—

"Delphine!"

My mother mixed romance with good practical sense, and very properly said that girls with good names and tolerable faces might get on in the world, but it took fortune to make your Sallies and Mollies go down. She had good taste, too, and didn't name either of us Louisa Prudence, like an unfortunate I once saw; and we were left, with our nice cottage covered with its vine of bitter-sweet and climbing rose, fifteen hundred dollars each, and our names, Delphine and Laura. Not a bad heritage, with economy, good looks, and hearts to take life cheerily. Still it is plain enough that a fifty-dollar note for the bride was not to be despised nor overlooked. In fact, with the exception of Polly's present of a brown earthen bowl and a pudding-stick, it was the first approach to a wedding-gift that I had yet received. And this note was

trouble the second. But of that, by-and-by.

"Delphine!" said Laura, softly.

Some people's voices execrate you. Laura's was soft and soothing.

"Well!"

"Don't say any more to—to Mr. Sampson about names."

"Oh, dear! hateful!"

"Delphine, be thankful it's no worse!"

"How could it be worse,—unless it were Hog-and-Hominy? I never knew anything so utterly ridiculous! America! Columbia! Yankee-Doodle! I'd rather it had been Abraham!"

All this I almost shouted in a passion of vexation, and Laura hastily closed the window.

"Let me loosen your braids for you, Del," said she, quietly, taking up my hair in her gentle way, which always had a good effect on my prancing nerves; "let me bathe your forehead with this, dear;—now, let me tell you something you will like."

"Oh, my heart! Laura, I wish you could! for I declare to you, that, if it wasn't for—if it didn't—— Oh, dear, dear! how I do hate that name!"

"It is not so very good a name,—that must be owned, Del. All is, you will have to call him 'Mr. Sampson,' or 'My dear,' or 'You'; or, stay, you might abbreviate it into Ame, Ami. Ami and Delphine!—it sounds like a French story for youth. If I were you, I wouldn't meddle with it or think any more about it."

"Such a name! so ridiculous!" I muttered.

"You have considered it so much and so closely, Del, that it is most disproportionately prominent in your mind. You can put out Bunker-Hill Monument with your little finger, if you hold it close enough to your eye. Don't you remember what Mr. Sampson said to-night about somebody whose mind had no perspective in it? that his shoe-ribbon was as prominent and important as his soul? Don't go and be a goosey, Del, and have no perspective, will you?" And Laura

leaned over and kissed my forehead, all corrugated with my pet grief.

"Well, Laura, what can be worse? I declare — almost I think, Laura, I would rather he should have some great defect."

"Moral or physical? Gambling? one leg? one eye? lying? six fingers? How do you mean, Del?"

"Oh, patience! no, indeed! — six fingers! I only meant" —

And here, of course, I stopped.

"Which virtue could you spare in Mr. Sampson?" said Laura, coolly, fastening my hair neatly in its net, and sitting down in *her* rocking-chair.

When it came to that, of course there were none to be spared. We undressed, silently, — Laura rolling all her ribbons carefully, and I throwing mine about; Laura, consistent, conservative, allopathic, High-Church, — I, homœopathic, hydro-pathic, careless, and given to Parkerism. It did not matter, as to harmony. Two bracelets, but no need to be alike. We clasped arms and hearts all the same. By-and-by I remembered, —

"Oh! what's your good news, Laura?"

"Ariana Cooper and Geraldine Parker are both married, — both on the same day, at Grace Church, New York."

"Is it possible? Who told you? How do you know?"

"I read it in the 'Evening Post,' just before I came up-stairs. Now guess, — guess a month, Del, and you won't guess whom they have married."

"No use to guess. They've found somebody in New York at their aunt's, I suppose. Both so pretty and rich, they were likely to find good *partis*."

"Merchants both, I think. Now do guess!"

"How can I? Herbert Clark, maybe, — or Captain Ellington? No, of course not. A merchant? Julius Winthrop. I know Ariana was a great admirer of a military man. She used to say she would have loved Sidney for his chivalry, and Raleigh for his graceful foppery; and Pembroke Dunkin she admired for both. It isn't Pembroke?"

And here I sighed over and over, like a foolish virgin.

"Now, then, listen. Here it is in the paper," said Laura.

"Married, at Grace Church, by the Rev. So-and-So, assisted, etc., etc., Ossian Smutt, Esq., of the firm of S. Hamilton & Company, to Ariana, eldest daughter of the late George S. Cooper. At the same place, and day, Hon. Unity Smith, M. C., to Geraldine Miranda, daughter of the late Russell Parker of Pine Lodge. The happy quartette have left in the Persia for a tour in Europe. We wish them joy."

"Ugh! Laura! goodness! well, that outdoes me," I screamed, with a sudden sense of relief, that set me laughing as passionately as I had been crying. For, though I have not before owned it, I had been crying heartily.

The Balm of a Thousand Flowers descended on my lacerated heart. To say the truth, I had dreaded more Ariana's little shrug, and Geraldine Parker's up-raised eyebrows, on reading my marriage, than a whole life of *that* name, on my own account merely. But now, thank Heaven, so much trouble was out of my way. Mrs. Unity Smith, and Mrs. Orlando — no, Ossian Smutt, could by no possibility laugh at me. Mrs. A. Sampson wasn't bad on a card. It would not smut one, anyhow. I laughed grimly, and composed myself to sleep.

The next morning had come the pleasant letter from my Albany aunt, with the fifty-dollar note. Laura continued rocking, fifty strokes a minute, and stitching at the rate of sixty. I held the note idly, rubbing up my imagination for things new and old. Laura, being industrious, was virtuously employing her thoughts. As idleness brings mischief, and riches anxiety, I did not rock long without evil consequences. Eve herself was not contented in Eden. She had to do all the cooking, for one thing, — and angels always happening in to dinner! For my part, the name of Adam would have been enough to spoil my pleasure. Here Laura interrupted my thoughts, which were

running headlong into everything wicked.

"What do you say?"

"What do you?" I answered; for, like other bad people, I had the greatest respect for good people's opinions.

"I think—a small—silver salver!"

"Do you think so, really?"

"Yes, Del. That will be good; silver, you know, is always good to have; and it will be handsome and useful always."

"What! for us?"

"Yes,—pretty to hand a cup of tea on, or a glass of wine,—pretty to set in the middle of a long table with a vase of flowers on it, when you have the Court and High-Sheriff to dine,—as you will, of course, every year,—or with your spoon-goblet. Oh, there are plenty of ways to make a small silver salver useful. Mrs. Harris says she doesn't see how any one can keep house without a silver salver."

The last sentence she said with a laugh, for she knew I thought so much of what Mrs. Harris said.

"We've kept house all our lives without one, Laura."

"Yes,—but I often wish we had one, for all that. As Mrs. Harris says, 'It gives such an air!'"

What a dreadful utilitarian Laura was, I thought. Now, the whole world and Boston were full of beautiful things,—full of things that had no special usefulness, but were absolutely and of themselves beautiful. And such a thing I wanted,—such a presence before me,—“a thing of beauty and of joy forever,”—something that would not speak directly or indirectly of labor, of something to be wrought out with toil, or associated with common, every-day objects. When that life should come to which I secretly looked forward,—when my soul should bound into a more radiant atmosphere, where the clouds, if any were, should be all gold- and silver-tinted, and where my sorrows, love-colored, were to be sweeter than other people's joys,—in that life, there would be moments of sweet abandonment to the simple sense of happi-

ness. Then I should want something on which my mind might linger, my eye rest,—as the bird rests for an instant, to turn her plumage in the sun, and take another and loftier flight. Not a word of all this, which common minds called farrago, but which had its truth to me, did I utter to Laura. Of course, none of these things bear transplanting or expressing.

"Laura, do you like that statue of Mercury in Mrs. Gore's library?"

"Very much. But I am sure I should be tired of seeing it every day, standing on one toe. I should be tired, if he was n't."

"Mrs. Gore says she never tires of it. I asked her. She says it is a delight to her to lie on the sofa and trace the beautiful undulations of his figure. How airy! It looks as if it would fly again without the least effort,—as if it had just 'new-lighted on a heaven-kissing hill'! Don't you think it perfect, Laura?"

"Well—yes,—I suppose so. I am not so enthusiastic as you are about it."

"Why don't you like it?"

I would not let Laura see how disappointed I was.

"One thing,—I don't like statuary in any attitude which, if continued, would seem to be painful. I know artists admire what gives an impression of motion; and I like to look at Mercury once; as you say, it gives an idea of flight, of motion,—and it is beautiful for two minutes. But then comes a sense of its being painful. So that statue of Hebe, or Aurora,—which is it?—looks as if swiftly coming towards you; but only for a minute. It does not satisfy you longer, because the unfitness comes then, and the fatigue, and your imagination is harassed and fretted. I think statuary should be in repose,—that is, if we want it in the house as a constant object of sight. Eve at the fountain, or Echo listening, or Sabrina fair sitting

"Under the glassy, cool, translucent wave,
With twisted braids of lilies knitting
The loose train of her amber-dropping
hair!"

No matter, if she is represented employed. The motion may go so far."

I suppose I looked blank.

"Oh, don't think I am not glad to admire it. I thought you were thinking of it for Aunt Allen's gift," continued Laura.

"And so I was. It costs just fifty dollars. But I think you are right about it. And, besides, do you like bronze, Laura?"

"I like marble a great, great deal best. There is a bronze statue of Fortune, and a Venus, at Harris & Stanwood's, that are called 'so beautiful!'—and I wouldn't have them in my house."

Here was an extinguisher. Laura did n't like bronze. And Laura was to be in my house, whether bronzes were or not.

The sun shone brightly through the bitter-sweet that ran half over the window, and lighted on the corner of an old mahogany chest.

"That reminds me!" said I, suddenly. "Yesterday, I was looking at crockery, and there was the most delightful cabinet!—real Japan work, such as we read of; full of little drawers, and with carved silver handles, and a secret drawer that shoots out when you touch a spring at the back. Wouldn't that be a beautiful thing to stand in the parlor, Laura?"

"For what, Del? Could you keep silver in it? How large is it?"

"Why, no,—it wouldn't be large enough to hold silver. And, besides, I don't know that I want it for any such purpose. It would hold jewelry."

"If you had any, Del."

"There's the secret drawer,—that would be capital for anything I wanted to keep perfectly secret."

"Such as what?"

"Oh, I don't know what, now; but I might possibly have."

"I can't think of anything you would want to shut up in that drawer," said Laura, laughing at my mysterious face, which she said looked about as secret as a hen-coop with the chickens all flying

out between the slats. "In the first place, you haven't any secrets, and are not likely to have; and next, you will show us (Mr. Sampson and me) the drawer and spring the first thing you do. And I shall look there every week, to see if there's anything hid there!"

"Oh, bah!" said I to myself; "Summer told me that cabinet was just fifty dollars."

Something—I know not what, and probably never shall know—made me rise from my rocking-chair, and walk to the chamber-window. At that moment, a man with a green bag in his hand walked swiftly by, touched his hat as he passed, and smiled as he turned the corner out of sight. A little spasm, half painful in its pleasure, contracted my chest, and then set out at a thrilling pace to the end of my fingers. Then a sense of triumphant fulness, in my heart, on my lip, in my eyes. Not the name, but the nature passed,—strong to wrestle, determined to win. Not the body, but the soul of a man, passed across my field of vision, armed for earth-strife, gallantly breasting life. What mattered the shape or the name,—whether handsome or with a fine fortune? How these accidents fell off from the soul, as it beamed in the loving eye and firm lip!

"The moment that his face I see,

I know the man that must" lead "me."

And gently as the fawn follows the forest-keeper does my heart follow his, to the green pastures and still waters where he loves to lead. I did not think whether he had a name.

"Are you considering what to put into the secret drawer, Del?"

"Yes,—rather."

Again Laura and I sat and rocked,—this time silently, for my head was full, and I was holding a stopper on it to keep it from running over; while Laura was really puzzled about the way to make a dog's eyes with Berlin wool. As I rocked, from association probably, I thought again of Eve,—who never seems at all like a grandmother to me, nor even like "the mother of all living," but like a

sweet, capricious, tender, naughty girl. Like Eve, I had only to stretch forth my hand (with the fifty-dollar note in it) and grasp "as much beauty as could live" within that space. Yet, as fifty dollars would buy not only this, but that, and also the other, it presently became the representative of tens of fifties, hundreds of fifties, thousands of fifties, and so on,—different fifties all, but all assuming shapes of beauty and value; finally, alternately clustering and separating, gathering as if in all sorts of beautiful heads,—angel heads, winged children,—then shooting off in a thousand different directions, leaving behind landscapes of exquisite sunsets, of Norwegian scenery, of processions of pines, of moonlight seen through arched bridges, of Palmyrene deserts, of pilgrims in the morning praying. Then came hurdy-gurdy boys and little flower-girls again, mingling with the landscapes, and thrusting their curly heads forward, as if to bid me not forget them. Then they all ran away and left me standing in a long, endless hall with endless columns, and white figures all about,—in the niches, on the floor, on the walls,—each Olympian in beauty, in grandeur, in power to lift the entranced soul to the high region where itself was created, and to which it always pointed. The white figures melted and warmed into masses and alcoves, and innumerable volumes looked affectionately at me. They knew me of old, and had told me their delightful secrets. "They had slept in my bosom, and whispered kind things to me in the dark night." Some pressed forward, declaring that here was the new wine of thought, sparkling and foaming as it had never done before, from the depths of human sympathy; and others murmured, "The old is better," and smiled at the surface-thoughts in blue and gold. Volumes and authors grew angry and vituperative. There was so much to be said on all sides, that I was deafened, and, with a shake of my head, shook everything into chaos, as I had done a hundred times before.

"What are you thinking of, Del?" said Laura, pointing the dog's eye with scarlet wool, to make him look fierce. "You have been looking straight at me for half a minute."

"Half a minute! have I?"

That wasn't long, however, considering what I had seen in the time.

"At Cotton's, yesterday, I saw, Laura, a beautiful engraving of Arria and Pætus. She is drawing the dagger from her side, and saying, so calmly, so heroically,—'My Pætus! it is not hard to die!'"

I had inquired the price of this engraving, and the man said it was fifty dollars without the frame.

"Those pictures are so painful to look at! don't you think so, Del? And the better they are, the worse they are! Don't you remember that day we passed with Sarah, how we wondered she could have her walls covered with such pictures?"

"Morrill brought them home from Italy, or she wouldn't, perhaps. But I do remember,—they were very disagreeable. That flaying of Marsyas! and Christ crowned with thorns! and that sad *Ecce Homo*!"

"Yes,—and the *Laocoön* on that centre bracket! enough to make you scream to look at it! I desire never to have such bloody reminders about me; and for a parlor or sitting-room I would infinitely prefer a dead wall to such a picture, if it were by the oldest of the old masters. Who wants *Ugolino* in the house, if it is ever so well painted? Supping on horrors indeed!"

We rocked again,—and Laura talked about plants and shirts and such healthy subjects. But, of course, my mind was in such a condition, nothing but fifty-dollar subjects would stay in it; and, most of all, I must not let Laura guess what I was thinking of.

"Do you like enamelled watches, Laura,—those pretty little ones made in Geneva, I mean, worth from forty to sixty dollars?"

"How do you mean? Do I like the

HOMES FOR THE INDUSTRIOUS

IN THE GARDEN STATE OF THE WEST.

**THE ILLINOIS CENTRAL RAILROAD CO., HAVE FOR SALE
1,200,000 ACRES OF RICH FARMING LANDS.**
In Tracts of Forty Acres and upward on Long Credit and at Low Prices.

THE attention of the enterprising and industrious portion of the community is directed to the following statements and liberal inducements offered them by the

ILLINOIS CENTRAL RAILROAD COMPANY.

which, as they will perceive, will enable them, by proper energy, perseverance and industry, to provide comfortable homes for themselves and families, with, comparatively speaking, very little capital.

LANDS OF ILLINOIS.

No State in the Valley of the Mississippi offers so great an inducement to the settler as the State of Illinois. There is no portion of the world where all the conditions of climate and soil so admirably combine to produce those two great staples, CORN and WHEAT, as the Prairies of Illinois.

EASTERN AND SOUTHERN MARKETS.

These lands are contiguous to a railroad 700 miles in length, which connects with other roads and navigable lakes and rivers, thus affording an unbroken communication with the Eastern and Southern markets.

RAILROAD SYSTEM OF ILLINOIS.

Over \$100,000,000 of private capital have been expended on the railroad system of Illinois. Inasmuch as part of the income from several of these works, with a valuable public fund in lands, go to diminish the State expenses; the TAXES ARE LIGHT, and must consequently every day decrease.

THE STATE DEBT.

The State debt is only \$10,106,398 14, and within the last three years has been reduced \$2,959,746 80, and we may reasonably expect that in ten years it will become extinct.

PRESENT POPULATION.

The State is rapidly filling up with population; \$68,025 persons having been added since 1850, making the present population 1,723,663, a ratio of 102 per cent. in ten years.

AGRICULTURAL PRODUCTS.

The Agricultural Products of Illinois are greater than those of any other State. The products sent out during the past year exceeded 1,500,000 tons. The wheat crop of 1860 approaches

35,000,000 bushels, while the corn crop yields not less than 140,000,000 bushels.

FERTILITY OF THE SOIL.

Nowhere can the industrious farmer secure such immediate results for his labor as upon these prairie soils, they being composed of a deep rich loam, the fertility of which unsurpassed by any on the globe.

TO ACTUAL CULTIVATORS.

Since 1854 the Company have sold 1,300,000 acres. They sell only to actual cultivators, and every contract contains agreement to cultivate. The road has been constructed through these lands at an expense of \$30,000,000. In 1850 the population of forty-nine counties, through which it passes, was only 335,000; since which 479,293 have been added; making the whole population 814,891, a gain of 143 per cent.

EVIDENCES OF PROSPERITY.

As an evidence of the thrift of the people, it may be stated that 600,000 tons of freight, including 8,600,000 bushels of grain, and 250,000 barrels of flour were forwarded over the line last year.

PRICES AND TERMS OF PAYMENT.

The prices of these lands vary from \$6 to \$25 per acre, according to location, quality, &c. First class farming land sells for about \$10 to \$12 per acre; and the relative expense of subdividing prairie land as compared with wood land is the ratio of 1 to 10 in favor of the former. The terms of sale for the bulk of these lands will be

ONE YEAR'S INTEREST IN ADVANCE,

at six per cent per annum, and six interest notes at six cent., payable respectively in one, two, three, four, five, six years from date of sale; and four notes for principal payable in four, five, six and seven years from date of sale; the contract stipulating that one-tenth of the tract purchased shall be fenced and cultivated, each and every year, for years from date of sale, so that at the end of five years one-half shall be fenced and under cultivation.

TWENTY PER CENT. WILL BE DEDUCTED

from the valuation for cash, except the same should be at \$5 dollars per acre, when the cash price will be five dollars

Pamphlets descriptive of the lands, soil, climate, productions, prices, and terms of payment, can be had on application to

To Our Lady Friends.

AMONGST the many compounds now offering to our lady friends, there are few that we can so readily recommend as those emanating from the celebrated house of Joseph Burnett & Co. They possess two qualities to which we would especially call attention; viz: the entire absence of all deleterious substances, and the certainty that they will perform all they are said to do. The unpleasant and oftentimes painful results attending exposure to our most changeable climate upon the skin, may be entirely obviated by the use of BURNETT'S KALLISTON, which has now become so useful an auxiliary to the toilet that no lady considers her dressing table complete without it.—*N. O. True Delta.*

Extract from a Letter, written by a Lady from Vienna.

"As old travellers, we bear the annoyances and privations incident to journeying with composure, but I have suffered—more from exhaustion of my supply of KALLISTON, than from any other cause. If any good friend should be coming out here, do, pray, send me enough to last till I get home again. You can have no idea of the relief and comfort it brings when one is suffering from exposure. I have tried other 'appliances,' but have found nothing that will compare with it for efficacy or agreeableness."

MESSES. JOSEPH BURNETT & Co.

MARLBORO', July 11, 1856.

Gents: The package of Kalliston came to hand last evening, and I am glad to have an opportunity to state to you how much we value it. My family have used it almost daily for more than two years, and now they think they cannot do without it.

A single application has repeatedly removed the freckles from the face of my little boy, leaving his skin smooth and fair. And in all cases of sunburn or irritation of the skin, from whatever cause, it has proved itself a perfect and very pleasant remedy.

I can, if you desire it, refer you to several cases of obstinate cutaneous disease, in which I know the Kalliston has had a wonderful good effect; one in particular, the daughter of Mr. P—, one of my neighbors, had suffered for many years, from eruptions and painful inflammation of the skin, (probably the effect of bad vaccine virus,) leaving it in several places puckered and quite red. A few weeks ago, I recommended to him your Kalliston; he has since informed me, that the effect of its use has been very marked and beneficial, that the skin has become soft and smooth, and the inflammation and redness has nearly disappeared.

I owe it to you to state that I did not believe in the efficacy of any cosmetic until I tried your Kalliston, and I cheerfully give my testimony in its favor.

Yours Respectfully,

J. M. BOYD.

BURNETT'S KALLISTON,

As a Wash for the Complexion, has no equal. It is distinguished for its cooling and soothing properties, and is admirably adapted to all unnatural conditions of the skin—removing Tan, Sunburn, Freckles, Redness and Roughness of the skin, etc., curing Chapped Hands, and allaying the irritation caused by the bites of Mosquitoes, and other annoying insects.

phens's theories are to be put to a speedier and sterner test than he expected, and we are to prove which is stronger, — an oligarchy built *on* men, or a commonwealth built *of* them. Our structure is alive in every part with defensive and recuperative energies; woe to theirs, if that vaunted corner-stone which they believe patient and enduring as marble should begin to writhe with intelligent life!

We have no doubt of the issue. We believe that the strongest battalions are always on the side of God. The Southern army will be fighting for Jefferson Davis, or at most for the liberty of self-government, while we go forth for the defence of principles which alone make government august and civil society possible. It is the very life of the nation that is at stake. There is no question here of dynasties, races, religions, — but simply whether we will consent to include in our Bill of Rights — not merely as of equal validity with all other rights, whether natural or acquired, but by its very nature transcending and abrogating them all — the Right of Anarchy. We must convince men that treason against the ballot-box is as dangerous as treason against a throne, and that, if they play so desperate a game, they must stake their lives on the hazard. The one lesson that remained for us to teach the political theorists of the Old World was, that we are as strong to suppress intestine disorder as foreign aggression, and we must teach it decisively and thoroughly. The economy of war is to be tested by the value of the object to be gained by it. A ten years' war would be cheap that gave us a country to be proud of and a flag that should command the respect of the world because it was the symbol of the enthusiastic unity of a great nation.

The Government, however slow it may have been to accept the war which Mr. Buchanan's supineness left them, is acting now with all energy and determination. What they have a right to claim is the confidence of the people, and that depends in good measure on the discre-

tion of the press. Only let us have no more weakness under the plausible name of Conciliation. We need not discuss the probabilities of an acknowledgment of the Confederate States by England and France; we have only to say, "Acknowledge them at your peril." But there is no chance of the recognition of the Confederacy by any foreign governments, so long as it is without the confidence of the brokers. There is no question on which side the strength lies. The whole tone of the Southern journals, so far as we are able to judge, shows the inherent folly and weakness of the Secession movement. Men who feel strong in the justice of their cause, or confident in their powers, do not waste breath in childish boasts of their own superiority and querulous depreciation of their antagonists. They are weak, and they know it. And not only are they weak in comparison with the Free States, but we believe they are without the moral support of whatever deserves the name of public opinion at home. If not, why does their Congress, as they call it, hold council always with closed doors, like a knot of conspirators? The first tap of the Northern drum dispelled many illusions, and we need no better proof of which ship is sinking than that Mr. Caleb Cushing should have made such haste to come over to the old Constitution with the stars and stripes at her mast-head.

We cannot think that the war we are entering on can end without some radical change in the system of African slavery. Whether it be doomed to a sudden extinction, or to a gradual abolition through economical causes, this war will not leave it where it was before. As a power in the State, its reign is already over. The fiery tongues of the batteries in Charleston harbor accomplished in one day a conversion which the constancy of Garrison and the eloquence of Phillips had failed to bring about in thirty years. And whatever other result this war is destined to produce, it has already won for us a blessing worth everything to us as a nation in emancipating the public opinion of the North.

their organization, while the seeming gain of a few days or weeks was a loss to the Government, whose great advantage was in an administrative system thoroughly established, and, above all, in the vast power of the national idea, a power weakened by every day's delay. This is so true, that already men began to talk of the rival governments at Montgomery and Washington, and Canadian journals recommend a strict neutrality, as if the independence and legitimacy of the mushroom despotism of New Ashantee were an acknowledged fact, and the name of the United States of America had no more authority than that of Jefferson Davis and Company, dealers in all kinds of repudiation and anarchy. For more than a month after the inauguration of President Lincoln there seemed to be a kind of interregnum, during which the confusion of ideas in the Border States as to their rights and duties as members of the "old" Union, as it began to be called, became positively chaotic. Virginia, still professing neutrality, prepared to seize the arsenal at Harper's Ferry and the navy-yard at Norfolk; she would prevent the passage of the United States' forces with a armed phalanx of her gallant regiments of whom stood looking on while a file of marines took down wounded men in an engine-house for them; she would do everything but her duty,—the gallant Ancient Pistol of a commonwealth. She "resumed her sovereignty," whatever that meant; her Convention passed an ordinance of secession, concluded a league offensive and defensive with the rebel Confederacy, appointed Jefferson Davis commander-in-chief of her land-forces and somebody else of the fleet she meant to steal at Norfolk, and then coolly referred the whole matter back to the people to vote three weeks afterwards whether they *would* secede three weeks before. Wherever the doctrine of Secession has penetrated, it seems to have obliterated every notion of law and precedent.

The country had come to the conclusion that Mr. Lincoln and his cabinet were mainly employed in packing their

trunks to leave Washington, when the "venerable Edward Ruffin of Virginia" fired that first gun at Fort Sumter which brought all the Free States to their feet as one man. That shot is destined to be the most memorable one ever fired on this continent since the Concord fowling-pieces said, "That bridge is ours, and we mean to go across it," eighty-seven Aprils ago. As these began a conflict which gave us independence, so that began another which is to give us nationality. It was certainly a great piece of good-luck for the Government that they had a fort which it was so profitable to lose. The people were weary of a masterly inactivity which seemed to consist mainly in submitting to be kicked. We know very well the difficulties that surrounded the new Administration; we appreciate their reluctance to begin a war the responsibility of which was as great as its consequences seemed doubtful; but we cannot understand how it was hoped to evade war, except by concessions vastly more disastrous than war itself. War has no evil comparable in its effect on national character to that of a craven submission to manifest wrong, the postponement of moral to material interests. There is no prosperity so great as courage. We do not believe that any amount of forbearance would have conciliated the South so long as they thought us pusillanimous. The only way to retain the Border States was by showing that we had the will and the power to do without them. The little Bopeep policy of "Let them alone, and they 'll all come home Wagging their tails behind them"

was certainly tried long enough with conspirators who had shown unmistakably that they desired nothing so much as the continuance of peace, especially when it was all on one side, and who would never have given the Government the great advantage of being attacked in Fort Sumter, had they not supposed they were dealing with men who could not be cuffed into resistance. The lesson we have to teach them now is, that we are thoroughly and terribly in earnest. Mr. Ste-

We are by no means inclined to criticize the Administration, even if this were the proper time for it; but we cannot help thinking that there was great wisdom in Napoleon's recipe for saving life in dealing with a mob,—"First fire grape-shot *into* them; after that, over their heads as much as you like." The position of Mr. Lincoln was already embarrassed when he entered upon office, by what we believe to have been a political blunder in the leaders of the Republican Party. Instead of keeping closely to the real point, and the only point, at issue, namely, the claim of a minority to a right of rebellion when displeased with the result of an election, the bare question of Secession, pure and simple, they allowed their party to become divided, and to waste themselves in discussing terms of compromise and guaranties of slavery which had nothing to do with the business in hand. Unless they were ready to admit that popular government was at an end, those were matters already settled by the Constitution and the last election. Compromise was out of the question with men who had gone through the motions, at least, of establishing a government and electing an anti-president. The way to insure the loyalty of the Border States, as the event has shown, was to convince them that disloyalty was dangerous. That revolutions never go backward is one of those compact generalizations which the world is so ready to accept because they save the trouble of thinking; but, however it may be with revolutions, it is certain that rebellions most commonly go backward with disastrous rapidity, and it was of the gravest moment, as respected its moral influence, that Secession should not have time allowed it to assume the proportions and the dignity of revolution, in other words, of a rebellion too powerful to be crushed. The secret friends of the Secession treason in the Free States have done their best to bewilder the public mind and to give factitious prestige to a conspiracy against free government and civilization by talking about the *right* of revolution, as if it were some acknowl-

edged principle of the Law of Nations. There is a right, and sometimes a duty, of rebellion, as there is also a right and sometimes a duty of hanging men for it; but rebellion continues to be rebellion until it has accomplished its object and secured the acknowledgment of it from the other party to the quarrel, and from the world at large. The Republican Party in the November elections had really effected a peaceful revolution, had emancipated the country from the tyranny of an oligarchy which had abused the functions of the Government almost from the time of its establishment, to the advancement of their own selfish aims and interests; and it was this legitimate change of rulers and of national policy by constitutional means which the Secessionists intended to prevent. To put the matter in plain English, they resolved to treat the people of the United States, in the exercise of their undoubted and lawful authority, as rebels, and resorted to their usual policy of intimidation in order to subdue them. Either this magnificent empire should be their plantation, or it should perish. This was the view even of what were called the moderate slaveholders of the Border States; and all the so-called compromises and plans of reconstruction that were thrown into the caldron where the hell-broth of anarchy was brewing had this extent,—no more,—What terms of *submission* would the people make to their natural masters? Whatever other result may have come of the long debates in Congress and elsewhere, they have at least convinced the people of the Free States that there can be no such thing as a moderate slaveholder,—that moderation and slavery can no more coexist than Floyd and honesty, or Anderson and treason.

We believe, then, that conciliation was from the first impossible,—that to attempt it was unwise, because it put the party of law and loyalty in the wrong,—and that, if it was done as a mere matter of policy in order to gain time, it was a still greater mistake, because it was the rebels only who could profit by it in consolidating

Mr. Lincoln's Inaugural Speech was of the kind usually called "firm, but conciliatory,"—a policy doubtful in troublous times, since it commonly argues weakness, and more than doubtful in a crisis like ours, since it left the course which the Administration meant to take ambiguous, and, while it weakened the Government by exciting the distrust of all who wished for vigorous measures, really strengthened the enemy by encouraging the conspirators in the Border States. There might be a question as to whether this or that attitude were expedient for the Republican Party; there could be none as to the only safe and dignified one for the Government of the Nation. Treason was as much treason in the beginning of March as in the middle of April; and it seems certain now, as it seemed probable to many then, that the country would have sooner rallied to the support of the Government, if the Government had shown an earlier confidence in the loyalty of the people. Though the President talked of "repossessing" the stolen forts, arsenals, and custom-houses, yet close upon this declaration followed the disheartening intelligence that the Cabinet were discussing the propriety of evacuating not only Fort Sumter, which was of no strategic importance, but Fort Pickens, which was the key to the Gulf of Mexico, and to abandon which was almost to acknowledge the independence of the Rebel States. Thus far the Free States had waited with commendable patience for some symptom of vitality in the new Administration, something that should distinguish it from the piteous helplessness of its predecessor. But now their pride was too deeply outraged for endurance, indignant remonstrances were heard from all quarters, and the Government seemed for the first time fairly to comprehend that it had twenty millions of freemen at its back, and that forts might be taken and held by honest men as well as by knaves and traitors. The nettle had been stroked long enough; it was time to try a firm grip. Still the Administration seemed

inclined to temporize, so thoroughly was it possessed by the notion of conciliating the Border States. In point of fact, the side which those States might take in the struggle between Law and Anarchy was of vastly more import to them than to us. They could bring no considerable reinforcement of money, credit, or arms to the rebels; they could at best but add so many mouths to an army whose commissariat was already dangerously embarrassed. They could not even, except temporarily, keep the war away from the territory of the seceding States, every one of which had a sea-door open to the invasion of an enemy who controlled the entire navy and shipping of the country. The position assumed by Eastern Virginia and Maryland was of consequence only so far as it might facilitate a sudden raid on Washington, and the policy of both these States was to amuse the Government by imaginary negotiations till the plans of the conspirators were ripe. In both States men were actively recruited and enrolled to assist in attacking the capital. With them, as with the more openly rebellious States, the new theory of "Coercion" was ingeniously arranged like a valve, yielding at the slightest impulse to the passage of forces for the subversion of legitimate authority, closing imperviously so that no drop of power could ooze through in the opposite direction. Lord de Roos, long suspected of cheating at cards, would never have been convicted but for the resolution of an adversary, who, pinning his hand to the table with a fork, said to him blandly, "My Lord, if the ace of spades is not under your Lordship's hand, why, then, I beg your pardon!" It seems to us that a timely treatment of Governor Letcher in the same energetic way would have saved the disasters of Harper's Ferry and Norfolk,—for disasters they were, though six months of temporizing had so lowered the public sense of what was due to the national dignity, that people were glad to see the Government active at length, even if only in setting fire to its own house.

satisfaction when Major Anderson took the extraordinary responsibility of doing his duty. But such was the general uncertainty, so doubtful seemed the loyalty of the Democratic Party as represented by its spokesmen at the North, so irresolute was the tone of many Republican leaders and journals, that a powerful and wealthy community of twenty millions of people gave a sigh of relief when they had been permitted to install the Chief Magistrate of their choice in their own National Capital. Even after the inauguration of Mr. Lincoln, it was confidently announced that Jefferson Davis, the Burr of the Southern conspiracy, would be in Washington before the month was out; and so great was the Northern despondency, that the chances of such an event were seriously discussed. While the nation was falling to pieces, there were newspapers and "distinguished statesmen" of the party so lately and so long in power base enough to be willing to make political capital out of the common danger, and to lose their country, if they could only find their profit. There was even one man found in Massachusetts, who, measuring the moral standard of his party by his own, had the unhappy audacity to declare publicly that there were friends enough of the South in his native State to prevent the march of any troops thence to sustain that Constitution to which he had sworn fealty in Heaven knows how many offices, the rewards of almost as many turnings of his political coat. There was one journal in New York which had the insolence to speak of *President Davis* and *Mister Lincoln* in the same paragraph. No wonder the "dirt-eaters" of the Carolinas could be taught to despise a race among whom creatures might be found to do that by choice which they themselves were driven to do by misery.

Thus far the Secessionists had the game all their own way, for their dice were loaded with Northern lead. They framed their sham constitution, appointed themselves to their sham offices, issued their sham commissions, endeavored to bribe

England with a sham offer of low duties and Virginia with a sham prohibition of the slave-trade, advertised their proposals for a sham loan which was to be taken up under intimidation, and levied real taxes on the people in the name of the people whom they had never allowed to vote directly on their enormous swindle. With money stolen from the Government, they raised troops whom they equipped with stolen arms, and beleaguered national fortresses with cannon stolen from national arsenals. They sent out secret agents to Europe, they had their secret allies in the Free States, their conventions transacted all important business in secret session;—there was but one exception to the shrinking delicacy becoming a maiden government, and that was the openness of the stealing. We had always thought a high sense of personal honor an essential element of chivalry; but among the *Romanic* races, by which, as the wonderful ethnologist of "De Bow's Review" tells us, the Southern States were settled, and from which they derive a close entail of chivalric characteristics, to the exclusion of the vulgar Saxons of the North, such is by no means the case. For the first time in history the deliberate treachery of a general is deemed worthy of a civic ovation, and Virginia has the honor of being the first State claiming to be civilized that has decreed the honors of a triumph to a cabinet officer who had contrived to gild a treason that did not endanger his life with a speculation that could not further damage his reputation. Rebellion, even in a bad cause, may have its romantic side; treason, which had not been such but for being on the losing side, may challenge admiration; but nothing can sweeten larceny or disinfect perjury. A rebellion inaugurated with theft, and which has effected its entry into national fortresses, not over broken walls, but by breaches of trust, should take Jonathan Wild for its patron saint, with the run of Mr. Buchanan's cabinet for a choice of sponsors,—godfathers we should not dare to call them.

and perilous months, had proved, if it proved anything, the essential conservatism of a population in which every grown man has a direct interest in the stability of the national government. So abstinent are they by habit and principle from any abnormal intervention with the machine of administration, so almost superstitious in adherence to constitutional forms, as to be for a moment staggered by the claim to a *right* of secession set up by all the Cotton States, admitted by the Border Slave-States, which had the effrontery to deliberate between their plain allegiance and their supposed interest, and but feebly denied by the Administration then in power. The usual panacea of palaver was tried; Congress did its best to add to the general confusion of thought; and, as if that were not enough, a Convention of Notables was called simultaneously to thresh the straw of debate anew, and to convince thoughtful persons that men do not grow wiser as they grow older. So in the two Congresses the notables talked,—in the one, those who ought to be shelved, in the other, those who were shelved already,—while those who were too thoroughly shelved for a seat in either addressed Great Union Meetings at home. Not a man of them but had a compromise in his pocket, adhesive as Spalding's glue, warranted to stick the shattered Confederacy together so firmly, that, if it ever broke again, it must be in a new place, which was a great consolation. If these gentlemen gave nothing very valuable to the people of the Free States, they were giving the Secessionists what was of inestimable value to them,—Time. The latter went on seizing forts, navy-yards, and deposits of Federal money, erecting batteries, and raising and arming men at their leisure; above all, they acquired a prestige, and accustomed men's minds to the thought of disunion, not only as possible, but actual. They began to grow insolent, and, while compelling absolute submission to their rebellious usurpation at home, decried any exercise of legitimate authority on the part of the General Government as *Coer-*

cion,—a new term, by which it was sought to be established as a principle of constitutional law, that it is always the Northern bull that has gored the Southern ox.

During all this time, the Border Slave-States, and especially Virginia, were playing a part at once cowardly and selfish. They assumed the right to stand neutral between the Government and rebellion, to contract a kind of morganatic marriage with Treason, by which they could enjoy the pleasant sin without the tedious responsibility, and to be traitors in everything but the vulgar contingency of hemp. Doubtless the aim of the political managers in these States was to keep the North amused with schemes of arbitration, reconstruction, and whatever other fine words would serve the purpose of hiding the real issue, till the new government of Secessia should have so far consolidated itself as to be able to demand with some show of reason a recognition from foreign powers, and to render it politic for the United States to consent to peaceable secession. They counted on the self-interest of England and the supineness of the North. As to the former, they were not wholly without justification,—for nearly all the English discussions of the "American Crisis" which we have seen have shown far more of the shop-keeping spirit than of interest in the maintenance of free institutions; but in regard to the latter they made the fatal mistake of believing our Buchanans, Cushings, and Touceys to be representative men: They were not aware how utterly the Democratic Party had divorced itself from the moral sense of the Free States, nor had they any conception of the tremendous recoil of which the long-repressed convictions, traditions, and instincts of a people are capable.

Never was a nation so in want of a leader; never was it more plain, that, without a head, the people "bluster abroad as beasts," with plenty of the iron of purpose, but purpose without coherence, and with no cunning smith of circumstance to edge it with plan and helve it with direction. What the country was waiting for showed itself in the universal thrill of

ARMY-HYMN.

"Old Hundred."

O LORD of Hosts ! Almighty King !
Behold the sacrifice we bring !
To every arm Thy strength impart,
Thy spirit shed through every heart !

Wake in our breasts the living fires,
The holy faith that warmed our sires ;
Thy hand hath made our Nation free ;
To die for her is serving Thee.

Be Thou a pillared flame to show
The midnight snare, the silent foe ;
And when the battle thunders loud,
Still guide us in its moving cloud.

God of all Nations ! Sovereign Lord !
In Thy dread name we draw the sword,
We lift the starry flag on high
That fills with light our stormy sky.

From treason's rent, from murder's stain
Guard Thou its folds till Peace shall reign, —
Till fort and field, till shore and sea
Join our loud anthem, PRAISE TO THEE !

THE PICKENS-AND-STEALIN'S REBELLION.

HAD any one ventured to prophesy on the Fourth of March that the immediate prospect of Civil War would be hailed by the people of the Free States with a unanimous shout of enthusiasm, he would have been thought a madman. Yet the prophecy would have been verified by what we now see and hear in every city, town, and hamlet from Maine to Kansas. With the advantage of three months' active connivance in the cabinet of Mr. Buchanan, with an empty treasury at Washington, and that reluctance to assume responsibility and to inaugurate a decided policy, the common vice of our politicians, who endeavor to divine and to fol-

low popular sentiment rather than to lead it, it seemed as if Disunion were inevitable, and the only open question were the line of separation. So assured seemed the event, that English journalists moralized gravely on the inherent weakness of Democracy. While the leaders of the Southern Rebellion did not dare to expose their treason to the risk of a popular vote in any one of the seceding States, the "Saturday Review," one of the ablest of British journals, solemnly warned its countrymen to learn by our example the dangers of an extended suffrage.

Meanwhile the conduct of the people of the Free States, during all these trying

the army struggled on together. I find that I have been rather understating the troubles of the march. It seems impossible that such difficulty could be encountered within twenty miles of the capital of our nation. But we were making a rush to put ourselves in that capital, and we could not proceed in the slow, systematic way of an advancing army. We must take the risk and stand the suffering, whatever it was. So the Seventh Regiment went through its bloodless *Noche Triste*.

MORNING.

At last we issued from the damp woods, two miles below the railroad junction. Here was an extensive farm. Our vanguard had halted and borrowed a few rails to make fires. These were, of course, carefully paid for at their proprietor's own price. The fires were bright in the gray dawn. About them the whole regiment was now halted. The men tumbled down to catch forty winks. Some, who were hungrier for food than sleep, went off foraging among the farm-houses. They returned with appetizing legends of hot breakfasts in hospitable abodes, or scanty fare given grudgingly in hostile ones. All meals, however, were paid for.

Here, as at other halts below, the country-people came up to talk to us. The traitors could easily be distinguished by their insolence disguised as obsequiousness. The loyal men were still timid, but more hopeful at last. All were very lavish with the monosyllable, *Sir*. It was an odd coincidence, that the vanguard, halting off at a farm in the morning, found it deserted for the moment by its tenants, and protected only by an engraved portrait of our (former) Colonel

Duryea, serenely smiling over the mantel-piece.

From this point, the railroad was pretty much all gone. But we were warmed and refreshed by a nap and a bite, and besides had daylight and open country.

We put our guns on their own wheels, all dropped into ranks as if on parade, and marched the last two miles to the station. We still had no certain information. Until we actually saw the train awaiting us, and the Washington companies, who had come down to escort us, drawn up, we did not know whether our Uncle Sam was still a resident of the capital.

We packed into the train, and rolled away to Washington.

WASHINGTON.

WE marched up to the White House, showed ourselves to the President, made our bow to him as our host, and then marched up to the Capitol, our grand lodgings.

There we are now, quartered in the Representatives Chamber.

And here I must hastily end this first sketch of the Great Defence. May it continue to be as firm and faithful as it is this day!

I have scribbled my story with a thousand men stirring about me. If any of my sentences miss their aim, accuse my comrades and the bewilderment of this martial crowd. For here are four or five thousand others on the same business as ourselves, and drums are beating, guns are clanking, companies are tramping, all the while. Our friends of the Eighth Massachusetts are quartered under the dome, and cheer us whenever we pass.

Desks marked John Covode, John Cochran, and Anson Burlingame, have allowed me to use them as I wrote.

our company, the tallest man in the regiment, and one of the handiest, suggested that we should tear up the rails at a turn-out by the station, and so be prepared for chances. So "Out crowbars!" was the word. We tore up and bagged half a dozen rails, with chairs and spikes complete. Here, too, some of the engineers found a keg of spikes. This was also bagged and loaded on our cars. We fought the chaps with their own weapons, since they would not meet us with ours.

These things made delay, and by-and-by there was a long halt, while the Colonel communicated, by orders sounded along the line, with the engine. Homans's drag was hard after us, bringing our knapsacks and traps.

After I had admired for some time the beauty of our moonlit line, and listened to the orders as they grew or died along the distance, I began to want excitement. Bonnell suggested that he and I should scout up the road and see if any rails were wanting. We travelled along into the quiet night.

A mile ahead of the line we suddenly caught the gleam of a rifle-barrel. "Who goes there?" one of our own scouts challenged smartly.

We had arrived at the nick of time. Three rails were up. Two of them were easily found. The third was discovered by beating the bush thoroughly. Bonnell and I ran back for tools, and returned at full trot with crowbar and sledge on our shoulders. There were plenty of willing hands to help,—too many, indeed,—and with the aid of a huge Massachusetts man we soon had the rail in place.

From this time on we were constantly interrupted. Not a half-mile passed without a rail up. Bonnell was always at the front laying track, and I am proud to say that he accepted me as aide-de-camp. Other fellows, unknown to me in the dark, gave hearty help. The Seventh showed that it could do something else than drill.

At one spot, on a high embankment

over standing water, the rail was gone, sunk probably. Here we tried our rails brought from the turn-out. They were too short. We supplemented with a length of plank from our stores. We rolled our cars carefully over. They passed safe. But Homans shook his head. He could not venture a locomotive on that frail stuff. So we lost the society of the "J. H. Nicholson." Next day the Massachusetts commander called for some one to dive in the pool for the lost rail. Plump into the water went a little wiry chap and grappled the rail. "When I come up," says the brave fellow afterwards to me, "our officer out with a twenty-dollar gold piece and wanted me to take it. 'That a'n't what I come for,' says I. 'Take it,' says he, 'and share with the others.' 'That a'n't what they come for,' says I. But I took a big cold," the diver continued, "and I'm condemned hoarse yit,"—which was the fact.

Farther on we found a whole length of track torn up, on both sides, sleepers and all, and the same thing repeated with alternations of breaks of single rails. Our howitzer-ropes came into play to hoist and haul. We were not going to be stopped.

But it was becoming a *Noche Triste* to some of our comrades. We had now marched some sixteen miles. The distance was trifling. But the men had been on their legs pretty much all day and night. Hardly any one had had any full or substantial sleep or meal since we started from New York. They napped off, standing, leaning on their guns, dropping down in their tracks on the wet ground, at every halt. They were sleepy, but plucky. As we passed through deep cuttings, places, as it were, built for defence, there was a general desire that the tedium of the night should be relieved by a shindy.

During the whole night I saw our officers moving about the line, doing their duty vigorously, despite exhaustion, hunger, and sleeplessness.

About midnight our friends of the Eighth had joined us, and our whole lit-

THE BRIDGE.

WHEN the frenzy of the brief tempest was over, it began to be a question, "What to do about the broken bridge?" The gap was narrow; but even Charles Homans could not promise to leap the "J. H. Nicholson" over it. Who was to be our Julius Cæsar in bridge-building? Who but Sergeant Scott, Armorer of the Regiment, with my fellow-sentry of the morning, Bonnell, as First Assistant?

Scott called for a working party. There were plenty of handy fellows among our Engineers and in the Line. Tools were plenty in the Engineers' chest. We pushed the platform car upon which howitzer No. 1 was mounted down to the gap, and began operations.

"I wish," says the *petit caporal* of the Engineer Company, patting his howitzer gently on the back, "that I could get this Putty Blower pointed at the enemy, while you fellows are bridge-building."

The inefficient destructives of Maryland had only half spoilt the bridge. Some of the old timbers could be used, --and for new ones, there was the forest.

Scott and his party made a good and a quick job of it. Our friends of the Massachusetts Eighth had now come up. They lent a ready hand, as usual: The sun set brilliantly. By twilight there was a practicable bridge. The engine was despatched back to keep the road open. The two platform cars, freighted with our howitzers, were rigged with the gun-ropes for dragging along the rail. We passed through the files of the Massachusetts men, resting by the way, and eating by the fires of the evening the suppers we had in great part provided them; and so begins our night-march.

THE NIGHT-MARCH.

O GOTTSCHALK! what a poetic *Marche de Nuit* we then began to play, with our heels and toes, on the railroad track!

It was full-moonlight and the night inexpressibly sweet and serene. The air

was cool and vivified by the gust and shower of the afternoon. Fresh spring was in every breath. Our fellows had forgotten that this morning they were hot and disgusted. Every one hugged his rifle as if it were the arm of the Girl of his Heart, and stepped out gayly for the promenade. Tired or foot-sore men, or even lazy ones, could mount upon the two freight-cars we were using for artillery-wagons. There were stout arms enough to tow the whole.

The scouts went ahead under First Lieutenant Farnham of the Second Company. We were at school together, -- I am afraid to say how many years ago. He is just the same cool, dry, shrewd fellow he was as a boy, and a most efficient officer.

It was an original kind of march. I suppose a battery of howitzers never before found itself mounted upon cars, ready to open fire at once and bang away into the offing with shrapnel or into the bushes with canister. Our line extended a half-mile along the track. It was beautiful to stand on the bank above a cutting and watch the files strike from the shadow of a wood into a broad flame of moonlight, every rifle sparkling up alert as it came forward. A beautiful sight to see the barrels writing themselves upon the dimness, each a silver flash.

By-and-by, "Halt!" came, repeated along from the front, company after company. "Halt! a rail gone."

It was found without difficulty. The imbeciles who took it up probably supposed we would not wish to wet our feet by searching for it in the dewy grass of the next field. With incredible doltishness they had also left the chairs and spikes beside the track. Bonnell took hold, and in a few minutes had the rail in place and firm enough to pass the engine. Remember, we were not only hurrying on to succor Washington, but opening the only convenient and practicable route between it and the loyal States.

A little farther on, we came to a village, -- a rare sight in this scantily peopled region. Here Sergeant Keeler, of

able squads of our fellows. The unseasonable heat of this most breathless day was too much for many of the younger men, unaccustomed to rough work, and weakened by want of sleep and irregular food in our hurried movements thus far.

Charles Homans's private carriage was, however, ready to pick up tired men, hot men, thirsty men, men with corns, or men with blisters. They tumbled into the train in considerable numbers.

An enemy that dared could have made a moderate bag of stragglers at this time. But they would not have been allowed to straggle, if any enemy had been about. By this time we were convinced that no attack was to be expected in this part of the way.

The main body of the regiment, under Major Shaler, a tall, soldierly fellow, with a moustache of the fighting-color, tramped on their own pins to the watering-place, eight miles or so from Annapolis. There troops and train came to a halt, with the news that a bridge over a country road was broken a mile farther on.

It had been distinctly insisted upon, in the usual Southern style, that we were not to be allowed to pass through Maryland, and that we were to be "welcomed to hospitable graves." The broken bridge was a capital spot for a skirmish. Why not look for it here?

We looked; but got nothing. The rascals could skulk about by night, tear up rails, and hide them where they might be found by a man with half an eye, or half-destroy a bridge; but there was no shoot in them. They have not faith enough in their cause to risk their lives for it, even behind a tree or from one of these thickets, choice spots for ambush.

So we had no battle there, but a battle of the elements. The volcanic heat of the morning was followed by a furious storm of wind and a smart shower. The regiment wrapped themselves in their blankets and took their wetting with more or less satisfaction. They were receiving samples of all the different little miseries of a campaign.

And here let me say a word to my fellow-volunteers, actual and prospective, in all the armies of all the States:—

A soldier needs, besides his soldierly drill,

I. Good FEET.

II. A good Stomach.

III. And after these, come the good Head and the good Heart.

But Good Feet are distinctly the first thing. Without them you cannot get to your duty. If a comrade, or a horse, or a locomotive, takes you on its back to the field, you are useless there. And when the field is lost, you cannot retire, run away, and save your bacon.

Good shoes and plenty of walking make good feet. A man who pretends to belong to an infantry company ought always to keep himself in training, so that any moment he can march twenty or thirty miles without feeling a pang or raising a blister. Was this the case with even a decimation of the army who rushed to defend Washington? Were you so trained, my comrades of the Seventh?

A captain of a company, who will let his men march with such shoes as I have seen on the feet of some poor fellows in this war, ought to be garroted with shoe-strings, or at least compelled to play Pope and wash the feet of the whole army of the Apostles of Liberty.

If you find a foot-soldier lying beat out by the roadside, desperate as a sea-sick man, five to one his heels are too high, or his soles too narrow or too thin, or his shoe is not made straight on the inside, so that the great toe can spread into its place as he treads.

I am an old walker over Alps across the water, and over Cordilleras, Sierras, Deserts, and Prairies at home; I have done my near sixty miles a day without discomfort,—and speaking from large experience, and with painful recollections of the suffering and death I have known for want of good feet on the march, I say to every volunteer:—

Trust in God; BUT KEEP YOUR SHOES EASY!

right, green fields on the left. Cattle are feeding quietly about. The air sings with birds. The chestnut-leaves sparkle. Frogs whistle in the warm spring morning. The regiment groups itself along the bank and the cutting. Several Marylanders of the half-price age — under twelve — come gaping up to see us harmless invaders. Each of these young gentry is armed with a dead spring frog, perhaps by way of tribute. And here — hollo! here comes Horace Greeley *in propria persona*! He marches through our groups with the Greeley walk, the Greeley hat on the back of his head, the Greeley white coat on his shoulders, his trousers much too short, and an absorbed, abstracted demeanor. Can it be Horace, reporting for himself? No; this is a Maryland production, and a little disposed to be sulky.

After a few minutes' halt, we hear the whistle of the engine. This machine is also an historic character in the war.

Remember it! "J. H. Nicholson" is its name. Charles Homans drives, and on either side stands a sentry with fixed bayonet. New spectacles for America! But it is grand to know that the bayonets are to protect, not to assail, Liberty and Law.

The train leads off. We follow, by the track. Presently the train returns. We pass it and trudge on in light marching order, carrying arms, blankets, haversacks, and canteens. Our knapsacks are upon the train.

Fortunate for our backs that they do not have to bear any more burden! For the day grows sultry. It is one of those breezeless baking days which brew thunder-gusts. We march on for some four miles, when, coming upon the guards of the Massachusetts Eighth, our howitzer is ordered to fall out and wait for the train. With a comrade of the Artillery, I am placed on guard over it.

ON GUARD WITH HOWITZER NO. TWO.

HENRY BONNELL is my fellow-sentry. He, like myself, is an old campaigner in such campaigns as our generation has

known. So we talk California, Oregon, Indian life, the Plains, keeping our eyes peeled meanwhile, and ranging the country. Men that will tear up track are quite capable of picking off a sentry. A giant chestnut gives us little dots of shade from its pigmy leaves. The country about us is open and newly ploughed. Some of the worm-fences are new, and ten rails high; but the farming is careless, and the soil thin.

Two of the Massachusetts men come back to the gun while we are standing there. One is my friend Stephen Morris, of Marblehead, Sutton Light Infantry. I had shared my breakfast yesterday with Stephe. So we refraternize.

His business is, — "I make shoes in winter and fishin' in summer." He gives me a few facts, — suspicious persons seen about the track, men on horseback in the distance. One of the Massachusetts guard last night challenged his captain. Captain replied, "Officer of the night." Whereupon, says Stephe, "The recruit let squizzle and jest missed his ear." He then related to me the incident of the railroad station. "The first thing they know'd," says he, "we bit right into the depot and took charge." "I don't mind," Stephe remarked, — "I don't mind life, nor yit death; but whenever I see a Massachusetts boy, I stick by him, and if them Secessionists attackt us to-night, or any other time, they 'll git in debt."

Whistle, again! and the train appears. We are ordered to ship our howitzer on a platform car. The engine pushes us on. This train brings our light baggage and the rear guard.

A hundred yards farther on is a delicious fresh spring below the bank. While the train halts, Stephe Morris rushes down to fill my canteen. "This a'n't like Marblehead," says Stephe, panting up; "but a man that can shin up *them* rocks can git right over *this* sand."

The train goes slowly on, as a rickety train should. At intervals we see the fresh spots of track just laid by our Yankee friends. Near the sixth mile, we began to overtake hot and uncomfort-

the Seventh tenable by anybody's grip. Most sat in the shade and were shorn by a barber. A few were honored with a clip by the artist hand of the *petit caporal* of our Engineer Company.

While I rattle off these trifling details, let me not fail to call attention to the grave service done by our regiment, by its arrival, at the nick of time, at Annapolis. No clearer special Providence could have happened. The country-people of the traitor sort were aroused. Baltimore and its mob were but two hours away. The Constitution had been hauled out of reach of a rush by the Massachusetts men,—first on the ground,—but was half-manned and not fully secure. And there lay the Maryland, helpless on the shoal, with six or seven hundred souls on board, so near the shore that the late Captain Rynders's gun could have sunk her from some ambush.

Yes! the Seventh Regiment at Annapolis was the Right Man in the Right Place!

OUR MORNING MARCH.

REVEILLE. As nobody pronounces this word *à la française*, as everybody calls it "Revelee," why not drop it, as an affectation, and translate it the "Stir your Stumps," the "Peel your Eyes," the "Tumble Up," or literally the "Wake"?

Our snorers had kept up this call so lustily since midnight, that, when the drums sounded it, we were all ready.

The Sixth and Second Companies, under Captain Nevers, are detached to lead the van. I see my brother Billy march off with the Sixth, into the dusk, half-moonlight, half-dawn, and hope that no beggar of a Secessionist will get a pat shot at him, by the roadside, without his getting a chance to let fly in return. Such little possibilities intensify the earnest detestation we feel for the treasons we come to resist and to punish. There will be some bitter work done, if we ever get to blows in this war,—this needless, reckless, brutal assault upon the mildest of all governments.

Before the main body of the regiment marches, we learn that the "Baltic" and other transports came in last night with troops from New York and New England, enough to hold Annapolis against a square league of Plug Uglies. We do not go on without having our rear protected and our communications open. It is strange to be compelled to think of these things in peaceful America. But we really knew little more of the country before us than Cortés knew of Mexico. I have since learned from a high official, that thirteen different messengers were despatched from Washington in the interval of anxiety while the Seventh was not forthcoming, and only one got through.

At half-past seven we take up our line of march, pass out of the charming grounds of the Academy, and move through the quiet, rusty, picturesque old town. It has a romantic dulness—Annapolis—which deserves a parting compliment.

Although we deem ourselves a fine-looking set, although our belts are blanched with pipe-clay and our rifles shine sharp in the sun, yet the townspeople stare at us in a dismal silence. They have already the air of men quelled by a despotism. None can trust his neighbor. If he dares to be loyal, he must take his life into his hands. Most would be loyal, if they dared. But the system of society which has ended in this present chaos has gradually eliminated the bravest and best men. They have gone in search of Freedom and Prosperity; and now the bullies cow the weaker brothers. "There must be an end of this mean tyranny," think the Seventh, as they march through old Annapolis and see how sick the town is with doubt and alarm.

Outside the town, we strike the railroad and move along, the howitzers in front, bouncing over the sleepers. When our line is fully disengaged from the town, we halt.

Here the scene is beautiful. The van rests upon a high embankment, with a pool surrounded by pine-trees on the

coming soldiery. So ended the 23d of April.

Midnight, 24th. We were rattled up by an alarm,—perhaps a sham one, to keep us awake and lively. In a moment, the whole regiment was in order of battle in the moonlight on the parade. It was a most brilliant spectacle, as company after company rushed forward, with rifles glittering, to take their places in the array.

After this pretty spirt, we were rationed with pork, beef, and bread for three days, and ordered to be ready to march on the instant.

WHAT THE MASSACHUSETTS EIGHTH HAD BEEN DOING.

MEANTIME General Butler's command, the Massachusetts Eighth, had been busy knocking disorder in the head.

Presently after their landing, and before they were refreshed, they pushed companies out to occupy the railroad-track beyond the town.

They found it torn up. No doubt the scamps who did the shabby job fancied that there would be no more travel that way until strawberry-time. They fancied the Yankees would sit down on the fences and begin to whittle white-oak toothpicks, darning the rebels, through their noses, meanwhile.

I know these men of the Eighth can whittle, and I presume they can say "Darn it," if occasion requires; but just now track-laying was the business on hand.

"Wanted, experienced track-layers!" was the word along the files.

All at once the line of the road became densely populated with experienced track-layers, fresh from Massachusetts.

Presto change! the rails were relaid, spiked, and the roadway levelled and better ballasted than any road I ever saw south of Mason and Dixon's line. "We must leave a good job for these folks to model after," say the Massachusetts Eighth.

A track without a train is as useless as a road without a man. Train and engine

must be had. "Uncle Sam's mails and troops cannot be stopped another minute," our energetic friends conclude. So—the railroad company's people being either frightened or false—in marches Massachusetts to the station. "We, the People of the United States, want rolling-stock for the use of the Union," they said, or words to that effect.

The engine—a frowzy machine at the best—had been purposely disabled.

Here appeared the *deus ex machina*, Charles Homans, Beverly Light Guard, Company E, Eighth Massachusetts Regiment.

That is the man, name and titles in full, and he deserves well of his country.

He took a quiet squint at the engine,—it was as helpless as a boned turkey,—and he found "Charles Homans, his mark," written all over it.

The old rattletrap was an old friend. Charles Homans had had a share in building it. The machine and the man said, "How d'y' do?" at once. Homans called for a gang of engine-builders. Of course they swarmed out of the ranks. They passed their hands over the locomotive a few times, and presently it was ready to whistle and wheeze and rumble and gallop, as if no traitor had ever tried to steal the go and the music out of it.

This had all been done during the afternoon of the 23d. During the night, the renovated engine was kept cruising up and down the track to see all clear. Guards of the Eighth were also posted to protect passage.

Our commander had, I presume, been coöperating with General Butler in this business. The Naval Academy authorities had given us every despatch and assistance, and the middies, frank, personal hospitality. The day was halcyon, the grass was green and soft, the apple-trees were just in blossom: it was a day to be remembered.

Many of us will remember it, and show the marks of it for months, as the day we had our heads cropped. By evening there was hardly one poll in

on a mound without the inclosure, might not, at tap of drum, unmask a battery of giant columbiads, and belch blazes at us, raking our line.

Nothing so entertaining happened. It was a parade, not a battle. At sunset our band played strains sweet enough to pacify all Secession, if Secession had music in its soul. Coffee, hot from the coppers of the Naval School, and biscuit were served out to us; and while we supped, we talked with our visitors, such as were allowed to approach.

First the boys of the School—fine little blue-jackets—had their story to tell.

“Do you see that white farm-house, across the river?” says a brave pigmy of a chap in navy uniform. “That is head-quarters for Secession. They were going to take the School from us, Sir, and the frigate; but we’ve got ahead of ’em, now you and the Massachusetts boys have come down,”—and he twinkled all over with delight. “We can’t study any more. We are on guard all the time. We’ve got howitzers, too, and we’d like you to see, to-morrow, on drill, how we can handle ’em. One of their boats came by our sentry last night,” (a sentry probably five feet high,) “and he blazed away, Sir. So they thought they wouldn’t try us that time.”

It was plain that these young souls had been well tried by the treachery about them. They, too, had felt the pang of the disloyalty of comrades. Nearly a hundred of the boys had been spoilt by the base example of their elders in the repudiating States, and had resigned.

After the middies, came anxious citizens from the town. Scared, all of them. Now that we were come and assured them that persons and property were to be protected, they ventured to speak of the disgusting tyranny to which they, American citizens, had been subjected. We came into contact here with utter social anarchy. No man, unless he was ready to risk assault, loss of property, exile, dared to act or talk like a freeman. “This great wrong must be righted,” think the

Seventh Regiment, as one man. So we tried to reassure the Annapolitans that we meant to do our duty as the nation’s armed police, and mob-law was to be put down, so far as we could do it.

Here, too, voices of war met us. The country was stirred up. If the rural population did not give us a bastard imitation of Lexington and Concord, as we tried to gain Washington, all Pluguglydom would treat us *à la* Plugugly somewhere near the junction of the Annapolis and Baltimore and Washington Railroad. The Seventh must be ready to shoot.

At dusk we were marched up to the Academy and quartered about in the buildings,—some in the fort, some in the recitation-halls. We lay down on our blankets and knapsacks. Up to this time our sleep and diet had been severely scanty.

We stayed all next day at Annapolis. The Boston brought the Massachusetts Eighth ashore that night. Poor fellows! what a figure they cut, when we found them bivouacked on the Academy grounds next morning! To begin: They had come off in hot patriotic haste, half-uniformed and half-outfitted. Finding that Baltimore had been taken by its own loafers and traitors, and that the Chesapeake ferry was impracticable, had obliged them to change line of march. They were out of grub. They were parched dry for want of water on the ferry-boat. Nobody could decipher Caucasian, much less Bunker-Hill Yankee, in their grimy visages.

But, hungry, thirsty, grimy, these fellows were GRIT.

Massachusetts ought to be proud of such hardy, cheerful, faithful sons.

We of the Seventh are proud, for our part, that it was our privilege to share our rations with them, and to begin a fraternization which grows closer every day and will be *historical*.

But I must make a shorter story. We drilled and were reviewed that morning on the Academy parade. In the afternoon the Naval School paraded their la before they gave up their barracks to

had been suffered, was greatly lightened by these good omens. If Annapolis was safe, why not Washington safe also? If treachery had got head at the capital, would not treachery have reached out its hand and snatched this doorway? These were our speculations as we began to discern objects, before we heard news.

But news came presently. Boats pulled off to us. Our officers were put into communication with the shore. The scanty facts of our position became known from man to man. We privates have greatly the advantage in battling with the doubt of such a time. We know that we have nothing to do with rumors. Orders are what we go by. And orders are Facts.

We lay a long, lingering day, off Annapolis. The air was full of doubt, and we were eager to be let loose. All this while the Maryland stuck fast on the bar. We could see them, half a mile off, making every effort to lighten her. The soldiers tramped forward and aft, danced on her decks, shot overboard a heavy baggage-truck. We saw them start the truck for the stern with a cheer. It crashed down. One end stuck in the mud. The other fell back and rested on the boat. They went at it with axes, and presently it was clear.

As the tide rose, we gave our grounded friends a lift with a hawser. No go! The Boston tugged in vain. We got near enough to see the whites of the Massachusetts eyes, and their unlucky faces and uniforms all grimy with their lodgings in the coal-dust. They could not have been blacker, if they had been breathing battle-smoke and dust all day. That experience was clear gain to them.

By-and-by, greatly to the delight of the impatient Seventh, the Boston was headed for shore. Never speak ill of the beast you bestraddle! Therefore *requiescat* Boston! may her ribs lie light on soft sand when she goes to pieces! may her engines be cut up into bracelets for the arms of the patriotic fair! good-bye to her, dear old, close, dirty, slow coach! She served her country well in a moment

of trial. Who knows but she saved it? It was a race to see who should first get to Washington,—and we and the Virginia mob, in alliance with the District mob, were perhaps nip and tuck for the goal.

ANNAPOLIS.

So the Seventh Regiment landed and took Annapolis. We were the first troops ashore.

The middies of the Naval Academy no doubt believe that they had their quarters secure. The Massachusetts boys are satisfied that they first took the town in charge. And so they did.

But the Seventh took it a little more. Not, of course, from its loyal men, but for its loyal men,—for loyal Maryland, and for the Union.

Has anybody seen Annapolis? It is a picturesque old place, sleepy enough, and astonished to find itself wide-awaked by a war and obliged to take responsibility and share for good and ill in the movement of its time. The buildings of the Naval Academy stand parallel with the river Severn, with a green plateau toward the water and a lovely green lawn toward the town. All the scene was fresh and fair with April, and I fancied, as the Boston touched the wharf, that I discerned the sweet fragrance of apple-blossoms coming with the spring-time airs.

I hope that the companies of the Seventh, should the day arrive, will charge upon horrid batteries or serried ranks with as much alacrity as they marched ashore on the greensward of the Naval Academy. We disembarked, and were halted in line between the buildings and the river.

Presently, while we stood at ease, people began to arrive,—some with smallish fruit to sell, some with smaller news to give. Nobody knew whether Washington was taken. Nobody knew whether Jeff. Davis was now spitting in the Presidential spittoon, and scribbling his distiches with the nib of the Presidential goose-quill. We were absolutely in doubt whether a seemingly inoffensive knot of rustics,

Sunday, the 21st, was a long and somewhat anxious day. While we were bowling along in the sweet sunshine and sweet moonlight of the halcyon time, Uncle Sam might be dethroned by somebody in buckram, or Baltimore burnt by the boys from Lynn and Marblehead, revenging the massacre of their fellows. Every ope begins to comprehend the fiery eagerness of men who live in historic times. "I wish I had control of chain-lightning for a few minutes," says O., the droll fellow of our company. "I'd make it come thick and heavy and knock spots out of Secession."

At early dawn of Monday the 22d, after feeling along slowly all night, we see the harbor of Annapolis. A frigate with sails unbent lies at anchor. She flies the stars and stripes. Hurrah!

A large steamboat is aground farther in. As soon as we can see anything, we catch the glitter of bayonets on board.

By-and-by boats come off, and we get news that the steamer is the "Maryland," a ferry-boat of the Philadelphia and Baltimore Railroad. The Massachusetts Eighth Regiment had been just in time to seize her on the north side of the Chesapeake. They learned that she was to be carried off by the crew and leave them blockaded. So they shot their Zouaves ahead as skirmishers. The fine fellows rattled on board, and before the steamboat had time to take a turn or open a valve, she was held by Massachusetts in trust for Uncle Sam. Hurrah for the most important prize thus far in the war! It probably saved the "Constitution," "Old Ironsides," from capture by the traitors. It probably saved Annapolis, and kept Maryland open without bloodshed.

As soon as the Massachusetts Regiment had made prize of the ferry-boat, a call was made for engineers to run her. Some twenty men at once stepped to the front. We of the New York Seventh afterwards concluded that whatever was needed in the way of skill or handicraft could be found among those brother Yankees. They were the men to make armies of.

They could tailor for themselves, shoe themselves, do their own blacksmithing, gunsmithing, and all other work that calls for sturdy arms and nimble fingers. In fact, I have such profound confidence in the universal accomplishment of the Massachusetts Eighth, that I have no doubt, if the order were, "Poets to the front!" "Painters present arms!" "Sculptors charge bayonets!" a baker's dozen out of every company would respond.

Well, to go on with their story, — when they had taken their prize, they drove her straight down-stream to Annapolis, the nearest point to Washington. There they found the Naval Academy in danger of attack, and Old Ironsides — serving as a practice-ship for the future midshipmen — also exposed. The call was now for seamen to man the old craft and save her from a worse enemy than her prototype met in the "Guerrière." Seamen? Of course! They were Marblehead men, Gloucester men, Beverly men, seamen all, *par excellence!* They clapped on the frigate to aid the middies, and by-and-by started her out into the stream. In doing this their own pilot took the chance to run them purposely on a shoal in the intricate channel. A great error of judgment on his part! as he perceived, when he found himself in irons and in confinement. "The days of trifling with traitors are over!" think the Eighth Regiment of Massachusetts.

But there they were, hard and fast on the shoal, when we came up. Nothing to nibble on but knobs of anthracite. Nothing to sleep on softer or cleaner than coal-dust. Nothing to drink but the brackish water under their keel. "Rather rough!" as they afterward patiently told us.

Meantime the Constitution had got hold of a tug, and was making her way to an anchorage where her guns commanded everything and everybody. Good and true men chuckled greatly over this. The stars and stripes also were still up at the fort at the Naval Academy.

Our dread, that, while we were off at sea, some great and perhaps fatal harm

place at table filled and every waiter ten deep with orders. So, being an old campaigner, I followed up the stream of provender to the fountain-head, the kitchen. Half a dozen other old campaigners were already there, most hospitably entertained by the cooks. They served us, hot and hot, with the best of their best, straight from the gridiron and the pan. I hope, if I live to breakfast again in the Lapierre House, that I may be allowed to help myself and choose for myself below-stairs.

When we rendezvoused at the train, we found that the orders were for every man to provide himself three days' rations in the neighborhood, and be ready for a start at a moment's notice.

A mountain of bread was already piled up in the station. I stuck my bayonet through a stout loaf, and, with a dozen comrades armed in the same way, went foraging about for other *vivres*.

It is a poor part of Philadelphia; but whatever they had in the shops or the houses seemed to be at our disposition.

I stopped at a corner shop to ask for pork, and was amicably assailed by an earnest dame,—Irish, I am pleased to say. She thrust her last loaf upon me, and sighed that it was not baked that morning for my "honor's service."

A little farther on, two kindly Quaker ladies compelled me to step in. "What could they do?" they asked eagerly. "They had no meat in the house; but could we eat eggs? They had in the house a dozen and a half, new-laid." So the pot to the fire, and the eggs boiled, and bagged by myself and that tall Saxon, my friend E., of the Sixth Company. While the eggs simmered, the two ladies thee-ed us prayerfully and tearfully, hoping that God would save our country from blood, unless blood must be shed to preserve Law and Liberty.

Nothing definite from Baltimore when we returned to the station. We stood by, waiting orders. About noon the Eighth Massachusetts Regiment took the train southward. Our regiment was ready to a man to try its strength with

the Plug Uglies. If there had been any voting on the subject, the plan to follow the straight road to Washington would have been accepted by acclamation. But the higher powers deemed that "the longest way round was the shortest way home," and no doubt their decision was wise. The event proved it.

At two o'clock came the word to "fall in." We handled our howitzers again, and marched down Jefferson Avenue to the steamer "Boston" to embark.

To embark for what port? For Washington, of course, finally; but by what route? That was to remain in doubt to us privates for a day or two.

The Boston is a steamer of the outside line from Philadelphia to New York. She just held our legion. We tramped on board, and were allotted about the craft from the top to the bottom story. We took tents, traps, and grub on board, and steamed away down the Delaware in the sweet afternoon of April. If ever the heavens smiled fair weather on any campaign, they have done so on ours.

THE "BOSTON."

SOLDIERS on shipboard are proverbially fish out of water. We could not be called by the good old nickname of "lobsters" by the crew. Our gray jackets saved the *sobriquet*. But we floundered about the crowded vessel like boiling victims in a pot. At last we found our places, and laid ourselves about the decks to tan or bronze or burn scarlet, according to complexion. There were plenty of cheeks of lobster-hue before next evening on the Boston.

A thousand young fellows turned loose on shipboard were sure to make themselves merry. Let the reader imagine that! We were like any other excursionists, except that the stacks of bright guns were always present to remind us of our errand, and regular guard-mounting and drill went on all the time. The young citizens growled or laughed at the minor hardships of the hasty outfit, and toughened rapidly to business.

After a patient hour of this, the word is given, we fall in, our two guns find their places at the right of the line of march, we move on through the thickening crowd.

At a great house on the left, as we pass the Astor Library, I see a handkerchief waving for me. Yes! it is she who made the sandwiches in my knapsack. They were a trifle too thick, as I afterwards discovered, but otherwise perfection. Be these my thanks and the thanks of hungry comrades who had bites of them!

At the corner of Great Jones Street we halted for half an hour,—then, everything ready, we marched down Broadway.

It was worth a life, that march. Only one who passed, as we did, through that tempest of cheers, two miles long, can know the terrible enthusiasm of the occasion. I could hardly hear the rattle of our own gun-carriages, and only once or twice the music of our band came to me muffled and quelled by the uproar. We knew now, if we had not before divined it, that our great city was with us as one man, utterly united in the great cause we were marching to sustain.

This grand fact I learned by two senses. If hundreds of thousands roared it into my ears, thousands slapped it into my back. My fellow-citizens smote me on the knapsack, as I went by at the gun-ropes, and encouraged me each in his own dialect. "Bully for you!" alternated with benedictions, in the proportion of two "bullies" to one blessing.

I was not so fortunate as to receive more substantial tokens of sympathy. But there were parting gifts showered on the regiment, enough to establish a variety-shop. Handkerchiefs, of course, came floating down upon us from the windows, like a snow. Pretty little gloves pelted us with love-taps. The sterner sex forced upon us pocket-knives new and jagged, combs, soap, slippers, boxes of matches, cigars by the dozen and the hundred, pipes to smoke shag and pipes to smoke Latakia, fruit, eggs, and sandwiches. One

fellow got a new purse with ten bright quarter-eagles.

At the corner of Grand Street, or thereabouts, a "bhoj" in red flannel shirt and black dress pantaloons, leaning back against the crowd with Herculean shoulders, called me,—*"Sahy, bully! take my dorg! he's one of the kind that holds till he draps."* This gentleman, with his animal, was instantly shoved back by the police, and the Seventh lost the "dorg."

These were the comic incidents of the march, but underlying all was the tragic sentiment that we might have tragic work presently to do. The news of the rascal attack in Baltimore on the Massachusetts Sixth had just come in. Ours might be the same chance. If there were any of us not in earnest before, the story of the day would steady us. So we said good-bye to Broadway, moved down Cortlandt Street under a bower of flags, and at half-past six shoved off in the ferry-boat.

Everybody has heard how Jersey City turned out and filled up the Railroad Station, like an opera-house, to give God-speed to us as a representative body, a guaranty of the unquestioning loyalty of the "conservative" class in New York. Everybody has heard how the State of New Jersey, along the railroad line, stood through the evening and the night to shout their quota of good wishes. At every station the Jerseymen were there, uproarious as Jerseymen, to shake our hands and wish us a happy despatch. I think I did not see a rod of ground without its man, from dusk till dawn, from the Hudson to the Delaware.

Upon the train we made a jolly night of it. All knew that the more a man sings, the better he is likely to fight. So we sang more than we slept, and, in fact, that has been our history ever since.

PHILADELPHIA.

At sunrise we were at the station in Philadelphia, and dismissed for an hour. Some hundreds of us made up Broad Street for the Lapierre House to breakfast. When I arrived, I found every

ton slaves. Dangerous knowledge must be excluded from without and from within. For the first end, the South Carolina legislature passed, in December, 1822, the act for the imprisonment of Northern colored seamen, which has since produced so much excitement. For the second object, the Grand Jury, about the same time, presented as a grievance "the number of schools which are kept within the city by persons of color," and proposed their prohibition. This was the encouragement given to the intellectual progress of the slaves; while, as a reward for betraying them, Pensil, the free colored man who advised with Devany, received a present of one thousand dollars, and Devany himself had what was rightly judged to be the higher gift of freedom, and was established in business, with liberal means, as a drayman. He is still living in Charleston, has thriven greatly in his vocation, and, according to the newspapers, enjoys the privilege of being the only man of property in the State whom a special statute exempts from taxation. It is something of a privilege, especially with secession impending. But those whom he betrayed to death have been exempt from taxation longer than he has.

More than a third of a century has passed since the incidents of this true story closed. It has not vanished from the memories of South Carolinians, though the printed pages which once told it have been gradually withdrawn from sight. The intense avidity which at first grasped at every incident of the great insurrectionary plot was succeeded by a distaste for the memory of the tale; and the official reports which told what slaves had once planned and dared have now come to be among the rarest of American historical documents. In 1841, a friend of the writer, then visiting South Carolina, heard from her hostess for the first time the events which are recounted here. On asking to see the reports of the trials, she was cautiously told that the only copy in the house, after being carefully kept for years under lock and key, had been burnt at last, lest it should reach the dangerous eyes of the slaves. The same thing had happened, it was added, in many other families. This partially accounts for the great difficulty now to be found in obtaining a single copy of either publication; and this is why, to the readers of American history, Denmark Vesey and Peter Poyas have been heretofore but the shadows of names.

NEW YORK SEVENTH REGIMENT.

OUR MARCH TO WASHINGTON.

THROUGH THE CITY.

At three o'clock in the afternoon of Friday, April 19th, we took our peacemaker, a neat twelve-pound brass howitzer, down from the Seventh Regiment Armory, and stationed it in the rear of the building. The twin peacemaker is somewhere near us, but entirely hidden by this enormous crowd.

An enormous crowd! of both sexes,

of every age and condition. The men offer all kinds of truculent and patriotic hopes; the women shed tears, and say, "God bless you, boys!"

This is a part of the town where bad-dish cigars prevail. But good or bad, I am ordered to keep all away from the gun. So the throng stands back, peers curiously over the heads of its junior members, and seems to be taking the measure of my coffin.

thought it was because they were not Baptists, and an Episcopal pamphleteer because they were not Episcopalians. It never seems to occur to any of these spectators that these people rebelled simply because they were slaves and wished to be free.

No doubt, there were enough special torches with which a man so skilful as Denmark Vesey could kindle up these dusky powder-magazines; but, after all, the permanent peril lay in the powder. So long as that existed, everything was incendiary. Any torn scrap in the street might contain a Missouri-Compromise speech, or a report of the last battle in St. Domingo, or one of those able letters of Boyer's which were winning the praise of all, or one of John Randolph's stirring speeches in England against the slave-trade. The very newspapers which reported the happy extinction of the insurrection by the hanging of the last conspirator, William Garner, reported also, with enthusiastic indignation, the massacre of the Greeks at Constantinople and at Scio; and then the Northern editors, breaking from their usual reticence, pointed out the inconsistency of Southern journals in printing, side by side, denunciations of Mohammedan slave-sales and advertisements of Christian ones.

Of course, the insurrection threw the whole slavery question open to the public. "We are sorry to see," said the "National Intelligencer" of August 31st, "that a discussion of the hateful Missouri question is likely to be revived, in consequence of the allusions to its supposed effect in producing the late servile insurrection in South Carolina." A member of the Board of Public Works of South Carolina published in the Baltimore "American Farmer" an essay urging the encouragement of white laborers, and hinting at the ultimate abolition of slavery, "if it should ever be thought desirable." More boldly still, a pamphlet appeared in Charleston under the signature of "Achates," arguing with remarkable sagacity and force against the whole system of slave-labor in towns, and pro-

posing that all slaves in Charleston should be sold or transferred to the plantations, and their places supplied by white labor. It is interesting to find many of the facts and arguments of Helper's "Impending Crisis" anticipated in this courageous tract, written under the pressure of a crisis which had just been so narrowly evaded. The author is described in the preface as "a soldier and patriot of the Revolution, whose name, did we feel ourselves at liberty to use it, would stamp a peculiar weight and value on his opinions." It was commonly attributed to General Thomas Pinckney.

Another pamphlet of the period, also published in Charleston, recommended as a practical cure for insurrection the copious administration of Episcopal Church services, and the prohibition of negroes from attending Fourth-of-July celebrations. On this last point it is more consistent than most pro-slavery arguments. "The celebration of the Fourth of July belongs *exclusively* to the white population of the United States. The American Revolution was a *family-quarrel among equals*. In this the negroes had no concern; their condition remained, and must remain, unchanged. They have no more to do with the celebration of that day than with the landing of the Pilgrims on the rock at Plymouth. It therefore seems to me improper to allow these people to be present on these occasions. In our speeches and orations, much, and sometimes more than is politically necessary, is said about personal liberty, which negro auditors know not how to apply, except by running the parallel with their own condition. They therefore imbibe false notions of their own personal rights, and give reality in their minds to what has no real existence. The peculiar state of our community must be steadily kept in view. This, I am gratified to learn, will in some measure be promoted by the institution of the South Carolina Association."

On the other hand, more stringent laws became obviously necessary to keep down the advancing intelligence of the Charles-

him, that the work of insurrection would go on; but as none but white persons were permitted to be present, I cannot tell whether he said it."

During all this time there was a guarded silence in the Charleston journals, which strongly contrasts with the extreme publicity at last given to the testimony. Even the "National Intelligencer," at Washington, passed lightly over the affair, and deprecated the publication of particulars. The Northern editors, on the other hand, eager for items, were constantly complaining of this reserve, and calling for further intelligence. "The Charleston papers," said the "Hartford Courant" of July 16th, "have been silent on the subject of the insurrection, but letters from this city state that it has created much alarm, and that two brigades of troops were under arms for some time to suppress any risings that might have taken place." "You will doubtless hear," wrote a Charleston correspondent of the same paper, just before, "many reports, and some exaggerated ones." "There was certainly a disposition to revolt, and some preparations made, principally by the plantation negroes, to take the city." "We hoped they would progress so far as to enable us to ascertain and punish the ringleaders." "Assure my friends that we feel in perfect security, although the number of nightly guards and other demonstrations may induce a belief among strangers to the contrary."

The strangers would have been very blind strangers, if they had not been more influenced by the actions of the Charlestonians than by their words. The original information was given on May 25th. The time passed, and the plot failed on June 16th. A plan for its revival on July 2d proved abortive. Yet a letter from Charleston in the "Hartford Courant" of August 6th, represented the panic as unabated: "Great preparations are making, and all the military are put in preparation to guard against any attempt of the same kind again; but we have no apprehension of its being repeated." On August 10th, Governor Ben-

nett wrote the letter already mentioned, which was printed and distributed as a circular, its object being to deprecate undue alarm. "Every individual in the State is interested, whether in regard to his own property or the reputation of the State, in giving no more importance to the transaction than it justly merits." Yet five days after this,—two months after the first danger had passed,—a reinforcement of United States troops arrived at Fort Moultrie. And during the same month, several different attempts were made by small parties of armed negroes to capture the mails between Charleston and Savannah, and a reward of two hundred dollars was offered for their detection.

The first official report of the trials was prepared by the Intendant, by request of the city council. It passed through four editions in a few months,—the first and fourth being published in Charleston, and the second and third in Boston. Being, however, but a brief pamphlet, it did not satisfy the public curiosity, and in October of the same year, (1822,) a larger volume appeared at Charleston, edited by the magistrates who presided at the trials, Lionel H. Kennedy and Thomas Parker. It contains the evidence in full, and a separate narrative of the whole affair, more candid and lucid than any other which I have found in the newspapers or pamphlets of the day. It exhibits that rarest of all qualities in a slave-community, a willingness to look facts in the face. This narrative has been faithfully followed, with the aid of such cross-lights as could be secured from many other quarters, in preparing the present history.

The editor of the first official report racked his brains to discover the special causes of the revolt, and never trusted himself to allude to the general one. The negroes rebelled because they were deluded by Congressional eloquence, or because they were excited by a Church squabble, or because they had been spoilt by mistaken indulgences, such as being allowed to learn to read, "a misguided benevolence," as he pronounces it. So the Baptist Convention seems to have

The number enlisted was counted by thousands; yet for twenty-nine days after the first treachery, and during twenty days of official examination, only fifteen of the conspirators were ferreted out. Meanwhile the informers' names had to be concealed with the utmost secrecy, — they were in peril of their lives from the slaves, — William Paul scarcely dared to go beyond the door-step, — and the names of important witnesses examined in June were still suppressed in the official report published in October. That a conspiracy on so large a scale should have existed in embryo during four years, and in an active form for several months, and yet have been so well managed, that, after actual betrayal, the authorities were again thrown off their guard and the plot nearly brought to a head again, — this certainly shows extraordinary ability in the leaders, and a talent for concerted action on the part of slaves generally with which they have hardly been credited.

And it is also to be noted, that the range of the conspiracy extended far beyond Charleston. It was proved that Frank, slave of Mr. Ferguson, living nearly forty miles from the city, had boasted of having enlisted four plantations in his immediate neighborhood. It was in evidence that the insurgents "were trying all round the country, from Georgetown and Santee round about to Combahee, to get people"; and after the trials, it was satisfactorily established that Vesey "had been in the country as far north as South Santee, and southwardly as far as the Euhaws, which is between seventy and eighty miles from the city." Mr. Ferguson himself testified that the good order of any gang was no evidence of their ignorance of the plot, since the behavior of his own initiated slaves had been unexceptionable, in accordance with Vesey's directions.

With such an organization and such materials, there was nothing in the plan which could be pronounced incredible or impracticable. There is no reason why they should not have taken the city. After all the Governor's entreaties as to

moderate language, the authorities were obliged to admit that South Carolina had been saved from a "horrible catastrophe." "For although success could not possibly have attended the conspirators, yet, before their suppression, Charleston would probably have been wrapped in flames, many valuable lives would have been sacrificed, and an immense loss of property sustained by the citizens, even though no other distressing occurrences were experienced by them, while the plantations in the lower country would have been disorganized, and the agricultural interests have sustained an enormous loss." The Northern journals had already expressed still greater anxieties. "It appears," said the "New York Commercial Advertiser," "that, but for the timely disclosure, the whole of that State would in a few days have witnessed the horrid spectacle once witnessed in St. Domingo."

My friend David Lee Child has kindly communicated to me a few memoranda of a conversation held long since with a free colored man who had worked in Vesey's shop during the time of the insurrection, and these generally confirm the official narratives. "I was a young man then," he said, "and, owing to the policy of preventing communication between free colored people and slaves, I had little opportunity of ascertaining how the slaves felt about it. I know that several of them were abused in the street, and some put in prison, for appearing in sack-cloth. There was an ordinance of the city, that any slave who wore a badge of mourning should be imprisoned and flogged. They generally got the law, which is thirty-nine lashes, but sometimes it was according to the decision of the Court." "I heard, at the time, of arms being buried in coffins at Sullivan's Island." "In the time of the insurrection, the slaves were tried in a small room, in the jail where they were confined. No colored person was allowed to go within two squares of the prison. Those two squares were filled with troops, five thousand of whom were on duty, day and night. I was told, Vesey said to those that tried

Not so with Denmark Vesey. The plans of years were frustrated; his own life and liberty were thrown away; many others were sacrificed through his leadership; and one more added to the list of unsuccessful insurrections. All these disastrous certainties he faced calmly, and gave his whole mind composedly to the conducting of his defence. With his arms tightly folded and his eyes fixed on the floor, he attentively followed every item of the testimony. He heard the witnesses examined by the Court, and cross-examined by his own counsel, and it is evident from the narrative of the presiding judge that he showed no small skill and policy in the searching cross-examination which he then applied. The fears, the feelings, the consciences of those who had betrayed him, all were in turn appealed to; but the facts were too overpowering, and it was too late to aid his comrades or himself. Then turning to the Court, he skilfully availed himself of the point which had so much impressed the community, the intrinsic improbability that a man in his position of freedom and prosperity should sacrifice everything to free other people. If they thought it so incredible, why not give him the benefit of the incredibility? The act being, as they stated, one of infatuation, why convict him of it on the bare word of men who, by their own showing, had not only shared the infatuation, but proved traitors to it? An ingenious defence,—indeed, the only one which could by any possibility be suggested, anterior to the days of Choate and somnambulism; but in vain. He was sentenced, and it was not, apparently, till the judge reproached him for the destruction he had brought on his followers that he showed any sign of emotion. Then the tears came into his eyes. But he said not another word.

The executions took place on five different days, and, bad as they were, they might have been worse. After the imaginary Negro Plot of New York, in 1741, thirteen negroes had been judicially burned alive; two had suffered the same sentence at Charleston in 1808; and it was

undoubtedly some mark of progress that in this case the gallows took the place of the flames. Six were hanged on July 2d, upon Blake's lands, near Charleston,—Denmark Vesey, Peter Poyas, Jesse, Ned, Rolla, and Batteau,—the last three being slaves of the Governor himself. Gullah Jack and John were executed "on the Lines," near Charleston, on July 12th, and twenty-two more on July 26th. Four others suffered their fate on July 30th; and one more, William Garner, effected a temporary escape, was captured, and tried by a different court, and was finally executed on August 9th.

The self-control of these men did not desert them at their execution. When the six leaders suffered death, the report says, Peter Poyas repeated his charge of secrecy. "Do not open your lips; die silent, as you shall see me do": and all obeyed. And though afterwards, as the particulars of the plot became better known, there was less inducement to conceal, yet every one of the thirty-five seems to have met his fate bravely, except the conjurer. Governor Bennett, in his letter, expresses much dissatisfaction at the small amount learned from the participants. "To the last hour of the existence of several who appeared to be conspicuous actors in the drama, they were pressingly importuned to make farther confessions,"—this "importuning" being more clearly defined in a letter of Mr. Ferguson, owner of two of the slaves, as "having them severely corrected." Yet so little was obtained, that the Governor was compelled to admit at last that the really essential features of the plot were not known to any of the informers.

It is to be remembered that the plot failed because a man unauthorized and incompetent, William Paul, undertook to make enlistments on his own account. He blundered on one of precisely that class of men—favored house-servants—whom his leaders had expressly reserved for more skilful manipulations. He being thus detected, one would have supposed that the discovery of many accomplices would at once have followed.

haps better. In all, thirty-five were sentenced to death, thirty-four to transportation, twenty-seven acquitted by the Court, and twenty-five discharged without trial, by the Committee of Vigilance, making in all one hundred and twenty-one.

The sentences pronounced by Judge Kennedy upon the leading rebels, while paying a high tribute to their previous character, of course bring all law and all Scripture to prove the magnitude of their crime. "It is a melancholy fact," he says, "that those servants in whom we reposed the most unlimited confidence have been the principal actors in this wicked scheme." Then he rises into earnest appeals. "Are you incapable of the heavenly influence of that gospel all whose paths are peace? It was to reconcile us to our destiny on earth, and to enable us to discharge with fidelity all our duties, whether as master or servant, that those inspired precepts were imparted by Heaven to fallen man." And so on.

To these reasonings the prisoners had, of course, nothing to say; but the official reports bear the strongest testimony to their fortitude. "Rolla, when arraigned, affected not to understand the charge against him, and when it was at his request further explained to him, assumed, with wonderful adroitness, astonishment and surprise. He was remarkable, throughout his trial, for great presence and composure of mind. When he was informed he was convicted, and was advised to prepare for death, though he had previously (but after his trial) confessed his guilt, he appeared perfectly confounded, but exhibited no signs of fear. In Ned's behavior there was nothing remarkable; but his countenance was stern and immovable, even whilst he was receiving the sentence of death: from his looks it was impossible to discover or conjecture what were his feelings. Not so with Peter; for in his countenance were strongly marked disappointed ambition, revenge, indignation, and an anxiety to know how far the discoveries had extended; and the same emotions were exhibited in his con-

duct. He did not appear to fear personal consequences, for his whole behavior indicated the reverse; but exhibited an evident anxiety for the success of their plan, in which his whole soul was embarked. His countenance and behavior were the same when he received his sentence, and his only words were, on retiring, 'I suppose you 'll let me see my wife and family before I die?' and that not in a supplicating tone. When he was asked, a day or two after, if it was possible he could wish to see his master and family murdered, who had treated him so kindly, he only replied to the question by a smile. Monday's behavior was not peculiar. When he was before the Court, his arms were folded; he heard the testimony given against him, and received his sentence with the utmost firmness and composure. But no description can accurately convey to others the impression which the trial, defence, and appearance of Gullah Jack made on those who witnessed the workings of his cunning and rude address. When arrested and brought before the Court, in company with another African named Jack, the property of the estate of Pritchard, he assumed so much ignorance, and looked and acted the fool so well, that some of the Court could not believe that this was the necromancer who was sought after. This conduct he continued when on his trial, until he saw the witnesses and heard the testimony as it progressed against him, when, in an instant, his countenance was lighted up as if by lightning, and his wildness and vehemence of gesture, and the malignant glance with which he eyed the witnesses who appeared against him, all indicated the savage, who, indeed, had been *caught*, but not *tamed*. His courage, however, soon forsook him. When he received sentence of death, he earnestly implored that a fortnight longer might be allowed him, and then a week longer, which he continued earnestly to solicit until he was taken from the court-room to his cell; and when he was carried to execution, he gave up his spirit without firmness or composure."

the case before them, with a list of prisoners and witnesses. By a vote of the Court, all spectators were excluded, except the owners and counsel of the slaves concerned. No other colored person was allowed to enter the jail, and a strong guard of soldiers was kept always on duty around the building. Under these general arrangements the trials proceeded with elaborate formality, though with some variations from ordinary usage, — as was, indeed, required by the statute.

For instance, the law provided that the testimony of any Indian or slave could be received, *without oath*, against a slave or free colored person, although it was not valid, even under oath, against a white. But it is best to quote the official language in respect to the rules adopted. "As the Court had been organized under a statute of a peculiar and local character, and intended for the government of a distinct class of persons in the community, they were bound to conform their proceedings to its provisions, which depart in many essential features from the principles of the Common Law and some of the settled rules of evidence. The Court, however, determined to adopt those rules, whenever they were not repugnant to nor expressly excepted by that statute, nor inconsistent with the local situation and policy of the State; and laid down for their own government the following regulations: First, that no slave should be tried except in the presence of his owner or his counsel, and that notice should be given in every case at least one day before the trial; second, that the testimony of one witness, unsupported by additional evidence or by circumstances, should lead to no conviction of a *capital* nature; third, that the witnesses should be confronted with the accused and with each other in every case, except where testimony was given under a solemn pledge that the names of the witnesses should not be divulged, — as they declared, in some instances, that they apprehended being murdered by the blacks, if it was known that they had volunteered their evidence; fourth, that the pris-

whenever this was requested by the owners of the slaves, or by the prisoners themselves, if free; fifth, that the statements or defences of the accused should be heard in every case, and they be permitted themselves to examine any witness they thought proper."

It is singular to observe how entirely these rules seem to concede that a slave's life has no sort of value to himself, but only to his master. His master, not he himself, must choose whether it be worth while to employ counsel. His master, not his mother or his wife, must be present at the trial. So far is this carried, that the provision to exclude "persons who had no particular interest in the slaves accused" seems to have excluded every acknowledged relative they had in the world, and admitted only those who had invested in them so many dollars. And yet the very first section of that part of the statute under which they were tried lays down an explicit recognition of their humanity. "And whereas natural justice forbids that any *person*, of what condition soever, should be condemned unheard." So thoroughly, in the whole report, are the ideas of person and chattel intermingled, that, when Governor Bennett petitions for mitigation of sentence in the case of his slave Batteau, and closes, "I ask this, gentlemen, as an individual suffering a severe and distressing loss," it is really impossible to decide whether the predominant emotion be affectional or financial.

It is a matter of painful necessity to acknowledge that the proceedings of all slave-tribunals justify the honest admission of Governor Adams of South Carolina, in his legislative message of 1855: — "The administration of our laws, in relation to our colored population, by our courts of magistrates and freeholders, as these courts are at present constituted, calls loudly for reform. Their decisions are rarely in conformity with justice or humanity." This trial, as reported by the justices themselves, seems to have been no worse than the average, — per-

danger was finally made public. "The scenes I witnessed," says one who has since narrated the circumstances, "and the declaration of the impending danger that met us at all times and on all occasions, forced the conviction that never were an entire people more thoroughly alarmed than were the people of Charleston at that time. . . . During the excitement and the trial of the supposed conspirators, rumor proclaimed all, and doubtless more than all, the horrors of the plot. The city was to be fired in every quarter, the arsenal in the immediate vicinity was to be broken open and the arms distributed to the insurgents, and an universal massacre of the white inhabitants to take place. Nor did there seem to be any doubt in the mind of the people that such would actually have been the result, had not the plot fortunately been detected before the time appointed for the outbreak. It was believed, as a matter of course, that every black in the city would join in the insurrection, and that, if the original design had been attempted, and the city taken by surprise, the negroes would have achieved a complete and easy victory. Nor does it seem at all impossible that such might have been or yet may be the case, if any well-arranged and resolute rising should take place."

Indeed, this universal admission, that the slaves were ready to take part in any desperate enterprise, was one of the most startling aspects of the affair. The authorities say that the two principal state's evidence declared that "they never spoke to any person of color on the subject, or knew of any one who had been spoken to by the other leaders, who withheld his assent." And the conspirators seem to have been perfectly satisfied that all the remaining slaves would enter their ranks upon the slightest suggestion. "Let us assemble a sufficient number to commence the work with spirit, we'll not want men; they'll fall in behind us fast enough." And as an illustration of this readiness, the official re-

port mentions a slave who had belonged to one master for sixteen years, sustaining a high character for fidelity and affection, who had twice travelled with him through the Northern States, resisting every solicitation to escape, and who yet was very deeply concerned in the insurrection, though knowing it to involve the probable destruction of the whole family with whom he lived.

One singular circumstance followed the first rumors of the plot. Several white men, said to be of low and unprincipled character, at once began to make interest with the supposed leaders among the slaves, either from genuine sympathy, or with the intention of betraying them for money, or of profiting by the insurrection, should it succeed. Four of these were brought to trial; but the official report expresses the opinion that many more might have been discovered but for the inadmissibility of slave-testimony against whites. Indeed, the evidence against even these four was insufficient for a capital conviction, although one was overheard, through stratagem, by the Intendant himself, and arrested on the spot. This man was a Scotchman, another a Spaniard, a third a German, and the fourth a Carolinian. The last had for thirty years kept a shop in the neighborhood of Charleston; he was proved to have asserted that "the negroes had as much right to fight for their liberty as the white people," had offered to head them in the enterprise, and had said that in three weeks he would have two thousand men. But in no case, it appears, did these men obtain the confidence of the slaves, and the whole plot was conceived and organized, so far as appears, without the slightest coöperation from any white man.

The trial of the conspirators began on Wednesday, June 19th. At the request of the Intendant, Justices Kennedy and Parker summoned five freeholders (Messrs. Drayton, Heyward, Pringle, Legaré, and Turnbull) to constitute a court, under the provisions of the act "for the better ordering and governing negroes and other slaves." The Intendant laid

small timepieces? or is it the picture on the back?" said Laura.

"Oh, either. I was thinking of a beauty I saw at Crosby's yesterday, with the *Madoñna della Seggiola* on the back. Now it is a good thing to have such a picture about one, any way. I looked at this through the microscope. It was surprisingly well done; and I suppose the watches are as good as most."

"Better than yours and mine, Del?" said Laura, demurely.

"Why, no,—I suppose not so good. But I was thinking more of the picture."

"Oh!" said Laura.

I was on the point of asking what she thought of Knight's Shakspeare, when the bell rang and Polly brought up Miss Russell's card.

Miss Russell was good and pretty, with a peach-bloom complexion, soft blue eyes, and curling auburn hair. Still those were articles that could not well be appraised, as I thought the first minute after we were seated in the parlor. But she had over her shoulders a cashmere scarf, which Mr. Russell had brought from India himself, which was therefore a genuine article, and which, to crown all, cost him only fifty dollars. It would readily bring thrice that sum in Boston, Miss Russell said. But such chances were always occurring. Then she described how the shawls were all thrown in a mess together in a room, and how the captains of vessels bought them at hap-hazard, without knowing anything about their value or their relative fineness, and how you could often, if you knew about the goods, get great bargains. It was a good way to send out fifty or a hundred dollars by some captain you could trust for taste, or the captain's wife. But it was generally a mere chance. Sometimes there would be bought a great old shawl that had been wound round the naked waist and shoulders of some Indian till it was all soiled and worn. That would have to be cut up into little neck-scarfs. But sometimes, too, you got them quite new. Papa knew about dry goods, luckily, and selected a nice one.

Part of this was repulsive,—but, again,

part of it attractive. We don't expect to be the cheated ones ourselves.

The bell rang again, and this time Lieutenant Clarence Herbert entered on tiptoe: not of expectation particularly, but he had a way of tiptoeing which had been the fashion before he went to sea the last time, and which he resumed on his return, without noticing that in the mean time the fashion had gone by, and everybody stood straight and square on his feet. The effect, like all just-gone-by fashions, was to make him look ridiculous; and it required some self-control on our part to do him the justice of remembering that he could be quite brilliant when he pleased, was musical and sentimental. He had a good name, as I sighed in recalling.

We talked on and on, instinctively keeping near the ground, and hopping from bough to bough of daily facts.

When they were both gone, we rejoiced, and went up-stairs again to our work and our rocking. Laura hummed,—

"The visit paid, with ecstasy we come,
As from a seven-years' transportation, home,
And there resume the unembarrassed brow,
Recovering what we lost, we know not how,"—

"What is it?"—

"Expression,—and the privilege of thought."

"What an idea Louisa Russell always gives one of clothes!" said Laura. "I never remember the least thing she says. I would almost as soon have in the house one of those wire-women they keep in the shops to hang shawls on, for anything she has to say."

"I know it," I answered. "But, to tell the truth, Laura, there was something very interesting about her clothes to me to-day. That scarf! Don't you think, Laura, that an India scarf is always handsome?"

"Always handsome? What! all colors and qualities?"

"Of course not. I mean a handsome one,—like Louisa Russell's."

"Why, yes, Del. A handsome scarf is always handsome,—that is, until it is defaced or worn out. What a literal mood you are in just now!"

"Well, Laura,"—I hesitated, and then

added slowly, "don't you think that an India scarf has become almost a matter of necessity? I mean, that everybody has one?"

"In Boston, you mean. I understand the New York traders say they sell ten cashmere shawls to Boston people where they do one to a New-Yorker."

"Mrs. Harris told me, Laura, that she *could not* do without one. She says she considers them a real necessary of life. She has lost four of those little neck-scarfs, and, she says, she just goes and buys another. Her neck is always cold just there."

"Is it, really?" said Laura, dryly. "I suppose nothing short of cashmere could possibly warm it!"

"Well, it is a pretty thing for a present, any way," said I, rather impatiently; for I had settled on a scarf as unexceptionable in most respects. There was the bargain, to begin with. Then it was always a good thing to hand down to one's heirs. The Gores had a long one that belonged to their grandmamma, and they could draw it through a gold ring. It was good to wear, and good to leave. Indicated blood, too,—and — and — In short, a great deal of nonsense was on the end of my tongue, waiting my leave to slip off, when Laura said,—

"Didn't Lieutenant Herbert say he would bring you Darley's 'Margaret'?"

"Yes,—he is to bring it to-morrow. What a pretty name Clarence Herbert is! Lieutenant Clarence Herbert,—there 's a good name for you! How many pretty names there are!"

"You wouldn't be at a loss to name boys," said Laura, laughing,— "like Mr. Stickney, who named his boys One, Two, and Three. Think of going by the name of One Stickney!"

"That isn't so bad as to be named 'The Fifteenth of March.' And that was a real name, given to a girl who was born at sea. I wonder what *she* was called 'for short.'"

"Sweet fifteen, perhaps."

"That would do. Yes,—Herbert, Robert," said I, musingly, "and Philip, and

Arthur, and Algernon, Alfred, Sidney, Howard, Rupert" —

"Oh, don't, Del! You are foolish, now."

"How, Laura?" said I, consciously.

"Why don't you say America?"

"Oh, what a fall!"

"Enough better than your fine Lieutenant, Del, with his taste, and his sentiments, and his fine bows, and 'his infinite deal of nothing.'"

I sighed and said nothing. The name-fancies had gone by in long procession. America had buried them all, and stamped sternly on their graves.

"What made you ask about Darley's 'Margaret,' Laura?"

"Oh,—only I wanted to see it."

"Don't you think," said I, suddenly reviving with a new idea, "that a portfolio of engravings is a handsome thing to have in one's parlor or library? Add to it, you know, from time to time; but begin with 'Margaret,' perhaps, and Retzsch's 'Hamlet' or 'Faust,'—or a collection of fine wood engravings, such as Mrs. Harris has,—and perhaps one of Albert Dürer's ugly things to show off with. What do you think of it, Laura?"

"Do you ever look at Mrs. Harris's nowadays, Del?"

"Why, no,—I can't say I do, now. But I have looked at them when people were there. How she would shrug and shiver when they *would* put their fingers on her nice engravings, and soil, or bend and break them at the corners! Somebody asked her once, all the time breaking up a fine Bridgewater Madonna she had just given forty dollars for, 'What is this engraving worth, now?' She answered, coldly,—'Five minutes ago I thought it worth forty dollars: now I would take forty cents for it.'"

"Not very polite, I should say," said Laura. "And rather cruel too, on the whole; since the offence was doubtless the result of ignorance only."

"I know. But Mrs. Harris said she was so vexed she could not restrain herself; and besides, she would infinitely prefer that he should be mortally offended,

at least to the point of losing his acquaintance, to having her best pictures spoiled. She said he cost too much altogether."

"She should have the corners covered somehow. To be sure, it would be better for people to learn how to treat nice engravings, — but they won't; and every day somebody comes to see you, and talks excellent sense, all the while either rolling up your last 'Art Journal,' or breaking the face of Bryant's portrait in, or some equal mischief. I don't think engravings pay, to keep, — on the whole; do you, Del?" And Laura smiled while she rocked.

"Well, perhaps not. I am sure I shouldn't be amiable enough to have mine thumb'd and ruined; and certainly, if they are only to be kept in a portfolio, it seems hardly worth while."

"So I think," said Laura.

This vexatious consideration — for so it had become — of how I should spend my aunt's money, came at length almost to outweigh the pleasure of having it to spend. It was perhaps a little annoyance, at first, but by repetition became

of course great. The prick of a pin is nothing; but if it prick three weeks, sleeping and waking, "there is differences, look you!"

"What shall I do with it?" became a serious matter. Suppose I left the regions of art and beauty particularly, and came back and down to what would be suitable on the whole, and agreeable to my aunt, whose taste was evidently beyond what Albany could afford, or she would not have sent me to the Modern Athens to buy the right thing. Nothing that would break; else, *Sèvres china* would be nice: I might get a small plate, or a dish, for the money. Clothes wear out. Furniture, — you don't want to say, "This chair, or this bureau or looking-glass, is my Aunt Allen's gift." No, indeed! It must be something uncommon, *recherché*, tasteful, durable, and, if possible, something that will show well and sound well always. If it were only to spend the money, of course I could buy a carpet or fire-set with it. And off went my bewildered head again on a tour of observation.

[To be continued.]

HARBORS OF THE GREAT LAKES.

IN a recent article upon "The Great Lakes,"* we remarked, that, from the conformation of their shores, natural harbors are of rare occurrence. Consequently, for the protection and convenience of commerce, a system of artificial harbors has been adopted by the Federal Government, and appropriations have been made from time to time by Congress for this purpose; and officers of the United States Engineer Corps have been appointed to carry on the work. It is to some extent a new and peculiar kind of engineering, caused by the peculiar conditions of the case.

* See *Atlantic Monthly* for February.

Most of the lake-towns are built upon rivers which empty into the lakes, and these rivers are usually obstructed at their mouths by bars of sand and clay. The formation of these bars is due to several causes. The principal one is this:—The shores of the lakes being usually composed of sand, this is carried along by the shore-currents of the lake and deposited at the river-mouths. Another cause of these obstructions may be found in the fact, that the currents of the rivers are constantly bringing down with them an amount of soil, which is deposited at the point where the current meets the still waters of the lake. A third cause,

as we are told by Col. Graham, in his Report for 1855, is the following:—

“Although the great depth of Lake Michigan prevents the surface from freezing, yet the ice accumulates in large bodies in the shallow water near the shores, and is driven by the wind into the mouths of the rivers. A barrier being thus formed to the force of the lake-waves, the sudden check of velocity causes them to deposit a portion of the silt they hold in suspension upon the upper surface of this stratum of ice. By repeated accumulations in this way, the weight becomes sufficient to sink the whole mass to the bottom. There it rests, together with other strata, which are sunk in the same way, until the channel is obstructed by the combined masses of ice and silt. In the spring, when the ice melts, the silt is dropped to the bottom, which, combined with that constantly deposited by the lake-shore currents, causes a greater accumulation in winter than at any other season.”

These bars at the natural river-mouths have frequently not more than two or three feet of water; and some of them have entirely closed up the entrance, although at a short distance inside there may be a depth of from twelve to fifteen or even twenty feet of water.

The channels of these rivers have also a tendency to be deflected from their courses, on entering the lake, by the shore-currents, which, driven before the prevailing winds, bend the channel off at right angles, and, carrying it parallel with the lake-shore, form a long spit of sand between the river and the lake.

Thus, in constructing an artificial harbor at one of these river-mouths, the first object to be aimed at is to prevent the further formation of a bar; and the second, to deepen and improve the river-channel. The former is attained by running out piers into the lake from the mouth of the river; and the latter, by the use of a dredge-boat, to cut through the obstructions.

These piers are formed of a line of

cribs, built of timber, and loaded with stone to keep them in place, and enable them to resist the action of the waves. They are usually built about twenty or twenty-five feet wide, and from thirty to forty feet long. They are strengthened by cross-ties of timber, uniting together the outward walls of the crib. Piles are usually driven down into the clay, inside of these cribs, and they are covered with a deck or flooring of plank. As the action of the currents is constantly tending to remove the bed on which the cribs rest, and thus cause them to tilt over, their bottoms are constructed in a sort of open lattice-work, with openings large enough to allow the stones with which they are loaded to drop through and supply the place of the earth which is washed away.

The effect of these piers is to concentrate and deepen the river-channel, and to retard the formation of bars, though they do not wholly prevent it. In the spring it is often necessary to employ the services of a steam-dredge-boat to cut through the bar, before vessels can pass out.

The portion of these cribs above water is found not to last more than ten or fifteen years; so that it is now recommended to replace them with piers of stone masonry, wherever the material is easy of access.

As to the cause of the shore-currents which produce this mischief, Col. Graham says, in one of his Reports, —

“The great power which operates to produce the littoral or shore currents of the lake is the prevailing winds; just as the great ocean current called the Gulf Stream is produced by the trade-winds. The first-mentioned phenomenon is but a miniature demonstration of the same principle which is more boldly shown in the other. The wind, acting in its most prevalent lakeward direction, combined with this littoral current, produces the great power which is constantly forming sand-bars and shoals at all the harbor-entrances on our extensive lake-coasts. To counteract the effect of this great

power, upon a given point, is what we have chiefly to contend for in planning the harbor-piers for all the lake-ports intended to be improved. The point which an engineer first aims at, in undertaking to plan any of these harbor-works, is to ascertain as nearly as possible the direction and force of the prevailing winds."

The length of the Chicago piers is as follows:—North pier, 3900 feet long, 24 feet wide; south pier, 1800 feet long, 24 feet wide; and they are placed 200 feet apart.

Harbors of this kind have been constructed at Chicago, Waukegan, Kenosha, Racine, Milwaukee, Sheboygan, Manitowoc, Michigan City, and St. Joseph, on Lake Michigan; at Clinton River, on Lake St. Clair; at Monroe, Sandusky, Huron, Vermilion, Black River, Cleveland, Grand River, Ashtabula, Conneaut, Erie, Dunkirk, and Buffalo, on Lake Erie; at Oak Orchard, Genesee River, Sodus Bay, Oswego, and Ogdensburg, on Lake Ontario.

For Lakes Huron and Superior it is believed that no appropriations have been made, the scanty population of their shores not seeming as yet to demand it, and those two lakes having in their numerous groups of islands more natural shelter for vessels than Michigan or Erie.

Besides these river-harbors, Col. Graham recommends to Government the construction at certain points on the lakes of sheltered roadsteads, or harbors of refuge, to which vessels may run for shelter in bad weather, when it may be difficult or dangerous to enter the river-mouths. These are proposed to be made by building breakwaters of crib-work, loaded with stone, and extending along the shore in a sufficient depth of water to admit vessels riding easily at anchor under their lee. Many lives and much property would undoubtedly be saved every year by such constructions; for it is a difficult matter for a vessel to enter these narrow rivers in a heavy gale of wind, and if she misses the entrance, she is very likely to go ashore.

Another very important work to the

navigation of the lakes is the deepening of the channel in Lake St. Clair.

Between Lakes Huron and Erie lies Lake St. Clair, a shallow sheet of water, some twenty miles in length, through which all the trade of the Upper Lakes is obliged to pass. At the mouth of the river which connects this lake with Huron, there is a delta of mud flats, with numerous channels, which in their deepest parts have not more than ten feet of water, and would be utterly impassable, were not the bottom of a soft and yielding mud, which permits the passage of vessels through it, under the impulse of steam or a strong wind.

Mr. James L. Barton, a gentleman long connected with the lake-commerce, thus wrote some years ago upon this subject to the Hon. Robert McClelland, then chairman of the House Committee on Commerce:—

"These difficulties are vastly increased from the almost impassable condition of the flats in Lake St. Clair. Here steamboats and vessels are daily compelled in all weather to lie fast aground, and shift their cargoes, passengers, and luggage into lighters, exposing life, health, and property to great hazard, and then by extraordinary heaving and hauling are enabled to get over. Indeed, so bad has this passage become, that one of the largest steamboats, after lying two or three days on these flats, everything taken from her into lighters, was unable, with the powerful aid of steam and everything else she could bring into service, to pass over; she was obliged to give her freight and passengers to a smaller boat, abandon the trip, and return to Buffalo. Other vessels have been compelled not only to take out all their cargoes, but even their chains and anchors have been stripped from them, before they could get over. To meet this difficulty as far as possible, the commercial men around these lakes have imposed a tax upon their shipping, to dredge out and deepen the channel through these flats."

Col. Graham, in one of his Reports to the Department, writes as follows upon

the importance of this improvement in a military point of view:—

“Since the opening of the Sault Ste. Marie Canal, the only obstacle to the co-operation of armed fleets, which in time of war would be placed upon Lakes Superior, Michigan, and Huron, with that which would be on Lake Erie, is at St. Clair flats. That obstacle removed, and a depth of channel of twelve feet obtained there, which might be increased to sixteen or eighteen feet by dredging, war-steamers of the largest class which would probably be placed on these lakes would have a free navigation from Buffalo at the foot of Lake Erie to Fond du Lac of Lake Superior.

“It would be very important that these fleets should have the power of concentration, either wholly or in part, at certain important points now rendered impracticable by these intervening flats. It would no doubt often be important as a measure of naval tactics alone. It would as often, again, be equally necessary in coöperating with our land-forces. It might even become necessary to depend on the navy to transport our land-forces rapidly from one point to another on different sides of the flats.

“When a work like this subserves the double purpose of military defence in times of war, and of promoting the interests of commerce between several of the States of the Union in time of peace, it would seem to have an increased claim to the attention of the General Government. If any work of improvement can be considered national in its character, the improvement of St. Clair flats, in the manner proposed, may, it is submitted, justly claim to be placed in that category.”

The plan proposed by the United States Engineers for this improvement is to construct two parallel piers of about four thousand feet long, as a permanent protection to the channel-way, and to dredge out a channel between these piers, six hundred feet wide and twelve feet deep. The cost of this work is estimated at about \$533,000. This may seem a large sum of money; but when it is considered that the

value of the commerce which passed over these flats in the year 1855 was ascertained by Col. Graham to be over two hundred and fifty millions of dollars, or considerably more than the whole exports of the Southern States for the year 1860, more than a million of dollars per day during the period of navigation, and that the increased charge on freights by reason of this obstruction is more than two millions of dollars per annum, which of course has to be paid by the producer, the investment of one quarter of that annual charge in a work which would do away with the tax might seem to be a measure of economy.

To show the importance of these lake-harbors, and the vast amount of commerce which depends upon them, and which has grown up within the last twenty years, we will give an extract from another of Col. Graham's very interesting Reports, upon the Chicago harbor.

“The present vast extent and rapidly increasing growth of the commerce of Chicago render it a matter of absolute necessity, in which not only Illinois, but also a number of her neighboring States are deeply interested, that her harbor should be kept in the best and most secure state of improvement, so as always to afford, during the season of navigation, a safe and easy entrance and departure for vessels drawing at least twelve feet water.

“The States which are thus directly interested in the port of Chicago are New York, Pennsylvania, Ohio, Michigan, Indiana, Illinois, Wisconsin, and Minnesota. The shores of all these are washed either by Lake Michigan or the other Great Lakes, with which Chicago has a direct and very extensive commerce through the St. Clair flats. The other States and Territories, which do not reach to the Great Lakes, but which are nevertheless greatly interested in the preservation of Chicago harbor, are Iowa and Missouri, and Nebraska and Kansas. A very large portion of the wheat and other grain produced in those last-mentioned States and Territories will be brought by rail-

roads to the port of Chicago, to be shipped thence to the Eastern Atlantic markets.

"The average amount of duties received annually at the Chicago custom-house for three years, 1853, '54, and '55, was \$377,797.86. The imports at Chicago for 1855 were,—

By lake shipment, . . .	\$100,752,304.41
" Illinois and Michigan Canal, . . .	7,426,262.35
" Railroads, . . .	88,481,497.90
Total imports in 1855, . . .	\$196,660,064.66

Exports.

By lake shipment, . . .	\$34,817,716.32
" Canal, . . .	79,614,042.70
" Railroads, . . .	98,521,262.86
Total value of exports in 1855, . . .	\$212,953,021.88

"Aggregate value of imports and exports at Chicago in the year 1855, \$409,613,086.54.*

"These statistics have been obtained by much labor and perseverance, with a view to the strictest accuracy. The result has amply justified the labor; for the published statistics of this commerce, which have gone forth to the country through the newspaper-press of the city, fall far short of its actual extent. On discovering this fact, I felt it to be a matter of duty to obtain the information directly from the only authentic sources, namely, the custom-house, mercantile, and warehouse records.

"Such are the claims which, in a civil point of view, are presented in behalf of the preservation of this harbor.

"There is still another, of not less magnitude, which is exclusively national. It is the influence it would have on the military defence of this part of our frontier, and the success of our arms in time of war. A single glance at the general map of the United States will be sufficient to show the importance of Chicago as a military position in conducting our operations in defence of our northwestern frontier in time of war.

* This is more than half of the value of all the exports and imports of the Union in the year 1860, King Cotton included.

"The great depth to which Lake Michigan here penetrates into a populous and fertile country totally devoid of fortifications would constitute an irresistible inducement to an enemy to aim with all his strength at this point, should he find it divested of any of the chief means of defence which are by all nations accorded to maritime ports of chief importance. He would find Chicago very much in such a state of weakness, if the harbor-works here are allowed to fall into a dilapidated condition; for then our naval force would not itself be secure in hovering about this port, or in cruising in its immediate vicinity for purposes of military defence. There is scarcely a week in the year that a fleet might not have occasion to take refuge from the lake-gales in a safe harbor. Deprived of this advantage, the only resort would be to take the open sea, and there buffet out the storms. On their subsiding, this defensive fleet, on attempting to resume its proper position, might find it occupied by an enemy, with all the advantages, in a combat, which ought to be secured to our side.

"An enemy, once possessing this harbor, could by a powerful fleet cover the landing of an army in pursuit of the conquest of territory, or designing to lay heavy pecuniary contributions upon the inhabitants. Peace is the proper time to prepare against such a catastrophe, and the protection of the harbor is the first element in the military defence that should be attended to. With the harbor secured permanently in good condition, the port of Chicago, through the enterprise of the people of Illinois and the surrounding States, will possess the elements of military strength in perhaps a greater degree than any other seaport in the Union.

"The immense reticulation of railroads, amounting to an aggregate length of 2720 miles, which are tributary to this port, now daily brings into Chicago the vast amount of agricultural produce exhibited in our tables. These are their peace-offerings to other nations. In the emergency of war, however, these rail-

roads could in a single day concentrate at Chicago troops enough for any military campaign, even if designed to cover our whole northwestern lake-frontier. Besides this, they would be the means of bringing here, daily, the munitions of war, and, above all, the necessary articles of subsistence and forage, to sustain an army of any magnitude, and to keep it in activity throughout any period that the war might last. In other words, Chicago would be in time of war the chief *point d'appui* of military operations in the Northwest."

In regard to the military importance of the command of the Great Lakes, history ought to teach us a lesson. At the breaking out of the War of 1812, this matter had been entirely neglected by our Government, in spite of the earnest appeals of the officer in command in this quarter. The consequence was the utter failure of the campaign against Canada, and the capture of the principal posts in the Northwest by the British, who had provided a naval force here, small, indeed, but sufficient where there was no opponent. It was not until the naval force organized by Commodore Perry swept the British from Lake Erie that General Harrison was able to recover the lost territory. From these considerations, the importance of strong fortifications in the Straits of Mackinac, to command the entrance of our Mediterranean, would seem to be evident.

The early advocates in Congress of these lake-improvements had to encounter a very violent opposition from various quarters.

First, the abstractionists of the Virginia school — men who "would cavil for the ninth part of a hair" — affirmed in general terms, that this Government was established with the view of regulating our external affairs, leaving all internal matters to be regulated by the States; and then, descending to particulars, declared, that, while Congress had the power to make improvements on salt water, it could do nothing on fresh. Further-

more, they argued, that, to give the power of spending money, the water must ebb and flow, and that the improvement must be below a port of entry, and not above. Another refinement of the Richmond sophists was this: — If a river be already navigable, Congress has the power to improve it, because it can "regulate" commerce; but if a sand-bar at its mouth prevents vessels from passing in or out, Congress cannot interfere, because that would be "creating," and not "regulating." Other Southern orators and their Northern followers denounced these appropriations as a system of plunder and an attack upon Southern rights, forgetting the fact, that, in these harbor and coast appropriations, the South, with a much smaller commerce than the North, had always claimed the larger share of expenditure. Thus, from 1825 to 1831,

New England received . . .	\$ 327,563.21
The Middle States, including the Lakes,	982,145.20
The South and Southwest . . .	2,233,813.18

Others joined in this opposition, from ignorance of the great commerce growing up on the lakes; and frequently, where bills have been passed by Congress, Southern influence has caused the Executive to veto them. In spite of all these obstacles, however, this great interest forced itself upon the attention of the country; and in July, 1847, a Convention, composed of delegates from eighteen States, met in Chicago, to concert measures for obtaining from Government the necessary improvements for Western rivers and harbors. This body sent an able memorial to Congress, and the result has been that larger appropriations have since been made. Still, however, much remains to be done, and it appears by the last Report of Colonel Graham, that his estimates for necessary work on lake harbors and roadsteads amount to nearly three millions of dollars, to which half a million should be added for the improvement of St. Clair flats, making an aggregate of three and a half millions of dollars, which is much needed at this time, for the safe navigation of the lakes.

It may be remarked, in this connection, that the lakes, with their tributary streams, are furnished with nearly a hundred light-houses, four or five of which are revolving, and the remainder fixed lights,—Lake Ontario having eight, Lake Erie twenty-three, Lake St. Clair two, Lake Huron nine, Lake Michigan thirty-two, and Lake Superior fourteen.

When we say that Chicago exports thirty millions of bushels of grain, and is the largest market in the world, many persons doubtless believe that these are merely Western figures of speech, and not figures of arithmetic. Let us, then, compare the exports of those European cities which have confessedly the largest corn-trade with those of Chicago.

1854.	Bushels of Grain.
Odessa, on the Black Sea,	7,040,000
Galatz and Brailow, do.,	8,320,000
Dantzic, on the Baltic,	4,408,000
Riga, do.,	4,000,000
St. Petersburg, Gulf of Finland,	7,200,000
Archangel, on the White Sea,	9,528,000
	40,496,000
Chicago, 1860,	30,000,000

or three-quarters of the amount of grain shipped by the seven largest corn-markets in Europe; and if we add to the shipments from Chicago the amount from other lake-ports last year, the aggregate will be found to exceed the shipments of those European cities by ten to twenty millions of bushels. Will any one doubt that the granary of the world is in the Mississippi Valley?

The internal commerce of the country, as it exists on the lakes, rivers, canals, and railroads, is not generally appreciated. It goes on noiselessly, and makes little show in comparison with the foreign trade; but its superiority may be seen by a few comparisons taken from a speech of the Hon. J. A. Rockwell, in Congress, in 1846.

In the year 1844, the value of goods transported on the New York Canals was \$92,750,874
The whole exports of the country in 1844. 99,715,179

The imports and exports of Cleveland the same year amounted to the sum of \$11,195,703
The whole Mediterranean and South American trade, in 1844, amounted to 11,202,548

And if, as we have shown, the trade of one of these lake-ports, in 1855, amounted to over four hundred millions, we may safely claim that the whole lake-commerce in 1860 exceeds the entire foreign trade of the United States.

A few statistics of the lake-steamboats may not be uninteresting. They are taken from Mr. Barton's letter, above referred to.

"The 'New York Mercantile Advertiser,' of May —, 1819, contained the following notice:—

"The swift steamboat Walk-in-the-Water is intended to make a voyage early in the summer from Buffalo, on Lake Erie, to Michilimackinac, on Lake Huron, for the conveyance of company. The trip has so near a resemblance to the famous Argonautic expedition in the heroic ages of Greece, that expectation is quite alive on the subject. Many of our most distinguished citizens are said to have already engaged their passage for this splendid adventure."

"Her speed may be judged from the fact that it took her ten days to make the trip from Buffalo to Detroit and back, and the charge was eighteen dollars.

"In 1826 or '27, the majestic waters of Lake Michigan were first ploughed by steam,—a boat having that year made an excursion with a pleasure-party to Green Bay. These pleasure-excursions were annually made by two or three boats, till the year 1832. This year, the necessities of the Government requiring the transportation of troops and supplies for the Indian war then existing, steamboats were chartered by the Government, and made their first appearance at Chicago, then an open roadstead, in which they were exposed to the full sweep of northerly storms the whole length of Lake Michigan.

"In 1833, eleven steamboats were employed on the lakes, which carried in that year 61,485 passengers, and only two trips were made to Chicago. Time of the round trip, twenty-five days.

"In 1834, eighteen boats were upon the lakes, and three trips were made to Chicago. The lake-business now increased so much, that in 1839 a regular line of eight boats was formed to run from Buffalo to Chicago.

"In 1840, the number of steamboats on the lakes was forty-eight. Cabin-passage from Buffalo to Chicago, twenty dollars."

About 1850 was the height of steamboat-prosperity on the lakes. There was at that time a line of sixteen first-class steamers from Buffalo to Chicago, leaving each port twice a day. The boats were elegantly fitted up, usually carried a band of music, and the table was equal to that of most American hotels. They usually made the voyage from Buffalo to Chicago in three or four days, and the charge was about ten dollars. They went crowded with passengers, four or five hundred not being an uncommon number, and their profits must have been large. The building of railroads from East to West, such as the Michigan Central and Southern lines, and the Lake Shore and Great Western, soon took away the passenger-business, and the

propellers could carry freight at lower rates than those expensive side-wheel boats could pretend to do. So they have gradually disappeared from these waters, until at present their number is very small, compared with what it was ten years ago, while the number of screw-propellers is increasing yearly, as well as that of sail-vessels.

Great as is this lake-commerce now, it is still but in its infancy. The productive capacities of most of the States which border upon these waters are only beginning to be developed. If in twenty-five years the trade has grown to its present proportions, what may be expected from it in twenty-five years more?

The secession of the Gulf States from the Union, and the closing of the Mississippi to the products of the Northwest, could we suppose such a state of things to be possible, would still more clearly show the value of the lake-route to the ocean.

Run the line of $36^{\circ} 30'$ across the continent from sea to sea, and build a wall upon it, if you will, higher than the old wall of China, and the Northern Confederacy will contain within itself every element of wealth and prosperity. Commerce and agriculture, manufactures and mines, forests and fisheries,—all are there.

THE MAN WHO NEVER WAS YOUNG.

AT Munich, last summer, I made the acquaintance of M——y, the famous painter. I had heard much of him during my stay there, and of his eccentricities. Just then it was quite the mode to circulate stories about him, and I listened to so many which were incredible that I was seized with an irresistible desire to meet him. I took, certainly, a roundabout way to accomplish this. M——y had a horror of

forming new acquaintances,—so it was said. He fled from letters of introduction coming in the ordinary way, as from the plague. Neither prince nor noble could win his intimacy or tempt him out of the pale of his daily routine. We are most eager in the pursuit of what is forbidden. I became the more determined to make M——y's acquaintance, the more difficult it seemed. After revolving the matter

carefully, I wrote to America to my intimate friend R., who I knew had subdued "the savage," as M—y was sometimes called, and begged him to put me in the way of getting hold of the strange fellow. In four or five weeks I received an answer. R. simply inclosed me his own card with the painter's name in pencil written on it,—advising me to go to the artist's house, deliver the card in person, and trust the result to fortune. Now I had heard, as before intimated, all sorts of stories about M—y. He was a bachelor, at least fifty years old. He lived by himself, as was reported,—in a superb house in an attractive part of the town. Gossip circulated various tales about its interior. Sometimes he reigned a Sardanapalus; at other times, a solitary queen graced but a temporary throne. He was addicted to various vices. He played high, lost generally large sums, and was in perpetual fear of the bailiffs. It was even reported that a royal decree had been issued to exempt so extraordinary a genius from ordinary arrest. In short, scarcely anything extravagant in the category of human occurrences was omitted in the daily changing detail of the scandal-loving society of Magnificent Munich. Only, no one ever imputed a mean or dishonorable thing to M—y; but for the rest, there was nothing he did not do or permit to be done. He painted when he liked and what he liked. His compositions, whether of landscape or history, were eagerly snatched up at extravagant prices,—for M—y was always exorbitant in his demands. Besides, when he chose, M—y painted portraits,—never on application, nor for the aristocracy or the rich,—but as the mood seized him, of some subject that attracted him while on his various excursions, or of some of his friends. Yet who *were* his friends? Could any one tell? I could not find a person who claimed to know him intimately. Everybody had something to praise him for: "But it was such a pity that"—and here would follow one of the thousand bits of gossip which were floating about and had been floating for years.

I had seen M—y often,—for he was no recluse, and could be met daily in the streets. His general appearance so fascinated me that the desire to know the man led me to adopt the course I have just mentioned. So much by way of explanation.

And now, furnished with the card and the advice contained in my friend R.'s letter, I proceeded one afternoon to the — Strasse, and sought admittance. A decent-looking servant-woman opened the door, and to my inquiry replied that Herr M—y was certainly at home, but whether engaged or not she could not answer. She ushered me into a small apartment on my right, which seemed intended for a reception-room. I was about sending some kind of message to the master of the house, for I did not like to trust the magic card out of my possession, when I heard a door open and shut at the end of the hall, and the quick, nervous step of a man along the passage. Seeing the servant standing by the door, M—y, for it was he, walked toward it and presented himself bodily before me. He wore a cap and dressing-gown, and looked vexed, but not ill-natured, on seeing me. I was much embarrassed, and, forgetting what I had proposed to say to him, I put R.'s card into his hand without a word. His eye lighted up instantly.

"You are from America?—You are welcome!—How is my friend?" were words rapidly enunciated. "Come with me,—leave your hat there,—so!"—and we mounted a flight of stairs, passed what I perceived to be a fine *salon*, then through a charming, domestic-looking apartment into one still smaller, around the walls of which hung three portraits. Portraits did I say? I can employ no other name,—but so life-like and so human, my first impression was that I was entering a room where were three living people.

"Never you mind these," exclaimed M—y, pleasantly, "but sit down there," pointing to a large *fauteuil*, "and tell me when you reached Munich, and if you will stay some time: then I can judge better how to do for you."

My face flushed, for I felt guilty at the little fraud I seemed to have practised on him. I hesitated only an instant, and then frankly told him the truth: how it was eighteen months since I left America; how I had been three months in Munich already; how, hearing so much about him and observing him frequently in the streets, I became anxious for his acquaintance, and had written to R. accordingly.

The man has the face of a child: cloud and sunshine pass rapidly over it. Pleasure and chagrin, sometimes anger, often-er joy, flit across it, swiftly as the flashing of a meteor. While I was making this explanation, he looked at me with a searching scrutiny,—at first angrily, then sadly, as if he were going to cry; but when I finished, he took my hand in both of his, and said, very seriously,—

“You are welcome just the same.”

Soon he commenced laughing: the oddity of the affair was just beginning to strike him. After conversing awhile, he said,—

“Ah, we shall like each other,—shall we not? Where do you stay? You shall come and live with me. But will that content you? Have you seen enough of the outside of Munich?”

I really knew not what to make of so unexpected a demonstration. Should I accept his invitation, so entirely a stranger as I was? Why not? M——y was in earnest; he meant what he said; yet I hesitated.

“You need feel no embarrassment,” he said, kindly. “I really want you to come,—unless, indeed, it is not agreeable to you.”

“A thousand thanks!” I exclaimed,—“I will come.”

“Not a single one,” said M——y. “Go and arrange affairs at your hotel, and make haste back for dinner: it will be served in an hour.”

The next day I was domesticated in M——y’s house.

I have not the present design to give any account of him. Should the reader find anything in what is written to interest or attract, it is possible that in

a future number a chapter may be devoted to the great artist of Munich. Now, however, I remark simply, that the gossip and strange stories and incidents and other *et ceteras* told of him proved to be ridiculous creations, with scarcely a shadow to rest on, having their inception in M——y’s peculiarities,—peculiarities which originated from an entire and absolute independence of thought and manner and conduct. A grown-up man in intellect, experience, and sagacity,—a child in simplicity and feeling, and in the effect produced by the forms and ceremonies and conventionalities of life: these seemed always to astonish him, and he never, as he said, could understand why people should live with masks over their faces, when they would breathe so much freer and be so much more at their ease by taking them off. This was the man who invited me to come to his house,—and who would not have given the invitation, had he not wanted me to accept it.

I have spoken of three paintings which excited my attention the day I paid my first visit. These were masterpieces,—three portraits, not life-like, but life itself. They did not attract by the perpetual stare of the eyes following one, whichever way one turned, as in many pictures; in these the eyes were not thrown on the spectator. One portrait was that of a man of at least fifty: an intellectual head; eyes, I know not what they were,—fierce, defiant, hardly human, but earthly, devilish; a mouth repulsive to behold, in its eager, absorbing, selfish expression. Another,—the same person evidently: the same clear breadth and development of brain, but a subdued and almost heavenly expression of the eyes, while the mouth was quite a secondary feature, scarcely disagreeable. The third was the likeness of a young girl, beautiful, even to perfection. What character, what firmness, what power to love could be read in those features! What hate, what revulsion, what undying energy for the true and

the right were there! A fair, young creation,—so fair and so young, it seemed impossible that her destiny should be an unhappy one: yet her destiny was unhappy. The shadow on the brow, the melancholy which softened the clear hazel eye, the slightest possible compression of the mouth, said,—“*Destined to misfortune!*” Were these actual portraits of living persons, or at least of persons who had lived? Was there any connection between the man with two faces and two lives and the maiden with an unhappy destiny? After I became better acquainted with M——y, I asked him the question, and in reply he told me the following story, which I now give as nearly as possible in his own words.

Many years ago, in one of my excursions, I came to Baden-Baden. It was a favorite resort for me, because I found there so many varieties of the human countenance, and I liked to study them. One evening I was in the Conversation-Haus, looking at the players at *rouge-et-noir*. At one end of the table I saw seated a man apparently past fifty; around him were three or four young fellows of twenty or twenty-five. It is nothing unusual to see old men at the gaming-table,—quite the contrary. But this person’s head and forehead gave the lie to his countenance, and I stopped to regard him. While I was doing so, his eyes met mine. I suppose my gaze was earnest; for his eyes instantly fell, but, recovering, he returned my look with a stare so impudently defiant that I directed my attention at once elsewhere. Ever and anon, however, I would steal a glance at this person,—for there was something in his looks which fascinated me. He entered with gusto into the game, won and lost with a good-natured air, yet so premeditated, so, in fact, *youthfully-old*, I felt a chill pass over me while I was looking at him. Later in the evening I encountered him again. It was in the public room of my own hotel, at supper. He was drinking Rhine-wine with the

same young men who were with him at *rouge-et-noir*. The tone of the whole company was boisterous, and became more so as each fresh bottle was emptied. The young fellows were very noisy, but impulsively so. The man also was turbulent and inclined to be merry in the extreme; but as I watched his eye, I shuddered, for there enthroned was a permanent expression indicating a *consciousness in every act which he committed*. Once again our eyes met, and I turned away and left the apartment. During my walk half an hour afterwards, I encountered the same party, still more excited and hilarious, in company with some women, whose character it was not easy to mistake. As I passed, the Unknown brushed close by me, and again his glance met my own. He seemed half-maddened by my curious look, which he could not but perceive, and, as I thought, made use of some insulting expression. I took no notice of it, but passed on my way, and saw him no more during my stay in the place.

From Baden I made an excursion into Switzerland. I was stopping at a pleasant village in the romantic neighborhood of the Bernese Alps. One afternoon I took a walk of several miles in a new direction. I left the road and pursued a path used only by pedestrians, which shortened the distance to another village not far off. A little way from this path was erected a small chapel, and in a niche stood an image of Christ, well executed in fine white marble. The work was so superior to the rude designs we find throughout the country that I stopped to examine it. I was amply repaid. In place of the painful-looking Christ on the Cross,—too often a mere caricature,—the image was that of the Youthful Saviour,—mild, benignant, forgiving. In his left palm, which was not extended, but held near his person, rested a globe, which he seemed to regard with a heavenly love and compassion, and the effect on me was so impressive that the words came impulsively to my lips,—“*I am the light of the world.*”

For several minutes I stood regarding with intense admiration this beautiful exhibition of the Saviour of Sinners. Presently, I saw the door of the chapel was open. Should I look in? I did so. What did I behold? The individual I had seen at Baden,—the gamester, the bacchanal, the debauchee! Now, how changed! He was kneeling at a tomb,—the only one in the chapel. The setting sun fell directly on his features. His fine brow seemed fairer and more intellectual than before. His eyes were soft and subdued, and destitute of anything which could partake of an earthly element. Even the mouth, which had so disgusted me, was no longer disagreeable. Contrition, humility, an earnest, sincere repentance, were tokens clearly to be read in every line of his face. I took very quietly some steps backward, so as to quit the spot unobserved, if possible. In doing so, I stumbled and fell over some loose stones. The noise startled the stranger, who was, I think, about to leave the chapel. He came forward just as I was recovering myself. We stood close together, facing each other. A flush passed over the man's face. He seized my arm and exclaimed fiercely, —

“What are you doing here?”

Without appearing to recognize him, I hastened to explain that my presence there was quite accidental, and it was in attempting to retreat quietly, after discovering I was likely to prove an intruder, that my falling over some stones had attracted his notice. Thus saying, and bowing, I was about to proceed homeward, when the stranger suddenly exclaimed, —

“Stop!”

He came up close to me. Every trace of angry excitement had vanished. Calm and self-possessed, but very mournfully, he said, —

“Are you willing I should put my arm in yours, and walk back with you to the inn? I am alone,—and God above knows,” he added, after a pause, “how utterly so.”

I could only bow an assent, for this sudden exhibition of weakness was an-

noying to me. My new acquaintance took my arm, much in the manner a child would do, and we walked along together.

“I am staying at the same house with you,” he said, as we proceeded. “Did you know it?”

“No, I did not.”

“Yes,” he continued, — “I saw you when you dismounted, and I knew you at once. Don't you recognize me?” he inquired, sadly.

“I do,” was all I replied.

“So much the better!” he went on. “I like your countenance, — nay, I love to look at your face. You are a good man; do you know it? I suppose not: the good are never conscious, and I should not tell you. Excuse my rude approach just now: the Devil had for a moment dominion over me. Will you remain here awhile? Shall we sit and be together? And will you — say, will you talk with me?”

I promised I would. My feelings, despite his miserable weakness, were becoming interested, and in this manner we reached the inn. Then I persuaded this strange person to sit down in my room, where I ordered something comfortable provided for supper. In fact, I thought it the best thing I could do for him. Very soon I gained his entire confidence. After two or three days he exhibited to me a small portrait, exquisitely painted, of a most lovely young girl, and permitted me to copy it. It is one of the three which you see on the wall there. The others, I need not add, are portraits of the man himself in the two moods I have described. For his history, it teaches its lesson, and I shall tell it to you. He narrated it to me the evening before he left the inn, where we spent two weeks or more, and I have neither seen nor heard from him since. Seated near me, in my room, he gave the following account of himself.

I was born in Frankfort. My parents had several children, all of whom died in infancy except me. I was the youngest,

and I lived through the periods which had proved so fatal to the rest. The extraordinary care of my mother, who watched me with a melancholy tenderness, no doubt contributed to save a life which in boyhood, and indeed to a mature age, was at the best a precarious one. My parents were respectable people, in easy circumstances. I grew up selfish and effeminate, in consequence of being so much indulged. I exhibited early a studious disposition, and it was decided to give me an accomplished education, with reference to my occupying, could I attain it at a future day, a chair in some university. My mother was a very religious woman. From the first, she had a morbid sense of the responsibility of bringing up a boy. She believed my way to manhood was beset by innumerable temptations, almost impossible to escape, difficult to be resisted, and absolutely ruinous to my soul, if yielded to. She preached to me incessantly. She kept me from the society of boys of my own age, for fear I should be contaminated,—and from the approach of any of the other sex, lest my mind should be diverted from serious matters and led into wantonness and folly. She would have made a priest of me, had it not been for my father;—he objected. His brother, for whom I was named, was a distinguished professor, to whom I bore, as he thought, a close resemblance, and he desired I should imitate him in my pursuits. I had good abilities, and was neither inefficient nor wanting in resolution or industry. At first I longed for natural life and society; but by degrees habit helped me to endure, and finally to conquer. In fact, I was taught that I was doing God service in cultivating an ascetic life. My studies were pursued with success. I rapidly mastered what was placed before me, and my relations were proud of my progress. At the usual period the ordinary craving for female society became strong in me. My mother took great pains to impress on me that here commenced my first struggle with Satan, and, if I yielded, I should certainly and beyond all perad-

venture become a child of the Devil. I was in a degree conscientious. I was ambitious to attain to a holy life. I believed what my mother had from my infancy labored so hard to inculcate, and I trod out with an iron step every fresh rising emotion of my heart, every genuine passion of my nature. But I suffered much. The imagination could not always be subdued, and there were periods when I felt that the “strong man armed” had possession of me. Nevertheless his time was not come, and at length the struggle was over. It was not that I had gained a laudable control of myself; but, having crucified every rebellious thought, there was nothing left for control. I had marked my victory by extermination. To live was no joy; neither was it specially the reverse: a long, monotonous, changeless platitude; yet no desire to quit the terrible uniformity.

I was forty years old. I had obtained my purpose. I was a learned professor. As I gained in acquirements and reputation, I became more and more laborious. My health, which had become quite firm, began to yield under incessant application. I was advised, indeed commanded, by my physician to take repose and recreation. I came here among the Alps. I stopped at this very house. The season was fine, the inns were filled with tourists, and great glee and hilarity prevailed. It was not without its effect on me. By slow degrees, with returning health, the pulses of life beat with what seemed an unnatural excitement. The world, as I opened my eyes on it from the window of the inn, was for the first time not without its attractions. I quieted myself with the idea, that, once back with my books, my thoughts would flow in the regular channel; and I called to mind something the physician had said about the necessity of my being amused, and so forth, to quiet my conscience, which began to reproach me for enjoying the small ray of sunlight which shone in on my spirit.

One day, in a little excursion with two or three gentlemen, I was attracted

by the beauty of a spot away from the travelled road. Leaving my acquaintances resting under some trees to await my return, I strolled by a narrow path across the small valley, till I reached the wished-for place. You know it already. It is where you beheld erected the Christ and the Tomb. I was looking around with much admiration, when from the opposite direction came some strolling Savoyards, with a species of puppet, or *marionnette*, called by these people *Made-moiselle Catherina*. Without waiting for my assent, the man stopped, and with the aid of his wife arranged the machine and set *Catherina* in motion, accompanying the dance with a song of his own:—

“Ma commère, quand je danse,
Mon cotillon, va-t-il bien?
Il va d'ici, il va de là,
Ha, ha, ha!
Ma commère, quand je danse,” etc.

I stopped and looked, and was amused. The music was rude, but wild, and carried with it an *abandon* of feeling. I avow to you, it stole upon me, penetrating soul and body. How I wished I could, on the spot, throw off the coil which surrounded me and wander away with these children of the road!

While I stood preoccupied and abstracted, I was roused by a low voice pronouncing something,—I did not hear what,—and, coming to myself, I saw standing before me, with her tambourine outstretched, a young girl, fourteen or fifteen years old. She spoke again,—“*S'il vous plait, Monsieur.*” Large, lustrous, beaming eyes were turned on me,—not boldly, not with assurance, neither altogether bashfully,—but honestly regarding me full in the face, questioning if, after being so attentive a spectator, I were willing to bestow something. It was strange I had not noticed this girl before. I had hardly perceived there were three in the company. Now that I did observe her, I kept looking so earnestly that I forgot to respond to her request. She was faultless in form and physical development,—absolutely and unequivocally faultless. Her face, though

browned by constant exposure, was classically beautiful; the foot and hand very small and delicate. Heavens! how every fibre in my frame thrilled with an ecstatic emotion, as, for the first time in my life, I was brought under the influence of female charms! My head swam, my eyes grew dim,—I staggered. I think I should have fallen, had not the young girl herself seized my arm and supported me. This brought me to myself. I bestowed nothing on the strollers, but asked if they were coming to the village. They answered in the affirmative; and telling them to come and play at the inn where I was lodging, I hastily quitted the scene.

Do not think I am in the least exaggerating in this narrative. God knows, what I have to recount is sufficiently extraordinary. I hastened homeward, my soul in a tumult. On a sudden, the labor of a lifetime was destroyed, the opinions and convictions of a lifetime stultified and set at naught. And how?—by what? By a strolling, vagrant Savoyard. Rather by an exquisite specimen of God's handiwork in flesh and blood! And if God's handiwork, why might I *not* be roused and touched and thrilled and entranced? Something within boldly, in fact audaciously, put that question to me.

I slept none that night. I was haunted by that form and face. I essayed to be calm, and to compose myself to slumber. Impossible! For the moment was swept away my past, with its dreary, lifeless forms, its ghostly ceremonies, its masked shapes, its soulless, rayless, emotionless existence. To awake and find life has been one grand error,—to awake and know that youth and early manhood are gone, and that you have been cheated of your honest and legitimate enjoyments,—to feel that Pleasure might have wooed you gracefully when young, and when it would become you to sacrifice at her shrine,—gods and fiends! I gnashed my teeth in impotent rage,—I blasphemed,—I was mad!

The morning brought to me compos-

ure. While I was dressing, I heard the music of my Savoyards under the window. I did not trust myself to look out; but, after breakfasting, I went into the street to search for them.

I was not long unsuccessful, and was immediately recognized with a profusion of nods and grimaces by the man and a coarse smile by the woman, who prepared to set *Mademoiselle Catherina* instantly at work. The young girl took scarcely any notice of me. I bestowed some money on the couple, and bade them go to the nearest wine-shop and procure whatever they desired. They started off, quite willing, I thought, to leave me alone with the girl. I lost no time. Going close to her, I said, —

“You are not the child of these people?”

“Alas, no, Monsieur! — I have neither father nor mother.”

“And no relations?”

“No relations, Monsieur.”

“How long have you lived in this way?”

“Almost always, I suppose. But I remember something many years ago — very strange. I was all the time in one place, — such a beautiful spot, it makes it hurt here,” (putting her hand on her heart) “when I think of that. Afterwards it was dark a long time. I do not remember any more.”

“And do you like to wander about in this way?”

“Oh, no, Monsieur! — no, indeed!”

“Would you be pleased to go to a nice home, and stay, as you say, all the time in one place, and learn to read and write, and have friends to love you and take care of you?”

“Yes! oh, yes!”

“Would you be afraid to go with me?”

The young girl regarded me with a look of penetration which was surprising, and replied calmly, but with some timidity, —

“No.”

“Then it shall be so,” I said.

I bade the child sit down and wait for my return. I took the direction which

the man and his wife had pursued, and found them already busily engaged in the wine-shop, where they had purchased what for them was a sumptuous entertainment.

“You have stolen that girl,” I exclaimed, with severity; “and I shall have the matter investigated before the Syndic.”

They were not so frightened as I expected to see them, although a good deal discomposd.

“Monsieur mistakes,” said the man. “It was we who saved the poor thing’s life, when the father and mother were put to death far away from here in Hungary, and not a soul to take compassion on her. She was only four years old; the prison-door was opened and her parents led to execution, and she left to wander about until she should starve.”

I asked if they knew who her parents were. They did not, but were sure they were people of distinction, condemned for political offences. This was all I could learn. The child, they said, was in possession of no relic which betrayed her name or origin. She only wore a small gold medallion on which was engraved a youthful Christ, — the same in design as you see erected near the tomb in yonder valley. It has been faithfully copied.

It was difficult to induce the couple to part with Eudora, — that was her name. She was now useful to them, and her marvellous beauty began to attract and brought additional coin to their collections, after the performances of the *marionnette*. But I was resolved. I offered to the strollers so large a sum in gold that they could not resist. It was arranged on the spot. With very little ceremony they said “Good-bye” to Eudora, and, taking the path over the mountain, in a few minutes were out of sight.

What a new, what a strange attitude for me! Could I believe in my own existence? There I stood, a grave professor of the University of —, educated and trained in the discipline I have already explained to you. There stood

Eudora, just as perfect in form and feature as imagination of poet ever pictured.

My plan was formed on the spot, instantly. It was praiseworthy; but I deserved no praise for it. A deep, engrossing selfishness, pervading alike sense and spirit, actuated me. I had already brought under control the fever of the previous day. I could reason calmly; but my conclusions had reference only to my own gratification and my own happiness. I regarded Eudora as mine,—my property,—literally belonging to me. I was forty,—she not fifteen. Yet what was I to do with her? Recommend her to the care of my mother, who was still alive? Certainly not; she would then be lost to me. I had a cousin, a lady of high respectability, well married, who resided in the same town in which I lived. She had no child of her own; she had often spoken of adopting one. I frequently visited her house; and when there, she never ceased to criticize me for leading such an ascetic life. Here was an excellent opportunity for my new charge. My cousin would be delighted to have the guardianship of such a lovely creature. She would be as devoted to her as to an own child. She would sympathize in my plans, and would be careful to train Eudora *for me*.

Such was the programme. It flashed on me and was definitely settled before I had time to bid her follow me to the inn. She came unhesitatingly, and as if she had confidence in my kind intentions. I did not converse much with her, but, making hasty preparations, we left the place and proceeded rapidly homeward.

I was not disappointed. My cousin entered readily into my plans. She was a really good person, seeing all things which she undertook through the complacent medium of duty. This was, she thought, such a fortunate incident! It gave her what she had long desired, and it would serve to distract me from the wretched life I had always led. Thereupon Eudora was installed in her new home, where

she found father and mother in my cousin and her husband, where her education was commenced and got on fast. She had a quick intellect, instinctively seizing what was most important and rapidly forming conclusions. How, day by day, I witnessed the development of her mind! How I watched every new play of the emotions! How I saw with a beating heart, as she advanced toward womanhood, fresh charms displayed and additional beauty manifested! I shall not tire you with a prolonged narrative of how I enjoyed, month after month, for more than two years, the society of Eudora, during which time she made satisfactory advances in education and accomplishment and attained in grace and loveliness the absolute perfection of womanhood.

And what, during this period, were my relations with Eudora?—what were her feelings toward me? I approach the subject with pain. I look back now on those feelings and on my conduct with an abhorrence and disgust which I cannot describe. From the first she trusted to me with implicit confidence. Discriminating in an extraordinary degree, her gratitude prevented her perceiving my real character. She gave me credit for absolute, unqualified, disinterested benevolence in rescuing her from the wretched and precarious condition of a vagrant. Thus she set about in her own mind to adorn me with every virtue. I was magnanimous, noble, unselfish, truthful, brave, the soul of honor, incapable of anything mean or petty. How often has she told me this, holding my hand in hers, looking full in my face, her own beaming with honest enthusiasm! How my soul literally shrank within me! How like a guilty wretch I felt to hear these words! How I wished I could be all Eudora pictured me! How I essayed to act the part! How careful I was lest ever my real nature should disclose itself! Even when, despite my efforts, something did transpire to excite an instant's question, she put it aside at once by giving an interpretation to it worthy

of me. Now, what was I to do? Eudora had reached a marriageable age. She had seen but little of society, though by no means living a recluse. My cousin had watched carefully over her, and was to her, indeed, all a mother could be. I had remained perfectly tranquil, secure, as I supposed, in her affections. I thought I had but to wait till the proper period should arrive and then take her to myself.

My cousin, as I have intimated, understood my views. It was therefore with no sort of perturbation, that, one day, I heard her ask me to step into her little sitting-room in order to converse about Eudora. I supposed she was going to tell me that it was time we were married,—indeed, I thought so myself. I was therefore very much astonished when she commenced by saying that I ought now to begin to treat Eudora as a young lady, especially if I expected ever to win her hand. I turned deadly pale, and asked her what she meant.

"I mean," she replied, "that you ought to act toward Eudora: as men generally act who wish to win a fair lady. Do not deceive yourself with the idea that she loves you. She would tell you she did in a moment, if you asked her,—and wonder, besides, why you thought it necessary to put the question. But she knows nothing about it. The thought of becoming your wife never enters her head, and you would frighten her, if you spoke to her on such a subject. No, my cousin; it is time you behaved as other men behave. Eudora is grateful to you beyond expression. She believes you to be perfect; and you seem content to sit and let her tell you so, when you ought to be a manly wooer."

I will not detail the remarks of my cousin. She talked with me at least two hours. I was perfectly confounded by what she said. I began to hate her for the ridiculous advice she gave me. I put it down to a curious, meddling nature. I grew vexed, too, with Eudora, because my cousin said she did not love me. I did not reflect that I had done

nothing to excite love. I had drawn perpetually on a heart overflowing and grateful,—selfish caitiff that I was! This, however, I did not then understand,—so completely were my eyes blinded!

I left my cousin in a petulant spirit, and sought Eudora. She saw I was troubled, and asked me the cause. I told her. A shadow, a dark, portentous shadow, suddenly clouded her face;—as suddenly it passed away, giving place to a look of sharp, painful agony, which was succeeded by a return of something like her natural expression. Then she scrutinized my face calmly, critically. All this did not occupy half a minute. Ere one could say it had been, Eudora was apparently the same as ever. God alone knows all which in that half-minute rose in that young girl's heart. She took my hand; she reproached me for my apparent distrust of her; she said she was mine to love and to honor me forever. She would go at once to her mother—so she called my cousin—and tell her so. Thus saying, she left me. And I—I did not then understand the struggle and the victory of the poor girl over herself. I did not reflect that no maidenly blush, no charming confusion, announced my happy destiny,—no kiss, no caress, no sign that the heart's citadel had surrendered; but, instead, a calmness, a composure, and a hastening from my presence. No, I thought nothing of this; I only considered that now the time was at hand when Eudora would be mine!

I married her. It was but three weeks after this conversation. I was in haste, and Eudora herself seemed desirous that the day should be an early one. My cousin was amazed. I enjoyed her discomfiture; for she did not relish the thought that I should thus set at nought her advice and overturn her theory. She shook her head,—she attempted a protest,—and then began zealously the preparations for the wedding.

I wish I could give you some clear idea of the wife I had gained, some slight notion of the happiness and delight and bliss in which I revelled,—that is, if a

man purely and unutterably selfish has a right to call that happiness which he enjoys. Eudora lived only for me. She rose, she sat, she came, she went only to pleasure me. She had one thought, one idea: it was for me. And what was my return? Nothing, — absolutely and literally nothing. I accepted every service, every sweet, loving token, every delicate act of devotion, as something to which I was entitled, — as my right. Forty-four years old, a life with one idea, a narrow, selfish, overbearing nature, ministered to by such a creature, noble, lovely, true, with eighteen years of life!

Three years thus passed, — three years which ate slowly into Eudora's heart, — teaching her she *had* a heart, and bringing forth such fruit as such experiences would produce. Yet she had not lost faith in me. She might have felt that perfection did not belong to man, and therefore I was not perfect; but she cheated herself as to all the rest. If she were not perfectly happy with a husband who took no pains to sympathize with her, who repressed instead of encouraging the natural vivacity of her nature, who never went abroad with her to places where every one was accustomed to go, still she did not lay the cause at my door.

I had another cousin: this cousin was a man, twenty-four years old when he first came, by a mere chance, to the town where we lived. He was, like you, a painter, — not one of those poor romantic vagabonds who multiply pictures of themselves in every new composition, and who starve on their own sighs. This man was in the enjoyment of a handsome competence, and made painting his profession because he loved the art. My cousin who resided in the place knew this man-cousin of mine. He paid her a visit; and while he was in her house, my wife happened to go in. Thus the acquaintance began. The next day he came to see me. I received him cordially, and invited him to visit us often. At length he became perfectly at home in our house. I was pleased with this, — for I began to feel that Eudora drew heavily on my time, insist-

ing too much on my society; and I was only glad to escape by leaving her to the society of my relative, — blind fool that I was! But I must do him justice. He was a noble specimen of a fresh-hearted young man, — loyal and honorable. Yet how could he escape the fascination of Eudora's presence? — how tear himself away from it, when he had no thought that it was dangerous? At my request, my wife sat to him for a small portrait: this is it which I have permitted you to copy. By-and-by, and really to keep Eudora from engrossing too much of my time, I allowed her to go out with our artist-cousin; and in company they examined paintings, and viewed scenery, and talked, and walked, and sometimes read together.

One evening, while seated in my library, deeply abstracted, the door opened and Eudora entered. I looked up, saw who it was, and relapsed into study.

"My husband," exclaimed she, in a soft, sweet tone, "put down your book; sit upon this sofa; I want to speak with you."

I rose, a little petulantly, and did as she desired. She threw her arms around my neck, and kissed me tenderly.

"I have something to ask of you," she said, — "something to request."

"What is it?" I exclaimed, — almost sharply.

"It is that you would not invite Alphonse to come here any more, — that you would never speak of my going out with him again, but encourage his leaving here, — and that you would give me more of your society."

"Pray, what does all this mean, Eudora?" I demanded. "Alphonse and you have been quarrelling, I suppose."

"No, my husband."

"Then, what do you mean by such nonsense?" I asked, in an irritated tone.

"I scarcely have courage to tell you," she cried, — "for I fear it will make us both forever miserable."

Thoroughly aroused by this astounding avowal, I repeated, in a stern tone and without one touch of sympathy, my demand for an explanation. She knelt

lovingly at my feet,—not in a posture submissive or humiliating, but as if thus she could get nearer my heart,—and began, calmly:—

"Sometimes, my husband, I have thought my feelings for you were such as I ought to entertain for my father or an elder brother. I venerate and admire your character; I would die for you,—oh, how willingly!—but sometimes I fear it is not *love* I feel for you."

She paused, and looked at me earnestly.

"How long have you felt as you now do?" I asked, with an icy calmness.

"I do not know. I cannot tell. But I have not thought of it seriously till Alphonse came here,—and I want you to send him away."

"And do you love Alphonse?" I asked, slowly.

"Oh, God! I do not know. I cannot tell what is the matter with me. Perhaps it is mere infatuation. Alas! I cannot tell."

"And why do you come with this to me?" I said sneeringly, devil that I was.

"Because you are my husband,—because you are wise and strong and good, and the only one who can advise me,—because I am in danger, and you can save me," she cried, looking imploringly on my frigid features.

"And for that purpose you come to me?"

"I do, I do!" she exclaimed. At the same time she threw her arms around me passionately, buried her face in my bosom, and wept.

There was a struggle within me,—not violent nor desperate, but calm and cold,—while the face of that fair young creature was pressed close to my heart by her own arms thrown clingly around me. I did not move the while; I did not respond to her sad embrace even by the slightest pressure of my hand. Yet I was all the time conscious that a pure and noble being was supplicating me for help,—a being who had devoted her life to me,—whose soul was stainless, while mine was spotted with the leprosy of a

selfish nature. Like one under the influence of nightmare, who knows he does but dream and makes an effort fruitless as imaginary to lift himself out of it, I did try to follow what my heart said I should do,—fold my dear wife in my arms, and reassure her in all things. But I did no such thing. The other spirit—I should say seven others more hateful and detestable than any which had before possession of me—conquered. I raised Eudora from her kneeling posture. I placed her on the sofa beside me. I began to hate her,—to hate her for her goodness, her gentleness, her truthfulness, her fidelity,—to hate her because she dared make such an avowal, and because it was true. What right had she to permit her feelings to be influenced by another,—she, my lawfully wedded wife? I would not admit the truth to myself that *I* was the sole, miserable, detestable cause. Oh, no!

"Eudora," I said at length, "I have never seen you manifest so much nervous excitement. Do you not see how ridiculous is your request? You want me to bring ridicule, not to say disgrace, on myself, by suddenly forbidding Alphonse my house. What will he suppose, what will the world think, except that there has been some extraordinary cause for such a procedure? And all out of a silly, romantic, imaginary notion which has got into your head. Now, listen: if you would do your duty and honor me, let Alphonse come and go as usual; let him perceive no difference in your manner or in your treatment of him: in this way only I shall escape mortification and chagrin."

She rose as I finished,—slowly rose,—with a countenance disheartened and despairing. She uttered no word, and turned slowly to leave the room. She had reached the door, when, not content with the merciless outrage on her heart already inflicted, under the instigation of the demon working within me, I prepared another stab.

"Eudora," I said, "one word more."

She came immediately back, doubtless

with a slight hope that I would show some sympathy for her.

"Eudora," I continued, rising and laying my hand on her shoulder, "*have you permitted any improper familiarities from Alphonse?*"

Quick as lightning was my hand struck from its resting-place; swift as thought her face changed to an expression so terrible that instinctively I stepped back to avoid her. It was but an instant. Then came a last awful look of *recognition*, whereby I knew I was found out, my soul was stripped of all hypocritical coverings, and she saw and understood me. What a scene! To discover in the one she had revered and worshipped so long her moral assassin! To stand face to face and have the dreadful truth suddenly revealed! The darkness of despair gathered around her brow; an agony, like that which finds no comforter, was stamped on her face; and with these a hate, a horror, a contempt, mingled triumphantly. The door opened, — it was closed, — and my wife was lost to me forever. I essayed to call her back. "Eudora" came faintly to my lips. It was too late. Then a contemptible, jealous hatred took possession of me. Ere I left my apartment, I said, "She shall pay dear for this! she shall soon come submissive to my feet! she cannot live away from me; and before I forgive, she must be humiliated!" How little did I know her!

From that period Eudora simply treated me with the courtesy of a lady. She never looked in my face, — her eyes never met mine. On my part, to carry out a plan I had adopted, I encouraged more and more the visits of Alphonse. He had expected to leave that week; but I persuaded him to remain another month, and pressed him to stay at my house. I told him that this would be agreeable to my wife, who could have his society when I was not able to be with her, and I should insist on his accepting my invitation. This was after I saw how rebellious, as I termed it, Eudora was becoming; and I was deter-

mined to torture her all I could. Alphonse was now an inmate of our house, which greatly increased the opportunities for his being with Eudora. She appeared to enjoy intercourse with him just as usual; I think, in fact, she did enjoy it more than usual; and it made me hate her to see that she was not repentant and miserable. Three weeks passed in this way; — I becoming more hateful and severe by every petty, petulant, despicable device of which my nature was capable; she continuing with little change of manner or conduct; and Alphonse unconsciously growing more devoted.

It was a cold, stormy afternoon: the rain had increased since morning. Eudora had gone out immediately after breakfast. She did not come back to dinner, and Alphonse, who had remained in all day, said she spoke of going to my cousin's. I took it for granted the storm detained her; but when it was evening and she did not appear, I began to be disturbed and asked Alphonse to go for her. In a short time he returned with the information that Eudora had not been at my cousin's that day. I was alarmed; I could see the shadow of my Nemesis close by me. It had fallen suddenly, and with no warning. For a moment I suspected Alphonse; but the distress he manifested was too genuine to be counterfeited, and I dismissed the thought. In the midst of this confusion and dismay, — now late in the evening, — a letter was put into my hands, just left by a messenger at my door. The address was in my wife's hand. I tore open the envelope, and read, —

"Man! I can endure no longer."

This was the end of the chapter beginning with my introduction to the strolling Savoyards, the dance of the *marionnette*, the transfer of Eudora! I attempted no search for her; too well I knew it would be useless; indeed, I felt a strange sense of freedom. My professor's life disgusted me: I threw it off. I resigned my chair, and sold my house, my furniture, my books, — everything. My nature clam-

ored for indulgence, my senses for enjoyment. I quitted the place. I threw off all restraint. Literally I let myself loose on the world. I sought the company of the young. I drank, I gamed, I was as debauched as the worst. But although *with* them, I was not *of* them. *They*—only from the effervescence of strong animal spirits did they go into excesses. What they did was without reflection, impulsive, unpremeditated. *Me* a calm consciousness pervaded always. Go where I would, do what I would, amidst every criminal indulgence, every noisy debauch or riotous dissipation, it always rode the storm and was present in the fury of the tempest,—that fearful, awful conscious *Ego*met! How I wished I could commit one impulsive sin!

After three years, I was passing with a gay company through the Swiss town of ——. In that place is the convent of the Sisterhood of Our Mother of Pity. The night I stayed there, one of the number died. I heard of it in the morning, as we were preparing to leave. From what was said in connection with the circumstance, I knew it was Eudora. I left my companions to go on by themselves. I made my way to the convent and begged permission to look on the dead face of my wife. It was granted. She was already arrayed for the grave. I came and threw myself on the lifeless form, and cried as children cry. The fountains of my heart gave way, the sympathies of my nature were upheaved, and for two hours I wept on unrestrained. Even consciousness fled for once and left me to the luxury of grief. At length the worthy people came to me and took me from the room. I asked many questions, to which they could give me but unsatisfactory replies. They knew little of Eudora's history. She had come directly from my house to this place, and had been remarkable for her acts of untiring benevolence in ministering to the sick and the destitute. She lost her life from too great exposure in watching at the bedside of a miserable woman whom all the world seemed to

have abandoned, and who died of some malignant fever. I will not attempt to describe what I passed through. I became sincerely repentant. I saw my character in its true light. I prayed that my sins might be forgiven.

The place where Eudora died was not far from the spot where we first met. I begged the good priest who acted as her confessor to consecrate a little chapel which I should build there, and permit me to place my wife's remains in it. He consented. I caused the image of the Christ which she always wore to be carefully copied in marble and placed before the chapel, and I spent several weeks there, deploring my sins and seeking for light from above.

It was not to be that I should thus easily settle the error of a lifetime. After a while I felt the desperate gnawing of the senses inexpressible and irresistible. Satan had come again, and I was called for. And I went! There was no escape,—there *is* no escape! Once more I plunged into riotous folly and excess, giving full license to my unbridled appetites,—but conscious always. When the fever subsided, I was once more repentant and sorrowful, and I came here,—only to be carried off again to renew the same wretched scenes. I know not how long this will last. I know not if Heaven or Hell will triumph. Yet, strange as you may think it, I believe I am not so bad a man as when I was a professor in ———, slowly destroying my lovely wife. From each paroxysm I fancy I escape somewhat stronger, somewhat more manly than before. I think, too, my periods of excess are shorter, and of repentance longer; and I sometimes entertain a hope that folly and madness will in me, as in the young, become exhausted, and that beyond still lies the goal of peace and wisdom.

Such as it is, strange as it may seem, you have from me a truthful history. Would that the world might hear it and be wiser! Mark me! Let not those who undertake to train the young attempt to destroy what Nature has implanted. Let

them direct and modify, but not extinguish. The impulsive freedom of youth is generally the result of an exuberant and overflowing spirit, and should be treated accordingly, — else, later in life,

it may burst forth fierce and unconquerable, or, what is worse, be indulged in secret and make of us hypocrites and dissemblers.

WOE TO THE MAN WHO HAS HAD NO YOUTH!

THE MEN OF SCHWYZ.

As you go from Lucerne in a decorous little steamboat down the pleasant Vierwaldstättersee, or Lake of the Four Forest Cantons, with the sloping hills on either side, and the green meadow-patches and occasional house among the trees, you come to a sudden turn where the scenery changes swiftly, and pass between steep and shaggy rocks rising perpendicularly out of the blue water, which seems to get bluer there, into the frowning Bay of Uri, guarded, as if it were the last home of freedom, by great granite hills, lying like sleepy giants with outstretched arms, while the heavy clouds rest black and broken on their summits, and the white vapors float below. Just where the lake makes this turn is the hamlet of Brunnen, which you will not hurry by, if you are wise, but tarry with the kind little hostess of the Golden Eagle by the pleasant shore, and learn, if you will, as nowhere else, what the spirit of the Swiss was in the ancient time, as in this.

As you walk across the little valley which stretches down from the hills to the lake where Brunnen is, you remember that it is the town of Schwyz you come to, where dwelt once the hardy, valourous little colony which gave its name to Switzerland, — famous in the annals of this stout-hearted mountain-land for the "peculiar fire" with which they have always fought for their ancient freedom, — worthy to leave their name, in lasting token of the service they did to their fellows and to mankind.

Schwyz lies at the foot of the Hacken Mountain, which rises with double peaks

known as the Mythen, (Murray and the tourists, with dubious etymological right, translate *Mitres*,) — with the dark forests above it on the slopes, and the green openings sparkling in the sunlight, where men and their herds of cattle breathe a purer air. Behind these everlasting walls the spirit of freedom has found a resting-place through the turbulent centuries, during which, on rough Northern soil, the new civilization was taking root, hereafter to overshadow the earth.

Touching the origin of these men of Schwyz, there is a tradition, handed down from father to son, which runs in this wise.

"Toward the North, in the land of the Swedes and Frisians, there was an ancient kingdom, and hunger came upon the people, and they gathered together, and it was resolved that every tenth man should depart. And so they went forth from among their friends, in three bands under three leaders, six thousand fighting men, great like unto giants, with their wives and children and all their worldly goods. And they swore never to desert one another, and smote with victorious arm Graf Peter of the Franks, who would obstruct their progress. They besought of God a land like that of their ancestors, where they might pasture their cattle in peace; and God led them into the country of Brochenburg, and they built there Schwyz; and the people increased, and there was no more room for them in the valley. Some went forth, therefore, into the country round about,

even as far as the Weissland; and it is still in the memory of old men how the people went from mountain to mountain, from valley to valley, to Frutigen, Obersibenthal, Sanen, Afflentsch, and Jaun;—and beyond Jaun dwell other races.”

The time and circumstance of this wandering are unknown, and we may make what we will of it; but to the men of Schwyz the tradition is an affirmation of their original primal independence. And of old time, also, the Emperors have admitted that these people of their own free will sought and obtained the protection of the Empire,—a privilege by no means extended to all the dwellers of the Waldstätte, (or Forest Cantons,) but confined to the men of Schwyz.

As the Emperors were often absent, engaged in great wars, and the times were very troublous, and there was need of some commanding character among them, for the administration of the criminal law touching the shedding of blood, they often made the Count of Lenzburg Bailiff. But no matter of any moment could be acted upon without the sense of the people being taken, of the serf as well as the freeman: for these two classes existed not less among these primitive people than elsewhere, in the feudal times; and this community of counsel of freeman and serf is related to have worked harmoniously, “for equality existed of itself, by nature, there.” They chose a *Landammann*, or chief magistrate,—a man free by birth, of an honorable name and some substance; and for judges also they were careful to select men of substance, “for he careth most for freedom and order who hath most to lose”; and for the greater peace of the land there was a Street-Council, consisting of seven reputable men, who went through the streets administering justice in small causes here and there, as in the East the judges sat at the city-gate or at the door of the palace.

As the people increased, the valleys of Schwyz, Uri, and Unterwalden were separated and grew to be independent in their own domestic matters, while united with respect to external affairs,

as in the league made in 1251 between Zürich, Schwyz, and Uri;—they were like the Five Nations of Canada, says the historian, but more human through Christianity. Their religious belief was simple and fervent; the Goths, as Arians, had rejected the supremacy of the Pope; and now there came secretly teachers from the East, through Bulgaria, Bosnia, and Hungary, even into Rhaetia, and thence to these fastnesses of the Alps. The mind of men, thus left free, developed itself according to the different character of the races. The people of Schwyz were strengthened in their adherence to the authentic Word of God, as it was with the Apostles, without the use of pictures or the bones of saints; this Word they learned by heart, and made little of the additions of men; hence they got to be heretics, and were called Manicheans; but Catholicism conquered them at last.

Thus simple and unknown lived this ancient people,—destined to restore in the end the Confederacy of Helvetia, lost since the days of Cæsar’s victory, thirteen hundred years before,—till Gerhard, Abbot of Einsiedeln, complained of them to the Emperor Henry V. for pasturing their cattle upon the slopes which belonged to the convent: for, forgetful of the people who dwelt in these parts, whose existence, indeed, was concealed from him by the monks, the Emperor Henry II., in 1018, had bestowed upon the convent the neighboring *desert*; and the Abbot, of course, did not fail to make the most of the gift. Thus there occurred a collision. The Abbot pursued these poor peasants with the spiritual power, which was not light in those days, and summoned them before the Diet of Nobles of Swabia; but they rejected that tribunal, for they acknowledged only the authority of the Emperor. Whereupon the Abbot laid his complaint before Henry V. at Basel, where Graf Rudolph of Lenzburg, Bailiff of Schwyz, spoke for them. A simple people, innocent of human learning, they could urge against the patent of the Emperor only the tra-

dition of their fathers, and judgment went against them touching the matter, and no question was made in it as to the validity of the Emperor's patent. It was an unexpected blow to the Schwyzers. Tradition among people living solitary grows into a religious right, which they fight for readily. For eleven years their turbulence went unpunished; for Henry V. had other matters on his hands, and his two successors conferred other privileges upon the convent. Thirty years afterwards, however, in 1142 or thereabouts, at the solicitation of the monks, obedience was commanded by the Emperor Conrad III., then on the point of departing with his Crusaders to Palestine. But the people answered, — "If the Emperor, to our injury, contemning the traditions of our fathers, will give our land to unrighteous priests, the protection of the Empire is worthless to us." Thereupon the Emperor waxed wroth; the ban was laid upon them by Hermann, Bishop of Constance; but they withdrew, nevertheless, from the protection of the Empire, and Uri and Unterwalden with them, — fearing neither the Emperor nor the ban, for they could not conceive how it was a sin to maintain the right, and so they pastured their cattle without fear.

When Friedrich I. came to the throne and wanted soldiers, he sent Graf Ulrich of Lenzburg, Bailiff of the Waldstätte, into the valleys to speak to the men of Schwyz. "The heart of the people is in the hands of noble heroes," says the historian; — gladly did the youths, six hundred strong, seize their arms and go forth under Graf Ulrich, whom they loved, to fight for the Emperor his friend, beyond the mountains, in Italy. And now it came the Emperor's turn for the ban; the whole Imperial House of Hohenstaufen fell into spiritual disgrace; Friedrich II. was cursed at Lyons as a blasphemer; but these things did not turn away the hearts of the men of Schwyz from his House.

Long after the time of this Ulrich, the last reigning Graf of Lenzburg, shortly

after the Swiss Union had been renewed, at the instance of Walther of Attinghausen, in 1206, Unterwalden chose Rudolph, Count of Hapsburg, for Bailiff. He endeavored to extend his authority over the other two Cantons, in which he was aided by the Emperor Otho IV., of the House of Brunswick, who had been raised to the throne in opposition to the House of Swabia, and who, for the purpose of conciliating him, made him Imperial Bailiff of the Waldstätte. An active, vigorous man this Rudolph, grandfather of the Rudolph who was afterwards called to be King of the Germans, whom the Swiss, scattered in their hamlets, were little prepared to make head against, and therefore recognized him with what grace they might, after an assurance that their freedom and rights should be maintained; and he smoothed for them their old controversy with the monks of Einsiedeln, and got a comfortable division of the property made in 1217. But he was hateful to them, nevertheless; and although we know nothing of the way in which he administered his office, we conjecture that it was partly because the Emperor who appointed him was not of the House of Hohenstaufen, to which they were attached, and partly because he claimed that the office of Bailiff was hereditary in his family, whereas the men of Schwyz preferred to offer it of their own free will to whom they would. They made it a condition of assistance to the Emperor Friedrich in 1231, when he went down into Italy to fight the Guelphs, that he should deprive this Rudolph of the office of Imperial Bailiff; and then they went forth, six hundred strong, and did famous work against the Guelphs, with such fire in them that the Emperor not only knighted Struthan von Winkelried of Unterwalden, but gave that valley a patent of freedom, according to which the Schwyzers voluntarily chose the protection of the Empire.

And now Rudolph, Count of Hapsburg, founder of the Austrian monarchy,

strides into the history of the men of Schwyz. A tall, slender man this Rudolph, bald and pale; with much seriousness in his features, but winning confidence the moment one spoke with him by his friendliness, loving simplicity; a restless, stirring man, with more wisdom in him than his companions had, equal or superior to him in birth or power, working his way by device when he could, by the strong arm when that was needed. He took the part of the peasants against the nobles, and used the one to put down the other. In the midst of the turmoils in which he got involved with Sanct Gallen and Basel, and while encamped before the walls of the latter city, he was wakened in his tent at midnight by Friedrich of Hohenzollern, Burgrave of Nürnberg; for there had come from Frankfort on the Main Heinrich von Pappenheim, Hereditary Marshal of the Empire, with the news, that, "in the name of the Electors, with unanimous consent, in consideration of his great virtue and wisdom, Lewis Count Palatine of the Rhine and Duke of Bavaria had named Count Rudolph of Hapsburg King of the Roman Empire of the Germans": at which Rudolph was more astonished than those who knew him, it is recorded. Not because of his genealogy, nor his marriage with Gertrude Anne, daughter of Burcard, Count of Hohenburg and Hagenlock, did he win this great fortune, but, as the Elector Engelbrecht of Cologne said, "because he was just and wise and loved of God and men." And now the world learned what was in him; and how for eighteen years he kept the throne, which no king for three-and-twenty years before him had been able to hold, history will relate to the curious.

Switzerland was divided at this period into small sovereignties and baronial fiefs; and there were, besides, also the Imperial cities of Bern and Basel and Zürich. The nobles were warlike and restless. Rudolph checked their depredations and composed their dissensions. Upon that seething age of violence and rapine he

laid, as it were, the forming hand, as if in the darkness the coming time was dimly visible to him;—a man to be remembered, in the vexed and disheartening history of Austria, as one of her few heroes. The people of Schwyz, Uri, and Unterwalden, notwithstanding the dislike they had shown to his ancestor, voluntarily appointed him their protector; and he gave them, in 1274, the firm assurance that he would treat them as worthy sons of the Empire in inalienable independence; and to that assurance he remained true till his death, which happened in 1291, in the seventy-fourth year of his age.

It is related in the Rhymed Chronicle of Ottocar, how he had been kept alive for a whole year by the skill of his physicians, but that they told him at last, as he sat playing at draughts, that death was upon him, and that he could live but five days. "Well, then," he said, "on to Spires!" that he might lay him in the Imperial vault in the great Cathedral there,—where many Emperors slept their long sleep, till, in the Orléans Succession War in the time of Louis XIV., as afterwards in 1794, under the revolutionary commander Custine, French soldiers rudely disturbed it, with every circumstance of outrage which Frenchmen only could devise. Rudolph went forth thither, but fell by the way, and died at Gernersheim, a dirty little village which he had founded. And in the Cathedral at Spires, where he rested from his activities, you may see this day a monumental statue of him, executed by that great artist, the late Ludwig Schwanthaler of Munich, for his art-loving patron, Ludwig I., King of Bavaria.

Rudolph was succeeded by his son Albrecht, then forty-three years old, likewise a vigorous man, whose restless spirit of aggrandizement gave the Swiss much uneasiness. His purpose seems to have been to acquire the sovereignty of the ecclesiastical and baronial fiefs, and, having thus encompassed the free cities and the Three Cantons, to compel submission to his authority. In the seventh week after Ru-

dolph's death, they met together to renew the ancient bond with the people of Uri and Unterwalden; and they swore, in or out of their valleys, to stand by one another, if harm should be done to any of them. "In this we are as one man," ran their oath, among other things, "in that we will receive no judge who is not a countryman and an inhabitant, or who has bought his office."

After several years of troubles and frights among them, the Emperor sent to the Forest Cantons to say, that it would be well for them and their posterity, if they submitted to the protection of the Royal House, as all neighboring cities and counties had done; he wished them to be his dear children; he was the descendant of their Bailiff of Lenzburg, son of their Emperor Rudolph; if he offered them the protection of his glorious line, it was not that he lusted after their flocks or would make merchandise of their poverty, but because he knew from his father and from history what brave men they were, whom he would lead to victory and knighthood and plunder.

Then spake the nobles and the free-men of the Forest Cantons: "They know very well, and will ever remember, how his father of blessed memory was a good leader and Bailiff to them; but they love the condition of their ancestors, and will abide by it. If the King would but confirm it!"

And thereupon they sent Werner, Baron of Attinghausen, Landammann of Uri, like his fathers before him and his posterity after him, to the Imperial Court. But the King was quarrelling with his Electors, and was in bad humor, and sent to Uri to forbid them from assessing land-rates on a convent there. Whereupon the men of Schwyz, being without protection, made a league for ten years with Werner, Count of Honburg; and that their submission to the Austrian power might not be construed into a duty, they sent to the King for an Imperial Bailiff. Albrecht appointed Hermann Gessler of Brünck,

and Beringer of Landenberg, whose cousin Hermann was in much favor with him. Beringer's manners were rough even at the Court; and to get rid of him, they sent him to tame the Waldstätte. He appointed Bailiffs whose poverty and avarice were the cause of much oppression, emboldened as they were by the ill-feeling of the King towards the men of Schwyz, whose freedom the King had refused to confirm, and waited only for opportunity to annihilate their ancient rights, after the example he had already set in Vienna and Styria.

The Imperial Bailiffs resolved to take up their abode in the Forest Cantons,—Landenberg in Unterwalden, near Sarnen, in a castle of the King's, while Gessler built a prison-castle by Altorf in Uri; for within the memory of men no lord had dwelt in Schwyz. They used their power wantonly;—unjust and weary imprisonments for slightest faults; haughty manners, and all the stings of insolent authority;—and no redress to be had at the King's hands. The peace and happy security of the men of Schwyz were gone, and they looked in one another's faces for the thing that was to be done. The honored families of their race were despised and called peasant-nobles;—there was Werner Stauffacher, a well-to-do and well-meaning man; and the Lord of Attinghausen above all, of an ancient house, in years, with much experience, and true to his country; there was Rudolph Redings of Biberek, whose descendants live to this day in Schwyz, supporting still the honor of their name; and the Winkelrieds, mindful of the spirit of their ancestor who slew the dragon. In such persons the people *believed*; they knew them and their fathers before them; and when they were made light of, there was hatred between the people and the Bailiffs. As Gessler passed Stauffacher's house in Steinen, one day, where the little chapel now stands, and saw how the house was well built, with many windows, and painted over with mottoes, after the manner of rich farmers' houses, he cried to his face, "Can one endure

that these peasants should live in such houses?"

It came at last to insulting their wives and daughters; and the first man that attempted this, one Wolfenschiess, was struck dead by an angry husband; and when the brave wife of Stauffacher reflected how her turn might come next, she persuaded her husband to anticipate the danger. Werner Stauffacher at once crossed the lake to Uri, to consult with his friend Walther, Prince of Attinghausen, with whom he found concealed a young man of courage and understanding. "He is an Unterwaldner from the Melchthal," said Walther; "his name is Erni an der Halden, and he is a relation of mine; for a trifling matter Landenberg has fined him a couple of oxen; his father Henry complained bitterly of the loss, whereupon a servant of the Bailiff said, 'If the peasants want to eat bread, they can draw their own plough'; at which Erni took fire, and broke one of the fellow's fingers with his stick, and then took refuge here; meanwhile the Bailiff has caused his father's eyes to be put out." And then the two friends took counsel together; and Walther bore witness how the venerable Lord of Attinghausen had said that these Bailiffs were no longer to be endured. What desolating wrath resistance would bring upon the Waldstätte they knew and measured, and swore that death was better than an unrighteous yoke. And they parted, each to sound his friends, — appointing as a place of conference the Rütli. It is a little patch of meadow, which the precipices seem to recede expressly to form, on the Bay of Uri, sloping down to the water's edge, — so called from the trees being rooted out (*ausgereutet*) there, — not far from the boundary between Unterwalden and Uri, where the Mytenstein rises solitary like an obelisk out of the water. There, in the stillness of night, they often met together for council touching the work which was to be done; thither by lonely paths came Fürst and Melchthal, Stauffacher in his boat, and

from Unterwalden his sister's son, Edelknecht of Rudenz. The more dangerous the deed, the more solemn the bond which bound them.

On the night of Wednesday before Martinmas, on the 10th of November, 1307, Fürst, Melchthal, and Stauffacher brought each from his own Canton ten upright men to the Rütli, to deliberate honestly together. And when they came there and remembered their inherited freedom, and the eternal brotherly bond between them, consecrated by the danger of the times, they feared neither Albrecht nor the power of Austria; and they took each other by the hand, and said, that "in these matters no one was to act after his own fancy; no one was to desert another; that in friendship they would live and die; each was so to strive to preserve the ancient rights of the people that the Swiss through all time might taste of this friendship; neither should the property or the rights of the Count of Hapsburg be molested, nor the Bailiffs or their servants lose one drop of blood; but the freedom which their fathers gave them they would bequeath to their children": and then, when remembering that upon what they did now the fate of their posterity depended, each looked upon his friend, consoled. And Walther Fürst, Werner Stauffacher, and Arnold an der Halden of Melchthal lifted their hands to heaven, and, in the name of God, who created emperor and peasant with the inalienable rights of man, swore to maintain their freedom; and when the thirty heard this, each one raised his hand and swore the same by God and the Saints; — and then each went his way to his hut, and was silent, and wintered his cattle.

In the mean while it happened that the Bailiff Hermann Gessler was shot dead by Wilhelm Tell, who was of Bürglen, at the entrance of the Schächenthal, a half-hour from Altorf, in Uri, — son-in-law of Walther Fürst, and a man of some substance, for he had the stewardship in fee in Bürglen of the Frauenmüster Abbey in Zürich, — one of the con-

spirators. Out of wanton tyranny, or suspicious of the breaking out of disturbances, Gessler determined to discover who bore the joke most impatiently; and, after the symbolical way of the times and the people, set up a hat, (it was on the 18th of November,) to represent the dignity of the Duke Albrecht of Austria, and commanded all to do it homage. The story of Tell's refusal, and of the apple placed on the head of his son to be shot at, the world knows far and wide. Convinced by his success that God was with him, Tell confessed, that, if the matter had gone wrong, he would have had his revenge upon the Bailiff. Gessler did not dare to detain him in Uri, on account of Tell's many friends and relations, but took him up the lake, contrary to the traditions of the people, which forbade foreign imprisonment. They had not got far beyond the Rütli, when the föhn-wind, breaking loose from the gulfs of the Gothard, threw the waves into a rage, and the rocks echoed with its angry cries. In this moment of deadly danger, Gessler commanded them to unbind Tell, who, he knew, was an excellent boatman; and as they passed by the foot of the Axen Mountain, to the right as you come out of the Bay of Uri, Tell grasped his bow and leaped upon a flat rock there, climbed up the mountain while the boat tossed to and fro against the rocks, and fled through the land of the men of Schwyz. But the Bailiff escaped the storm also, and landed by Küsnacht, where he fell with Tell's arrow through him.

It should be remembered that this was Tell's deed alone: the hour which the people had agreed upon for their deliverance had not come; they had no part in the death of Gessler. Carlyle has remarked this as appearing also in Schiller's drama, in the construction of which, he says, "there is no connection, or a very slight one, between the enterprise of Tell and that of the men of Rütli." It was not a deed conformable to law or the highest ethics, yet it was one which mankind is ever ready to forgive

and applaud; and the echo of it through the ages will die away only when hatred of tyranny and wrathful impatience under hopeless oppression die away also from the hearts of men. Tell was an outlaw, and he took an outlaw's vengeance: it was life against life. And yet it is a curious fact, that the historian of Switzerland (that wonderful genius, Johannes Müller, who is reported to have read more books than any man in Europe, in proof of which they point you to his fifty folio volumes of excerpts in the Town Library at Schaffhausen) suggests as a reason why there were only one hundred and fourteen persons, who had known Tell, to gather together in 1388, not much more than thirty years after his death, at the erection of a chapel dedicated to his memory on the rock where he leaped ashore, that Tell did not often leave Bürglen, where he dwelt, and that, according to the ethics of that period, the deed was not one likely to attract inquisitive wonderers to him.

There is hardly an event or character in history which is not to somebody a myth or a phantom; and so Tell has not escaped the skepticism of men. But those who doubt his existence have little experience of history, says Müller. Grasser was the first to remark the resemblance between the adventures of Tell and those of a certain Tocco, or Toke, or Palnatoke, of Denmark, which are related by Saxo Grammaticus, a learned historian who flourished in Denmark in the twelfth century, of which kingdom and its dependencies he compiled an elaborate history, first printed at Paris in 1486; but the Danish Tocco, who is supposed to have existed in the latter half of the tenth century, was wholly unknown to the Swiss, who, if ever, came to the Alps before that time. The Icelanders, also, have a similar story about another hero, which appears in the "Vilkinasaga" of the fourteenth century. It is more likely that the Danes and other Northern people got their tradition from the Swiss, by way of the Hanse Towns perhaps, if we are to be permitted to be-

lieve in but one original tradition, which is not less arbitrary than unphilosophic.

Moreover, for what did these one hundred and fourteen people dedicate a chapel to him thirty years and a little more after his death? And there is the Chronicle of Klingenberg, which covers the end of the fourteenth century, which tells his story; and Melchior Russ, of Lucerne, who, in compiling his book, about the year 1480, had before him a Tell-song, and the Chronicle of Eglof Etterlins, Town-Clerk of Lucerne in the first half of the fifteenth century; and since 1387, too, there has been solemn service by the people of Uri to commemorate him. So that the "Fable Danoise" of Uriel Freudenberger of Bern (1760) becomes a mere absurdity, and the indignant Canton of Uri had no less right to burn it (although to burn was not to answer it, suggests the critic,) than to honor the "Defence" by Balthasar with two medals of gold. And what has been written to establish him may be read in Zurlauben, (whose approbation is almost proof, says Mülller, reverentially,) and elsewhere as undernoted.*

Tell's posterity in the male line is reported to have died out with Johann Martin, in 1684; the female, with Varena, in 1720. Yet it is certainly a little surprising that the elder Swiss chroniclers, John of Winterthur, and Justinger of Bern, for instance, who were almost Tell's contemporaries, make no mention of him in relating the Revolution in the Waldstätte, and that it should be left to Tschudi and others, almost two hundred years afterwards, in the sixteenth century, to give his story that dramatic importance upon which Schiller has set the seal forever. It can be explain-

ed, perhaps, on the ground that it did not at the time possess that importance which we have been taught to give it; though roughly, thus, we do away with the poetry of it, to be sure. Let Voltaire, whose function it was to deny, enjoy his feeble sneer, that "the difficulty of pronouncing those respectable names"—to wit, *Melchtad*, and *Stauffager*, and *Valtherfurst*, to say nothing of *Grisler*—"injures their celebrity." Neither are we to conceal the fact, that it is doubted, if not denied, that there ever was any Gessler in Uri to perform all the wicked things ascribed to him, and to get that arrow through him in such dramatic and effective manner in the Hollow Way; for has not Kopp published, with edifying explanation, "Documents for the History of the Confederation," (Lucerne, 1835,) in which, in the list of Bailiffs (*Landvoigte*) at Küssnacht, we do not find the name of Gessler? Perhaps there was a mistake in the name, the critic suggests.

The Revolution thus begun at the Rütli, and by Tell, went forward swiftly in January, 1308; and, true to their oath, it was consummated by the men of Schwyz without harm to the property of the Bailiffs, also without the spilling of a single drop of blood. The prison at Uri was captured, and Landenberg also, as he descended to hear mass, by twenty men from Unterwalden; but, escaping, he fled across the meadows from Sarnen to Alpnach, where he was overtaken and made to swear that he would never set foot again in the Waldstätte, and then suffered to depart safely to the King. And the peasants breathed again; and Stauffacher's wife opened her house to all who had been at the Rütli; and there was joy in the land.

And how in that same year Duke Albrecht met with a bloody end, such as befell no King or Emperor of the Germans before or after him, at the hands of Duke John, his nephew, whose inheritance he had kept back, and other conspirators; and what vengeance overtook the murderers; and how Duke John, escaping in

Tell, Geschichte aus der Vorzeit* (Reutlingen, 1836); Henning, *Wilh. Tell* (Nürnberg, 1836); and *Histoire de Guill. Tell, Libérateur de la Suisse* (Paris, 1843).

the habit of a monk into Italy, was no more heard of, but became a shadow forever, like the rest of them; — and how, eight years afterwards, came the expedition of Duke Leopold of Austria against the Waldstätte, and the fight at Morgarten, where the Swiss, thirteen hundred mountaineers in all, Wilhelm Tell among them, routed twenty thousand of the well-armed chivalry of Austria, — dating from that heroic Thermopylæ of theirs the foundation of the Swiss Confederacy, as, larger and perhaps not less resolute, we see it to-day, ready to defy, if need be, single-handed, the greatest military nation of the earth; — and how, thirty years afterwards, the men of Schwyz and Uri go forth, nine hundred strong, — among them Tell, and Werner Stauffacher, now bent with years, — to the aid of Bern, threatened by the nobles roundabout; — and how, in 1332, was formed the league with Lucerne, whereby the beautiful lake gets its name as the Lake of the *Four Forest Cantons*; — and how, one sultry July day in 1386, the men of Schwyz and Uri and Unterwalden, together with other Swiss, — some of them armed with the very halberds with which their fathers defended the pass at Morgarten, — fought again their hereditary enemy, Austria, by the clear waters of the little Lake of Sempach; how, when they saw the enemy, they fell upon their knees, according to their ancient custom, and prayed to God, and then with loud war-cry dashed at full run upon the Austrian host, whose shields were like a dazzling wall, and their spears like a forest, and the Mayor of Lucerne with sixty of his followers went down in the shock, but not a single one of the Austrians recoiled; and how at that critical, dreadful moment, — for the flanks of the enemy's phalanx were advancing to encompass them, — there suddenly strode forth the Knight Arnold Strutthan von Winkelried, crying, "I will make a path for you! care for my wife and children!" and, rushing forward, grasped several spears and buried them in his breast, — a large, strong man, he bore the soldiers down with him

as he fell, and his companions pushed forward over his dead body into the midst of the host, and the victory was won, and another book was added to the epic story of the men of Schwyz and Uri and Unterwalden; — and how Duke Leopold fell fighting bravely, as became his house, and six hundred and fifty nobles with him, so that there was mourning at the Court of Austria for many a year, and men said it was a judgment upon the reckless spirit of the nobles; and how Martin Malterer, standard-bearer, of Freyburg in the Breisgau, happening to come upon Leopold as he was dying, was as one petrified, and the banner fell from his hands, and he threw himself across the body of Leopold to save it from further outrage, waiting for and finding his own death there; — and how this ruinous contest between Switzerland and Austria was not finally closed till the time of Maximilian, in 1499, when first the right of private war was abolished in Germany; — and how, through the various fortunes of the succeeding centuries, the character of the Swiss has remained for the most part the same as in the earlier time: — these things one may read at large elsewhere; but we hasten to the conclusion.

The story of Tell has been the subject of several dramas. Lemierre, a popular French dramatist of his day, (though J. J. Rousseau affects to call him a *scribe* whom the French Academy once crowned,) produced a play founded upon it, in Paris, in 1766; but the language of Swiss freemen on a French stage was little to the taste of those days, and it was a failure. Voltaire, when asked what he thought of it, replied, — "*Il n'y a rien à dire; il est écrit en langue du pays.*" But twenty years afterwards it was revived with prodigious success; for the truth which was in it flashed out then, forerunner of the storm which was soon to break over France. Again, when Florian, whom we are to remember always for his "*Fables*," banished in 1793 by the decree which forbade nobles to remain in Paris, taking refuge at Sceaux,

was arrested and thrown into prison, he consoled his captivity by composing his drama of "Guillaume Tell,"—the worst of his productions, it is recorded. Lastly, it has been consecrated for all time by the genius of Friedrich Schiller. The legend was first brought to Schiller's notice, doubtless, by Goethe, who writes to him concerning it from Switzerland in 1797. Goethe himself thought of founding an epic on it. It was not, however, till 1801, before his journey to Dresden, that Schiller's attention was permanently directed to it. Completed on the 18th of February, it was brought out at Weimar on the 17th of March, 1804, with the most extraordinary success: the fifth act, however, was suppressed, in deference to the intended court alliance with the daughter of a murdered Russian emperor; it not being considered good taste to represent the assassination of an autocrat upon such an occasion.

Schiller's drama has been translated into French by Merle d'Aubigné and others, and many times into English,—among us by the Rev. C. T. Brooks. It follows the tradition substantially. Carlyle declares, indeed, that "the incidents of the Swiss Revolution, as detailed in Tschudi or Müller, are here faithfully preserved, even to their minutest branches." We tarried once for several days at Brunnen, and read the play upon the spot in sight of the Rütli, in the little balcony of the *pension* of the Golden Eagle, with the deep, calm, blue lake at our feet, and the Hacken and Axen mountains and the Selisberg shutting out the world for a time; and as we look at the play now, it recalls with the utmost minuteness the scenery and the coloring of it all: yet Schiller never was there. It was the last startling effulgence of his comet-like genius; for when the spring-flowers came again, he was gone from our earth.

In the last act of the great drama, as Tell sits at his cottage-door in Bürglen in Uri, surrounded by his wife and children, after the consummation of the deed, there approaches a monk begging alms;

—it is the parricide Duke John, flying the sight and presence of men. In the contrast of the feelings of these two persons, then and there, one reads Schiller's justification of his hero. As if to complete by contrast the moral of the drama of "Tell," it is related also in the tradition, that in 1354, when the stream of the Schächen was swollen, Tell, then bowing under the snowy years, seeing a child fall into it, as he passed that way, plunged in, and lost his life. Uhland has indicated this in his "Death of Tell," as only Uhland could:—

"Die Kraft derselben Liebe,
Die du dem Knaben trugst,
Ward einst in dir zum Triebe,
Dass du den Zwingherrn schlugst."

Some liken life to a book to be read in. To us it is rather an unwritten poem which each age repeats to the next,—melodious sometimes, as when the blind old mythic bard of Chios sang it under the olive-trees, by the blue Ægean, to the listening Greeks, thirsty for beauty, drinking it ever with their eyes, and with their lips lisping it,—or rough and more full of meaning, as when, with the men of Schwyz and Uri and Unterwalden, the great idea of freedom, majestic as their mountains, utters itself, composed and stern, in deeds which for all time make Switzerland honored and free.

On the 10th of November, 1859, the heart of Germany beat with gladness, if touched also with a certain sorrow, as in every hamlet, on every hill-side, from the German Ocean to the Tyrolese Alps, from the Vosges to the Carpathians and the Slavic border, the people met to celebrate with simple rites the hundredth birthday of its great poet Schiller, in whom they recognize not more what he did than what he sought after, whose striving is their striving, from highest to lowest,—the ideal man, burning to gather them together, and fold them as one flock under one shepherd, that, no longer divided, they may face the world and the future with one heart, with one great trembling hope, to lead the new civilization to its lasting triumphs.

Schiller had sung of Wilhelm Tell; and the men of Schwyz remembered him on that occasion, too, on the Rütli, with their confederates from Oberwalden and Niederwalden. On the afternoon of the 11th of November, they met at Brunnen,—on the lake, as we have said,—the men of Schwyz embarking in one great boat, amidst peals of music, while numberless little canoes received the others. The wind, blowing strong from the north, filled the sail, and, as they floated down the Bay of Uri, they remembered Stauffacher and his friends, who had glided over the same dark waters at dead of night, past the Mytenstein to the Rütli, and the old time lived again; and the little chapel on the spot where Tell sprang ashore, erected by the Canton Uri, where once a year, since 1388, mass is said, and a sermon preached to the people, who go up in solemn procession of little boats, looked friendly over to them; and the countrymen of Schiller, present for the first time from Stuttgart and Munich, wondered at the solemn beauty of the snow-peaks reflected in the waters below. A chorus of many voices broke upon the mountain-stillness, as the little fleet approached the Rütli; the men of Uri, already there, “the first on the spot,” and with them the men of Gersau, a valiant band, answered in a song of welcome; and they shook each other by the hand, and made a little circle, three hundred in all, upon the Rütli; and Lusser of Uri thanked the men of Schwyz for the invitation to remember their fathers here on the five hundred and fifty-second anniversary of the deeds which Schiller has so gloriously sung. We best remember the poet by repeating and upholding his words:—

“Wir wollen seyn ein einzig Volk von Brüdern,

In keiner Noth uns trennen und Gefahr.

Wir wollen frey seyn, wie die Väter waren,
Eher den Tod als in der Knechtschaft leben.

Wir wollen trauen auf den höchsten Gott,
Und uns nicht fürchten vor der Macht der Menschen.”

“One people will we be,—a band of brothers;
No danger, no distress shall sunder us.
We will be freemen as our fathers were,
And sooner welcome death than live as slaves.
We will rely on God's almighty arm,
And never quail before the power of man.” *

Then they read the scene of the Rütli Oath from Schiller's play, and sing the Swiss national song, “Callest thou, my Fatherland?” And the pastor Tschümperlin admonishes them that they best cultivate the spirit of Schiller and Tell by worthy training of their children. As they are about to break up at last, the Landammann Styger of Schwyz suggests a beautiful thing to them:—“As we came from Brunnen, and looked up at the Mytenstein as we passed it,—the great pyramid rising up there out of the water as if meant by Nature for a monument,—it seemed to us that a memorial tablet should be placed there, simple like the column itself, with words like these: ‘To Him who wrote “Tell,” on his One Hundredth Birthday, the Original Cantons.’” And the proposition was received with unanimous shout of assent. “This was the worthy ending of the Schiller-Festival on the Rütli,” says the contemporary chronicle.

On the 10th day of November, 1859, also, there was put into the hands of the Central Committee of the Society of the Swiss Union the deed of purchase of the Rütli. It is in the handwriting of Franz Lusser of Uri, Clerk of the Court, and dated the 10th of November, the birthday of Schiller. Thus Switzerland owns its sacred places, and the title-deeds long laid up in its heart are written out at last.

On the 21st of October of last year, on a brilliant afternoon, the men of Schwyz and Uri went forth again from Brunnen, with the chief magistracy of the land. From Treib came the Unterwaldners, all in richly decorated boats, and the inhabitants of Lucerne in two steamboats with much music, meeting in front of the Mytenstein, which lifts its colossal front

* Rev. C. T. Brooks's translation, p. 53.

eighty feet above the water there. The top of it was covered with a large boat-sail, with the arms of the original Cantons and Swiss mottoes on it; in a wreath of evergreen, the arms of the other Cantons; in the middle of it, in token of the twenty-two Cantons, a white cross upon red ground; above all, the flag of the Confederacy spread to the Föhn. At the foot was a little stand made of twigs for the speaker, about which the little fleet was grouped, under the charge of the Landammann Aufdermauer of Brunnen, a gallant gentleman, host of the Golden Eagle, with his kind little sister, of whom we spoke at the beginning.

When all was still, Uri opens the musical trilogy, — the words by P. Gall. Morell, monk of Einsiedeln, the music by Baumgartner of Zürich; Unterwalden takes up the burden; then Schwyz; then all three in chorus; — and the echo of the fresh voices among the rocks there was as in a cathedral. Then Landammann Styger climbs to the stand, and makes a little speech, and reads a letter from Schiller's daughter, (of which presently,) while the curious shepherd-boys stretch out their necks over the craggy tops of the Selisberg to look down upon the lively scene below.

At the end of his speech, Styger lets fall the sail amid the beating of the drums and the shouts of the multitude; and on the flat sides of the rock appear the gilded metal letters, a foot high, — "To the Singer of Tell, Fr. Schiller, the Original Cantons, 1859." And there were other little speeches, — one by Lusser, who exclaims with much truth, "The rocks of our mountains can be broken, but not *bent*"; and then followed the Swiss psalm by Zwysig. And afterwards, in the evening, a feast in the Golden Eagle in Brunnen, at which, with the ancient sobriety, they remember the dangers of the present, and affirm their neutrality, which should not hang upon the caprice of a neighbor, but be grounded in their own will, for there is no Lord in Christendom for them except Him who is above all.

Thus wrote Schiller's daughter: —

"Gentlemen of the Committee of the Schiller Memorial on the Mythenstein: —

"Your friendly words have truly delighted and deeply moved my heart; — not less the engraving of the Mythenstein, which shall stand as the very worthy and noble memorial of the Singer of Wilhelm Tell in the land of the Swiss for all time forever, — a token of recognition of the genius which, struggling for the highest good of mankind, has found its home in the hearts of all noble men and women. With infinite joy I greeted the beautiful idea, so wholly worthy of the land as of the poet, — there, where magnificent Nature, grown friendly, offers its hand on the very ground where one of the noblest, most finished creations of Schiller takes root, to consecrate to him a memorial which, defying time and storms, shall illumine afar off every heart which turns to it.

"In memory also of my beloved mother, Charlotte, Schiller's earthly angel, I rejoice in this memorial. She it was who, with deepest love for Switzerland, which she calls the land of her affections, where she passed happy youthful days from 1783 to 1784, led Schiller to it, and by her fresh, lively descriptions made him partake of it; and so prepared the way for the genius which could embrace and penetrate all things for the masterly representation of the country, which, unfortunately, his feet never trod. If, unhappily, I am not able to be present at the festival on the 21st of October, I am not the less thankful for your kind invitation; and in that sacred hour I will be with you in spirit, deeply sympathizing with all that the noble *idea* brought into life.

"A little memorial of the 10th of November, 1859, representing Schiller and Charlotte, I pray you, Gentlemen, to accept of me, and, when you recall the parents, to remember also the daughter.

Respectfully yours,

EMILIE V. GLEICHEN-RUSSWURM,
geb. v. SCHILLER.

Greiffenstein ob Bonndland. 12 October, 1860.

In the churchyard of Cleversulzbach lies buried, since the 2d of May, 1802, the mother of Schiller. Prof. Dr. E. Mörka, when he was preacher there, erected a simple stone cross over the grave, and with his own hands engraved upon it the words, "Schiller's Mother." On the famous 10th of November, 1859, woman's hand decorated the grave with flowers, and put a laurel wreath upon the cross;

and in the hour when great cities with festal processions and banquets and oratory and jubilant song offered their homage to the son, a few persons gathered around the grave of the mother, and in the silence there planted a linden-tree; for in stillness thus, while she lived, had his mother done her part, lovingly and with faith, to unfold and consecrate the genius of Friedrich Schiller.

A NOOK OF THE NORTH.

ADVENTUROUS travellers, who penetrated into Canada during the late visit of the Sovereign-Apparent of that colony, have furnished the public, through the daily press, with minute and more or less faithful descriptions of places upon the grand routes. Quebec and Montreal have been done by them to a hair; Kingston and another wicked place made notorious for bad manners; Toronto, Hamilton, and London of the West photographed with a camera of maximum dimensions. Upon the two great railroad-lines by which Canada is now traversed, — the Grand Trunk and the Great Western, — there is hardly a station which has not been mentioned by the reporters, either for the loyal manner in which it was decorated to do honor to the youthful Prince, or for the rather inhospitable display of certain objectionable symbols by the people around.

But neither in Canada nor elsewhere is it upon the grand routes that glimpses can be had of interior life and character. Primitive simplicity is altogether incompatible with railroads. The boy who resides near a station is quite an old man, compared with any average boy taken from the sequestered clearings ten miles back: he may be a worse kind of boy, or he may be a better, but he isn't the same kind, at any rate. Of girls it is more difficult to speak with confidence

in the present era, — hooped skirts having pretty nearly assimilated them everywhere; but I have noticed that they are less ingenuous along railroads than in secluded districts, and their parents more suspicious, — a fact which makes railroad-vicinities inferior places to dwell in, compared to those that are rural and remote from the demoralizing influences of up and down trains.

I do not aver that the railroad is devoid of a kind of poetry of its own, — the same kind of sentiment, nearly, that resides about anvils and smelting-furnaces in the Hartz Mountains and in the great coal-districts: an infernal kind of sentiment, for the most part, being inseparable from burning fiery furnaces and grime; as in "Fridolin," and in the "Song of the Bell," and in the "Forging of the Anchor." Once, particularly, in travelling by rail, did I experience the mysterious glamour that seems to hang round iron more than about any other metal. It was past midnight; and on waking up after a sleep of some hours, I found myself alone in the long car, which had come to a stand-still while I slept. The stillness of the night was broken at intervals by a short, loud boom, as of an iron bell ringing up some terrible domestic from the incomprehensible unseen. On looking out of the window, I saw by some dim lamp-light that we

were alone in an immense iron hall; *we*, I say, for there was a ponderous, grimy being darkly visible to me, whose gigantic shadow made terrible gestures upon the walls and among the great iron girders of the roof, as he moved slowly along the train, striking the wheels with a heavy sledge-hammer as he went. Of course there was nothing unusual in such a proceeding, the object of which was, probably, to ascertain something connected with the condition of the rolling stock; but there was a kind of awful poetry in the toll of the iron bell, which ran, and reverberated, and tingled among the iron ribs in the building, making them all sing as if they were things of flesh and blood, with plenty of iron in the latter, which is reckoned to be conducive to robust health.

But the romance of rolling stock has yet to be disengaged, and the inspired conductor or bardic baggage-master destined to do that is yet in the shell. May he long remain there!

Off the track some ten or twenty miles, though, almost anywhere, some of the materials, at least, for good, regular poetry of the old-fashioned kind are to be found. A mill, for instance, with a wooden wheel,—no demoralizing iron about it, in fact, except what cannot well be dispensed with, in view of wear and tear. A white cottage, where the miller dwells serene; mossy roof, red brick chimney, and no lightning-rod or any other iron, being the principal features of the serene miller's abode. Cherries, in that tranquil person's garden, that are nearly ripe, and roses of a delicate red,—but none so ripe or so red as the lips and cheeks of the serene miller's daughter, who trips across the little wooden foot-bridge over the mill-stream, singing a birdy kind of song as she goes. She is clad in a black velvet bodice and russet skirt, and has no iron about her of any description, unless, indeed, it is in her blood,—where it ought to be. The breath of kine waiting to be relieved of their honest milk, which is a good, solid kind of fluid in such places, and

meanders about the land with great freedom in company with honey. All these things will be very scarce in the world by-and-by, on which account it seems to be a judicious thing to go off the track a little, now and then, if only to "say that we have seen them."

In following the graphic narratives of the Prince of Wales's tour, the mind naturally wandered away to places *not* visited by him, although within easy distance of his fore-ordered course. It is well that there are places left to talk about! Let us conjure up a few old reminiscences of one,—a silent, primitive little nook of the North, within an hour's ride of Quebec, but too insignificant a spot for the coveted distinction of a royal visit. Crowned heads, then, will have the goodness to transfer their attention, and skip to the next article.

The nook to which I refer is Lorette, in Lower or French Canada, where it is commonly called *Jeune Lorette*, to distinguish it from *Ancienne Lorette*,—a less interesting place, distant from it about four miles.

Jeune Lorette is situated about eight miles north-west of Quebec, upon the beautiful, romantic stream called the St. Charles, which rushes down many a picturesque gorge, and winds through many pleasant meadows, in its course of some twenty miles from Lake St. Charles away up in the hills to the St. Roch suburb of Quebec. Here it assumes the character of a deep, tortuous dock, incumbered with the *débris* of many ship-yards, and reflecting the skeleton shapes of big-ribbed merchantmen on the stocks. Here, too, it is generally called the Little River; probably to distinguish it from the great River St. Lawrence, into which it oozes at this point.

But higher up, as I have said, the St. Charles is romantic and rushes on its fate. At Lorette, it divides the village in twain: a western section, for the most part peopled by French-Canadian *habitans*; an eastern one, inhabited by half-breed Indians, a remnant of the once powerful Hurons of old.

These Canadian Hurons are not, in their present condition, corroborative of the Cooper specifications of Indian life: rather the contrary, in fact. There is a wing of them — a wing without feathers, indeed — settled down at Amherstburgh, on the far western marge of Lake Erie, in Canada, quite six hundred miles away from their brethren of Lorette. When shooting woodcock once in that district, I entered the comfortable log farm-house of the chief of the settlement, whose name was Martin. He was a fat, rather Dutch-looking Indian, but still active and industrious,—for a man who is an Indian and fat. I asked Mr. Martin if he hunted much; to which he replied, No, he did not,—adding, that he never was far into the woods but once in his life, and that was on his own lot of a hundred acres of bush, in which he was lost, on that occasion, for two days.

Among the Hurons of Lorette there are a few young men who hunt moose and caribou in the proper season; but the men, generally speaking, as well as the women, are engaged in the manufacture of snow-shoes and moccasins,—articles for which there is a great demand in Lower Canada. Philippe Vincent, a chieftain and shoemaker of the tribe, told me that he had disposed of twelve hundred dollars' worth of these articles, on a trip to Montreal, from which he had just returned. Many articles of Indian fancy-work are also manufactured by them: beaded pouches for tobacco, bark-work knick-knacks, and curious racks made of the hoofs of the moose, and hung upon the wall to stick small articles into.

On the profits of this work many of them live in comfort,—nay, in luxury. Paul Vincent, a cousin of Philippe mentioned above, and, like him, a chief of the tribe and a renowned builder of snow-shoes, paid two hundred and seventy-five dollars for a piano for his daughter, when I was at Quebec, five or six years ago. Whenever I visited Philippe, that stately man of the Hurons would usher me into a little parlor with a sofa in it and a carpet on the floor; he would produce bran-

dy in a cut decanter, and cake upon a good porcelain plate, and would be merry in French and expansive on the subject of trade.

Most of these hybrid Hurons are quite as white as their Canadian neighbors; but they generally have the horse-tail hair, and black, beady eye of the aborigines. The ordinary dress of the men, in winter, is a blue blanket-coat, made with a *capuchon*, or hood, which latter is generally trimmed with bright-colored ribbon and ornamented with beads. Epaulettes, fashioned out of pieces of red and blue cloth, somewhat after the pattern of a pen-wiper, impart a distinguished appearance to the shoulders of these garments, which are rendered still more picturesque by being tucked round the body with heavy woollen sashes, variegated in red, blue, and yellow. Some of these sashes are heavily beaded, and worth from five to ten dollars each; and they, as well as the Indian blanket-coats, are to be had at the furriers' shops in Quebec, where there is a considerable demand for them by members of snow-shoe clubs, and others whose occupations or amusements render that style of costume appropriate for their wear. The older women dress in the ordinary squaw costume, with short, narrow petticoats, and embroidered *metasses*, or leggings. When going out, they fold a blue blanket over all, and put on a regular, unpicturesque, stove-pipe hat, with a band of tin-foil around it,—which makes them look like one of those mulatto coachmen one sees now and then on the box of a *bonton* barouche, with his silver-mounted hat and double-caped blue box-coat. The young girls are disposed to innovations upon the petticoats, and modifications of the *metasses*. Once I saw one standing on a great gray crag at the foot of the fall. She looked extremely picturesque at a little distance, giving a nice bit of local color to the scene with her scarlet legs; but on a nearer approach, much of the value of the color disappeared before the unromantic facts of a pale-face petticoat and patent-leather gaiter-boots. I

have noticed several of the younger people here with brown hair and blue or gray eyes, significant that the aboriginal blood is being gradually diluted. In another generation or two, there will be little of it left among them. But the correspondents of the press, who described some of these Indians seen by them at Quebec, are mistaken in attributing to them an admixture of Irish blood. Until within eight years past, there were few, if any, Irish to be found in the neighborhood of Lorette. Since that time, the construction of the Quebec water-works, which are supplied from Lake St. Charles, has given employment to hundreds of the Hibernian stock in that neighborhood; and I know not whether their influence as regards race may not be now discernible in the features of many pugnacious Huronites of tender years: but the white element traceable in the lineaments of the present and passing generations of the settlement is distinctly attributable to the proximity of the French-Canadian, whose language has been transfused into them with the blood.

Few, if any, of the older people of Lorette speak English,—Huron and French being the only languages at their command. Since the building of the great reservoir, however, many of the rising generation are picking up the English tongue in its roundest Irish form. Previously, matters were the reverse. I once noticed a handsome, brown-faced boy there, who used to come about with a bow and arrows, soliciting coppers, which were placed one by one in a split stick, shot at, and pocketed by the archer, if hit,—as they almost always were. He spoke Indian and French, and I took him for an olive-branch of the tribe; but, on questioning him, he told me that his name was Bill Coogan, and that he first saw the light, I think, in Cork, Ireland.

There is one charming feature at Lorette,—a winding, dashing cascade, which boils and creams down with splendid fury through a deep gorge fenced with pied and tumbled rocks, and overhung by gnarly-boughed cedars, pines,

and birches. There is, or at least there was, a crumbling old saw-mill on a ledge of rock nearly half-way up the torrent. It was in keeping with the scene, and I hope it is there still; but it was very shaky when I last saw it, and has probably made an *éboulement* down to the foot of the fall before now. Some short distance above the head of the fall, near the bridge by which the two villages are connected, the scene is pictorially damaged by a stark, staring paper-mill, the dominant colors of which are Solferino-red and pea-green. This, a comparatively new feature in the landscape, is not visible from below, however, and it is from there that the fall is seen to best advantage.

To the eye of the experienced fisherman, it is obvious that the St. Charles, with its sparkling rapids, and the deep, swirling pools formed by its numerous "elbows," must erstwhile have been a chosen retreat of the noble salmon. Even now, notwithstanding the obstructions caused by the immense deposits of ship-yard refuse at its mouth, a few of these fine fish are caught every season by one or two persevering anglers from Quebec,—men who thrive on disappointment,—whose fish-hooks are miniature anchors of Hope. Lake St. Charles, from which the river derives its existence and its name, is a wild, beautiful tarn, about five miles above Lorette, embosomed in hills and woods. There are good bass in that lake, by whose shores there dwells—or dwelt—an ancient fisherman called Gabriel, who supplied anglers with canoes, and paddled them about the waters.

Lorette, although undistinguished by a glance from the mild blue eyes of the Premier Prince of England, was flashed upon, years ago, by the awful light that gleamed from the dark, fierce ones of Hamlet, Prince of Denmark. This is how I came to know it.

Fifteen years ago,—it was on the seventeenth of August, 1845,—I made my first pilgrimage to Lorette, in company with a friend. We wandered at

large through the village, talking *patois* to the swarthy damsels, and picking up Indian knick-knacks, as we went. At last, fired with the ambition of doing a distinguished thing, we proposed calling upon the head chief of the village, whose name, I think, was Simon, but might possibly have been Peter, — for I regret to say that my memory is rather misty upon that important point. That personage was absent from home; but we were hospitably received by his father, who also appeared to be his butler, as he was engaged in bottling off some root-beer into stone blacking-jars, when we entered. I suppose the chief's father must once have been a chief himself, and that his menial position arose from the fact of his appearance being rather disreputable. He was a decrepit and very dirty old man, in a tight blue frock-coat, and swathed as to his spindle shanks with scarlet leggings. Sitting by a small window at the farther end of the large, bare room, was the prettiest little Huronite damsel I ever saw, rather fair than dark, and very neatly attired in a costume partly Indian. This little girl — a granddaughter of the dirty old man, as that person informed us — was occupied in tying up some small bundles of what the Canadians call *racine* — a sweet-smelling kind of rush-grass, sold by them in the Quebec market, and used like *sachets*, for imparting a pleasant odor to linen garments. After some conversation of a general character, the old man requested us to write our names in his visitors' book, which was a long, dirty volume, similar in form to those usually seen upon bar-counters. In this book we were delighted to find the autographs of many dear friends, of whom we little expected to meet with traces in this nook of the North. Mark Tapley and Oliver Twist, for instance, had visited the place in company some two years before. There could be no mistake about it; for there were the two names, in characteristic, but different manuscript, bound together by the mystic circumflex that indicated them to be friends and travelling-companions.

The record covered a period of ten years; but was that sufficient to account for the appearance of Shakspeare on its pages? And yet there he was; and in merry mood he must have been, when he came to Lorette, — for he wrote himself down "Bill," and dashed off a little picture of himself after the signature, in a bold, if not artistic manner. Our friend Titmouse was there, too, represented by his famous declaration commencing, "Tittlebat Titmouse is my name." He seemed to have taken particularly fast hold of the memory of the old Huron, who described him as a tremendous-looking, big person, with large black whiskers, and remembered having enjoyed a long pull at a brandy-flask carried by him. Of course there can be no doubt about that man being the real Tittlebat of our affections. Of the other signatures in the Huronite album, I chiefly remember that of M. F. Tupper, which I looked upon at the time as a base forgery, and do aver my belief now that it was nothing else: for the aged sagamore described the writer of that signature as a young, cheerful, and communicative man, who smoked a short, black pipe, and had spaniels with him. Could my friend, could I, venture to inscribe our humble names among this galaxy of the good and great? Not so: and yet, to pacify the Huronite patriarch's thirst for autographs, we wrote signatures in his brown old book; and if that curious volume is still in existence, the names of Don Cæsar de Bazan and Sir Lucius O'Trigger, Bart., will be found closely linked together on a particular page with the circumflex of friendship.

And now the old man, delighted with the addition to his autographs, proposed to treat us to an exhibition of several medals gained by him for deeds of valor when he was a warrior, and previously to his having entered upon the career of a bottler of root-beverages. He had silver disks presented to him by at least two of Thackeray's Georges, a couple from William IV., and I think one from her present Majesty, Queen Victoria. All of these he touched with reverence, and

not until he had purified his hands upon a dirty towel. After we had duly admired these decorations, and listened with patience to the old man's garrulous talk about them, he told us that he had yet another to show, — one presented to him many years ago by a great man of that day, — a man embalmed for all posterity on account of his unrivalled performances upon the tight-rope, — a man of whom he reduced all description to mendicancy in designating him as *un danseur très-renommé sur la corde tendue*. The medal was a small silver one, and it bore the following inscription : —

FROM

EDMUND KEAN, THE BRITISH ACTOR,

TO

TOUSSAHISSA,

CHIEF OF THE HURON INDIANS.

1826.

And such is fame! It appears that Kean, always fond of excitement, had organized a tremendous *pow-wow* among these poor specimens of the red man, on his visit to Quebec. They adopted him, — constituted him a chief of their tribe. It would be interesting to have a full account of the great passionist's demeanor upon that solemn occasion. Did he harrow up his hearers with a burst from "Othello" or a deep-sea groan from "Hamlet," and then create a revulsion of feeling by somersaulting over the centre-fire of the circle and standing on his head before it, grinning diabolically at the incensed pot? Or did he, foreshadowing the coming Blondin, then unplanned, stretch his tight-rope across the small Niagara that flashes down into the chasm of the St. Charles, and, kicking his boots off, carry some "mute, inglorious" Colcord over in an Indian bark basket? If he did such things, the old Huronite was foggy upon the subject and reserved, limiting his assertions to the statement, that "the British actor" was a *farceur*, and likewise *un danseur très-renommé sur la corde tendue*.

Long afterwards, when I resided at

Quebec, my visits to Lorette were very frequent. Once, as I passed along the street, or road, between the straggling log-houses, I was accosted, in good English, by a fat and very jovial old squaw, who was attired in a green silk dress, sported a turban, and appeared to be altogether a superior kind of person. On inquiry, I learned from her that she was the widow of a former chief of the tribe, and came originally from Upper Canada, where she learned to speak English. Her husband had been presented with many medals, she said; — would I like to see them? I followed the old lady into her dwelling, where she showed me several silver medals, which I thought I recognized as the same exhibited by the aged Huronite with the red legs. But the Kean medal was not among them; nor could I, by any system of description in my power, recall the features of the relic to the memory of the old squaw.

Subsequently, I tried many times to trace it, but without success. Many strangers visit Lorette during the summer season, and it is possible that some virtuoso, struck by the associative value of the relic, may have prevailed on its owner to part with it for a consideration. There are people who would have possessed themselves of it without the exchange of a consideration. Should this meet the eye of its present possessor, and if so be that the medal came into his hands on the consideration principle, so that he need not be ashamed of it, he will confer a favor by giving the correct reading of the Indian name. For "Toussahissa," as I have rendered it, is not exact, but only as near as I can make it out from my pencil-memoranda, which, written in a note-book that did occasional duty as a fly-book, have been partially obliterated in that spot by the contact of a large and remarkably gaudy salmon-fly, whose repose between the leaves is disturbed, perhaps, by aquatic nightmares of salmon gaping at him from whirling eddies.

Between Lorette and the unexplored wilderness that stretches away to polar

desolation there is but a narrow selvage of civilization. Looking toward it from my windows at Quebec, I could see the blue, serrated ridge of highlands beyond which the surveyor has never yet run his lines,—beyond which the surveyor's lines would be superfluous, indeed, and futile; for the soil is of the barren, rocky kind, and the timber of the scrubby. Not quite so savage is this frontier, indeed, as the wild precincts described by the Nebraska editor, whose meditations for a leader used to be cut short, occasionally, by the bellowing of the shaggy bison at his window, or the incursion of the redoubtable “grizzly” into his wood-shed where the elk-meat hung. But, in the clear, cold nights that precede the punctual and distinct winter of these regions, the black bears often come down from their fastnesses amid the wild ridges, and astonish the drowsy *habitant* and his household by their pranks among his pigs and calves: also in the spring.

In a small settlement of this wild tract, a few miles to the north-east of Lorette, there dwelt, some six or seven years ago, a poor farmer named Cantin, who added to the meagre fare afforded by his sterile acres such stray birds and hares as he could get within range of his old musket, without risking himself very far away from the isolated clearing. One night in the early part of May, when the snow had disappeared from the open grounds, but lingered yet in the ravines and rocky thickets, a dreadful tumult among the cattle of the settlement indicated the presence of bear. Cantin had the old firelock ready, but the night was dark and unfavorable for active measures. At gray morning, traces of the nocturnal intruder were visible, and that close by the *cabane* in which Cantin lived, in the little inclosure near which a struggle had evidently taken place, resulting in the discomfiture of a yearling calf, portions of which were discovered in the thickets a short distance from the clearing. Here the patches of snow gave ample evidence of the passage of a very large bear. When the sun was well

up, Cantin sallied forth alone, with his gun and a small supply of ammunition,—unluckily for him, a very small supply. He did not return to dinner. Shots were heard in the course of the day, at a considerable distance in the hills; and when the afternoon was far advanced, and Cantin had not made his appearance, several of his neighbors—all the men of the settlement, indeed, and they made but a small party—set out in search of him. The snow-patches facilitated their search; and, having tracked him a good way, they suddenly saw him kneeling by a tree at the end of an open glade, with his hands clasped in an attitude of prayer. He was a frightful spectacle when they raised his *bonnet-bleu*, which had fallen down over his face. The entire facial mask had been torn clean from the skull by a fearful sweep of the bear's paw, and hung from his collar-bone by a strip of skin. He must have been dead for some hours. Fifty yards from where he knelt, the bear was found lying under some bushes, quite dead, and with two bullet-holes through its carcass. Cantin, it appeared, had expended all his ammunition, and the wounded beast had executed a terrible vengeance on him while the life-blood was welling through the last bullet-hole. I saw this bear brought into Québec, in a cart, on the following day; and it is to be seen yet, I believe, or at least the taxidermal presentment of it is, in the shop of a furrier in John Street of that city. An enterprising druggist bought up the little fat left in the animal after its long winter's fast; and such was the demand among sensational people for gallipots of “grease of the bear that killed Cantin,” that it seemed as if fashion had ordained the wearing of hair “on end.”

Of the other wild beasts of this hill-district, the commonest is that known to the inhabitants as the *loup-cervier*,—a name oddly enough misconstrued by a writer on Canadian sports into “Lucifer.” This is the true lynx,—a huge cat with long and remarkably thick legs, paws in which dangerous claws are

sheathed, and short tail. Its principal prey is the common or Northern hare, which abounds in these regions: but at times the *loup-cervier* will invade the poultry-yards; and he is even held to account, now and then, for the murder of innocent lambs, and the disappearance of tender piglings whose mothers were so negligent as to let them stray alone into the brushwood. These fierce cats have been killed, occasionally, quite close to Quebec. When thus driven to approach populous districts, it must be from scarcity of their accustomed food; for they are usually very savage and ravenous, when found in such places. I know an instance, myself, in which a gentleman of Quebec, riding a little way from the town, was suddenly pounced upon and attacked by a *loup-cervier*, near the Plains of Abraham. He struck the animal with his whip several times, but it persisted in following him, and he got rid of it only by putting spurs to his horse and beating it in speed. The animal was killed soon afterwards, near the same place.

I had heard of another variety of wild-cat, seen at rare intervals in the same districts. The *habitant* is rather foggy on the subject of zoölogy in general, and my attempts to obtain a satisfactory description of this animal were futile. Some of the definitions of this rare *chat-sauvage*, indeed, might have answered for specifications of a griffin, or of a vampire-bat. At last, one day, when walking about in the market-place at Quebec, I saw a crowd assembled round a gray-clad countryman, who presided over a small box on which the words *Chat-Sauvage* were painted. Now was my time to set the question at rest. I invested sixpence in the show. When a good number of sixpences had been paid in, the proprietor opened his box, out from which crawled a fat, familiar raccoon, apparently as much at home in the market-place as he could have been in the middle of his native swamp. And this was the mysterious "wild-cat" about which I had asked so many questions and heard so many stories!

It is noticeable that thunder-storms, travelling from the westward toward Quebec, usually diverge across the valley of the St. Charles in the direction of Lorette, and coast along the ridge of ground on which that place is situated to Charlesbourg, a small village lying about four miles to the east of it, upon the ridge. There the storms appear to culminate, pouring out the full vials of their wrath upon the devoted *habitans* of white-cotted Charlesbourg. The wayfarer who wends through this rustical district will hardly fail to observe the prevailing taste for lightning-rods. The smallest cottage has at least two of these fire-irons, one upon each gable; houses of more pretensions are provided with an indefinite number; and the big white church has its purple roof so bristled with them, that the pause which a flash of lightning must necessarily make before deciding by which of them to come down must enable any tolerably active person to get out of the way in good time. And yet, with all these defenders of the faithful, I remember how the steeple was taken clean off the big white church, in splinters, one wild night after I had watched a long array of cloud-chariots rolling heavily away eastward along the ridge: also, how a farmer's handsome daughter, the belle of the village, sat upright and dead upon a sofa when people came again to their eyesight after a blinding flash. So much for lightning-rods! — so much for the mystic iron!

When the day of the *Fête Dieu* comes round, Quebec and its neighboring villages are all alive for the celebration of the *fête*, which takes place on the following Sunday. Then the great suburb of St. Roch is a sight to see. Every street of it is converted into a green alley, embowered with young pine-trees, and flaunting with banners temporarily constructed out of all available pieces of dry-goods, lent by the devoted shop-keepers of the olden Church. Most extraordinary lithographs of holy personages are hung out upon the door-posts and walls of every house. Bowers shading curious little shrines

meet the eye everywhere. The white tables of the little shrines are loaded with gilt and tinselled offerings in immense variety. Curious bosses, like lace-pillows got up for church, swing pendent from the verdant pine-branches. The vast parish-church, of sombre gray masonry, flashing carnival-fires from the tin-plated pepper-boxes and slopes of its acre of roof, is receiving or disgorging a variegated multitude of good Catholics. Within, it is a mass of foliage, a wilderness of shrines, a cloud-land of incense. Long processions of maidens all in white, and others of maidens all in pale watchet-blue, are threading the principal streets. They are not *all* very religious maidens, I am afraid; because, as sure as fate, one very young one of those robed in pure white "made eyes" at me as she passed. Now all this display in Quebec and its suburbs is set forth on a great scale and with bewildering turmoil; but if you want to see it in miniature presentment, you must pass down through St. Roch, and take the road to Lorette. Arrived among the *sauvages*,—for so the Canadian *habitant* invariably calls his Indian brother, who is often as like him as one pea is like another,—you will there see the little old Huron church decked out in humble imitation of its younger, but bigger brothers in the city. The lanes between the log-houses are embowered in a modest way, and the drapery is eked out by many a yellow flannel petticoat and pair of scarlet leggings that dally riotously with each other in the breeze. The shrines are certainly less magnificent than those fairy bowers of the elf-land St. Roch, but there is a good deal of beaded peltry and bark-work about them, giving them, in a small way, the character of aboriginal bazaars. The Hurons are *bons Catholiques*, and everything connected with the *fête* is conducted with a solemnity becoming the character of the Christian red man. So decorous, indeed, are the little *sauvages* forming the miniature processions, that I do not remember ever detecting the eyes of any of them wandering and wantoning around, like those

of the naughty little processional in white about whose conduct I just now complained.

The instinct of the French-Canadian for Indian trading has led one of that race to establish a general store close by the Huron village, though on the *habitant* side of the stream. The gay printed cottons indispensable to the *belle sauvagesse* are here to be found, as well as the blue blankets and the white, of so much account in the wardrobe of the women as well as of the men. Here, too, are to be had the assorted beads and silks and worsteds used in the embroidery of mocasons, epaulettes, and such articles; nor is the quality of the Cognac kept on hand by Joe for his customers to be characterized as despicable. Indeed, it would be hazardous to aver that anything is *not* to be had, for the proper compensation, in Joe's establishment,—that is, anything that could possibly be required by the most exacting *sauvage* or *sauvagesse*, from a strap of sleigh-bells to a red-framed looking-glass. Out of that store, too, comes a deal of the vivid drapery displayed upon the *Fête Dieu*, and much of the art-union resource combined in the attractive cheap lithograph element so edifying to the connoisseur.

I think it was one of those *fêtes*—if not, another bright summer holiday—that I once saw darkly disturbed in this quiet little hamlet. Standing upon the table-rock that juts out at the foot of the fall so as to half-bridge over the lowermost eddy, I saw a small object topple over the summit of the cascade. It was nothing but a common pail or stable-bucket, as I perceived, when it glided past, almost within arm's length of me, and disappeared down the winding gorge. When I went up again to the road, I saw a crowd of holiday people standing near the little inn. They were solemn and speechless, and, on approaching, I saw that they were gazing upon the body of a man, dead and sadly crushed and mutilated. He was a *calèche*-driver from Quebec, well known to the small community; and although it does not seem

any great height from the roadway near the Inn to the tumbled rocks by the river's edge just above the fall, yet it was a drop to mash and kill the poor fellow dead enough, when his foot slipped, as he descended the unsafe path to get water for his horse. A dweller in great cities—say, for instance, one who lives within decent distance of such a charming locality as that called the Five Points in New York—could hardly realize the amount of awe that an event so trifling as a sudden and violent death will spread over a primitive village community. This happened in the French division of the place, which, of course, was decorated to the utmost ability of the people in honor of the *fête*: and so palpable was the gloom cast over all by the circumstance, that the bright flannels flaunting from the *cordons* stretched across the way seemed to darken into palls, and the gay red streamers must have appeared to the subdued carnival spirits as warning crape-knots on the door-handle of death.

I believe it is a maxim with the Italian connoisseur of art, that no landscape is perfect without one red spot to give value to its varieties of green. On this principle, let me break the monotony of this little rural sketch with the one touch of genuine American character that belonged to it at the time of which I speak. Let William Button be the one red spot that predominated vastly over the green influences by which he was surrounded. The little inn at Lorette was then kept by a worthy host bearing the above-mentioned name, which was dingily lettered out upon a swinging sign, dingily representing a trotting horse,—emblem as dear to the slow Canadian as to the fast American mind. William Button—known as Billy Button to hosts of familiar friends—was, I think, a Kentuckian by birth; a fact which might honestly account for his having come by the loss of an eye through some operation by which marks of violence had been left upon the surrounding tracts of his rugged countenance. He was a short, thick-set man, with bow-legs like those of a

bull-terrier, and walked with a heavy lurch in his gait. William's head was of immense size in proportion to his stature. Indeed, that important joint of his person must have been a division by about two of what artists term heroic proportions, or eight heads to a height,—a standard by which Button was barred from being a hero, for his head could hardly have been much less than a fourth of his entire length. The expression of his face was remarkably typical of American humor and shrewdness, an effect much aided by the chronic wink afforded by his closed eye. How Button found his way to this remote spot would have been a puzzle to any person unfamiliar with American character. How he managed to live among and deal with and very considerably master a community speaking no language with which he was acquainted was more unaccountable still. The inn could not have been a very profitable speculation, in itself; but there was one room in it fitted out with a display of Indian manufactures,—some of the articles reposing in glass cases to protect them from hands and dust, others arranged with negligent regularity upon the walls. Out of these the landlord made a good penny, as he charged an extensive percentage upon the original cost,—that is, to strangers; but if you were in Button's confidence, then was there no better fellow to intrust with a negotiation for a pair of snowshoes, or moose-horns, or anything else in that line of business. In the winter season he was a great instigator of moose and caribou-expeditions to the districts where these animals abound, assembling for this purpose the best Indian hunters to be found in the neighborhood, and accompanying the party himself. Out of the spoils of these expeditions he sometimes made a handsome profit: a good pair of moose-horns, for instance, used to fetch from six to ten dollars; and there is always a demand for the venison in the Quebec market. The skins were manufactured into moccason-leather by Indian adepts whom Button had in his

pay, and who worked for a very low rate of remuneration,—quite disproportioned, indeed, to the fancy-prices always paid by strangers for the articles turned out by their hands.

The name "Billy Button" carries with it an association oddly corroborated by a story narrated of himself by the man of whom I am speaking. Of all the reminiscences connected with the illegitimate drama that have dwelt with me from my early childhood until now, not one is more vividly impressed upon my memory than that standard old comedy on horseback performed by circus-riders long since gone to rest, and entitled "Billy Button's Journey to Brentford." The hero of this pleasant horse-play was a tailor,—men following that useful trade being considered capable of affording more amusement in connection with horses than any others, excepting, perhaps, jolly mariners on a spree. The plot of the drama used to strike my young mind as being a "crib" from "John Gilpin"; but I forgave that, in consideration of the skilful manner in which the story was wrought out. With what withering contempt used I, brought up among horses and their riders, to jeer at the wretched attempts of the tailor to remain permanently upon any central point of the horse's spinal ridge! How cheerful my feelings, when that man of shreds and patches fell prostrate in the sawdust, where he lay grovelling until the next revolution of his noble steed, when the animal caught him up by the baggiest portion of the trousers and carried him round the arena as a terrier might a rat! But, oh, what mingled joy and admiration, when out from the worried mass of coats leaped the nimble rider, now no longer a miserable tailor, but a roseate young man in tights and spangles, featly posturing over all the available area of his steed, and "witching the world with noble horsemanship"!

All these memories crowded upon me with a tremendous shock the very first time I saw the name of William Button upon the dingy swinging sign. After-

wards, when I became intimate with that curious person, I discovered that he was a capital "whip,"—first-rate, indeed, as a driver of the fast trotting horse, as well as a good judge of that superior article. With respect to his experiences as a rider he was more reserved; and it was not until after I had known him a long time that he confided to me the particulars of a ride once taken by him, which bore, in its principal features, a singular resemblance to the one performed by his great namesake of the sawdust-ring.

There is a pack of fox-hounds kept at Montreal, maintained chiefly by officers of the garrison, as a shadowy reminiscence, perhaps, of the real thing, which is essentially of insular Britain and of nowhere else. Button happened to go to Montreal, on one occasion, for the purpose of picking up a race-horse, I think, for the Quebec market. Somebody who used to ride with the hounds had a horse which he wanted to get rid of, on account of headstrong tendencies in general and inability to appreciate the advantages of a bit. I remember the animal well. He was a fiery chestnut, with white about the legs, and very good across a country so long as he was wanted to go; but no common power could stop him when once he began to do that. On this animal—"The Buffer," he was called—Button was persuaded to mount, "just to try him a little," his owner said; and by way of doing that with perfect freedom from restraint, they rode out to where the hounds were to throw off, a couple of miles from the city. Button used to say that the term "throw off," which was new to him in that application, haunted him all the way out, like a bad dream. It was a bag-fox day, I believe: that is, the hunt was provided with a trapped animal, brought upon the ground in a sack and let out when the proper time came,—a process known in sporting parlance as "shaking a fox." The usual amount of "law" having been conceded, the hounds were laid on, and went away, as Button said, like a fire-flake over a prairie. No sooner did "The Buffer" hear the cry of the pack, than he started

forward with a suddenness and force by which his wretched rider was jerked back at least a foot behind the saddle, into which place of rest he never once again fell during his many vicissitudes of position in that ride. I have said that Button was bow-legged; and to that providential fact did he attribute the power by which he clung on to various parts of the steed during his wild career of perhaps a mile, but which seemed to the troubled senses of the rider not much less than fifty. It was providential for him, too, that the country was but sparsely intersected by fences, and those not of a very formidable character: nevertheless, at each of these the too confiding Button experienced a change of position, being, as he used to express it, "interjuiced forward o' the saddle or back'ard o' the saddle, accordin' to the kind o' thing the hoss flew over, and one time booleyvusted right under the hoss, whar he hung on by the girth ontill another buck-jump sent him right side on ag'in; but never, on no account, did he touch leather ag'in in all that ride." And thus Billy Button might have ridden farther and fared worse, had he not seen a terrible fate staring him imminently in the face. The hounds had just entered a little grove of young pine-trees, which stood very close together, and bristled with sharp, jagged branches nearly to the root, after the manner of these children of the wood. At this place of torture "The Buffer" was rushing with all his might, Button being then situated upon his neck, in a position most convenient for being "skinned alive" by the trees, as he said, when a plunge made by the animal over a plashy pool transferred the rider to his tail, from which he "collapsed right down in a kind o' swoon, and when he come to, found himself settin' up to his elbows in muddy water, very solitary-like, and with a terrible stillness all around."—What became of "The Buffer" I forget, and also how Button got home; but he certainly did not ride. And he always wound up the narrative of his first and last fox-hunt by invoking terrible ends to himself, if

ever he "threw leg over dog-hoss ag'in, to see a throw-off."

Button left Lorette about two years after I first became acquainted with him, and I next heard of him down at the rock-walled Saguenay, where he had gone into a speculation for supplying the Boston market with salmon. But horse-flesh seemed to be more palatable to him than fish; for, later still, I met him at Toronto, in Upper Canada, mounted upon a powerful dark brown stallion, and leading another, its exact counterpart.

"Hollo, Button!" said I, in response to his cheery, "How de dew?"—"On horseback again, I see; have you forgotten the Buffer-business, then?"

"Forgot the yaller cuss!" replied he. "No, Sir-ree! He hangs round me yet, like fever 'n' agur upon a ma'sh. But the critter I 'm onto a'n't no dog-hoss, you may believe; he don't 'throw off' nor nothin', *he* don't." Him and his mate here a'n't easy matched. I fetched 'em up from below on spec, and you can hev the span for a cool thousand on ice."

And this was the last I saw of Button, who was one of the strangest combinations of hotel-keeper, horse-jockey, Indian-trader, fish-monger, and alligator, I ever met.

Tradition still retains a hold upon the Hurons of Lorette, little as remains to them of the character and lineaments of the red man. A pitiable procession of their diluted "braves" may sometimes be seen in the streets of Quebec, on such distinguished occasions as the Prince's visit. But it is with a manifest consciousness of the ludicrous that these industrials now do their little drama of the war-dance and the oration and the council-smoke. That drama has degenerated into a very feeble farce now, and the actors in it would be quite outdone in their travesty by any average corps of "supes" at one of our theatres. By-and-by all this will have died out, and the "Indian side" of the stream at Lorette will be assimilated in all its features to the other. The moccason is already typifying the decadence of aboriginal things

there. That article is now fitted with India-rubber soles for the Quebec demand, — a continuation of the sole running in a low strip round the edge of the foot. With the gradual widening of that strip, until the moccason of the red man has been clean obliterated from things that are by the India-rubber of the white, will the remnant of the Hurons have passed away with things that were. Verdict on the "poor Indian": — "Wiped out with an India-rubber shoe."

And then, in future generations, the tradition of Indian blood among Canadian families of dark complexion, along these ridges, will be about as vague as that of Spanish descent in the case of certain tribes of fishermen on the western coast of Ireland. From the assimilation already going on, however, it may be argued that the physical character of the Indian will be gradually merged and lost in that of the French colonist. The Hurons are described as having formerly been a people of large stature, while those of the present day in Lower Canada are usually rather undersized than otherwise, like their *habitant* neighbors. As a race, the latter are below the middle stature, although generally of great bodily strength and endurance.

Physical size and grand proportions are looked upon by the French-Canadian with great respect. In all the cases of popular *émeutes* that have from time to time broken out in Lower Canada, the fighting leaders of the people were exceptional men, standing head and shoulders over their confiding followers. Where gangs of raftsmen congregate, their "captains" may be known by superior stature. The doings of their "big men" are treasured by the French-Canadians in traditional lore. One famous fellow of this governing class is known by his deeds and words to every lumberer and stevedore and timber-tower about Montreal and Quebec. This man, whose name was Joe Monfaron, was the bully of the Ottawa raftsmen. He was about six feet six inches high and proportionably broad and deep; and I remem-

ber how people would turn round to look after him, as he came pounding along Notre-Dame Street, in Montreal, in his red shirt and tan-colored *shupac* boots, all dripping wet after mooring an acre or two of raft, and now bent for his ashore-haunts in the Ste-Marie suburb, to indemnify himself with bacchanalian and other consolations for long-endured hardship. Among other feats of strength attributed to him, I remember the following, which has an old, familiar taste, but was related to me as a fact.

There was a fighting stevedore or timber-tower, I forget which, at Quebec, who never had seen Joe Monfaron, as the latter seldom came farther down the river than Montreal. This fighting character, however, made a custom of laughing to scorn all the rumors that came down on rafts, every now and then, about terrible chastisements inflicted by Joe upon several hostile persons at once. He, the fighting timber-tower, hadn't found his match yet about the lumbercoves at Quebec, and he only wanted to see Joe Monfaron once, when he would settle the question as to the championship of the rafts on sight. One day, a giant in a red shirt stood suddenly before him, saying, —

"You're Dick Dempsey, eh?"

"That's me," replied the timber-tower; "and who are you?"

"Joe Monfaron. I heard you wanted me, — here I am," was the Cæsarean response of the great captain of rafts.

"Ah! you're Joe Monfaron!" said the bully, a little staggered at the sort of customer he saw before him. "I said I'd like to see you, for sure; but how am I to know you're the right man?"

"Shake hands, first," replied Joe, "and then you'll find out, may-be."

They shook hands, — rather warmly, perhaps, for the timber-tower, whose features wore an uncertain expression during the operation, and who at last broke out into a yell of pain, as Joe cast him off with a defiant laugh. Nor did the bully wait for any further explanations; for, whether the man who had just brought

the blood spouting out at the tips of his fingers was Joe Monfaron or not, he was clearly an ugly customer and had better be left alone.

There are several roads from Quebec to Lorette, all of them good for carriages except one, which, from its extreme destitution of every condition essential to easy locomotion on wheels, is called, in the expressive language of the French colonists, *La Misère*. And yet this is the only road which, from touching various points of the River St. Charles, affords the traveller compensating glimpses of the picturesque windings of that stream. The pedestrian, however, is the only kind of explorer who really sees a country and its people; and for him who is not too proud to walk, *La Misère* is not so hard to bear as its name might imply.

If iron takes the romance out of things, in a general way, as I mentioned at the beginning of this article my impression that it rather does, I know not whether primitive Lorette has not become sadly vulcanized into prosaic progress by the grand system of water-works established there for the benefit of Quebec. Connected as it is, now, with the latter place, by seven miles of iron pipes, I would not undertake to say that it retains aught of the rustic simplicity of its greener days. Had the pipes been of wood, indeed, the place might yet have had a chance. To understand this, one should hear the French-Canadian expatiate upon the superiority of the wooden to the metal bridge. Five years ago, the road-trustees of Quebec undertook to span the Montmorency River, just above the great fall, with an iron suspension-bridge. This would shorten the road, they said, by some two or three hundred yards of divergence from the old wooden bridge higher up. They built their bridge, which looked like a spider's web spanning the verge of the stupendous cata-

ract, when seen from the St. Lawrence below. It was opened to the public in April, 1856, but was little used for some days, as the conservative *habitants*, who had gone the crooked road over the wooden bridge all their lives, declined to see what advantage could be gained by taking to a straight one pontificed with iron. It had not been open a week, however, when, as two or three hurrying peasants were venturing it with their carts, it fell with a crash, and all were washed headlong in an instant over the precipice and into the boiling abyss below, from which not one vestige of their remains was ever returned for a sign to their awe-stricken friends. Supposing this bridge to be rebuilt, — which is not likely, — I do not believe that a *habitant* of all that region could be got to cross it, even under the malediction, with bell, book, and candle, of his priest. And so the old wooden bridge flourishes, and the crooked road is travelled by gray-coated *cultivateurs*, whose forefathers went crooked in the same direction for several generations, mounted upon persevering ponies which wouldn't upon any account be persuaded into going straight.

A gleam of hope for Lorette flashes upon me since the above was written. On looking over a provincial paper, I find astounding rumors of ghosts appearing upon the track of a western railroad. Things clothed in the traditional white appear before the impartial cow-catcher, which divides them for the passage of the train, in the wake of which they immediately reappear in a full state of repair and posture of contempt. If this sort of thing goes on, what a splendid new field will be opened for the writer of romance!

Certainly, I do not yet see what antidote there is for the primitive and pastoral against seven miles of iron pipe; but it is cheerful to know that ghosts are beginning to come about railroads, and all may yet be well with Lorette.

BEHIND THE MASK.

It was an old, distorted face, —
 An uncouth visage, rough and wild;
Yet from behind, with laughing grace,
 Peeped the fresh beauty of a child.

And so contrasting, fair and bright,
 It made me of my fancy ask
If half earth's wrinkled grimness might
 Be but the baby in the mask.

Behind gray hairs and furrowed brow
 And withered look that life puts on,
Each, as he wears it, comes to know
 How the child hides, and is not gone.

For, while the inexorable years
 To saddened features fit their mould,
Beneath the work of time and tears
 Waits something that will not grow old!

And pain and petulance and care
 And wasted hope and sinful stain
Shape the strange guise the soul doth wear,
 Till her young life look forth again.

The beauty of his boyhood's smile, —
 What human faith could find it now
In yonder man of grief and guile, —
 A very Cain, with branded brow?

Yet, overlaid and hidden, still
 It lingers, — of his life a part;
As the scathed pine upon the hill
 Holds the young fibres at its heart.

And, haply, round the Eternal Throne,
 Heaven's pitying angels shall not ask
For that last look the world hath known,
 But for the face behind the mask!

DIAMONDS AND PEARLS.

WE were lately lounging away a Roman morning among the gems in Castellani's sparkling rooms in the Via Poli. One of the treasures handed out for rapacious examination was a diamond necklace, just finished for a Russian princess, at the cost of sixty thousand dollars, and a set of pearls for an English lady, who must pay, before she bears her prize homeward, the sum of ten thousand dollars. Castellani junior, a fine, patriotic young fellow, who has since been banished for his liberal ideas of government, smiled as he read astonishment in our eyes, and proceeded forthwith to dazzle us still further with more gems of rarest beauty, till then hidden away in his strong iron boxes.

Castellani, father and son, are princes among jewellers, and deserve to be ranked as artists of a superior order. Do not fail to visit their charming apartments, as among the most attractive lesser glories, when you go to Rome. They have a grand way of doing things, right good to look upon; and we once saw a countrywoman of ours, who has written immortal words in the cause of freedom, made the recipient of a gem at their hands, which she cannot but prize as among the chief tributes so numerous bestowed in all parts of the Christian world where her feet have wandered.

Castellani's jeweller's shop has existed in Rome since the year 1814. At that time all the efforts of this artist (Castellani the elder) were directed to the imitation of the newest English and French fashions, and particularly to the setting of diamonds. This he continued till 1823. From 1823 to 1827 he sought aid for his art in the study of Technology. And not in vain; for in 1826 he read before the *Accademia dei Lincei* of Rome, (founded by Federico Cesi,) a paper on the chemical process of coloring a *giallone* (yellow) in the manufacture of gold, in which he announced some facts in the

action of electricity, long before Delarive and other chemists, as noticed in the "Quarterly Journal of Science," Dec., 1828, No. 6, and the "Bibliothèque Universelle de Genève," 1829, Tom. xi. p. 84.

At this period Etruria began to lay open the treasures of her art. All were struck by the beauty of the jewels found in the tombs; but Castellani was the first who thought of reproducing some of them; and he did it to the great admiration of the amateurs, foremost among whom may be mentioned the Duke Don Michelangelo Caetani, a man of great artistic feeling, who aided by his counsels and his designs the *renaissance* of Roman jewelry.

The discovery of the celebrated tomb Regolini-Galassi at Cervetri was an event in jewelry. The articles of gold found in it (all now in the Vatican) were diligently studied by Castellani, when called upon to appraise them. Comprehending the methods and the character of the work, he boldly followed tradition.

The discoveries of Campanari of Toscanella, and of the Marquis Campana of Rome, gave valuable aid to this new branch of art.

Thus it went on improving; and Castellani produced very expert pupils, all of them Italians. Fashion, if not public feeling, came to aid the *renaissance*, and others, in Rome and elsewhere, undertook similar work after the models of Castellani. It may be asserted that the triumph of the classic jewelry is now complete. Castellani renounced the modern methods of chasing and engraving, and adhered only to the antique fashion of overlaying with cords, grains, and finest threads of gold. From the Etruscan style he passed to the Greek, the Roman, the Christian. In this last he introduced the rough mosaics, such as were used by the Byzantines with much effect and variety of tint and of design.

The work of Castellani is dear; but

that results from his method of execution, and from the perfect finish of all the details. He does not seek for cheapness, but for the perfection of art: this is the only thing he has in view. As he is a man of genius, we have devoted considerable space to his admirable productions.

The Talmud informs us that Noah had no other light in the ark than that which came from precious stones. Why do not our modern jewellers take a hint from the ancient safety-boat, and light up accordingly? We dare say old Tavernier, that knowing French gem-trader of the seventeenth century, had the art of illuminating his château at Aubonne in a way wondrous to the beholder. Among all the jewellers, ancient or modern, Jean Baptiste Tavernier seems to us the most interesting character. His great knowledge of precious stones, his acute observation and unflinching judgment, stamp him as one of the remarkable men of his day. Forty years of his life he passed in travelling through Turkey, Persia, and the East Indies, trading in gems of the richest and rarest lustre. A great fortune was amassed, and a barony in the Canton of Berne, on the Lake of Geneva, was purchased as no bad harbor for the rest of his days. There he hoped to enjoy the vast wealth he had so industriously acquired. But, alas! stupid nephews abound everywhere; and one of his, to whom he had intrusted a freight worth two hundred and twenty thousand livres, caused him so great a loss, that, at the age of eighty-four, he felt obliged to sail again for the East in order to retrieve his fortune, or at least repair the ill-luck arising from his unfortunate speculation. He forgot, poor old man! that youth and strength are necessary to fight against reverses; and he died at Moscow, on his way, in 1689. When you visit the great Library in Paris, you will find his "Travels," in three volumes, published in 1677-79, on a shelf among the quartos. Take them down, and spend a pleasant hour in looking through the pages of the enthusiastic old merchant-jeweller. His adventures in search of diamonds and

other precious commodities are well told; and although he makes the mistakes incidental to many other early travellers, he never wilfully romances. He supposed he was the first European that had explored the mines of Golconda; but an Englishman of the name of Methold visited them as early as 1622, and found thirty thousand laborers working away for the rich Marcandar, who paid three hundred thousand pagodas annually to the king for the privilege of digging in a single mine. The first mine visited by Tavernier was that of Raolconda, a five-days' journey from Golconda. The manner of trading there he thus describes:—

"A very pretty sight is that presented every morning by the children of the master-miners and of other inhabitants of the district. The boys, the eldest of which is not over sixteen or the youngest under ten, assemble and sit under a large tree in the public square of the village. Each has his diamond weight in a bag hung on one side of his girdle, and on the other a purse containing sometimes as much as five or six hundred pagodas. Here they wait for such persons as have diamonds to sell, either from the vicinity or from any other mine. When a diamond is brought to them, it is immediately handed to the eldest boy, who is tacitly acknowledged as the head of this little band. By him it is carefully examined, and then passed to his neighbor, who, having also inspected it, transmits it to the next boy. The stone is thus passed from hand to hand, amid unbroken silence, until it returns to that of the eldest, who then asks the price and makes the bargain. If the little man is thought by his comrades to have given too high a price, he must keep the stone on his own account. In the evening the children take account of stock, examine their purchases, and class them according to their water, size, and purity, putting on each stone the price they expect to get for it; they then carry the stones to the masters, who have always assortments to complete, and the profits are divided among the young traders, with this difference in favor of the

head of the firm, that he receives one-fourth per cent. more than the others. These children are so perfectly acquainted with the value of all sorts of gems, that, if one of them, after buying a stone, is willing to lose one-half per cent. on it, a companion is always ready to take it."

Master Tavernier discourses at some length on the ingenious methods adopted by the laborers to conceal diamonds which they have found, sometimes swallowing them,—and he tells of one miner who hid in the corner of his eye a stone of two carats! Altogether, his work is one worthy to be turned over, even in that vast collection, the Imperial Library, for its graphic pictures of gem-hunting two hundred years ago.

Professor Tennant says, "One of the common marks of opulence and taste in all countries is the selection, preservation, and ornamental use of gems and precious stones." Diamonds, from the time Alexander ordered pieces of flesh to be thrown into the inaccessible valley of Zulmeah, that the vultures might bring up with them the precious stones which attached themselves, have everywhere ranked among the luxuries of a refined cultivation. It is the most brilliant of stones, and the hardest known body. Pliny says it is so hard a substance, that, if one should be laid on an anvil and struck with a hammer, look out for the hammer! [*Mem.* If the reader have a particularly fine diamond, never mind Pliny's story: the risk is something, and Pliny cannot be reached for an explanation, should his experiment fail.] By its own dust only can the diamond be cut and polished; and its great lustre challenges the admiration of the world. Ordinary individuals, with nothing to distinguish them from the common herd, have "got diamonds," and straightway became ever afterwards famous. An uncommon-sized brilliant, stuck into the front linen of a foolish fellow, will set him up as a marked man, and point him out as something worth looking at. The announcement in the papers of the day, that "Mademoiselle Mars would wear all her diamonds," nev-

er failed to stimulate the sale of tickets on all such occasions. As it may interest our readers to know what treasures an actress of 1828 possessed, we copy from the catalogue of her effects a few items.

"Two rows of brilliants set *en chatons*, one row composed of forty-six brilliants, the other of forty-four; eight sprigs of wheat in brilliants, composed of about five hundred brilliants, weighing fifty-seven carats; a garland of brilliants that may be taken to pieces and worn as three distinct ornaments, three large brilliants forming the centre of the principal flowers, the whole comprising seven hundred and nine brilliants, weighing eighty-five carats three-quarters; a Sévigné mounted in colored gold, in the centre of which is a burnt topaz surrounded by diamonds weighing about three grains each, the drops consisting of three opals similarly surrounded by diamonds; one of the three opals is of very large size, in shape oblong, with rounded corners; the whole set in gold studded with rubies and pearls.

"A *parure* of opals, consisting of a necklace and Sévigné, two bracelets, earrings the studs of which are emeralds, comb, belt-plate set with an opal in the shape of a triangle; the whole mounted in wrought gold, studded with small emeralds.

"A Gothic bracelet of enamelled gold, in the centre a burnt topaz surrounded by three large brilliants; in each link composing the bracelet is a square emerald; at each extremity of the topaz forming the centre ornament are two balls of burnished gold, and two of wrought gold.

"A pair of girandole ear-rings of brilliants, each consisting of a large stud brilliant and of three pear-shaped brilliants united by four small ones; another pair of ear-rings composed of fourteen small brilliants forming a clustre of grapes, each stud of a single brilliant.

"A diamond cross composed of eleven brilliants, the ring being also of brilliants.

"A bracelet with a gold chain, the centre-piece of which is a fine opal surrounded with brilliants; the opal is oblong

and mounted in the Gothic style; the clasp is an opal.

"A gold bracelet, with a *grecque* surrounded by six angel heads graven on turkoises, and a head of Augustus.

"A serpent bracelet à la *Cléopâtre*, enamelled black, with a turkois on its head.

"A bracelet with wrought links burnished on a dead ground; the clasp a heart of burnished gold with a turkois in the centre, graven with Hebrew characters.

"A bracelet with a row of Mexican chain, and a gold ring set with a turkois and fastened to the bracelet by a Venetian chain.

"A ring, the hoop encircled with small diamonds.

"A ring, à la *chevalière*, set with a square emerald between two pearls.

"A gold *chevalière* ring, on which is engraved a small head of Napoleon.

"Two belt-buckles, Gothic style, one of burnished gold, the other set with emeralds, opals, and pearls.

"A necklace of two rows coral; a small bracelet of engraved carnelians.

"A comb of rose diamonds, form D 5, surmounted by a large rose surrounded by smaller ones, and a cinque-foil in roses, the *chatons* alternated, below a band of roses."

The weight of the diamond, as every one knows, is estimated in *carats* all over the world. And what is a carat, pray? and whence its name? It is of Indian origin, a *kirat* being a small seed that was used in India to weigh diamonds with. Four grains are equal to one carat, and six carats make one pennyweight. But there is no standard weight fixed for the finest diamonds. Competition alone among purchasers must arrange their price. The commercial value of gems is rarely affected, and among all articles of commerce the diamond is the least liable to depreciation. Panics that shake empires and topple trade into the dust seldom lower the cost of this king of precious stones; and there is no personal property that is so apt to remain unchanged in money-value.

Diamond anecdotes abound, the world over; but we have lately met with two brief ones that ought to be preserved.

"Carlier, a bookseller in the reign of Louis XIV., left, at his death, to each of his children, — one a girl of fifteen, the other a captain in the guards, — a sum of five hundred thousand francs, then an enormous fortune. Mademoiselle Carlier, young, handsome, and wealthy, had numerous suitors. One of these, a M. Tiquet, a Councillor of the Parliament, sent her on her fête-day a bouquet, in which the calices of the roses were of large diamonds. The magnificence of this gift gave so good an opinion of the wealth, taste, and liberality of the donor, that the lady gave him the preference over all his competitors. But sad was the disappointment that followed the bridal! The husband was rather poor than rich; and the bouquet, that had cost forty-five thousand francs, (nine thousand dollars,) had been bought on credit, and was paid out of the bride's fortune."

"The gallants of the Court of Louis XV. carried extravagance as far as the famous Egyptian queen. She melted a pearl, — they pulverized diamonds, to prove their insane magnificence. A lady having expressed a desire to have the portrait of her canary in a ring, the last Prince de Conti requested she would allow him to give it to her; she accepted, on condition that no precious gems should be set in it. When the ring was brought to her, however, a diamond covered the painting. The lady had the brilliant taken out of the setting, and sent it back to the giver. The Prince, determined not to be gainsaid, caused the stone to be ground to dust, which he used to dry the ink of the letter he wrote to her on the subject."

Let us mention some of the most noted diamonds in the world. The largest one known, that of the Rajah of Matan, in Borneo, weighs three hundred and sixty-seven carats. It is egg-shaped and is of the finest water. Two large war-vessels, with all their guns, powder, and shot, and one hundred and fifty thousand dol-

lars in money, were once refused for it. And yet its weight is only about three ounces!

The second in size is the *Orloff*, or *Grand Russian*, sometimes called the *Moon of the Mountain*, of one hundred and ninety-three carats. The Great Mogul once owned it. Then it passed by conquest into the possession of Nadir the Shah of Persia. In 1747 he was assassinated, and all the crown-jewels slipped out of the dead man's fingers,—a common incident to mortality. What became of the great diamond no one at that time knew, till one day a chief of the Anganians walked, mole-footed, into the presence of a rich Armenian gentleman in Balsora, and proposed to sell him (no lispings,—not a word to betray him) a large emerald, a splendid ruby, and the great Orloff diamond. Mr. Shafrass counted out fifty thousand piastres for the lot; and the chief folded up his robes and silently departed. Ten years afterwards the people of Amsterdam were apprised that a great treasure had arrived in their city, and could be bought, too. Nobody there felt rich enough to buy the great Orloff sparkler. So the English and Russian governments sent bidders to compete for the gem. The Empress Catharine offered the highest sum; and her agent, the Count Orloff, paid for it in her name four hundred and fifty thousand roubles, cash down, and a grant of Russian nobility! The size of this diamond is that of a pigeon's egg, and its lustre and water are of the finest: its shape is not perfect.

The *Grand Tuscan* is next in order,—for many years held by the Medici family. It is now owned by the Austrian Emperor, and is the pride of the Imperial Court. It is cut as a rose, nine-sided, and is of a yellow tint, lessening somewhat its value. Its weight is one hundred and thirty-nine and a half carats; and its value is estimated at one hundred and fifty-five thousand, six hundred and eighty-eight pounds.

The most perfect, though not the largest, diamond in Europe is the *Regent*,

which belongs to the Imperial diadem of France. Napoleon the First used to wear it in the hilt of his state-sword. Its original weight was four hundred and ten carats; but after it was cut as a brilliant, (a labor of two years, at a cost of three thousand pounds sterling,) it was reduced to one hundred and thirty-seven carats. It came from the mines of Golconda; and the thief who stole it therefrom sold it to the grandfather of the Earl of Chatham, when he was governor of a fort in the East Indies. Lucky Mr. Pitt pocketed one hundred and thirty-five thousand pounds for his treasure, the purchaser being Louis XV. This amount, it is said, is only half its real value. However, as it cost the Governor, according to his own statement, some years after the sale, only twenty thousand pounds, his speculation was "something handsome." Pope had a fling at Pitt, in his poetical way, intimating a wrong with regard to the possession of the diamond; but we believe the transaction was an honest one. In the inventory of the crown-jewels, the Regent diamond is set down at twelve million francs!

The *Star of the South* comes next in point of celebrity. It is the largest diamond yet obtained from Brazil; and it is owned by the King of Portugal. It weighed originally two hundred and fifty-four carats, but was trimmed down to one hundred and twenty-five. The grandfather of the present king had a hole bored in it, and liked to strut about on gala-days with the gem suspended around his neck. This magnificent jewel was found by three banished miners, who were seeking for gold during their exile. A great drought had laid dry the bed of a river, and there they discovered this lustrous wonder. Of course, on promulgating their great luck, their sentence was revoked immediately.

The world-renowned *Koh-i-noor* next claims our attention.

A Venetian diamond-cutter (wretched, bungling Hortensio Borgis!) reduced the great Koh-i-noor from its primitive weight—nine hundred carats—to two hundred

and eighty. Tavernier saw this celebrated jewel two hundred years ago, not long after its discovery. It came into the possession of Queen Victoria in 1849, *three thousand years*, say the Eastern sages, after it belonged to Karna, the King of Anga! On the 16th of July, 1852, the Duke of Wellington superintended the commencement of the re-cutting of the famous gem, and for thirty-eight days the operation went on. Eight thousand pounds were expended in the cutting and polishing. When it was finished and ready to be restored to the royal keeping, the person (a celebrated jeweller) to whom the whole care of the work had been intrusted, allowed a friend to take it in his fingers for examination. While he was feasting his eyes over it, and turning it to the light in order to get the full force of its marvellous beauty, down it slipped from his grasp and fell upon the ground. The jeweller nearly fainted with alarm, and poor "Butterfingers" was completely jellified with fear. Had the stone struck the ground at a particular angle, it would have split in two, and been ruined forever.

Innumerable anecdotes cluster about this fine diamond. Having passed through the hands of various Indian princes, violence and fraud are copiously mingled up with its history. We quote one of Madame de Barrera's stories concerning it:—

"The King of Lahore having heard that the King of Cabul possessed a diamond that had belonged to the Great Mogul, the largest and purest known, he invited the fortunate owner to his court, and there, having him in his power, demanded his diamond. The guest, however, had provided himself against such a contingency with a perfect imitation of the coveted jewel. After some show of resistance, he reluctantly acceded to the wishes of his powerful host. The delight of Runjeet was extreme, but of short duration,—the lapidary to whom he gave orders to mount his new acquisition pronouncing it to be merely a bit of crystal. The mortification and rage of

the despot were unbounded. He immediately caused the palace of the King of Cabul to be invested, and ransacked from top to bottom. But for a long while all search was vain; at last a slave betrayed the secret;—the diamond was found concealed beneath a heap of ashes. Runjeet Singh had it set in an armlet, between two diamonds, each the size of a sparrow's egg."

The *Shah of Persia*, presented to the Emperor Nicholas by the Persian monarch, is a very beautiful stone, irregularly shaped. Its weight is eighty-six carats, and its water and lustre are superb.

The various stories attached to the *Sancy* diamond, the next in point of value, would occupy many pages. During four centuries it has been accumulating romantic circumstances, until it is now very difficult to give its true narrative. If Charles the Bold, the last Duke of Burgundy, ever wore it suspended round his neck, he sported a magnificent jewel. If the Curate of Montagny bought it for a crown of a soldier who picked it up after the defeat of Granson, not knowing its value, the soldier was unconsciously cheated by the Curate. If a citizen of Berne got it out of the Curate's fingers for three crowns, he was a shrewd knave. De Barante says, that in 1492 (Columbus was then about making land in this hemisphere) this diamond was sold in Lucerne for five thousand ducats. After that, all sorts of incidents are related to have befallen it. Here is one of them.—Henry IV. was once in a strait for money. The *Sieur de Sancy* (who gave his name to the gem) wished to send the monarch his diamond, that he might raise funds upon it from the Jews of Metz. A trusty servant sets off with it, to brave the perils of travel, by no means slight in those rough days, and is told, in case of danger from brigands, to swallow the precious trust. The messenger is found dead on the road, and is buried by peasants. De Sancy, impatient that his man does not arrive, seeks for his body, takes it from the ground where it is buried, opens it, and recovers his gem! In some way not now known,

Louis XV. got the diamond into his possession, and wore it at his coronation. In 1789, it disappeared from the crown-treasures, and no trace of it was discovered till 1830, when it was offered for sale by a merchant in Paris. Count Demidoff had a lawsuit over it in 1832; and as it is valued at a million of francs, it was worth quarrelling about.

The *Nassuck Diamond*, valued at thirty thousand pounds, is a magnificent jewel, nearly as large as a common walnut. Pure as a drop of dew, it ranked among the richest treasures in the British conquest of India.

What has become of the great triangular *Blue Diamond*, weighing sixty-seven carats, stolen from the French Court at the time of the great robbery of the crown-jewels? Alas! it has never been heard from. Three millions of francs represented its value; and no one, to this day, knows its hiding-place. What a pleasant morning's work it would be to unearth this gem from its dark corner, where it has lain *perdu* so many years! The bells of Notre Dame should proclaim such good-fortune to all Paris.

But enough of these individual magnificos. Their beauty and rarity have attracted sufficient attention in their day. Yet we should like to handle a few of those Spanish splendors which Queen Isabel II. wore at the reception of the ambassadors from Morocco. That day she shone in diamonds alone to the amount of two million dollars! We once saw a monarch's sword, of which

"The jewelled hilt,

Whose diamonds lit the passage of his blade," was valued at one hundred thousand dollars! But one of the pleasantest of our personal remembrances, connected with diamonds, is the picking up of a fine, lustrous gem which fell from O. B.'s violin-bow, (the gift of the Duke of Devonshire,) one night, after he had been playing his magic instrument for the special delight of a few friends. The tall Norwegian wrapped it in a bit of newspaper, when it was restored to him, and thrust it into his cigar-box! [O. B. sometimes

carried his treasures in strange places. One day he was lamenting the loss of a large sum of money which he had received as the proceeds of a concert in New York. A week afterwards he found his missing nine hundred dollars stuffed away in a dark corner of one of his violin-cases.]

There is a very pretty diamond-story current in connection with the good Empress Eugénie. Madame de Barrera relates it in this wise.

"When the sovereign of France marries, by virtue of an ancient custom kept up to the present day, the bride is presented by the city of Paris with a valuable gift. Another is also offered at the birth of the first-born.

"In 1853, when the choice of His Majesty Napoleon III. raised the Empress Eugénie to the throne, the city of Paris, represented by the Municipal Commission, voted the sum of six hundred thousand francs for the purchase of a diamond necklace to be presented to Her Majesty.

"The news caused quite a sensation among the jewellers. Each was eager to contribute his finest gems to form the Empress's necklace, — a necklace which was to make its appearance under auspices as favorable as those of the famous *Queen's Necklace* had been unpropitious. But on the 28th of January, two days after the vote of the Municipal Commission, all this zeal was disappointed; the young Empress having expressed a wish that the six hundred thousand francs should be used for the foundation of an educational institution for poor young girls of the Faubourg St. Antoine.

"The wish has been realized, and, thanks to the beneficent fairy in whose compassionate heart it had its origin, the diamond necklace has been metamorphosed into an elegant edifice, with charming gardens. Here a hundred and fifty young girls, at first, but now as many as four hundred, have been placed, and receive, under the management of those angels of charity called the *Sisters of St. Vincent de Paul*, an excellent ed-

education proportioned to their station, and fitting them to be useful members of society.

"The solemn opening of the *Maison Eugénie-Napoléon* took place on the 1st of January, 1857.

"M. Veron, the *journaliste*, now deputy of the Seine, has given, in the '*Moniteur*,' a very circumstantial account of this establishment. From it we borrow the following:—

"The girls admitted are usually wretchedly clad; on their entrance, they receive a full suit of clothes. Almost all are pale, thin, weak children, to whom melancholy and suffering have imparted an old and careworn expression. But, thanks to cleanliness, to wholesome and sufficient food, to a calm and well-regulated life, to the pure, healthy air they breathe, the natural hues and the joyousness of youth soon reanimate the little faces; and with lithe, invigorated limbs, and happy hearts, these young creatures join merrily in the games of their new companions. They have entered the institution old; they will leave it young.'

"The Empress Eugénie delights in visiting the institution of the Faubourg St. Antoine. This is natural. Her Majesty cannot but feel pleasure in the contemplation of all she has accomplished by sacrificing a magnificent, but idle ornament to the welfare of so many beings rescued from misery and ignorance. These four hundred young girls will be so many animated, happy, and grateful jewels, constituting for Her Majesty in the present, and for her memory in the future, an ever new set of jewels, an immortal ornament, a truly celestial talisman.

"A fresco painting represents, in a hemicycle, the Empress in her bridal dress, offering to the Virgin a diamond necklace; young girls are kneeling around her in prayer; admiration and fervent faith are depicted on their brows."

A very large amount of the world's capital is represented in precious stones, and ninety per cent. of that capital so

invested is in diamonds. This was not always the case. Ancient millionnaires held their enormous jewelry-riches more in colored stones than is the custom now. Crystallized carbon has risen in the estimation of capitalists, and crystallized clay has gone down in the scale of value.

If the diamond be the hardest known substance in the world's jewel-box, the pearl is by no means its near relation in that particular. The daughters of St. Ilich slept undisturbed eleven hundred and eighteen years, with all their riches in sound condition, except the pearls that were found with their splendid ornaments. The other decorations sparkled in the light as brilliantly as ever; but the pearls crumbled into dust, as their owners had done centuries before. Eight hundred years before these ladies lived and wore pearls, a queen with "swarthy cheeks and bold black eyes" tried a beverage which cost, exclusive of the vinegar which partly composed it, the handsome little sum of something over eighty thousand pounds. Diamond and vinegar would not have mixed so prettily.

Pearls are perishable beauties, exquisite in their perfect state, but liable to accident from the nature of their delicate composition. Remote antiquity chronicles their existence, and immemorial potentates eagerly sought for them to adorn their persons. Pearl-fisheries in the Persian Gulf are older than the reign of Alexander; and the Indian Ocean, the Red Sea, and the Coast of Coromandel yielded their white wonders ages ago. Under the Ptolemies, in the time of the Caliphs, the pearl-merchant flourished, grew rich, and went to Paradise. To-day the pearl-diver is grubbing under the waves that are lapping the Sooloo Islands, the coast of Coromandel, and the shores of Algiers. In Ceylon he is busiest, and you may find him from the first of February to the middle of April risking his life in the perilous seas. His boat is from eight to ten tons burden, and without a deck. At ten o'clock at night, when the cannon fires, it is his

signal to put off for the bank opposite Condatchy, which he will reach by daylight, if the weather be fair. Unless it is calm, he cannot follow his trade. As soon as light dawns, he prepares to descend. His diving-stone, to keep him at the bottom, is got ready, and, after offering up his devotions, he leaps into the water. Two minutes are considered a long time to be submerged, but some divers can hold out four or five minutes. When his strength is exhausted, he gives a signal by pulling the rope, and is drawn up with his bag of oysters. Appalling dangers compass him about. Sharks watch for him as he dives, and not infrequently he comes up maimed for life. It is recorded of a pearl-diver, that he died from over-exertion immediately after he reached land, having brought up with him a shell that contained a pearl of great size and beauty. Barry Cornwall has remembered the poor fellow in song so full of humanity, that we quote his pearl-strung lyric entire.

"Within the midnight of her hair,
Half hidden in its deepest deeps,
A single, peerless, priceless pearl
(All filmy-eyed) forever sleeps.
Without the diamond's sparkling eyes,
The ruby's blushes, there it lies,
Modest as the tender dawn,
When her purple veil 's withdrawn, —
The flower of gems, a lily cold and pale!
Yet what doth all avail, —
All its beauty, all its grace,
All the honors of its place?
He who plucked it from its bed,
In the far blue Indian ocean,
Lieth, without life or motion,
In his earthy dwelling, — dead!
And his children, one by one,
When they look upon the sun,
Curse the toil by which he drew
The treasure from its bed of blue.

"Gentle Bride, no longer wear,
In thy night-black, odorous hair,
Such a spoil! It is not fit
That a tender soul should sit
Under such accursed gem!
What need'st thou a diadem, —
Thou, within whose Eastern eyes
Thought (a starry Genius) lies, —

Thou, whom Beauty has arrayed, —
Thou, whom Love and Truth have made
Beautiful, — in whom we trace
Woman's softness, angel's grace,
All we hope for, all that streams
Upon us in our haunted dreams?

"O sweet Lady! cast aside,
With a gentle, noble pride,
All to sin or pain allied!
Let the wild-eyed conqueror wear
The bloody laurel in his hair!
Let the black and snaky vine
Round the drinker's temples twine!
Let the slave-begotten gold
Weigh on bosoms hard and cold!
But be THOU forever known
By thy natural light alone!"

One of the best judges of pearls that ever lived, out of the regular trade, was no less a person than Cæsar. He was a great connoisseur, and could tell at once, when he took a pearl in his hand, its weight and value. He gave one away worth a quarter of a million dollars. Servilia, the mother of Brutus, was the lady to whom he made the regal present.

Caligula, not satisfied with building ships of cedar with sterns inlaid with gems, had a pearl-collar made for a favorite horse! Pliny grows indignant as he chronicles the luxury of this Emperor.

"I have seen," says he, "Lollia Paulina, who was the wife of the Emperor Caligula, — and this not on the occasion of a solemn festival or ceremony, but merely at a supper of ordinary betrothals, — I have seen Lollia Paulina covered with emeralds and pearls, arranged alternately, so as to give each other additional brilliancy, on her head, neck, arms, hands, and girdle, to the amount of forty thousand sesterces, [£336,000 sterling,] the which value she was prepared to prove on the instant by producing the receipts. And these pearls came, not from the prodigal generosity of an imperial husband, but from treasures which had been the spoils of provinces. Marcus Lollius, her grandfather, was dishonored in all the East on account of the gifts he had extorted from kings, disgraced by Tiberius, and obliged to poison himself, that his

grand-daughter might exhibit herself by the light of the *lucernæ* blazing with jewels."

Nero offered to Jupiter Capitolinus the first trimmings of his beard in a magnificent vase enriched with the costliest pearls.

Catherine de Medicis and Diane de Poitiers almost floated in pearls, their dresses being literally covered with them. The wedding-robe of Anne of Cleves was a rich cloth-of-gold, thickly embroidered with great flowers of large Orient pearls. Poor Mary, Queen of Scots, had a wonderful lot of pearls among her jewels; and the sneaking manner in which Elizabeth got possession of them we will leave Miss Strickland, the biographer of Queens, to relate.

"If anything farther than the letters of Drury and Throgmorton be required to prove the confederacy between the English Government and the Earl of Moray, it will only be necessary to expose the disgraceful fact of the traffic of Queen Mary's costly *parure* of pearls, her own personal property, which she had brought with her from France. A few days before she effected her escape from Lochleven Castle, the righteous Regent sent these, with a choice collection of her jewels, very secretly to London, by his trusty agent, Sir Nicholas Elphinstone, who undertook to negotiate their sale, with the assistance of Throgmorton, to whom he was directed for that purpose. As these pearls were considered the most magnificent in Europe, Queen Elizabeth was complimented with the first offer of them. 'She saw them yesterday, May 2nd,' writes Bodotel La Forrest, the French ambassador at the Court of England, 'in the presence of the Earls of Pembroke and Leicester, and pronounced them to be of unparalleled beauty.' He thus describes them: 'There are six cordons of large pearls, strung as paternosters; but there are five-and-twenty separate from the rest, much finer and larger than those which are strung; these are for the most part like black *muscade*s. They had not been

here more than three days, when they were appraised by various merchants; this Queen wishing to have them at the sum named by the jeweller, who could have made his profit by selling them again. They were at first shown to three or four working jewellers and lapidaries, by whom they were estimated at three thousand pounds sterling, (about ten thousand crowns,) and who offered to give that sum for them. Several Italian merchants came after them, who valued them at twelve thousand crowns, which is the price, as I am told, this Queen Elizabeth will take them at. There is a Genoese who saw them after the others, and said they were worth sixteen thousand crowns; but I think they will allow her to have them for twelve thousand.' 'In the mean time,' continues he, in his letter to Catherine of Medicis, 'I have not delayed giving your Majesty timely notice of what was going on, though I doubt she will not allow them to escape her. The rest of the jewels are not near so valuable as the pearls. The only thing I have heard particularly described is a piece of unicorn richly carved and decorated.' Mary's royal mother-in-law of France, no whit more scrupulous than her good cousin of England, was eager to compete with the latter for the purchase of the pearls, knowing that they were worth nearly double the sum at which they had been valued in London. Some of them she had herself presented to Mary, and especially wished to recover; but the ambassador wrote to her in reply, that 'he had found it impossible to accomplish her desire of obtaining the Queen of Scots' pearls, for, as he had told her from the first, they were intended for the gratification of the Queen of England, who had been allowed to purchase them at her own price, and they were now in her hands.'

"Inadequate though the sum for which her pearls were sold was to their real value, it assisted to turn the scale against their real owner.

"In one of her letters to Elizabeth, supplicating her to procure some amelio-

ration of the rigorous confinement of her captive friends, Mary alludes to her stolen jewels:—"I beg also," says she, "that you will prohibit the sale of the rest of my jewels, which the rebels have ordered in their Parliament, for you have promised that nothing should be done in it to my prejudice. I should be very glad, if they were in safer custody, for they are not meat proper for traitors. Between you and me it would make little difference, and I should be rejoiced, if any of them happened to be to your taste, that you would accept them from me as offerings of my good-will."

"From this frank offer it is apparent that Mary was not aware of the base part Elizabeth had acted, in purchasing her magnificent *parure* of pearls of Moray, for a third part of their value."

One of the most famous pearls yet discovered (there may be shells down below that hide a finer specimen) is the beautiful *Peregrina*. It was fished up by a little negro boy in 1560, who obtained his liberty by opening an oyster. The modest bivalve was so small that the boy in disgust was about to pitch it back into the sea. But he thought better of his rash determination, pulled the shells asunder, and, lo, the rarest of priceless pearls! [*Moral.* Don't despise little oysters.] La *Peregrina* is shaped like a pear, and is of the size of a pigeon's egg. It was presented to Philip II. by the finder's master, and is still in Spain. No sum has ever determined its value. The King's jeweller named five hundred thousand dollars, but that paltry amount was scouted as ridiculously small.

There is a Rabbinical story which aptly shows the high estimate of pearls in early ages, only one object in Nature being held worthy to be placed above them:—

"On approaching Egypt, Abraham

locked Sarah in a chest, that none might behold her dangerous beauty. But when he was come to the place of paying custom, the collectors said, 'Pay us the custom': and he said, 'I will pay the custom.' They said to him, 'Thou carriest clothes': and he said, 'I will pay for clothes.' Then they said to him, 'Thou carriest gold': and he answered them, 'I will pay for my gold.' On this they further said to him, 'Surely thou bearest the finest silk': he replied, 'I will pay custom for the finest silk.' Then said they, 'Surely it must be pearls that thou takest with thee': and he only answered, 'I will pay for pearls.' Seeing that they could name nothing of value for which the patriarch was not willing to pay custom, they said, 'It cannot be but thou open the box, and let us see what is within.' So they opened the box, and the whole land of Egypt was illumined by the lustre of Sarah's beauty,—far exceeding even that of pearls."

Shakspeare, who loved all things beautiful, and embalmed them so that their lustre could lose nothing at his hands, was never tired of introducing the diamond and the pearl. They were his favorite ornaments; and we intended to point out some of the splendid passages in which he has used them. But we have room now for only one of those priceless sentences in which he has set the diamond and the pearl as they were never set before. No kingly diadem can boast such jewels as glow along these lines from "Lear":—

"You have seen

Sunshine and rain at once: her smiles and tears

Were like a better day: Those happy smiles That played on her ripe lip seemed not to know

What guests were in her eyes; which parted thence,

As pearls from diamonds dropp'd.

REVIEWS AND LITERARY NOTICES.

1. *Lis Oubreto* de ROUMANILLE. Avignon. 1860. 12mo.

FEW persons, when they consider the present greatness and prosperity of the French Empire, bear in mind the heterogeneous elements of which it is composed. For us, Paris is France, and the literature of the realm is comprised in the words, "Paris publications." We think not of the millions of Frenchmen to whom the language of the capital is a sealed letter, — of the Germans of Alsatia, the Flemings of the extreme North-East, the Bretons of the peninsula of Finisterre, the Basques, the Catalans of the mountains of Roussillon, and, more numerous than all these, the fourteen millions of the thirty-seven departments south of the Loire. These speak, to this day, with fewer modifications than have taken place in any other of the European languages during the same lapse of time, the very tongue in which wrote Bertran de Born and Pierre Vidal, the idiom in which Dante and Petrarca found some of their happiest inspirations, and which, we are told, Tasso envied for its poetic capabilities.

True, the Provinces of Gascony, Provence, Auvergne may be traversed by the stranger almost without his suspecting that other than the French, more or less badly spoken, is in common use. In hotels and shops he will hear nothing else.

The larger towns in direct communication with the capital, and all that is purely exterior in the people, are becoming more and more French every day. But in the family interior, far from the noise of affairs, the bustle of towns, in hamlets, among the vine-growers and tenders of the silk-worm, in the mountains and retired valleys, the home-tongue is again at ease. Simple, ingenuous, amber-like in its sunny tints, it is a reflection of that ardent poetical imagination which made the courts of the Counts of Toulouse the nurseries of modern poetry, when the rest of Europe was little else than one wrangling battle-field. Neither the exterminating crusade against the Albigenses, after which the idiom of Provence was wellnigh stigmatized as heretical, nor the civil and religious wars of the seventeenth century, nor even the *dragonnades* of Louis XIV., have been able to outroot it. The levelling edicts of the first French Revolution were powerless against it. The Provençal, or Langue d'Oc, if you will, the Gascon, the Auvergnat, are spoken to this day in their respective provinces, universally spoken by the people, who in many instances do not understand French at all. They must be preached to in their own dialect. They have their songs, their theatre even.

Nor must this be understood as referring only to the lower strata of society. The better classes, even, retain a fondness for their mother-tongue which years of residence in Paris will not obliterate. In their very French, they still retain the inflections, the tones of the South, — a measured cadence in the phrase, which the Parisian uniformly styles *gasconner*. They feel ill at ease in what they call the cold-mannered speech of the *Franchiman*. In the words of one of their poets, Mistral, who has proved that he was no less a master of the academic forms and rules than of the riches and power of his own Avignonnais: — "Those who have not lived at the South, and especially in the midst of our rural population, can have no idea of the incompatibility, the insufficiency, the poverty of the language of the North in regard to our manners, our needs, our organization. The French language, transplanted to Provence,

seems like the cast-off clothes of a Parisian dandy adapted to the robust shoulders of a harvester bronzed by the Southern sun."

The Provençal, in its two principal divisions, the Gascon and Langue d'Oc, is the current idiom south of the Loire. The South-West Provinces had, in the seventeenth century, no mean poet in Godelin; and in our own day, Jasmin has found a host of followers. The inhabitants of the South-East, however, the more immediate retainers of the language of the Troubadours, save in a few drinking-songs and Christmas carols, had forgotten the strains that once resounded beyond the limits of Provence and had first awaked the poetic emulation of Spain and Italy. The princess of song, stung by the envious spirit of persecution in the Albigensian wars, had slept for centuries, and the thick hedge of forgetfulness had grown rank about the language and its treasures. What Raynouard, Diez, Mahn, Fauriel, and others have done to bring to light again the unedited texts was little better than an autopsy. A living, breathing poet was wanting to reanimate by his touch the poesy that had slept so long. That poet was Roumanille.

The Minnesingers have found heirs and continuators in the modern writers of Germany. Side by side with the increasing tendency to unity in all national literature is working the force of races confounded under one political banner, to assert their existence as such. Congresses have shaped new kingdoms; but they have not reached or removed the limits of nationalities that have each their expression in song, whether in Moldavia or among the Czechs of Bohemia. The regeneration of local idioms, which is fast working its way from the Bosphorus to the Atlantic, was first undertaken in Provence, at the instigation of Roumanille. The son of a gardener of St. Remy, he was first struck with the insufficiency of French literature for his immediate countrymen, when, on his return from college, seeking to recite some of his earlier poems in the language of Racine to his aged mother, she failed to understand them. For her he translated, and found that his own Provençal was richer, more copious and melodious than the French itself, and, if less finical and restrained by grammatical forms, more pliant for the poet, and better answering the exigencies of

primitive, spontaneous expression of feeling. From that moment his efforts were unceasingly directed towards the reintegration of his mother-tongue, which had so long played but the part of a Cinderella among the Romanic nations.

His poems, collected in 1847, under the title of "*Margarideto*," (Daisies,) were hailed by his countrymen with their habitual national enthusiasm. Nor did he remain inactive during the Revolution of 1848, addressing the people in home-phrase in several small volumes of prose. In 1852, he sent forth a call to his brother-writers, the *felibre*, who had joined with him in his efforts. The result was the publication of "*Li Prouvençalo*," a charming selection from those modern Troubadours who in all ranks of society sing, because sing they must, in bright and sunny Provence, and who in very deed find poetry

"In the forge's dust and ashes, in the tissues of the loom."

The call of Roumanille was the signal for a revival. Since that time, he himself, now a publisher in Avignon, has steadily watched and fostered the movement. The new literature has rapidly gone beyond its home-limits. Within the present year, Paris has republished several of the most noted works.

The volume which has called forth these remarks, "*Lis Oubreto*," comprises the poems of M. Roumanille,—"Li Margarideto," "Li Nouvè," "Li Sounjarello," "La Part de Dieu," "Li Flour de Sauvi." They are characterized by an elevation in the thoughts and a religious purity of sentiment, qualities which, it has been urged, and justly too, were lacking in many of the former productions in various dialects of France. We call the poetry of Roumanille elevated, yet it always addresses itself to the people of Provence, and borrows its images from the many-colored life of those to whom it speaks; religious, but simple and ingenuous, with a tinge of mysticism, — not the mysticism that seeks the good in dreamy inaction, as in some of the Spanish authors, nor has it the obscure tinge of the transcendental English school. The religion of Roumanille is active, not dogmatic; he incites to *do*, rather than discuss or dream the good. There is a health, a vigor, an earnestness, in this spontaneous poesy of an idiom

which six centuries ago was the language of courts, and now sings the song of toil. Side by side with the over-cultured language of the Parisian, it seems so free and frank! Where the one is hampered for fear of sinning, the other, buoyant and elastic, reads freely and fears not to be too ingenious.

Roumanille's poems have not been translated; it is hardly likely they ever will be,—at least, the greater number. They were not made for Paris. They are not at ease in a French garb,—nor, for that matter, in any other than their own diaphanous, sun-tinted, vovelly Provençal, unless they could find their expression in some *folk-speech*, as the Germans say, that could utter things of daily life without euphuistic windings,—without fear of ridicule for things of home expressed in home-words.

As characterizing the nature and tendency of the new poetry, we subjoin a translation of "Li Crecho," (The Infant Asylums,) of which M. Sainte-Beuve, of the French Academy, one whose judgment as literary critic could be little biased in favor of the *naïve* graces of the original, said,—“The piece is worthy of the ancient Troubadours. The angel of the asylums and of little children in his celestial sadness could not be disavowed by the angels of Klopstock, nor by that of Alfred de Vigny.”

“Li Crecho” was recited by the author at the inauguration of the Infant Asylum of Avignon, the 20th of November, 1851, and forms part of the sheaf of poems entitled “Li Flour de Sauvi.”

I.

“Among the choirs of Seraphim, whom God has created to sing eternally, transported with love, ‘Glory, glory to the Father!’—among the joys of Paradise, one oftentimes, far from the happy singers, went thoughtful away.

“And his snow-white forehead inclined towards our world, as droops a flower that has no moisture in summer. Day by day he grew more dreamy. If sadness, when in God's glory, could torment the heart, I should say that this fair angel was pining with sorrow.

“Of what did he dream thus, and in secret? Why was he not of the feast? Why, alone among angels, as one that had sinned, did he bow the head?

II.

“Lo! he has just knelt at the feet of God. What will he say? What will he do? To

see and hear him, his brethren interrupt their song of praise.

III.

“When Jesus, thy child, wept,—when he shivered with cold in the manger of Bethlehem,—it was my smile that consoled him, my wings that sheltered him, with my warm breath did I comfort him.

“And since then, O God, when a child weeps, in my pitying heart his voice resounds. Therefore forever now am I sick at heart,—therefore, O Lord, am I ever thoughtful.

“On earth, O God, I have something to do. Let me descend there. There are so many babes, poor milk-lambs, who, shivering with cold, weep and wail far from the breasts, far from the kisses of their mothers! In warm rooms will I shelter them,—will cover and tend them,—will nurse and caress them,—will lull them to rest. Instead of one mother, they shall each have twenty that shall give them suck and soothe them to sleep.”

IV.

“And with heart and hand did the angels applaud,—a tremor of joy shot through the stars of heaven,—and, unfolding his pinions, with the rapidity of lightning the angel descended. The road-side smiled with flowers, as he passed,—and mothers trembled for joy; for infant-asylums arose wherever the child-angel trod.”

One of the first to respond to the call of Roumanille for the composition of the selection “Li Prouvençalo” was Th. Aubanel, also of Avignon. The “Segaire” (Mowers) and “Lou 9 Thermidor” made it plain, that, of the thirty names, that of the young printer would soon take a prominent place among the revivers of Southern letters. And now, eight years later, the promise of M. René Taillandier, in his introduction to the selection, has become reality.

“La Miougrano Entreduberto” (The Opened Pomegranate) is printed with an accompanying French translation. Mistral, the brother-poet and friend of the author, thus announces the poems:—

“The pomegranate is of its nature wilder than other trees. It loves to grow in pebbly elevations (*clapeirolo*) in the full sun-rays, far from man and nearer to God. There alone, in the scorching summer-beams, it expands in secret its blood-red flowers. Love and the sun fecundate its bloom. In the crimson chalices thousands of coral-grains germ spontaneously, like a thousand fair sisters all under the same roof.

"The swollen pomegranate holds imprisoned as long as it can the roseate seeds, the thousand blushing sisters. But the birds of the moor speak to the solitary tree, saying,— 'What wilt thou do with the seeds? Even now comes the autumn, even now comes the winter, that chases us beyond the hills, beyond the seas. . . . And shall it be said, O wild pomegranate, that we have left Provence without seeing thy beautiful coral-grains, without having a glimpse of thy thousand virgin daughters?'

"Then, to satisfy the envious birdlings of the moor, the pomegranate slowly half-opens its fruit; the thousand vermeil seeds glitter in the sun; the thousand timorous sisters with rosy cheeks peep through the arched window: and the roguish birds come in flocks and feast at ease on the beautiful coral-grains; the roguish lovers devour with kisses the fair blushing sisters.

"Aubanel—and you will say as I do, when you have read his book—is a wild pomegranate-tree. The Provençal public, whom his first poems had pleased so much, was beginning to say,— 'But what is our Aubanel doing, that we no longer hear him sing?'

Then follows an exposition of the hopeless passion of the poet,—how he took for motto,

"Quau canto,
Soun mau encanto."

Hence the three books of poems now before us,— "The Book of Love," "Twilight," and "The Book of Death." "The Book of Love," "a thing excessively rare," as we are told in the Preface, "but this one written in good faith," opens with a couplet that is a key to the whole volume:—

"I am sick at heart,
And *will* not be cured."

We subjoin a literal translation of the eleventh song, line for line:—

"De-la-man-d'eilà de la mar,
Dins mis ouro de pantaiaige,
Souventi-fes iéu fau un viage,
Iéu fau souvent un viage amar,
De-la-man-d'eilà de la mar."

etc., etc.

"Far away, beyond the seas,
In my hours of reverie,
Oftentimes I make a voyage,
I often make a bitter voyage,
Far away, beyond the seas.

"Yonder far, towards the Dardanelles,
With the ships I glide away,
Whose long masts pierce the sky;

Towards my loved one do I go,
Yonder far, towards the Dardanelles.

"With the great white clouds sailing on,
Driven by the wind, their master-shepherd,
The great clouds which before the stars
Pass onwards like white flocks,
With the clouds I go sailing on.

"With the swallows I take my flight,
The swallows returning to the sun;
Towards fair days do they go, quick, quick;
And I, quick, quick, towards my love,
With the swallows take my flight.

"Oh, I am very sick for home,
Sick for the home that my love haunts!
Far from that foreign country,
As the bird far from its nest,
I am very sick for home.

"From wave to wave, o'er the bitter waters,
Like a corse thrown to the seas,
In dreams am I borne onward
To the feet of her that's dear,
From wave to wave, o'er the bitter waters.

"On the shores I am there, dead!
My love in her arms supports me;
Speechless she gazes and weeps,
Lays her hand upon my heart,
And suddenly I live again!

"Then I clasp her, then I fold her
In my arms: 'I have suffered enough!
Stay, stay! I *will* not die!'
And as a drowning one I seize her,
And fold her in my arms.

"Far away, beyond the seas,
In my hours of reverie,
Oftentimes I make a voyage,
I often make a bitter voyage,
Far away, beyond the seas."

As may easily be seen, Aubanel writes not, like Roumanille, for his own people alone. His Muse is more ambitious, and seeks to interest by appealing to the sentiments in a language polished with all the art of its sister, the French. There are innumerable exquisite passages scattered through the work, which make us ready to believe in the figurative comparison of the prefacer, when he tells us that "the coral-grains of the 'Opened Pomegranate' will become in Provence the chaplet of lovers."

If Roumanille and Aubanel contented themselves with the publication of poems of no very ambitious length, the author of

"Mirèio" aimed directly at enriching his language at the outset with an epic. He has given us in twelve cantos the song of Provence. He makes us see and feel the life of Languedoc, — traverse the Crau, that Arabia Petraea of France, — see the Rhone, and the fair daughters of Arles, in their picturesque costumes, — see the wild bulls of the Camargo, the Pampas of the Mediterranean. We are among the growers of the silk-worm; we hear the home-songs and talks of the Mas, listen to the people's legends and tales of witchery, and can study the Middle-Age spirit that still in these regions endows every shrine with miracles, as we follow the pilgrimage to the chapel of the Three Marys.

"Mirèio" is all Provence living and breathing before us in a poem. No wonder, then, that, in the present dearth of poetry in France, this epic or idyl, call it as you will, was received with acclamations. M. René Taillandier has consecrated to it one of his most masterly articles in the "*Revue des Deux Mondes*." Lamartine has devoted to it a whole *entretien* in his "*Cours de Littérature*." It was discussed, quoted, translated in all the journals of the capital. We may revert to it at greater length in a future number of the "*Atlantic*."

The name of Jasmin, the barber-poet of Agen, is already familiar to the English public. Professor Longfellow has translated his "*Blind Girl of Castel-Cuillé*." His name is known in Paris as well, perhaps, as that of any other living French poet, if we except Lamartine and Victor Hugo. Accompanied with a French translation, his principal poems, "*Mous Soubenis*," "*L'Abuglo de Castel-Cuillé*," "*Françoneto*," "*Maltro l'Innoucent*," "*Lous Dus Frays Bessous*," "*La Semmâno d'un Fil*," have been read as much north of the Loire as south.

"The Curl-Papers" — for thus he styles his works — having been translated into German and English, the reputation of the author may be called European. The forty maintainers of the Floral Games of Clémence Isaure at Toulouse awarded him the title of *Maître ès Jeux-Floraux*. His progress through the South was marked by ovations, and every town, from Marseilles to Bordeaux, hastened to recognize the modern Troubadour. Happier than

most of his predecessors, Jasmin receives his laurels in season, and can wear the crowns that are presented him. The "*Papillôtos*" were formerly scattered in three costly volumes; they have now been collected in one handsome duodecimo, with an accompanying French translation of the principal pieces, — a translation which called from Ampère the remark, — "*A défaut des vers de Jasmin, on ferait cent lieues pour entendre cette prose-là!*"

"*Lés Piaoulats d'un Reïpetit*" is one of the rare productions of the written literature of Auvergne, so rich in antique legends and original popular songs. The author, at the Archæological Concourse of Béziers, in 1838, obtained deserved encomium for his "*Ode to Riquet*," the creator of the great Southern French Canal, linking the Atlantic and Mediterranean. He has written in the Romanic dialect in use in Auvergne, which, if it lacks the finish and polish of the Provençal, is not wanting in grace and ingenuousness. It is characterized by a rude energy, a sombre harmony, that tallies well with the wild and rural character of the country.

At first sight, the dialect seems to have a marked affinity with that made use of by Jasmin in his "*Papillôtos*." It is, however, easily distinguishable by the frequent use of peculiar gutturals, the almost constant change of *a* into *o*, and a greater number of radicals of Celtic origin. In a recent work on Auvergne, it is argued that these Celtic words form the basis of the language. The history of the region itself would tend to corroborate this theory.

Sheltered by rocky mountain-ranges, the Dômes, the Dore, and Cantal, (*Mons Celtorum*), the Arverni obstinately repulsed every attempt towards the naturalization of the Roman tongue, and battled for six centuries with the same energy displayed by them, when, under Vercingetorix, they fought for their nationality and the independence of Gaul against Cæsar. The Latin could exercise, therefore, but slight influence on the idiom of these regions, which has preserved since then in its vocabulary, and even in syntactical forms, a marked relationship with the Celtic, which, according to Sidonius Apollinaris, was still spoken there in the sixth century.

The actual dialect of Auvergne is peculiarly adapted to recitals of a legendary

nature, owing to its vivacity of articulation, coupled with a kind of gloom in the quality of the sounds. *Natf* and touching in popular song and Christmas carol, it is not divested of a certain grandeur for subjects deserving of a higher style.

The works of M. Veyre comprise the various styles of shorter poems. His "Ode to Riquet," and that in honor of Gerbert, (Pope Silvester II., a native of Auvergne,) show what the language can do in the hands of a master. In the latter he describes the career of that predestined child whom legend accompanied from his cradle to the grave.

"La Fièro de St. Urbo," curious picture of the manners of the country, is written in that ironical and gay vein of which the older French writers possessed the secret; but that is now fast dying away. "Répopiado" and "Lou Boun Sens del Payson" show that the language of Auvergne is no less adapted to moral teachings than to the touching inspirations and free jovial songs of the country Muse.

The work of M. Veyre is the first tending to give his native province a share in the literary revival of the Romanic idioms, which is so universally felt in Southern France, and has of late produced so much.

History of the United Netherlands, from the Death of William the Silent to the Synod of Dort. With a Full View of the English-Dutch Struggle against Spain; and of the Origin and Destruction of the Spanish Armada. By JOHN LOTHROP MOTLEY, LL.D., D. C. L. New York: Harper & Brothers. Vols. I. and II. 8vo.

THESE volumes bear the unmistakable mark, not merely of historical accuracy and research, but of historical genius; and the genius is not that of Thierry or Guizot, of Gibbon or Macaulay, but has a palpable individuality of its own. They evince throughout a patient, persistent industry in investigating original documents, from the mere labor of which an Irish hod-carrier would shrink aghast, and thank the Virgin that, though born a drudge, he was not born to drudge in the bogs and morasses of unexplored domains of History; yet the genius and enthusiasm of the his-

torian are so strong that he converts the drudgery into delight, and lives joyful, though "laborious days." There is not a page in these volumes which does not sparkle with evidences of an enjoyment far beyond any that the rich and pleasure-seeking idler can ever know; and while the materials are those of the barest and bleakest fact, the style of the narrative is that of the gayest, most genial, and most elastic spirit of romance. We have read all the best fictions which have been published during the interval which has elapsed between the publication of the "History of the Dutch Republic" and that of the "History of the United Netherlands," but we have read none which fairly exceeds, in what is called, in the slang of fifth-rate critics, "breathless interest," this novel, but authentic memorial of a past heroic age.

The first requirement of an historian in the present century is original research, — not merely research into rare printed books and pamphlets, but into unpublished and almost unknown manuscripts. No sobriety of judgment, no sagacity of insight, no brilliancy of imagination can compensate for defective information. The finest genius is degraded to the rank of a compiler, unless he sheds new light upon his subject by contributing new facts. The severest requirements of the Baconian method of induction — requirements which have been notoriously disregarded by men of science in the investigation of Nature — remain in force as regards the students of history. The powers of analysis, generalization, statement, and narrative in Macaulay's historical essays were fully equal to any powers he displayed in the "History of England from the Reign of James II." No candid critic can deny that there is little in his "History" which, as far as regards essential facts and principles, had not been previously stated in a more sententious form in his Essays. But we recollect the time when the same dignified scholars who are now insensible to his defects were blind to his merits, and with majestic dulness classed him among the inglorious company of superficial, untrustworthy, brilliant declaimers. The moment, however, he published in octavo volumes a solid history, and appended to the bottom of each page the obscure authorities on which his narrative was founded, and

which plainly exhibited the capacity of the brilliant declaimer to perform all the austere duties of the drudge, his reputation marvellously increased among the most frigid and most exacting dispensers of praise. To come nearer home, we remember the time when Bancroft's rhetoric entirely shut out from the eyes of antiquaries and men of taste Bancroft's industry and scholarship. It was not until he plainly showed his power to "toil terribly," not until he palpably *added* to our knowledge of American history, that men who had sneered at his occasional rhapsodies of patriotism admitted his claims to be considered the historian of the United States. They resisted Bancroft as long as Bancroft gave them the slightest reason to believe that he was interposing his own mind between them and facts which they knew as well as he; but when, by independent and indefatigable research, at home and abroad, he indisputably widened the sphere of their information, they pardoned the faults of the rhetorician in their gratitude to the toiling investigator who had added to their knowledge.

It is the felicity of Mr. Motley, that, like Prescott, he is not placed under the necessity of overcoming prejudices. There is nobody on either side of the Atlantic (whether we use the word as indicating its limited sense as an ocean, or its larger and more liberal meaning as a magazine) who would not rejoice in his success, and be grieved by his failure. And this good feeling on the part of the public he owes, in a great degree, to the individuality he has impressed upon his work. That individuality is not the individuality of a partisan or of a theorist, but the individuality of a broad-minded, high-minded, chivalrous gentleman. With a soul open to the finest sentiments and ideas of the age in which he lives, tolerant of frailty, but intolerant of meanness, falsehood, and malignity, and writing with the frankness with which a cultivated man of decided opinions might speak to a company of chosen associates, the most obstinate bigot can hardly fail to feel the charm of his free and cordial manner of expression. Hume, Gibbon, Hallam, and Macaulay, Sismondi, Guizot, and Michelet, all have in their characters something which invites and provokes opposition. But the

spirit which underlies Mr. Motley's large scholarship is so thoroughly genial and generous, and is so purified from the pedantry of knowledge and the pedantry of opinion, that it is impossible for him to rouse in other minds any of the antipathy which is often felt for powerful individualities whose powers of mind and extent of erudition still enforce respect and extort admiration. The instinctive sympathy he thus creates is due to no lack of intrepidity in expressing his love for what is right and his hatred for what is wrong. No historian is more decisive in his judgments, or more scornful of the arts and hypocrisies by which the champions of opposite opinions are flattered and propitiated. But his spirit is that of the knight "without reproach," as well as the knight "without fear"; and even his adversaries cannot but delight in the singleness and simplicity of purpose with which he strives after the truth. Nothing in his position or in his character gives them the slightest pretence for supposing that his bold advocacy of liberal views is connected with any ulterior designs or any "fatted calf" of theory or office. While he is thus healthily free from the taint of the partisan, he is also independent of the austere insensibility of the judicial Pharisee, whose boast is that he decides questions relating to human nature without any admixture of human instinct and human feeling. Mr. Motley, throughout his *History*, writes from his heart as well as from his head; and we have been unable to discover that he has swerved from the truth of things by allowing his narrative to be vitiated by an undue prominence of either.

If we pass from the historian's individuality to his materials, we find, that, in a great degree, his facts are discoveries, and that, if his book possessed no literary value whatever, it would still be an important addition to the history of Europe during the latter part of the sixteenth century. He has, of course, studied all the prominent contemporary chronicles and pamphlets of Holland, Flanders, Spain, France, Germany, and England; and if his materials had been confined to published sources of information, he would still be in possession of facts not generally known or carefully analyzed and combined; but the peculiar value of his *History* is due to its exhaustive examination of unpublished

private letters and political documents. The archives of Holland, England, and Spain have been opened to his investigations, and he has been particularly fortunate in being able to read the whole correspondence between Philip II., his ministers, and governors, relating to the affairs of the Netherlands, from 1584 to the death of that monarch. Placed thus at the centre from which events radiated, and understanding perfectly the real designs which Spain concealed under a cover of the most diabolical dissimulation, and which are now for the first time completely elucidated, he was able to judge of the mistakes of the other cabinets of Europe, also laid bare to his unwearied research. The study of the manuscripts in the English State-Paper Office, and in the collections of the British Museum, has given him a perfect insight into the characters and policy of the statesmen of the England of Elizabeth; and the exact relations which England bore to Holland and Spain he has for the first time clearly indicated. As a contribution to the history of England, these two volumes are of inestimable value. They will disturb, and in some cases revolutionize, the fixed opinions which the most intelligent Englishmen of the present day have formed of almost every public man of the Elizabethan era; and we cannot but wonder that this work should have been left for an American scholar to accomplish.

The present volumes of Mr. Motley's *History* begin with the murder of William of Orange, in 1584, and extend only to the assassination of Henry III. of France, in 1589. These five years, however, are crowded with individuals and events of special importance, and the historian has shed new light on every topic he has touched. The determination of Philip II. to put down the revolt of the Netherlands was part of an extensive scheme, which involved the conquest of England and France, the extermination of Protestantism, and the subjection of Europe to the despotic sway of Spain and Rome. The interest of the history is therefore European. To grasp it requires a knowledge of the minutest threads of a tangled web of intrigue which spread from the Escorial to the North Sea. This knowledge Mr. Motley has obtained. The cabinets of Spain, England, and France have yielded

up their inmost secrets to his indefatigable research. He peeps over the shoulder of Philip, and reads the despatch by which he intends to outwit Walsingham,—and in a second of time is peeping over the shoulder of Walsingham, to see what the latter is doing to outwit Philip. There is something inexpressibly stimulating to curiosity in watching the movements of the nimble historian as he speeds from one cabinet to another, and, the invisible spy in the councils of all, detects the misconceptions and blunders of each. In this complicated game of craft, policy, and passion, our historian is the first writer who has arrived at the knowledge of the cards which each player held in his hand at the time the game was played.

In 1584, the subjugation of the Netherlands seemed to be but a question of time; and the disparity between the power of Spain and that of her revolted provinces is thus strikingly stated:—

“The contest between those seven meagre provinces upon the sand-banks of the North Sea and the great Spanish Empire seemed at the moment with which we are now occupied a sufficiently desperate one. Throw a glance upon the map of Europe. Look at the broad, magnificent Spanish Peninsula, stretching across eight degrees of latitude and ten of longitude, commanding the Atlantic and the Mediterranean, with a genial climate, warmed in winter by the vast furnace of Africa, and protected from the scorching heats of summer by shady mountain and forest and temperate breezes from either ocean. A generous southern territory, flowing with wine and oil and all the richest gifts of a bountiful Nature,—splendid cities,—the new and daily expanding Madrid, rich in the trophies of the most artistic period of the modern world,—Cadiz, as populous at that day as London, seated by the straits where the ancient and modern systems of Philip were blending like the mingling of the two oceans,—Granada, the ancient wealthy seat of the fallen Moors,—Toledo, Valladolid, and Lisbon, chief city of the recently conquered kingdom of Portugal, counting, with its suburbs, a larger population than any city, excepting Paris, in Europe, the mother of distant colonies, and the capital of the rapidly developing traffic with both the Indies: these were some of the treasures of Spain herself. But she possessed Sicily also, the better portion of Italy, and important dependencies in Africa, while the famous maritime discoveries of the age had all inured to her aggrandize-

ment. The world seemed suddenly to have expanded its wings from East to West only to bear the fortunate Spanish Empire to the most dizzy heights of wealth and power. The most accomplished generals, the most disciplined and daring infantry the world has ever known, the best-equipped and most extensive navy, royal and mercantile, of the age, were at the absolute command of the sovereign. Such was Spain.

"Turn now to the north-western corner of Europe. A morsel of territory, attached by a slight sand-hook to the continent, and half-submerged by the stormy waters of the German Ocean: this was Holland. A rude climate, with long, dark, rigorous winters and brief summers, — a territory, the mere wash of three great rivers, which had fertilized happier portions of Europe only to desolate and overwhelm this less-favored land, — a soil so ungrateful, that, if the whole of its four hundred thousand acres of arable land had been sowed with grain, it could not feed the laborers alone, — and a population largely estimated at one million of souls: these were the characteristics of the province which already had begun to give its name to the new commonwealth. The isles of Zeeland — entangled in the coils of deep, slow-moving rivers, or combating the ocean without — and the ancient episcopate of Utrecht, formed the only other provinces that had quite shaken off the foreign yoke. In Friesland, the important city of Groningen was still held for the King; while Bois-le-Duc, Zutphen, besides other places in Gelderland and North Brabant, also in possession of the royalists, made the position of those provinces precarious."

The safety of the Netherlands appeared to depend so entirely on their success in gaining the assistance of foreign powers, that it is not surprising that the Estates eagerly offered the sovereignty of the country, first to France and then to England. The details of the negotiations with these powers Mr. Motley recounts at great length. When England, at last, adopted the side of the Netherlands, and caught glimpses of the fact that the struggle of the latter against Spain was her cause no less than the cause of the Dutch, the parsimony and indecision of Elizabeth, and the hesitating counsels of her favorite minister, Burleigh, prevented the English-Dutch alliance from being efficient against the common enemy. An incompetent general, the Earl of Leicester, was sent over to Holland with the English troops; yet even his incompetency might

not have stood in the way of success, had he not been hampered with instructions which paralyzed what vigor and intelligence he possessed, and had not his soldiers been left to starve by the government they served. Elizabeth was trying to secure a peace with Spain, while Philip and Farnese were busy in contriving the means of an invasion of England; and up to the time the Spanish Armada appeared in the British seas, she and her government were thoroughly cajoled by Spanish craft. Mr. Motley remorselessly exposes, not only the duplicity of Philip, but the credulity of Elizabeth; he demonstrates the superiority of Spain in all the arts which were then supposed to constitute statesmanship; and shows that it was to no sagacity and vigor on the part of the English government, but to the instinctive intelligence and intrepidity of the English people, that the nation was saved from overthrow. Walsingham is almost the only English statesman who comes out from the historian's pitiless analysis with any credit; and, in respect to sagacity, Burleigh is degraded below Leicester: for Leicester at least understood that the enmity of Philip of Spain to England was unappeasable, and therefore justly considered his perfidious negotiations for peace as a mere blind to cover designs of conquest.

But we have no space, in this hurried notice of Mr. Motley's work, to linger on the fertile topics which his luminous narrative suggests. In a future article we hope to do some justice to the facts, principles, and judgments he has established. At present, after indicating his diligence in exploring original authorities, and the importance of the conclusions at which he arrives, we can only venture a few remarks on his historical genius and method.

As regards his historical genius, it is sufficient to say that he exhibits both sympathy and imagination. He has so completely assimilated his materials that his narrative of events is that of an eye-witness rather than that of a chronicler. Reproducing the passions, without participating in the errors of the age about which he writes, he intensely realizes everything he recounts. The siege of Antwerp and the defeat of the Spanish Armada are the two prominent and obvious illustrations of

his power of pictorial description : in these he has presented facts with a vividness and coherence worthy of the great masters of poetry and romance ; and his capacity of thus giving unmistakable reality to events is not merely exercised in harmony with the literal truth of things, but makes that truth more clearly appreciated. Desirous as he is to impress the imagination, he never sacrifices accuracy to effect.

The same picturesque truthfulness characterizes his descriptions of individuals. In the present volumes he has analyzed and represented a wide variety of human character, separated not only by personal, but national traits. Philip II., Farnese, and Mendoza, — Olden-Barneveld, Paul Buys, St. Aldegonde, Hohenlo, Martin Schenk, and Maurice of Nassau, — Henry III., Henry of Navarre, and the Duke of Guise, — Queen Elizabeth, Burleigh, Walsingham, Buckhurst, Leicester, Davison, Raleigh, Sidney, Howard, Drake, Hawkins, Frobisher, and Norris, — all, as delineated by him, have vital reality, all palpably live and move before the eye of his mind.

The method which Mr. Motley has adopted is admirably calculated to insure accuracy as well as reality to his representation of events and persons. His plan is always to allow the statesmen and soldiers who appear in his work to express themselves in their own way, and convey their opinions and purposes in their own words. This mode is opposed to compression, but favorable to truth. Macaulay's method is to re-state everything in his own language, and according to his own logical forms. He never allows the Whigs and Tories, whose opinions and policy he exhibits, to say anything for themselves. He detests quotation-marks. His summaries are so clear and compact that we are tempted to forget that they leave out the modifications which opinions receive from individual character. The reason that his statements are so often questioned is due to the fact that he insists on his readers viewing everything through the medium of his own mind. Mr. Motley is more objective in his representations ; and his readers can dispute his summaries of character and expositions of policy by the abundant materials for differing judgment which the historian himself supplies.

Life of Andrew Jackson. By JAMES PARTON, Author of the "Life of Aaron Burr," etc., etc. 3 vols. 8vo. New York : Mason Brothers. 1860.

WE criticized Mr. Parton's "Life of Aaron Burr" with considerable severity at the time of its appearance ; and we are the more glad to meet with a book of his which we can as sincerely and heartily commend. The same quality of sympathy with his subject, which led him in his former work to palliate the moral obliquity and overlook the baseness of his hero, in consideration of brilliant gifts of intellect and person, gives vigor and spirit to his delineation of a character in most respects so different as that of Jackson. This man, who filled so large a place in our history, and left perhaps a stronger impress of himself on our politics than any other of our public men except Jefferson, was well worthy to be made a subject of careful study and elucidation. Mr. Parton has given us the means of understanding a character hitherto a puzzle, and deserves our hearty thanks for the manner in which he has done it.

We think the book remarkably fair in its tone, though perhaps Mr. Parton is now and then led to exaggerate the positive greatness of Jackson, who, as it appears to us, was rather eminent by comparison and contrast with the men around him. But there were many strong, if not great qualities in his composition, and so much that was picturesque and strange in the incidents of his career and the state of society which formed his character, that we have found this biography one of the most instructive and entertaining we ever read. If Mr. Parton sometimes exaggerates his hero's merits, he is also outspoken in regard to his faults. If here and there a little Carlylish, his style has the merit of great liveliness, and his pictures of frontier-life are full of interest and vivacity.

Mr. Parton begins his book with a new kind of genealogy, and one suited to our Western hemisphere, where men are valued more for what they themselves are than for what their grandfathers were, — for making than for wearing an illustrious name. He shows that Jackson came of a good stock, — pious, tenacious of opinion and purpose, and brave, — the Scotch-Irish. He then tells us how young Jackson im-

bibed his fierce patriotism, riding as a boy-trooper, and wellnigh dying a prisoner, during the last years of the Revolutionary War. He lets us see his hero cock-fighting, horse-racing, bad-whiskey-drinking, studying law, and fighting by turns, leaving behind him somewhat dubious but on the whole favorable memories, yet somehow getting on, till he is appointed District-Attorney among the wolves, wildcats, and redskins of Tennessee. The story of his emigration thither and his early life there is wonderfully picturesque, and told by Mr. Parton with the spirit which only sympathy can give.

A great part of the material is wholly new, and we are at last enabled to get at the real Jackson, and to gain something like an adequate and consistent conception of him. We are particularly glad to learn the truth about Mrs. Jackson, after so many years of slander and misunderstanding, and to find something really touching and noble, instead of ludicrous, in the grim General's devotion to his first and only love. We get also for the first time an understandable account of the Battle of New Orleans, made up with praiseworthy impartiality from the accounts of both sides. Nor is it only here that the author gives us new light. He enables us to judge fairly of the sad story of Arbutnot and Ambrister, and throws a great deal of light on many points of our political history which much needed honest illumination. The book is of especial interest at the present time, as it contains the best narrative we have ever seen of the Nullification troubles of 1832. Mr. Parton not only shows a decided talent for biography, but his work is characterized by a thoroughness of research and honesty of purpose that make it, on the whole, the best life yet written of any of our public men.

Poems. By ROSE TERRY. Boston: Ticknor & Fields. 1861. pp. 231.

We forget who it was that once charitably christened one of his volumes "Prose by a Poet," in order that the public might be put on their guard as to the difference between it and the others,—inexperienced critics are so apt to make mistakes! The example seems to us worth following, and, were this dangerous frankness made a

point of honor in title-pages, we should be able at a glance to distinguish the books that must be bought from those that may be read. We should then see advertised "The Ten-Inch Bore, or Sermons by Rev. Canon So-and-so,"—"Essays to do Good, by a Victim of Original Sin,"—"Poems by a Proser,"—"Political Economy, by a Bankrupt," and the like. We should know, at least, what we had to expect.

We do not mean to apply this to Miss Terry; but her volume reminded us, by the association of opposites, of the title to which we have referred. We had long known her as a writer of picturesque and vigorous prose, as one of the most successful sketchers of New England character, abounding in humor and pathos; but we had never conceived her as a writer of verse. The readers of the "Atlantic" remember too well her "Maya, the Princess," "Metempsychosis," and "The Sphinx's Children," to need reminding that she has qualities of fancy as remarkable as her faculty for observing real life. Miss Terry seems in this volume to have sought refuge from the real in the ideal, from the jar and bustle of the outward world in the silent and shadowy interior of thought and being. Her poems have the fault of nearly all modern poetry, inasmuch as they are over-informed with thought and sadness. By far the greater number of her themes are abstract and melancholy. It appears to us that her mind moves more naturally and finds readier expression in the picturesque than in the metaphysical; and in saying this we mean to say that she is really a poet, and not a rhymers of thoughts. "Midnight" is a poem full of originality and vigor, with that suggestion of deepest meaning which is so much more effective than definite statement. "December XXXI." gives us a new and delightful treatment of a subject which the poets have made us rather shy of by their iteration. We would signalize also, as an especial favorite of ours, "The Two Villages," and still more the very striking poem "At Last." But, after all, we are not sure that the Ballads are not the best pieces in the volume. The "Frontier Ballads," in particular, quiver with strength and spirit, and have the true game-flavor of the border.

Harrington. By the Author of "What Cheer?" Boston: Thayer & Eldridge.

ONE of the most impossible books that man ever wrote. A book which one could almost prove never could be written, and which, as an illogical conclusion, but a stubborn fact, has been written, nevertheless. "*Harrington*" is an Abolition novel, the scene of which is laid in Boston, with a few introductory chapters of plantation-slavery in Louisiana. Its principal merit is its burning earnestness of feeling and purpose; and earnestness is sacred from criticism. Whenever the warm pulse of an author's heart can be felt through the texture of his story, criticism is mere flippancy. But, at the risk of making our author's lip curl with disdain of the sordid insensibility that refuses to join in his enthusiasm throughout, we shall venture to remind him that enthusiasm is no proof of truth, whether in argument or conclusion.

The introductory chapters, containing the flight of the slave Antony through the Louisiana swamp, are almost unequalled for unfaltering power, for gorgeous wealth of color. Many of the glowing sentences belong rather to passionate poetry than to tamer prose. The agonized resolution that turns the panting fugitive's blood and body to fire, — the fear, so vividly portrayed that the reader's nerves thrill with the shock that brings the hunted negro's heart almost to his mouth with one wild throb, — the matchless picture of the forest and marsh, lengthening and widening with dizzy swell to the weary eye and failing brain, — all are the work of a master of language.

When the scene shifts to Boston, the language, which was in perfect keeping with the tropical madness of Antony's flight and the tropical splendor of the Southern forest, is extravagant to actual absurdity, when used with reference to ordinary scenes and ordinary events. All the force of contrast is lost; and contrast is the great secret of effect. The lavish richness of our author's words is as little suited to the things they describe as a mantle of gold brocade would be to the shoulders of a beggar. Even the loveliest of young women is more likely to enter a room by the ordinary mysterious mode of

locomotion than to "flash" into it like a salamander. That it was possible for Muriel Eastman, in gratifying her "vaulting ambition" by a very creditable spring over the parallel bars, to "toss the air into perfume," we are not prepared to deny, having no very clear notion of the meaning of those remarkable words; but when we are told that Mrs. Eastman was "ineffably surprised, yet more ineffably amused," we must be allowed to enter an energetic protest. *Harrington* himself is perhaps a trifle too "regnant" to be altogether satisfactory; and there are many similar extravagances and inaccuracies.

The social intercourse of the ladies and gentlemen in this book is particularly bad. It seems as if the author were ignorant of the usages of good society, and, impatient of the vulgar ceremony of inferior people, had seen no way to assert the superiority of his two fair ladies and their unimaginable lovers, except making them dispense with all such observances whatever. His uncertainty how people in their position really do act has hampered his powers; and he is not that rarity, an original writer, but that very common person, one who tries to be original. Real ladies and gentlemen are not reduced to the alternative of either being embarrassed by the ordinary social rules or disregarding them altogether; they take advantage of them. It is a false originality that is singular about ordinary forms; it is only the tyro in chess who is "original" in his first move; Paul Morphy, the most inventive of players, always begins with the customary advance of the king's pawn.

There is the usual partiality — one-sidedness — common to the writings and orations of our author's political school. It may well be doubted whether in reality all the virtues have been monopolized by the Antislavery men, all the vices by their opponents. Our author only hurts his own cause, when he invests with a halo of light every brawler who echoes the words of the really eminent leaders. Because one Abolitionist, who has sacrificed power and position to his creed, is entitled to praise, is another, who perhaps, by advocating the same doctrines, gains a higher position, a wider influence, perhaps an easier support, than he could in any other way, to share the credit of having made a sacrifice? One

would not disparage martyrs; but Saint Lawrence on a cold gridiron, and the pilgrim who boiled his peas, are entitled to more credit for their shrewdness than their suffering. Our author, however, makes no distinction; and a natural result will be that many of his readers, knowing that in one case his praises are undeserved, will be slow to believe them just in any case. And not only are all of this particular school disinterested, but they are all among the master-intellects of the age, apparently by definition. Mr. Harrington himself is the commanding intellect of the story, perhaps because of his belief in the greatest number of heresies, — being somewhat peculiar in his religious views, believing in woman's rights, considering the marriage ceremony a silly concession to popular prejudice, giving credence to

omens, active as an Abolitionist, and — to crown all — holding that Lord Bacon wrote Shakspeare's Plays! We sympathize entirely with the author's indignant protest against thinking a theory necessarily inaccurate because it contravenes the opinion of the majority. Certainly, a new thing is not necessarily wrong; but neither is a new thing necessarily right; and we are heartless enough to pronounce the "Baconian theory" rather weak than otherwise for a hero.

We cannot close our notice of this book without commending the old French fencing-master as particularly good. He talks very simply and well on matters that he understands, and is silent on those that he does not understand, — affording in both respects an excellent example to the more important characters.

VOL. VII.—APRIL, 1861.—NO. XLII.

APRIL DAYS.

"Can trouble dwell with April days?"

In Memoriam.

IN our methodical New England life, we still recognize some magic in summer. Most persons reluctantly resign themselves to being decently happy in June, at least. They accept June. They compliment its weather. They complain of the earlier months as cold, and so spent them in the city; and they will complain of the later months as hot, and so refrigerate themselves on some barren sea-coast. God offers us yearly a necklace of twelve pearls; most men choose the fairest, label it June, and cast the rest away. It is time to chant a hymn of more liberal gratitude.

There are no days in the whole round year more delicious than those which often come to us in the latter half of April. On these days one goes forth in the morning, and an Italian warmth broods over all the hills, taking visible shape in a glistening mist of silvered azure, with which mingles the smoke from many bonfires. The sun trembles in his own soft rays, till one understands the old English tradition, that he dances on Easter-Day. Swimming in a sea of glory, the tops of the hills look nearer than their bases, and their glistening watercourses seem close to the eye, as

is their liberated murmur to the ear. All across this broad interval the teams are ploughing. The grass in the meadow seems all to have grown green since yesterday. The blackbirds jangle in the oak, the robin is perched upon the elm, the song-sparrow on the hazel, and the bluebird on the apple-tree. There rises a hawk and sails slowly, the stateliest of airy things, a floating dream of long and languid summer-hours. But as yet, though there is warmth enough for a sense of luxury, there is coolness enough for exertion. No tropics can offer such a burst of joy; indeed, no zone much warmer than our Northern States can offer a genuine spring. There can be none where there is no winter, and the monotone of the seasons is broken only by wearisome rains. Vegetation and birds being distributed over the year, there is no burst of verdure nor of song. But with us, as the buds are swelling, the birds are arriving; they are building their nests almost simultaneously; and in all the Southern year there is no such rapture of beauty and of melody as here marks every morning from the last of April onward.

But days even earlier than these in

April have a charm,—even days that seem raw and rainy, when the sky is dull and a bequest of March-wind lingers, chasing the squirrel from the tree and the children from the meadows. There is a fascination in walking through these bare early woods,—there is such a pause of preparation, winter's work is so cleanly and thoroughly done. Everything is taken down and put away; throughout the leafy arcades the branches show no remnant of last year, save a few twisted leaves of oak and beech, a few empty seed-vessels of the tardy witch-hazel, and a few gnawed nutshells dropped coquetishly by the squirrels into the crevices of the bark. All else is bare, but prophetic: buds everywhere, the whole splendor of the coming summer concentrated in those hard little knobs on every bough; and clinging here and there among them, a brown, papery chrysalis, from which shall yet wave the superb wings of the Luna moth. An occasional shower patters on the dry leaves, but it does not silence the robin on the outskirts of the wood: indeed, he sings louder than ever, though the song-sparrow and the bluebird are silent.

Then comes the sweetness of the nights in latter April. There is as yet no evening-primrose to open suddenly, no cistus to drop its petals; but the May-flower knows the hour, and becomes more fragrant in the darkness, so that one can then often find it in the woods without aid from the eye. The pleasant night-sounds are begun; the hylas are uttering their shrill *peep* from the meadows, mingled soon with hoarser toads, who take to the water at this season to deposit their spawn. The tree-toads soon join them; but one listens in vain for bullfrogs, or katydids, or grasshoppers, or whippoorwills, or crickets: we must wait for them until the delicious June.

The earliest familiar token of the coming season is the expansion of the stiff catkins of the alder into soft, drooping tresses. These are so sensitive, that, if you pluck them at almost any time during the winter, a day's bright sunshine will make

them open in a glass of water, and thus they eagerly yield to every moment of April warmth. The blossom of the birch is more delicate, that of the willow more showy, but the alders come first. They cluster and dance everywhere upon the bare boughs above the watercourses; the blackness of the buds is softened into rich brown and yellow; and as this graceful creature thus comes waving into the spring, it is pleasant to remember that the Norse Eddas fabled the first woman to have been named *Embla*, because she was created from an alder-bough.

The first wild-flower of the spring is like land after sea. The two which, throughout the Northern Atlantic States, divide this interest are the *Epigæa repens* (May-flower, ground-laurel, or trailing-arbutus) and the *Hepatica triloba* (liverleaf, liverwort, or blue anemone). Of these two, the latter is perhaps more immediately exciting on first discovery; because it does not, like the *epigæa*, exhibit its buds all winter, but opens its blue eyes almost as soon as it emerges from the ground. Without the rich and delicious odor of its compeer, it has an inexpressibly fresh and earthy scent, that seems to bring all the promise of the blessed season with it; indeed, that clod of fresh turf with the inhalation of which Lord Bacon delighted to begin the day must undoubtedly have been full of the roots of our little *hepatica*. Its healthy sweetness belongs to the opening year, like Chaucer's poetry; and one thinks that anything more potent and voluptuous would be less enchanting,—until one turns to the May-flower. Then comes a richer fascination for the senses. To pick the May-flower is like following in the footsteps of some spendthrift army which has scattered the contents of its treasure-chest among beds of scented moss. The fingers sink in the soft, moist verdure, and make at each instant some superb discovery unawares; again and again, straying carelessly, they clutch some new treasure; and, indeed, all is linked together in bright necklaces by secret threads beneath the surface, and where

you grasp at one, you hold many. The hands go wandering over the moss as over the keys of a piano, and bring forth fragrance for melody. The lovely creatures twine and nestle and lay their glowing faces to the very earth beneath withered leaves, and what seemed mere barrenness becomes fresh and fragrant beauty. So great is the charm of the pursuit, that the epigæa is really the one wild-flower for which our country-people have a hearty passion. Every village child knows its best haunts, and watches for it eagerly in the spring; boys wreath their hats with it, girls twine it in their hair, and the cottage-windows are filled with its beauty.

In collecting these early flowers, one finds or fancies singular natural affinities. I flatter myself with being able always to find hepatica, if there is any within reach, for I was brought up with it ("Cockatoo he know me berry well"); but other persons, who were brought up with May-flower, and remember searching for it with their almost baby-fingers, can find that better. The most remarkable instance of these natural affinities was in the case of L. T. and his double anemones. L. had always a gift for wild-flowers, and used often to bring to Cambridge the largest white anemones that ever were seen, from a certain special hill in Watertown; they were not only magnificent in size and whiteness, but had that exquisite blue on the outside of the petals, as if the sky had bent down in ecstasy at last over its darlings, and left visible kisses there. But even this success was not enough, and one day he came with something yet choicer. It was a rue-leaved anemone (*A. thalictroides*); and, if you will believe it, each one of the three white flowers was *double*, not merely with that multiplicity of petals in the disk which is common with this species, but technically and horticulturally double, like the double-flowering almond or cherry,—the most exquisitely delicate little petals, seeming like lace-work. He had three specimens,—gave one to the Autocrat of Botany, who said it was almost or

quite unexampled, and another to me. As the man in the fable says of the chameleon,—“I have it yet, and can produce it.”

Now comes the marvel. The next winter L. went to New York for a year, and wrote to me, as spring drew near, with solemn charge to visit his favorite haunt and find another specimen. Armed with this letter of introduction, I sought the spot, and tramped through and through its leafy corridors. Beautiful wood-anemones I found, to be sure, trembling on their fragile stems, deserving all their pretty names,—Wind-flower, Easter-flower, Pasque-flower, and homeopathic Pulsatilla; rue-leaved anemones I found also, rising taller and straighter and firmer in stem, with the whorl of leaves a little higher up on the stalk than one fancies it ought to be, as if there were a supposed danger that the flowers would lose their balance, and as if the leaves must be all ready to catch them. These I found, but the special wonder was not there for me. Then I wrote to L. that he must evidently come himself and search; or that, perhaps, as Sir Thomas Browne avers that “smoke doth follow the fairest,” so his little treasures had followed him towards New York. Judge of my surprise, when, on opening his next letter, out dropped, from those folds of metropolitan paper, a veritable double anemone. He had just been out to Hoboken, or some such place, to spend an afternoon, and, of course, his pets were there to meet him; and from that day to this, I have never heard of the thing happening to any one else.

May-Day is never allowed to pass in this community without profuse lamentations over the tardiness of our spring as compared with that of England and the poets. Yet it is very common to exaggerate this difference. Even so good an observer as Wilson Flagg is betrayed into saying that the epigæa and hepatica “seldom make their appearance until after the middle of April” in Massachusetts, and that “it is not unusual for the whole month of April to pass away without pro-

ducing more than two or three species of wild-flowers." But I have formerly found the hepatica in bloom at Mount Auburn, for three successive years, on the twenty-seventh of March; and last spring it was actually found, farther inland, where the season is later, on the seventeenth. The May-flower is usually as early, though the more gradual expansion of the buds renders it less easy to give dates. And there are nearly twenty species which I have noted, for five or six years together, as found before May-Day, and which may therefore be properly assigned to April. The list includes bloodroot, cowslip, houstonia, saxifrage, dandelion, chickweed, cinquefoil, strawberry, mouse-ear, bell-wort, dog's-tooth violet, five species of violet proper, and two of anemone. These are all common flowers, and easily observed; and the catalogue might be increased by rare ones, as the white corydalis, the smaller yellow violet, (*V. rotundifolia*), and the claytonia or spring-beauty.

But in England the crocus and the snowdrop—neither being probably an indigenous flower, since neither is mentioned by Chaucer—usually open before the first of March; indeed, the snowdrop was formerly known by the yet more fanciful name of "Fair Maid of February." Chaucer's daisy comes equally early; and March brings daffodils, narcissi, violets, daisies, jonquils, hyacinths, and marsh-marigolds. This is altogether in advance of our season, so far as the flowers give evidence,—though we have plucked snowdrops in February. But, on the other hand, it would appear, that, though a larger number of birds winter in England than in Massachusetts, yet the return of those which migrate is actually earlier among us. From journals kept during sixty years in England, and an abstract of which is printed in Hone's "Every-Day Book," it appears that only two birds of passage revisit England before the fifteenth of April, and only thirteen more before the first of May; while with us the song-sparrow and the blue-bird appear about the first of March, and

quite a number more by the middle of April. This is a peculiarity of the English spring which I have never seen explained or even mentioned.

After the epigæa and the hepatica have opened, there is a slight pause among the wild-flowers,—these two forming a distinct prologue for their annual drama, as the brilliant witch-hazel in October brings up its separate epilogue. The truth is, Nature attitudinizes a little, liking to make a neat finish with everything, and then to begin again with *éclat*. Flowers seem spontaneous things enough, but there is evidently a secret marshalling among them, that all may be brought out with due effect. As the country-people say that so long as any snow is left on the ground more snow may be expected, it must all vanish simultaneously at last,—so every seeker of spring-flowers has observed how accurately they seem to move in platoons, with little straggling. Each species seems to burst upon us with a united impulse; you may search for them day after day in vain, but the day when you find one specimen the spell is broken and you find twenty. By the end of April all the margins of the great poem of the woods are illuminated with these exquisite vignettes.

Most of the early flowers either come before the full unfolding of their leaves or else have inconspicuous ones. Yet Nature always provides for her bouquets the due proportion of green. The verdant and graceful sprays of the wild raspberry are unfolded very early, long before its time of flowering. Over the meadows spread the regular Chinese-pagodas of the equisetum, (horsetail or scouring-rush,) and the rich coarse vegetation of the veratrum, or American hellebore. In moist copses the ferns and osmundas begin to uncurl in April, opening their soft coils of spongy verdure, coated with woolly down, from which the humming-bird steals the lining of her nest.

The early blossoms represent the aboriginal epoch of our history: the bloodroot and the May-flower are older than

the white man, older perchance than the red man; they alone are the true Native Americans. Of the later wild plants, many of the most common are foreign importations. In our sycophancy we attach grandeur to the name *exotic*: we call aristocratic garden-flowers by that epithet; yet they are no more exotic than the humbler companions they brought with them, which have become naturalized. The dandelion, the buttercup, chickweed, celandine, mullein, burdock, yarrow, whiteweed, nightshade, and most of the thistles, — these are importations. Miles Standish never crushed these with his heavy heel as he strode forth to give battle to the savages; they never kissed the daintier foot of Priscilla, the Puritan maiden. It is noticeable that these are all of rather coarser texture than our indigenous flowers; the children instinctively recognize this, and are apt to omit them, when gathering the more delicate native blossoms of the woods.

There is something touching in the gradual retirement before civilization of these delicate aborigines. They do not wait for the actual brute contact of red bricks and curbstones, but they feel the danger miles away. The Indians called the low plantain "the white man's foot-step"; and these shy creatures gradually disappear, the moment the red man gets beyond their hearing. Bigelow's delightful "*Florula Bostoniensis*" is becoming a series of epitaphs. Too well we know it, — we who in happy Cambridge childhood often gathered, almost within a stone's throw of Professor Agassiz's new Museum, the arethusa and the gentian, the cardinal-flower and the gaudy rhexia, — we who remember the last secret hiding-place of the rhodora in West Cambridge, of the yellow violet and the *Viola debilis* in Watertown, of the *Convallaria trifolia* near Fresh Pond, of the *Hottonia* beyond Wellington's Hill, of the *Cornus florida* in West Roxbury, of the *Clintonia* and the dwarf ginseng in Brookline, — we who have found in its one chosen nook the sacred *Andromeda polyfolia* of Linnæus. Now vanished

almost or wholly from city-suburbs, these fragile creatures still linger in more rural parts of Massachusetts; but they are doomed everywhere, unconsciously, yet irresistibly; while others still more shy, as the *Linnaea*, the yellow *Cypripedium*, the early pink *Azalea*, and the delicate white *Corydalis* or "Dutchman's breeches," are being chased into the very recesses of the Green and the White Mountains. The relics of the Indian tribes are supported by the legislature at Martha's Vineyard, while these precursors of the Indian are dying unfriended away.

And with these receding plants go also the special insects which haunt them. Who that knew that pure enthusiast, Dr. Harris, but remembers the accustomed lamentations of the entomologist over the departure of these winged companions of his lifetime? Not the benevolent Mr. John Beeson more tenderly mourns the decay of the Indians than he the exodus of these more delicate native tribes. In a letter which I happened to receive from him a short time previous to his death, he thus renewed the lament: — "I mourn for the loss of many of the beautiful plants and insects that were once found in this vicinity. *Clethra*, *Rhodora*, *Sanguinaria*, *Viola debilis*, *Viola acuta*, *Dracæna borealis*, *Rhexia*, *Cypripedium*, *Corallorhiza verna*, *Orchis spectabilis*, with others of less note, have been rooted out by the so-called hand of improvement. *Cicindela rugifrons*, *Helluo præusta*, *Sphæroderus stenostomus*, *Blethisa quadricollis*, (*Americana* m.), *Carabus*, *Horia*, (which for several years occurred in profusion on the sands beyond Mount Auburn,) with others, have entirely disappeared from their former haunts, driven away, or exterminated perhaps, by the changes effected therein. There may still remain in your vicinity some sequestered spots, congenial to these and other rarities, which may reward the botanist and the entomologist who will search them carefully. Perhaps you may find there the pretty coccinella-shaped, silver-margined *Omophron*, or the still rarer *Panagæus*

fasciatus, of which I once took two specimens on Wellington's Hill, but have not seen it since." Is not this indeed handling one's specimens "gently as if you loved them," as Isaak Walton bids the angler do with his worm?

There is this merit, at least, among the coarser crew of imported flowers, that they bring their own proper names with them, and we know precisely whom we have to deal with. In speaking of our own native flowers, we must either be careless and inaccurate, or else resort sometimes to the Latin, in spite of the indignation of friends. There is something yet to be said on this point. In England, where the old household and monkish names adhere, they are sufficient for popular and poetic purposes, and the familiar use of scientific names seems an affectation. But here, where many native flowers have no popular names at all, and others are called confessedly by wrong ones, — where it really costs less trouble to use Latin names than English, the affectation seems the other way. Think of the long list of wild-flowers where the Latin name is spontaneously used by all who speak of the flower: as, *Arethusa*, *Aster*, *Cistus*, ("after the fall of the *cistus*-flower,") *Clematis*, *Clethra*, *Geranium*, *Iris*, *Lobelia*, *Rhodora*, *Spiræa*, *Tiarella*, *Trientalis*, and so on. Even those formed from proper names (the worst possible system of nomenclature) become tolerable at last, and we forget the man in the more attractive flower. Are those who pick the *Houstonia* to be supposed thereby to indorse the Texan President? Or are the deluded damsels who chew *Cassia*-buds to be regarded as swallowing the late Secretary of State? The names have long since been made over to the flowers, and every questionable aroma has vanished. When the godfather happens to be a botanist, there is a peculiar fitness in the association; the *Linnæa*, at least, would not smell so sweet by any other name.

In other cases the English name is a mere modification of the Latin one, and our ideal associations have really a scien-

tific basis: as with *Violet*, *Lily*, *Laurel*, *Gentian*, *Vervain*. Indeed, our enthusiasm for vernacular names is like that for Indian names, one-sided: we enumerate only the graceful ones, and ignore the rest. It would be a pity to Latinize *Touch-me-not*, or *Yarrow*, or *Gold-Thread*, or *Self-Heal*, or *Columbine*, or *Blue-Eyed-Grass*, — though, to be sure, this last has an annoying way of shutting up its azure orbs the moment you gather it, and you reach home with a bare, stiff blade, which deserves no better name than *Sisyrinchium anceps*. But in what respect is *Cucumber-Root* preferable to *Medeola*, or *Solomon's-Seal* to *Convallaria*, or *Rock-Tripe* to *Umbilicaria*, or *Lousewort* to *Pedicularis*? In other cases the merit is divided: *Anemone* may dispute the prize of melody with *Windflower*, *Campanula* with *Harebell*, *Neottia* with *Ladies'-Tresses*, *Uvularia* with *Bellwort* and *Strawbell*, *Potentilla* with *Cinquefoil*, and *Sanguinaria* with *Bloodroot*. *Hepatica* may be bad, but *Liverleaf* is worse. The pretty name of *May-flower* is not so popular, after all, as that of *Trailing-Arbutus*, where the graceful and appropriate adjective redeems the substantive, which happens to be Latin and incorrect at the same time. It does seem a waste of time to say *Chrysanthemum leucanthemum* instead of *Whiteweed*; though, if the long scientific name were an incantation to banish the intruder, our farmers would gladly consent to adopt it.

But the great advantage of a reasonable use of the botanical name is, that it does not deceive us. Our primrose is not the English primrose, any more than it was our robin who tucked up the babes in the wood; our cowslip is not the English cowslip, it is the English marsh-marigold, — Tennyson's "wild marsh-marigold shines like fire in swamps and hollows gray." The pretty name of *Azalea* means something definite; but its rural name of *Honeysuckle* confounds under that name flowers without even an external resemblance, — *Azalea*, *Diervilla*, *Lonicera*, *Aquilegia*, — just as every bird which sings loud in deep woods is popu-

larly denominated a thrush. The really rustic names of both plants and animals are very few with us, — the different species are many; and as we come to know them better and love them more, we absolutely require some way to distinguish them from their half-sisters and second-cousins. It is hopeless to try to create new popular epithets, or even to revive those which are thoroughly obsolete. Miss Cooper may strive in vain, with benevolent intent, to christen her favorite spring-blossoms "May-Wings" and "Gay-Wings," and "Fringe-Cup" and "Squirrel-Cup," and "Cool-Wort" and "Bead-Ruby"; there is no conceivable reason why these should not be the familiar appellations, except the irresistible fact that they are not. It is impossible to create a popular name: one might as well attempt to invent a legend or compose a ballad. *Nascitur, non fit.*

As the spring comes on, and the densening outlines of the elm give daily a new design for a Grecian urn, — its hue, first brown with blossoms, then emerald with leaves, — we appreciate the vanishing beauty of the bare boughs. In our favored temperate zone, the trees denude themselves each year, like the goddesses before Paris, that we may see which unadorned loveliness is the fairest. Only the unconquerable delicacy of the beech still keeps its soft vestments about it: far into spring, when worn to thin rags and tatters, they cling there still; and when they fall, the new appear as by magic. It must be owned, however, that the beech has good reasons for this prudishness, and possesses little beauty of figure; while the elms, maples, chestnuts, walnuts, and even oaks, have not exhausted all their store of charms for us, until we have seen them disrobed. Only yonder magnificent pine-tree, — that pitch-pine, nobler when seen in perfection than white-pine, or Norwegian, or Norfolk Islander, — that pitch-pine, herself a grove, *una nemus*, holds her unchanging beauty throughout the year, like her half-brother, the ocean, whose voice she

shares; and only marks the flowing of her annual tide of life by the new verdure that yearly submerges all trace of last year's ebb.

How many lessons of faith and beauty we should lose, if there were no winter in our year! Sometimes, in following up a watercourse among our hills, in the early spring, one comes to a weird and desolate place, where one huge wild grape-vine has wreathed its ragged arms around a whole thicket and brought it to the ground, — swarming to the tops of hemlocks, clenching a dozen young maples at once and tugging them downward, stretching its wizard black length across the underbrush, into the earth and out again, wrenching up great stones in its blind, aimless struggle. What a piece of chaos is this! Yet come here again, two months hence, and you shall find all this desolation clothed with beauty and with fragrance, one vast bower of soft green leaves and graceful tendrils, while summer-birds chirp and flutter amid these sunny arches all the livelong day. "Out of the strong cometh forth sweetness."

To the end of April, and often later, one still finds remains of snowbanks in sheltered woods, especially those consisting of evergreen trees; and this snow, like that upon high mountains, has become hardened by the repeated thawing and freezing of the surface, till it is more impenetrable than ice. But the snow that actually falls during April is usually only what Vermonters call "sugar-snow," — falling in the night and just whitening the surface for an hour or two, and taking its name, not so much from its looks as from the fact that it denotes the proper weather for "sugaring," namely, cold nights and warm days. Our saccharine associations, however, remain so obstinately tropical, that it seems almost impossible for the imagination to locate sugar in New England trees; though it is known that not the maple only, but the birch and the walnut even, afford it in appreciable quantities.

Along our maritime rivers the people associate April, not with "sugaring," but

with "shadding." The pretty *Amelanchier Canadensis* of Gray—the *Aronia* of Whittier's song—is called Shad-bush or Shad-blow in Essex County, from its connection with this season; and there is a bird known as the Shad-spirit, which I take to be identical with the flicker or golden-winged woodpecker, whose note is still held to indicate the first day when the fish ascend the river. Upon such slender wings flits our New England romance!

In April the creative process described by Thales is repeated, and the world is renewed by water. The submerged creatures first feel the touch of spring, and many an equivocal career, beginning in the ponds and brooks, learns later to ignore this obscure beginning, and hops or flutters in the dusty daylight. Early in March, before the first male canker-moth appears on the elm-tree, the whirlwig beetles have begun to play round the broken edges of the ice, and the caddis-worms to crawl beneath it; and soon come the water-skater (*Gerres*) and the water-boatman (*Notonecta*). Turtles and newts are in busy motion when the spring-birds are only just arriving. Those gelatinous masses in yonder wayside-pond are the spawn of water-newts or tritons: in the clear transparent jelly are imbedded, at regular intervals, little blackish dots; these elongate rapidly, and show symptoms of head and tail curled up in a spherical cell; the jelly is gradually absorbed for their nourishment, until on some fine morning each elongated dot gives one vigorous wriggle, and claims thenceforward all the privileges attendant on this dissolution of the union. The final privilege is often that of being suddenly snapped up by a turtle or a snake: for Nature brings forth her creatures liberally, especially the aquatic ones, sacrifices nine-tenths of them as food for their larger cousins, and reserves only a handful to propagate their race, on the same profuse scale, next season.

It is surprising, in the midst of our Museums and Scientific Schools, how little we yet know of the common things

before our eyes. Our savans still confess their inability to discriminate with certainty the egg or tadpole of a frog from that of a toad; and it is strange that these hopping creatures, which seem so unlike, should coincide so nearly in their juvenile career, while the tritons and salamanders, which border so closely on each other in their maturer state as sometimes to be hardly distinguishable, yet choose different methods and different elements for laying their eggs. The eggs of our salamanders or land-lizards are deposited beneath the moss on some damp rock, without any gelatinous envelope; they are but few in number, and the anxious mamma may sometimes be found coiled in a circle around them, like the symbolic serpent of eternity.

The small number of birds yet present in early April gives a better opportunity for careful study,—more especially if one goes armed with that best of fowling-pieces, a small spy-glass: the best,—since how valueless for purposes of observation is the bleeding, gasping, dying body, compared with the fresh and living creature, as it tilts, trembles, and warbles on the bough before you! Observe that robin in the oak-tree's top: as he sits and sings, every one of the dozen different notes which he flings down to you is accompanied by a separate flirt and flutter of his whole body, and, as Thoreau says of the squirrel, "each movement seems to imply a spectator," and to imply, further, that the spectator is looking through a spy-glass. Study that song-sparrow: why is it that he always goes so ragged in spring, and the bluebird so neat? is it that the song-sparrow is a wild artist, absorbed in the composition of his lay, and oblivious of ordinary proprieties, while the smooth bluebird and his ash-colored mate cultivate their delicate warble only as a domestic accomplishment, and are always nicely dressed before sitting down to the piano? Then how exciting is the gradual arrival of the birds in their summer-plumage! to watch it is as good as sitting at the window on Easter Sunday to observe the new bon-

nets. Yonder, in that clump of alders by the brook, is the delicious jargoning of the first flock of yellow-birds; there are the little gentlemen in black and yellow, and the little ladies in olive-brown; "sweet, sweet, sweet" is the only word they say, and often they will so lower their ceaseless warble, that, though almost within reach, the little minstrels seem far away. There is the very earliest cat-bird, mimicking the bobolink before the bobolink has come: what is the history of his song, then? is it a reminiscence of last year? or has the little coquette been practising it all winter, in some gay Southern society, where cat-birds and bobolinks grow intimate, just as Southern fashionables from different States may meet and sing duets at Saratoga? There sounds the sweet, low, long-continued trill of the little hair-bird, or chipping-sparrow, a suggestion of insect sounds in sultry summer, and produced, like them, by a slight fluttering of the wings against the sides: by-and-by we shall sometimes hear that same delicate rhythm burst the silence of the June midnights, and then, ceasing, make stillness more still. Now watch that woodpecker, roving in ceaseless search, traveling over fifty trees in an hour, running from top to bottom of some small sycamore, pecking at every crevice, pausing to dot a dozen inexplicable holes in a row upon an apple-tree, but never once intermitting the low, querulous murmur of housekeeping anxiety: now she stops to hammer with all her little life at some tough piece of bark, strikes harder and harder blows, throws herself back at last, flapping her wings furiously as she brings down her whole strength again upon it; finally it yields, and grub after grub goes down her throat, till she whets her beak after the meal as a wild beast licks its claws, and off on her pressing business once more.

It is no wonder that there is so little substantial enjoyment of Nature in the community, when we feed children on grammars and dictionaries only, and take no pains to train them to see that which

is before their eyes. The mass of the community have "summered and wintered" the universe pretty regularly, one would think, for a good many years; and yet nine persons out of ten in the town or city, and two out of three even in the country, seriously suppose, for instance, that the buds upon trees are formed in the spring; they have had them before their eyes all winter, and never seen them. As large a proportion suppose, in good faith, that a plant grows at the base of the stem, instead of at the top: that is, if they see a young sapling in which there is a crotch at five feet from the ground, they expect to see it ten feet from the ground by-and-by, — confounding the growth of a tree with that of a man or animal. But perhaps the best of us could hardly bear the severe test unconsciously laid down by a small child of my acquaintance. The boy's father, a college-bred man, had early chosen the better part, and employed his fine faculties in rearing laurels in his own beautiful nursery-gardens, instead of in the more arid soil of court-rooms or state-houses. Of course the young human scion knew the flowers by name before he knew his letters, and used their symbols more readily; and after he got the command of both, he was one day asked by his younger brother what the word *idiot* meant, — for somebody in the parlor had been saying that somebody else was an idiot. "Don't you know?" quoth Ben, in his sweet voice: "an idiot is a person who doesn't know an arbor-vitæ from a pine, — he doesn't know anything." When Ben grows up to maturity, bearing such terrible tests in his unshrinking hands, who of us will be safe?

The softer aspects of Nature, especially, require time and culture before man can enjoy them. To rude races her processes bring only terror, which is very slowly outgrown. Humboldt has best exhibited the scantiness of finer natural perceptions in Greek and Roman literature, in spite of the grand oceanic anthology of Homer, and the delicate water-coloring of the Greek Anthology and

of Horace. The Oriental and the Norse sacred books are full of fresh and beautiful allusions; but the Greek saw in Nature only a framework for Art, and the Roman only a camping-ground for men. Even Virgil describes the grotto of Æneas merely as a "black grove" with "horrid shade,"—"*Horrenti atrum nemus imminet umbrâ.*" Wordsworth points out, that, even in English literature, the "Windsor Forest" of Anne, Countess of Winchelsea, was the first poem which represented Nature as a thing to be consciously enjoyed; and as she was almost the first English poetess, we might be tempted to think that we owe this appreciation, like some other good things, to the participation of woman in literature. But, on the other hand, it must be remembered that the voluminous Duchess of Newcastle, in her "Ode on Melancholy," describes among the symbols of hopeless gloom "the still moonshine night" and "a mill where rushing waters run about,"—the sweetest natural images. So woman has not so much to claim, after all. In our own country, the early explorers seemed to find only horror in its woods and waterfalls. Josselyn, in 1672, could only describe the summer splendor of the White Mountain region as "dauntingly terrible, being full of rocky hills, as thick as mole-hills in a meadow, and full of infinite thick woods." Father Hennepin spoke of Niagara, in the narrative still quoted in the guide-books, as a "frightful cataract"; though perhaps his original French

phrase was softer. And even John Adams could find no better name than "horrid chasm" for the gulf at Egg Rock, where he first saw the sea-anemone.

But we are lingering too long, perhaps, with this sweet April of smiles and tears. It needs only to add that all her traditions are beautiful. Ovid says well, that she was not named from *aperire*, to open, as some have thought, but from *Aphrodite*, goddess of beauty. April holds Easter-time, St. George's Day, and the Eve of St. Mark's. She has not, like her sister May in Germany, been transformed to a verb and made a synonyme for joy,—"*Deine Seele malet den trüben Herbst,*"—but April was believed in early ages to have been the birth-time of the world. According to Venerable Bede, the point was first accurately determined at a council held at Jerusalem about A. D. 200, when, after much profound discussion, it was finally decided that the world's birthday occurred on Sunday, April eighth,—that is, at the vernal equinox and the full moon. But April is certainly the birth-time of the year, at least, if not of the planet. Its festivals are older than Christianity, older than the memory of man. No sad associations cling to it, as to the month of June, in which month, says William of Malmesbury, kings are wont to go to war,—"*Quando solent reges ad arma procedere,*"—but it holds the Holy Week, and it is the Holy Month. And in April Shakspeare was born, and in April he died.

THE PROFESSOR'S STORY.

CHAPTER XXIX.

THE WHITE ASH.

WHEN Helen returned to Elsie's bedside, it was with a new and still deeper feeling of sympathy, such as the story told by Old Sophy might well awaken. She understood, as never before, the singular fascination and as singular repulsion which she had long felt in Elsie's presence. It had not been without a great effort that she had forced herself to become the almost constant attendant of the sick girl; and now she was learning, but not for the first time, the blessed truth which so many good women have found out for themselves, that the hardest duty bravely performed soon becomes a habit, and tends in due time to transform itself into a pleasure.

The old Doctor was beginning to look graver, in spite of himself. The fever, if such it was, went gently forward, wasting the young girl's powers of resistance from day to day; yet she showed no disposition to take nourishment, and seemed literally to be living on air. It was remarkable that with all this her look was almost natural, and her features were hardly sharpened so as to suggest that her life was burning away. He did not like this, nor various other unobtrusive signs of danger which his practised eye detected. A very small matter might turn the balance which held life and death poised against each other. He surrounded her with precautions, that Nature might have every opportunity of cunningly shifting the weights from the scale of death to the scale of life, as she will often do, if not rudely disturbed or interfered with.

Little tokens of good-will and kind remembrance were constantly coming to her from the girls in the school and the good people in the village. Some of the mansion-house people obtained rare flowers which they sent her, and her table

was covered with fruits which tempted her in vain. Several of the school-girls wished to make her a basket of their own handiwork, and, filling it with autumnal flowers, to send it as a joint offering. Mr. Bernard found out their project accidentally, and, wishing to have his share in it, brought home from one of his long walks some boughs full of variously tinted leaves, such as were still clinging to the stricken trees. With these he brought also some of the already fallen leaflets of the white ash, remarkable for their rich olive-purple color, forming a beautiful contrast with some of the lighter-hued leaves. It so happened that this particular tree, the white ash, did not grow upon The Mountain, and the leaflets were more welcome for their comparative rarity. So the girls made their basket, and the floor of it they covered with the rich olive-purple leaflets. Such late flowers as they could lay their hands upon served to fill it, and with many kindly messages they sent it to Miss Elsie Venner at the Dudley mansion-house.

Elsie was sitting up in her bed when it came, languid, but tranquil, and Helen was by her, as usual, holding her hand, which was strangely cold, Helen thought, for one who was said to have some kind of fever. The school-girls' basket was brought in with its messages of love and hopes for speedy recovery. Old Sophy was delighted to see that it pleased Elsie, and laid it on the bed before her. Elsie began looking at the flowers and taking them from the basket, that she might see the leaves. All at once she appeared to be agitated; she looked at the basket,—then around, as if there were some fearful presence about her which she was searching for with her eager glances. She took out the flowers, one by one, her breathing growing hurried, her eyes staring, her hands trembling,—till, as she came near the bottom of the basket, she flung out all the

rest with a hasty movement, looked upon the olive-purple leaflets as if paralyzed for a moment, shrunk up, as it were, into herself in a curdling terror, dashed the basket from her, and fell back senseless, with a faint cry which chilled the blood of the startled listeners at her bedside.

"Take it away!—take it away!—quick!" said Old Sophy, as she hastened to her mistress's pillow. "It's the leaves of the tree that was always death to her,—take it away! She can't live wi' it in the room!"

The poor old woman began chafing Elsie's hands, and Helen to try to rouse her with hartshorn, while a third frightened attendant gathered up the flowers and the basket and carried them out of the apartment. She came to herself after a time, but exhausted and then wandering. In her delirium, she talked constantly as if she were in a cave, with such exactness of circumstance that Helen could not doubt at all that she had some such retreat among the rocks of The Mountain, probably fitted up in her own fantastic way, where she sometimes hid herself from all human eyes, and of the entrance to which she alone possessed the secret.

All this passed away, and left her, of course, weaker than before. But this was not the only influence the unexplained paroxysm had left behind it. From this time forward there was a change in her whole expression and her manner. The shadows ceased flitting over her features, and the old woman, who watched her from day to day and from hour to hour as a mother watches her child, saw the likeness she bore to her mother coming forth more and more, as the cold glitter died out of the diamond eyes, and the stormy scowl disappeared from the dark brows and low forehead.

With all the kindness and indulgence her father had bestowed upon her, Elsie had never felt that he loved her. The reader knows well enough what fatal recollections and associations had frozen up the springs of natural affection in his

breast. There was nothing in the world he would not do for Elsie. He had sacrificed his whole life to her. His very seeming carelessness about restraining her was all calculated; he knew that restraint would produce nothing but utter alienation. Just so far as she allowed him, he shared her studies, her few pleasures, her thoughts; but she was essentially solitary and uncommunicative. No person, as was said long ago, could judge him,—because his task was not merely difficult, but simply impracticable to human powers. A nature like Elsie's had necessarily to be studied by itself, and to be followed in its laws where it could not be led.

Every day, at different hours, during the whole of his daughter's illness, Dudley Venner had sat by her, doing all he could to soothe and please her: always the same thin film of some emotional non-conductor between them; always that kind of habitual regard and family-interest, mingled with the deepest pity on one side and a sort of respect on the other, which never warmed into outward evidences of affection.

It was after this occasion, when she had been so profoundly agitated by a seemingly insignificant cause, that her father and Old Sophy were sitting, one at one side of her bed and one at the other. She had fallen into a light slumber. As they were looking at her, the same thought came into both their minds at the same moment. Old Sophy spoke for both, as she said, in a low voice,—

"It's her mother's look,—it's her mother's own face right over again,—she never look' so before,—the Lord's hand is on her! His will be done!"

When Elsie woke and lifted her languid eyes upon her father's face, she saw in it a tenderness, a depth of affection, such as she remembered at rare moments of her childhood, when she had won him to her by some unusual gleam of sunshine in her fitful temper.

"Elsie, dear," he said, "we were thinking how much your expression was sometimes like that of your sweet mother. If

you could but have seen her, so as to remember her!"

The tender look and tone, the yearning of the daughter's heart for the mother she had never seen, save only with the unfixed, undistinguishing eyes of earliest infancy, perhaps the under-thought that she might soon rejoin her in another state of being,—all came upon her with a sudden overflow of feeling which broke through all the barriers between her heart and her eyes, and Elsie wept. It seemed to her father as if the malign influence,—evil spirit it might almost be called,—which had pervaded her being, had at last been driven forth or exorcised, and that these tears were at once the sign and the pledge of her redeemed nature. But now she was to be soothed, and not excited. After her tears she slept again, and the look her face wore was peaceful as never before.

Old Sophy met the Doctor at the door and told him all the circumstances connected with the extraordinary attack from which Elsie had suffered. It was the purple leaves, she said. She remembered that Dick once brought home a branch of a tree with some of the same leaves on it, and Elsie screamed and almost fainted then. She, Sophy, had asked her, after she had got quiet, what it was in the leaves that made her feel so bad. Elsie couldn't tell her,—didn't like to speak about it,—shuddered whenever Sophy mentioned it.

This did not sound so strangely to the old Doctor as it does to some who listen to this narrative. He had known some curious examples of antipathies, and remembered reading of others still more singular. He had known those who could not bear the presence of a cat, and recollected the story, often told, of a person's hiding one in a chest when one of these sensitive individuals came into the room, so as not to disturb him; but he presently began to sweat and turn pale, and cried out that there must be a cat hid somewhere. He knew people who were poisoned by strawberries, by honey, by different meats,—many who could not bear

dure cheese,—some who could not bear the smell of roses. If he had known all the stories in the old books, he would have found that some have swooned and become as dead men at the smell of a rose,—that a stout soldier has been known to turn and run at the sight or smell of rue,—that cassia and even olive-oil have produced deadly faintings in certain individuals,—in short, that almost everything has seemed to be a poison to somebody.

"Bring me that basket, Sophy," said the old Doctor, "if you can find it."

Sophy brought it to him,—for he had not yet entered Elsie's apartment.

"These purple leaves are from the white ash," he said. "You don't know the notion that people commonly have about that tree, Sophy?"

"I know they say the Ugly Things never go where the white ash grows," Sophy answered. "Oh, Doctor dear, what I 'm thinkin' of a'n't true, is it?"

The Doctor smiled sadly, but did not answer. He went directly to Elsie's room. Nobody would have known by his manner that he saw any special change in his patient. He spoke with her as usual, made some slight alteration in his prescriptions, and left the room with a kind, cheerful look. He met her father on the stairs.

"Is it as I thought?" said Dudley Vener.

"There is everything to fear," the Doctor said, "and not much, I am afraid, to hope. Does not her face recall to you one that you remember, as never before?"

"Yes," her father answered,— "oh, yes! What is the meaning of this change which has come over her features, and her voice, her temper, her whole being? Tell me, oh, tell me, what is it? Can it be that the curse is passing away, and my daughter is to be restored to me,—such as her mother would have had her,—such as her mother was?"

"Walk out with me into the garden," the Doctor said, "and I will tell you all I know and all I think about this great mystery of Elsie's life."

They walked out together, and the Doctor began :—

"She has lived a twofold being, as it were,—the consequence of the blight which fell upon her in the dim period before consciousness. You can see what she might have been but for this. You know that for these eighteen years her whole existence has taken its character from that influence which we need not name. But you will remember that few of the lower forms of life last as human beings do; and thus it might have been hoped and trusted with some show of reason, as I have always suspected you hoped and trusted, perhaps more confidently than myself, that the lower nature which had become ingrafted on the higher would die out and leave the real woman's life she inherited to outlive this accidental principle which had so poisoned her childhood and youth. I believe it is so dying out; but I am afraid,—yes, I must say it, I fear it has involved the centres of life in its own decay. There is hardly any pulse at Elsie's wrist; no stimulants seem to rouse her; and it looks as if life were slowly retreating inwards, so that by-and-by she will sleep as those who lie down in the cold and never wake."

Strange as it may seem, her father heard all this not without deep sorrow, and such marks of it as his thoughtful and tranquil nature, long schooled by suffering, claimed or permitted, but with a resignation itself the measure of his past trials. Dear as his daughter might become to him, all he dared to ask of Heaven was that she might be restored to that truer self which lay beneath her false and adventitious being. If he could once see that the icy lustre in her eyes had become a soft, calm light,—that her soul was at peace with all about her and with Him above,—this crumb from the children's table was enough for him, as it was for the Syro-Phœnician woman who asked that the dark spirit might go out from her daughter.

There was little change the next day, until all at once she said in a clear voice

that she should like to see her master at the school, Mr. Langdon. He came accordingly, and took the place of Helen at her bedside. It seemed as if Elsie had forgotten the last scene with him. Might it be that pride had come in, and she had sent for him only to show how superior she had grown to the weakness which had betrayed her into that extraordinary request, so contrary to the instincts and usages of her sex? Or was it that the singular change which had come over her had involved her passionate fancy for him and swept it away with her other habits of thought and feeling? Or perhaps, rather, that she felt that all earthly interests were becoming of little account to her, and wished to place herself right with one to whom she had displayed a wayward movement of her unbalanced imagination? She welcomed Mr. Bernard as quietly as she had received Helen Darley. He colored at the recollection of that last scene, when he came into her presence; but she smiled with perfect tranquillity. She did not speak to him of any apprehension; but he saw that she looked upon herself as doomed. So friendly, yet so calm did she seem through all their interview, that Mr. Bernard could only look back upon her manifestation of feeling towards him on their walk from the school as a vagary of a mind laboring under some unnatural excitement, and wholly at variance with the true character of Elsie Venner, as he saw her before him in her subdued, yet singular beauty. He looked with almost scientific closeness of observation into the diamond eyes; but that peculiar light which he knew so well was not there. She was the same in one sense as on that first day when he had seen her coiling and uncoiling her golden chain, yet how different in every aspect which revealed her state of mind and emotion! Something of tenderness there was, perhaps, in her tone towards him; she would not have sent for him, had she not felt more than an ordinary interest in him. But through the whole of his visit she never lost her gracious self-possession. The Dudley race

might well be proud of the last of its daughters, as she lay dying, but unconquered by the feeling of the present or the fear of the future.

As for Mr. Bernard, he found it very hard to look upon her and listen to her unmoved. There was nothing that reminded him of the stormy-browed, almost savage girl he remembered in her fierce loveliness,—nothing of all her singularities of air and of costume. Nothing? Yes, one thing. Weak and suffering as she was, she had never parted with one particular ornament, such as a sick person would naturally, as it might be supposed, get rid of at once. The golden cord which she wore round her neck at the great party was still there. A bracelet was lying by her pillow; she had unclasped it from her wrist.

Before Mr. Bernard left her, she said,—

"I shall never see you again. Some time or other, perhaps, you will mention my name to one whom you love. Give her this from your scholar and friend Elsie."

He took the bracelet, raised her hand to his lips, then turned his face away; in that moment he was the weaker of the two.

"Good-bye," she said; "thank you for coming."

His voice died away in his throat, as he tried to answer her. She followed him with her eyes as he passed from her sight through the door, and when it closed after him sobbed tremulously once or twice,—but stilled herself, and met Helen, as she entered, with a composed countenance.

"I have had a very pleasant visit from Mr. Langdon," Elsie said. "Sit by me, Helen, awhile without speaking; I should like to sleep, if I can,—and to dream."

CHAPTER XXX.

THE GOLDEN CORD IS LOOSED.

THE Reverend Chauncy Fairweather, hearing that his parishioner's daughter, Elsie, was very ill, could do nothing less than come to the mansion-house and ten-

der such consolations as he was master of. It was rather remarkable that the old Doctor did not exactly approve of his visit. He thought that company of every sort might be injurious in her weak state. He was of opinion that Mr. Fairweather, though greatly interested in religious matters, was not the most sympathetic person that could be found; in fact, the old Doctor thought he was too much taken up with his own interests for eternity to give himself quite so heartily to the need of other people as some persons got up on a rather more generous scale (our good neighbor Dr. Honeywood, for instance) could do. However, all these things had better be arranged to suit her wants; if she would like to talk with a clergyman, she had a great deal better see one as often as she liked, and run the risk of the excitement, than have a hidden wish for such a visit and perhaps find herself too weak to see him by-and-by.

The old Doctor knew by sad experience that dreadful mistake against which all medical practitioners should be warned. His experience may well be a guide for others. Do not overlook the desire for spiritual advice and consolation which patients sometimes feel, and, with the frightful *mauvaise honte* peculiar to Protestantism, alone among all human beliefs, are ashamed to tell. As a part of medical treatment, it is the physician's business to detect the hidden longing for the food of the soul, as much as for any form of bodily nourishment. Especially in the higher walks of society, where this unutterably miserable false shame of Protestantism acts in proportion to the general acuteness of the cultivated sensibilities, let no unwillingness to suggest the sick person's real need suffer him to languish between his want and his morbid sensitiveness. What an infinite advantage the Mussulmans and the Catholics have over many of our more exclusively spiritual sects in the way they keep their religion always by them and never blush for it! And besides this spiritual longing, we should never forget that

"On some fond breast the parting soul relies,"

and the minister of religion, in addition to the sympathetic nature which we have a right to demand in him, has trained himself to the art of entering into the feelings of others.

The reader must pardon this digression, which introduces the visit of the Reverend Chauncy Fairweather to Elsie Venner. It was mentioned to her that he would like to call and see how she was, and she consented,—not with much apparent interest, for she had reasons of her own for not feeling any very deep conviction of his sympathy for persons in sorrow. But he came, and worked the conversation round to religion, and confused her with his hybrid notions, half made up of what he had been believing and teaching all his life, and half of the new doctrines which he had veneered upon the surface of his old belief. He got so far as to make a prayer with her,—a cool, well-guarded prayer, which compromised his faith as little as possible, and which, if devotion were a game played against Providence, might have been considered a cautious and sagacious move.

When he had gone, Elsie called Old Sophy to her.

"Sophy," she said, "don't let them send that cold-hearted man to me any more. If your old minister comes to see you, I should like to hear him talk. He looks as if he cared for everybody, and would care for me. And, Sophy, if I should die one of these days, I should like to have that old minister come and say whatever is to be said over me. It would comfort Dudley more, I know, than to have that hard man here, when you're in trouble: for some of you will be sorry when I'm gone,—won't you, Sophy?"

The poor old black woman could not stand this question. The cold minister had frozen Elsie until she felt as if nobody cared for her or would regret her,—and her question had betrayed this momentary feeling.

"Don't talk so! don't talk so, darlin'!" she cried, passionately. "When you go, Ol' Sophy 'll go; 'n' where you go, Ol' Sophy 'll go: 'n' we 'll both go t' th'

place where th' Lord takes care of all his children, whether their faces are white or black. Oh, darlin', darlin'! if th' Lord should let me die fus', you shall fin' all ready for you when you come after me. On'y don't go 'n' leave poor Ol' Sophy all 'lone in th' world!"

Helen came in at this moment and quieted the old woman with a look. Such scenes were just what were most dangerous, in the state in which Elsie was lying: but that is one of the ways in which an affectionate friend sometimes unconsciously wears out the life which a hired nurse, thinking of nothing but her regular duties and her wages, would have spared from all emotional fatigue.

The change which had come over Elsie's disposition was itself the cause of new excitements. How was it possible that her father could keep away from her, now that she was coming back to the nature and the very look of her mother, the bride of his youth? How was it possible to refuse her, when she said to Old Sophy that she should like to have her minister come in and sit by her, even though his presence might perhaps prove a new source of excitement?

But the Reverend Doctor did come and sit by her, and spoke such soothing words to her, words of such peace and consolation, that from that hour she was tranquil as never before. All true hearts are alike in the hour of need; the Catholic has a reserved fund of faith for his fellow-creature's trying moment, and the Calvinist reveals those springs of human brotherhood and charity in his soul which are only covered over by the iron tables inscribed with the harder dogmas of his creed. It was enough that the Reverend Doctor knew all Elsie's history. He could not judge her by any formula, like those which have been moulded by past ages out of their ignorance. He did not talk with her as if she were an outside sinner, worse than himself. He found a bruised and languishing soul, and bound up its wounds. A blessed office,—one which is confined to no sect or creed, but which good men in all times, under

various names and with varying ministries, to suit the need of each age, of each race, of each individual soul, have come forward to discharge for their suffering fellow-creatures.

After this there was little change in Elsie, except that her heart beat more feebly every day, — so that the old Doctor himself, with all his experience, could see nothing to account for the gradual failing of the powers of life, and yet could find no remedy which seemed to arrest its progress in the smallest degree.

"Be very careful," he said, "that she is not allowed to make any muscular exertion. Any such effort, when a person is so enfeebled, may stop the heart in a moment; and if it stops, it will never move again."

Helen enforced this rule with the greatest care. Elsie was hardly allowed to move her hand or to speak above a whisper. It seemed to be mainly the question now, whether this trembling flame of life would be blown out by some light breath of air, or whether it could be so nursed and sheltered by the hollow of these watchful hands that it would have a chance to kindle to its natural brightness.

— Her father came in to sit with her in the evening. He had never talked so freely with her as during the hour he had passed at her bedside, telling her little circumstances of her mother's life, living over with her all that was pleasant in the past, and trying to encourage her with some cheerful gleams of hope for the future. A faint smile played over her face, but she did not answer his encouraging suggestions. The hour came for him to leave her with those who watched by her.

"Good-night, my dear child," he said, and, stooping down, kissed her cheek.

Elsie rose by a sudden effort, threw her arms round his neck, kissed him, and said, "Good-night, my dear father!"

The suddenness of her movement had taken him by surprise, or he would have checked so dangerous an effort. It was too late now. Her arms slid away from him like lifeless weights, — her head fell

back upon her pillow, — a long sigh breathed through her lips.

"She is faint," said Helen, doubtfully; "bring me the hartshorn, Sophy."

The old woman had started from her place, and was now leaning over her, looking in her face, and listening for the sound of her breathing.

"She 's dead! Elsie 's dead! My darlin' 's dead!" she cried aloud, filling the room with her utterance of anguish.

Dudley Venner drew her away and silenced her with a voice of authority, while Helen and an assistant plied their restoratives. It was all in vain.

The solemn tidings passed from the chamber of death through the family. The daughter, the hope of that old and honored house, was dead in the freshness of her youth, and the home of its solitary representative was hereafter doubly desolate.

A messenger rode hastily out of the avenue. A little after this the people of the village and the outlying farm-houses were startled by the sound of a bell.

One, — two, — three, — four, —

They stopped in every house, as far as the wavering vibrations reached, and listened —

— five, — six, — seven, —

It was not the little child which had been lying so long at the point of death; that could not be more than three or four years old —

— eight, — nine, — ten, — and so on to fifteen, — sixteen, — seventeen, — eighteen — — —

The pulsations seemed to keep on, — but it was the brain, and not the bell, that was throbbing now.

"Elsie 's dead!" was the exclamation at a hundred firesides.

"Eighteen year old," said old Widow Peake, rising from her chair. "Eighteen year ago I laid two gold eagles on her mother's eyes, — he wouldn't have anything but gold touch her eyelids, — and now Elsie 's to be straightened, — the Lord have mercy on her poor sinful soul!"

Dudley Venner prayed that night that he might be forgiven, if he had failed in any act of duty or kindness to this unfortunate child of his, now freed from all the woes born with her and so long poisoning her soul. He thanked God for the brief interval of peace which had been granted her, for the sweet communion they had enjoyed in these last days, and for the hope of meeting her with that other lost friend in a better world.

Helen mingled a few broken thanks and petitions with her tears: thanks that she had been permitted to share the last days and hours of this poor sister in sorrow; petitions that the grief of bereavement might be lightened to the lonely parent and the faithful old servant.

Old Sophy said almost nothing, but sat day and night by her dead darling. But sometimes her anguish would find an outlet in strange sounds, something between a cry and a musical note,—such as none had ever heard her utter before. These were old remembrances surging up from her childish days,—coming through her mother from the cannibal chief, her grandfather,—death-wails, such as they sing in the mountains of Western Africa, when they see the fires on distant hill-sides and know that their own wives and children are undergoing the fate of captives.

The time came when Elsie was to be laid by her mother in the small square marked by the white stone.

It was not unwillingly that the Reverend Chauncy Fairweather had relinquished the duty of conducting the service to the Reverend Doctor Honeywood, in accordance with Elsie's request. He could not, by any reasoning, reconcile his present way of thinking with a hope for the future of his unfortunate parishioner. Any good old Roman Catholic priest, born and bred to his faith and his business, would have found a loop-hole into some kind of heaven for her, by virtue of his doctrine of "invincible ignorance," or other special proviso; but a recent convert cannot enter into the working conditions of his new creed. Beliefs must be

lived in for a good while, before they accommodate themselves to the soul's wants, and wear loose enough to be comfortable.

The Reverend Doctor had no such scruples. Like thousands of those who are classed nominally with the despairing believers, he had never prayed over a departed brother or sister without feeling and expressing a guarded hope that there was mercy in store for the poor sinner, whom parents, wives, children, brothers and sisters could not bear to give up to utter ruin without a word,—and would not, as he knew full well, in virtue of that human love and sympathy which nothing can ever extinguish. And in this poor Elsie's history he could read nothing which the tears of the recording angel might not wash away. As the good physician of the place knew the diseases that assailed the bodies of men and women, so he had learned the mysteries of the sickness of the soul.

So many wished to look upon Elsie's face once more, that her father would not deny them; nay, he was pleased that those who remembered her living should see her in the still beauty of death. Helen and those with her arrayed her for this farewell-view. All was ready for the sad or curious eyes which were to look upon her. There was no painful change to be concealed by any artifice. Even her round neck was left uncovered, that she might be more like one who slept. Only the golden cord was left in its place: some searching eye might detect a trace of that birth-mark which it was whispered she had always worn a necklace to conceal.

At the last moment, when all the preparations were completed, Old Sophy stooped over her, and, with trembling hand, loosed the golden cord. She looked intently, for some little space: there was no shade nor blemish where the ring of gold had encircled her throat. She took it gently away and laid it in the casket which held her ornaments.

"The Lord be praised!" the old woman cried, aloud. "He has taken away the mark that was on her; she's fit to meet his holy angels now!"

So Elsie lay for hours in the great room, in a kind of state, with flowers all about her,—her black hair braided, as in life,—her brows smooth, as if they had never known the scowl of passion,—and on her lips the faint smile with which she had uttered her last “Good-night.” The young girls from the school looked at her, one after another, and passed on, sobbing, carrying in their hearts the picture that would be with them all their days. The great people of the place were all there with their silent sympathy. The lesser kind of gentry, and many of the plainer folk of the village, half-pleased to find themselves passing beneath the stately portico of the ancient mansion-house, crowded in, until the ample rooms were overflowing. All the friends whose acquaintance we have made were there, and many from remoter villages and towns.

There was a deep silence at last. The hour had come for the parting words to be spoken over the dead. The good old minister's voice rose out of the stillness, subdued and tremulous at first, but growing firmer and clearer as he went on, until it reached the ears of the visitors who were in the far, desolate chambers, looking at the pictured hangings and the old dusty portraits. He did not tell her story in his prayer. He only spoke of our dear departed sister as one of many whom Providence in its wisdom has seen fit to bring under bondage from their cradles. It was not for us to judge them by any standard of our own. He who made the heart alone knew the infirmities it inherited or acquired. For all that our dear sister had presented that was interesting and attractive in her character we were to be grateful; for whatever was dark or inexplicable we must trust that the deep shadow which rested on the twilight dawn of her being might render a reason before the bar of Omniscience; for the grace which had lightened her last days we should pour out our hearts in thankful acknowledgment. From the life and the death of this our dear sister we should learn a lesson of patience with

our fellow-creatures in their inborn peculiarities, of charity in judging what seem to us wilful faults of character, of hope and trust, that, by sickness or affliction, or such inevitable discipline as life must always bring with it, if by no gentler means, the soul which had been left by Nature to wander into the path of error and of suffering might be reclaimed and restored to its true aim, and so led on by divine grace to its eternal welfare. He closed his prayer by commending each member of the afflicted family to the divine blessing.

Then all at once rose the clear sound of the girls' voices, in the sweet, sad melody of a funeral hymn,—one of those which Elsie had marked, as if prophetically, among her own favorites.

And so they laid her in the earth, and showered down flowers upon her, and filled her grave, and covered it with green sods. By the side of it was another oblong ridge, with a white stone standing at its head. Mr. Bernard looked upon it, as he came close to the place where Elsie was laid, and read the inscription,—

CATALINA

WIFE TO DUDLEY VENNER

DIED

OCTOBER 13TH 1840

AGED XX YEARS.

A gentle rain fell on the turf after it was laid. This was the beginning of a long and dreary autumnal storm, a deferred “equinoctial,” as many considered it. The mountain-streams were all swollen and turbulent, and the steep declivities were furrowed in every direction by new channels. It made the house seem doubly desolate to hear the wind howling and the rain beating upon the roofs. The poor relation who was staying at the house would insist on Helen's remaining a few days: Old Sophy was in such a condition, that it kept her in continual anxiety and there were many cares which Helen could take off from her.

The old black woman's life was buried in her darling's grave. She did nothing but moan and lament for her. At night she was restless, and would get up and wander to Elsie's apartment and look for her and call her by name. At other times she would lie awake and listen to the wind and the rain,—sometimes with such a wild look upon her face, and with such sudden starts and exclamations, that it seemed as if she heard spirit-voices and were answering the whispers of unseen visitants. With all this were mingled hints of her old superstition,—forebodings of something fearful about to happen,—perhaps the great final catastrophe of all things, according to the prediction current in the kitchens of Rockland.

"Hark!" Old Sophy would say,—
 "don' you hear th' crackin' 'n' th' snap-
 pin' up in Th' Mountain, 'n' th' roll-
 in' o' th' big stones? The's somethin'
 stirrin' among th' rocks; I hear th' soun'
 of it in th' night, when th' wind has stop-
 ped blowin'. Oh, stay by me a little while,
 Miss Darlin'! stay by me! for it's th'
 Las' Day, may-be, that's close on us, 'n'
 I feel as if I couldn' meet th' Lord all
 alone!"

It was curious,—but Helen did certainly recognize sounds, during the lull of the storm, which were not of falling rain or running streams,—short snapping sounds, as of tense cords breaking,—long uneven sounds, as of masses rolling down steep declivities. But the morning came as usual; and as the others said nothing of these singular noises, Helen did not think it necessary to speak of them. All day long she and the humble relative of Elsie's mother, who had appeared, as poor relations are wont to in the great crises of life, were busy in arranging the disordered house, and looking over the various objects which Elsie's singular tastes had brought together, to dispose of them as her father might direct. They all met together at the usual hour for tea. One of the servants came in, looking very blank, and said to the poor relation, —

"The well is gone dry; we have nothing but rain-water."

Dudley Venner's countenance changed; he sprang to his feet and went to assure himself of the fact, and, if he could, of the reason of it. For a well to dry up during such a rain-storm was extraordinary,—it was ominous.

He came back, looking very anxious.

"Did any of you notice any remarkable sounds last night," he said,—
 "or this morning? Hark! do you hear anything now?"

They listened in perfect silence for a few moments. Then there came a short cracking sound, and two or three snaps, as of parting cords.

Dudley Venner called all his household together.

"We are in danger here, as I think, to-night," he said,—
 "not very great danger, perhaps, but it is a risk I do not wish you to run. These heavy rains have loosed some of the rocks above, and they may come down and endanger the house. Harness the horses, Elbridge, and take all the family away. Miss Darley will go to the Institute; the others will pass the night at the Mountain House. I shall stay here, myself: it is not at all likely that anything will come of these warnings; but if there should, I choose to be here and take my chance."

It needs little, generally, to frighten servants, and they were all ready enough to go. The poor relation was one of the timid sort, and was terribly uneasy to be got out of the house. This left no alternative, of course, for Helen, but to go also. They all urged upon Dudley Venner to go with them: if there was danger, why should he remain to risk it, when he sent away the others?

Old Sophy said nothing until the time came for her to go with the second of Elbridge's carriage-loads.

"Come, Sophy," said Dudley Venner, "get your things and go. They will take good care of you at the Mountain House; and when we have made sure that there is no real danger, you shall come back at once."

"No, Massa!" Sophy answered. "I 've seen Elsie into th' ground, 'n' I a'n't goin' away to come back 'n' fin' Massa Venner buried under th' rocks. My darlin' 's gone; 'n' now, if Massa goes, 'n' th' ol' place goes, it 's time for Ol' Sophy to go, too. No, Massa Venner, we 'll both stay in th' ol' mansion 'n' wait for th' Lord!"

Nothing could change the old woman's determination; and her master, who only feared, but did not really expect the long-deferred catastrophe, was obliged to consent to her staying. The sudden drying of the well at such a time was the most alarming sign; for he remembered that the same thing had been observed just before great mountain-slides. This long rain, too, was just the kind of cause which was likely to loosen the strata of rock piled up in the ledges; if the dreaded event should ever come to pass, it would be at such a time.

He paced his chamber uneasily until long past midnight. If the morning came without accident, he meant to have a careful examination made of all the rents and fissures above, of their direction and extent, and especially whether, in case of a mountain-slide, the huge masses would be like to reach so far to the east and so low down the declivity as the mansion.

At two o'clock in the morning he was dozing in his chair. Old Sophy had lain down on her bed, and was muttering in troubled dreams.

All at once a loud crash seemed to rend the very heavens above them: a crack as of the thunder that follows close upon the bolt,—a rending and crushing as of a forest snapped through all its stems, torn, twisted, splintered, dragged with all its ragged boughs into one chaotic ruin. The ground trembled under them as in an earthquake; the old mansion shuddered so that all its windows shattered in their casements; the great chimney shook off its heavy cap-stones, which came down on the roof with resounding concussions; and the echoes of The Mountain roared and bellowed in long reduplication, as if its whole foundations

were rent, and this were the terrible voice of its dissolution.

Dudley Venner rose from his chair, folded his arms, and awaited his fate. There was no knowing where to look for safety; and he remembered too well the story of the family that was lost by rushing out of the house, and so hurrying into the very jaws of death.

He had stood thus but for a moment, when he heard the voice of Old Sophy in a wild cry of terror:—

"It's the Las' Day! It's the Las' Day! The Lord is comin' to take us all!"

"Sophy!" he called; but she did not hear him or heed him, and rushed out of the house.

The worst danger was over. If they were to be destroyed, it would necessarily be in a few seconds from the first thrill of the terrible convulsion. He waited in awful suspense, but calm. Not more than one or two minutes could have passed before the frightful tumult and all its sounding echoes had ceased. He called Old Sophy; but she did not answer. He went to the western window and looked forth into the darkness. He could not distinguish the outlines of the landscape, but the white stone was clearly visible, and by its side the new-made mound. Nay, what was that which obscured its outline, in shape like a human figure? He flung open the window and sprang through. It was all that there was left of poor Old Sophy, stretched out, lifeless, upon her darling's grave.

He had scarcely composed her limbs and drawn the sheet over her, when the neighbors began to arrive from all directions. Each was expecting to hear of houses overwhelmed and families destroyed; but each came with the story that his own household was safe. It was not until the morning dawned that the true nature and extent of the sudden movement was ascertained. A great seam had opened above the long cliff, and the terrible Rattlesnake Ledge, with all its envenomed reptiles, its dark fissures and black caverns, was buried forever beneath a mighty incumbent mass of ruin.

CHAPTER XXXI.

MR. SILAS PECKHAM RENDERS HIS
ACCOUNT.

THE morning rose clear and bright. The long storm was over, and the calm autumnal sunshine was now to return, with all its infinite repose and sweetness. With the earliest dawn exploring parties were out in every direction along the southern slope of The Mountain, tracing the ravages of the great slide and the track it had followed. It proved to be not so much a slide as the breaking off and falling of a vast line of cliff, including the dreaded Ledge. It had folded over like the leaves of a half-opened book when they close, crushing the trees below, piling its ruins in a glacis at the foot of what had been the overhanging wall of the cliff, and filling up that deep cavity above the mansion-house which bore the ill-omened name of Dead Man's Hollow. This it was which had saved the Dudley mansion. The falling masses, or huge fragments breaking off from them, would have swept the house and all around it to destruction but for this deep shelving dell, into which the stream of ruin was happily directed. It was, indeed, one of Nature's conservative revolutions; for the fallen masses made a kind of shelf, which interposed a level break between the inclined planes above and below it, so that the nightmare-fancies of the dwellers in the Dudley mansion, and in many other residences under the shadow of The Mountain, need not keep them lying awake hereafter to listen for the snapping of roots and the splitting of the rocks above them.

Twenty-four hours after the falling of the cliff, it seemed as if it had happened ages ago. The new fact had fitted itself in with all the old predictions, forebodings, fears, and acquired the solidarity belonging to all events which have slipped out of the fingers of Time and dissolved in the antecedent eternity.

Old Sophy was lying dead in the Dudley mansion. If there were tears shed for her, they could not be bitter ones; for

she had lived out her full measure of days, and gone—who could help fondly believing it?—to rejoin her beloved mistress. They made a place for her at the foot of the two mounds. It was thus she would have chosen to sleep, and not to have wronged her humble devotion in life by asking to lie at the side of those whom she had served so long and faithfully. There were very few present at the simple ceremony. Helen Darley was one of these few. The old black woman had been her companion in all the kind offices of which she had been the ministering angel to Elsie.

After it was all over, Helen was leaving with the rest, when Dudley Venner begged her to stay a little, and he would send her back: it was a long walk; besides, he wished to say some things to her, which he had not had the opportunity of speaking. Of course Helen could not refuse him; there must be many thoughts coming into his mind which he would wish to share with her who had known his daughter so long and been with her in her last days.

She returned into the great parlor with the wrought cornices and the medallion-portraits on the ceiling.

"I am now alone in the world," Dudley Venner said.

Helen must have known that before he spoke. But the tone in which he said it had so much meaning, that she could not find a word to answer him with. They sat in silence, which the old tall clock counted out in long seconds; but it was a silence which meant more than any words they had ever spoken.

"Alone in the world! Helen, the freshness of my life is gone, and there is little left of the few graces which in my younger days might have fitted me to win the love of women. Listen to me,—kindly, if you can; forgive me, at least. Half my life has been passed in constant fear and anguish, without any near friend to share my trials. My task is done now; my fears have ceased to prey upon me; the sharpness of early sorrows has yielded something of its edge to time. You have

bound me to you by gratitude in the tender care you have taken of my poor child. More than this. I must tell you all now, out of the depth of this trouble through which I am passing. I have loved you from the moment we first met; and if my life has anything left worth accepting, it is yours. Will you take the offered gift?"

Helen looked in his face, surprised, bewildered.

"This is not for me,—not for me," she said. "I am but a poor faded flower, not worth the gathering of such a one as you. No, no,—I have been bred to humble toil all my days, and I could not be to you what you ought to ask. I am accustomed to a kind of loneliness and self-dependence. I have seen nothing, almost, of the world, such as you were born to move in. Leave me to my obscure place and duties; I shall at least have peace;—and you—you will surely find in due time some one better fitted by Nature and training to make you happy."

"No, Miss Darley!" Dudley Venner said, almost sternly. "You must not speak to a man who has lived through my experiences of looking about for a new choice after his heart has once chosen. Say that you can never love me; say that I have lived too long to share your young life; say that sorrow has left nothing in me for Love to find his pleasure in; but do not mock me with the hope of a new affection for some unknown object. The first look of yours brought me to your side. The first tone of your voice sunk into my heart. From this moment my life must wither out or bloom anew. My home is desolate. Come under my roof and make it bright once more,—share my life with me,—or I shall give the halls of the old mansion to the bats and the owls, and wander forth alone without a hope or a friend!"

To find herself with a man's future at the disposal of a single word of hers!—a man like this, too, with a fascination for her against which she had tried to shut her heart, feeling that he lived in another sphere than hers, working as she was for

her bread, a poor operative in the factory of a hard master and jealous overseer, the salaried drudge of Mr. Silas Peckham! Why, she had thought he was grateful to her as a friend of his daughter; she had even pleased herself with the feeling that he liked her, in her humble place, as a woman of some cultivation and many sympathetic points of relation with himself; but that he *loved* her,—that this deep, fine nature, in a man so far removed from her in outward circumstance, should have found its counterpart in one whom life had treated so coldly as herself,—that Dudley Venner should stake his happiness on a breath of hers,—poor Helen Darley's,—it was all a surprise, a confusion, a kind of fear not wholly fearful. Ah, me! women know what it is,—that mist over the eyes, that trembling in the limbs, that faltering of the voice, that sweet, shamefaced, unspoken confession of weakness which does not wish to be strong, that sudden overflow in the soul where thoughts loose their hold on each other and swim single and helpless in the flood of emotion,—women know what it is!

No doubt she was a little frightened and a good deal bewildered, and that her sympathies were warmly excited for a friend to whom she had been brought so near, and whose loneliness she saw and pitied. She lost that calm self-possession she had hoped to maintain.

"If I thought that I could make you happy,—if I should speak from my heart, and not my reason,—I am but a weak woman,—yet if I can be to you — What can I say?"

What more could this poor, dear Helen say?

"Elbridge, harness the horses and take Miss Darley back to the school."

What conversation had taken place since Helen's rhetorical failure is not recorded in the minutes from which this narrative is constructed. But when the man who had been summoned had gone to get the carriage ready, Helen resumed something she had been speaking of.

"Not for the world! Everything must go on just as it has gone on, for the present. There are proprieties to be consulted. I cannot be hard with you, that out of your very affliction has sprung this — this — well — you must name it for me, — but the world will never listen to explanations. I am to be Helen Darley, lady assistant in Mr. Silas Peckham's school, as long as I see fit to hold my office. And I mean to attend to my scholars just as before; so that I shall have very little time for visiting or seeing company. I believe, though, you are one of the Trustees and a Member of the Examining Committee; so that, if you should happen to visit the school, I shall try to be civil to you."

Every lady sees, of course, that Helen was quite right; but perhaps here and there one will think that Dudley Venner was all wrong, — that he was too hasty, — that he should have been too full of his recent grief for such a confession as he has just made, and the passion from which it sprung. Perhaps they do not understand the sudden recoil of a strong nature long compressed. Perhaps they have not studied the mystery of *allotropism* in the emotions of the human heart. Go to the nearest chemist and ask him to show you some of the dark-red phosphorus which will not burn without fierce heating, but at 500°, Fahrenheit, changes back again to the inflammable substance we know so well. Grief seems more like ashes than like fire; but as grief has been love once, so it may become love again. This is emotional *allotropism*.

Helen rode back to the Institute and inquired for Mr. Peckham. She had not seen him during the brief interval between her departure from the mansion-house and her return to Old Sophy's funeral. There were various questions about the school she wished to ask.

"Oh, how's your health, Miss Darley?" Silas began. "We've missed you considerable. Glad to see you back at the post of dooty. Hope the Squire treated you hahnsmely, — liberal pecooniary compen-

sation, — hey? A'n't much of a loser, I guess, by acceptin' his propositions?"

Helen blushed at this last question, as if Silas had meant something by it beyond asking what money she had received; but his own double-meaning expression and her blush were too nice points for him to have taken cognizance of. He was engaged in a mental calculation as to the amount of the deduction he should make under the head of "damage to the institution," — this depending somewhat on that of the "pecooniary compensation" she might have received for her services as the friend of Elsie Venner.

So Helen slid back at once into her routine, the same faithful, patient creature she had always been. But what was this new light which seemed to have kindled in her eyes? What was this look of peace, which nothing could disturb, which smiled serenely through all the little meannesses with which the daily life of the educational factory surrounded her, — which not only made her seem resigned, but overflowed all her features with a thoughtful, subdued happiness? Mr. Bernard did not know, — perhaps he did not guess. The inmates of the Dudley mansion were not scandalized by any mysterious visits of a veiled or unveiled lady. The vibrating tongues of the "female youth" of the Institute were not set in motion by the standing of an equipage at the gate, waiting for their lady teacher. The servants at the mansion did not convey numerous letters with superscriptions in a bold, manly hand, sealed with the arms of a well-known house, and directed to Miss Helen Darley; nor, on the other hand, did Hiram, the man from the lean-streak in New Hampshire, carry sweet-smelling, rose-hued, many-layered, criss-crossed, fine-stitch-lettered packages of note-paper directed to Dudley Venner, Esq., and all too scanty to hold that incredible expansion of the famous three words which a woman was born to say, — that perpetual miracle which astonishes all the go-betweens who wear their shoes out in carrying a woman's infinite variations on the theme, "I love you."

But the reader must remember that there are walks in country-towns where people are liable to meet by accident, and that the hollow of an old tree has served the purpose of a post-office sometimes; so that he has her choice (to divide the pronouns impartially) of various hypotheses to account for the new glory of happiness which seemed to have irradiated our poor Helen's features, as if her dreary life were awakening in the dawn of a blessed future.

With all the alleviations which have been hinted at, Mr. Dudley Venner thought that the days and the weeks had never moved so slowly as through the last period of the autumn that was passing. Elsie had been a perpetual source of anxiety to him, but still she had been a companion. He could not mourn for her; for he felt that she was safer with her mother, in that world where there are no more sorrows and dangers, than she could have been with him. But as he sat at his window and looked at the three mounds, the loneliness of the great house made it seem more like the sepulchre than these narrow dwellings where his beloved and her daughter lay close to each other, side by side,—Catalina, the bride of his youth, and Elsie, the child whom he had nurtured, with poor Old Sophy, who had followed them like a black shadow, at their feet, under the same soft turf, sprinkled with the brown autumnal leaves. It was not good for him to be thus alone. How should he ever live through the long months of November and December?

The months of November and December did, in some way or other, get rid of themselves at last, bringing with them the usual events of village-life and a few unusual ones. Some of the geologists had been up to look at the great slide, of which they gave those prolix accounts which everybody remembers who read the scientific journals of the time. The engineers reported that there was little probability of any further convulsion along the line of rocks which overhung the more thickly settled part of the town.

The naturalists drew up a paper on the "Probable Extinction of the *Crotalus Durissus* in the Township of Rockland." The engagement of the Widow Rowens to a Little Millionville merchant was announced,— "Sudding 'n' unexpected," Widow Leech said,— "waälthy, or she wouldn't ha' looked at him,— fifty year old, if he is a day, 'n' ha'n't got a white hair in his head." The Reverend Chauncy Fairweather had publicly announced that he was going to join the Roman Catholic communion,— not so much to the surprise or consternation of the religious world as he had supposed. Several old ladies forthwith proclaimed their intention of following him; but, as one or two of them were deaf, and another had been threatened with an attack of that mild, but obstinate complaint, *dementia senilis*, many thought it was not so much the force of his arguments as a kind of tendency to jump as the bellwether jumps, well known in flocks not included in the Christian fold. His bereaved congregation immediately began pulling candidates on and off, like new boots, on trial. Some pinched in tender places; some were too loose; some were too square-toed; some were too coarse, and didn't please; some were too thin, and wouldn't last;— in short, they couldn't possibly find a fit. At last people began to drop in to hear old Doctor Honeywood. They were quite surprised to find what a human old gentleman he was, and went back and told the others, that, instead of being a case of confluent sectarianism, as they supposed, the good old minister had been so well vaccinated with charitable virus that he was now a true, open-souled Christian of the mildest type. The end of all which was, that the liberal people went over to the old minister almost in a body, just at the time that Deacon Shearer and the "Vinegar-Bible" party split off, and that not long afterwards they sold their own meeting-house to the malecontents, so that Deacon Soper used often to remind Colonel Sprowle of his wish that "our little man and him [the Reverend Doctor] would

swop pulpits," and tell him it had "pooty nigh come trew."—But this is anticipating the course of events, which were much longer in coming about; for we have but just got through that terribly long month, as Mr. Dudley Venner found it, of December.

On the first of January, Mr. Silas Peckham was in the habit of settling his quarterly accounts, and making such new arrangements as his convenience or interest dictated. New-Year was a holiday at the Institute. No doubt this accounted for Helen's being dressed so charmingly,—always, to be sure, in her own simple way, but yet with such a true lady's air that she looked fit to be the mistress of any mansion in the land.

She was in the parlor alone, a little before noon, when Mr. Peckham came in.

"I'm ready to settle my accaount with you now, Miss Darley," said Silas.

"As you please, Mr. Peckham," Helen answered, very graciously.

"Before payin' you your selary," the Principal continued, "I wish to come to an understandin' as to the futur'. I consider that I've been payin' high, very high, for the work you do. Women's wages can't be expected to do more than feed and clothe 'em, as a general thing, with a little savin', in case of sickness, and to bury 'em, if they break daown, as all of 'em are liable to do at any time. If I

a'n't misinformed, you not only support yourself out of my establishment, but likewise relatives of yours, who I don't know that I'm called upon to feed and clothe. There is a young woman, not burdened with destitoot relatives, has signified that she would be glad to take your dooties for less peccoaniary compensation, by a consid'able amaount, than you now receive. I shall be willin', however, to retain your services at sech redooiced rate as we shall fix upon,—provided sech redooiced rate be as low or lower than the same services can be obtained elsewhere."

"As you please, Mr. Peckham," Helen answered, with a smile so sweet that the Principal (who of course had trumped up this opposition-teacher for the occasion) said to himself she would stand being cut down a quarter, perhaps a half, of her salary.

"Here is your accaount, Miss Darley, and the balance doo you," said Silas Peckham, handing her a paper and a small roll of infectious-flavored bills wrapping six poisonous coppers of the old coinage.

She took the paper and began looking at it. She could not quite make up her mind to touch the feverish bills with the cankering copper in them, and left them airing themselves on the table.

The document she held ran as follows:

Silas Peckham, Esq., Principal of the Apollinean Institute,

In Account with Helen Darley, Assist. Teacher.

<i>Dr.</i>	<i>Cr.</i>
To Salary for quarter ending Jan. 1st, @ \$75 per quarter \$75.00	By Deduction for absence, 1 week 3 days \$10.00
	" Board, lodging, etc., for 10 days, @ 75 cts. per day 7.50
	" Damage to Institution by absence of teacher from duties, say . . . 25.00
	" Stationery furnished 43
	" Postage-stamp 01
	" Balance due Helen Darley . . . \$32.06
	\$75.00

ROCKLAND, Jan. 1st, 1859.

Now Helen had her own private reasons for wishing to receive the small sum which was due her at this time without

any unfair deduction,—reasons which we need not inquire into too particularly, as we may be very sure that they were right

and womanly. So, when she looked over this account of Mr. Silas Peckham's, and saw that he had contrived to pare down her salary to something less than half its stipulated amount, the look which her countenance wore was as near to that of righteous indignation as her gentle features and soft blue eyes would admit of its being.

"Why, Mr. Peckham," she said, "do you mean this? If I am of so much value to you that you must take off twenty-five dollars for ten days' absence, how is it that my salary is to be cut down to less than seventy-five dollars a quarter, if I remain here?"

"I gave you fair notice," said Silas. "I have a minute of it I took down immediately after the interview."

He lugged out his large pocket-book with the strap going all round it, and took from it a slip of paper which confirmed his statement.

"Besides," he added, slyly, "I presoom you have received a liberal pecoonyary compensation from Squire Venner for nussin' his daughter."

Helen was looking over the bill while he was speaking.

"Board and lodging for ten days, Mr. Peckham,—*whose* board and lodging, pray?"

The door opened before Silas Peckham could answer, and Mr. Bernard walked into the parlor. Helen was holding the bill in her hand, looking as any woman ought to look who has been at once wronged and insulted.

"The last turn of the thumbscrew!" said Mr. Bernard to himself. "What is it, Helen? You look troubled."

She handed him the account.

He looked at the footing of it. Then he looked at the items. Then he looked at Silas Peckham.

At this moment Silas was sublime. He was so transcendently unconscious of the emotions going on in Mr. Bernard's mind at the moment, that he had only a single thought.

"The accaount 's correc'ly cast, I pre-soom;—if the' 's any mistake of figgers

or addin' 'em up, it 'll be made all right. Everything 's accordin' to agreement. The minute written immed'ately after the intervoo is here in my possession."

Mr. Bernard looked at Helen. Just what would have happened to Silas Peckham, as he stood then and there, but for the interposition of a merciful Providence, nobody knows or ever will know; for at that moment steps were heard upon the stairs, and Hiram threw open the parlor-door for Mr. Dudley Venner to enter.

He saluted them all gracefully with the good-wishes of the season, and each of them returned his compliment,—Helen blushing fearfully, of course, but not particularly noticed in her embarrassment by more than one.

Silas Peckham reckoned with perfect confidence on his Trustees, who had always said what he told them to, and done what he wanted. It was a good chance now to show off his power, and, by letting his instructors know the unstable tenure of their offices, make it easier to settle his accounts and arrange his salaries. There was nothing very strange in Mr. Venner's calling; he was one of the Trustees, and this was New Year's Day. But he had called just at the lucky moment for Mr. Peckham's object.

"I have thought some of makin' changes in the department of instruction," he began. "Several accomplished teachers have applied to me, who would be glad of sitooations. I understand that there never have been so many fust-rate teachers, male and female, out of employment as doorin' the present season. If I can make sahtisfahetory arrangements with my present corpse of teachers, I shall be glad to do so; otherwise I shell, with the permission of the Trustees, make sech noo arrangements as circumstahnces compel."

"You may make arrangements for a new assistant in my department, Mr. Peckham," said Mr. Bernard, "at once,—this day,—this hour. I am not safe to be trusted with your person five minutes

out of this lady's presence, — of whom I beg pardon for this strong language. Mr. Venner, I must beg you, as one of the Trustees of this Institution, to look at the manner in which its Principal has attempted to swindle this faithful teacher, whose toils and sacrifices and self-devotion to the school have made it all that it is, in spite of this miserable trader's incompetence. Will you look at the paper I hold?"

Dudley Venner took the account and read it through, without changing a feature. Then he turned to Silas Peckham.

"You may make arrangements for a new assistant in the branches this lady has taught. Miss Helen Darley is to be my wife. I had hoped to announce this news in a less abrupt and ungraceful manner. But I came to tell you with my own lips what you would have learned before evening from my friends in the village."

Mr. Bernard went to Helen, who stood silent, with downcast eyes, and took her hand warmly, hoping she might find all the happiness she deserved. Then he turned to Dudley Venner, and said, —

"She is a queen, but has never found it out. The world has nothing nobler than this dear woman, whom you have discovered in the disguise of a teacher. God bless her and you!"

Dudley Venner returned his friendly grasp, without answering a word in articulate speech.

Silas remained dumb and aghast for a brief space. Coming to himself a little, he thought there might have been some mistake about the items, — would like to have Miss Darley's bill returned, — would make it all right, — had no idea that Squire Venner had a special interest in Miss Darley, — was sorry he had given offence, — if he might take that bill and look it over —

"No, Mr. Peckham," said Mr. Dudley Venner; "there will be a full meeting of the Board next week, and the bill, and such evidence with reference to the management of the Institution and the treatment of its instructors as Mr. Lang-

don sees fit to bring forward, will be laid before them."

Miss Helen Darley became that very day the guest of Miss Arabella Thornton, the Judge's daughter. Mr. Bernard made his appearance a week or two later at the Lectures, where the Professor first introduced him to the reader.

He stayed after the class had left the room.

"Ah, Mr. Langdon! how do you do? Very glad to see you back again. How have you been since our correspondence on Fascination and other curious scientific questions?"

It was the Professor who spoke, — whom the reader will recognize as myself, the teller of this story.

"I have been well," Mr. Bernard answered, with a serious look which invited a further question.

"I hope you have had none of those painful or dangerous experiences you seemed to be thinking of when you wrote; at any rate, you have escaped having your obituary written."

"I have seen some things worth remembering. Shall I call on you this evening and tell you about them?"

"I shall be most happy to see you."

This was the way in which I, the Professor, became acquainted with some of the leading events of this story. They interested me sufficiently to lead me to avail myself of all those other extraordinary methods of obtaining information well known to writers of narrative.

Mr. Langdon seemed to me to have gained in seriousness and strength of character by his late experiences. He threw his whole energies into his studies with an effect which distanced all his previous efforts. Remembering my former hint, he employed his spare hours in writing for the annual prizes, both of which he took by a unanimous vote of the judges. Those who heard him read his Thesis at the Medical Commencement will not soon forget the impression made by his fine personal appearance and manners, nor the universal interest excited in the audience,

as he read, with his beautiful enunciation, that striking paper entitled "Unresolved Nebulæ in Vital Science." It was a general remark of the Faculty, — and old Doctor Kittredge, who had come down on purpose to hear Mr. Langdon, heartily agreed to it, — that there had never been a diploma filled up, since the institution which conferred upon him the degree of *Doctor Medicinæ* was founded, which carried with it more of promise to the profession than that which bore the name of

Bernardus Caryl Langdon.

CHAPTER XXXII.

CONCLUSION.

MR. BERNARD LANGDON had no sooner taken his degree, than, in accordance with the advice of one of his teachers whom he frequently consulted, he took an office in the heart of the city where he had studied. He had thought of beginning in a suburb or some remoter district of the city proper.

"No," said his teacher, — to wit, myself, — "don't do any such thing. You are made for the best kind of practice; don't hamper yourself with an outside constituency, such as belongs to a practitioner of the second class. When a fellow like you chooses his beat, he must look ahead a little. Take care of all the poor that apply to you, but leave the half-pay classes to a different style of doctor, — the people who spend one half their time in taking care of their patients, and the other half in squeezing out their money. Go for the swell-fronts and south-exposure houses; the folks inside are just as good as other people, and the pleasantest, on the whole, to take care of. They must have somebody, and they like a gentleman best. Don't throw yourself away. You have a good presence and pleasing manners. You wear white linen by inherited instinct. You can pronounce the word *view*. You have all the elements of success; go and take it. Be polite and generous, but don't undervalue yourself. You will be useful, at any rate; you may

just as well be happy, while you are about it. The highest social class furnishes incomparably the best patients, taking them by and large. Besides, when they won't get well and bore you to death, you can send 'em off to travel. Mind me now, and take the tops of your sparrowgrass. Somebody must have 'em, — why shouldn't you? If you don't take your chance, you 'll get the butt-ends as a matter of course."

Mr. Bernard talked like a young man full of noble sentiments. He wanted to be useful to his fellow-beings. Their social differences were nothing to him. He would never court the rich, — he would go where he was called. He would rather save the life of a poor mother of a family than that of half a dozen old gouty millionnaires whose heirs had been yawning and stretching these ten years to get rid of them.

"Generous emotions!" I exclaimed. "Cherish 'em; cling to 'em till you are fifty, — till you are seventy, — till you are ninety! But do as I tell you, — strike for the best circle of practice, and you 'll be sure to get it!"

Mr. Langdon did as I told him, — took a genteel office, furnished it neatly, dressed with a certain elegance, soon made a pleasant circle of acquaintances, and began to work his way into the right kind of business. I missed him, however, for some days, not long after he had opened his office. On his return, he told me he had been up at Rockland, by special invitation, to attend the wedding of Mr. Dudley Venner and Miss Helen Darley. He gave me a full account of the ceremony, which I regret that I cannot relate in full. "Helen looked like an angel," — that, I am sure, was one of his expressions. As for her dress, I should like to give the details, but am afraid of committing blunders, as men always do, when they undertake to describe such matters. White dress, anyhow, — that I am sure of, — with orange-flowers, and the most wonderful lace veil that was ever seen or heard of. The

Reverend Doctor Honeywood performed the ceremony, of course. The good people seemed to have forgotten they ever had had any other minister,—except Deacon Shearer and his set of malecontents, who were doing a dull business in the meeting-house lately occupied by the Reverend Mr. Fairweather.

“Who was at the wedding?”

“Everybody, pretty much. They wanted to keep it quiet, but it was of no use. Married at church. Front pews, old Doctor Kittredge and all the mansion-house people and distinguished strangers,—Colonel Sprowle and family, including Matilda's young gentleman, a graduate of one of the fresh-water colleges,—Mrs. Pickins (late Widow Rowens) and husband,—Deacon Soper and numerous parishioners. A little nearer the door, Abel, the Doctor's man, and Elbridge, who drove them to church in the family-coach. Father Fairweather, as they all call him now, came in late, with Father McShane.”

“And Silas Peckham?”

“Oh, Silas had left The School and Rockland. Cut up altogether too badly in the examination instituted by the Trustees. Had moved over to Tamarack, and thought of renting a large house and ‘farming’ the town-poor.”

Some time after this, as I was walking with a young friend along by the swell-fronts and south-exposures, whom should I see but Mr. Bernard Langdon, looking remarkably happy, and keeping step by the side of a very handsome and singularly well-dressed young lady? He bowed and lifted his hat as we passed.

“Who is that pretty girl my young doctor has got there?” I said to my companion.

“Who is that?” he answered. “You don't know? Why, that is neither more nor less than Miss Letitia Forester, daughter of—of—why, the great banking-firm, you know, Bilyuns Brothers & Forester. Got acquainted with her in the country, they say. There's a story that they're engaged, or like to be, if the firm consents.”

“Oh!” I said.

I did not like the look of it in the least. Too young,—too young. Has not taken any position yet. No right to ask for the hand of Bilyuns Brothers & Co.'s daughter. Besides, it will spoil him for practice, if he marries a rich girl before he has formed habits of work.

I looked in at his office the next day. A box of white kids was lying open on the table. A three-cornered note, directed in a very delicate lady's-hand, was distinguishable among a heap of papers. I was just going to call him to account for his proceedings, when he pushed the three-cornered note aside and took up a letter with a great corporation-seal upon it. He had received the offer of a professor's chair in an ancient and distinguished institution.

“Pretty well for three-and-twenty, my boy,” I said. “I suppose you'll think you must be married one of these days, if you accept this office.”

Mr. Langdon blushed.—There had been stories about him, he knew. His name had been mentioned in connection with that of a very charming young lady. The current reports were not true. He had met this young lady, and been much pleased with her, in the country, at the house of her grandfather, the Reverend Doctor Honeywood,—you remember Miss Letitia Forester, whom I have mentioned repeatedly? On coming to town, he found his country-acquaintance in a social position which seemed to discourage his continued intimacy. He had discovered, however, that he was a not unwelcome visitor, and had kept up friendly relations with her. But there was no truth in the current reports,—none at all.

Some months had passed, after this visit, when I happened one evening to stroll into a box in one of the principal theatres of the city. A small party sat on the seats before me: a middle-aged gentleman and his lady, in front, and directly behind them my young doctor and the same very handsome young la-

dy I had seen him walking with on the side-walk before the swell-fronts and south-exposures. As Professor Langdon seemed to be very much taken up with his companion, and both of them looked as if they were enjoying themselves, I determined not to make my presence known to my young friend, and to withdraw quietly after feasting my eyes with the sight of them for a few minutes.

"It looks as if something might come of it," I said to myself.

At that moment the young lady lifted her arm accidentally, in such a way that the light fell upon the clasp of a chain which encircled her wrist. My eyes filled with tears as I read upon the clasp, in sharp-cut Italic letters, *E. V.* They were tears at once of sad remembrance and of joyous anticipation; for the ornament on which I looked was the double pledge of a dead sorrow and a living affection. It was the golden bracelet,—the parting-gift of Elsie Venner.

BUBBLES.

I.

I STOOD on the brink in childhood,
And watched the bubbles go
From the rock-fretted sunny ripple
To the smoother lymph below;

And over the white creek-bottom,
Under them every one,
Went golden stars in the water,
All luminous with the sun.

But the bubbles brake on the surface,
And under, the stars of gold
Brake, and the hurrying water
Flowed onward, swift and cold.

II.

I stood on the brink in manhood,
And it came to my weary heart,—
In my breast so dull and heavy,
After the years of smart,—

That every hollowest bubble
Which over my life had passed
Still into its deeper current
Some sky-sweet gleam had cast;

That, however I mocked it gayly,
And guessed at its hollowness,
Still shone, with each bursting bubble,
One star in my soul the less.

CITIES AND PARKS:

WITH SPECIAL REFERENCE TO THE NEW YORK CENTRAL PARK.

THE first murderer was the first city-builder; and a good deal of murdering has been carried on in the interest of city-building ever since Cain's day. Narrow and crooked streets, want of proper sewerage and ventilation, the absence of forethought in providing open spaces for the recreation of the people, the allowance of intramural burials, and of fetid nuisances, such as slaughter-houses and manufactories of offensive stuffs, have converted cities into pestilential inclosures, and kept Jefferson's saying—"Great cities are great sores"—true in its most literal and mortifying sense.

There is some excuse for the crowded and irregular character of Old-World cities. They grew, and were not builded. Accumulations of people, who lighted like bees upon a chance branch, they found themselves hived in obdurate brick and mortar before they knew it; and then, to meet the necessities of their cribbed, cabined, and confined condition, they must tear down sacred landmarks, sacrifice invaluable possessions, and trample on prescriptive rights, to provide breathing-room for their gasping population. Besides, air, water, light, and cleanliness are modern innovations. The nose seems to have acquired its sensitiveness within a hundred years,—the lungs their objection to foul air, and the palate its disgust at ditch-water like the Thames, within a more recent period. Honestly dirty, and robustly indifferent to what mortally offends our squeamish senses, our happy ancestors fattened on carbonic acid gas, and took the exhalations of graveyards and gutters with a placidity of stomach that excites our physiological admiration. If they died, it was not for want of air. The pestilence carried them off,—and that was a providential enemy, whose home-bred origin nobody suspected.

It must seem to foreigners of all things the strangest, that, in a country where land is sold at one dollar and twenty-five cents the acre by the square mile, there should in any considerable part of it be a want of room,—any necessity for crowding the population into pent-up cities,—any narrowness of streets, or want of commons and parks. And yet it is an undeniable truth that our American cities are all suffering the want of ample thoroughfares, destitute of adequate parks and commons, and too much crowded for health, convenience, or beauty. Boston has for its main street a serpentine lane, wide enough to drive the cows home from their pastures, but totally and almost fatally inadequate to be the great artery of a city of two hundred thousand people. Philadelphia is little better off with her narrow Chestnut Street, which purchases what accommodation it affords by admitting the parallel streets to nearly equal use, and thus sacrificing the very idea of a metropolitan thoroughfare, in which the splendor and motion and life of a metropolis ought to be concentrated. New York succeeds in making Broadway what the Toledo, the Strand, the Linden Strasse, the Italian Boulevards are; but the street is notoriously blocked and confused, and occasions more loss of time and temper and life and limb than would amply repay, once in five years, the widening of it to double its present breadth.

It is a great misfortune, that our commercial metropolis, the predestined home of five millions of people, should not have a single street worthy of the population, the wealth, the architectural ambition ready to fill and adorn it. Wholesale trade, bankers, brokers, and lawyers seek narrow streets. There must be swift communication between the opposite sides, and easy recognition of faces across the

way. But retail trade requires no such conditions. The passers up and down on opposite sides of Broadway are as if in different streets, and neither expect to recognize each other nor to pass from one to the other without set effort. It took a good while to make Broad and Canal Streets attractive business-streets, and to get the importers and jobbers out of Pearl Street; but the work is now done. The Bowery affords the only remaining chance of building a magnificent metropolitan thoroughfare in New York; and we anticipate the day when Broadway will surrender its pretensions to that now modest Cheapside. Already, about the confluence of the Third and Fourth Avenues at Eighth Street are congregated some of the chief institutions of the city, —the Bible House, the Cooper Institute, the Astor Library, the Mercantile Library. Farther down, the continuation of Canal Street affords the most commanding sites for future public edifices; while the neighborhoods of Franklin and Chatham Squares ought to be seized upon to embellish the city at imperial points with its finest architectural piles. The capacities of New York, below Union Square, for metropolitan splendor are entirely undeveloped; the best points are still occupied by comparatively worthless buildings, and the future will produce a now unlooked-for change in the whole character of that great district.

The huddling together of our American cities is due to the recentness of the time when space was our greatest enemy and sparseness our chief discouragement. Our founders hated room as much as a backwoods farmer hates trees. The protecting walls, which narrowed the ways and cramped the houses of the Old-World cities, did not put a severer compress upon them than the disgust of solitude and the craving for "the sweet security of streets" threw about our city-builders. In the Western towns now, they carefully give a city air to their villages by crowding the few stores and houses of which they are composed into the likeliest appearance of an absolute scarcity of space.

They labor unconsciously to look crowded, and would sooner go into a cellar to eat their oysters than have them in the finest saloon above ground. And so, if a peninsula like Boston, or a miniature Mesopotamia like New York, or a basin like Cincinnati, could be found to tuck away a town in, in which there was a decent chance of covering over the nakedness of the land within a thousand years, they rejoiced to seize on it and warm their shivering imaginations in the idea of the possible snugness which their distant posterity might enjoy.

Boston owes its only park worth naming — the celebrated Common — to the necessity of leaving a convenient cow-pasture for the babes and sucklings of that now mature community. Forty acres were certainly never more fortunately situated for their predestined service, nor more providentially rescued for the higher uses of man. May the memory of the weaning babes who pleaded for the spot where their "milky mothers" fed be ever sacred in our Athens, and may the cows of Boston be embalmed with the bulls of Egypt! A white heifer should be perpetually grazing, at her tether, in the shadow of the Great Elm. Would it be wholly unbecoming one born in full view of that lovely inclosure to suggest that the straightness of the lines in which the trees are planted on Boston Common, and the rapidly increasing thickness of their foliage, destroy in the summer season the effect of breadth and liberty, hide both the immediate and the distant landscape, stifle the breeze, and diminish the attractiveness of the spot? Fewer trees, scattered in clumps and paying little regard to paths, would vastly improve the effect. The colonnades of the malls furnish all the shade desirable in so small an inclosure.

For the most part, the proper laying-out of cities is both a matter of greater ease and greater importance in America than anywhere else. We are much in the condition of those old Scriptural worthies, of whom it could be so coolly

said, "So he went and built a city," as if it were a matter of not much greater account than "So he went and built a log-house." Very likely some of those Biblical cities, extemporized so tersely, were not much more finished than those we now and then encounter in our Western and Southern tours, where a poor shed at four cross-roads is dignified with the title. We believe it was Samuel Dexter, the pattern of Webster, who, on hanging out his shingle in a New England village, where a tavern, a school-house, a church, and a blacksmith's shop constituted the whole settlement, gave as a reason, that, having to break into the world somewhere, he had chosen the weakest place. He would have tried a new Western city, had they then been in fashion, as a still softer spot in the social crust. But this rage for cities in America is prophetic. The name is a spell; and most of the sites, surveyed and distributed into town-lots with squares and parks staked out, are only a century before their time, and will redound to the future credit, however fatal to the immediate cash of their projectors. Who can doubt that Cairo of Illinois—the standing joke of tourists, (and the standing-water of the Ohio and Mississippi,) though no joke to its founders—will one day rival its Egyptian prototype? America runs to cities, and particularly in its Northern latitudes. As cities have been the nurses of democratic institutions and ideas, democratic nations, for very obvious reasons, tend to produce them. They are the natural fruits of a democracy. And with no people are great cities so important, or likely to be so increasingly populous, as with a great agricultural and commercial nation like our own, covered with a free and equal population. The vast wealth of such a people, evenly distributed, and prevented from over-accumulation in special families by the absence of primogeniture and entail,—their general education and refined tastes,—the intense community of ideas, through the all-pervading influence of a daily press reaching with simulta-

neous diffusion over thousands of square miles,—the facilities of locomotion,—all inevitably coöperate with commercial necessities to create great cities,—not merely as the homes of the mercantile and wealthy class, but as centres where the leisure, the tastes, the pride, and the wants of the people at large repair more and more for satisfaction. Free populations, educated in public schools and with an open career for all, soon instinctively settle the high economies of life.

Many observers have ascribed the rapid change which for twenty years past has been going on in the relative character of towns and villages on the one hand, and cities on the other, to the mere operation of the railroad-system. But that system itself grew out of higher instincts. Equal communities demand equal privileges and advantages. They tend to produce a common level. The country does not acquiesce in the superiority of the city in manners, comforts, or luxuries. It demands a market at its door,—first-rate men for its advisers in all medical, legal, moral, and political matters. It demands for itself the amusements, the refinements, the privileges of the city. This is to be brought about only by the application, at any cost, of the most immediate methods of communication with the city; and behold our railroad system,—the Briarean shaking of hands which the country gives the city! The growth of this system is a curious commentary on the purely mercenary policy which is ordinarily supposed to govern the investments of capital. The railroads of the United States are as much the products of social rivalries and the fruits of an ineradicable democratic instinct for popularizing all advantages, as of any commercial emulation. The people have willingly bandaged their own eyes, and allowed themselves to believe a profitable investment was made, because their inclinations were so determined to have the roads, profitable or not. Their wives and daughters *would* shop in the city; the

choicest sights and sounds were there; there concentrated themselves the intellectual and moral lights; there were the representative splendors of the state or nation; — and a swift access to them was essential to true equality and self-respect.

One does not need to be a graybeard to recall the time when every county-town in New England had, because it needs must have, its first-rate lawyer, its distinguished surgeon, its comprehensive business-man, — and when a fixed and unchanging population gave to our villages a more solid and a more elegant air than they now possess. The Connecticut river-villages, with a considerable increase in population, and a vast improvement in the general character of the dwellings, have nevertheless lost their most characterizing features, — the large and dignified residences of their founders, and the presence of the once able and widely known men that were identified with their local importance and pride. The railroads have concentrated the ability of all the professions in the cities, and carried thither the wealth of all the old families. To them, and not to the county-town, repair the people for advice in all critical matters, for supplies in all important purchases, for all their rarest pleasures, and all their most prized and memorable opportunities.

Cities, and the immediate neighborhood of cities, are rapidly becoming the chosen residences of the enterprising, successful, and intelligent. As might be supposed, the movement works both ways: the locomotive facilities carry citizens into the country, as well as countrymen into the city. But those who have once tasted the city are never wholly weaned from it, and every citizen who moves into a village-community sends two countrymen back to take his place. He infects the country with civic tastes, and acts as a great conductor between the town and the country. It is apparent, too, that the experience of ten years, during which some strong reaction upon the centripetal tendencies of the previous ten years drove many of the wealthy

and the self-supposed lovers of quietude and space into the country, has dispersed several very natural prejudices, and returned the larger part of the truants to their original ways. One of these prejudices was, that our ordinary Northern climate was as favorable to the out-door habits of the leisurely class as the English climate; whereas, besides not having a leisurely class, and never being destined to have any, under our wise wealth-distributing customs, and not having any out-door habits, which grow up only on estates and on hereditary fortunes, experience has convinced most who have tried it that we have only six months when out-of-doors allows any comfort, health, or pleasure away from the city. The roads are sloughs; side-walks are wanting; shelter is gone with the leaves; non-intercourse is proclaimed; companionship cannot be found; leisure is a drug; books grow stupid; the country is a stupendous bore. Another prejudice was the anticipated economy of the country. This has turned out to be, as might have been expected, an economy to those who fall in with its ways, which citizens are wholly inapt and unprepared to do. It is very economical not to *want* city comforts and conveniences. But it proves more expensive to those who go into the country to *want* them there than it did to *have* them where they abound. They are not to be had in the country at any price, — water, gas, fuel, food, attendance, amusement, locomotion in all weathers; but such a moderate measure of them as a city-bred family cannot live without involves so great an expense, that the expected economy of life in the country to those not actually brought up there turns out a delusion. The expensiveness of life in the city comes of the generous and grand scale on which it there proceeds, not from the superior cost of the necessities or comforts of life. They are undoubtedly cheaper in the city, all things considered, than anywhere in the country. Where everything is to be had, in the smallest or the largest quantities, — where

every form of service can be commanded at a moment's notice,—where the wit, skill, competition of a country are concentrated upon the furnishing of all commodities at the most taking rates,—there prices will, of course, be most reasonable; and the expensiveness of such communities, we repeat, is entirely due to the abundant wealth which makes such enormous demands and secures such various comforts and luxuries;—in short, it is the high standard of living, not the cost of the necessities of life. This high standard is, of course, an evil to those whose social ambition drives them to a rivalry for which they are not prepared. But no special pity is due to hardships self-imposed by pride and folly. The probability is, that, proportioned to their income from labor, the cost of living in the city, for the bulk of its population, is lighter, their degree of comfort considered, than in the country. And for the wealthy class of society, no doubt, on the whole, economy is served by living in the city. Our most expensive class is that which lives in the country after the manner of the city.

A literary man, of talents and thorough respectability, lately informed us, that, after trying all places, cities, villages, farm-houses, boarding-houses, hotels, taverns, he had discovered that keeping house in New York was the cheapest way to live,—vastly the cheapest, if the amount of convenience and comfort was considered,—and absolutely cheapest in fact. To be sure, being a bachelor, his housekeeping was done in a single room, the back-room of a third-story, in a respectable and convenient house and neighborhood. His rent was ninety-six dollars a year. His expenses of every other kind, (clothing excepted,) one dollar a week. He could not get his chop or steak cooked well enough, nor his coffee made right, until he took them in hand himself,—nor his bed made, nor his room cleaned. His conveniences were incredibly great. He cooked by alcohol, and expected to warm himself the winter through on two gallons of alcohol at seventy-five cents a

gallon. This admirable housekeeping is equalled in economy only by that of a millionaire, a New-Yorker, and a bachelor also, whose accounts, all accurately kept by his own hand, showed, after death, that (1st) his own living, (2d) his support of religion, (3d) his charities, (4th) his gifts to a favorite niece, had not averaged, for twenty years, over five hundred dollars. Truly, the city is a cheap place to live in, for those who know how! And what place is cheap for those who do not?

Contrary to the old notion, the more accurate statistics of recent times have proved the city, as compared with the country, the more healthy, the more moral, and the more religious place. What used to be considered the great superiority of the country—hardship, absence of social excitements and public amusements, simple food, freedom from moral exposure—a better knowledge of the human constitution, considered either physically or morally, has shown to be decidedly opposed to health and virtue. More constitutions are broken down in the hardening process than survive and profit by it. Cold houses, coarse food unskillfully cooked, long winters, harsh springs, however favorable to the heroism of the stomach, the lungs, and the spirits, are not found conducive to longevity. In like manner, monotony, seclusion, lack of variety and of social stimulus lower the tone of humanity, drive to sensual pleasures and secret vices, and nourish a miserable pack of mean and degrading immoralities, of which scandal, gossip, backbiting, tale-bearing are the better examples.

In the Old World, the wealth of states is freely expended in the embellishment of their capitals. It is well understood, not only that loyalty is never more economically secured than by a lavish appeal to the pride of the citizen in the magnificence of the public buildings and grounds which he identifies with his nationality, but that popular restlessness is exhaled and dangerous passions drained off in the roominess which parks and gardens afford the common people. In the New World, it has not yet proved neces-

sary to provide against popular discontents or to bribe popular patriotism with spectacles and state-parade; and if it were so, there is no government with an interest of its own separate from that of the people to adopt this policy. It has therefore been concluded that democratic institutions must necessarily lack splendor and great public provision for the gratification of the æsthetic tastes or the indulgence of the leisure of the common people. The people being, then, our sovereigns, it has not been felt that they would or could have the largeness of view, the foresight, the sympathy with leisure, elegance, and ease, to provide liberally and expensively for their own recreation and refreshment. A bald utility has been the anticipated genius of our public policy. Our national Mercury was to be simply the god of the post-office, or the sprite of the barometer,—our Pan, to keep the crows from the corn-fields,—our Muses, to preside over district-schools. It begins now to appear that the people are not likely to think anything too good for themselves, or to higgie about the expense of whatever ministers largely to their tastes and fancies,—that political freedom, popular education, the circulation of newspapers, books, engravings, pictures, have already created a public which understands that man does not live by bread alone,—which demands leisure, beauty, space, architecture, landscape, music, elegance, with an imperative voice, and is ready to back its demands with the necessary self-taxation. This experience our absolute faith in free institutions enabled us to anticipate as the inevitable result of our political system; but let us confess that the rapidity with which it has developed itself has taken us by surprise. We knew, that, when the people truly realized their sovereignty, they would claim not only the utilitarian, but the artistic and munificent attributes of their throne,—and that all the splendors and decorations, all the provisions for leisure, taste, and recreation, which kings and courts have made, would be found to be mere preludes and rehear-

sals to the grander arrangements and achievements of the vastly richer and more legitimate sovereign, the People, when he understood his own right and duty. As dynasties and thrones have been predictions of the royalty of the people, so old courts and old capitals, with all their pomp and circumstance, their parks and gardens, galleries and statues, are but dim prefigurings of the glories of architecture, the grandeur of the grounds, the splendor and richness of the museums and conservatories with which the people will finally crown their own self-respect and decorate their own majesty. But we did not expect to see this sure prophecy turning itself into history in our day. We thought the people were too busy with the spade and the quill to care for any other sceptres at present. But it is now plain that they have been dreaming princely dreams and thinking royal thoughts all the while, and are now ready to put them into costly expression.

Passing by all other evidences of this, we come at once to the most majestic and indisputable witness of this fact, the actual existence of the Central Park in New York,—the most striking evidence of the sovereignty of the people yet afforded in the history of free institutions,—the best answer yet given to the doubts and fears which have frowned on the theory of self-government,—the first grand proof that the people do not mean to give up the advantages and victories of aristocratic governments, in maintaining a popular one, but to engraft the energy, foresight, and liberality of concentrated powers upon democratic ideas, and keep all that has adorned and improved the past, while abandoning what has impaired and disgraced it. That the American people appreciate and are ready to support what is most elegant, refined, and beautiful in the greatest capitals of Europe,—that they value and intend to provide the largest and most costly opportunities for the enjoyment of their own leisure, artistic tastes, and rural instincts, is emphatically declared in the history, progress, and manifest destiny of

the Central Park; while their competency to use wisely, to enjoy peacefully, to protect sacredly, and to improve industriously the expensive, exposed, and elegant pleasure-ground they have devised, is proved with redundant testimony by the year and more of experience we have had in the use of the Park, under circumstances far less favorable than any that can ever again arise. As a test of the ability of the people to know their own higher wants, of the power of their artistic instincts, their docility to the counsels of their most judicious representatives, their superiority to petty economies, their strength to resist the natural opposition of heavy tax-payers to expensive public works, their gentleness and amenableness to just authority in the pursuit of their pleasures, of their susceptibility to the softening influences of elegance and beauty, of their honest pride and rejoicing in their own splendor, of their superior fondness for what is innocent and elevating over what is base and degrading, when brought within equal reach, the Central Park has already afforded most encouraging, nay, most decisive proof.

The Central Park is an anomaly to those who have not deeply studied the tendencies of popular governments. It is a royal work, undertaken and achieved by the Democracy,—surprising equally themselves and their skeptical friends at home and abroad,—and developing, both in its creation and growth, in its use and application, new and almost incredible tastes, aptitudes, capacities, and powers in the people themselves. That the people should be capable of the magnanimity of laying down their authority, when necessary to concentrate it in the hands of energetic and responsible trustees requiring large powers,—that they should be willing to tax themselves heavily for the benefit of future generations,—that they should be wise enough to distrust their own judgment and defer modestly to the counsels of experts,—that they should be in favor of the most solid and substantial work,—that they should be willing to have the

better half of their money under ground and out of sight, invested in drains and foundations of roads,—that they should acquiesce cheerfully in all the restrictions necessary to the achievement of the work, while admitted freely to the use and enjoyment of its inchoate processes,—that their conduct and manners should prove so unexceptionable,—their disposition to trespass upon strict rules so small,—their use and improvement of the work so free, so easy, and so immediately justificatory of all the cost of so generous and grand an enterprise: these things throw light and cheer upon the prospects of popular institutions, at a period when they are seriously clouded from other quarters.

We do not propose to enter into any description of the Central Park. Those who have not already visited it will find a description, accompanying a study for the plan submitted for competition in 1858, by Messrs. Olmsted and Vaux, and published among the Documents of the New York Senate, which will satisfy their utmost expectations. We wish merely to throw out some replies to the leading objections we have met in the papers and other quarters to the plan itself. We need hardly say that the Central Park requires no advocate and no defence. Its great proprietor, the Public, is perfectly satisfied with his purchase and his agents. He thinks himself providentially guided in the choice of his Superintendent, and does not vainly pique himself upon his sagacity in selecting Mr. Frederick Law Olmsted for the post. This gentleman, in his place, offsets at least a thousand square plugs in round holes. He is precisely the man for the place,—and that is precisely the place for the man. Among final causes, it would be difficult not to assign the Central Park as the reason of his existence. To fill the duties of his office as he has filled them,—to prove himself equally competent as original designer, patient executor, potent disciplinarian, and model police-officer,—to enforce a method, precision, and strictness, equally marked in the workmanship, in the accounts, and in the police of the Park,—

to be equally studious of the highest possible use and enjoyment of the work by the public of to-day, and of the prospects and privileges of the coming generations, — to sympathize with the outside people, while in the closest fellowship with the inside, — to make himself equally the favorite and friend of the people and of the workmen: this proves an original adaptation, most carefully improved, which we seriously believe not capable of being paralleled in any other public work, of similar magnitude, ever undertaken. The union of prosaic sense with poetical feeling, of democratic sympathies with refined and scholarly tastes, of punctilious respect for facts with tender hospitality for ideas, has enabled him to appreciate and embody, both in the conception and execution of the Park, the beau-ideal of a people's pleasure-ground. If he had not borne, as an agriculturist, and as the keenest, most candid, and instructive of all our writers on the moral and political economy of our American Slavery, a name to be long remembered, he might safely trust his reputation to the keeping of New York city and all her successive citizens, as the author and achiever of the Central Park, — which, when completed, will prove, we are confident, the most splendid, satisfactory, and popular park in the world.

Two grand assumptions have controlled the design from the inception.

First, That the Park would be the only park deserving the name, for a town of twice or thrice the present population of New York; that this town would be built compactly around it (and in this respect of centrality it would differ from any extant metropolitan park of magnitude); and that it would be a town of greater wealth and more luxurious demands than any now existing.

Second, That, while in harmony with the luxury of the rich, the Park should and would be used more than any existing park by people of moderate wealth and by poor people, and that its use by these people must be made safe, convenient, agreeable; that they must be ex-

pected to have a pride and pleasure in using it rightly, in cherishing and protecting it against all causes of injury and dilapidation, and that this is to be provided for and encouraged.

A want of appreciation of the first assumption is the cause of all sincere criticism against the Transverse Roads. Some engineers originally pronounced them impracticable of construction; but all their grounds of apprehension have been removed by the construction of two of them, especially by the completion of the tunnel under Vista Rock, and below the foundation of the Reservoir embankment and wall. They were planned for the future; they are being built solidly, massively, permanently, for the future. Less thoroughly and expensively constructed, they would need to be rebuilt in the future at enormously increased cost, and with great interruption to the use of the Park; and the grounds in their vicinity, losing the advantage of age, would need to be remodelled and remade. An engineer, visiting the Park for the first time, and hearing the criticism to which we refer applied to the walls and bridges of the Transverse Roads, observed, — "People in this country are so unaccustomed to see genuine substantial work, they do not know what it means when they meet with it." We think he did not do the people justice.

The Transverse Roads passing through the Park will not be seen from it; and although they will not be, when deep in the shadow of the overhanging bridges and groves, without a very grand beauty, this will be the beauty of utility and of permanence, not of imaginative grace. The various bridges and archways of the Park proper, while equally thorough in their mode of construction, and consequently expensive, are in all cases embellished each with special decorations in form and color. These decorations have the same quality of substantiality and thorough good workmanship. Note the clean under-cutting of the leaves, (of which there are more than fifty different forms in the decorations of the Terrace arch,)

and their consequent sharp and expressive shadows. Admitting the need of these structures, and the economy of a method of construction which would render them permanent, the additional cost of their permanent decoration in this way could not have been rationally grudged.

Regard for the distant future has likewise controlled the planting; and the Commissioners, in so far as they have resisted the clamor of the day, that the Park must be immediately shaded, have done wisely. Every horticulturist knows that this immediate shade would be purchased at an expense of dwarfed, diseased, and deformed trees, with stunted shade, in the future. No man has planted large and small trees together without regretting the former within twenty years. The same consideration answers an objection which has been made, that the trees are too much arranged in masses of color. Imagine a growth of twenty years, with the proper thinnings, and most of these masses will resolve each into one tree, singled out, as the best individual of its mass, to remain. There is a large scale in the planting, as in everything else.

Regard to the convenience, comfort, and safety of those who cannot afford to visit the Park in carriages has led to an unusual extent and variety of character in the walks, and also to a peculiar arrangement by which they are carried in many instances beneath and across the line of the carriage-roads. Thus access can be had by pedestrians to all parts of the Park at times when the roads are thronged with vehicles, without any delays or dangers in crossing the roads, and without the humiliation to sensitive democrats of being spattered or dusted, or looked down upon from luxurious equipages.

The great irregularity of the surface offers facilities for this purpose,—the walks being carried through the heads of valleys which are crossed by the carriage-ways upon arches of masonry. Now with regard to these archways, if no purposes of convenience were to be served by them, the Park would not, we may ad-

mit, be beautified by them. But we assume that the population of New York is to be doubled; that, when it is so, if not sooner, the walks and drives of the Park will often be densely thronged; and, for the comfort of the people, when that shall be the case, we consider that these archways will be absolutely necessary.* Assuming further, then, that they are to be built, and, if ever, built now,—since it would involve an entirely new-modelling of the Park to introduce them in the future,—it was necessary to pay some attention to make them agreeable and unmonotonous objects, or the general impression of ease, freedom, and variety would be interfered with very materially. It is not to make the Park architectural, as is commonly supposed, that various and somewhat expensive *design* is introduced; on the contrary, it is the intention to plant closely in the vicinity of all the arches, so that they may be unnoticed in the general effect, and be seen only just at the time they are being used, when, of course, they must come under notice.

The charge is made, that the features of the natural landscape have been disregarded in the plan. To which we answer, that on the ground of the Lower Park there was originally no landscape, in the artistic sense. There were hills, and hillocks, and rocks, and swampy valleys. It would have been easy to flood the swamps into ponds, to clothe the hillocks with grass and the hills with fo-

* The length of roads, walks, etc., completed, will be found in the last Annual Report, pp. 47-52.

The length of the famous drive in Hyde Park (the Ring Road) is $2\frac{1}{2}$ miles. There is another road, straight between two gates, $1\frac{1}{2}$ miles in length. "Rotten Row" (the Ride) is a trifle over a mile in length.

The length of Drive in Central Park will be $9\frac{1}{2}$ miles; the length of Bridle Roads, $5\frac{1}{2}$ miles; the length of Walks, 20 miles.

Ten miles of walk, gravelled and substantially underlaid, are now finished.

Eighteen archways are planned, beside those of the Transverse Roads, equal 1 to 46 acres. When the planting is well-grown, no two of the archways will be visible from the same point.

liage, and leave the rocks each unscathed in its picturesqueness. And this would have been a great improvement; yet there would be no landscape: there would be an unassociated succession of objects,—many nice “bits” of scenery, appropriate to a villa-garden or to an artist’s sketch-book, but no scenery such as an artist arranges for his broad canvas, no composition, no *park-like* prospect. It would have afforded a good place for loitering; but if this were all that was desirable, forty acres would have done as well as a thousand, as is shown in the Ramble. Space, breadth, objects in the distance, clear in outline, but obscure, mysterious, exciting curiosity, in their detail, were wanting.

To their supply there were hard limitations. On each side, within half a mile of each other, there were to be lines of stone and brick houses, cutting off any great lateral distance. Suppose one to have entered the Park at the south end, and to have moved far enough within it to dispossess his mind of the sentiments of the streets: he will have threaded his way between hillocks and rocks, one after another, differing in magnitude, but never opening a landscape having breadth or distance. He ascends a hill and looks northward: the most distant object is the hard, straight, horizontal line of the stone wall of the Reservoir, flanked on one side by the peak of Vista Rock. It is a little over a mile distant,—but, standing clear out against the horizon, appears much less than that. Hide it with foliage, as well as the houses right and left, and the limitation of distance is a mile in front and a quarter of a mile upon each side. Low hills or ridges of rock in a great degree cut off the intermediate ground from view: cross these, and the same unassociated succession of objects might be visited, but no one of them would have engaged the visitor’s attention and attracted him onward from a distance. The plan has evidently been to make a selection of the natural features to form the leading ideas of the new scenery, to magnify the most important quality of

each of these, and to remove or tone down all the irregularities of the ground between them, and by all means to make the limit of vision undefined and obscure. Thus, in the central portion of the Lower Park the low grounds have been generally filled, and the high grounds reduced; but the two largest areas of low ground have been excavated, the excavation being carried laterally into the hills as far as was possible, without extravagant removal of rock, and the earth obtained transferred to higher ground connecting hillocks with hills. Excavations have also been made about the base of all the more remarkable ledges and peaks of rock, while additional material has been conveyed to their sides and summits to increase their size and dignity.

This general rule of the plan was calculated to give, in the first place, breadth, and, in the second, emphasis, to any general prospect of the Park. A want of unity, or rather, if we may use the word, of *assemblage*, belonged to the ground; and it must have been one of the first problems to establish some one conspicuous, salient idea which should take the lead in the composition, and about which all minor features should seem naturally to group as accessories. The straight, evidently artificial, and hence distinctive and notable, Mall, with its terminating Terrace, was the resolution of this problem. It will be, when the trees are fully grown, a feature of the requisite importance,—and will serve the further purpose of opening the view toward, and, as it were, framing and keeping attention directed upon, Vista Rock, which from the southern end of the Mall is the most distant object that can be brought into view.

For the same purpose, evidently, it was thought desirable to insist, as far as possible, upon a pause at the point where, to the visitor proceeding northward, the whole hill-side and glen before Vista Rock first came under view, and where an effect of distance in that direction was yet attainable. This is provided for by the Terrace, with its several stairs and stages, and tempta-

tions to linger and rest. The introduction of the Lake to the northward of the Terrace also obliges a diversion from the direct line of proceeding; the visitor's attention is henceforth directed laterally, or held by local objects, until at length by a circuitous route he reaches and ascends (if he chooses) the summit of Vista Rock, when a new landscape of entirely different character, and one not within our control, is opened to him. Thus the apparent distance of Vista Rock from the lower part of the Park (which is increased by means which we have not

thought it necessary to describe) is not falsified by any experience of the visitor in his subsequent journey to it.

There was a fine and completely natural landscape in the Upper Park. The plan only simplifies it,—removing and modifying those objects which were incongruous with its best predominating character, and here and there adding emphasis or shadow.

The Park (with the extension) is two and three quarter miles in length and nearly half a mile wide. It contains 843 acres, including the Reservoir (136 acres).

Original cost of land to 106th Street,	\$5,444,369.90
Of this, assessed on adjoining property,	1,657,590.00
To be paid by corporation direct,	3,786,779.90
Assessed value of extension land, (106th to 110th,) . .	1,400,000.00
Total cost of land,	\$6,800,000.00 *

In all European parks, there is more or less land the only use of which is to give a greater length to the roads which pass around it,—it being out of sight, and, in American phrase, unimproved. There is not an acre of land in Central Park, which, if not wanted for Park purposes, would not sell for at least as much as the land surrounding the Park and beyond its limits,—that is to say, for at least \$60,000, the legal annual interest of which is \$4,200. This would be the ratio of the annual waste of property in the case of any land not put to use; but, in elaborating the plan, care has been taken that no part of the Park should be without its special advantages, attractions, or valuable uses, and that these should as far as possible be made immediately available to the public.

The comprehensiveness of purpose and the variety of detail of the plan far exceed those of any other park in the world, and have involved, and continue to involve, a greater amount of study and invention than has ever before been given to a park. A consideration of this should enforce an unusually careful method of maintenance, both in the gardening and police departments. Sweeping with a broom of brush-wood once a

week is well enough for a hovel; but the floors of a palace must needs be daily waxed and polished, to justify their original cost. We are unused to thorough gardening in this country. There are not in all the United States a dozen lawns or grass-plots so well kept as the majority of tradesmen's door-yards in England or Holland. Few of our citizens have ever seen a really well-kept ground. During the last summer, much of the Park was in a state of which the Superintendent professed himself to be ashamed; but it caused not the slightest

* The amount thus far expended in construction and maintenance is nearly \$3,000,000. The plan upon which the work is proceeding will require a further expenditure of \$1,600,000. The expenditure is not squandered. Much the larger part of it is paid for day-labor. Account with laborers is kept by the hour, the rate of wages being scarcely above the lowest contractor's rates, and 80 per cent. below the rate of other public works of the city; always paid directly into the laborer's hands,—in specie, however.

The thorough government of the work, and the general efficiency of its direction, are indicated by the remarkable good order and absence of "accidents" which have characterized it. See p. 64 of Annual Report, 1860. For some particulars of cost, see pp. 61, 62, of same Report.

comment with the public, so far as we heard. As nearly all men in office, who have not a personal taste to satisfy, are well content, if they succeed in satisfying the public, we fear the Superintendent will be forced to "economize" on the keeping of the Park, as he was the past year, to a degree which will be as far from true economy as the cleaning of mosaic floors with birch brooms. The Park is laid out in a manner which assumes and requires cleanly and orderly habits in those who use it; much of its good quality will be lost, if it be not very neatly kept; and such negligence in the keeping will tend to negligence in the using.

In the plan, there is taken for granted a generally good inclination, a cleanly, temperate, orderly disposition, on the part of the public which is to frequent the Park, and finally to be the governors of its keeping, and a good, well-disposed,

and well-disciplined police force, who would, in spite of "the inabilities of a republic," adequately control the cases exceptional to the assumed general good habits of that public, — at the same time neglecting no precaution to facilitate the convenient enforcement of the laws, and reduce the temptation to disorderly practices to a minimum.

How thoroughly justified has been this confidence in the people, taking into account the novelty of a good public ground, of cleanliness in our public places, and indeed the novelty of the whole undertaking, we have already intimated. How much the privileges of the Park in its present incomplete condition are appreciated, and how generally the requirements of order are satisfied, the following summary, compiled from the Park-keeper's reports of the first summer's use after the roads of the Lower Park were opened, will inadequately show.

Number of visitors in six months.	Foot.	Saddle.	Carriages.
May,	184,450	8,017	26,500
June,	294,300	9,050	31,300
July,	71,035	2,710	4,945
August,	63,800	875	14,905
September,	47,433	2,645	20,708
October,	160,187	3,014	26,813
Usual number of visitors on a fine summer's day,	2,000	90	1,200
Usual number of visitors on a fine Sunday, (Men 20,000, Women 13,000, Children 2,000.)	35,000	60	1,500
Sunday, May 29, entrances counted,	75,000	120	3,200
Usual number of visitors, fine Concert day,	7,500	180	2,500
Saturday, Sept. 22, (Concert day,) entrances counted, 13,000		225	4,650

During this time, (six months,) but thirty persons were detected upon the Park tipsy. Of these, twenty-four were sufficiently drunk to justify their arrest, — the remainder going quietly off the grounds, when requested to do so. That is to say, it is not oftener than once a week that a man is observed to be the worse for liquor while on the Park; and this, while three to four thousand laboring men are at work within it, are paid upon it, and grog-shops for their accommodation are all along its boundaries. In other words, about one in thirty thousand of the visitors to the Park has been under the influence of drink when induced to visit it.

On Christmas and New-Year's Days, it was estimated by many experienced reporters that over 100,000 persons, each day, were on the Park, generally in a frolicsome mood. Of these, but one (a small boy) was observed by the keepers to be drunk; there was not an instance of quarrelling, and no disorderly conduct, except a generally good-natured resistance to the efforts of the police to maintain safety on the ice.

The Bloomingdale Road and Harlem Lane, two famous trotting-courses, where several hundred famously fast horses may be seen at the top of their speed any fine afternoon, both touch an entrance to the Park. The Park roads are, of course,

vastly attractive to the trotters, and for a few weeks there were daily instances of fast driving there: as soon, however, as the law and custom of the Park, restricting speed to a moderate rate, could be made generally understood, fast driving became very rare,—more so, probably, than in Hyde Park or the Bois de Boulogne. As far as possible, an arrest has been made in every case of intentionally fast driving observed by the keepers: those arrested number less than one to ten thousand of the vehicles entering the Park for pleasure-driving. In each case a fine (usually three dollars) has been imposed by the magistrate.

In six months there have been sixty-four arrests for all sorts of “disorderly conduct,” including walking on the grass after being requested to quit it, quarrelling, firing crackers, etc.,—one in eighteen thousand visitors. So thoroughly established is the good conduct of people on the Park, that many ladies walk daily in the Ramble without attendance.

A protest, as already intimated, is occasionally made against the completeness of detail to which the Commissioners are disposed to carry their work, on the ground that the habits of the masses of our city-population are ill-calculated for its appreciation, and that loss and damage to expensive work must often be the result. To which we would answer, that, if the authorities of the city hitherto have so far misapprehended or neglected their duty as to allow a large industrious population to continue so long without the opportunity for public recreations that it has grown up ignorant of the rights and duties appertaining to the general use of a well-kept pleasure-ground, any losses of the kind apprehended, which may in consequence occur, should be cheerfully borne as a necessary part of the responsibility of a good government. Experience thus far, however, does not justify these apprehensions.

To collect exact evidence showing that the Park is already exercising a good influence upon the character of the people is not in the nature of the case practi-

cable. It has been observed that rude, noisy fellows, after entering the more advanced or finished parts of the Park, become hushed, moderate, and careful. Observing the generally tranquil and pleased expression, and the quiet, sauntering movement, the frequent exclamations of pleasure in the general view or in the sight of some special object of natural beauty, on the part of the crowds of idlers in the Ramble on a Sunday afternoon, and recollecting the totally opposite character of feeling, thought, purpose, and sentiment which is expressed by a crowd assembled anywhere else, especially in the public streets of the city, the conviction cannot well be avoided that the Park already exercises a beneficent influence of no inconsiderable value, and of a kind which could have been gained in no other way. We speak of Sunday afternoons and of a crowd; but the Park evidently does induce many a poor family, and many a poor seamstress and journeyman, to take a day or a half-day from the working-time of the week, to the end of retaining their youth and their youthful relations with purer Nature, and to their gain in strength, good-humor, safe citizenship, and—if the economists must be satisfied—money-value to the commonwealth. Already, too, there are several thousand men, women, and children who resort to the Park habitually: some daily, before business or after business, and women and children at regular hours during the day; some weekly; and some at irregular, but certain frequent chances of their business. Mr. Astor, when in town, rarely misses his daily ride; nor Mr. Bancroft; Mr. Mayor Harper never his drive. And there are certain working-men with their families equally sure to be met walking on Sunday morning or Sunday afternoon; others on Saturday. The number of these *habitués* constantly increases. When we meet those who depend on the Park as on the butcher and the omnibus, and the thousands who are again drawn by whatever impulse and suggestion of the hour, we often ask, What would they have done, where would

they have been, to what sort of recreation would they have turned, *if to any*, had there been no park? Of one sort the answer is supplied by the keeper of a certain saloon, who came to the Park, as he said, to see his old Sunday customers. The enjoyment of the ice had made them forget their grog.

Six or seven years ago, an opposition brought down the prices and quadrupled the accommodations of the Staten Island ferry-boats. Clifton Park and numerous German gardens were opened; and the consequence was described, in common phrase, as the transformation of a portion of the island, on Sunday, to a Pandemonium. We thought we would, like Dante, have a cool look at it. We had read so much about it, and heard it talked about and preached about so much, that we were greatly surprised to find the throng upon the sidewalks quite as orderly and a great deal more evidently good-natured than any we ever saw before in the United States. We spent some time in what we had been led to suppose the hottest place, Clifton Park, in which there was a band of music and several thousand persons, chiefly Germans, though with a good sprinkling of Irish servant-girls with their lovers and brothers, with beer and ices; but we saw no rudeness, and no more impropriety, no more excitement, no more (weekday) sin, than we had seen at the church in the morning. Every face, however, was foreign. By-and-by came in three Americans, talking loudly, moving rudely, proclaiming contempt for "lager" and yelling for "liquor," bantering and offering fight, joking coarsely, profane, noisy, demonstrative in any and every way, to the end of attracting attention to themselves, and proclaiming that they were "on a spree" and highly excited. They could not keep it up; they became awkward, ill at ease, and at length silent, standing looking about them in stupid wonder. Evidently they could not understand what it meant: people drinking, smoking in public, on Sunday, and yet not excited, not trying to make it a

spree. It was not comprehensible. We ascertained that one of the ferry-boat bars had disposed of an enormous stock of lemonade, ginger-beer, and soda-water before three o'clock,—but, till this was all gone, not half a dozen glasses of intoxicating drinks. We saw no quarrelling, no drunkenness, and nothing like the fearful disorder which had been described,—with a few such exceptions as we have mentioned of native Americans who had no conception of enjoyment free from bodily excitement.

To teach and induce habits of orderly, tranquil, contemplative, or social amusement, moderate exercises and recreation, soothing to the nerves, has been the most needed "mission" for New York. We think we see daily evidence that the Park accomplishes not a little in this way. Unfortunately, the evidence is not of a character to be expressed in Federal currency, else the Commissioners would not be hesitating about taking the ground from One-Hundred-and-Sixth to One-Hundred-and-Tenth Street, because it is to cost half a million more than was anticipated. What the Park is worth to us to-day is, we trust, but a trifle to what it will be worth when the bulk of our hard-working people, of our over-anxious Marthas, and our gutter-skating children shall live nearer to it, and more generally understand what it offers them,—when its play-grounds are ready, its walks more shaded,—when cheap and wholesome meals, to the saving, occasionally, of the dreary housewife's daily pottering, are to be had upon it,—when its system of cheap cabs shall have been successfully inaugurated,—and when a daily discourse of sweet sounds shall have been made an essential part of its functions in the body-politic.

We shall not probably live to see "the gentility of Sir Philip Sidney made universal," but we do hope that we shall live to know many residents of towns of ten thousand population who will be ashamed to subscribe for the building of new churches while no public play-ground is being prepared for their people.

LIFE IN THE IRON-MILLS.

"Is this the end?
O Life, as futile, then, as frail!
What hope of answer or redress?"

A CLOUDY day: do you know what that is in a town of iron-works? The sky sank down before dawn, muddy, flat, immovable. The air is thick, clammy with the breath of crowded human beings. It stifles me. I open the window, and, looking out, can scarcely see through the rain the grocer's shop opposite, where a crowd of drunken Irishmen are puffing Lynchburg tobacco in their pipes. I can detect the scent through all the foul smells ranging loose in the air.

The idiosyncrasy of this town is smoke. It rolls sullenly in slow folds from the great chimneys of the iron-foundries, and settles down in black, slimy pools on the muddy streets. Smoke on the wharves, smoke on the dingy boats, on the yellow river,—clinging in a coating of greasy soot to the house-front, the two faded poplars, the faces of the passers-by. The long train of mules, dragging masses of pig-iron through the narrow street, have a foul vapor hanging to their reeking sides. Here, inside, is a little broken figure of an angel pointing upward from the mantel-shelf; but even its wings are covered with smoke, clotted and black. Smoke everywhere! A dirty canary chirps desolately in a cage beside me. Its dream of green fields and sunshine is a very old dream,—almost worn out, I think.

From the back-window I can see a narrow brick-yard sloping down to the river-side, strewed with rain-butts and tubs. The river, dull and tawny-colored, (*la belle rivière!*) drags itself sluggishly along, tired of the heavy weight of boats and coal-barges. What wonder? When I was a child, I used to fancy a look of weary, dumb appeal upon the face of the negro-like river slavishly bearing its burden day after day. Something of the same idle notion comes to me to-day,

when from the street-window I look on the slow stream of human life creeping past, night and morning, to the great mills. Masses of men, with dull, besotted faces bent to the ground, sharpened here and there by pain or cunning; skin and muscle and flesh begrimed with smoke and ashes; stooping all night over boiling caldrons of metal, laired by day in dens of drunkenness and infamy; breathing from infancy to death an air saturated with fog and grease and soot, vileness for soul and body. What do you make of a case like that, amateur psychologist? You call it an altogether serious thing to be alive: to these men it is a drunken jest, a joke,—horrible to angels perhaps, to them commonplace enough. My fancy about the river was an idle one: it is no type of such a life. What if it be stagnant and slimy here? It knows that beyond there waits for it odorous sunlight,—quaint old gardens, dusky with soft, green foliage of apple-trees, and flushing crimson with roses,—air, and fields, and mountains. The future of the Welsh puddler passing just now is not so pleasant. To be stowed away, after his grimy work is done, in a hole in the muddy graveyard, and after that,—*not* air, nor green fields, nor curious roses.

Can you see how foggy the day is? As I stand here, idly tapping the window-pane, and looking out through the rain at the dirty back-yard and the coal-boats below, fragments of an old story float up before me,—a story of this old house into which I happened to come to-day. You may think it a tiresome story enough, as foggy as the day, sharpened by no sudden flashes of pain or pleasure.—I know: only the outline of a dull life, that long since, with thousands of dull lives like its own, was vainly lived and lost: thousands of them,—massed, vile,

slimy lives, like those of the torpid lizards in yonder stagnant water-butt. — Lost? There is a curious point for you to settle, my friend, who study psychology in a lazy, *dilettante* way. Stop a moment. I am going to be honest. This is what I want you to do. I want you to hide your disgust, take no heed to your clean clothes, and come right down with me, — here, into the thickest of the fog and mud and foul effluvia. I want you to hear this story. There is a secret down here, in this nightmare fog, that has lain dumb for centuries: I want to make it a real thing to you. You, Egoist, or Pantheist, or Arminian, busy in making straight paths for your feet on the hills, do not see it clearly, — this terrible question which men here have gone mad and died trying to answer. I dare not put this secret into words. I told you it was dumb. These men, going by with drunken faces and brains full of unawakened power, do not ask it of Society or of God. Their lives ask it; their deaths ask it. There is no reply. I will tell you plainly that I have a great hope; and I bring it to you to be tested. It is this: that this terrible dumb question is its own reply; that it is not the sentence of death we think it, but, from the very extremity of its darkness, the most solemn prophecy which the world has known of the Hope to come. I dare make my meaning no clearer, but will only tell my story. It will, perhaps, seem to you as foul and dark as this thick vapor about us, and as pregnant with death; but if your eyes are free as mine are to look deeper, no perfume-tinted dawn will be so fair with promise of the day that shall surely come.

My story is very simple, — only what I remember of the life of one of these men, — a furnace-tender in one of Kirby & John's rolling-mills, — Hugh Wolfe. You know the mills? They took the great order for the Lower Virginia railroads there last winter; run usually with about a thousand men. I cannot tell why I choose the half-forgotten story of this Wolfe more than that of myriads of these furnace-hands. Perhaps because

there is a secret underlying sympathy between that story and this day with its impure fog and thwarted sunshine, — or perhaps simply for the reason that this house is the one where the Wolfes lived. There were the father and son, — both hands, as I said, in one of Kirby & John's mills for making railroad-iron, — and Deborah, their cousin, a picker in some of the cotton-mills. The house was rented then to half a dozen families. The Wolfes had two of the cellar-rooms. The old man, like many of the puddlers and feeders of the mills, was Welsh, — had spent half of his life in the Cornish tin-mines. You may pick the Welsh emigrants, Cornish miners, out of the throng passing the windows, any day. They are a trifle more filthy; their muscles are not so brawny; they stoop more. When they are drunk, they neither yell, nor shout, nor stagger, but skulk along like beaten hounds. A pure, unmixed blood, I fancy: shows itself in the slight angular bodies and sharply-cut facial lines. It is nearly thirty years since the Wolfes lived here. Their lives were like those of their class: incessant labor, sleeping in kennel-like rooms, eating rank pork and molasses, drinking — God and the distillers only know what; with an occasional night in jail, to atone for some drunken excess. Is that all of their lives? — of the portion given to them and these their duplicates swarming the streets to-day? — nothing beneath? — all? So many a political reformer will tell you, — and many a private reformer, too, who has gone among them with a heart tender with Christ's charity, and come out outraged, hardened.

One rainy night, about eleven o'clock, a crowd of half-clothed women stopped outside of the cellar-door. They were going home from the cotton-mill.

"Good-night, Deb," said one, a mulatto, steadying herself against the gas-post. She needed the post to steady her. So did more than one of them.

"Dah 's a ball to Miss Potts' to-night. Ye 'd best come."

"Intee, Deb, if hur 'll come, hur 'll

hef fun," said a shrill Welsh voice in the crowd.

Two or three dirty hands were thrust out to catch the gown of the woman, who was groping for the latch of the door.

"No."

"No? Where's Kit Small, then?"

"Begorra! on the spoils. Alleys behind, though we helped her, we dud. An wid ye! Let Deb alone! It's on-dacent frettin' a quite body. Be the powers, an' we'll have a night of it! there'll be lashin's o' drink,—the Vargent be blessed and praised for 't!"

They went on, the mulatto inclining for a moment to show fight, and drag the woman Wolfe off with them; but, being pacified, she staggered away.

Deborah groped her way into the cellar, and, after considerable stumbling, kindled a match, and lighted a tallow dip, that sent a yellow glimmer over the room. It was low, damp,—the earthen floor covered with a green, slimy moss,—a fetid air smothering the breath. Old Wolfe lay asleep on a heap of straw, wrapped in a torn horse-blanket. He was a pale, meek little man, with a white face and red rabbit-eyes. The woman Deborah was like him; only her face was even more ghastly, her lips bluer, her eyes more watery. She wore a faded cotton gown and a slouching bonnet. When she walked, one could see that she was deformed, almost a hunchback. She trod softly, so as not to waken him, and went through into the room beyond. There she found by the half-extinguished fire an iron saucepan filled with cold boiled potatoes, which she put upon a broken chair with a pint-cup of ale. Placing the old candlestick beside this dainty repast, she untied her bonnet, which hung limp and wet over her face, and prepared to eat her supper. It was the first food that had touched her lips since morning. There was enough of it, however: there is not always. She was hungry,—one could see that easily enough,—and not drunk, as most of her companions would have been found at this hour. She did not drink, this wom-

an,—her face told that, too,—nothing stronger than ale. Perhaps the weak, flaccid wretch had some stimulant in her pale life to keep her up,—some love or hope, it might be, or urgent need. When that stimulant was gone, she would take to whiskey. Man cannot live by work alone. While she was skinning the potatoes, and munching them, a noise behind her made her stop.

"Janey!" she called, lifting the candle and peering into the darkness. "Janey, are you there?"

A heap of ragged coats was heaved up, and the face of a young girl emerged, staring sleepily at the woman.

"Deborah," she said, at last, "I'm here the night."

"Yes, child. Hur's welcome," she said, quietly eating on.

The girl's face was haggard and sickly; her eyes were heavy with sleep and hunger: real Milesian eyes they were, dark, delicate blue, glooming out from black shadows with a pitiful fright.

"I was alone," she said, timidly.

"Where's the father?" asked Deborah, holding out a potato, which the girl greedily seized.

"He's beyant,—wid Haley,—in the stone house." (Did you ever hear the word *jail* from an Irish mouth?) "I came here. Hugh told me never to stay me-lone."

"Hugh?"

"Yes."

A vexed frown crossed her face. The girl saw it, and added quickly,—

"I have not seen Hugh the day, Deb. The old man says his watch lasts till the mornin'."

The woman sprang up, and hastily began to arrange some bread and fitch in a tin pail, and to pour her own measure of ale into a bottle. Tying on her bonnet, she blew out the candle.

"Lay ye down, Janey dear," she said, gently, covering her with the old rags. "Hur can eat the potatoes, if hur's hungry."

"Where are ye goin', Deb? The rain's sharp."

"To the mill, with Hugh's supper."

"Let him bide till th' morn. Sit ye down."

"No, no,"—sharply pushing her off.
"The boy 'll starve."

She hurried from the cellar, while the child wearily coiled herself up for sleep. The rain was falling heavily, as the woman, pail in hand, emerged from the mouth of the alley, and turned down the narrow street, that stretched out, long and black, miles before her. Here and there a flicker of gas lighted an uncertain space of muddy footwalk and gutter; the long rows of houses, except an occasional lager-bier shop, were closed; now and then she met a band of mill-hands skulking to or from their work.

Not many even of the inhabitants of a manufacturing town know the vast machinery of system by which the bodies of workmen are governed, that goes on unceasingly from year to year. The hands of each mill are divided into watches that relieve each other as regularly as the sentinels of an army. By night and day the work goes on, the unsleeping engines groan and shriek, the fiery pools of metal boil and surge. Only for a day in the week, in half-courtesy to public censure, the fires are partially veiled; but as soon as the clock strikes midnight, the great furnaces break forth with renewed fury, the clamor begins with fresh, breathless vigor, the engines sob and shriek like "gods in pain."

As Deborah hurried down through the heavy rain, the noise of these thousand engines sounded through the sleep and shadow of the city like far-off thunder. The mill to which she was going lay on the river, a mile below the city-limits. It was far, and she was weak, aching from standing twelve hours at the spools. Yet it was her almost nightly walk to take this man his supper, though at every square she sat down to rest, and she knew she should receive small word of thanks.

Perhaps, if she had possessed an artist's eye, the picturesque oddity of the scene might have made her step stagger less,

and the path seem shorter; but to her the mills were only "summat deilish to look at by night."

The road leading to the mills had been quarried from the solid rock, which rose abrupt and bare on one side of the cinder-covered road, while the river, sluggish and black, crept past on the other. The mills for rolling iron are simply immense tent-like roofs, covering acres of ground, open on every side. Beneath these roofs Deborah looked in on a city of fires, that burned hot and fiercely in the night. Fire in every horrible form: pits of flame waving in the wind; liquid metal-flames writhing in tortuous streams through the sand; wide caldrons filled with boiling fire, over which bent ghastly wretches stirring the strange brewing; and through all, crowds of half-clad men, looking like revengeful ghosts in the red light, hurried, throwing masses of glittering fire. It was like a street in Hell. Even Deborah muttered, as she crept through, "'T looks like t' Devil's place!" It did,—in more ways than one.

She found the man she was looking for, at last, heaping coal on a furnace. He had not time to eat his supper; so she went behind the furnace, and waited. Only a few men were with him, and they noticed her only by a "Huur comes t' hunchback, Wolfe."

Deborah was stupid with sleep; her back pained her sharply; and her teeth chattered with cold, with the rain that soaked her clothes and dripped from her at every step. She stood, however, patiently holding the pail, and waiting.

"Hout, woman! ye look like a drowned cat. Come near to the fire,"—said one of the men, approaching to scrape away the ashes.

She shook her head. Wolfe had forgotten her. He turned, hearing the man, and came closer.

"I did no' think; gi' me my supper, woman."

She watched him eat with a painful eagerness. With a woman's quick instinct, she saw that he was not hungry,—was eating to please her. Her pale,

watery eyes began to gather a strange light.

"Is't good, Hugh? T'ale was a bit sour, I feared."

"No, good enough." He hesitated a moment. "Ye're tired, poor lass! Bide here till I go. Lay down there on that heap of ash, and go to sleep."

He threw her an old coat for a pillow, and turned to his work. The heap was the refuse of the burnt iron, and was not a hard bed; the half-smothered warmth, too, penetrated her limbs, dulling their pain and cold shiver.

Miserable enough she looked, lying there on the ashes like a limp, dirty rag,—yet not an unfitting figure to crown the scene of hopeless discomfort and veiled crime: more fitting, if one looked deeper into the heart of things,—at her thwarted woman's form, her colorless life, her waking stupor that smothered pain and hunger,—even more fit to be a type of her class. Deeper yet if one could look, was there nothing worth reading in this wet, faded thing, half-covered with ashes? no story of a soul filled with groping passionate love, heroic unselfishness, fierce jealousy? of years of weary trying to please the one human being whom she loved, to gain one look of real heart-kindness from him? If anything like this were hidden beneath the pale, bleared eyes, and dull, washed-out-looking face, no one had ever taken the trouble to read its faint signs: not the half-clothed furnace-tender, Wolfe, certainly. Yet he was kind to her: it was his nature to be kind, even to the very rats that swarmed in the cellar: kind to her in just the same way. She knew that. And it might be that very knowledge had given to her face its apathy and vacancy more than her low, torpid life. One sees that dead, vacant look steal sometimes over the rarest, finest of women's faces,—in the very midst, it may be, of their warmest summer's day; and then one can guess at the secret of intolerable solitude that lies hid beneath the delicate laces and brilliant smile. There was no warmth, no brilliancy, no sum-

mer for this woman; so the stupor and vacancy had time to gnaw into her face perpetually. She was young, too, though no one guessed it; so the gnawing was the fiercer.

She lay quiet in the dark corner, listening, through the monotonous din and uncertain glare of the works, to the dull splash of the rain in the far distance,—shrinking back whenever the man Wolfe happened to look towards her. She knew, in spite of all his kindness, that there was that in her face and form which made him loathe the sight of her. She felt by instinct, although she could not comprehend it, the finer nature of the man, which made him among his fellow-workmen something unique, set apart. She knew, that, down under all the vileness and coarseness of his life, there was a groping passion for whatever was beautiful and pure,—that his soul sickened with disgust at her deformity, even when his words were kindest. Through this dull consciousness, which never left her, came, like a sting, the recollection of the dark blue eyes and lithe figure of the little Irish girl she had left in the cellar. The recollection struck through even her stupid intellect with a vivid glow of beauty and of grace. Little Janey, timid, helpless, clinging to Hugh as her only friend: that was the sharp thought, the bitter thought, that drove into the glazed eyes a fierce light of pain. You laugh at it? Are pain and jealousy less savage realities down here in this place I am taking you to than in your own house or your own heart,—your heart, which they clutch at sometimes? The note is the same, I fancy, be the octave high or low.

If you could go into this mill where Deborah lay, and drag out from the hearts of these men the terrible tragedy of their lives, taking it as a symptom of the disease of their class, no ghost Horror would terrify you more. A reality of soul-starvation, of living death, that meets you every day under the besotted faces on the street,—I can paint nothing of this, only give you the outside outlines

of a night, a crisis in the life of one man : whatever muddy depth of soul-history lies beneath you can read according to the eyes God has given you.

Wolfe, while Deborah watched him as a spaniel its master, bent over the furnace with his iron pole, unconscious of her scrutiny, only stopping to receive orders. Physically, Nature had promised the man but little. He had already lost the strength and instinct vigor of a man, his muscles were thin, his nerves weak, his face (a meek, woman's face) haggard, yellow with consumption. In the mill he was known as one of the girl-men: "Molly Wolfe" was his *sobriquet*. He was never seen in the cockpit, did not own a terrier, drank but seldom; when he did, desperately. He fought sometimes, but was always thrashed, pommelled to a jelly. The man was game enough, when his blood was up: but he was no favorite in the mill; he had the taint of school-learning on him, — not to a dangerous extent, only a quarter or so in the free-school in fact, but enough to ruin him as a good hand in a fight.

For other reasons, too, he was not popular. Not one of themselves, they felt that, though outwardly as filthy and ash-covered; silent, with foreign thoughts and longings breaking out through his quietness in innumerable curious ways: this one, for instance. In the neighboring furnace-buildings lay great heaps of the refuse from the ore after the pig-metal is run. *Korl* we call it here: a light, porous substance, of a delicate, waxen, flesh-colored tinge. Out of the blocks of this *korl*, Wolfe, in his off-hours from the furnace, had a habit of chipping and moulding figures,—hideous, fantastic enough, but sometimes strangely beautiful: even the mill-men saw that, while they jeered at him. It was a curious fancy in the man, almost a passion. The few hours for rest he spent hewing and hacking with his blunt knife, never speaking, until his watch came again, — working at one figure for months, and, when it was finished, breaking it to pieces perhaps, in a fit of disappointment. A morbid,

gloomy man, untaught, unled, left to feed his soul in grossness and crime, and hard, grinding labor.

I want you to come down and look at this Wolfe, standing there among the lowest of his kind, and see him just as he is, that you may judge him justly when you hear the story of this night. I want you to look back, as he does every day, at his birth in vice, his starved infancy; to remember the heavy years he has groped through as boy and man,—the slow, heavy years of constant, hot work. So long ago he began, that he thinks sometimes he has worked there for ages. There is no hope that it will ever end. Think that God put into this man's soul a fierce thirst for beauty,—to know it, to create it; to *be*—something, he knows not what,—other than he is. There are moments when a passing cloud, the sun glinting on the purple thistles, a kindly smile, a child's face, will rouse him to a passion of pain, — when his nature starts up with a mad cry of rage against God, man, whoever it is that has forced this vile, slimy life upon him. With all this groping, this mad desire, a great blind intellect stumbling through wrong, a loving poet's heart, the man was by habit only a coarse, vulgar laborer, familiar with sights and words you would blush to name. Be just: when I tell you about this night, see him as he is. Be just,—not like man's law, which seizes on one isolated fact, but like God's judging angel, whose clear, sad eye saw all the countless cankering days of this man's life, all the countless nights, when, sick with starving, his soul fainted in him, before it judged him for this night, the saddest of all.

I called this night the crisis of his life. If it was, it stole on him unawares. These great turning-days of life cast no shadow before, slip by unconsciously. Only a trifle, a little turn of the rudder, and the ship goes to heaven or hell.

Wolfe, while Deborah watched him, dug into the furnace of melting iron with his pole, dully thinking only how many rails the lump would yield. It was late,

—nearly Sunday morning; another hour, and the heavy work would be done,—only the furnaces to replenish and cover for the next day. The workmen were growing more noisy, shouting, as they had to do, to be heard over the deep clamor of the mills. Suddenly they grew less boisterous,—at the far end, entirely silent. Something unusual had happened. After a moment, the silence came nearer; the men stopped their jeers and drunken choruses. Deborah, stupidly lifting up her head, saw the cause of the quiet. A group of five or six men were slowly approaching, stopping to examine each furnace as they came. Visitors often came to see the mills after night: except by growing less noisy, the men took no notice of them. The furnace where Wolfe worked was near the bounds of the works; they halted there hot and tired: a walk over one of these great foundries is no trifling task. The woman, drawing out of sight, turned over to sleep. Wolfe, seeing them stop, suddenly roused from his indifferent stupor, and watched them keenly. He knew some of them: the overseer, Clarke,—a son of Kirby, one of the mill-owners,—and a Doctor May, one of the town-physicians. The other two were strangers. Wolfe came closer. He seized eagerly every chance that brought him into contact with this mysterious class that shone down on him perpetually with the glamour of another order of being. What made the difference between them? That was the mystery of his life. He had a vague notion that perhaps to-night he could find it out. One of the strangers sat down on a pile of bricks, and beckoned young Kirby to his side.

"This is hot, with a vengeance. A match, please?"—lighting his cigar. "But the walk is worth the trouble. If it were not that you must have heard it so often, Kirby, I would tell you that your works look like Dante's Inferno."

Kirby laughed.

"Yes. Yonder is Farinata himself in the burning tomb,"—pointing to some figure in the shimmering shadows.

"Judging from some of the faces of your men," said the other, "they bid fair to try the reality of Dante's vision, some day."

Young Kirby looked curiously around, as if seeing the faces of his hands for the first time.

"They 're bad enough, that 's true. A desperate set, I fancy. Eh, Clarke?"

The overseer did not hear him. He was talking of net profits just then,—giving, in fact, a schedule of the annual business of the firm to a sharp peering little Yankee, who jotted down notes on a paper laid on the crown of his hat: a reporter for one of the city-papers, getting up a series of reviews of the leading manufactories. The other gentlemen had accompanied them merely for amusement. They were silent until the notes were finished, drying their feet at the furnaces, and sheltering their faces from the intolerable heat. At last the overseer concluded with—

"I believe that is a pretty fair estimate, Captain."

"Here, some of you men!" said Kirby, "bring up those boards. We may as well sit down, gentlemen, until the rain is over. It cannot last much longer at this rate."

"Pig-metal,"—mumbled the reporter,—"um!—coal facilities,—um!—hands employed, twelve hundred,—bitumen,—um!—all right, I believe, Mr. Clarke;—sinking-fund,—what did you say was your sinking-fund?"

"Twelve hundred hands?" said the stranger, the young man who had first spoken. "Do you control their votes, Kirby?"

"Control? No." The young man smiled complacently. "But my father brought seven hundred votes to the polls for his candidate last November. No force-work, you understand,—only a speech or two, a hint to form themselves into a society, and a bit of red and blue bunting to make them a flag. The Invincible Roughs,—I believe that is their name. I forget the motto: 'Our country's hope,' I think."

There was a laugh. The young man talking to Kirby sat with an amused light in his cool gray eye, surveying critically the half-clothed figures of the puddlers, and the slow swing of their brawny muscles. He was a stranger in the city,—spending a couple of months in the borders of a Slave State, to study the institutions of the South,—a brother-in-law of Kirby's,—Mitchell. He was an amateur gymnast,—hence his anatomical eye; a patron, in a *blasé* way, of the prize-ring; a man who sucked the essence out of a science or philosophy in an indifferent, gentlemanly way; who took Kant, Novalis, Humboldt, for what they were worth in his own scales; accepting all, despising nothing, in heaven, earth, or hell, but one-ideal men; with a temper yielding and brilliant as summer water, until his Self was touched, when it was ice, though brilliant still. Such men are not rare in the States.

As he knocked the ashes from his cigar, Wolfe caught with a quick pleasure the contour of the white hand, the blood-glow of a red ring he wore. His voice, too, and that of Kirby's, touched him like music,—low, even, with chording cadences. About this man Mitchell hung the impalpable atmosphere belonging to the thorough-bred gentleman. Wolfe, scraping away the ashes beside him, was conscious of it, did obeisance to it with his artist sense, unconscious that he did so.

The rain did not cease. Clarke and the reporter left the mills; the others, comfortably seated near the furnace, lingered, smoking and talking in a desultory way. Greek would not have been more unintelligible to the furnace-tenders, whose presence they soon forgot entirely. Kirby drew out a newspaper from his pocket and read aloud some article, which they discussed eagerly. At every sentence, Wolfe listened more and more like a dumb, hopeless animal, with a duller, more stolid look creeping over his face, glancing now and then at Mitchell, marking acutely every smallest sign of refinement, then back to himself, seeing

as in a mirror his filthy body, his more stained soul.

Never! He had no words for such a thought, but he knew now, in all the sharpness of the bitter certainty, that between them there was a great gulf never to be passed. Never!

The bell of the mills rang for midnight. Sunday morning had dawned. Whatever hidden message lay in the tolling bells floated past these men unknown. Yet it was there. Veiled in the solemn music ushering the risen Saviour was a key-note to solve the darkest secrets of a world gone wrong,—even this social riddle which the brain of the grimy puddler grappled with madly to-night.

The men began to withdraw the metal from the caldrons. The mills were deserted on Sundays, except by the hands who fed the fires, and those who had no lodgings and slept usually on the ash-heaps. The three strangers sat still during the next hour, watching the men cover the furnaces, laughing now and then at some jest of Kirby's.

"Do you know," said Mitchell, "I like this view of the works better than when the glare was fiercest? These heavy shadows and the amphitheatre of smothered fires are ghostly, unreal. One could fancy these red smouldering lights to be the half-shut eyes of wild beasts, and the spectral figures their victims in the den."

Kirby laughed. "You are fanciful. Come, let us get out of the den. The spectral figures, as you call them, are a little too real for me to fancy a close proximity in the darkness,—unarmed, too."

The others rose, buttoning their overcoats, and lighting cigars.

"Raining, still," said Doctor May, "and hard. Where did we leave the coach, Mitchell?"

"At the other side of the works.—Kirby, what 's that?"

Mitchell started back, half-frightened, as, suddenly turning a corner, the white figure of a woman faced him in the darkness,—a woman, white, of giant proportions, crouching on the ground, her arms

flung out in some wild gesture of warning.

"Stop! Make that fire burn there!" cried Kirby, stopping short.

The flame burst out, flashing the gaunt figure into bold relief.

Mitchell drew a long breath.

"I thought it was alive," he said, going up curiously.

The others followed.

"Not marble, eh?" asked Kirby, touching it.

One of the lower overseers stopped.

"Korl, Sir."

"Who did it?"

"Can't say. Some of the hands; chipped it out in off-hours."

"Chipped to some purpose, I should say. What a flesh-tint the stuff has! Do you see, Mitchell?"

"I see."

He had stepped aside where the light fell boldest on the figure, looking at it in silence. There was not one line of beauty or grace in it: a nude woman's form, muscular, grown coarse with labor, the powerful limbs instinct with some one poignant longing. One idea: there it was in the tense, rigid muscles, the clutching hands, the wild, eager face, like that of a starving wolf's. Kirby and Doctor May walked around it, critical, curious. Mitchell stood aloof, silent. The figure touched him strangely.

"Not badly done," said Doctor May. "Where did the fellow learn that sweep of the muscles in the arm and hand? Look at them! They are groping,—do you see?—clutching: the peculiar action of a man dying of thirst."

"They have ample facilities for studying anatomy," sneered Kirby, glancing at the half-naked figures.

"Look," continued the Doctor, "at this bony wrist, and the strained sinews of the instep! A working-woman,—the very type of her class."

"God forbid!" muttered Mitchell.

"Why?" demanded May. "What does the fellow intend by the figure? I cannot catch the meaning."

"Ask him," said the other, dryly.

"There he stands,"—pointing to Wolfe, who stood with a group of men, leaning on his ash-rake.

The Doctor beckoned him with the affable smile which kind-hearted men put on, when talking to these people.

"Mr. Mitchell has picked you out as the man who did this,—I'm sure I don't know why. But what did you mean by it?"

"She be hungry."

Wolfe's eyes answered Mitchell, not the Doctor.

"Oh-h! But what a mistake you have made, my fine fellow! You have given no sign of starvation to the body. It is strong,—terribly strong. It has the mad, half-despairing gesture of drowning."

Wolfe stammered, glanced appealingly at Mitchell, who saw the soul of the thing, he knew. But the cool, probing eyes were turned on himself now,—mocking, cruel, relentless.

"Not hungry for meat," the furnace-tender said at last.

"What then? Whiskey?" jeered Kirby, with a coarse laugh.

Wolfe was silent a moment, thinking.

"I dunno," he said, with a bewildered look. "It mebbe. Summat to make her live, I think,—like you. Whiskey ull do it, in a way."

The young man laughed again. Mitchell flashed a look of disgust somewhere,—not at Wolfe.

"May," he broke out impatiently, "are you blind? Look at that woman's face! It asks questions of God, and says, 'I have a right to know.' Good God, how hungry it is!"

They looked a moment; then May turned to the mill-owner:—

"Have you many such hands as this? What are you going to do with them? Keep them at puddling iron?"

Kirby shrugged his shoulders. Mitchell's look had irritated him.

"*Ce n'est pas mon affaire.* I have no fancy for nursing infant geniuses. I suppose there are some stray gleams of mind and soul among these wretches. The Lord will take care of his own; or else

they can work out their own salvation. I have heard you call our American system a ladder which any man can scale. Do you doubt it? Or perhaps you want to banish all social ladders, and put us all on a flat table-land,—eh, May?”

The Doctor looked vexed, puzzled. Some terrible problem lay hid in this woman's face, and troubled these men. Kirby waited for an answer, and, receiving none, went on, warming with his subject.

“I tell you, there 's something wrong that no talk of ‘*Liberté*’ or ‘*Egalité*’ will do away. If I had the making of men, these men who do the lowest part of the world's work should be machines,—nothing more,—hands. It would be kindness. God help them! What are taste, reason, to creatures who must live such lives as that?” He pointed to Deborah, sleeping on the ash-heap. “So many nerves to sting them to pain. What if God had put your brain, with all its agony of touch, into your fingers, and bid you work and strike with that?”

“You think you could govern the world better?” laughed the Doctor.

“I do not think at all.”

“That is true philosophy. Drift with the stream, because you cannot dive deep enough to find bottom, eh?”

“Exactly,” rejoined Kirby. “I do not think. I wash my hands of all social problems,—slavery, caste, white or black. My duty to my operatives has a narrow limit,—the pay-hour on Saturday night. Outside of that, if they cut korn, or cut each other's throats, (the more popular amusement of the two,) I am not responsible.”

The Doctor sighed,—a good honest sigh, from the depths of his stomach.

“God help us! Who is responsible?”

“Not I, I tell you,” said Kirby, testily. “What has the man who pays them money to do with their souls’ concerns, more than the grocer or butcher who takes it?”

“And yet,” said Mitchell's cynical voice, “look at her! How hungry she is!”

Kirby tapped his boot with his cane.

No one spoke. Only the dumb face of the rough image looking into their faces with the awful question, “What shall we do to be saved?” Only Wolfe's face, with its heavy weight of brain, its weak, uncertain mouth, its desperate eyes, out of which looked the soul of his class,—only Wolfe's face turned towards Kirby's. Mitchell laughed,—a cool, musical laugh.

“Money has spoken!” he said, seating himself lightly on a stone with the air of an amused spectator at a play. “Are you answered?”—turning to Wolfe his clear, magnetic face.

Bright and deep and cold as Arctic air, the soul of the man lay tranquil beneath. He looked at the furnace-tender as he had looked at a rare mosaic in the morning; only the man was the more amusing study of the two.

“Are you answered? Why, May, look at him! ‘*De profundis clamavi.*’ Or, to quote in English, ‘Hungry and thirsty, his soul faints in him.’ And so Money sends back its answer into the depths through you, Kirby! Very clear the answer, too!—I think I remember reading the same words somewhere:—washing your hands in Eau de Cologne, and saying, ‘I am innocent of the blood of this man. See ye to it!’”

Kirby flushed angrily.

“You quote Scripture freely.”

“Do I not quote correctly? I think I remember another line, which may amend my meaning: ‘Inasmuch as ye did it unto one of the least of these, ye did it unto me.’ Deist? Bless you, man, I was raised on the milk of the Word. Now, Doctor, the pocket of the world having uttered its voice, what has the heart to say? You are a philanthropist, in a small way,—*n'est ce pas?* Here, boy, this gentleman can show you how to cut korn better,—or your destiny. Go on, May!”

“I think a mocking devil possesses you to-night,” rejoined the Doctor, seriously.

He went to Wolfe and put his hand kindly on his arm. Something of a vague idea possessed the Doctor's brain that much good was to be done here by a

friendly word or two: a latent genius to be warmed into life by a waited-for sunbeam. Here it was: he had brought it. So he went on complacently:—

"Do you know, boy, you have it in you to be a great sculptor, a great man?—do you understand?" (talking down to the capacity of his hearer: it is a way people have with children, and men like Wolfe,)—"to live a better, stronger life than I, or Mr. Kirby here? A man may make himself anything he chooses. God has given you stronger powers than many men,—me, for instance."

May stopped, heated, glowing with his own magnanimity. And it was magnanimous. The puddler had drunk in every word, looking through the Doctor's flurry, and generous heat, and self-approval, into his will, with those slow, absorbing eyes of his.

"Make yourself what you will. It is your right."

"I know," quietly. "Will you help me?"

Mitchell laughed again. The Doctor turned now, in a passion,—

"You know, Mitchell, I have not the means. You know, if I had, it is in my heart to take this boy and educate him for"—

"The glory of God, and the glory of John May."

May did not speak for a moment; then, controlled, he said,—

"Why should one be raised, when myriads are left?—I have not the money, boy," to Wolfe, shortly.

"Money?" He said it over slowly, as one repeats the guessed answer to a riddle, doubtfully. "That is it? Money?"

"Yes, money,—that is it," said Mitchell, rising, and drawing his furred coat about him. "You've found the cure for all the world's diseases.—Come, May, find your good-humor, and come home. This damp wind chills my very bones. Come and preach your Saint-Simonian doctrines to-morrow to Kirby's hands. Let them have a clear idea of the rights of the soul, and I'll venture next week they'll

strike for higher wages. That will be the end of it."

"Will you send the coach-driver to this side of the mills?" asked Kirby, turning to Wolfe.

He spoke kindly: it was his habit to do so. Deborah, seeing the puddler go, crept after him. The three men waited outside. Doctor May walked up and down, chafed. Suddenly he stopped.

"Go back, Mitchell! You say the pocket and the heart of the world speak without meaning to these people. What has its head to say? Taste, culture, refinement? Go!"

Mitchell was leaning against a brick wall. He turned his head indolently, and looked into the mills. There hung about the place a thick, unclean odor. The slightest motion of his hand marked that he perceived it, and his insufferable disgust. That was all. May said nothing, only quickened his angry tramp.

"Besides," added Mitchell, giving a corollary to his answer, "it would be of no use. I am not one of them."

"You do not mean"—said May, facing him.

"Yes, I mean just that. Reform is born of need, not pity. No vital movement of the people's has worked down, for good or evil; fermented, instead, carried up the heaving, cloggy mass. Think back through history, and you will know it. What will this lowest deep—thieves, Magdalens, negroes—do with the light filtered through ponderous Church creeds, Baconian theories, Goetheschemes? Some day, out of their bitter need will be thrown up their own light-bringer,—their Jean Paul, their Cromwell, their Messiah."

"Bah!" was the Doctor's inward criticism. However, in practice, he adopted the theory; for, when, night and morning, afterwards, he prayed that power might be given these degraded souls to rise, he glowed at heart, recognizing an accomplished duty.

Wolfe and the woman had stood in the shadow of the works as the coach drove off. The Doctor had held out his hand in a frank, generous way, telling him to

"take care of himself, and to remember it was his right to rise." Mitchell had simply touched his hat, as to an equal, with a quiet look of thorough recognition. Kirby had thrown Deborah some money, which she found, and clutched eagerly enough. They were gone now, all of them. The man sat down on the cinder-road, looking up into the murky sky.

"'T be late, Hugh. Wunnot hur come?"

He shook his head doggedly, and the woman crouched out of his sight against the wall. Do you remember rare moments when a sudden light flashed over yourself, your world, God? when you stood on a mountain-peak, seeing your life as it might have been, as it is? one quick instant, when custom lost its force and every-day usage? when your friend, wife, brother, stood in a new light? your soul was bared, and the grave,—a foretaste of the nakedness of the Judgment-Day? So it came before him, his life, that night. The slow tides of pain he had borne gathered themselves up and surged against his soul. His squalid daily life, the brutal coarseness eating into his brain, as the ashes into his skin: before, these things had been a dull aching into his consciousness; to-night, they were reality. He griped the filthy red shirt that clung, stiff with soot, about him, and tore it savagely from his arm. The flesh beneath was muddy with grease and ashes, —and the heart beneath that! And the soul? God knows.

Then flashed before his vivid poetic sense the man who had left him,—the pure face, the delicate, sinewy limbs, in harmony with all he knew of beauty or truth. In his cloudy fancy he had pictured a Something like this. He had found it in this Mitchell, even when he idly scoffed at his pain: a Man all-knowing, all-seeing, crowned by Nature, reigning,—the keen glance of his eye falling like a sceptre on other men. And yet his instinct taught him that he too — He! He looked at himself with sudden loathing, sick, wrung his hands with a cry, and then was silent. With all the phan-

toms of his heated, ignorant fancy, Wolfe had not been vague in his ambitions. They were practical, slowly built up before him out of his knowledge of what he could do. Through years he had day by day made this hope a real thing to himself,—a clear, projected figure of himself, as he might become.

Able to speak, to know what was best, to raise these men and women working at his side up with him: sometimes he forgot this defined hope in the frantic anguish to escape,—only to escape,—out of the wet, the pain, the ashes, somewhere, anywhere,—only for one moment of free air on a hill-side, to lie down and let his sick soul throb itself out in the sunshine. But to-night he panted for life. The savage strength of his nature was roused; his cry was fierce to God for justice.

"Look at me!" he said to Deborah, with a low, bitter laugh, striking his puny chest savagely. "What am I worth, Deb? Is it my fault that I am no better? My fault? My fault?"

He stopped, stung with a sudden remorse, seeing her hunchback shape writhing with sobs. For Deborah was crying thankless tears, according to the fashion of women.

"God forgi' me, woman! Things go harder wi' you nor me. It 's a worse share."

He got up and helped her to rise; and they went doggedly down the muddy street, side by side.

"It 's all wrong," he muttered, slowly, —"all wrong! I dunnot understan'. But it 'll end some day."

"Come home, Hugh!" she said, coaxingly; for he had stopped, looking around bewildered.

"Home,—and back to the mill!" He went on saying this over to himself, as if he would mutter down every pain in this dull despair.

She followed him through the fog, her blue lips chattering with cold. They reached the cellar at last. Old Wolfe had been drinking since she went out, and had crept nearer the door. The

girl Janey slept heavily in the corner. He went up to her, touching softly the worn white arm with his fingers. Some bitterer thought stung him, as he stood there. He wiped the drops from his forehead, and went into the room beyond, livid, trembling. A hope, trifling, perhaps, but very dear, had died just then out of the poor puddler's life, as he looked at the sleeping, innocent girl,—some plan for the future, in which she had borne a part. He gave it up that moment, then and forever. Only a trifle, perhaps, to us: his face grew a shade paler,—that was all. But, somehow, the man's soul, as God and the angels looked down on it, never was the same afterwards.

Deborah followed him into the inner room. She carried a candle, which she placed on the floor, closing the door after her. She had seen the look on his face, as he turned away: her own grew deadly. Yet, as she came up to him, her eyes glowed. He was seated on an old chest, quiet, holding his face in his hands.

"Hugh!" she said, softly.

He did not speak.

"Hugh, did hur hear what the man said,—him with the clear voice? Did hur hear? Money, money,—that it wud do all?"

He pushed her away,—gently, but he was worn out; her rasping tone fretted him.

"Hugh!"

The candle flared a pale yellow light over the cobwebbed brick walls, and the woman standing there. He looked at her. She was young, in deadly earnest; her faded eyes, and wet, ragged figure caught from their frantic eagerness a power akin to beauty.

"Hugh, it is true! Money ull do it! Oh, Hugh, boy, listen till me! He said it true! It is money!"

"I know. Go back! I do not want you here."

"Hugh, it is t' last time. I'll never worrit hur again."

There were tears in her voice now, but she choked them back.

"Hear till me only to-night! If one of t' witch people wud come, them we heard of t' home, and gif hur all hur wants, what then? Say, Hugh!"

"What do you mean?"

"I mean money."

Her whisper shrilled through his brain.

"If one of t' witch dwarfs wud come from t' lane moors to-night, and gif hur money, to go out,—out, I say,—out, lad, where t' sun shines, and t' heath grows, and t' ladies walk in silken gownds, and God stays all t' time,—where t' man lives that talked to us to-night,—Hugh knows,—Hugh could walk there like a king!"

He thought the woman mad, tried to check her, but she went on, fierce in her eager haste.

"If I were t' witch dwarf, if I had t' money, wud hur thank me? Wud hur take me out o' this place wid hur and Janey? I wud not come into the gran' house hur wud build, to vex hur wid t' hunch,—only at night, when t' shadows were dark, stand far off to see hur."

Mad? Yes! Are many of us mad in this way?

"Poor Deb! poor Deb!" he said, soothingly.

"It is here," she said, suddenly jerking into his hand a small roll. "I took it! I did it! Me, me!—not hur! I shall be hanged, I shall be burnt in hell, if anybody knows I took it! Out of his pocket, as he leaned against t' bricks. Hur knows?"

She thrust it into his hand, and then, her errand done, began to gather chips together to make a fire, choking down hysteric sobs.

"Has it come to this?"

That was all he said. The Welsh Wolfe blood was honest. The roll was a small green pocket-book containing one or two gold pieces, and a check for an incredible amount, as it seemed to the poor puddler. He laid it down, hiding his face again in his hands.

"Hugh, don't be angry wud me! It's only poor Deb,—hur knows?"

He took the long skinny fingers kindly in his.

"Angry? God help me, no! Let me sleep. I am tired."

He threw himself heavily down on the wooden bench, stunned with pain and weariness. She brought some old rags to cover him.

It was late on Sunday evening before he awoke. I tell God's truth, when I say he had then no thought of keeping this money. Deborah had hid it in his pocket. He found it there. She watched him eagerly, as he took it out.

"I must gif it to him," he said, reading her face.

"Hur knows," she said with a bitter sigh of disappointment. "But it is hur right to keep it."

His right! The word struck him. Doctor May had used the same. He washed himself, and went out to find this man Mitchell. His right! Why did this chance word cling to him so obstinately? Do you hear the fierce devils whisper in his ear, as he went slowly down the darkening street?

The evening came on, slow and calm. He seated himself at the end of an alley leading into one of the larger streets. His brain was clear to-night, keen, intent, mastering. It would not start back, cowardly, from any hellish temptation, but meet it face to face. Therefore the great temptation of his life came to him veiled by no sophistry, but bold, defiant, owning its own vile name, trusting to one bold blow for victory.

He did not deceive himself. Theft! That was it. At first the word sickened him; then he grappled with it. Sitting there on a broken cart-wheel, the fading day, the noisy groups, the church-bells' tolling passed before him like a panorama, while the sharp struggle went on within. This money! He took it out, and looked at it. If he gave it back, what then? He was going to be cool about it.

People going by to church saw only a sickly mill-boy watching them quietly at the alley's mouth. They did not know that he was mad, or they would not have gone by so quietly: mad with hunger; stretch-

ing out his hands to the world, that had given so much to them, for leave to live the life God meant him to live. His soul within him was smothering to death; he wanted so much, thought so much, and *knew*—nothing. There was nothing of which he was certain, except the mill and things there. Of God and heaven he had heard so little, that they were to him what fairy-land is to a child: something real, but not here; very far off. His brain, greedy, dwarfed, full of thwarted energy and unused powers, questioned these men and women going by, coldly, bitterly, that night. Was it not his right to live as they,—a pure life, a good, true-hearted life, full of beauty and kind words? He only wanted to know how to use the strength within him. His heart warmed, as he thought of it. He suffered himself to think of it longer. If he took the money?

Then he saw himself as he might be, strong, helpful, kindly. The night crept on, as this one image slowly evolved itself from the crowd of other thoughts and stood triumphant. He looked at it. As he might be! What wonder, if it blinded him to delirium,—the madness that underlies all revolution, all progress, and all fall?

You laugh at the shallow temptation? You see the error underlying its argument so clearly,—that to him a true life was one of full development rather than self-restraint? that he was deaf to the higher tone in a cry of voluntary suffering for truth's sake than in the fullest flow of spontaneous harmony? I do not plead his cause. I only want to show you the mote in my brother's eye: then you can see clearly to take it out.

The money,—there it lay on his knee, a little blotted slip of paper, nothing in itself; used to raise him out of the pit; something straight from God's hand. A thief! Well, what was it to be a thief? He met the question at last, face to face, wiping the clammy drops of sweat from his forehead. God made this money—the fresh air, too—for his children's use. He never made the difference between

poor and rich. The Something who looked down on him that moment through the cool gray sky had a kindly face, he knew,—loved his children alike. Oh, he knew that!

There were times when the soft floods of color in the crimson and purple flames, or the clear depth of amber in the water below the bridge, had somehow given him a glimpse of another world than this,—of an infinite depth of beauty and of quiet somewhere,—somewhere,—a depth of quiet and rest and love. Looking up now, it became strangely real. The sun had sunk quite below the hills, but his last rays struck upward, touching the zenith. The fog had risen, and the town and river were steeped in its thick, gray damp; but overhead, the sun-touched smoke-clouds opened like a cleft ocean,—shifting, rolling seas of crimson mist, waves of billowy silver veined with blood-scarlet, inner depths unfathomable of glancing light. Wolfe's artist-eye grew drunk with color. The gates of that other world! Fading, flashing before him now! What, in that world of Beauty, Content, and Right, were the petty laws, the mine and thine, of mill-owners and mill-hands?

A consciousness of power stirred within him. He stood up. A man,—he thought, stretching out his hands,—free to work, to live, to love! Free! His right! He folded the scrap of paper in his hand. As his nervous fingers took it in, limp and blotted, so his soul took in the mean temptation, lapped it in fancied rights, in dreams of improved existences, drifting and endless as the cloud-seas of color. Clutching it, as if the tightness of his hold would strengthen his sense of possession, he went aimlessly down the street. It was his watch at the mill. He need not go, need never go again, thank God!—shaking off the thought with unspeakable loathing.

Shall I go over the history of the hours of that night? how the man wandered from one to another of his old haunts, with a half-consciousness of bidding them farewell,—lanes and alleys and back-

yards where the mill-hands lodged,—noting, with a new eagerness, the filth and drunkenness, the pig-pens, the ash-heaps covered with potato-skins, the bloated, pimpled women at the doors,—with a new disgust, a new sense of sudden triumph, and, under all, a new, vague dread, unknown before, smothered down, kept under, but still there? It left him but once during the night, when, for the second time in his life, he entered a church. It was a sombre Gothic pile, where the stained light lost itself in far-retreating arches; built to meet the requirements and sympathies of a far other class than Wolfe's. Yet it touched, moved him uncontrollably. The distances, the shadows, the still, marble figures, the mass of silent kneeling worshippers, the mysterious music, thrilled, lifted his soul with a wonderful pain. Wolfe forgot himself, forgot the new life he was going to live, the mean terror gnawing underneath. The voice of the speaker strengthened the charm; it was clear, feeling, full, strong. An old man, who had lived much, suffered much; whose brain was keenly alive, dominant; whose heart was summer-warm with charity. He taught it to-night. He held up Humanity in its grand total; showed the great world-cancer to his people. Who could show it better? He was a Christian reformer; he had studied the age thoroughly; his outlook at man had been free, world-wide, over all time. His faith stood sublime upon the Rock of Ages; his fiery zeal guided vast schemes by which the gospel was to be preached to all nations. How did he preach it to-night? In burning, light-laden words he painted the incarnate Life, Love, the universal Man: words that became reality in the lives of these people,—that lived again in beautiful words and actions, trifling, but heroic. Sin, as he defied it, was a real foe to them; their trials, temptations, were his. His words passed far over the furnace-tender's grasp, toned to suit another class of culture; they sounded in his ears a very pleasant song in an unknown tongue. He meant to cure this world-

cancer with a steady eye that had never glared with hunger, and a hand that neither poverty nor strychnine-whiskey had taught to shake. In this morbid, distorted heart of the Welsh puddler he had failed.

Wolfe rose at last, and turned from the church down the street. He looked up; the night had come on foggy, damp; the golden mists had vanished, and the sky lay dull and ash-colored. He wandered again aimlessly down the street, idly wondering what had become of the cloud-sea of crimson and scarlet. The trial-day of this man's life was over, and he had lost the victory. What followed was mere drifting circumstance,—a quicker walking over the path,—that was all. Do you want to hear the end of it? You wish me to make a tragic story out of it? Why, in the police-reports of the morning paper you can find a dozen such tragedies: hints of shipwrecks unlike any that ever befell on the high seas; hints that here a power was lost to heaven,—that there a soul went down where no tide can ebb or flow. Commonplace enough the hints are,—jocose sometimes, done up in rhyme.

Doctor May, a month after the night I have told you of, was reading to his wife at breakfast from this fourth column of the morning-paper: an unusual thing,—these police-reports not being, in general, choice reading for ladies; but it was only one item he read.

"Oh, my dear! You remember that man I told you of, that we saw at Kirby's mill?—that was arrested for robbing Mitchell? Here he is; just listen:—*'Circuit Court. Judge Day. Hugh Wolfe, operative in Kirby & John's Loudon Mills. Charge, grand larceny. Sentence, nineteen years hard labor in penitentiary.'*—Scoundrel! Serves him right! After all our kindness that night! Picking Mitchell's pocket at the very time!"

His wife said something about the ingratitude of that kind of people, and then they began to talk of something else.

Nineteen years! How easy that was to read! What a simple word for Judge

Day to utter! Nineteen years! Half a lifetime!

Hugh Wolfe sat on the window-ledge of his cell, looking out. His ankles were ironed. Not usual in such cases; but he had made two desperate efforts to escape. "Well," as Haley, the jailer, said, "small blame to him! Nineteen years' imprisonment was not a pleasant thing to look forward to." Haley was very good-natured about it, though Wolfe had fought him savagely.

"When he was first caught," the jailer said afterwards, in telling the story, "before the trial, the fellow was cut down at once,—laid there on that pallet like a dead man, with his hands over his eyes. Never saw a man so cut down in my life. Time of the trial, too, came the queerest dodge of any customer I ever had. Would choose no lawyer. Judge gave him one, of course. Gibson it was. He tried to prove the fellow crazy; but it wouldn't go. Thing was plain as daylight: money found on him. 'T was a hard sentence,—all the law allows; but it was for 'xample's sake. These mill-hands are gettin' unbearable. When the sentence was read, he just looked up, and said the money was his by rights, and that all the world had gone wrong. That night, after the trial, a gentleman came to see him here, name of Mitchell,—him as he stole from. Talked to him for an hour. Thought he came for curiosity, like. After he was gone, thought Wolfe was remarkable quiet, and went into his cell. Found him very low; bed all bloody. Doctor said he had been bleeding at the lungs. He was as weak as a cat; yet, if ye'll b'lieve me, he tried to get a-past me and get out. I just carried him like a baby, and threw him on the pallet. Three days after, he tried it again: that time reached the wall. Lord help you! he fought like a tiger,—giv' some terrible blows. Fightin' for life, you see; for he can't live long, shut up in the stone crib down yonder. Got a death-cough now. 'T took two of us to bring him down that day; so I just put the irons on his feet. There he sits, in

there. Goin' to-morrow, with a batch more of 'em. That woman, hunchback, tried with him,—you remember?—she's only got three years. 'Complice. But *she's* a woman, you know. He's been quiet ever since I put on irons: giv' up, I suppose. Looks white, sick-lookin'. It acts different on 'em, bein' sentenced. Most of 'em gets reckless, devilish-like. Some prays awful, and sings them vile songs of the mills, all in a breath. That woman, now, she's desper't. Been beggin' to see Hugh, as she calls him, for three days. I'm a-goin' to let her in. She don't go with him. Here she is in this next cell. I'm a-goin' now to let her in."

He let her in. Wolfe did not see her. She crept into a corner of the cell, and stood watching him. He was scratching the iron bars of the window with a piece of tin which he had picked up, with an idle, uncertain, vacant stare, just as a child or idiot would do.

"Tryin' to get out, old boy?" laughed Haley. "Them irons will need a crow-bar beside your tin, before you can open 'em."

Wolfe laughed, too, in a senseless way.

"I think I'll get out," he said.

"I believe his brain's touched," said Haley, when he came out.

The puddler scraped away with the tin for half an hour. Still Deborah did not speak. At last she ventured nearer, and touched his arm.

"Blood?" she said, looking at some spots on his coat with a shudder.

He looked up at her. "Why, Deb!" he said, smiling,—such a bright, boyish smile, that it went to poor Deborah's heart directly, and she sobbed and cried out loud.

"Oh, Hugh, lad! Hugh! dunnot look at me, when it wur my fault! To think I brought hur to it! And I loved hur so! Oh, lad, I dud!"

The confession, even in this wretch, came with the woman's blush through the sharp cry.

He did not seem to hear her,—scraping away diligently at the bars with the bit of tin.

Was he going mad? She peered closely into his face. Something she saw there made her draw suddenly back,—something which Haley had not seen, that lay beneath the pinched, vacant look it had caught since the trial, or the curious gray shadow that rested on it. That gray shadow,—yes, she knew what that meant. She had often seen it creeping over women's faces for months, who died at last of slow hunger or consumption. That meant death, distant, lingering: but this — Whatever it was the woman saw, or thought she saw, used as she was to crime and misery, seemed to make her sick with a new horror. Forgetting her fear of him, she caught his shoulders, and looked keenly, steadily, into his eyes.

"Hugh!" she cried, in a desperate whisper,—“oh, boy, not that! for God's sake, not *that*!”

The vacant laugh went off his face, and he answered her in a muttered word or two that drove her away. Yet the words were kindly enough. Sitting there on his pallet, she cried silently a hopeless sort of tears, but did not speak again. The man looked up furtively at her now and then. Whatever his own trouble was, her distress vexed him with a momentary sting.

It was market-day. The narrow window of the jail looked down directly on the carts and wagons drawn up in a long line, where they had unloaded. ~~She~~ She could see, too, and hear distinctly the clink of money as it changed hands, the busy crowd of whites and blacks shoving, pushing one another, and the chaffering and swearing at the stalls. Somehow, the sound, more than anything else had done, wakened him up,—made the whole real to him. He was done with the world and the business of it. He let the tin fall, and looked out, pressing his face close to the rusty bars. How they crowded and pushed! And he,—he should never walk that pavement again! There came Neff Sanders, one of the feeders at the mill, with a basket on his arm. Sure enough, Neff was married the other

week. He whistled, hoping he would look up; but he did not. He wondered if Neff remembered he was there,—if any of the boys thought of him up there, and thought that he never was to go down that old cinder-road again. Never again! He had not quite understood it before; but now he did. Not for days or years, but never!—that was it.

How clear the light fell on that stall in front of the market! and how like a picture it was, the dark-green heaps of corn, and the crimson beets, and golden melons! There was another with game: how the light flickered on that pheasant's breast, with the purplish blood dripping over the brown feathers! He could see the red shining of the drops, it was so near. In one minute he could be down there. It was just a step. So easy, as it seemed, so natural to go! Yet it could never be—not in all the thousands of years to come—that he should put his foot on that street again! He thought of himself with a sorrowful pity, as of some one else. There was a dog down in the market, walking after his master with such a stately, grave look!—only a dog, yet he could go backwards and forwards just as he pleased: he had good luck! Why, the very vilest cur, yelping there in the gutter, had not lived his life, had been free to act out whatever thought God had put into his brain; while he—No, he would not think of that! He tried to put the thought away, and to listen to a dispute between a countryman and a woman about some meat; but it would come back. He, what had he done to bear this?

Then came the sudden picture of what might have been, and now. He knew what it was to be in the penitentiary,—how it went with men there. He knew how in these long years he should slowly die, but not until soul and body had become corrupt and rotten,—how, when he came out, if he lived to come, even the lowest of the mill-hands would jeer him,—how his hands would be weak, and his brain senseless and stupid. He believed he was almost that now. He put his hand

to his head, with a puzzled, weary look. It ached, his head, with thinking. He tried to quiet himself. It was only right, perhaps; he had done wrong. But was there right or wrong for such as he? What was right? And who had ever taught him? He thrust the whole matter away. A dark, cold quiet crept through his brain. It was all wrong; but let it be! It was nothing to him more than the others. Let it be!

The door grated, as Haley opened it.

"Come, my woman! Must look up for t' night. Come, stir yerself!"

She went up and took Hugh's hand.

"Good-night, Deb," he said, carelessly.

She had not hoped he would say more; but the tired pain on her mouth just then was bitterer than death. She took his passive hand and kissed it.

"Hur 'll never see Deb again!" she ventured, her lips growing colder and more bloodless.

What did she say that for? Did he not know it? Yet he would not be impatient with poor old Deb. She had trouble of her own, as well as he.

"No, never again," he said, trying to be cheerful.

She stood just a moment, looking at him. Do you laugh at her, standing there, with her hunchback, her rags, her bleared, withered face, and the great despised love tugging at her heart?

"Come, you!" called Haley, impatiently.

She did not move.

"Hugh!" she whispered.

It was to be her last word. What was it?

"Hugh, boy, not THAT!"

He did not answer. She wrung her hands, trying to be silent, looking in his face in an agony of entreaty. He smiled again, kindly.

"It is best, Deb. I cannot bear to be hurted any more."

"Hur knows," she said, humbly.

"Tell my father good-bye; and—and kiss little Janey."

She nodded, saying nothing, looked in

his face again, and went out of the door. As she went, she staggered.

"Drinkin' to-day?" broke out Haley, pushing her before him. "Where the Devil did you get it? Here, in with ye!" and he shoved her into her cell, next to Wolfe's, and shut the door.

Along the wall of her cell there was a crack low down by the floor, through which she could see the light from Wolfe's. She had discovered it days before. She hurried in now, and, kneeling down by it, listened, hoping to hear some sound. Nothing but the rasping of the tin on the bars. He was at his old amusement again. Something in the noise jarred on her ear, for she shivered as she heard it. Hugh rasped away at the bars. A dull old bit of tin, not fit to cut korn with.

He looked out of the window again. People were leaving the market now. A tall mulatto girl, following her mistress, her basket on her head, crossed the street just below, and looked up. She was laughing; but, when she caught sight of the haggard face peering out through the bars, suddenly grew grave, and hurried by. A free, firm step, a clear-cut olive face, with a scarlet turban tied on one side, dark, shining eyes, and on the head the basket poised, filled with fruit and flowers, under which the scarlet turban and bright eyes looked out half-shadowed. The picture caught his eye. It was good to see a face like that. He would try to-morrow, and cut one like it. *To-morrow!* He threw down the tin, trembling, and covered his face with his hands. When he looked up again, the daylight was gone.

Deborah, crouching near by on the other side of the wall, heard no noise. He sat on the side of the low pallet, thinking. Whatever was the mystery which the woman had seen on his face; it came out now slowly, in the dark there, and became fixed,—a something never seen on his face before. The evening was darkening fast. The market had been over for an hour; the rumbling of the carts over the pavement grew more infrequent: he listened

to each, as it passed, because he thought it was to be for the last time. For the same reason, it was, I suppose, that he strained his eyes to catch a glimpse of each passer-by, wondering who they were, what kind of homes they were going to, if they had children,—listening eagerly to every chance word in the street, as if — (God be merciful to the man! what strange fancy was this?) — as if he never should hear human voices again.

It was quite dark at last. The street was a lonely one. The last passenger, he thought, was gone. No,—there was a quick step: Joe Hill, lighting the lamps. Joe was a good old chap; never passed a fellow without some joke or other. He remembered once seeing the place where he lived with his wife. "Granny Hill" the boys called her. Bedridden she was; but so kind as Joe was to her! kept the room so clean! — and the old woman, when he was there, was laughing at "some of t' lad's foolishness." The step was far down the street; but he could see him place the ladder, run up, and light the gas. A longing seized him to be spoken to once more.

"Joe!" he called, out of the grating. "Good-bye, Joe!"

The old man stopped a moment, listening uncertainly; then hurried on. The prisoner thrust his hand out of the window, and called again, louder; but Joe was too far down the street. It was a little thing; but it hurt him,—this disappointment.

"Good-bye, Joe!" he called, sorrowfully enough.

"Be quiet!" said one of the jailers, passing the door, striking on it with his club.

Oh, that was the last, was it?

There was an inexpressible bitterness on his face, as he lay down on the bed, taking the bit of tin, which he had rasped to a tolerable degree of sharpness, in his hand,—to play with, it may be. He bared his arms, looking intently at their corded veins and sinews. Deborah, listening in the next cell, heard a slight clicking sound, often repeated. She shut

her lips tightly, that she might not scream; the cold drops of sweat broke over her, in her dumb agony.

"Hur knows best," she muttered at last, fiercely clutching the boards where she lay.

If she could have seen Wolfe, there was nothing about him to frighten her. He lay quite still, his arms outstretched, looking at the pearly stream of moonlight coming into the window. I think in that one hour that came then he lived back over all the years that had gone before. I think that all the low, vile life, all his wrongs, all his starved hopes, came then, and stung him with a farewell poison that made him sick unto death. He made neither moan nor cry, only turned his worn face now and then to the pure light, that seemed so far off, as one that said, "How long, O Lord? how long?"

The hour was over at last. The moon, passing over her nightly path, slowly came nearer, and threw the light across his bed on his feet. He watched it steadily, as it crept up, inch by inch, slowly. It seemed to him to carry with it a great silence. He had been so hot and tired there always in the mills! The years had been so fierce and cruel! There was coming now quiet and coolness and sleep. His tense limbs relaxed, and settled in a calm languor. The blood ran fainter and slow from his heart. He did not think now with a savage anger of what might be and was not; he was conscious only of deep stillness creeping over him. At first he saw a sea of faces: the mill-men, — women he had known, drunken and bloated, — Janeys timid and pitiful, — poor old Debs: then they floated together like a mist, and faded away, leaving only the clear, pearly moonlight.

Whether, as the pure light crept up the stretched-out figure, it brought with it calm and peace, who shall say? His dumb soul was alone with God in judgment. A Voice may have spoken for it from far-off Calvary, "Father, forgive them, for they know not what they do!" Who dare say? Fainter and fainter the heart rose and fell, slower and slower

the moon floated from behind a cloud, until, when at last its full tide of white splendor swept over the cell, it seemed to wrap and fold into a deeper stillness the dead figure that never should move again. Silence deeper than the Night! Nothing that moved, save the black, nauseous stream of blood dripping slowly from the pallet to the floor!

There was outcry and crowd enough in the cell the next day. The coroner and his jury, the local editors, Kirby himself, and boys with their hands thrust knowingly into their pockets and heads on one side, jammed into the corners. Coming and going all day. Only one woman. She came late, and outstayed them all. A Quaker, or Friend, as they call themselves. I think this woman was known by that name in heaven. A homely body, coarsely dressed in gray and white. Deborah (for Haley had let her in) took notice of her. She watched them all — sitting on the end of the pallet, holding his head in her arms — with the ferocity of a watch-dog, if any of them touched the body. There was no meekness, sorrow, in her face; the stuff out which murderers are made, instead. All the time Haley and the woman were laying straight the limbs and cleaning the cell, Deborah sat still, keenly watching the Quaker's face. Of all the crowd there that day, this woman alone had not spoken to her, — only once or twice had put some cordial to her lips. After they all were gone, the woman, in the same still, gentle way, brought a vase of wood-leaves and berries, and placed it by the pallet, then opened the narrow window. The fresh air blew in, and swept the woody fragrance over the dead face. Deborah looked up with a quick wonder.

"Did hur know my boy wud like it? Did hur know Hugh?"

"I know Hugh now."

The white fingers passed in a slow, pitiful way over the dead, worn face. There was a heavy shadow in the quiet eyes.

"Did hur know where they 'll bury Hugh?" said Deborah in a shrill tone, catching her arm.

This had been the question hanging on her lips all day.

"In t' town-yard? Under t' mud and ash? T' lad 'll smother, woman! He wur born on t' lane moor, where t' air is frick and strong. Take hur out, for God's sake, take hur out where t' air blows!"

The Quaker hesitated, but only for a moment. She put her strong arm around Deborah and led her to the window.

"Thee sees the hills, friend, over the river? Thee sees how the light lies warm there, and the winds of God blow all the day? I live there,—where the blue smoke is, by the trees. Look at me." She turned Deborah's face to her own, clear and earnest. "Thee will believe me? I will take Hugh and bury him there to-morrow."

Deborah did not doubt her. As the evening wore on, she leaned against the iron bars, looking at the hills that rose far off, through the thick sodden clouds, like a bright, unattainable calm. As she looked, a shadow of their solemn repose fell on her face: its fierce discontent faded into a pitiful, humble quiet. Slow, solemn tears gathered in her eyes: the poor weak eyes turned so hopelessly to the place where Hugh was to rest, the grave heights looking higher and brighter and more solemn than ever before. The Quaker watched her keenly. She came to her at last, and touched her arm.

"When thee comes back," she said, in a low, sorrowful tone, like one who speaks from a strong heart deeply moved with remorse or pity, "thee shall begin thy life again,—there on the hills. I came too late; but not for thee,—by God's help, it may be."

Not too late. Three years after, the Quaker began her work. I end my story here. At evening-time it was light. There is no need to tire you with the long years of sunshine, and fresh air, and slow, patient Christ-love, needed to make healthy and hopeful this impure body and soul. There is a homely pine house, on one of these hills, whose win-

dows overlook broad, wooded slopes and clover-crimsoned meadows,—nched into the very place where the light is warmest, the air freest. It is the Friends' meeting-house. Once a week they sit there, in their grave, earnest way, waiting for the Spirit of Love to speak, opening their simple hearts to receive His words. There is a woman, old, deformed, who takes a humble place among them: waiting like them: in her gray dress, her worn face, pure and meek, turned now and then to the sky. A woman much loved by these silent, restless people; more silent than they, more humble, more loving. Waiting: with her eyes turned to hills higher and purer than these on which she lives,—dim and far off now, but to be reached some day. There may be in her heart some latent hope to meet there the love denied her here,—that she shall find him whom she lost, and that then she will not be all-unworthy. Who blames her? Something is lost in the passage of every soul from one eternity to the other,—something pure and beautiful, which might have been and was not: a hope, a talent, a love, over which the soul mourns, like Esau deprived of his birthright. What blame to the meek Quaker, if she took her lost hope to make the hills of heaven more fair?

Nothing remains to tell that the poor Welsh puddler once lived, but this figure of the mill-woman cut in korl. I have it here in a corner of my library. I keep it hid behind a curtain,—it is such a rough, ungainly thing. Yet there are about it touches, grand sweeps of outline, that show a master's hand. Sometimes,—to-night, for instance,—the curtain is accidentally drawn back, and I see a bare arm stretched out imploringly in the darkness, and an eager, wolfish face watching mine: a wan, woful face, through which the spirit of the dead korl-cutter looks out, with its thwarted life, its mighty hunger, its unfinished work. Its pale, vague lips seem to tremble with a terrible question. "Is this the End?" they say,—"nothing beyond?—no more?"

Why, you tell me you have seen that look in the eyes of dumb brutes,—horses dying under the lash. I know.

The deep of the night is passing while I write. The gas-light wakens from the shadows here and there the objects which lie scattered through the room: only faintly, though; for they belong to the open sunlight. As I glance at them, they each recall some task or pleasure of the coming day. A half-moulded child's head; Aphrodite; a bough of forest-leaves; music; work; homely fragments,

in which lie the secrets of all eternal truth and beauty. Prophetic all! Only this dumb, woful face seems to belong to and end with the night. I turn to look at it. Has the power of its desperate need commanded the darkness away? While the room is yet steeped in heavy shadow, a cool, gray light suddenly touches its head like a blessing hand, and its groping arm points through the broken cloud to the far East, where, in the flickering, nebulous crimson, God has set the promise of the Dawn.

C.F. Adams. Jr.

THE REIGN OF KING COTTON.

To every age and to all nations belong their peculiar maxims and political or religious cries, which, if collected by some ingenious philosopher, would make a striking compendium of universal history. Sometimes a curious outward similarity exists between these condensed national sentences of peoples dissimilar in every other respect. Thus, to-day is heard in the senescent East the oft-repeated formula of the Mussulman's faith, "There is no God but Allah, and Mahomet is his Prophet," while in the youthful West a new cry, as fully believed, not less devout, and scarcely less often repeated, arises from one great and influential portion of the political and social thinkers of this country,—the cry that "There is no King but Cotton, and the African is its High-Priest." According to the creed of philosophy, philanthropy, and economy in vogue among the sect whose views take utterance in this formula, King Cotton has now reigned supreme over the temporal affairs of the princes, potentates, and people of this earth for some thirty years. Consequently, it is fair to presume that its reign has fully developed its policy and tendencies and is producing its fruit for good or evil, especially in the land of its disciples. It is well, therefore, sometimes to withdraw a little from the

dust and smoke of the battle, which, with us at least, announces the spread of this potentate's power, and to try to disentangle the real questions at issue in the struggle from the eternal complications produced by short-sighted politicians and popular issues. Looking at the policy and tendency of the reign of King Cotton, as hitherto developed and indicated by its most confidential advisers and apostles and by the lapse of time in the so-called Slave States, to what end does it necessarily tend? to what results must it logically lead?

What is coarsely, but expressively, described in the political slang of this country as "*The Everlasting Nigger-Question*" might perhaps fairly be considered exhausted as a topic of discussion, if ever a topic was. Is it exhausted, however? Have not rather the smoke and sweat and dust of the political battle in which we have been so long and so fiercely engaged exercised a dimming influence on our eyes as to the true difficulty and its remedy, as they have on the vision of other angry combatants since the world began? It is easy to say, in days like these, that men seem at once to lose their judgment and reason when they approach this question,—to look hardly an arm's length before them,—to become mere tools of

their own passions; and all this is true, and, in conceding it all, no more is conceded than that the men of the present day are also mortal. How many voters in the last election, before they went to the polls, had seriously thought out for themselves the real issue of the contest, apart from party names and platforms and popular cries and passionate appeals to the conscience and the purse? In all parties, some doubtless were impelled by fanaticism, — many were guided by instinct, — more by the voice of their leaders, — most by party catchwords and material interests, — but how many by real reflection and the exercise of reason? Was it every fifth man, or every tenth? Was it every fiftieth? Let every one judge for himself. The history of the reigning dynasty, its policy and tendency, are still open questions, the discussion of which, though perhaps become tedious, is not exhausted, and, if conducted in a fair spirit, will at least do no harm. What, then, is all this thirty years' turmoil, of which the world is growing sick, about? Are we indeed only fighting, as the party-leaders at the North seem trying to persuade us, for the control, by the interests of free labor or of slave-labor, of certain remaining national territories into which probably slavery never could be made to enter? — or rather is there not some deep innate principle, — some strong motive of aggrandizement or preservation, — some real Enceladus, — the cause of this furious volcano of destructive agitation? If, indeed, the struggle be for the possession of a sterile waste in the heart of the continent, — useless either as a slave-breeding or a slave-working country, — clearly, whatever the politician might say to the contrary, the patriot and the merchant would soon apply to the struggle the principle, that sometimes the game is not worth the candle. If, however, there be an underlying principle, the case is different, and the cost of the struggle admits of no limit save the value of the motive principle. He who now pretends to discuss this question should approach it neither as a Whig, a

Democrat, nor a Republican, but should look at it by the light of political philosophy and economy, forgetful of the shibboleth of party or appeals to passion. So far as may be, in this spirit it is proposed to discuss it here.

"By its fruits ye shall know it." Look, then, for a moment, at the fruits of the Cotton dynasty, as hitherto developed in the working of its policy and its natural tendency, — observe its vital essence and logical necessities, — seek for the result of its workings, when brought in contact with the vital spirits and life-currents of our original policy as a people, — and then decide whether this contest in which we are engaged is indeed an irrepressible and inextinguishable contest, or whether all this while we have not been fighting with shadows. King Cotton has now reigned for thirty years, be the same less or more. To feel sure that we know what its policy has wrought in that time, we must first seek for the conditions under which it originally began its work.

Ever since Adam and Eve were forced, on their expulsion from Paradise, to try the first experiment at self-government, their descendants have been pursuing a course of homœopathic treatment. It was the eating of the fruit of the tree of knowledge which caused all their woes; and in an increased consumption of the fruit of that tree they have persistently looked for alleviation of them. Experience seems to prove the wisdom of the treatment. The greater the consumption of the fruit, the greater the happiness of man. Knowledge has at last become the basis of all things, — of power, of social standing, of material prosperity, and, finally, in America, of government itself. Until within a century past, political philosophy in the creation of government began at the wrong end. It built from the pinnacle downward. The stability of the government depended on the apex, — the one or the few, — and not on the base, — the foundation of the many. At length, in this country, fresh from the hand of Nature, the astonished world saw a new experiment tried, — a

government systematically built up from the foundation of the many, — a government drawing its being from, and dependent for its continued existence on, the will and the intelligence of the governed. The foundation had first been laid deep and strong, and on it a goodly superstructure of government was erected. Yet, even to this day, the very subjects of that government itself do not realize that they, and not the government, are the sources of national prosperity. In times of national emergency like the present, — amid clamors of secession and of coercion, — angry threats and angrier replies, — wars and rumors of wars, — what is more common than to hear sensible men — men whom the people look to as leaders — picturing forth a dire relapse into barbarism and anarchy as the necessary consequence of the threatened convulsions? They forget, if they ever realized, that the people made this government, and not the government the people. Destroy the intelligence of the people, and the government could not exist for a day; — destroy this government, and the people would create another, and yet another, of no less perfect symmetry. While the foundations are firm, there need be no fears of the superstructure, which may be renewed again and again; but touch the foundations, and the superstructure must crumble at once. Those who still insist on believing that this government made the people are fond of triumphantly pointing to the condition of the States of Mexico, as telling the history of our own future, let our present government be once interrupted in its functions. Are Mexicans Yankees? Are Spaniards Anglo-Saxons? Are Catholicism and religious freedom, the Inquisition and common schools, despotism and democracy, synonymous terms? Could a successful republic, on our model, be at once instituted in Africa on the assassination of the King of Timbuctoo? Have two centuries of education nothing to do with our success, or an eternity of ignorance with Mexican failure? Was our government a lucky guess, and theirs an unfortunate specula-

tion? The one lesson that America is destined to teach the world, or to miss her destiny in failing to teach, has with us passed into a truism, and is yet continually lost sight of; it is the magnificent result of three thousand years of experiment: the simple truth, that no government is so firm, so truly conservative, and so wholly indestructible, as a government founded and dependent for support upon the affections and good-will of a moral, intelligent, and educated community. In our politics, we hear much of State-rights and centralization, — of distribution of power, — of checks and balances, — of constitutions and their construction, — of patronage and its distribution, — of banks, of tariffs, and of trade, — all of them subjects of moment in their sphere; but their sphere is limited. Whether they be decided one way or the other is of comparatively little consequence: for, however they are decided, if the people are educated and informed, the government will go on, and the community be prosperous, be they decided never so badly, — and if decided badly, the decision will be reversed; but let the people become ignorant and debased, and all the checks and balances and wise regulations which the ingenuity of man could in centuries devise would, at best, but for a short space defer the downfall of a republic. A well-founded republic can, then, be destroyed only by destroying its people, — its decay need be looked for only in the decay of their intelligence; and any form of thought or any institution tending to suppress education or destroy intelligence strikes at the very essence of the government, and constitutes a treason which no law can meet, and for which no punishment is adequate.

Education, then, as universally diffused as the elements of God, is the life-blood of our body politic. The intelligence of the people is the one great fact of our civilization and our prosperity, — it is the beating heart of our age and of our land. It is education alone which makes equality possible without anarchy, and liberty

without license. It is this which makes the fundamental principles of our Declaration of Independence living realities in New England, while in France they still remain the rhetorical statement of glittering generalities. From this source flow all our possibilities. Without it, the equality of man is a pretty figure of speech; with it, democracy is possible. This is a path beaten by two hundred years of footprints, and while we walk it we are safe and need fear no evil; but if we diverge from it, be it for never so little, we stumble, and, unless we quickly retrace our steps, we fall and are lost. The tutelary goddess of American liberty should be the pure marble image of the Professor's Yankee school-mistress. Education is the fundamental support of our system. It was education which made us free, progressive, and conservative; and it is education alone which can keep us so.

With this fact clearly established, the next inquiry should be as to the bearing and policy of the Cotton dynasty as touching this question of general intelligence. It is a mere truism to say that the cotton-culture is the cause of the present philosophical and economical phase of the African question. Throughout the South, whether justly or not, it is considered as well settled that cotton can be profitably raised only by a forced system of labor. This theory has been denied by some writers, and, in experience, is certainly subject to some marked exceptions; but undoubtedly it is the creed of the Cotton dynasty, and must here, therefore, be taken for true.* With this theory, the Southern States are under a direct inducement,

in the nature of a bribe, to the amount of the annual profit on their cotton-crop, to see as many perfections and as few imperfections as possible in the system of African slavery, and to follow it out unflinchingly into all its logical necessities. Thus, under the direct influence of the Cotton dynasty, the whole Southern tone on this subject has undergone a change. Slavery is no longer deplored as a necessary evil, but it is maintained as in all respects a substantial good. One of the logical necessities of a thorough slave-system is, in at least the slave-portion of the people, extreme ignorance. Whatever theoretically may be desirable in this respect among the master-class, ignorance, in its worst form,—ignorance of everything except the use of the tools with which their work is to be done,—is the necessary condition of the slaves. But it is said that slaves are property, without voice or influence in the government, and that the ignorance of the black is no obstacle to the intelligence of the white. This possibly may be true; but a government founded on ignorance, as the essential condition of one portion of its people, is not likely long to regard education as its vital source and essence. Still the assertion that the rule of education does not apply to slaves must be allowed; for we must deal with facts as we find them; and undoubtedly the slave has no rights which the master is bound to respect; and in speaking of the policy of the Cotton dynasty, the servile population must be regarded as it is, ignoring the question of what it might be; it must be taken into consideration only as a terrible inert mass of domesticated barbarism, and there left. The question

* "In truth," the institution of slavery, as an agency for cotton-cultivation, "is an expensive luxury, a dangerous and artificial state, and, even in a worldly point of view, an error. The cost of a first-class negro in the United States is about £300, and the interest on the capital invested in and the wear and tear of this human chattel are equal to 10 per cent., which, with the cost of maintaining, clothing, and doctoring him, or another 5 per cent., gives an annual cost of £45; and the pam-

pered Coolies in the best paying of all the tropical settlements, Trinidad, receive wages that do not exceed on an average on the year round 6s. per week, or about two-fifths, while in the East Indies, with perquisites, they do not receive so much as two-thirds of this. In Cuba, the Chinese emigrants do not receive so much even as one-third of this."—*Cotton Trade of Great Britain*, by J. A. MANN. — In India, labor is 80 per cent. cheaper than in the United States.

here is solely with the policy and tendency of the Cotton dynasty as affecting the master-class, and the servile class is in that consideration to be summarily disposed of as so much labor owned by so much capital.

The dynasty of Cotton is based on the monopoly of the cotton-culture in the Cotton States of the Union; its whole policy is directed to the two ends of making the most of and retaining that monopoly; and economically it reduces everything to subserviency to the question of cotton-supply;—thus Cotton is King. The result necessarily is, that the Cotton States have turned all their energies to that one branch of industry. All other branches they abandon or allow to languish. They have no commerce of their own, few manufactories, fewer arts; and in their abandonment of self in their devotion to their King, they do not even raise their own hay or corn, dig their own coal, or fell their own timber; and at present, Louisiana is abandoning the sugar-culture, one of the few remaining exports of the South, to share more largely in the monopoly of cotton. Thus the community necessarily loses its fair proportions; it ceases to be self-sustaining; it exercises one faculty alone, until all the others wither and become impotent for very lack of use. This intense and all-pervading devotion to one pursuit, and that a pursuit to which the existence of a servile class is declared essential, must, in a republic more than in any other government, produce certain marked politico-philosophical and economical effects on the master-class as a whole. In a country conducted on a system of servile labor, as in one conducted on free, the master-class must be divided into the two great orders of the rich and poor,—those who have, and those who have not. That the whole policy of the Cotton dynasty tends necessarily to making broader the chasm between these orders is most apparent. It makes the rich richer, and the poor poorer; for, as, according to the creed of the dynasty, capital should own labor, and the labor thus owned can alone success-

fully produce cotton, he who has must be continually increasing his store, while he who has not can neither raise the one staple recognized by the Cotton dynasty, nor turn his labor, his only property, to other branches of industry; for such have, in the universal abandonment of the community to cotton, been allowed to languish and die. The economical tendency of the Cotton dynasty is therefore to divide the master-class yet more distinctly into the two great opposing orders of society. On the one hand we see the capitalist owning the labor of a thousand slaves, and on the other the laboring white unable, under the destructive influence of a profitable monopoly, to make any use of that labor which is his only property.

What influence, then, has the Cotton dynasty on that portion of the master-class who are without capital? Its tendency has certainly necessarily been to make their labor of little value; but they are still citizens of a republic, free to come and go, and, in the eye of the law, equal with the highest;—on them, in times of emergency, the government must rest; their education and intelligence are its only sure foundations. But, having made this class the vast majority of the master-caste, what are the policy and tendency of the Cotton dynasty as touching them? The story is almost too old to bear even the shortest repetition. Philosophically, it is a logical necessity of the Cotton dynasty that it should be opposed to universal intelligence;—economically, it renders universal intelligence an impossibility. That slavery is in itself a positive good to society is a fundamental doctrine of the Cotton dynasty, and a proposition not necessary to be combated here; but, unfortunately, universal intelligence renders free discussion a necessity, and experience tells us that the suppression of free discussion is necessary to the existence of slavery. We are but living history over again. The same causes have often existed before, and they have drawn after them the necessary effects. Other peo-

ples, at other times, as well as our Southern brethren at present, have felt that the suppression of general discussion was necessary to the preservation of a prized and peculiar institution. Spain, Italy, Germany, France, the Netherlands, England, and Scotland have all, at different times, experienced the forced suppression of some one branch of political or religious thought. Their histories have recorded the effect of that suppression; and the rule to be deduced therefrom is simply this: If the people among whom such suppression is attempted are ignorant, and are kept so as part of a system, the attempt may be successful, though in its results working destruction to the community;—if, however, they are intelligent, and the system incautiously admits into itself any plan of education, the attempt at suppression will be abandoned, as the result either of policy or violence. In this respect, then, on philosophical grounds, the Cotton dynasty is not likely to favor the education of the masses. Again, it is undoubtedly the interest of the man who has not, that all possible branches of industry should be open to his labor, as rendering that labor of greater value; but the whole tendency of the Cotton monopoly is to blight all branches of industry in the Cotton States save only that one. General intelligence might lead the poor white to suspect this fact of an interest of his own antagonistic to the policy of the Cotton King, and therefore general intelligence is not part of that monarch's policy. This the philosophers of the Cotton dynasty fairly avow and class high among those dangers against which it behooves them to be on their guard. They theorize thus:—

“The great mass of our poor white population begin to understand that they have rights, and that they, too, are entitled to some of the sympathy which falls upon the suffering. They are fast learning that there is an almost infinite world of industry opening before them, by which they can elevate themselves and their families from wretchedness and ignorance to competence and intelligence. It is

this great upheaving of our masses which we have to fear, so far as our institutions are concerned.”*

Further, the policy of the Cotton King, however honestly in theory it may wish to encourage it, renders general education and consequent intelligence an impossibility. A system of universal education is made for a laboring population, and can be sustained only among a laboring population; but if that population consist of slaves, universal education cannot exist. The reason is simple; for the children of all must be educated, otherwise the scholars will not support the schools. It is an absolute necessity of society that in agricultural districts cultivated by slave-labor the free population should be too sparsely scattered to support a system of schools, even on starvation wages for the cheapest class of teachers.

Finally, though it is a subject not necessary now to discuss, the effect of the Cotton monopoly and dynasty in depressing the majority of the whites into a species of labor competition in the same branch of industry as the blacks, because the only branch open to all, can hardly have a self-respect-inspiring influence on that portion of the community, but should in its results rather illustrate old Falstaff's remark,—that “there is a thing often heard of, and it is known to many in our land, by the name of pitch; this pitch, as ancient writers do report, doth defile: so doth the company thou keepest.”

Such, reason tells us, should be the effect on the intelligence and education of the free masses of the South of the policy and dynasty of King Cotton. That experience in this case verifies the conclusions of reason who can doubt who has ever set foot in a thorough Slave State, —or in Kansas, or in any Free State half-peopled by the poor whites of the South? —or who can doubt it, that has ever even talked on the subject with an intelligent and fair-minded Southern gentleman? Who that knows them will deny that the poor whites of the South make

* *De Bow's Review*, January, 1850. Quoted in Olmsted's *Back Country*, p. 451.

the worst population in the country? Who ever heard a Southern gentleman speak of them, save in Congress or on the hustings, otherwise than with aversion and contempt? *

Here, then, we come at once to the foundation of a policy and the cause of this struggle. Whether it will or no, it is the inevitable tendency of the Cotton dynasty to be opposed to general intelligence. It is opposed to that, then, without which a republic cannot hope to exist; it is opposed to and denies the whole results of two thousand years of experience. The social system of which the government of to-day is the creature is founded on the principle of a generally diffused intelligence of the people;

* Except when used by the accomplished statistician, there is nothing more fallacious than the figures of the census. As the author of this article is a disciple neither of Buckle nor De Bow, they have not been used at all; but a few of the census figures are nevertheless instructive, as showing the difference between the Free and the Servile States in respect to popular education. According to the census of 1850, the white population of the Slave States amounted to 6,184,477 souls, and the colored population, free and slave, brought the total population up to an aggregate of 9,612,979, of which the whole number of school-pupils was 581,861. New York, with a population of 3,097,394 souls, numbered 675,221 pupils, or 93,860 more than all the Slave States. The eight Cotton States, from South Carolina to Arkansas, with a population of 2,137,264 whites and a grand total of 3,970,337 human beings, contained 141,032 pupils; the State of Massachusetts, with a total population of 994,514, numbered 176,475, or 35,443 pupils more than all the Cotton States. In popular governments the great sources of general intelligence are newspapers and periodicals; in estimating these, metropolitan New York should not be considered; but of these the whole number, in 1850, issued annually in all the Slave States was 81,038,698, and the number in the not peculiarly enlightened State of Pennsylvania was 84,898,672, or 3,859,974 more than in all the Slave States. In the eight Cotton States, the whole number was 30,041,991; and in the single State of Massachusetts, 64,820,564, or 34,778,573 more, and in the single State of Ohio, 30,473,407, or 431,416 more, than in all the above eight States.

but if now Cotton be King, as is so boldly asserted, then an influence has obtained control of the government of which the whole policy is in direct antagonism with the very elementary ideas of that government. History tells us that eight bags of cotton imported into England in 1784 were seized by the custom-house officers at Liverpool, on the ground that so much cotton could not have been produced in these States. In 1860, the cotton-crop was estimated at 3,851,481 bales. Thus King Cotton was born with this government, and has strengthened with its strength; and to-day, almost the creature of destiny, sent to work the failure of our experiment as a people, it has led almost one-half of the Republic to completely ignore, if not to reject, the one principle absolutely essential to that Republic's continued existence. What two thousand years ago was said of Rome applies to us:—"Those abuses and corruptions which in time destroy a government are sown along with the very seeds of it and both grow up together; and as rust eats away iron, and worms devour wood, and both are a sort of plagues born and bred with the substance they destroy; so with every form and scheme of government that man can invent, some vice or corruption creeps in with the very institution, which grows up along with and at last destroys it." No wonder, then, that the conflict is irrepressible and hot; for two instinctive principles of self-preservation have met in deadly conflict: the South, with the eager loyalty of the Cavalier, rallies to the standard of King Cotton, while the North, with the earnest devotion of the Puritan, struggles hard in defence of the fundamental principles of its liberties and the ark of its salvation.

Thus over nearly half of the national domain and among a large minority of the citizens of the Republic, the dynasty of Cotton has worked a divergence from original principle. Wherever the sway of King Cotton extends, the people have for the present lost sight of the most essential of our national attributes.

They are seeking to found a great and prosperous republic on the cultivation of a single staple product, and not on intelligence universally diffused: consequently they have founded their house upon the sand. Among them, cotton, and not knowledge, is power. When thus reduced to its logical necessities,—brought down, as it were, to the hard pan,—the experience of two thousand years convincingly proves that their experiment as a democracy must fail. It is, then, a question of vital importance to the whole people,—How can this divergence be terminated? Is there any result, any agency, which can destroy this dynasty, and restore us as a people to the firm foundations upon which our experiment was begun? Can the present agitation effect this result? If it could, the country might joyfully bid a long farewell to “the canker of peace,” and “hail the blood-red blossom of war with a heart of fire”; but the sad answer, that it cannot, whether resulting in the success of Democrat or Republican, seems almost too evident for discussion. The present conflict is good so far as it goes, but it touches only the surface of things. It is well to drive the Cotton dynasty from the control of the national government; but the aims of the Republican party can reach no farther, even if it meet with complete success in that. But even that much is doubtful. The danger at this point is one ever recurring. Those Northern politicians, who, in pursuit of their political objects and ambition, unreservedly bind up their destinies with those of the Cotton dynasty,—the Issachars of the North, whose strong backs are bowed to receive any burden,—the men who in the present conflict will see nought but the result of the maudlin sentimentality of fanatics and the empty cries of ambitious demagogues,—are not mistaken in their calculations. While Cotton is King, as it now is, nothing but time or its own insanity can permanently shake its hold on the national policy. In moments of fierce convulsion, as at present, the North, like a restive steed, may con-

test its supremacy. Let the South, however, bend, not break, before the storm, and history is indeed “a nurse’s tale,” if the final victory does not rest with the party of unity and discipline. While the monopoly of cotton exists with the South, and it is cultivated exclusively by native African labor, the national government will as surely tend, in spite of all momentarily disturbing influences, towards a united South as the needle to the pole. But even if the government were permanently wrested from its control, would the evil be remedied? Surely not. The disease which is sapping the foundations of our liberty is not eradicated because its workings are forced inward. What remedy is that which leaves a false and pernicious policy—a policy in avowed war with the whole spirit of our civilization and in open hostility to our whole experiment as a government—in full working, almost a religious creed with near one-half of our people? As a remedy, this would be but a quack medicine at the best. The cure must be a more thorough one. The remedy we must look for—the only one which can meet the exigencies of the case—must be one which will restore to the South the attributes of a democracy. It must cause our Southern brethren of their own free will to reverse their steps,—to return from their divergence. It must teach them a purer Christianity, a truer philosophy, a sounder economy. It must lead them to new paths of industry. It must gently persuade them that a true national prosperity is not the result of a total abandonment of the community to the culture of one staple. It must make them self-dependent, so that no longer they shall have to import their corn from the Northwest, their lumber-men and hay from Maine, their manufactures from Massachusetts, their minerals from Pennsylvania, and to employ the shipping of the world. Finally, it must make it impossible for one overgrown interest to plunge the whole community unresistingly into frantic rebellion or needless war. They

must learn that a well-conditioned state is, so far as may be, perfect in itself,—and, to be perfect in itself, must be intelligent and free. When these lessons are taught to the South, then will their divergence cease, and they will enter upon a new path of enjoyment, prosperity, and permanence. The world at present pays them an annual bribe of some \$65,000,000 to learn none of these lessons. Their material interest teaches them to bow down to the shrine of King Cotton. Here, then, lies the remedy with the disease. The prosperity of the country in general, and of the South in particular, demands that the reign of King Cotton should cease,—that his dynasty should be destroyed. This result can be obtained but in one way, and that seemingly ruinous. The present monopoly in their great staple commodity enjoyed by the South must be destroyed, and forever. This result every patriot and well-wisher of the South should ever long for; and yet, by every Southern statesman and philosopher, it is regarded as the one irremediable evil possible to their country. What miserable economy! what feeble foresight! What principle of political economy is better established than that a monopoly is a curse to both producer and consumer? To the first it pays a premium on fraud, sloth, and negligence; and to the second it supplies the worst possible article, in the worst possible way, at the highest possible price. In agriculture, in manufactures, in the professions, and in the arts, it is the greatest bar to improvement with which any branch of industry can be cursed. The South is now showing to the world an example of a great people borne down, crushed to the ground, cursed, by a monopoly. A fertile country of magnificent resources, inhabited by a great race, of inexhaustible energy, is abandoned to one pursuit;—the very riches of their position are as a pestilence to their prosperity. In the presence of their great monopoly, science, art, manufactures, mining, agriculture,—in a word, all the myriad branches of industry essential to the true prosperity of a

state,—wither and die, that sanded cotton may be produced by the most costly of labor. For love of cotton, the very intelligence of the community, the life-blood of their polity, is disregarded and forgotten. Hence it is that the marble and freestone quarries of New England alone are far more important sources of revenue than all the subterranean deposits of the Servile States. Thus the monopoly which is the apparent source of their wealth is in reality their greatest curse; for it blinds them to the fact, that, with nations as with individuals, a healthy competition is the one essential to all true economy and real excellence. Monopolists are always blind, always practise a false economy. Adam Smith tells us that “it is not more than fifty years ago that some of the counties in the neighborhood of London petitioned the Parliament against the extension of the turnpike roads into the remoter counties. Those remoter counties, they pretended, from the cheapness of labor, would be able to sell their grass and corn cheaper in the London market than themselves, and would thereby reduce their rents and ruin their cultivation.” The great economist significantly adds,—“Their rents, however, have risen, and their cultivation has been improved, since that time.” Finally, to-day, would the cultivation of cereals in the Northwest be improved, if made a monopoly? would its inhabitants be richer? would their economy be better? Certainly not. Yet to-day they undersell the world, and, in spite of competition, are far richer, far more contented and prosperous, than their fellow-citizens in the South in the full enjoyment of their boasted dynasty of Cotton.

“Here,” said Wellington, on the Eton foot-ball ground, “we won the battle of Waterloo.” Not in angry declamation and wordy debate, in threats of secession and cries for coercion, amid the clash of party-politics, the windy declamation of blatant politicians, or the dirty scramble for office, is the destruction of the dynasty of King Cotton to be looked for. The laws of trade must be the great teacher;

and here, as elsewhere, England, the noble nation of shopkeepers, must be the agent for the fulfilment of those laws. It is safe to-day to say, that, through the agency of England, and, in accordance with those laws, under a continuance of the present profit on that staple, the dynasty of King Cotton is doomed,—the monopoly which is now the basis of his power will be a monopoly no more. If saved at all from the blight of this monopoly, the South will be saved, not in New York or Boston, but in Liverpool,—not by the thinkers of America, but by the merchants of England. The real danger of the Cotton dynasty lies not in the hostility of the North, but in the exigencies of the market abroad; they struggle not against the varying fortunes of political warfare, but against the irreversible decrees of Fate. It is the old story of the Rutulian hero; and now, in the very crisis and agony of the battle, while the Cotton King is summoning all his resources and straining every nerve to cope successfully with its more apparent, but less formidable adversary, in the noisy struggle for temporary power, if it would listen for a moment to the voice of reason, and observe the still working of the laws of our being, it, too, might see cause to abandon the contest, with the angry lament, that, not by its opponent was it vanquished, but by the hostility of Jupiter and the gods. The operation of the laws of trade, as touching this monopoly, is beautifully simple. Already the indications are sufficient to tell us, that, under the sure, but silent working of those laws, the very profits of the Southern planter foreshadow the destruction of his monopoly. His dynasty rests upon the theory, that his negro is the only practical agency for the production of his staple. But the supply of African labor is limited, and the increased profit on cotton renders the cost of that labor heavier in its turn,—the value of the negro rising one hundred dollars for every additional cent of profit on a pound of cotton. The increased cost of the labor increases the cost of producing the cotton. The result is clear; and

the history of the cotton-trade has twice verified it. The increased profits on the staple tempt competition, and, in the increased cost of production, render it possible. Two courses only are open to the South: either to submit to the destruction of their monopoly, or to try to retain it by a cheaper supply of labor. They now feel the pressure of the dilemma; and hence the cry to reopen the slave-trade. According to the iron policy of their dynasty, they must inundate their country with freshly imported barbarism, or compete with the world. They cry out for more Africans; and to their cry the voice of the civilized world returns its *veto*. The policy of King Cotton forces them to turn from the daylight of free labor now breaking in Texas. On the other hand, it is not credible that all the land adapted to the growth of the cotton-plant is confined to America; and, at the present value of the commodity, the land adapted to its growth would be sought out and used, though buried now in the jungles of India, the wellnigh impenetrable wildernesses of Africa, the table-lands of South America, or the islands of the Pacific. Already the organized energy of England has pushed its explorations, under Livingstone, Barth, and Clegg, into regions hitherto unknown. Already, under the increased consumption, one-third of the cotton consumed at Liverpool is the product of climes other than our own. Hundreds of miles of railroad in India are opening to the market vast regions to share in our profits and break down our monopoly. To-day, India, for home-consumption and exportation, produces twice the amount of cotton produced in America; and, under the increased profit of late years, the importation into England from that country has risen from 12,324,200 pounds in 1830, to 77,011,839 pounds in 1840, and, finally, to 250,338,144 pounds in 1857, or nearly twenty per cent. of the whole amount imported, and more than one-fourth of the whole amount imported from America. The staple there produced does not, indeed, compare in quality with our own;

but this remark does not apply to the staple produced in Africa,—the original home of the cotton-plant, as of the negro,—or to that of the cotton-producing islands of the Pacific. The inexhaustible fertility of the valley of the Nile—producing, with a single exception, the finest cotton of the world,—lying on the same latitude as the cotton-producing States of America, and overflowing with unemployed labor—will find its profit, at present prices, in the abandonment of the cultivation of corn, its staple product since the days of Joseph, to come in competition with the monopoly of the South. Peru, Australia, Cuba, Jamaica, and even the Feejee Islands, all are preparing to enter the lists. And, finally, the interior of Africa, the great unknown and unexplored land, which for centuries has baffled the enterprise of travellers, seems about to make known her secrets under the persuasive arguments of trade, and to make her cotton, and not her children, her staple export in the future. In the last fact is to be seen a poetic justice. Africa, outraged, scorned, down-trodden, is, perhaps, to drag down forever the great enslaver of her offspring.

Thus the monopoly of King Cotton hangs upon a thread. Its profits must fall, or it must cease to exist. If subject to no disturbing influence, such as war, which would force the world to look elsewhere for its supply, and thus unnaturally force production elsewhere, the growth of this competition will probably be slow. Another War of 1812, or any long-continued civil convulsions, would force England to look to other sources of supply, and, thus forcing production, would probably be the death-blow of the monopoly. Apart from all disturbing influences arising from the rashness of his own lieges, or other causes, the reign of King Cotton at present prices may be expected to continue some ten years longer. For so long, then, this disturbing influence may be looked for in American politics; and then we may hope that this tremendous material influence, become subject, like others, to the laws of trade and competition, will cease to

threaten our liberties by silently sapping their very foundation. As in the course of years competition gradually increases, the effect of this competition on the South will probably be most beneficial. The change from monopoly to competition, distributed over many years, will come with no sudden and destructive shock, but will take place imperceptibly. The fall of the dynasty will be gradual; and with the dynasty must fall its policy. Its fruits must be eradicated by time. Under the healing influence of time, the South, still young and energetic, ceasing to think of one thing alone, will quickly turn its attention to many. Education will be more sought for, as the policy which resisted it, and made its diffusion impossible, ceases to exist. With the growth of other branches of industry, labor will become respectable and profitable, and laborers will flock to the country; and a new, a purer, and more prosperous future will open upon the entire Republic. Perhaps, also, it may in time be discovered that even slave-labor is most profitable when most intelligent and best rewarded,—that the present mode of growing cotton is the most wasteful and extravagant, and one not bearing competition. Thus even the African may reap benefit from the result, and in his increased self-respect and intelligence may be found the real prosperity of the master. And thus the peaceful laws of trade may do the work which agitation has attempted in vain. Sweet concord may come from this dark chaos, and the world receive another proof, that material interest, well understood, is not in conflict, but in beautiful unison with general morality, all-pervading intelligence, and the precepts of Christianity. Under these influences, too, the very supply of cotton will probably be immensely increased. Its cultivation, like the cultivation of their staple products by the English counties mentioned by Smith, will not languish, but flourish, under the influence of healthy competition.—These views, though simply the apparently legitimate result of principle and experience, are by no means unsupported by author-

ity. They are the same results arrived at from the reflections of the most unprejudiced of observers. A shrewd Northern gentleman, who has more recently and thoroughly than any other writer travelled through the Southern States, in the final summary of his observations thus covers all the positions here taken. "My conclusion," says Mr. Olmsted, "is this,—that there is no physical obstacle in the way of our country's supplying ten bales of cotton where it now does one. All that is necessary for this purpose is to direct to the cotton-producing region an adequate number of laborers, either black or white, or both. No amalgamation, no association on equality, no violent disruption of present relations is necessary. It is necessary that there should be more objects of industry, more varied enterprises, more general intelligence among the people,—and, especially, that they should become, or should desire to become, richer, more comfortable, than they are."

It is not pleasant to turn from this, and view the reverse of the picture. But, unless our Southern brethren, in obedience to some great law of trade or morals, return from their divergence,—if, still being a republic in form, the South close her ears to the great truth, that education is democracy's first law of self-preservation,—if the dynasty of King Cotton, unshaken by present indications, should continue indefinitely, and still the South should bow itself down as now before its throne,—it requires no gift of prophecy to read her future. As you sow, so shall you reap; and communities, like individuals, who sow the wind, must, in the fulness of time, look to reap the whirlwind. The Constitution of our Federal Union guarantees to each member composing it a republican form of government; but no constitution can guaranty that universal intelligence of the people without which, soon or late, a republican government must become, not only a form, but a mockery. Under the Cotton dynasty, the South has undoubtedly lost sight of this great principle; and unless she return and bind herself closely to it, her fate is fixed. Under

the present monopolizing sway of King Cotton,—soon or late, in the Union, or out of the Union,—her government must cease to be republican, and relapse into anarchy, unless previously, abandoning the experiment of democracy in despair, she take refuge in a government of force. The Northern States, the educational communities, have apparently little to fear while they cling closely to the principles inherent in their nature. With the Servile States, or away from them, the experiment of a constitutional republic can apparently be carried on with success through an indefinite lapse of time; but though, with the assistance of an original impetus and custom, they may temporarily drag along their stumbling brethren of the South, the catastrophe is but deferred, not avoided. Out of the Union, the more extreme Southern States—those in which King Cotton has already firmly established his dynasty—are, if we may judge by passing events, ripe for the result. The more Northern have yet a reprieve of fate, as having not yet wholly forgotten the lessons of their origin. The result, however, be it delayed for one year or for one hundred years, can hardly admit of doubt. The emergency which is to try their system may not arise for many years; but passing events warn us that it may be upon them now. The most philosophical of modern French historians, in describing the latter days of the Roman Empire, tells us that "the higher classes of a nation can communicate virtue and wisdom to the government, if they themselves are virtuous and wise: but they can never give it strength; for strength always comes from below; it always proceeds from the masses." The Cotton dynasty pretends not only to maintain a government where the masses are slaves, but a republican government where the vast majority of the higher classes are ignorant. On the intelligence of the mass of the whites the South must rely for its republican permanence, as on their arms it must rely for its force; and here again, the words of Sismondi, written of falling Rome,

seem already applicable to the South: — "Thus all that class of free cultivators, who more than any other class feel the love of country, who could defend the soil, and who ought to furnish the best soldiers, disappeared almost entirely. The number of small farmers diminished to such a degree, that a rich man, a man of noble family, had often to travel more than ten leagues before falling in with an equal or a neighbor." "The destruction of the republican form of government is, then, almost the necessary catastrophe; but what will follow that catastrophe it is not so easy to foretell. The Republic, thus undermined, will fall; but what shall supply its place? The tendency of decaying republics is to anarchy; and men take refuge from the terrors of anarchy in despotism. The South least of all can indulge in anarchy, as it would at once tend to servile insurrection. They cannot long be torn by civil war, for the same reason. The ever-present, all-pervading fear of the African must force them into some government, and the stronger the better. The social divisions of the South, into the rich and educated whites, the poor and ignorant whites, and the servile class, would seem naturally to point to an aristocratic or constitutional-monarchical form of government. But, in their transition state, difficulties are to be met in all directions; and the well-ordered social distinctions of a constitutional monarchy seem hardly consistent with the time-honored licentious independence and rude equality of Southern society. The reign of King Cotton, however, conducted under the present policy, must inevitably tend to increase and aggravate all the present social tendencies of the Southern system, — all the anti-republican affinities already strongly developed. It makes deeper the chasm dividing the rich and the poor; it increases vastly the ranks of the uneducated; and, finally, while most unnaturally forcing the increase of the already threatening African infusion, it also tends to make the servile condition more undurable, and its burdens heavier.

The modern Southern politician is the least far-seeing of all our short-sighted classes of American statesmen. In the existence of a nation, a generation should be considered but as a year in the life of man, and a century but as a generation of citizens. Soon or late, in the lives of this generation or of their descendants, in the Union or out of the Union, the servile members of this Confederacy must, under the results of the prolonged dynasty of Cotton, make their election either to purchase their security, like Cuba, by dependence on the strong arm of external force, or they must meet national exigencies, pass through revolutions, and destroy and reconstruct governments, making every movement on the surface of a seething, heaving volcano. All movements of the present, looking only to the forms of government of the master, must be carried on before the face of the slave, and the question of class will ever be complicated by that of caste. What the result of the ever-increasing tendencies of the Cotton dynasty will be it is therefore impossible to more than dream. But is it fair to presume that the immense servile population should thus see upturnings and revolutions, dynasties rising and falling before their eyes, and ever remain quiet and contented? "Nothing," said Jefferson, "is more surely written in the Book of Fate than that this people must be free." Fit for freedom at present they are not, and, under the existing policy of the Cotton dynasty, never can be. Whether under any circumstances they could become so is not here a subject of discussion; but, surely, the day will come when the white caste will wish the experiment had been tried. The argument of the Cotton King against the alleviation of the condition of the African is, that his nature does not admit of his enjoyment of true freedom consistently with the security of the community, and therefore he must have none. But certainly his school has been of the worst. Would not, perhaps, the reflections applied to the case of the French peasants of a century ago apply also to them? "It is not under

oppression that we learn how to use freedom. The ordinary sophism by which misrule is defended is, when truly stated, this: The people must continue in slavery, because slavery has generated in them all the vices of slaves; because they are ignorant, they must remain under a power which has made and which keeps them ignorant; because they have been made ferocious by misgovernment, they must be misgoverned forever. If the system under which they live were so mild and liberal that under its operation they had become humane and enlightened, it would be safe to venture on a change; but, as this system has destroyed morality, and prevented the development of the intellect,—as it has turned men, who might, under different training, have formed a virtuous and happy community, into savage and stupid wild beasts, therefore it ought to last forever.” Perhaps the counsellors of King Cotton think that in this case it will; but all history teaches us another lesson. If there be one spark of love for freedom in the nature of the African,—whether it be a love common to him with the man or the beast, the Caucasian or the chimpanzee,—the love of freedom as affording a means of improvement or an opportunity for sloth,—the policy of King Cotton will cause it to work its way out. It is impossible to say how long it will be in so doing, or what weight the broad back of the African will first be made to bear; but, if the spirit exist, some day it must out. This lesson is taught us by the whole recorded history of the world. Moses leading the Children of Israel up out of Egypt,—Spartacus at the gates of Rome,—the Jacquerie in France,—Jack Cade and Wat Tyler in England,—Nana Sahib and the Sepoys in India,—Toussaint l’Ouverture and the Haytiens,—and, finally, the insurrection of Nat Turner in this country, with those in Guiana, Jamaica, and St. Lucia: such examples, running through all history, point the same moral. This last result of the Cotton dynasty may come at any moment after the time shall once have arrived

when, throughout any great tract of country, the suppressing force shall temporarily, with all the advantages of master-ship, including intelligence and weapons, be unequal to coping with the force suppressed. That time may still be far off. Whether it be or not depends upon questions of government and the events of the chapter of accidents. If the Union should now be dissolved, and civil convulsions should follow, it may soon be upon us. But the superimposed force is yet too great under any circumstances, and the convulsion would probably be but temporary. At present, too, the value of the slave insures him tolerable treatment; but, as numbers increase, this value must diminish. Southern statesmen now assert that in thirty years there will be twelve million slaves in the South; and then, with increased numbers, why should not the philosophy of the sugar-plantation prevail, and it become part of the economy of the Cotton creed, that it is cheaper to work slaves to death and purchase fresh ones than to preserve their usefulness by moderate employment? Then the value of the slave will no longer protect him, and then the end will be nigh. Is this thirty or fifty years off? Perhaps not for a century hence will the policy of King Cotton work its legitimate results, and the volcano at length come to its head and defy all compression.

In one of the stories of the “Arabian Nights” we are told of an Afrite confined by King Solomon in a brazen vessel; and the Sultana tells us, that, during the first century of his confinement, he said in his heart,—“I will enrich whosoever will liberate me”; but no one liberated him. In the second century he said,—“Whosoever will liberate me, I will open to him the treasures of the earth”; but no one liberated him. And four centuries more passed, and he said,—“Whosoever shall liberate me, I will fulfil for him three wishes”; but still no one liberated him. Then despair at his long bondage took possession of his soul, and, in the eighth century, he swore,—“Whosoever shall liberate me, him will I surely slay!”

Let the Southern statesmen look to it well that the breaking of the seal which confines our Afrite be not deferred till long bondage has turned his heart, like the heart of the Spirit in the fable, into gall and wormwood; lest, if the breaking of that seal be deferred to the eighth or even the sixth century, it result to our descendants like the breaking of the sixth seal of Revelation, — “And, lo! there was a great earthquake; and the sun became black as sackcloth of hair, and the moon

became as blood, and the heaven departed as a scroll, when it is rolled together; and the kings of the earth, and the great men, and the rich men, and the chief captains, and the mighty men, and every free man hid themselves in the dens and in the rocks of the mountains, and said to the mountains and rocks, ‘Fall on us and hide us, for the great day of wrath is come!’” On that day, at least, will end the reign of King Cotton.

GLIMPSES OF GARIBALDI.

FIRST GLIMPSE.

It is a sultry morning in October, and we are steaming in a small Sardinian boat from Leghorn towards Naples. This city has fallen into the power of Garibaldi, who is concentrating his forces before Capua, while the King of Sardinia bears down with a goodly army from the North.

The first object of special interest which comes into view, after we pass the island of Elba, is Gaeta. Though care is taken not to run near enough to invite a chase from the Neapolitan frigates, we are yet able to obtain a distinct view of the last stronghold — the jumping-off place, as we hope it will prove — of Francis II. The white walls of the fortress rise grimly out of the sea, touching the land only upon one side, and looking as though they might task well the resources of modern warfare to reduce them. We soon make out the smoke of four or five steamers, which we suppose to be armed vessels, heading towards Gaeta.

About two o'clock we glide into the far-famed Bay of Naples, in company with the cool sea-breeze which there each afternoon sends to refresh the heated shore. As we swing round to our moorings, we pass numerous line-of-battle-ships

and frigates bearing the flags of England, France, and Sardinia, but look in vain and with disappointment for the star-spangled banner. A single floating representative of American nationality is obliged to divide the favor of her presence between the ports of both the Two Sicilies, and at this time she is at the island portion of the kingdom.

Our craft is at once beset by boats, their owners pushing, vociferating, and chaffering for fares, as though Mammon, and not Moloch, were the ruling spirit. Together with a chance companion of the voyage, Signor Alvigini, *Intendente* of Genoa, and his party, we are soon in the hands of the *commissionnaire* of the *Hôtel de Rome*. As we land, our passports are received by the police of Victor Emmanuel, who have replaced those of the late *régime*.

As we enter our carriage, we expect to see streets filled with crowds of turbulent people, or dotted with knots of persons conversing ominously in suppressed tones; and streets deserted, with shops closed; and streets barricaded. But in this matter we are agreeably disappointed. The shops are all open, the street vendors are quietly tending their tables, people go about their ordinary affairs, and wear their commonplace, every-day look. The

only difference apparent to the eye between the existing state of things and that which formerly obtained is, that there are few street brawls and robberies, though every one goes armed,—that the uniform of the soldiers of Francis II. is replaced by the dark gray dress of the National Guard,—and that the flag of the Tyrant King no longer waves over the castle-prison of Sant' Elmo. Garibaldi, on leaving Naples, had formally confided the city to the National Guard; and they had nobly sustained the trust reposed in them.

A letter of introduction to General Orsini, brought safely with us, though not without adventure, through the Austrian dominions, gains a courteous reception from General Turr, chief aide-de-camp to the "Dictator," and a pass to the camp. General Turr, an Hungarian refugee, is a person of distinguished appearance, not a little heightened by his peculiar dress, which consists of the usual Garibaldian uniform partially covered with a white military cloak, which hangs gracefully over his elegant figure.

After a brief, but pleasant, interview with this gentleman, we climb to the Castle of Sant' Elmo, built on a high eminence commanding the town, and with its guns mounted, not so as to defend it against an invading enemy, but to hurl destruction on the devoted subjects of the Bourbon. We are told that the people had set their hearts on seeing this fortress, which they look upon as a standing menace, razed to the ground, and its site covered with peaceful dwellings. And it is not without regret that we have since learned that Victor Emmanuel has thought it inexpedient to comply with this wish. Nor, in our ignorance, can we divest ourselves entirely of the belief that it would have been a wise as well as conciliatory policy to do so.

We are politely shown over the castle by one of the National Guard, who hold it in charge, and see lounging upon one of its terraces, carefully guarded, but kindly allowed all practicable liberty, several officers of the late power, prisoners where they had formerly held despotic sway.

We descend into the now empty dungeons, dark and noisome as they have been described, where victims of political accusation or suspicion have pined for years in dreary solitude. It produces a marked sensation in the minds of our Italian companions in this sad tour of inspection, when we tell them, through our guide Antonio, that these cells are the counterpart of the dungeons of the condemned in the prison of the Doges of Venice, as we had seen them a few days before,—save that the latter were better, in their day, in so far as in them the cold stone was originally lined and concealed by wooden casings, while in those before us the helpless prisoner in his gropings could touch only the hard rock, significant of the relentless despotism which enchained him. The walls are covered with the inscriptions of former tenants. In one place we discover a long line of marks in groups of fives,—like the tallies of our boyish sports,—but here used for how different a purpose! Were these the records of days, or weeks, or months? The only furniture of the cells is a raised platform of wood, the sole bed of the miserable inmate. The Italian visitors, before leaving, childishly vent their useless rage at the sight of these places of confinement, by breaking to pieces the windows and shutters, and scattering their fragments on the floor.

We have returned from Sant' Elmo, and, evening having arrived, are sitting in the smoking-room of the Hôtel de Grande Bretagne, conversing with one of the English Volunteers, when our friend General J——n of the British Army, one of the lookers-on in Naples, comes in, having just returned from "the front." He brings the news of a smart skirmish which has taken place during the day; of the English "Excursionists" being ordered out in advance; of their rushing with alacrity into the thickest of the fight, and bravely sustaining the conflict,—being, indeed, with difficulty withheld by their officers from needlessly exposing themselves. But this inspiring news is tinged with sadness. One of their num-

ber, well known and much beloved, had fallen, killed instantly by a bullet through the head. Military ardor, aroused by the report of brave deeds, is for a few moments held in abeyance by grief, and then rekindled by the desire of vengeance. Hot blood is up, and the prevailing feeling is a longing for a renewal of the fight. We are told, if we wish to see an action, to go to "the front" tomorrow. Accordingly we decide to be there.

The following day, our faithful *commissionnaire*, Antonio, places us in a carriage drawn by a powerful pair of horses, and headed for the Garibaldian camp. A hamper of provisions is not forgotten, and before starting we cause Antonio to double the supplies: we have a presentiment that we may find with whom to share them.

There are twelve miles before us to the nearest point in the camp, which is Caserta. Our chief object being to see the hero of Italy, if we do not find him at Caserta, we shall push on four miles farther, to Santa Maria; and, missing him there, ride still another four miles to Sant' Angelo, where rests the extreme right of the army over against Capua.

As we ride over the broad and level road from Naples to Caserta, bordered with lines of trees through its entire length, we are surprised to see not only husbandmen quietly tilling the fields, but laborers engaged in public works upon the highway, as if in the employ of a long established authority, and making it difficult to believe that we are in the midst of civil war, and under a provisional government of a few weeks' standing. But this and kindred wonders are fruits of the spell wrought by Garibaldi, who wove the most discordant elements into harmony, and made hostile factions work together for the common good, for the sake of the love they bore to him.

About mid-day we arrive at a redoubt which covers a part of the road, leaving barely enough space for one vehicle to pass. We are of course stopped, but are courteously received by the officer of the

guard. We show our pass from General Turr, giving us permission "freely to traverse all parts of the camp," and being told to drive on, find ourselves within the lines. As we proceed, we see laborers busily engaged throwing up breastworks, soldiers reposing beneath the trees, and on every side the paraphernalia of war.

Garibaldi is not here, nor do we find him at Santa Maria. So we prolong our ride to the twentieth mile by driving our reeking, but still vigorous horses to Sant' Angelo.

We are now in sight of Capua, where Francis II. is shut up with a strong garrison. The place is a compact walled town, crowned by the dome of a large and handsome church, and situated in a plain by the side of the Volturno. Though, contrary to expectation, there is no firing to-day, we see all about us the havoc of previous cannonadings. The houses we pass are riddled with round shot thrown by the besieged, and the ground is strewn with the limbs of trees severed by iron missiles. But where is Garibaldi? No one knows. Yonder, however, is a lofty hill, and upon its summit we descry three or four persons. It is there, we are told, that the Commander-in-Chief goes to observe the enemy, and among the forms we see is very probably the one we seek.

We have just got into our carriage again, and are debating as to whither we shall go next, when we are addressed from the road-side in English. There, dressed in the red shirt, are three young men, all not far from twenty years of age, members of the British regiment of "Excursionists." They are out foraging for their mess, and ask a ride with us to Santa Maria. We are only too glad of their company; and off we start, a carriage-full. Then commences a running fire of question and response. We find the society of our companions a valuable acquisition. They are from London, — young men of education, and full of enthusiasm for the cause of Italian liberty. One of them is a connection of our distinguished countrywoman, Mrs. Harriet

Beecher Stowe. Before going to Santa Maria, they insist on doing the honors, and showing the objects of interest in the vicinity. So they take us to their barrack, a large farm-house, and thence to "the front." To the latter spot our coachman declines driving, as his horses are not bullet-proof, and the enemy is not warranted to abstain from firing during our visit. So, proceeding on foot, we reach a low breastwork of sand-bags, with an orchard in advance of it. Here, our companions tell us, was the scene of yesterday's skirmish, in which they took an active part. The enemy had thrown out a detachment of sharp-shooters, who had entered the wood, and approached the breastwork. A battalion of the English Volunteers was ordered up. As they marched eagerly forwards, a body of Piedmontese, stationed a little from the road, shouted, "*Vivano gl' Inglesi! Vivano gl' Inglesi!*" At the breastworks where we are standing, the word was given to break ranks, and skirmish. Instantly they sprang over the wall, and took position behind the trees, to shoot "wherever they saw a head." Each soldier had his "covering man,"—a comrade stationed about ten feet behind him, whose duty it was to keep his own piece charged ready to kill any of the enemy who might attempt to pick off the leading man while the latter was loading. One of my young friends had the hammer of his rifle shot off in his hand. He kept his position till another weapon was passed out to him. The action lasted till evening, when the enemy drew off, there being various and uncertain reports as to their loss. Our British cousins had some ten wounded, besides the one killed. Fighting royalists, we will mention here, was no fancy-work about that time, as the Neapolitans had an ugly trick of extinguishing the eyes of their prisoners, and then putting their victims to death.

We return to our carriage, drive into a sheltered spot, and give the word of command to Antonio to open the hamper and deploy his supplies, when hun-

gry soldiers vie with the ravenous traveller in a knife-and-fork skirmish. No fault was found with the *cuisine* of the Hôtel de Grande Bretagne.

The rations disposed of, we set off again for Santa Maria. Arrived at the village, at the request of our companions, we visit with them a hospital, to see one of their comrades, wounded in the action of the preceding day, and, as we are known to profess the healing art, to give our opinion as to his condition. We enter a large court-yard surrounded with farm-buildings, one wing of which is devoted to hospital purposes. We find the wards clean and well ventilated, and wearing the look of being well attended. This favorable condition is owing in great measure to the interposition and supervision of several ladies, among whom are specially mentioned the two daughters of an English clergyman, without omitting the name of the Countess della Torres. The wounded comrade of our friends had been struck by a ball, which had not been reached by the probe, and was supposed to have entered the lung. The poor young fellow draws his rapid breath with much pain, but is full of pluck, and meets the encouraging assurances of his friends with a smile and words of fortitude. Some time afterwards we learn that he is convalescent, though in a disabled state.

It now becomes necessary to say our mutual farewells, which we do as cordially as though we had been old friends. We go our respective ways, to meet once more in Italy, and to renew our acquaintance again in London, where we subsequently spend a pleasant evening together by a cheerful English fireside.

Scarcely have we parted with these new-found friends of kindred blood and common language, when we are provided with another companion. An Italian officer asks a seat with us to Caserta. Our letter of introduction to General Orsini being shown to him, he volunteers to assist us in attaining our object, that of seeing the hero of Italy. At five, we are before the palace of Caserta, now a barrack,

and the head-quarters of the Commander-in-Chief. The building is one of great size and beauty of architecture. A lofty arch, sustained by elegant and massive marble pillars, bisects the structure, and on either side one may pass from the archway into open areas of spacious dimensions, from which lead passages to the various offices. We approach a very splendid marble staircase leading to the state apartments. A sentinel forbids us to pass. This is, then, perhaps, the part of the building occupied by the Commander-in-Chief. Not so. The state apartments are unoccupied, and are kept sacred from intrusion, as the property of the nation to which they are to belong. Garibaldi's apartments are among the humblest in the palace. We go on to the end of the archway, and see, stretching as far as the eye can reach, the Royal Drive, leading through a fine avenue of trees, and reminding us of the "Long Walk" at Windsor Castle. Retracing our steps, and crossing one of the court-yards, we ascend a modest staircase, and are in the antechamber of the apartments of the Commander-in-Chief. There are sentinels at the outer door, others at the first landing, and a guard of honor, armed with halberds, in the antechamber. Our courteous companion, by virtue of his official rank, has passed us without difficulty by the sentries, and quits us to discharge the duty which brought him to Caserta.

We are now eagerly expectant of the arrival of him whose face we have so long sought. The hour is at hand when he joins his military family at an unostentatious and very frugal dinner. In about half an hour there is a sudden cessation in the hum of conversation, the guard is ordered to stand to arms, and in a moment more, amid profound silence, Garibaldi has passed through the antechamber, leaving the place, as it were, pervaded by his presence. We had beheld an erect form, of rather low stature, but broad and compact, a lofty brow, a composed and thoughtful face, with decision and reserved force depicted on every

line of it. In the mien and carriage we had seen realized all that we had read and heard of the air of one born to command.

Our hero wore the characteristic red shirt and gray trousers, and, thrown over them, a short gray cloak faced with red. When without the cloak, there might be seen, hanging upon the back, and fastened around the throat, the party-colored kerchief usually appertaining to priestly vestments.

Returning to Naples, and sitting that night at our window, with the most beautiful of bays before us, we treasure up for perpetual recollection the picture of Garibaldi at head-quarters.

GARIBALDI AT POMPEII.

It is Sunday, the 21st of October. We have to-day observed the people, in the worst quarters of the city as well as in the best, casting their ballots in an orderly and quiet manner, under the supervision of the National Guard, for Victor Emmanuel as their ruler. To-morrow we have set apart for exploring Pompeii, little dreaming what awaits us there. Our friend, General J——n, of the British Army, learning that there is no likelihood of active operations at "the front," proposes to join us in our excursion.

We are seated in the restaurant at the foot of the acclivity which leads to the exhumed city, when suddenly Antonio appears and exclaims, "Garibaldi!" We look in the direction he indicates, and, in an avenue leading from the railway, we behold the Patriot-Soldier of Italy advancing toward us, accompanied by the Countess Pallavicini, the wife of the Prodictator of Naples, and attended by General Turr, with several others of his staff. We go out to meet them. General J——n, a warm admirer of Garibaldi, gives him a cordial greeting, and presents us as an American. We say a few words expressive of the sympathy entertained by the American people for the cause of Italy and its apostle. He whom we thus address, in his reply, professes his happiness

in enjoying the good wishes of Americans, and, gracefully turning to our friend, adds, "I am grateful also for the sympathy of the English." The party then pass on, and we are left with the glowing thought that we have grasped the hand of Garibaldi.

Half an hour later, we are absorbed in examining one of the structures of what was once Pompeii, when suddenly we hear martial music. We follow the direction of the sound, and presently find ourselves in the ancient forum. In the centre of the inclosure is a military band playing the "Hymn of Garibaldi"; while at its northern extremity, standing, facing us, between the columns of the temple of Jupiter, with full effect given to the majesty of his bearing, is Garibaldi. Moved by the strikingly contrasting associations of the time and the place, we turn to General J——n, saying, "Behold around us the symbols of the death of Italy, and there the harbinger of its resurrection." Our companion, fired with a like enthusiasm, immediately advances to the base of the temple, and, removing his hat, repeats the words in the presence of those there assembled.

GARIBALDI AT "THE FRONT."

ONCE again we look in the eye of this wonderful man, and take him by the hand. This time it is at "the front." On Saturday, the 27th of October, we are preparing to leave Naples for Rome by the afternoon boat, when we receive a message from General J——n that the bombardment of Capua is to begin on the following day at ten o'clock, and inviting us to join his party to the camp. Accordingly, postponing our departure for the North, we get together a few surgical instruments, and take a military train upon the railway in the afternoon for the field of action.

Our party consists of General J——n, General W., of Virginia, Captain G., a Scotch officer serving in Italy, and ourselves. Arrived at Caserta, Captain G., showing military despatches, is provided

with a carriage, in which we all drive to the advanced post at Sant' Angelo. We reach this place at about eight o'clock, when we ride and walk through the camp, which presents a most picturesque aspect, illuminated as it is by a brilliant moon. We see clusters of white tents, with now and then the general silence broken by the sound of singing wafted to us from among them, — here and there tired soldiers lying asleep on the ground, covered with their cloaks, — horses picketed in the fields, — camp-fires burning brightly in various directions; while all seems to indicate the profound repose of men preparing for serious work on the morrow. We pass and repass a bridge, a short time before thrown across the Volturno. A portion of the structure has broken down; but our English friends congratulate themselves that the part built by their compatriots has stood firm. We exchange greetings with Colonel Bourdonné, who is on duty here for the night, superintending the repairs of the bridge, and who kindly consigns us to his quarters.

Arrived at the farm-house where Colonel Bourdonné has established himself, and using his name, we are received with the utmost attention by the servants. The only room at their disposal, fortunately a large one, they soon arrange for our accommodation. To General J——n, the senior of the party, is assigned the only bed; an Italian officer occupies a sofa; while General W., Captain G., and ourselves are ranged, "all in a row," on bags of straw placed upon the floor. Of the merriment, prolonged far into the night, and making the house resound with peals of laughter, — not at all to the benefit, we fear, of several wounded officers in a neighboring room, — we may not write.

Sunday is a warm, clear, summer-like day, and our party climb the principal eminence of Sant' Angelo to witness the expected bombardment. We reach the summit at ten minutes before ten, the hour announced for opening fire. We find several officers assembled there, — among them General H., of Virginia. Low tone

of conversation and a restrained demeanor are impressed on all; for, a few paces off, conferring with two or three confidential aids, is the man whose very presence is dignity, — Garibaldi.

Casting our eye over the field, we cannot realize that there are such hosts of men under arms about us, till a military guide by our side points out their distribution to us.

"Look there!" says General H., pointing to an orchard beneath. "Under those trees they are swarming thick as bees. There are ten thousand men, at least, in that spot alone."

With an opera-glass we can distinctly scan the walls of Capua, and observe that they are not yet manned. But the besieged are throwing out troops by thousands into the field before our lines. We remark one large body drawn up in the shelter of the shadow cast by a large building. Every now and then, from out this shadow, a piercing ray of light is shot, reflected from the helm or sword-case of the commanding officer, who is gallantly riding up and down before his men, and probably haranguing them in preparation for the expected conflict. All these things strike the attention with a force and meaning far different from the impression produced by the holiday pageantry of mimic war.

The Commander-in-Chief is now dis-

engaged, and our party approach him to pay their respects. By the advice of General J——n, we proffer our medical services for the day; and we receive a pressure of the hand, a genial look, and a kind acknowledgment of the offer. But we are told there will be no general action to-day. Our report of these words, as we rejoin our companions, is the first intimation given that the bombardment is deferred. But, though there is some disappointment, their surprise is not extreme. For Garibaldi never informs even his nearest aide-de-camp what he is about to do. In fact, he quaintly says, "If his shirt knew his plans, he would take it off and burn it."

Some half-hour later, having descended from the eminence, we take our last look of Garibaldi. He has retired with a single servant to a sequestered place upon the mount, whither he daily resorts, and where his mid-day repast is brought to him. Here he spends an hour or two secure from interruption. What thoughts he ponders in his solitude the reader may perhaps conjecture as well as his most intimate friend. But for us, with the holy associations of a very high mountain before our mind, we can but trust that a prayer, "uttered or unexpressed," invokes the divine blessing upon the work to which Garibaldi devotes himself, — the political salvation of his country.

TWO OR THREE TROUBLES.

[Concluded.]

EVERY day, and twice a day, came Mr. Sampson, — though I have not said much about it; and now it was only a week before our marriage. This evening he came in very weary with his day's work, — getting a wretched man off from hanging, who probably deserved it richly. (It is said, women are always for hanging: and that is very likely. I

remember, when there had been a terrible murder in our parlors, as it were, and it was doubtful for some time whether the murderer would be convicted, Mrs. Harris said, plaintively, "Oh, do hang somebody!") Mr. Sampson did not think so, apparently, but sat on the sofa by the window, dull and abstracted.

If I had been his wife, I should have

done as I always do now in such a case : walked up to him, settled the sofa-cushion, and said, — “Here, now ! lie down, and don’t speak a word for two hours. Meantime I will tell you who has been here, and everything.” Thus I should rest and divert him by idle chatter, bathing his tired brain with good Cologne ; and if, in the middle of my best story and funniest joke, he fairly dropped off to sleep, I should just fan him softly, keep the flies away, say in my heart, “Bless him ! there he goes ! hands couldn’t mend him !” — and then look at him with as much more pride and satisfaction than at any other common wide-awake face as it is possible to conceive.

However, not being married, and having a whole week more to be silly in, I was both silly and suspicious. This was partly his fault. He was reserved, naturally and habitually ; and as he didn’t tell me he was tired and soul-weary, I never thought of that. Instead, as he sat on the sofa, I took a long string of knitting-work and seated myself across the room, — partly so that he might come to me, where there was a good seat. Then, as he did not cross the room, but still sat quietly on the sofa, I began to wonder and suspect. Did he work too hard ? Did he dread undertaking matrimony ? Did he wish he could get off ? Why did he not come and speak to me ? What had I done ? Nothing ! Nothing !

Here Laura came in to say she was going to Mrs. Harris’s to get the newest news about sleeves. Mrs. Harris for sleeves ; Mrs. Gore for bonnets ; and for housekeeping, recipes, and all that, who but Mrs. Parker, who knew that, and a hundred other things ? Many-sided are we all : talking sentiment with this one, housekeeping with that, and to a third saying what wild horses would not tear from us to the two first !

Laura went. And presently he said, wearily, but *I* thought drearily, —

“Delphine, are you all ready to be married ?”

The blood flushed from my heart to my forehead and back again. So, then,

he thought I was ready and waiting to drop like a ripe plum into his mouth, without his asking me ! Am I ready, indeed ? And suppose I am not ? Perhaps I, too, may have my misgivings. A woman’s place is not a sinecure. Troubles, annoyances, as the sparks fly upward ! Buttons to begin with, and everything to end with ! What did Mrs. Hemans say, poor woman ?

“Her lot is on you ! silent tears to weep,
And patient smiles to wear through suffering’s hour,
And sunless riches from affection’s deep
To pour on” — something — “a wasted shower !”

Yes, wasted, indeed ! I hadn’t answered a word to his question.

“It seems warm in this room,” said he again, languidly ; “shall we walk on the piazza ?”

“I think not,” I answered, curtly ; “I am not warm.”

Even that did not bring him to me. He still leaned his head on his hand for a minute or two, and then rose from the sofa and sat by the window, looking at the western sky, where the sun had long gone down. I could see his profile against the outer light, however, and it did not look placid. His brow was knit and mouth compressed. So, then, it was all very likely !

Having set out on my race of suspecting, my steeds did not lag. They were winged already, and I goaded them continually with memories. There was nothing I did not think of or accuse him of, — especially, the last and worst sin of breaking off our engagement at the eleventh hour ! — and I, who had suffered silently, secretly, untold torments about that name of his, — nobody, no man, could ever guess how keenly, because no man can ever feel as a woman does about such things ! Men, — they would as soon marry Tabitha as Juliana. They could call her “Wife.” It made no matter to them. What did any man care, provided she chronicled small beer, whether she had taste, feeling, sentiment, anything ?

Here I was wrong, as most passionate

people are at some time in their lives. Some men do care.

At the moment I had reached the top-most pinnacle of my wrath, and was darting lightnings on all mankind, Polly showed in Lieutenant Herbert, with his book of promised engravings.

With a natural revulsion of temper, I descended rapidly from my pinnacle, and, stepping half-way across the room, met the Lieutenant with unusual cordiality. Mr. Sampson bowed slightly and sat still. I drew two chairs towards the centre-table, lighted the argand, and seated myself with the young officer to examine and admire the beautiful forms in which the gifted artist has clothed the words rather than the thoughts of the writer,—out of the coarse real, lifting the scenes into the sweet ideal,—and out of the commonest, rudest New-England life, bringing the purest and most charming idyllic song. We did not say this.

I looked across at the window, where still sat the figure, motionless. Not a word from him. I looked at Lieutenant Herbert. He was really very handsome, with an imperial brow, and roseate lips like a girl's. Somehow he made me think of Claverhouse,—so feminine in feature, so martial in action! Then he talked,—talked really quite well,—reflected my own ideas in an animated and eloquent manner.

Why it was,—whether Herbert suspected we had had a lovers' quarrel,—or whether his vanity was flattered at my attention to him, which was entirely unusual,—or whether my own excited, nervous condition led me to express the most joyous life and good-humor, and shut down all my angry sorrow and indignant suspicions, while I smiled and danced over their sepulchre,—however it was, I know not,—but a new sparkle came into the blue eyes of the young *militaire*. He was positively entertaining. Conscious that he was talking well, he talked better. He recited poetry; he was even witty, or seemed so. With the magnetism of cordial sympathy, I called out from his memory treasures

new and old. He became not only animated, but devoted.

All this time the figure at the window sat calm and composed. It was intensely, madly provoking. He was so very sure of me, it appeared, he would not take the trouble to enter the lists to shiver a lance with this elegant young man with the beautiful name, the beautiful lips, and with, for the last half-hour at least, the beautiful tongue. He would not trouble himself to entertain his future wife. He would not trouble himself even to speak. Very well! Very well indeed! Did the Lieutenant like music? If "he" did not care a jot for me, perhaps others did. My heart beat very fast now; my cheeks burned, and my lips were parched. A glass of water restored me to calmness, and I sat at the piano. Herbert turned over the music, while I rattled off whatever came to my fingers' ends,—I did not mind or know what. It was very fine, I dare say. He whispered that it was "so beautiful!"—and I answered nothing, but kept on playing, playing, playing, as the little girl in the Danish story keeps on dancing, dancing, dancing, with the fairy red shoes on. Should I play on forever? In the church,—out of it,—up the street,—down the street,—out in the fields,—under the trees,—by the wood,—by the water,—in cathedrals,—I heard something murmuring,—something softly, softly in my ear. Still I played on and on, and still something murmured softly, softly in my ear. I looked at the window. The head was leaned down, and resting on both arms. Fast asleep, probably. Then I played louder, and faster, and wilder.

Then, for the first time, as deaf persons are said to hear well in the noise of a crowded street, or in a rail-car, so did I hear in the musical tumult, for the first time, the words of Herbert. They had been whispered, and I had heard, but not perceived them, till this moment.

I turned towards him, looked him full in the face, and dropped both hands into my lap. Well might I be astonished! He started and blushed violently, but said nothing. As for me, I was never

more calm in my life. In the face of a real mistake, all imaginary ones fell to the ground, motionless as so many men of straw. With an instinct that went before thought, and was born of my complete love and perfect reliance on my future husband, I pushed back the music-stool, and walked straight across the room to the window.

His head was indeed leaned on his arms; but he was white and insensible.

"Come here!" I said, sternly and commandingly, to Herbert, who stood where I had left him. "Now, if you can, hold him, while I wheel this sofa;—and now, ring the bell, if you please."

We placed him on the couch, and Polly came running in.

"Now, good-night, Sir; we can take care of him. With very many thanks for your politeness," I added, coldly; "and I will send home the book to-morrow."

He muttered something about keeping it as long as I wished, and I turned my back on him.

"Oh! oh!—what had *he* thought all this time?—what had he suffered? How his heart must have been agonized!—how terribly he must have felt the mortification,—the distress! Oh!"

We recovered him at length from the dead faint into which he had fallen. Polly, who thought but of the body, insisted on bringing him "a good heavy glass of Port-wine sangaree, with toasted crackers in it"; and wouldn't let him speak till he had drunken and eaten. Then she went out of the room, and left me alone with my justly incensed lover.

I took a *bricche*, and sat down humbly at the head of the sofa. He held out his hand, which I took and pressed in mine,—silently, to be sure; but then no words could tell how I had felt, and now felt,—how humiliated! how grieved! How wrongly I must have seemed to feel and to act! how wrongly I must have acted,—though my conscience excused me from feeling wrongly,—so to have deluded Herbert!

At last I murmured something regretful and tearful about Lieutenant Her-

bert.—Herbert! how I had admired that name!—and now, this Ithuriel touch, how it had changed it and him forever to me! What was in a name?—sure enough! As I gazed on the pale face on the couch, I should not have cared, if it had been named Alligator,—so elevated was I beyond all I had thought or called trouble of that sort! so real was the trouble that could affect the feelings, the sensitiveness, of the noble being before me!

At length he spoke, very calmly and quietly, setting down the empty tumbler. I trembled, for I knew it must come.

"I was so glad that fool came in, Del! For, to tell the truth, I felt really too weak to talk. I haven't slept for two nights, and have been on my feet and talking for four hours,—then I have had no dinner"—

"Oh!"

"And a damned intelligent jury, (I beg your pardon, but it's a great comfort to swear, sometimes,) that I can't humbug. But I must! I must, to-morrow!" he exclaimed, springing up from the sofa and walking hurriedly across the room.

"Oh, do sit down, if you are so tired!"

"I cannot sit down, unless you will let me stop thinking. I have but one idea constantly."

"But if the man is guilty, why do you want to clear him?" said I.

Not a word had he been thinking of me or of Herbert all this time! But then he had been thinking of a matter of life and death. How all, all my foolish feelings took to flight! It was some comfort that my lover had not either seen or suspected them. He thought he must have been nearly senseless for some time. The last he remembered was, we were looking at some pictures.

Laura came in from Mrs. Harris's, and, hearing how the case was, insisted on having a chicken broiled, and that he should eat some green-apple tarts, of her own cooking,—not sentimental, nor even wholesome, but they suited the occasion; and we sat, after that, all three talking, till past twelve o'clock. No danger now, Laura said, of bad dreams, if he did go to bed.

"But why do you care so very much, if you don't get him off?—you suppose him guilty, you say?"

"Because, Delphine, his punishment is abominably disproportioned to his offence. This letter of the law killeth. And then I would get him off, if possible, for the sake of his son and the family. And besides all that, Del, it is not for me to judge, you know, but to defend him."

"Yes,—but if you do your best?" I inquired.

"A lawyer never does his best," he replied, hastily, "unless he succeeds. He must get his client's case, or get him off. I must get some sleep to-night," he added, "and take another pull. There's a man on the jury,—he is the only one who holds out. I know I don't get him. And I know why. I see it in the cold steel of his eyes. His sister was left, within a week of their marriage-day, by a scoundrel,—left, too, to disgrace, as well as desertion,—and his heart is bitter towards all offences of the sort. I must get that man somehow!"

He was standing on the steps, as he spoke, and bidding me good-night; but I saw his head and heart were both full of his case, and *nothing else*.

The words rang in my ear after he went away: "Within a week of their marriage-day!" In a week we were to have been married. Thank Heaven, we were still to be married in a week. And he had spoken of the man as "a scoundrel," who left her. America, indeed! what matters it? Still, there would be the same head, the same heart, the same manliness, strength, nobleness,—all that a woman can truly honor and love. Not military, and not—a scoundrel; but plain, massive, gentle, direct. He would do. And a sense of full happiness pressed up to my very lips, and bubbled over in laughter.

"You are a happy girl, Del. Mrs. Harris says the court and everybody is talking of Mr. Sampson's great plea in that Shore case. Whether he gets it or not, his fortune is made. They say there hasn't been such an argument since Web-

ster's time,—so irresistible. It took every body off their feet."

I did not answer a word,—only clothed my soul with sackcloth and ashes, and called it good enough for me.

We went to bed. But in the middle of the night I waked Laura.

"What's the matter?" said she, springing out of bed.

"Don't, Laura!—nothing," said I.

"Oh, I thought you were ill! I've been sleeping with one eye open, and just dropped away. What is it?"

"Do lie down, then. I only wanted to ask you a question."

"Oh, do go to sleep! It's after three o'clock now. We never shall get up. Haven't you been asleep yet?"

"No,—I've been thinking all the time. But you are impatient. It's no matter. Wait till to-morrow morning."

"No. I am awake now. Tell me, and be done with it, Del."

"But I shall want your opinion, you know."

"Oh, *will* you tell me, Del?"

"Well, it is this. How do you think a handsome, a *very* handsome chess-table would do?"

"Do!—for what?"

"Why,—for my aunt's wedding-gift, you know."

"Oh, that! And you have waked me up, at this time of night, from the nicest dream! You cruel thing!"

"I am so sorry, Laura! But now that you are awake, just tell me how you like the idea;—I won't ask you another word."

"Very well,—very good,—excellent," murmured Laura.

In the course of the next ten minutes, however, I remembered that Laura never played chess, and that I had heard Mr. Sampson say once that he never played now,—that it was too easy for work, and too hard for amusement. So I put the chess-table entirely aside, and began again.

A position for sleep is, unluckily, the one that is sure to keep one awake. Lying down, all the blood in my body kept rushing to my brain, keeping up

perpetual images of noun substantives. If I could have spent my fifty dollars in verbs, in taking a journey, in giving a *fête champêtre*! (Garden lighted with Chinese lanterns, of course,—house covered inside and out with roses.) Things enough, indeed, there were to be bought. But the right thing!

A house, a park, a pair of horses, a curricule, a pony-phaëton. But how many feet of ground would fifty dollars buy?—and scarcely the hoof of a horse.

There was a diamond ring. Not for me; because “he” had been too poor to offer me one. But I could give it to him. No,—that wouldn’t do. He wouldn’t wear it,—nor a pin of ditto. He had said, simplicity in dress was good economy and always good taste. No. Then something else,—that wouldn’t wear, wouldn’t tear, wouldn’t lose, rust, break.

As to clothes, to which I swung back in despair,—this very Aunt Allen had always sent us all our clothes. So it would only be getting more, and wouldn’t seem to be anything. She was an odd kind of woman,—generous in spots, as most people are, I believe. Laura and I both said, (to each other,) that, if she would allow us a hundred dollars a year each, we could dress well and suitably on it. But, instead of that, she sent us every year, with her best love, a trunk full of her own clothes, made for herself, and only a little worn,—always to be altered, and retrimmed, and refurbished: so that, although worth at first perhaps even more than two hundred dollars, they came, by their unfitness and non-fitness, to be worth to us only three-quarters of that sum; and Laura and I reckoned that we lost exactly fifty dollars a year by Aunt Allen’s queerness. So much for our gratitude! Laura and I concluded it would be a good lesson to us about giving; and she had whispered to me something of the same sort, when I insisted on dressing Betsy Ann Hemmenway, a little mulatto, in an Oriental caftan and trousers, and had promised her a red sash for her waist. To be sure, Mrs. Hemmenway despised

the whole thing, and said she “wouldn’t let Betsy Ann be dressed up like a circus-rider, for nobody”; and that she should “wear a bonnet and mantilly, like the rest of mankind.” Which, indeed, she did,—and her bonnet rivalled the *coiffures* of Paris in brilliancy and procrastination; for it never came in sight till long after its little mistress. However, of that by-and-by. I was only too glad that Aunt Allen had not sent me another silk gown “with her best love, and, as she was only seventy, perhaps it might be useful.” No,—here was the fifty-dollar note, thank Plutus!

But then, what to do with it? Sleeping, that was the question. Waking, that was the same.

At twelve o’clock Mr. Sampson came to dine with us, and to say he was the happiest of men.

“That is, of course, I shall be, next week,” said he, smiling and correcting himself. “But I am rather happy now; for I’ve got my case, and Shore has sailed for Australia. Good riddance, and may he never touch *these* shores any more!”

He had been shaking hands with everybody, he said,—and was so glad to be out of it!

“Now that it is all over, I wish you would tell me why you are so glad, when you honestly believe the man guilty,” said I.

“Oh, my child, you are supposing the law to be perfect. Suppose the old English law to be in force now, making stealing a capital offence. You wouldn’t hang a starving woman or child who stole the baker’s loaf from your window-sill this morning before Polly had time to take it in, would you? Yet this was the law until quite lately.”

“After all, I don’t quite see either how you can bear to defend him, if you think him guilty, or be glad to have him escape, if he is,—I mean, supposing the punishment to be a fair one.”

“Because I am a frail and erring man, Delphine, and like to get my case. If my client is guilty,—as we will suppose,

for the sake of argument, he is, — he will not be likely to stop his evil career merely because he has got off now, and will be caught and hanged next time, possibly. If he does stop sinning, why, so much the better to have time for repentance, you know."

"Don't laugh, — now be serious."

"I am. Once, I made up my mind as to my client's guilt from what he told and did not tell me, and went into court with a heavy heart. However, in the course of the trial, evidence, totally unexpected to all of us, was brought forward, and my client's innocence fully established. It was a good lesson to me. I learned by experience that the business of counsel is to defend or to prosecute, and not to judge. The judge and jury are stereoscopic and see the whole figure."

How wise and nice it sounded! Any way, I wasn't a stereoscope, for I saw but one side, — the one "he" was on.

Monday morning. And we were to be married in the evening, — by ourselves, — nobody else. That was all the stipulation my lover made.

"I will be married morning, noon, or night, as you say, and dress and behave as you say; but not in a crowd of even three persons."

"Not even Laura?"

"Oh, yes! Laura."

"Not even Polly?"

"Oh, yes! the household."

And then he said, softly, that, if I wanted to please him, — and he knew his darling Del did, — I would dress in a white gown of some sort, and put a tea-rose in my beautiful dark hair, and have nobody by but just the family and old Mr. Price, the Boynton minister.

"I know that isn't what you thought of, exactly. You thought of being married in church" —

"Oh, dear, dear! old Mr. Price!" — but I did not speak.

"But if you would be willing?" —

"I supposed it would be more convenient," I muttered.

Visions of myself walking up the aisle, with a white silk on, tulle veil, orange-

flowers, of course, (so becoming!) house crowded with friends, collation, walking under the trees, — all faded off with a mournful cry.

It was of no use talking. Whatever he thought best, I should do, if it were to be married by the headsman, supposing there were such a person. This was all settled, then, and had been for a week.

Nobody need say that lovers, or even married lovers, have but one mind. They have two minds always. And that is sometimes the best of it; since the perpetual sacrifices made to each other are made no sacrifices, but sweet triumphs, by their love. Still, just as much as green is composed of yellow and blue, and purple of red and blue, the rays can any time be separated, and they always have a conscious life of their own. Of course, I had a sort of pleasure even in giving up my marriage in church; but I kept my blue rays, for all that, — and told Laura I dreaded the long, long prayer in that evening's service, and that I hoped in mercy old Mr. Price would have his wits about him, and not preach a funeral discourse.

"Old Mr. Price is eighty-nine years old, Laura says," said I.

"Yes. He was the minister who married my father and mother, and has always been our minister," answered my lover.

And so it was settled.

Laura was rolling up tape, Monday morning, as quietly as if there were to be no wedding. For my part, I wandered up and down, and could not set myself about anything.

"Old Mr. Price! and a great long prayer! And that is to be the end of it! My wedding-dress all made, and not to be worn! Flowers ditto! Nowhere to go, and so I shall stay at home. *He* has no house; so Taffy is to come to mine!"

And here I burst out laughing; for it was as well to laugh as cry; and besides, I said a great many things on purpose to have Laura say what she always did, — and which, after all, it was sweet to me to hear. Those were silly days!

"No, Del,—that is not the end of it,—only the beginning of it,—of a happy, useful, good life,—your path growing brighter and broader every year,—and — and — we won't talk of the garlands, dear; but your heart will have bridal-blossoms, whether your head has or not."

Laura kissed me, with tears in her sisterly eyes. She never talks fine, and went directly out of the room after this.

I thought that women shouldn't swear at all, or, if they did, should break their oaths as gracefully as I did mine, when I whispered it was "*so* good of him, to be willing I should stay in the cottage where I had always lived, and where every rose-tree and lilac knew me!" And that was true, too. But not all the truth. What need to be telling truths all the time? And what had women tongues for, but to hold them sometimes? Perhaps "*he*," too, would have preferred a journey to Europe, and a house on the Mill-Dam.

Things gradually settled themselves. My troubles seemed coming to a close by mechanical pressure. As to the name, it was better than Fire, Famine, and Slaughter,—and I was to take it into consideration, any way, and get used to it, if I could. The other trouble I put aside for the moment. After it was concluded on that the wedding should be strictly private, it was not necessary to buy my aunt's present under a few days, and I could have the decided advantage, in that way, of avoiding a duplicate.

The Monday of my marriage sped away swiftly. Polly had come up early to say to "*Laury*" (for Polly was a free and independent American girl of forty-five) that "*there'd be so much goin' to the door, and such, Betsy Ann had best be handy by, to answer the bell. Fin'ly, she's down there with her bunnet off, and goin' to stay.*"

As usual, Polly's plans were excellent, and adopted. There would be all the wedding-presents to arrive, congratulatory notes, etc. Everything to arrange, and a thousand and one things that neither one nor three pairs of hands could

do. How I wished Betsy Ann would consent to dress like an Oriental child, and look pretty and picturesque,—like a Barbary slave bearing vessels of gold and silver chalices, instead of her silly pointed waist and "*mantilly*," which she persisted in wearing, and which, of course, gave the look only of a stranger and sojourner in the land!

I hoped she was a careful child,—there were so many things which might be spoiled, even if they came in boxes. Betsy Ann was instructed, on pain of — almost death, to be very, very careful, and to put everything on the table in the library. She was by no means to unpack an article, not even a bouquet. Laura and myself preferred to arrange everything ourselves. We proposed to place each of the presents, for that evening only, in the library, and spread them out as usual; but the very next day, we determined, they should all be put away, wherever they were to go,—of course, we could not tell where, till we saw them. That was Laura's taste, and had come, on reflection, to be mine.

Laura said she should make me presents only of innumerable stitches: which she had done. Polly, whom it is both impossible and irrelevant to describe, took the opportunity to scrub the house from top to bottom. Her own wedding-present to me, homely though it was, I wrapped in silver paper, and showed it to her lying in state on the library-table, to her infinite amusement.

Like the North American Indian, the race of Pollicies is fast going out of American life. You read an advertisement of "*an American servant who wants a place in a genteel family,*" and visions of something common in American households, when you were children, come up to your mind's eye. Without considering the absurdity of an American girl calling herself by such a name, your eyes fill with tears at the thought of the faithful and loving service of years ago, when neither sickness, nor sorrow, nor death itself separated the members of the household, but the nurse-maid was the beloved

friend, living and dying under the same roof that witnessed her untiring and faithful devotion.

So, when you look after this "American servant," you find alien blood, lip-service, a surface-warmth that flatters, but does not delude,—a fidelity that fails you in sickness, or increased toil, or the prospect of higher wages; and you say to the "American servant,"—

"How long have you been in Boston?"

"Born in Boston, Ma'm,—in Eliot Street, Ma'm."

So was not Polly. Polly had lived with us always. She had a farm of her own, and needn't have "lived out" five minutes, unless she had chosen. But she did choose it, and chose to keep her place. And that was a true friend,—in a humble position, possibly, yet one of her own choosing. She rejoiced and wept with us, knew all about us,—corresponded regularly with us when away, and wrote poetry. She had a fair mind, great shrewdness, and kept a journal of facts. We loved her dearly,—next to each other, and a hundred times better than we did Aunt Allen or any of them.

Of course, as the day wore on, and afternoon came, and then almost night came, and still the bell had not once rung,—not once!—Polly was not the person to express or to permit the least surprise. Not Caleb Balderstone himself had a sharper eye to the "honor of the family." *Why* it was was left to the doctrine of chances to decide. *That* it was grew clearer and clearer every hour, as every hour came slowly by, unladen with box or package, even a bouquet.

Betsy Ann had grinned a great many times, and asked Polly over and over, "Where the presents all was?" and, "When I was to Miss Russell's, and Miss Sally was merried, the things come in with a rush,—silver, and gold, and money, ever so much!"

However, here Polly snubbed her, and told her to "shet up her head quick. Most of the presents was come long ago."

"Such a piece of work as I hed to

shet up that critter's mouth!" said Polly, laughing, as she assisted Laura in putting the last graces to my simple toilet before tea.

"There, now, Miss Sampson to be! I declare to man, you never looked better.

'Roses red, violets blue,
Pinks is pooty, and so be you.'

"How did you shut it, Polly?" said Laura, who was very much surprised, like myself, at the non-arrivals, and who constantly imagined she heard the bell. Ten arrivals we had both counted on,—ten, certainly,—fifteen, probably.

"Well, I told her the presents was all locked up; and if she was a clever, good child, and went to school regular, and got her learnin' good, I 'd certain show 'em to her some time. I told her," added Polly, whisperingly, and holding her hand over her mouth to keep from loud laughter,— "I told her I 'd seen a couple on 'em done up in beautiful silver paper!"

The bell rang at last, and we all sprang as with an electric shock. It was old Mr. Price, led in reverently by Mr. Sampson. Tea was ready; so we all sat down to it.

I don't know what other people think of, when they are going to be married,—I mean at the moment. Books are eloquent on the subject. For my part, I must confess, I thought of nothing. And let that encourage the next bride, who will imagine herself a dunce, because she isn't thinking of something fine and solemn. Perhaps I had so many ideas pressing in, in all directions, that the mind itself couldn't act. Be it as it may, I stood as if stupefied,—while old Mr. Price talked and prayed, it seemed, an age. I was roused, however, and glad enough I wasn't in church, when he called out,—

"*Ameriky*! do you take this woman for your wedded wife?" and still more rejoiced when he added, sternly,—

"*Delphiny*!" (using the long *i*), "do you take *Ameriky*?"

We both said "Yes." And then he commended us affectionately and reverently to the protection and love of Him who had himself come to a wedding. He then came to a close, to Polly's delight, who

said she "had expected nothin' but what the old gentleman would hold on an hour, — missionaries to China, and all."

Old Mr. Price took a piece of cake and a full glass of wine, and wished us joy. He was fast passing away, and with him the old-class ministers, now only traditional, who drank their half-mug of flip at funerals, went to balls to look benignantly on the scene of pleasure, came home at ten o'clock to write "the improvement" to their Sunday's sermon, took the other half-mug, and went to bed peaceably and in charity with the whole parish. They have gone, with the stage-coaches and country-newspapers; and the places that knew them will know them no more.

Betsy Ann, who was mercifully admitted to the wedding, pronounced it without hesitation the "flattest thing she ever see," — and was straightway dismissed by Polly, with an extra frosted cake, and a charge to "get along home with herself." Then Mr. Sampson walked slowly home with Mr. Price, and Laura and myself were left looking at each other.

"Delphiny!" said Laura.

"Ameriky!" said I.

"Well, — it's over now. If you had happened to be Mrs. Conant's daughter, you know, your name would have been Keren-happuch!"

"On the whole, I am glad it wasn't in church," said I.

Mr. Sampson returned before we had finished talking of that. And then Laura said, suddenly, —

"But you *must* decide on Aunt Allen's gift, Del. What shall it be? What will be pretty?"

"You shall decide," said I, amiably, turning to my husband.

"Oh, I have no notion of what is pretty, — at least of but one thing, — and that is not in Aunt Allen's gift."

He laughed, and I blushed, of course, as he pointed the compliment straight at me.

"But you *must* think. I cannot decide. I have thought of five hundred things already."

"Well, Laura, — what do you say?" said he.

"I think a silver salver would be pretty, and useful, too."

"Pretty and useful. Then let it be a silver salver, and be done with it," said he.

This notion of being "done with it" is so mannish! Here was my Gordian knot cut at once! However, there was no help for it, — though now, more than ever, since there was no danger of a duplicate, did I long for the fifty thousand different beautiful things the fifty dollars would buy.

Circumstances aided us, too, in coming to a conclusion. I was rather tired of rocking on these billows of uncertainty, even with the chance of plucking gems from the depths. And Mrs. Harris was coming the next day to tea, and to go away early to see Piccolomini sing and sparkle.

When we sat down that next day at the table, I poured the tea into a cup, and placed it on the prettiest little silver tray, and Polly handed it to Mrs. Harris as if she had done that particular thing all her life.

"Beautiful!" said Mrs. Harris, as it sparkled along back; "one of your wedding-gifts?"

"Yes," I answered, carelessly, — "Aunt Allen's."

So much was well got over. My hope was that Mrs. Harris, who talked well, and was never weary of that sort of well-doing, would keep on her own subjects of interest, to the exclusion of mine. Therefore, when she said pleasantly, *en passant*, —

"By the way, Delphine, I see you have taken my advice about wedding-presents. You know I always abominated that parading of gifts."

Laura hastened to the rescue, saying, —

"Yes, we quite agree with you, and remember your decided opinions on that subject. Did you say you had been to the Aquarial Gardens?"

How I wished I had been self-possessed enough to tell the whole story, with its

ridiculous side out, and make a good laugh over it, as it deserved!—for Mrs. Harris wouldn't stay in the Aquarial Gardens, which she pronounced a disgusting exhibition of "Creep and Crawl," and that it was all a set of little horrors; but swung back to wedding-gifts and wedding-times.

"When I was young,—ah! woful *when!*—
That I should say *when* I was young!"

it wasn't fashionable, or, I should say, necessary, to buy something for a bride," said Mrs. Harris, meditatively, and looking back—as we could see by her eyes—a long way.

For my part, I thought she had much better choose some other subject, considering everything. Certainly she had been one of the ten I had counted on. But she suddenly collected herself.

"I never look at a great needle-book, ('housewife,' we used to call it,) full of all possible and impossible contrivances and conveniences, without recalling my Aunt Hovey's patient smile when she gave it to me. She was rheumatic, and confined for twenty years to her chair; and these 'housewives' she made exquisitely, and each of her young friends on her wedding-day might count on one. Then Sebah Collins,—she brought me a bag of holders,—poor old soul! And Aunt Patty Hobbs gave me a bundle of rags! She said, 'Young housekeepers was allers a-wantin' rags, and, in course, there wa'n't nothin' but what was bran'-new out of the store.' Can I ever forget the Hill children, with their mysterious movements, their hidings, and their unaccountable absences? and then the work-basket on my toilet-table, on my wedding-morning! the little pin-cushions and emery-sacks, the fantastic thimble-cases, and the fish-shaped needle-books! all as nice as their handy little fingers could make, and every stitch telling of their earnest love and bright faces!—Every one of those children is dead. But I keep the work-basket sacred. I don't know whether it is more pleasure or pain."

She looked up again, as if before her passed a long procession. I had often

seen that expression in the eyes of old, and even of middle-aged persons, who had had much mental vicissitude, but I had not interpreted it till now. It was only for a moment; and she added, cheerfully,—

"The future is always pleasant; so we will look that way."

Just then a gentleman wished to see Mr. Sampson on business, and they two went into the library.

Mrs. Harris talked on, and I led the way to the parlor. She said she should be called for presently; and then Laura lighted the argand, and dropped the muslin curtains.

"Oh, isn't this sweet?" exclaimed Mrs. Harris, rapturously, approaching the table. "How the best work of Art pales before Nature!"

It was only a tall small vase of ground glass, holding a pond-lily, fully opened. But it was perfect in its way, and I knew by the smile on Laura's lips that it was her gift.

"Mine is in that corner, Delphine," said Mrs. Harris. "I wouldn't have it brought here till to-night, when I could see Laura, for fear you should have a duplicate. So here is my Mercury, that I have looked at till I love it. I wouldn't give you one that had only the odor of the shop about it; but you will never look at this, Del, without thoughts of our little cozy room and your old friend."

"Beautiful! No, indeed! Always!" murmured I.

She drew a little box from her pocket, and took out of it a taper-stand of chased silver.

"Mrs. Gore asked me to bring it to you, with her love. She wouldn't send it yesterday, she said, because it would look so like nothing by the side of costly gifts. Pretty, graceful little thing! isn't it? It is an evening-primrose, I think,—'love's own light,'—hey, Delphine?"

We had scarcely half admired the taper-stand and the Mercury when the carriage came for Mrs. Harris, who insisted on taking away Laura with her to the opera.

"No matter whether you thought of going or not; and, happily, there's no danger of Delphine being lonely. 'Two are company,' you know Emerson says, 'but three are a congregation.' So they will be glad to spare you. There, now! that is all you want,—and this shawl."

After they went, I sat listening for nearly half an hour to the low murmurs in the next room, and wishing the stranger would only go, so that I might exhibit my new treasures. At last the strange gentleman opened the door softly, talking all the way, across the room, through the entry, and finally whispering himself fairly out-of-doors. When my husband came in, I was eager to show him the Mercury, and the lily, and the taper-stand.

"And do you know, after all, I hadn't the real nobleness and truthfulness and right-mindedness to tell Mrs. Harris that these and Aunt Allen's gift were all I had received! I am ashamed of myself, to have such a mean mortification about what is really of no importance. Certainly, if my friends don't care enough for me to send me something, I ought to be above caring for it."

"I don't know that, Del. Your mortification is very natural. How can we help caring? Do you like your Aunt Allen very much?" added he, abruptly.

"Because she gave me fifty dollars? Yes, I begin to think I do," said I, laughing.

He looked at me quickly.

"Your Aunt Allen is very rich, is she not?"

"I believe so. Why? You look very serious. I neither respect nor love her for her riches; and I haven't seen her these ten years."

He looked sober and abstracted; but when I spoke, he smiled a little.

"Do you remember Elia's chapter on Old China?" said he, sitting down on the sofa, and—I don't mind saying—putting one arm round my waist.

"Yes,—why?"

"Do you remember Bridget's plaintive regret that they had no longer the good old times when they were poor? and

about the delights of the shilling gallery?"

"Yes,—what made you think of it?"

"What a beautiful chapter that is!—their gentle sorrow that they could no longer make nice bargains for books! and his wearing new, neat, black clothes, alas! instead of the overworn suit that was made to hang on a few weeks longer, that he might buy the old folio of Beaumont and Fletcher! Do you remember it, Delphine?"

"Yes, I do. And I think there is a deal of pleasure in considering and contriving,—though it's prettier in a book"—

"For my part," interrupted my husband, as though he had not heard me speak,—“for my part, I am sorry one cannot have such an exquisite appreciation of pleasure but through pain; for—I am tired of labor—and privation—and, in short, poverty. To work so hard, and so constantly!—with such a long, weary vista before one!—and these petty gains! Don't you think poverty is the one thing hateful, Delphine?"

He sprang up suddenly, and began walking up and down the room,—up and down,—up and down; and without speaking any more, or seeming to wish me to answer.

"Why, what is it? What do you mean?" said I, faintly; for my heart felt like lead in my bosom.

He did not answer at first, but walked towards me; then, turning suddenly away, sprang out of the window at the side of the room, saying, with a constrained laugh,—

"I shall be in again, presently. In the mean time I leave you to meditations on the shilling gallery!"

What a strange taunting sound his voice had! There was no insane blood among the Sampsons, or I might have thought he had suddenly gone crazy. Or if I had believed in demoniacal presences, I might have thought the murmuring, whispering old man was some tempter. Some evil influence certainly had been exerted over him. Scarcely less than

deranged could I consider him now, to be willing thus to address me. It was true, he was poor,—that he had struggled with poverty. But had it not been my pride, as I thought it was his, that his battle was bravely borne, and would be bravely won? I could not, even to myself, express the cruel cowardice of such words as he had used to his helpless wife. That he felt deeply and gallingly his poverty was plain. Even in that there was a weakness which induced more of contempt than pity for him; but was it not base to tell me of it now? Now, when his load was doubled, he complained of the burden! Why, I would have lain down and died far sooner than he should have guessed it of me. And he had thought it — and — said it!

There are emotions that seem to crowd and supersede each other, so that the order of time is inverted. I came to the point of disdainful composure, even before the struggle and distress began. I sat quietly where my husband left me, — such a long, long time! It seemed hours. I remembered how thoughtful I had determined to be of all our expenses, — the little account-book in which I had already entered some items; how I had thought of various ways in which I could assist him; yes, even little I was to be the most efficient and helpful of wives. Had I not taken writing-lessons secretly, and formed a thorough business-hand, and would I not earn many half-eagles with my eagle's quill? I remembered how I had thought, though I had not said it, (and how glad now I was I had not!) that we would help each other in sickness and health, — that we would toil up that weary hill where wealth stands so lusciously and goldenly shining. But then, hand in hand we were to have toiled, — hopefully, smilingly, lovingly, — not with this cold recrimination, nor, hardest of all, with — reproach!

Suddenly, a strange suspicion fell over me. It fell down on me like a pall. I shuddered with the cold of it.

I knew it wasn't so. I knew he loved me, — that he meant nothing, — that it

was a passing discontent, a hateful feeling engendered by the sight of the costly trifles before us. Yes, — I knew that. But, good heavens! to tell his wife of it!

I sat, with my head throbbing, and holding my hands, utterly tearless; for tears were no expression of the distressful pain, and blank disappointment of a life, that I felt. I said I felt this damp, dark suspicion. It was there like a presence, but it was as indefinite as dark; and I had a sort of control, in the midst of the tumult in my brain and heart, as to what thoughts I would let come to me. Not that! Faults there might be, — great ones, — but not that, the greatest! At least, if I could not respect, I could forgive, — for he loved me. Surely, surely, that must be true!

It would come, that flash, like lightning, or the unwilling memories of the drowning. I remembered the rich Miss Kate Stuart, who, they said, liked him, and that her father would have been glad to have him for a son-in-law. And I had asked him once about it, in the careless gayety of happy love. He had said, he supposed it might have happened — perhaps — who knows? — if he had not seen me. But he had seen me! Could it be that he was thinking of?

My calmness was giving way. As soon as I spoke, though it was only in a word of ejaculation, my pity for myself broke all the flood-gates down, and I fell on my face in a paroxysm of sobs.

A very calm, loving voice, and a strong arm raising me, brought me back at once from the wild ocean of passion on which I was tossing. I had not heard him come in. I was too proud and grieved to speak or to weep. So I dried my tears and sat stiffly silent.

"You are tired, dear!" said my husband, tenderly.

"No, — it's no matter."

"Everything is matter to me that concerns you. You know that, — you believe that, Delphine?"

"Why, what a strange sound! just as it used to sound!" I said to myself, whisperingly.

I know not what possessed me; but I was determined to have the truth, and the whole truth. I turned towards him and looked straight into his eyes.

"Tell me, truly, as you hope God will save you at your utmost need, *do* you love me? Did you marry me from any motive but that of pure, true love?"

"From no other," answered he, with a face of unutterable surprise; and then added, solemnly, "And may God take me, Delphine, when you cease to love me!"

It was enough. There was truth in every breath, in every glance of his deep eyes. A delicious languor took the place of the horrible tension that had been on every faculty,—a repose so sweet and perfect, that, if reason had placed the clearest possible proofs of my husband's perfidy before me, I should simply have smiled and fallen asleep on his true heart, as I did.

When I opened my eyes, I met his anxious look.

"Why, what has come over you, Del? I did not know you were nervous."

And then remembering, that, although I might be weakest among the weak, yet that it was his wisdom that was to sustain and comfort me, I said,—

"By-and-by I will tell you all about it, —certainly I will. I must tell you some time, but not to-night."

"And—I had thought to keep a secret from you, to-night, Del; but, on the whole, I shall feel better to tell you."

"Yes,—perhaps,—perhaps."

"Oh, yes! Secrets are safest, told. First, then, Del, I will tell you this secret. I am very foolish. Don't tell of it, will you? See here!"

He held up his closed hand before my face, laughingly.

"That man's name, Del, is Drake"—

"And not the Devil!" said I to myself.

"Solitude Drake."

"Really? Is that it, truly? What's in your hand?"

"Truly,—really. He lives in Albany. He is the son of a queer man, and is

something of a humorist himself. I have seen one of his sons. He has two. One's name is Paraclete, and the other Preserved. His daughter is pretty, very, and her name is Deliverance. They call her Del, for short. They do, on my word! Worse than Delphine, is it not?"

"Why, don't you like my name?" stammered I, with astonishment.

"Yes, very well. I don't care much about names. But I can tell you, Uncle Zabdiel and Aunt Jerusha, 'from whom I have expectations,' Del, think it is 'just about the poorest kind of a name that ever a girl had.' And our Cousin Abijah thought you were named Delilah, and that it was a good match for Sampson! I rectified him there; but he still insists on your being called 'Finny,' in the family, to distinguish you from the Midianitish woman."

"And so Uncle Zabdiel thinks I have a poor name?" said I, laughing heartily. "The shield looks neither gold nor silver, from which side soever we gaze. But I think *he* might put up with *my* name!"

My husband never knew exactly what I was laughing at. And why should he? I was fast overcoming my weakness about names, and thinking they were nothing, compared to things, after all.

When our laugh (for his was sympathetic) had subsided into a quiet cheerfulness, he said, again holding up his hand,—

"Not at all curious, Del? You don't ask what Mr. Solitude Drake wanted?"

"I don't think I care what he wanted: company, I suppose."

And I went on making bad puns about solitude sweetened, and ducks and drakes, as happy people do, whose hearts are quite at ease.

"And you don't want to know at all, Del?" said he, laughing a little nervously, and dropping from his hand an open paper into mine. "It shall be my wedding-present to you. It is Mr. Drake's retainer. Pretty stout one, is it not? This is what made me jump out of the window, —this and one other thing."

"Why, this is a draft for five hundred dollars!" said I, reading and staring stupidly at the paper.

"Yes, and I am retained in that great Albany land-case. It involves millions of property. That is all, Del. But I was so glad, so happy, that I was likely to do well at last, and that I could gratify all the wishes, reasonable and unreasonable, of my darling!"

"Is it a good deal?" said I, simply; for, after all, five hundred dollars did not seem such an Arabian fortune.

"Yes, Del, a good deal. Whichever way it is decided, it will make my fortune. And now—the other thing. You are sure you are very calm, and all this won't make you sleepless?"

"Oh, no! I am calm as a clock."

"Well, then,—your Aunt Allen is dead."

"Dead! Is she? Did she leave us all her money?"

"Why, no, your little cormorant. She has left it all about: Legacies, and An-

tiach College, and Destitute Societies. But I believe you have some clothes left to you and Laura. Any way, the will is in there, in the library: Mr. Drake had a copy of it. And the best of all is, I am to be the executor, which is enough better than residuary legatee."

"It is very strange!" said I, thinking of the multitude of old gowns I should have to alter over.

"Yes, it is, indeed, very strange. One of the strangest things about the matter is, that my good friend Solitude was so taken with 'my queer name,' as he calls it, that he 'took a fancy to me out of hand.' To be sure, he listened through my argument in the Shore case, and that may have helped his opinion of me as a lawyer.—Here comes Laura. Who would have thought it was one o'clock?"

And who would have thought that my little ugly chrysalis of troubles would have turned out such beautiful butterflies of blessings?

MARION DALE.

MARION DALE, I remember you once,

In the days when you blushed like a rose half-blown,
Long ere that wealthy respectable dunce
Sponged up your beautiful name in his own.

I remember you, Marion Dale,

Artless and cordial and modest and sweet:
You never walked in that glittering mail
That covers you now from your head to your feet.

Well I remember your welcoming smile,

When Alice and Annie and Edward and I
Came over to see you;—you lived but a mile
From my uncle's old house, and the grove that stood nigh.

I was no lover of yours, (pray, excuse me!)—

Our minds were different in texture and hue:
I never gave you a chance to refuse me;
Already I loved one less changeful than you.

Still it was ever a pride and a pleasure
Just to be near you, — the Rose of our vale.
Often I thought, "Who will own such a treasure?
Who win the rich love of our Marion Dale?"

I wonder now if you ever remember,
Ever sigh over fifteen years ago, —
Whether your June is all turned to December, —
Whether your life now is happy or no.

Gone are those winters of chats and of dances!
Gone are those summers of picnics and rides!
Gone the aroma of life's young romances!
Gone the swift flow of our passionate tides!

Marion Dale, — no longer our Marion, —
You have gone your way, and I have gone mine:
Lowly I've labored, while fashion's gay clarion
Trumpets your name through the waltz and the wine.

And when I meet you, your smile it is colder;
Statelier, prouder your features have grown;
Rounder each white and magnificent shoulder;
(Rather too low-necked your waist, I must own.)

Jewelled and muslined, your rich hair gold-netted,
Queenly 'mid flattering voices you move, —
Half to your own native graces indebted,
Half to the station and fortune you love.

"Marion" we called you; my wife you called "Alice";
I was plain "Phil"; — we were intimate all:
Strange, as we leave now our cards at your palace,
On Mrs. Prime Goldbanks of Bubblemere Hall!

Six golden lackeys illumine the doorway:
Sure, one would think, by the glances they throw,
That we were fresh from the mountains of Norway,
And had forgotten to shake off the snow!

They will permit us to enter, however;
Usher us into her splendid saloon:
There we sit waiting and waiting forever,
As one would watch for the rise of the moon.

Or it may be to-day's not her "reception":
Still she's at home, and a little unbends, —
Framing, while dressing, some harmless deception,
How she shall meet her "American" friends.

Smiling you meet us,— but not quite sincerely ;
Low-voiced you greet us,— but this is the *ton* :
This, we must feel it, is courtesy merely,—
Not the glad welcome of days that are gone.

You are in England,— the land where they freeze one,
When they 've a mind to, with fashion and form :
Yet, if you choose, you can thoroughly please one :
Currents run through you still youthful and warm.

So one would think, at least, seeing you moving,
Radiant and gay, at the Countess's *fête*.
Say, was that babble so sweeter than loving ?
Where was the charm, that you lingered so late ?

Ah, well enough, as you dance on in joyance !
Still well enough, at your dinners and calls !
Fashion and riches will mask much annoyance.
Float on, fair lady, whatever befalls !

Yet, Lady Marion, for hours and for hours
You are alone with your husband and lord.
There is a skeleton hid in yon flowers ;
There is a spectre at bed and at board.

Needs no confession to tell there is acting
Somewhere about you a tragedy grim.
All your bright rays have a sullen refracting ;
Everywhere looms up the image of *him* :

Him,— whom you love not, there is no concealing.
How *could* you love him, apart from his gold ?
Nothing now left but your fire-fly wheeling,—
Flashing one moment, then pallid and cold !

Yet you 've accepted the life that he offers,—
Sunk to his level,— not raised him to yours.
All your fair flowers have their roots in his coffers :
Empty the gold-dust, and then what endures ?

So, then, we leave you ! Your world is not ours.
Alice and I will not trouble you more.
Almost too heavy the scent of these flowers
Down the broad stairway. Quick, open the door !

Here, in the free air, we 'll pray for you, lady !
You who are changed to us,— gone from us,— lost !
Soon the Atlantic shall part us, already
Parted by gulfs that can never be crossed !

J.W. DeForest

CHARLESTON UNDER ARMS.

ON Saturday morning, January 19, 1861, the steamer *Columbia*, from New York, lay off the harbor of Charleston in full sight of Fort Sumter. It is a circumstance which perhaps would never have reached the knowledge of the magazine-reading world, nor have been of any importance to it, but for the attendant fact that I, the writer of this article, was on board the steamer. It takes two events to make a consequence, as well as two parties to make a bargain.

The sea was smooth; the air was warmish and slightly misty; the low coast showed bare sand and forests of pines. The dangerous bar of the port, now partially deprived of its buoys, and with its main channel rendered perilous by the hulks of sunken schooners, revealed itself plainly, half a mile ahead of us, in a great crescent of yellow water, plainly distinguishable from the steel-gray of the outer ocean. Two or three square-rigged vessels were anchored to the southward of us, waiting for the tide or the tugs, while four or five pilot-boats tacked up and down in the lazy breeze, watching for the cotton-freighters which ought at this season to crowd the palmetto wharves.

"I wish we could get the duties on those ships to pay some of our military bills," said a genteel, clean-spoken Charlestonian, to a long, green, kindly-faced youth, from I know not what Southern military academy.

We had arrived off the harbor about midnight, but had not entered, for lack of a beacon whereby to shape our course. Now we must wait until noon for the tide, standing off and on the while merely to keep up our fires. A pilot came under our quarter in his little schooner, and told us that the steamer *Nashville* had got out the day before with only a hard bumping. No other news had he: Fort Sumter had not been taken, nor assaulted; the independence of South Carolina had not been recognized; va-

rious desirable events had not happened. In short, the political world had remained during our voyage in that chaotic *status quo* so loved by President Buchanan. At twelve we stood for the bar, sounding our way with extreme caution. Without accident we passed over the treacherous bottom, although in places it could not have been more than eighteen inches below our keel. The shores closed in on both sides as we passed onward. To the south was the long, low, gray Morris Island, with its extinguished lighthouse, its tuft or two of pines, its few dwellings, and its invisible batteries. To the north was the long, low, gray Sullivan's Island, a repetition of the other, with the distinctions of higher sand-rolls, a village, a regular fort, and palmettos. We passed the huge brown Moultrie House, in summer a gay resort, at present a barrack; passed the hundred scattered cottages of the island, mostly untenanted now, and looking among the sand-drifts as if they had been washed ashore at random; passed the low walls of Fort Moultrie, once visibly yellow, but now almost hidden by the new *glacis*, and surmounted by piles of barrels and bags of sand, with here and there palmetto stockades as a casing for the improvised embrasures; passed its black guns, its solidly built, but rusty barracks, and its weather-worn palmetto flag waving from a temporary flag-staff. On the opposite side of the harbor was Fort Johnstone, a low point, exhibiting a barrack, a few houses, and a sand redoubt, with three forty-two pounders. And here, in the midst of all things, apparent master of all things, at the entrance of the harbor proper, and nearly equidistant from either shore, though nearest the southern, frowned Fort Sumter, a huge and lofty and solid mass of brickwork with stone embrasures, all rising from a foundation of ragged granite boulders washed by the tides. The port-holes were closed; a dozen or so of monstrous

cannon peeped from the summit; two or three sentinels paced slowly along the parapet; the stars and stripes blew out from the lofty flag-staff. The plan of Fort Sumter may be briefly described as five-sided, with each angle just so much truncated as to give room for one embrasure in every story. Its whole air is massive, commanding, and formidable.

Eighty or a hundred citizens, volunteers, cadets from the military academy, policemen, and negroes, greeted the arrival of the *Columbia* at her wharf. It was a larger crowd than usual, partly because a report had circulated that we should be forced to bring to off Fort Sumter and give an account of ourselves, and partly because many persons in Charleston have lately been perplexed with an abundant leisure. As I drove to my hotel, I noticed that the streets showed less movement of business and population than when I knew them four years ago. The place seemed dirtier, too, worse paved, shabbier as to its brick-work and stucco, and worse painted,—but whether through real deterioration, or by comparison with the neatly finished city which I had lately left, I cannot decide. There was surely not a third of the usual shipping, nor a quarter of the accustomed cotton. Here and there were wharves perfectly bare, not only of masting and of freight, but even of dust, as if they had not been used for days, or possibly for weeks.

My old hotel was as well kept, and its table as plentiful and excellent as ever. I believe we are all aware by this time that Charleston has not suffered from hunger; that beef has not sold at thirty-five cents a pound, but rather at ten or fifteen; that its Minute Men have not been accustomed to come down upon its citizens for forced dinners and dollars; that the State loan was taken willingly by the banks, instead of unwillingly by private persons; that the rich, so far from being obliged to give a great deal for the cause of Secession, have generally given very little; that the streets are well-policed, untrodden by mobs, and as

orderly as those of most cities; that, in short, the revolution so far has been political, and not social. At the same time exports and imports have nearly ceased; business, even in the retail form, is stagnant; the banks have suspended; debts are not paid.

After dinner I walked up to the Citadel square and saw a drill of the Home Guard. About thirty troopers, all elderly men, and several with white hair and whiskers, uniformed in long overcoats of homespun gray, went through some of the simpler cavalry evolutions in spite of their horses' teeth. The Home Guard is a volunteer police force, raised because of the absence of so many of the young men of the city at the islands, and because of the supposed necessity of keeping a strong hand over the negroes. A malicious citizen assured me that it was in training to take Fort Sumter by charging upon it at low water. On the opposite side of the square from where I stood rose the Citadel, or military academy, a long and lofty reddish-yellow building, stuccoed and castellated, which, by the way, I have seen represented in one of our illustrated papers as the United States Arsenal. Under its walls were half a dozen iron cannon which I judged at that distance to be twenty-four pounders. A few negroes, certainly the most leisurely part of the population at this period, and still fewer white people, leaned over the shabby fence and stared listlessly at the horsemen, with the air of people whom habit had made indifferent to such spectacles. Near me three men of the middle class of Charleston talked of those two eternal subjects, Secession and Fort Sumter. One of them, a rosy-faced, kindly-eyed, sincere, seedy, pursy gentleman of fifty, congratulated the others and thanked God because of the present high moral stand of South Carolina, so much loftier than if she had seized the key to her main harbor, when she had the opportunity. Her honor was now unspotted; her good faith and her love of the right were visible to the whole world; while the position of the Federal Government

was disgraced and sapped by falsity. Better Sumter treacherously in the hands of the United States than in the hands of South Carolina; better suffer for a time under physical difficulties than forever under moral dishonor.

Simple-hearted man, a fair type of his fellow-citizens, he saw but his own side of the question, and might fairly claim in this matter to be justified by his faith. His bald crown, sandy side-locks, reddish whiskers, sanguineous cheeks, and blue eyes were all luminous with confidence in the integrity of his State, and with scorn for the meanness and wickedness of her enemies. No doubt had he that the fort ought to be surrendered to South Carolina; no suspicion that the Government could show a reason for holding it, aside from low self-interest and malice. He was the honest mouth-piece of a most peculiar people, local in its opinions and sentiments beyond anything known at the North, even in self-poised Boston. Changing his subject, he spoke with hostile, yet chivalrous, respect of the pluck of the Black Republicans in Congress. They had never faltered; they had vouchsafed no hint of concession; while, on the other hand, Southerners had shamed him by their craven spirit. It grieved, it mortified him, to see such a man as Crittenden on his knees to the North, begging, actually with tears, for what he ought to demand as a right, with head erect and hands clenched. He departed with a mysterious allusion to some secret of his for taking Fort Sumter, — some disagreeably odorous chemical preparation, I guessed, by the scientific terms in which he beclouded himself, — something which he expected would soon be called for by the Governor. May he never smell anything worse, even in the other world, than his own compounds! Unionist, and perhaps Consolidationist, as I am, I could not look upon his honest, persuaded face, and judge him a traitor, at least not to any sentiment of right that was in his own soul.

Our hotel was full of legislators and volunteer officers, mostly planters or sons

of planters, and almost without exception men of standing and property. South Carolina is an oligarchy in spirit, and allows no plebeians in high places. Two centuries of plenteous feeding and favorable climate showed their natural results in the *physique* of these people. I do not think that I exaggerate, when I say that they averaged six feet or nearly in height, and one hundred and seventy pounds or thereabouts in weight. One or two would have brought in money, if enterprisingly heralded as Swiss or Belgian giants. The general physiognomy was good, mostly high-featured, often commanding, sometimes remarkable for massive beauty of the Jovian type, and almost invariably distinguished by a fearless, open-eyed frankness, in some instances running into arrogance and pugnacity. I remember one or two elderly men, in particular, whose faces would help an artist to idealize a Lacedæmonian general, or a baron of the Middle Ages. In dress somewhat careless, and wearing usually the last fashion but one, they struck me as less tidy than the same class when I saw it four years ago; and I made a similar remark concerning the citizens of Charleston, — not only men, but women, — from whom dandified suits and superb silks seem to have departed during the present martial time. Indeed, I heard that economy was the order of the day; that the fashionables of Charleston bought nothing new, partly because of the money pressure, and partly because the guns of Major Anderson might any day send the whole city into mourning; that patrician families had discharged their foreign cooks and put their daughters into the kitchen; that there were no concerts, no balls, and no marriages. Even the volunteers exhibited little of the pomp and vanity of war. The small French military cap was often the only sign of their present profession. The uniform, when it appeared, was frequently a coarse homespun gray, charily trimmed with red worsted, and stained with the rains and earth of the islands. One young dragoon in this sober dress

walked into our hotel, trailing the clinking steel scabbard of his sabre across the marble floor of the vestibule with a warlike rattle which reminded me of the Austrian officers whom I used to see, yes, and hear, stalking about the *cafés* of Florence. Half a dozen surrounded him to look at and talk about the weapon. A portly, middle-aged legislator must draw it and cut and thrust, with a smile of boyish satisfaction between his grizzled whiskers, bringing the point so near my nose, in his careless eagerness, that I had to fall back upon a stronger, that is, a more distant position. Then half a dozen others must do likewise, their eyes sparkling like those of children examining a new toy.

"It's not very sharp," said one, running his thumb carefully along the edge of the narrow and rather light blade.

"Sharp enough to cut a man's head open," averred the dragon.

"Well, it's a dam' shame that sixty-five men tharr in Sumter should make such an expense to the State," declared a stout, blonde young rifleman, speaking with a burr which proclaimed him from the up-country. "We haven't even troyed to get 'em out. We ought at least to make a troyal."

All strangers at Charleston walk to the Battery. It is the extreme point of the city peninsula, its right facing on the Ashley, its left on the Cooper, and its outlook commanding the entire harbor, with Fort Sumter, Fort Pinckney, Fort Moultrie, and Fort Johnstone in the distance. Plots of thin clover, a perfect wonder in this grassless land; promenades, neatly fenced, and covered with broken shells instead of gravel; a handsome bronze lantern-stand, twenty-five feet high, meant for a beacon; a long and solid stone quay, the finest sea-walk in the United States; a background of the best houses in Charleston, three-storied and faced with verandas: such are the features of the Battery. Lately four large iron guns, mounted like field-pieces, form an additional attraction to boys and soldierly-minded men. Nobody knew

their calibre; the policemen who watched them could not say; the idlers who gathered about them disputed upon it: they were eighteen pounders; they were twenty-fours; they were thirty-sixes. Nobody could tell what they were there for. They were aimed at Fort Sumter, but would not carry half way to it. They could hit Fort Pinckney, but that was not desirable. The policeman could not explain; neither could the idlers; neither can I. At last it got reported about the city that they were to sink any boats which might come down the river to reinforce Anderson; though how the boats were to get into the river, whether by railroad from Washington, or by balloon from the Free States, nobody even pretended to guess. Standing on this side of the Ashley, and looking across it, you naturally see the other side. The long line of nearly dead level, with its stretches of thin pine-forest and its occasional glares of open sand, gives you an idea of nearly the whole country about Charleston, except that in general you ought to add to the picture a number of noble evergreen oaks bearded with pendent, weird Spanish moss, and occasional green spikes of the tropical-looking Spanish bayonet. Of palmettos there are none that I know of in this immediate region, save the hundred or more on Sullivan's Island and the one or two exotics in the streets of Charleston. In the middle of the Ashley, which is here more than a quarter of a mile wide, lies anchored a topsail schooner, the nursery of the South Carolina navy. I never saw it sail anywhere; but then my opportunities of observation were limited. Quite a number of boys are on board of it, studying maritime matters; and I can bear witness that they are sufficiently advanced to row themselves ashore. Possibly they are moored thus far up the stream to guard them from sea-sickness, which might be discouraging to young sailors. However, I ought not to talk on this subject, for I am the merest civilian and land-lubber.

My first conversation in Charleston on

Secession was with an estimable friend, Northern-born, but drawing breath of Southern air ever since he attained the age of manhood. After the first salutation, he sat down, his hands on his knees, gazing on the floor, and shaking his head soberly, if not sadly.

"You have found us in a pretty fix,—in a pretty fix!"

"But what are you going to do? Are you really going out? *You* are not a politician, and will tell me the honest facts."

"Yes, we are going out,—there is no doubt of it. I have not been a seceder,—I have even been called one of the disaffected; but I am obliged to admit that secession is the will of the community. Perhaps you at the North don't believe that we are honest in our professions and actions. We are so. The Carolinians really mean to go out of the Union, and don't mean to come back. They say that they *are* out, and they believe it. And now, what are you going to do with us? What is the feeling at the North?"

"The Union must and shall be preserved, at all hazards. That famous declaration expresses the present Northern popular sentiment. When I left, people were growing martial; they were joining military companies; they wanted to fight; they were angry."

"So I supposed. That agrees with what I hear by letter. Well, I am very sorry for it. Our people here will not retreat; they will accept a war, first. If you preserve the Union, it must be by conquest. I suppose you can do it, if you try hard enough. The North is a great deal stronger than the South; it can desolate it,—crush it. But I hope it won't be done. I wish you would speak a good word for us, when you go back. You can destroy us, I suppose. But don't you think it would be inhuman? Don't you think it would be impolitic? Do you think it would result in sufficient good to counterbalance the evident and certain evil?"

"Why, people reason in this way. They say, that, even if we allow the final in-

dependence of the seceding States, we must make it clear that there is no such thing as the right of secession, but only that of revolution or rebellion. We must fix a price for going out of the Union, which shall be so high that henceforward no State will ever be willing to pay it. We must kill, once for all, the doctrine of peaceable secession, which is nothing else than national disintegration and ruin. Lieutenant-Governor Morton of Indiana declares in substance that England never spent blood and money to wiser purpose than when she laid down fifty thousand lives and one hundred millions of pounds to prevent her thirteen disaffected colonies from having their own way. No English colony since has been willing to face the tremendous issue thus offered it. Just so it is the interest, it is the sole safety of the Federal Government, to try to hold in the Cotton States by force, and, if they go out, to oblige them to pay an enormous price for the privilege. Revolution is a troublesome luxury, and ought to be made expensive. That is the way people talk at the North and at Washington. They reason thus, you see, because they believe that this is not a league, but a nation."

"And our people believe that the States are independent and have a right to recede from the Confederation without asking its leave. With few exceptions, all agree on that; it is honest, common public opinion. The South Carolinians sincerely think that they are exercising a right, and you may depend that they will not be reasoned nor frightened out of it; and if the North tries coercion, there will be war. I don't say this defiantly, but sadly, and merely because I want you to know the truth. War is abhorrent to my feelings,—especially a war with our own brethren: and then *we* are so poorly prepared for it!"

Such was the substance of several conversations. The reader may rely, I think, on the justness of my friend's opinions, founded as they are on his honesty of intellect, his moderation, and his opportunities for studying his fellow-citizens. All

told me the same story, but generally with more passion, sometimes with defiance; defiance toward the Government, I mean, and not toward me personally; for the better classes of Charleston are eminently courteous. South Carolina had seceded forever, defying all the hazards; she would accept nothing but independence or destruction; she did not desire any supposable compromise; she had altogether done with the Union. Yet her desire was not for war; it was simply and solely for escape. She would forget all her wrongs and insults, she would seek no revenge for the injurious past, provided she were allowed to depart without a conflict. Nearly every man with whom I talked began the conversation by asking if the North meant coercion, and closed it by deprecating hostilities and affirming the universal wish for *peaceable* secession. In case of compulsion, however, the State would accept the gage of battle; her sister communities of the South would side with her, the moment they saw her blood flow; Northern commerce would be devoured by privateers of all nations under the Southern flag; Northern manufactures would perish for lack of Southern raw material and Southern consumers; Northern banks would suspend, and Northern finances go into universal insolvency; the Southern ports would be opened forcibly by England and France, who must have cotton; the South would flourish in the struggle, and the North decay.

"But why do you venture on this doubtful future?" I asked of one gentleman. "What is South Carolina's grievance? The Personal-Liberty Bills?"

"Yes,—they constitute a grievance. And yet not much of one. Some of us even—the men of the 'Mercury' school, I mean—do not complain of the Union because of those bills. They say that it is the Fugitive-Slave Law itself which is unconstitutional; that the rendition of runaways is a State affair, in which the Federal Government has no concern; that Massachusetts, and other States, were quite right in nullifying an illegal and

aggressive statute. Besides, South Carolina has lost very few slaves."

"Is it the Territorial Question which forces you to quit us?"

"Not in its practical issues. The South needs no more territory; has not negroes to colonize it. The doctrine of 'No more Slave States' is an insult to us, but hardly an injury. The flow of population has settled that matter. You have won all the Territories, not even excepting New Mexico, where slavery exists nominally, but is sure to die out under the hostile influences of unpropitious soil and climate. The Territorial Question has become a mere abstraction. We no longer talk of it."

"Then your great grievance is the election of Lincoln?"

"Yes."

"And the grievance is all the greater because he was elected according to all the forms of law?"

"Yes."

"If he had been got into the Presidency by trickery, by manifest cheating, your grievance would have been less complete?"

"Yes."

"Is Lincoln considered here to be a bad or dangerous man?"

"Not personally. I understand that he is a man of excellent private character, and I have nothing to say against him as a ruler, inasmuch as he has never been tried. Mr. Lincoln is simply a sign to us that we are in danger, and must provide for our own safety."

"You secede, then, solely because you think his election proves that the mass of the Northern people is adverse to you and your interests?"

"Yes."

"So Mr. Wigfall of Texas hit the nail on the head, when he said substantially that the South cannot be at peace with the North until the latter concedes that slavery is right?"

"Well,—I admit it; that is precisely it."

I desire the reader to note the loyal frankness, the unshrinking honesty of

these avowals, so characteristic of the South Carolina *morale*. Whenever the native of that State does an act or holds an opinion, it is his nature to confess it and avow the motives thereof, without quibbling or hesitation. It is a persuaded, self-poised community, strikingly like its negative pole on the Slavery Question, Massachusetts. All those Charlestonians whom I talked with I found open-hearted in their secession, and patient of my open-heartedness as an advocate of the Union, although often astonished, I suspect, that any creature capable of drawing a conclusion from two premises should think so differently from themselves.

"But have you looked at the platform of the Republicans?" I proceeded. "It is not adverse to slavery in the States; it only objects to its entrance into the Territories; it is not an Abolition platform."

"We don't trust in the platform; we believe that it is an incomplete expression of the party creed,—that it suppresses more than it utters. The spirit which keeps the Republicans together is enmity to slavery, and that spirit will never be satisfied until the system is extinct."

"Finally,—yes; gradually and quietly and safely,—that is possible. I suppose that the secret and generally unconscious *animus* of the party is one which will abolitionize it after a long while."

"When will it begin to act in an abolition sense, do you think?"

"I can't say: perhaps a hundred years from now; perhaps two hundred."

There was a general laugh from the half-dozen persons who formed the group.

"What time do *you* fix?" I inquired.

"Two years. But for this secession of ours, there would have been bills before Congress within two years, looking to the abolition of slavery in the navy-yards, the District of Columbia, etc. That would be only the point of the wedge, which would soon assume the dimensions of an attack on slavery in the States. Look how aggressive the party has been in the question of the Territories."

"The questions are different. When Congress makes local laws for Utah, it does not follow that it will do likewise for South Carolina. You might as well infer, that, because a vessel sails from Liverpool to New York in ten days, therefore it will sail overland to St. Louis in five more."

Incredulous laughter answered me again. The South has labored under two delusions: first, that the Republicans are Abolitionists; second, that the North can be frightened. Back of these, rendering them fatally effective, lies that other delusion, the imagined right of peaceable secession, founded on a belief in the full and unresigned sovereignty of the States. Let me tell a story illustrative of the depth to which this belief has penetrated. Years ago, a friend of mine, talking to a Charleston boy about patriotism, asked him, "What is the name of your country?" "South Carolina!" responded the eight-year-old, promptly and proudly. What Northern boy, what Massachusetts boy even, would not have replied, "The United States of America?"

South Carolina, I am inclined to think, has long been a disunionist community, or nearly so, deceived by the idea that the Confederation is a bar rather than a help to her prosperity, and waiting only for a good chance to quit it. Up to the election of Lincoln all timid souls were against secession; now they are for it, because they think it less dangerous than submission. For instance, when I asked one gentleman what the South expected to gain by going out, he replied, "First, safety. Our slaves have heard of Lincoln,—that he is a black man, or black Republican, or black something,—that he is to become ruler of this country on the fourth of March,—that he is a friend of theirs, and will free them. We must establish our independence in order to make them believe that they are beyond his help. We have had to hang some of them in Alabama,—and we expect to be obliged to hang others, perhaps many."

This was not the only statement of the sort which I heard in Charleston. Other persons assured me of the perfect fidelity

of the negroes, and declared that they would even fight against Northern invaders, if needful. Skepticism in regard to this last comfortable belief is, however, not wanting.

"If it comes to a war, you have one great advantage over us," said to me a military gentleman, lately in the service of the United States. "Your working-class is a fighting-class, and will constitute the rank and file of your armies. Our working-class is not a fighting-class. Indeed, there is some reason to fear, that, if it take up arms at all, it will be on the wrong side."

My impression is, that a prevalent, though not a universal fear, existed lest the negroes should rise in partial insurrections on or about the fourth of March. A Northern man, who had lived for several years in the back-country of South Carolina, had married there, and had lately travelled through a considerable portion of the South, informed me that many of the villages were lately forming Home Guards, as a measure of defence against the slave population. The Home Guard is frequently a cavalry corps, and is always composed of men who have passed the usual term of military service; for it is deemed necessary to reserve the youth of the country to meet the "Northern masses," the "Federal mercenaries," on the field of possible battle. By letters from Montgomery, Alabama, I learn that unusual precautions have been common during the last winter, many persons locking up their negroes over night in the quarters, and most sleeping with arms at hand, ready for nocturnal conflict. Whoever considers the necessarily horrible nature of a servile insurrection will find in it some palliation for Southern violence toward suspected incendiaries and Southern precipitation in matters of secession, however strongly he may still maintain that lynch-law should not usurp the place of justice, nor revolution the place of regular government. If you live in a powder-magazine, you positively must feel inhospitably inclined towards a man who presents

himself with a cigar in his mouth. Even if he shows you that it is but a fireless stump, it still makes you uneasy. And if you catch sight of a multitude of smokers, distant as yet, but apparently intent on approaching, you will be very apt to rush toward them, deprecate their advance, forbid it, or possibly threaten armed resistance, even at the risk of being considered aggressive.

Are all the South Carolinians disunionists? It seemed so when I was there in January, 1861, and yet it did not seem so when I was there in 1855 and '56. At that time you could find men in Charleston who held that the right of secession was but the right of revolution, of rebellion,—well enough, if successful, but inductive to hanging, if unfortunate. Now those same men nearly all argue for the right of peaceable secession, declaring that the State has a right to go out at will, and that the Federal Government has no right to coerce or punish it. These turncoats are the sympathetic, who are carried away by a rush of popular enthusiasm, and the fearful or peaceable, who dread or dislike violence. Let us see how a timid Unionist can be converted into an advocate of the right of secession. Let us suppose a boat with three men on board, which is hailed by a revenue-cutter, with a threat of firing, if she does not come to. Two of these men believe that the revenue-officer is performing a legal duty, and desire to obey him; but the third, a reckless, domineering fellow, seizes the helm, lets the sail fill, and attempts to run by, meantime declaring at the top of his voice that the cutter has no business to stop his progress. The others dare not resist him and cannot persuade him. Now, then, what position will they take as to the right of the revenue-officer to fire? Ten to one they will join their comrade whom they lately opposed; they will cry out, that the pursuer was wrong in ordering them to stop, and ought not to punish them for disobedience; in short, they will be converted by the instinct of self-preservation into advocates of the right of peaceable

secession. I understand, indeed I know, that there are a few opponents of disunion remaining in South Carolina; but, although they are wealthy people and of good position, it is pretty certain that they have not an atom of political influence.

Secession peaceable! It is what is most particularly desired at Charleston, and, I believe, throughout the Cotton States. Certainly, when I was there, the war-party, the party of the "*Mercury*," was not in the ascendant, unless in the sense of having been "hoist with its own petard" when it cried out for immediate hostilities. Not only Governor Pickens and his Council, but nearly all the influential citizens, were opposed to bloodshed. They demanded independence and Fort Sumter, but desired and hoped to get both by argument. They believed, or tried to believe, that at last the Administration would hearken to reason and grant to South Carolina what it seemed to them could not be denied her with justice. The battle-cry of the "*Mercury*," urging precipitation even at the expense of defeat, for the sake of uniting the South, was listened to without enthusiasm, except by the young and thoughtless.

"We shall never attack Fort Sumter," said one gentleman. "Don't you see why? I have a son in the trenches, my next neighbor has one, everybody in the city has one. Well, we shan't let our boys fight; we can't bear to lose them. We don't want to risk our handsome, genteel, educated young fellows against a gang of Irishmen, Germans, British deserters, and New York roughs, not worth killing, and yet instructed to kill to the best advantage. We can't endure it, and we shan't do it."

This repugnance to stake the lives of South Carolina patricians against the lives of low-born mercenaries was a feeling that I frequently heard expressed. It was betting guineas against pennies, and on a limited stock of guineas.

Other men, anti-secessionists even, assured me that war was inevitable, that Fort Sumter would be attacked, that the

volunteers were panting for the strife, that Governor Pickens was excessively unpopular because of his peaceful inclinations, and that he would soon be forced to give the signal for battle. Once or twice I was seriously invited to stay a few days longer, in order to witness the struggle and victory of South Carolina. However, it was clear that the enthusiasm and confidence of the people were no longer what they had been. Several dull and costly weeks had passed since the passage of the secession ordinance. Stump-speeches, torchlight-processions, fireworks, and other jubilations, were among bygone things. The flags were falling to pieces, and the palmettos withering, unnoticed except by strangers. Men had begun to realize that a hurrah is not sufficient to carry out a great revolution successfully; that the work which they had undertaken was weightier, and the reward of it more distant, if not more doubtful, than they had supposed. The political prophets had been forced, like the Millerites, to ask an extension for their predictions. The anticipated fleet of cotton-freighters had not arrived from Europe, and the expected twelve millions of foreign gold had not refilled the collapsed banks. The daily expenses were estimated at twenty thousand dollars; the treasury was in rapid progress of depletion; and as yet no results. It is not wonderful, that, under these circumstances, the most enthusiastic secessionists were not gay, and that the general physiognomy of the city was sober, not to say troubled. It must not be understood, however, that there was any visible discontent or even discouragement. "We are suffering in our affairs," said a business-man to me; "but you will hear no grumbling." "We expect to be poor, very poor, for two or three years," observed a lady; "but we are willing to bear it, for the sake of the noble and prosperous end." "Our people do not want concessions, and will never be tempted back into the Union," was the voice of every private person, as well as of the Legislature. "I hope the Republicans will offer no com-

promise," remarked one excellent person who has not favored the revolution. "They would be sure to see it rejected: that would humiliate them and anger them; then there would be more danger of war."

Hatred of Buchanan, mingled with contempt for him, I found almost universal. If any Northerner should ever get into trouble in South Carolina because of his supposed abolition tendencies, I advise him to bestow a liberal cursing on our Old Public Functionary, assuring him that he will thereby not only escape tar and feathers, but acquire popularity. The Carolinians called the then President double-faced and treacherous, hardly allowing him the poor credit of being a well-intentioned imbecile. Why should they not consider him false? Up to the garrisoning of Fort Sumter he favored the project of secession full as decidedly as he afterwards crossed it. Did he think that he was laying a train to blow the Republicans off their platform, and leave off his labor in a fright, when he found that the powder-bags to be exploded had been placed under the foundations of the Union? The man who could explain Mr. Buchanan would have a better title than Daniel Webster to be called *The Great Expounder*.

During the ten days of my sojourn, Charleston was full of surprising reports and painful expectations. If a door slammed, we stopped talking, and looked at each other; and if the sound was repeated, we went to the window and listened for Fort Sumter. Every strange noise was metamorphosed by the watchful ear into the roar of cannon or the rush of soldiery. Women trembled at the salutes which were fired in honor of the secession of other States, fearing lest the struggle had commenced and the dearly-loved son or brother in volunteer uniform was already under the storm of the columbiads. One day, a reinforcement was coming to Anderson, and the troops must attack him before it arrived; the next day, Florida had assaulted Fort Pickens, and South Carolina was bound to dash her bare bos-

om against Fort Sumter. The batteries were strong enough to make a breach; and then again, the best authorities had declared them not strong enough. A columbiad throwing a ball of one hundred and twenty pounds, sufficient to crack the strongest embrasures, was on its way from some unknown region. An Armstrong gun capable of carrying ten miles had arrived or was about to arrive. No one inquired whether Governor Pickens had suspended the law of gravitation in South Carolina, in view of the fact that ordinarily an Armstrong gun will not carry five miles,—nor whether, in such case, the guns of Fort Sumter might not also be expected to double their range. Major Anderson was a Southerner, who would surrender rather than shed the blood of fellow-Southerners. Major Anderson was an army-officer, incapable by his professional education of comprehending State rights, angry because he had been charged with cowardice in withdrawing from Fort Moultrie, and resolved to defend himself to the death.

In the mean time, the city papers were strangely deficient in local news concerning the revolution,—possibly from a fear of giving valuable military information to the enemy at Washington. Uselessly did I study them for particulars concerning the condition of the batteries, and the number of guns and troops,—finding little in them but mention of parades, soldierly festivities, offers of service by enthusiastic citizens, and other like small business. I thought of visiting the islands, but heard that strangers were closely watched there, and that a permit from authority to enter the forts was difficult to obtain. Fortune, or rather, misfortune, favored me in this matter.

After passing six days in Charleston, hearing much that was extraordinary, but seeing little, I left in the steamer Columbia for New York. The main opening to the harbor, or Ship Channel, as it is called, being choked with sunken vessels, and the Middle Channel little known, our only resource for exit was Maffitt's Channel, a narrow strip of deep water closely

skirting Sullivan's Island. It was half-past six in the morning, slightly misty and very quiet. Passing Fort Sumter, then Fort Moultrie, we rounded a low breakwater, and attempted to take the channel. I have heard a half-dozen reasons why we struck; but all I venture to affirm is that we did strike. There was a bump; we hoped it was the last:—there was another; we hoped again:—there was a third; we stopped. The wheels rolled and surged, bringing the fine sand from the bottom and changing the green waters to yellow; but the Columbia remained inert under the gray morning sky, close alongside of the brown, damp beach of Sullivan's Island. There was only a faint breeze, and a mere ripple of a sea; but even those slight forces swung our stern far enough toward the land to complete our helplessness. We lay broadside to the shore, in the centre of a small crescent or cove, and, consequently, unable to use our engines without forcing either bow or stern higher up on the sloping bottom. The Columbia tried to advance, tried to back water, and then gave up the contest, standing upright on her flat flooring with no motion beyond an occasional faint bumping. The tug-boat Aid, half a mile ahead of us, cast off from the vessel which it was taking out, and came to our assistance. Apparently it had been engaged during the night in watching the harbor; for on deck stood a score of volunteers in gray overcoats, while the naval-looking personage with grizzled whiskers who seemed to command was the same Lieutenant Coste who transferred the revenue-cutter Aiken from the service of the United States to that of South Carolina. The Aid took hold of us, broke a large new hawser after a brief struggle, and then went up to the city to report our condition.

The morning was lowery, with driving showers running through it from time to time, and an atmosphere penetratingly damp and cheerless. On the beach two companies of volunteers were drilling in the rain, no doubt getting an appetite for breakfast. Without uniforms, their trou-

sers tucked into their boots, and here and there a white blanket fastened shawl-like over the shoulders, they looked, as one of our passengers observed, like a party of returned Californians. Their line was uneven, their wheeling excessively loose, their evolutions of the simplest and yet awkwardly executed. Evidently they were newly embodied, and from the country; for the Charleston companies are spruce in appearance and well drilled. Half a dozen of them, who had been on sentinel duty during the night, discharged their guns in the air,—a daily process, rendered necessary by the moist atmosphere of the harbor at this season; and then, the exercise being over, there was a general scamper for the shelter of a neighboring cottage, low-roofed and surrounded by a veranda after the fashion of Sullivan's Island. Within half an hour they reappeared in idle squads, and proceeded to kill the heavy time by staring at us as we stared at them. One individual, learned in sea-phrase, insulted our misfortune by bawling, "Ship ahoy!" A fellow in a red shirt, who looked more like a Bowery *bhoy* than like a Carolinian, hailed the captain to know if he might come aboard; whereupon he was surrounded by twenty others, who appeared to question him and confound him until he thought it best to disappear unostentatiously. I conjectured that he was a hero of Northern birth, who had concluded to run away, if he could do it safely.

When we tired of the volunteers, we looked at the harbor and its inanimate surroundings. A ship from Liverpool, a small steamer from Savannah, and a schooner or two of the coasting class passed by us toward the city during the day, showing to what small proportions the commerce of Charleston had suddenly shrunk. On shore there seemed to be no population aside from the volunteers. Sullivan's Island is a summer resort, much favored by Charlestonians in the hot season, because of its coolness and healthfulness, but apparently almost uninhabited in winter, notwithstanding that it

boasts a village called Moultrieville. Its hundred cottages are mostly of one model, square, low-roofed, a single story in height, and surrounded by a veranda, a portion of which is in some instances inclosed by blinds so as to add to the amount of shelter. Paint has been sparingly used, when applied at all, and is seldom renewed, when weather-stained. The favorite colors, at least those which most strike the eye at a distance, are green and yellow. The yards are apt to be full of sand-drifts, which are much prized by the possessors, with whom it is an object to be secured from high tides and other more permanent aggressions of the ocean. The whole island is but a verdureless sand-drift, of which the outlines are constantly changing under the influence of winds and waters. Fort Moultrie, once close to the shore, as I am told, is now a hundred yards from it; while, half a mile off, the sea flows over the site of a row of cottages not long since washed away. Behind Fort Moultrie, where the land rises to its highest, appears a continuous foliage of the famous palmettos, a low palm, strange to the Northern eye, but not beautiful, unless to those who love it for its associations. Compared with its brothers of the East, it is short, contracted in outline, and deficient in waving grace.

The chill mist and drizzling rain frequently drove us under cover. While enjoying my cigar in the little smoking-room on the promenade-deck, I listened to the talk of four players of euchre, two of them Georgians, one a Carolinian, and one a pro-slavery New-Yorker.

"I wish the Cap'n would invite old Greeley on board his boat in New York," said the Gothamite, "and then run him off to Charleston. I'd give ten thousand dollars towards paying expenses; that is, if they could do what they was a mind to with him."

"I reckon a little more 'n ten thousand dollars 'd do it," grinned Georgian First.

"They 'd cut him up into little bits," pursued the New-Yorker.

"They 'd worry him first like a cat does a mouse," added the Carolinian.

"I 'd rather serve Beecher or — what 's his name? — Cheever, that trick," observed Georgian Second. "It 's the cussed parsons that 's done all the mischief. Who played that bower? Yours, eh? My deal."

"I want to smash up some of these dam' Black Republicans," resumed the New-Yorker. "I want to see the North suffer some. I don't care, if New York catches it. I own about forty thousand dollars' worth of property in — Street, and I want to see the grass growing all round it. Blasted, if I can get a hand any way!"

"I say, we should be in a tight place, if the forts went to firing now," suggested the Carolinian. "Major Anderson would have a fair chance at us, if he wanted to do us any harm."

"Damn Major Anderson!" answered the New-Yorker. "I 'd shoot him myself, if I had a chance. I 've heard about Bob Anderson till I 'm sick of it."

Of this fashion of conversation you may hear any desired amount at the South, by going among the right sort of people. Let us take it for granted, without making impertinent inquiry, that nothing of the kind is ever uttered in any other country, whether in pot-house or parlor. I suppose that such remarks seem very horrid to ladies and other gentlemanly folk, who perhaps never heard the like in their lives, and imagine, when they see the stuff on paper, that it is spoken with scowling brows, through set teeth, and out of a heart of red-hot passion. The truth is, that these ferocious phrases are generally drawled forth in an *ex-officio* tone, as if the speaker were rather tired of that sort of thing, meant nothing very particular by it, and talked thus only as a matter of fashion. It will be observed that the most violent of these politicians was a New-Yorker. I am inclined to pronounce, also, that the two Georgians were by birth New-Englanders. The Carolinian was the most moderate of the company, giving his attention chiefly to the game, and throwing out his one remark concerning the worrying of Greeley

with an air of simply civil assent to the general meaning of the conversation, as an exchange of anti-abolition sentiments. "If you will play that card," he seemed to say, "I follow suit as a mere matter of course."

There was a second attempt to haul us off at sunset, and a third in the morning, both unsuccessful. Each tide, though stormless, carried the Columbia a little higher up the beach; and the tugs, trying singly to move her, only broke their hawsers and wasted precious time. Fortunately, the sea continued smooth, so that the ship escaped a pounding. On Saturday, at eleven, twenty-eight hours after we struck, all hope of getting off without discharging cargo having been abandoned, we passengers were landed on Sullivan's Island, to make our way back to Charleston. Our baggage was forwarded to the ferry in carts, and we followed at leisure on foot. In company with Georgian First and a gentleman from Brooklyn, I strolled over the sand-rolls, damp and hard now with a week's rain, passed one or two of the tenantless summer-houses, and halted beside the *glacis* of Fort Moultrie. I do not wonder that Major Anderson did not consider his small force safe within this fortification. It is overlooked by neighboring sand-hills and by the houses of Moultrieville, which closely surround it on the land side, while its ditch is so narrow and its rampart so low that a ladder of twenty-five feet in length would reach from the outside of the former to the summit of the latter. A fire of sharp-shooters from the commanding points, and two columns of attack, would have crushed the feeble garrison. No military movement could be more natural than the retreat to Fort Sumter. What puzzles one, especially on the spot, and what nobody in Charleston could explain to me, is the fact that this manœuvre could be executed unobserved by the people of Moultrieville, few as they are, and by the guard-boats which patrolled the harbor.

On the eastern side of the fort two or three dozen negroes were engaged in filling canvas bags with sand, to be used

in forming temporary embrasures. One lad of eighteen, a dark mulatto, presented the very remarkable peculiarity of chestnut hair, only slightly curling. The others were nearly all of the true field-hand type, aboriginal black, with dull faces, short and thick forms, and an air of animal contentment or at least indifference. They talked little, but giggled a great deal, snatching the canvas bags from each other, and otherwise showing their disbelief in the doctrine of all work and no play. When the barrows were sufficiently filled to suit their weak ideal of a load, a procession of them set off along a plank causeway leading into the fort, observing a droll semblance of military precision and pomp, and forcing a passage through lounging unmilitary buckras with an air of, "Out of de way, Ole Dan Tucker!" We glanced at the yet unfinished ditch, half full of water, and walked on to the gateway. A grinning, skipping negro drummer was showing a new pair of shoes to the tobacco-chewing, jovial youth who stood, or rather sat, sentinel.

"How 'd you get hold of *them*?" asked the latter, surveying the articles admiringly.

"Got a special order from the Cap'm fur 'um. That ee way to do it. Won't wet through, no matter how it rain. He, he! I'm all right now."

Here he showed ivory to his ears, cut a caper, and danced into the fort.

"D-a-m' nig-ger!" grinned the sentinel, approvingly, looking at us to see if we also enjoyed the incident. Thus introduced to the temporary guardian of the fort, we told him that we were from the Columbia,—which he was glad to hear of, wanting to know if she was damaged, how she went ashore, whether she could get off, etc., etc. He was a fair specimen of the average country Southerner, lounging, open to address, and fond of talk.

"I've no authority to let you in," he said, when we asked that favor; "but I'll call the corporal of the guard."

"If you please."

"Corporal of the guard!"

Appeared the corporal, who civilly

heard us, and went for the lieutenant of the guard. Presently a blonde young officer, with a pleasant face, somewhat Irish in character, came out to us, raising his forefinger in military salute.

"We should like to go into the fort, if it is proper," I said. "We ask hospitality the more boldly, because we are shipwrecked people."

"It is against the regulations. However, I venture to take the responsibility," was the obliging answer.

We passed in, and wandered unwatched for half an hour about the irregular, many-angled fortress. One-third of the interior is occupied by two brick barracks, covered with rusty stucco, and by other brick buildings, as yet incomplete, which I took to be of the nature of magazines. On the walls, gaping landward as well as seaward, are thirty or thirty-five iron cannon, all *en barbette*, but protected toward the harbor by heavy piles of sand-bags, fenced up either with barrels of sand or palmetto-logs driven firmly into the rampart. Four eight-inch columbiads, carrying sixty-four pound balls, pointed at Fort Sumter. Six other heavy pieces, Paixhans, I believe, faced the neck of the harbor. The remaining armament is of lighter calibre, running, I should judge, from forty-twos down to eighteens. Only one gun lay on the ground destitute of a carriage. The place will stand a great deal of battering; for the walls are nearly hidden by the sand-covered *glacis*, which would catch and smother four point-blank shots out of five, if discharged from a distance. Against shells, however, it has no resource; and one mortar would make it a most unwholesome residence.

"What's this?" asked a volunteer, in homespun gray uniform, who, like ourselves, had come in by courtesy.

"That's the butt of the old flag-staff," answered a comrade. "Cap'n Foster cut it down before he left the fort, damn him! It was a dam' sneaking trick. I've a great mind to shave off a sliver and send it to Lincoln."

The idea of getting a bit of the famous staff as a memento struck me, and I at-

tempted to put it in practice; but the exceedingly tough pitch-pine defied my slender pocket-knife.

"Jim, cut the gentleman a piece," said one of the volunteers. Jim drew a tooth-pick a foot long and did me the favor, for which I here repeat my thanks to him.

They were good-looking, healthy fellows, these two, like most of their comrades, with a certain air of frank gentility and self-respect about them, being probably the sons of well-to-do planters. It would be a great mistake to suppose that the volunteers are drawn, to any extent whatever, from the "poor white trash." The secession movement, like all the political action of the State at all times, is independent of the crackers, asks no aid nor advice of them, and, in short, ignores them utterly.

"I was here when the Star of the West was fired on," the Lieutenant told us. "We only had powder for two hours. Anderson could have put us out in a short time, if he had chosen."

"How rapidly can these heavy guns be fired?"

"About ten times an hour."

"Do you think the defences will protect the garrison against a bombardment?"

"I think the palmetto stockades will answer. I don't know about that enormous pile of barrels, however. If a shot hits the mass on the top, I am afraid it will come down, bags and barrels together, bury the gun and perhaps the gunners."

"What if Sumter should open now?" I suggested.

"We should be here to help," answered the Georgian.

"We should be here to run away," amended my comrade from Brooklyn.

"Well, I suppose we should be of mighty little use, and might as well clear out," was the sober second-thought of the Georgian.

Having satisfied our curiosity, we thanked the Lieutenant and left Fort Moultrie. The story of our visit to it excited much surprise, when we recounted it in the city. Members of the Legis-

lature and other men high in influence had desired the privilege, but had not applied for it, expecting a repulse.

A walk down a winding street, bordered by scattered cottages, inclosed by brown board-fences or railings, and track-ed by a horse-railroad built for the Moultrie House, led us to the ferry-wharf, where we found our baggage piled together, and our fellow-passengers wandering about in a state of bored expectation. Sullivan's Island in winter is a good spot for an economical man, inas-much as it presents no visible opportunities of spending money. There were houses of refreshment, as we could see by their signs; but if they did business, it was with closed doors and barred shut-ters. After we had paid a newsboy five cents for the "*Mercury*," and five more for the "*Courier*," we were at the end of our possibilities in the way of extrava-gance. At half-past one arrived the ferry-boat with a few passengers, most-ly volunteers, and a deck-load of mili-tary stores, among which I noticed Bos-ton biscuit and several dozen new knap-sacks. Then, from the other side, came the "*dam' nigger*," that is to say, the drummer of the new shoes, beating his sheepskin at the head of about fifty men of the Washington Artillery, who were on their way back to town from Fort Moultrie. They were fine-looking young fellows, mostly above the middle size of Northerners, with spirited and often aris-tocratic faces, but somewhat more devil-may-care in expression than we are ac-customed to see in New England. They poured down the gangway, trailed arms, ascended the promenade-deck, ordered arms, grounded arms, and broke line. The drill struck me as middling, which may be owing to the fact that the com-pany has lately increased to about two hundred members, thus diluting the old organization with a large number of new recruits. Military service at the South is a patrician exercise, much favored by men of "good family," more especially at this time, when it signifies real danger and glory.

Our rajpoots having entered the boat, we of lower caste were permitted to follow. At two o'clock we were steaming over the yellow waters of the harbor. The volun-teers, like everybody else in Charleston, discussed Secession and Fort Sumter, con-sidering the former as an accomplished fact, and the latter as a fact of the kind called stubborn. They talked uniform, too, and equipments, and marksmanship, and drinks, and cigars, and other military mat-ters. Now and then an awkwardly fold-ed blanket was taken from the shoulders which it disgraced, refolded, packed care-fully in its covering of India-rubber, and strapped once more in its place, two or three generally assisting in the operation. Presently a firing at marks from the up-per deck commenced. The favorite tar-get was a conical floating buoy, showing red on the sunlit surface of the harbor, some four hundred yards away. With a crack and a hoarse whiz the minié-balls flew towards it, splashing up the water where they first struck and then taking two or three tremendous skips before they sank. A militiaman from New York city, who was one of my fellow-passengers, told me that he "never saw such good shoot-ing." It seemed to me that every sixth ball either hit the buoy full, or touched water but a few yards this side of it, while not more than one in a dozen went wild.

"It is good for a thousand yards," said a volunteer, slapping his bright, new piece, proudly.

A favorite subject of argument appear-ed to be whether Fort Sumter ought to be attacked immediately or not. A lieuten-ant standing near me talked long and earnestly regarding this matter with a civilian friend, breaking out at last in a loud tone, —

"Why, good Heaven, Jim! do you want that place to go peaceably into the hands of Lincoln?"

"No, Fred, I do not. But I tell you, Fred, when that fort is attacked, it will be the bloodiest day,—the bloodiest day! — the bloodiest —!!"

And here, unable to express himself in words, Jim flung his arms wildly about,

ground his tobacco with excitement, spit on all sides, and walked away, shaking his head, I thought, in real grief of spirit.

We passed close to Fort Pinckney, our volunteers exchanging hurrahs with the garrison. It is a round, two-storied, yellow little fortification, standing at one end of a green marsh known as Shute's Folly Island. What it was put there for no one knows: it is too close to the city to protect it; too much out of the harbor to command that. Perhaps it might keep reinforcements for Anderson from coming down the Ashley, just as the guns on the Battery were supposed to be intended to deter them from descending the Cooper.

On the wharf of the ferry three drunken volunteers, the first that I had seen in that condition, brushed against me. The nearest one, a handsome young fellow of six feet two, half turned to stare back at me with a—

"How are ye, Cap'm? Gaw damn ye! Haw, haw, aw!"—and reeled onward, brimful of spirituous good-nature.

Four days more had I in Charleston, waiting from tide to tide for a chance to sail to New York, and listening from hour to hour for the guns of Fort Sumter. Sunday was a day of excitement, a report spreading that the Floridians had attacked Fort Pickens, and the Charlestonians feeling consequently bound in honor to fight their own dragon. Groups of earnest men talked all day and late into the evening under the portico and in the basement-rooms of the hotel, besides gathering at the corners and strolling about the Battery. "We must act." "We cannot delay." "We ought not to submit." Such were the phrases that fell upon the ear oftenest and loudest.

As I lounged, after tea, in the vestibule of the reading-room, an eccentric citizen of Arkansas varied the entertainment. A short, thin man, of the cracker type, swarthy, long-bearded, and untidy, he was dressed in well-worn civilian costume, with the exception of an old blue coat showing dim remnants of military garniture. Reeling up to a gentleman

who sat near me, he glared stupidly at him from beneath a broad-brimmed hat, demanding a seat mutely, but with such eloquence of oscillation that no words were necessary. The respectable person thus addressed, not anxious to receive the stranger into his lap, rose and walked away, with that air of not having seen anything so common to disconcerted people who wish to conceal their disturbance. Into the vacant place dropped the stranger, stretching out his feet, throwing his head back against the wall, and half closing his eyes with the drunkard's own leer of self-sufficiency. During a few moments of agonizing suspense the world waited. Then from those whiskey-scorched and tobacco-stained lips came a long, shrill "Yee-p!"

It was his exordium; it demanded the attention of the company; and though he had it not, he continued:—

"I'm an Arkansas man, *I am*. I'm a big su-gar planter, *I am*. All right! Go a'ead! I own fifty niggers, *I do*. Yee-p!"

He lifted both feet and slammed them on the floor energetically, pausing for a reply. He had addressed all men; no one responded, and he went on:—

"I'm for straightout, immedit shession, *I am*. I go for 'staining coursh of Sou' Car'lina, *I do*. I'm ready to fight for Sou' Car'lina. I'm a Na-po-le-on Bonaparte. All right! Go a'ead! Yee-p! Fellahs don't know me here. I'm an Arkansas man, *I am*. Sou' Car'lina won't kill an Arkansas man. I'm an immedit shessionist. Hurrah for Sou' Car'lina! All right! Yee-p!"

There was a lingering, caressing accent on his "*I am*," which told how dear to him was his individuality, drunk or sober. He looked at no one; his hat was drawn over his eyes; his hands were deep in his pockets; his feet did all needful gesturing. I stepped in front of him to get a fuller view of his face, and the action aroused his attention. He surveyed my gray Inverness wrapper and gave me a chuckling nod of approbation.

"How are ye, Bub? I like that blanket, I do."

In spite of this noble stranger's goodwill and prowess, we still found Fort Sumter a knotty question. In a country which for eighty years has not seen a shot fired in earnest, it is not wonderful that a good deal of ignorance should exist concerning military matters, and that second-class plans should be hatched for taking a first-class fortification. While I was in Charleston, the most popular proposition was to bombard continuously for two whole days and nights, thereby demoralizing the garrison by depriving it of sleep and causing it to surrender at the first attempt to escalate. Another plan, not in general favor, was to smoke Anderson out by means of a raft covered with burning mixtures of a chemical and bad-smelling nature. Still another, with perhaps yet fewer adherents, was to advance on all sides in such a vast number of row-boats that the fort could not sink them all, whereupon the survivors should land on the wharf and proceed to take such further measures as might be deemed expedient. The volunteers from the country always arrived full of faith and defiance. "We want to get a squint at that Fort Sumter," they would say to their city friends. "We are going to take it. If we don't plant the palmetto on it, it's because there's no such tree as the palmetto." Down the harbor they would go in the ferry-boats to Morris or Sullivan's Island. The spy-glass would be brought out, and one after another would peer through it at the object of their enmity. Some could not sight it at all, confounded the instrument, and fell back on their natural vision. Others, more lucky, or better versed in telescopic observations, got a view of the fortress, and perhaps burst out swearing at the evident massiveness of the walls and the size of the columbiads.

"Good Lord, what a gun!" exclaimed one man. "D'ye see that gun? What an almighty thing! I'll be ——, if I ever put my head in front of it!"

The difficulties of assault were admitted to be very great, considering the bad footing, the height of the ramparts, and the abundant store of muskets and grenades in the garrison. As to breaches, nobody seemed to know whether they could be made or not. The besieging batteries were neither heavy nor near, nor could they be advanced as is usual in regular sieges, nor had they any advantage over the defence except in the number of gunners, while in regard to position and calibre they were inferior. To knock down a wall nearly forty feet high and fourteen feet thick at a distance of more than half a mile seemed a tough undertaking, even when unresisted. It was discovered also that the side of the fortification towards Fort Johnstone, its only weak point, had been strengthened so as to make it bomb-proof by means of interior masonry constructed from the stones of the landing-place. Then nobody wanted to knock Fort Sumter down, inasmuch as that involved either the labor of building it up again, or the necessity of going without it as a harbor-defence. Finally, suppose it should be attacked and not taken? Really, we unlearned people in the art of war were vastly puzzled as we thought this whole matter over, and we sometimes doubted whether our superiors were not almost equally bothered with ourselves.

This fighting was a sober, sad subject; and yet at times it took a turn toward the ludicrous. A gentleman told me that he was present when the steamer Marion was seized with the intention of using her in pursuing the *Star of the West*. A vehement dispute arose as to the fitness of the vessel for military service.

"Fill her with men, and put two or three eighteen-pounders in her," said the advocates of the measure.

"Where will you put your eighteen-pounders?" demanded the opposition.

"On the promenade-deck, to be sure."

"Yes, and the moment you fire one, you'll see it go through the bottom of the ship, and then you'll have to go after it."

During the two days previous to my

second and successful attempt to quit Charleston, the city was in full expectation that the fort would shortly be attacked. News had arrived that Federal troops were on their way with reinforcements. An armed steamer had been seen off the harbor, both by night and day, making signals to Anderson. The Governor went down to Sullivan's Island to inspect the troops and Fort Moultrie. The volunteers, aided by negroes and even negro women, worked all night on the batteries. Notwithstanding we were close upon race-week, when the city is usually crowded, the streets had a deserted air, and nearly every acquaintance I met told me he had been down to the islands to see the preparations. Yet the whole excitement, like others which had preceded, ended even short of smoke. News came that reinforcements had not been sent to Anderson; and the destruction of that most inconvenient person was once more postponed. People fell back on the old hope that the Government would be brought to listen to reason,—that it would give up to South Carolina what it could not keep from her with justice,—that it would grant, in short, the incontrovertible right of peaceable secession. For, in the midst of all these labors and terrors, this expense and annoyance, no one talked of returning into the Union, and all agreed in deprecating compromise.

Once more, this time in the *James Adger*, I set sail from Charleston. The boat

lost one tide, and consequently one day, because at the last moment the captain found himself obliged to take out a South Carolina clearance. As I passed down the harbor, I counted fourteen square-rigged vessels at the wharves, and one lying at anchor, while three others had just passed the bar, outward-bound, and two were approaching from the open sea. Deterred from the Ship Channel by the sunken schooners, and from Maffitt's Channel by the fate of the *Columbia*, we tried the Middle Channel, and glided over the bar without accident.

"Sailing to Charleston is very much like going foreign," I said to a middle-aged sea-captain whom we numbered among our passengers. "What with heaving the lead, and doing without beacons, and lying off the coast o' nights, it makes one think of trading to new countries."

I had, it seems, unintentionally pulled the string which jerked him. Springing up, he paced about excitedly for a few moments, and then broke out with his story.

"Yes,—I know it,—I know as much about it as anybody, I reckon. I lay off there nine days in a nor'easter and lost my anchors; and here I am going on to New York to buy some more; and all for those cursed Black Republicans!"

In South Carolina they see but one side of the shield,—which is quite different, as we know, from the custom of the rest of mankind.

REVIEWS AND LITERARY NOTICES.

1. *Descriptive Ethnology*. By R. G. LATHAM. 2 vols. London. 1859.
2. *Anthropologie der Naturvölker*. Von Dr. T. WAIZ. 2 Bänder. Leipzig. 1860.

SOME writers have the remarkable faculty of making the subject which they may happen to treat forever more distasteful and wearisome to their readers. Whether the cause be in the style, or the point of view, or the method of treatment, or in all together, they seem able to force the student away in disgust from the whole field on which they labor, with vows never again to cross it.

Such an author, it seems to us, is pre-eminently R. G. Latham, in his treatment of Ethnology. Happy the man who has any such philosophic interest in Human Races, that he can ever care to hear again of the subject, after perusing Mr. Latham's various volumes on "Descriptive Ethnology." We wonder that the whole English reading public has not consigned the science to the shelf of Encyclopædias of Useful Knowledge, or of Year-Books of Fact, or any other equally philosophic and connected works, after the treatment which this modern master of Ethnology has given to the subject.

Such disconnected masses of facts are heaped together in these works, such incredible dullness is shown in presenting them, such careful avoidance of any generalization or of any interesting particular, such a bald and conceited style, and such a cockneyish and self-opinionated view of human history, as our soul wearies even to think of. Mr. Latham disdains any link of philosophy, or any classification, among his "ten thousand facts," as being a fault of the "German School" (whatever that may be) of Ethnology. It seems to him soundly "British" to disbelieve all the best conclusions of modern scholarship, and to urge his own fanciful or shallow theories. He treats all human superstitions and mythologies as if he were standing in the Strand and judging them by the ideas of modern London. His is a Cockney's view of antiquity. He cannot imagine that a barbarous and infant people, groping in

the mysteries of the moral universe, might entertain some earnest and poetic views which were not precisely in the line of thought of the Londoners of the nineteenth century, and yet which might be worth investigating. To his mind, there is no grand march of humanity, slow, but certain, towards higher ideals, through the various lines of race,—but rather innumerable ripples on the surface of history, which come and pass away without connection and without purpose.

The reader wades slowly through his books, and leaves them with a feeling of intense disgust. Such a vast gathering of facts merely to produce this melancholy confusion of details! You feel that his eminence in the science must be from the circumstance that no one else is dull enough and patient enough to gather such a museum of facts in regard to human beings. The mind is utterly confused as to divisions of human races, and is ready to conclude that there must be almost as many varieties of man as there are tribes or dialects, and that Ethnology has not yet reached the position of a science.

The reader must pardon the bitterness of our feelings; but we are just smarting from a prolonged perusal of all Mr. Latham's works, especially the two volumes whose title is given above; and that we may have sympathy, if only in a faint degree, from our friends, we quote a few passages, taken at random, though we cannot possibly thus convey an adequate conception of the infinite dullness of the work.

The following is his elegant introduction:—

"I follow the Horatian rule, and plunge, at once, *in medias res*. I am on the Indus, but not on the Indian portion of it. I am on the Himalayas, but not on their southern side. I am on the northwestern ranges, with Tartary on the north, Bokhara on the west, and Hindostan on the south. I am in a neighborhood where three great religions meet: Mahometanism, Buddhism, Brahminism. I *must* begin somewhere; and here is my beginning."—Vol. i. p. 1.

The following is his analysis of the beautiful Finnish Kalevala:—

"Wainamoinen is much of a smith, and more of a harper. Ilmarinen is most of a smith. Lemminkainen is much of a harper, and little of a smith. The hand of the daughter of the mistress of Pohjola is what, each and all, the three sons of Kalevala strive to win,—a hand which the mother of the owner will give to any one who can make for her and for Pohjola *Sampo*. Wainamoinen will not; but he knows of one who will,—Ilmarinen. Ilmarinen makes it, and gains the mother's consent thereby. But the daughter requires another service. He must hunt down the elk of Tunela. We now see the way in which the actions of the heroes are, at one and the same time, separate and connected. Wainamoinen tries; Ilmarinen tries (and eventually wins); Lemminkainen tries. There are alternations of friendship and enmity. *Sampo* is made and presented. It is then wanted back again.

"'Give us,' says Wainamoinen, 'if not the whole, half.'

"'Sampo,' says Louki, the mistress of Pohjola, 'cannot be divided.'

"'Then let us steal it,' says one of the three.

"'Agreed,' say the other two.

"So the rape of *Sampo* takes place. It is taken from Pohjola, whilst the owners are sung to sleep by the harp of Lemminkainen; sung to sleep, but not for so long a time as to allow the robbers to escape. They are sailing Kalevalaward, when Louki comes after them on the wings of the wind, and raises a storm. *Sampo* is broken, and thrown into the sea. Bad days now come. There is no sun, no moon. Ilmarinen makes them of silver and gold. He had previously made his second wife (for he lost his first) out of the same metals. However, *Sampo* is washed up, and made whole. Good days come. The sun and moon shine as before, and the sons of Kalevala possess *Sampo*."—Vol. i., pp. 433, 434.

This, again, is Mr. Latham's profound and interesting view of *Buddhism*:—

"Buddhism is one thing. Practices out of which Buddhism may be developed are another. It has been already suggested that the ideas conveyed by the terms *Sramanæ* and *Gymnosophistæ* are just as Brahminic as Buddhist, and, *vice versâ*, just as Buddhist as Brahminic.

"The earliest dates of specific Buddhism are of the same age as the earliest dates of specific Brahminism.

"Clemens of Alexandria mentions Buddhist pyramids, the Buddhist habit of depositing certain bones in them, the Buddhist practice

of foretelling events, the Buddhist practice of continence, the Buddhist Semnai or holy virgins. This, however, may be but so much asceticism. He mentions this and more. He supplies the name Bouta; Bouta being honored as a god.

"From Cyril of Jerusalem we learn that Samnaism was, more or less, Manichæan,—Manichæanism being, more or less, Samanist. Terebinthus, the preceptor of Manes, took the name Baudas. In Epiphanius, Terebinthus is the pupil of Scythianus.

"Suidas makes Terebinthus a pupil of Bauda, who pretended to be the son of a virgin. And here we may stop to remark, that the Mongol Tshingiz-Khan is said to be virgin-born; that, word for word, Scythianus is Sak; that Sakya Muni (compare it with Manes) is a name of Buddha.

"Be this as it may, there was, before A. D. 300,—

"1. Action and reaction between Buddhism and Christianity.

"2. Buddhist buildings.

"3. The same cultus in both Bactria and India.

"Whether this constitute Buddhism is another question."—Vol. ii. p. 317.

And more of an equally attractive and comprehensible character.

We assure the reader that these extracts are but feeble exponents of the peculiar power of Mr. Latham's works,—a power of unmitigated dulness. What his views are on the great questions of the science—the origin of races, the migrations, the crossings of varieties, and the like—no mortal can remember, who has penetrated the labyrinth of his researches.

An author of a very different kind is Professor Waiz, whose work on Anthropology has just reached this country: a writer as philosophic as Mr. Latham is disconnected; as pleasing and natural in style as the other is affected; as simply open to the true and good in all customs or superstitions of barbarous peoples as the Englishman is contemptuous of everything not modern and European. Waiz seems to us the most careful and truly scientific author in the field of Ethnology whom we have had since Prichard, and with the wider scope which belongs to the intellectual German.

The bane of this science, as every one knows, has been its theorizing, and its want of careful inductive reasoning from facts. The classifications in it have been endless,

varying almost with the fancies of each new student; while every prominent follower of it has had some pet hypothesis, to which he desired to suit his facts. Whether the *a priori* theory were of modern miraculous origin or of gradual development, of unity or of diversity of parentage, of permanent and absolute divisions of races or of a community of blood, it has equally forced the author to twist his facts.

Perhaps the basest of all uses to which theory has been put in this science was in a well-known American work, where facts and fancies in Ethnology were industriously woven together to form another withe about the limbs of the wretched African slave.

Waiz has reasoned slowly and carefully from facts, considering in his view all possible hypotheses, — even, for instance, the development-theory of Darwin, — and has formed his own conclusion on scientific data, or has wisely avowed that no conclusion is possible.

The classification to which he is forced is that which all profound investigators are approaching, — that of language interpreted by history. He is compelled to believe that no physiological evidences of race can be considered as at all equal to the evidences from language. At the same time, he is ready to admit that even this classification is imperfect, as from the nature of the case it must be; for the source of the confusion lies in the very unity of mankind. He rejects *in toto* Professor Agassiz's "realm-theory," as inconsistent with facts. The hybrid-question, as put by Messrs. Gliddon and Nott, meets with a searching and careful investigation, with the conclusion that nothing in facts yet ascertained proves any want of vitality or power of propagation in mulattoes or in crosses of any human races.

The unity of origin and the vast antiquity of mankind are the two important conclusions drawn.

His second volume is entirely devoted to the negro races, and is the most valuable treatise yet written on that topic.

The whole work is mainly directed towards *Naturevölker*, or "Peoples in a State of Nature," and therefore cannot be recommended for translation, as a general textbook on the science of Ethnology, — a book which is now exceedingly needed in all our higher schools and colleges; but as

a general treatise, with many new and important facts, scientifically treated, it can be most highly commended to the general scholar.

Il Politecnico. Repertorio Mensile di Studj applicati alla Prosperità e Coltura Sociale. Milano, 1860. New York: Charles B. Norton, Agent for Libraries, 596, Broadway.

AMONG the best first-fruits of Italian liberty are the free publication and circulation of books; and it is a striking indication of the new order of things in Lombardy, that the publishers at Milan of the monthly journal, "Il Politecnico," should at once have established an American agency in New York, and that in successive numbers of their periodical during the present year they should have furnished lists of some of the principal American publications which they are prepared to obtain for Italian readers. It will be a fortunate circumstance for the people of both countries, should a ready means be established for the interchange of their contemporaneous works in literature and science.

The "Politecnico" is not altogether a new journal. Seven volumes of it had been published, and had acquired for it a high reputation and a considerable circulation, when political events put a stop to its issue. The Austrian system of government after 1849 repressed all free expression of thought in Lombardy; and no encouragement was afforded for the publication of any work not under the control of the administration. With the beginning of the present year the "Politecnico" was reestablished, mainly through the influence and under the direction of Dr. Carlo Cattaneo, who had been the chief promoter of the preceding original series. The numbers of the new series give evidence of talent and independence in its conductors and contributors, and contain articles of intrinsic value, beside that which they possess as indications of the present intellectual condition and tendencies of Italy. The journal is wholly devoted to serious studies, its object being the cultivation of the moral and physical sciences with the arts depending on them, and their practical application to promote the national prosperity. That it will carry out

its design with ability is guaranteed by the character of Cattaneo.

Carlo Cattaneo is a man of unquestioned power of intellect, of strong character, and resolute energy. Already distinguished, not only as a political economist, but as a forcible reasoner in applied politics, he took a leading part in the struggle of 1848 in Milan, and, inspired by ill-will towards Charles Albert and the Piedmontese, was one of the promoters of the disastrous Lombard policy which defeated the hopes of the opponents of Austria at that day. Though an Italian liberal, and unquestionably honest in his patriotic intentions, he was virtually an ally of Radetzky. When the Austrians retook Milan, he was compelled to fly, and took refuge in Lugano, where he compiled three large volumes on the affairs of Italy, from the accession of Pius IX. to the fall of Venice, in which he exhibited his political views, endeavoring to show that the misfortunes of Lombardy were due to the ambitious and false policy of the unhappy Charles Albert. His distrust of the Piedmontese has not diminished with the recent changes in the affairs of Italy; and although Lombardy is now united to Piedmont, and the hope of freedom seems to lie in a hearty and generous union of men of all parties in support of the new government, Cattaneo, when in March last he was elected a member of the National Parliament, refused to take his seat, that he might not be obliged to swear allegiance to the King and the Constitution. His political desire seems to be to see Italy not brought under one rule, but composed of a union of states, each preserving its special autonomy. He is a federalist, and does not share in the unitarian view which prevails with almost all the other prominent Italian statesmen, and which at this moment appears to be the only system that can create a strong, united, independent Italy. It was to him, perhaps, more than to any other single man, that the difficulties which lately arose in the settling of the mode of annexation of Sicily and Naples to the Sardinian kingdom were due; and the small party in Parliament which recently refused to join in the vote of confidence in the ministry of Cavour was led by Ferrari, the disciple of the Milanese Doctor.

But however impracticable Cattaneo may be, and however mistaken and ex-

travagant his political views, he is a man of such vigor of mind, that a journal conducted by him becomes, from the fact of his connection with it, one of the important organs of Italian thought. We trust that the "Politecnico" will find subscribers among those in our country who desire to keep up their knowledge of Italian affairs at a time of such extraordinary interest as the present.

Elsie Venner. A Romance of Destiny. By OLIVER WENDELL HOLMES. 2 vols. Boston: Ticknor & Fields. 1861.

ENGLISH literature numbers among its more or less distinguished authors a goodly number of physicians. Sir Thomas Browne was, perhaps, the last of the great writers of English prose whose mind and style were impregnated with imagination. He wrote poetry without meaning it, as many of his brother doctors have meant to write poetry without doing it, in the classic style of

"Inoculation, heavenly maid, descend!"

Garth's "Dispensary" was long ago as fairly buried as any of his patients; and Armstrong's "Health" enjoys the dreary immortality of being preserved in the collections, like one of those queer things they show you in a glass jar at the anatomical museums. Arbuthnot, a truly genial humorist, has hardly had justice done him. People laugh over his fun in the "Memoirs of Scriblerus," and are commonly satisfied to think it Pope's. Smollett insured his literary life in "Humphrey Clinker"; and we suppose his *Continuation of Hume* is still one of the pills which ingenuous youth is expected to gulp before it is strong enough to resist. Goldsmith's fame has steadily gained; and so has that of Keats, whom we may also fairly reckon in our list, though he remained harmless, having never taken a degree. On the whole, the proportion of doctors who have positively succeeded in our literature is a large one, and we have now another very marked and beautiful case in Dr. Holmes. Since Arbuthnot, the profession has produced no such wit; since Goldsmith, no author so successful.

Five years ago it would have been only Dr. Holmes's intimate friends that would

have considered the remarkable success he has achieved not only possible, but probable. They knew, that, if the fitting opportunity should only come, he would soon show how much stuff he had in him, — sterner stuff, too, than the world had supposed, — stuff not merely to show off the iris of a brilliant reputation, but to block out into the foundations of an enduring fame. It seems an odd thing to say that Dr. Holmes had suffered by having given proof of too much wit; but it is undoubtedly true. People in general have a great respect for those who scare them or make them cry, but are apt to weigh lightly one who amuses them. They like to be tickled, but they would hardly take the advice of their tickler on any question they thought serious. We have our doubts whether the majority of those who make up what is called "the world" are fond of wit. It rather puts them out, as Nature did Fuseli. They look on its crinkling play as men do at lightning; and while they grant it is very fine, are teased with an uncomfortable wonder as to where it is going to strike next. They would rather, on the whole, it were farther off. They like well-established jokes, the fine old smoked-herring sort, such as the clown offers them in the circus, warranted never to spoil, if only kept dry enough. Your fresh wit demands a little thought, perhaps, or at least a kind of negative wit, in the recipient. It is an active, meddlesome quality, forever putting things in unexpected and somewhat startling relations to each other; and such new relations are as unwelcome to the ordinary mind as poor relations to a *nouveau riche*. Who wants to be all the time painfully conceiving of the antipodes walking like flies on the ceiling? Yet wit is related to some of the profoundest qualities of the intellect. It is the reasoning faculty acting *per saltum*, the sense of analogy brought to a focus; it is generalization in a flash, logic by the electric telegraph, the sense of likeness in unlikeness, that lies at the root of all discoveries; it is the prose imagination, common-sense at fourth proof. All this is no reason why the world should like it, however; and we fancy that the question, *Ridentem dicere verum quid vetat?* was plaintively put in the primitive tongue by one of the world's gray fathers to another without producing the slightest conviction. Of course, there must be some reason for this suspicion of wit, as there is

for most of the world's deep-rooted prejudices. There is a kind of surface-wit that is commonly the sign of a light and shallow nature. It becomes habitual *persiflage*, incapable of taking a deliberate and serious view of anything, or of conceiving the solemnities that environ life. This has made men distrustful of all laughers; and they are apt to confound in one sweeping condemnation with this that humor whose base is seriousness, and which is generally the rebound of the mind from over-sad contemplation. They do not see that the same qualities that make Shakespeare the greatest of tragic poets make him also the deepest of humorists.

Dr. Holmes was already an author of more than a quarter of a century's standing, and was looked on by most people as an *amusing* writer merely. He protested playfully and pointedly against this, once or twice; but, as he could not help being witty, whether he would or no, his audience laughed and took the protest as part of the joke. He felt that he was worth a great deal more than he was vulgarly rated at, and perhaps chafed a little; but his opportunity had not come. With the first number of the "Atlantic" it came at last, and wonderfully he profited by it. The public were first delighted, and then astonished. So much wit, wisdom, pathos, and universal Catharine-wheeling of fun and fancy was unexampled. "Why, good gracious," cried Madam Grundy, "we've got a *genius* among us at last! I always knew what it would come to!" "Got a fiddlestick!" says Mr. G.; "it's only rockets." And there was no little watching and waiting for the sticks to come down. We are afraid that many a respectable skeptic has a crick in his neck by this time; for we are of opinion that these are a new kind of rocket, that go without sticks, and *stay up* against all laws of gravity.

We expected a great deal from Dr. Holmes; we thought he had in him the makings of the best magazinist in the country; but we honestly confess we were astonished. We remembered the proverb, "T is the pace that kills," and could scarce believe that such a two-forty gait could be kept up through a twelvemonth. Such wind and bottom were unprecedented. But this was Eclipse himself; and he came in as fresh as a May morning, ready at a month's end for another year's run. And it was

not merely the perennial vivacity, the fun shading down to seriousness, and the seriousness up to fun, in perpetual and charming vicissitude;—here was the man of culture, of scientific training, the man who had thought as well as felt, and who had fixed purposes and sacred convictions. No, the Eclipse-comparison is too trifling. This was a stout ship under press of canvas; and however the phosphorescent star-foam of wit and fancy, crowding up under her bows or gliding away in subdued flashes of sentiment in her wake, may draw the eye, yet she has an errand of duty; she carries a precious freight, she steers by the stars, and all her seemingly wanton zigzags bring her nearer to port.

When children have made up their minds to like some friend of the family, they commonly besiege him for a story. The same demand is made by the public of authors, and accordingly it was made of Dr. Holmes. The odds were heavy against him; but here again he triumphed. Like a good Bostonian, he took for his heroine a *schoolma'am*, the Puritan Pallas Athene of the American Athens, and made her so lovely that everybody was looking about for a schoolmistress to despair after. Generally, the best work in imaginative literature is done before forty; but Dr. Holmes should seem not to have found out what a *Mariposa* grant Nature had made him till after fifty.

There is no need of our analyzing "Elsie Venner," for all our readers know it as well as we do. But we cannot help saying that Dr. Holmes has struck a new vein of New-England romance. The story is really a romance, and the character of the heroine has in it an element of mystery; yet the materials are gathered from every-day New-England life, and that weird borderland between science and speculation where psychology and physiology exercise mixed jurisdiction, and which rims New-England as it does all other lands. The character of Elsie is exceptional, but not purely ideal, like Cristabel and Lamia. In Doctor Kittredge and his "hired man," and in the Principal of the "Apollinean Institute," Dr. Holmes has shown his ability to draw those typical characters that represent the higher and lower grades of

average human nature; and in calling his work a Romance he quietly justifies himself for mingling other elements in the composition of Elsie and her cousin. Apart from the merit of the book as a story, it is full of wit, and of sound thought sometimes hiding behind a mask of humor. Admirably conceived are the two clergymen, gradually changing sides almost without knowing it, and having that persuasion of consistency which men always feel, because they must always bring their creed into some sort of agreement with their dispositions.

There is something melancholy in the fact, that the moment Dr. Holmes showed that he felt a deep interest in the great questions which concern this world and the next, and proved not only that he believed in something, but thought his belief worth standing up for, the cry of *Infidel* should have been raised against him by people who believe in nothing but an authorized version of Truth, they themselves being the censors. For our own part, we do not like the smell of Smithfield, whether it be Catholic or Protestant that is burning there; though, fortunately, one can afford to smile at the Inquisition, so long as its Acts of Faith are confined to the corners of sectarian newspapers. But Dr. Holmes can well afford to possess his soul in patience. The Unitarian John Milton has won and kept quite a respectable place in literature, though he was once forced to say, bitterly, that "new Presbyterian was only old Priest writ large." One can say nowadays, *E pur si muove*, with more comfort than Galileo could; the world does move forward, and we see no great chance for any ingenious fellow-citizen to make his fortune by a "Yankee Heretic-Baker," as there might have been two centuries ago.

Dr. Holmes has proved his title to be a wit in the earlier and higher sense of the word, when it meant a man of genius, a player upon thoughts rather than words. The variety, freshness, and strength which he has lent to our pages during the last three years seem to demand of us that we should add our expression of admiration to that which his countrymen have been so eager and unanimous in rendering.

AGNES OF SORRENTO.

CHAPTER I.

THE OLD TOWN.

THE setting sunbeams slant over the antique gateway of Sorrento, fusing into a golden bronze the brown freestone vestments of old Saint Antonio, who with his heavy stone mitre and upraised hands has for centuries kept watch thereupon.

A quiet time he has of it up there in the golden Italian air, in petrified act of blessing, while orange lichens and green mosses from year to year embroider quaint patterns on the seams of his sacerdotal vestments, and small tassels of grass volunteer to ornament the folds of his priestly drapery, and golden showers of blossoms from some more hardy plant fall from his ample sleeve-cuffs. Little birds perch and chitter and wipe their beaks unconcernedly, now on the tip of his nose and now on the point of his mitre, while the world below goes on its way pretty much as it did when the good saint was alive, and, in despair of the human brotherhood, took to preaching to the birds and the fishes.

Whoever passed beneath this old arched gateway, thus saint-guarded, in the year of our Lord's grace —, might have seen under its shadow, sitting op-

posite to a stand of golden oranges, the little Agnes.

A very pretty picture was she, reader, — with such a face as you sometimes see painted in those wayside shrines of sunny Italy, where the lamp burns pale at evening, and gillyflower and cyclamen are renewed with every morning.

She might have been fifteen or thereabouts, but was so small of stature that she seemed yet a child. Her black hair was parted in a white unbroken seam down to the high forehead, whose serious arch, like that of a cathedral-door, spoke of thought and prayer. Beneath the shadows of this brow lay brown, translucent eyes, into whose thoughtful depths one might look as pilgrims gaze into the waters of some saintly well, cool and pure down to the unblemished sand at the bottom. The small lips had a gentle compression which indicated a repressed strength of feeling; while the straight line of the nose, and the flexible, delicate nostril, were perfect as in those sculptured fragments of the antique which the soil of Italy so often gives forth to the day from the sepulchres of the past. The habitual pose of the head and face had the shy uplooking grace of a violet; and yet there was a grave tranquillity of expression, which gave a pecu-

liar degree of character to the whole figure.

At the moment at which we have called your attention, the fair head is bent, the long eyelashes lie softly down on the pale, smooth cheek; for the Ave Maria bell is sounding from the Cathedral of Sorrento, and the child is busy with her beads.

By her side sits a woman of some three-score years, tall, stately, and squarely formed, with ample breadth of back and size of chest, like the robust dames of Sorrento. Her strong Roman nose, the firm, determined outline of her mouth, and a certain energy in every motion, speak the woman of will and purpose. There is a degree of vigor in the decision with which she lays down her spindle and bows her head, as a good Christian of those days would, at the swinging of the evening bell.

But while the soul of the child in its morning freshness, free from pressure or conscience of earthly care, rose like an illuminated mist to heaven, the words the white-haired woman repeated were twined with threads of worldly prudence, — thoughts of how many oranges she had sold, with a rough guess at the probable amount for the day, — and her fingers wandered from her beads a moment to see if the last coin had been swept from the stand into her capacious pocket, and her eyes wandering after them suddenly made her aware of the fact that a handsome cavalier was standing in the gate, regarding her pretty grandchild with looks of undisguised admiration.

"Let him look!" she said to herself, with a grim clasp on her rosary; — "a fair face draws buyers, and our oranges must be turned into money; but he who does more than look has an affair with me; — so gaze away, my master, and take it out in buying oranges! — *Ave, Maria! ora pro nobis, nunc et,*" etc., etc.

A few moments, and the wave of prayer which had flowed down the quaint old shadowy street, bowing all heads as the wind bowed the scarlet tassels of neighboring clover-fields, was passed, and all

the world resumed the work of earth just where they left off when the bell began.

"Good even to you, pretty maiden!" said the cavalier, approaching the stall of the orange-woman with the easy, confident air of one secure of a ready welcome, and bending down on the yet prayerful maiden the glances of a pair of piercing hazel eyes that looked out on each side of his aquiline nose with the keenness of a falcon's.

"Good even to you, pretty one! We shall take you for a saint, and worship you in right earnest, if you raise not those eyelashes soon."

"Sir! my lord!" said the girl, — a bright color flushing into her smooth brown cheeks, and her large dreamy eyes suddenly upraised with a flutter, as of a bird about to take flight.

"Agnes, bethink yourself!" said the white-haired dame; — "the gentleman asks the price of your oranges; — be alive, child!"

"Ah, my lord," said the young girl, "here are a dozen fine ones."

"Well, you shall give them me, pretty one," said the young man, throwing a gold piece down on the stand with a careless ring.

"Here, Agnes, run to the stall of Raphael the poulterer for change," said the adroit dame, picking up the gold.

"Nay, good mother, by your leave," said the unabashed cavalier; "I make my change with youth and beauty thus!" And with the word he stooped down and kissed the fair forehead between the eyes.

"For shame, Sir!" said the elderly woman, raising her distaff, — her great glittering eyes flashing beneath her silver hair like tongues of lightning from a white cloud. "Have a care! — this child is named for blessed Saint Agnes, and is under her protection."

"The saints must pray for us, when their beauty makes us forget ourselves," said the young cavalier, with a smile. "Look me in the face, little one," he added; — "say, wilt thou pray for me?"

The maiden raised her large serious eyes, and surveyed the haughty, handsome face with that look of sober inquiry which one sometimes sees in young children, and the blush slowly faded from her cheek, as a cloud fades after sunset.

"Yes, my lord," she answered, with a grave simplicity, — "I *will* pray for you."

"And hang this upon the shrine of Saint Agnes for my sake," he added, drawing from his finger a diamond ring, which he dropped into her hand; and before mother or daughter could add another word or recover from their surprise, he had thrown the corner of his mantle over his shoulder and was off down the narrow street, humming the refrain of a gay song.

"You have struck a pretty dove with that bolt," said another cavalier, who appeared to have been observing the proceeding, and now, stepping forward, joined him.

"Like enough," said the first, carelessly.

"The old woman keeps her mewed up like a singing-bird," said the second; "and if a fellow wants speech of her, it's as much as his crown is worth; for Dame Elsie has a strong arm, and her distaff is known to be heavy."

"Upon my word," said the first cavalier, stopping and throwing a glance backward, — "where do they keep her?"

"Oh, in a sort of pigeon's nest up above the Gorge; but one never sees her, except under the fire of her grandmother's eyes. The little one is brought up for a saint, they say, and goes nowhere but to mass, confession, and the sacrament."

"Humph!" said the other, "she looks like some choice old picture of Our Lady, — not a drop of human blood in her. When I kissed her forehead, she looked into my face as grave and innocent as a babe. One is tempted to try what one can do in such a case."

"Beware the grandmother's distaff!" said the other, laughing.

"I've seen old women before," said the cavalier, as they turned down the street and were lost to view.

Meanwhile the grandmother and granddaughter were roused from the mute astonishment in which they were gazing after the young cavalier by a tittering behind them; and a pair of bright eyes looked out upon them from beneath a bundle of long, crimson-headed clover, whose rich carmine tints were touched to brighter life by setting sunbeams.

There stood *Giulietta*, the head coquette of the Sorrento girls, with her broad shoulders, full chest, and great black eyes, rich and heavy as those of the silver-haired ox for whose benefit she had been cutting clover. Her bronzed cheek was smooth as that of any statue, and showed a color like that of an open pomegranate; and the opulent, lazy abundance of her ample form, with her leisurely movements, spoke an easy and comfortable nature, — that is to say, when *Giulietta* was pleased; for it is to be remarked that there lurked certain sparkles deep down in her great eyes, which might, on occasion, blaze out into sheet-lightning, like her own beautiful skies, which, lovely as they are, can thunder and sulk with terrible earnestness when the fit takes them. At present, however, her face was running over with mischievous merriment, as she slyly pinched little *Agnes* by the ear.

"So you know not yon gay cavalier, little sister?" she said, looking askance at her from under her long lashes.

"No, indeed! What has an honest girl to do with knowing gay cavaliers?" said Dame Elsie, bestirring herself with packing the remaining oranges into a basket, which she covered trimly with a heavy linen towel of her own weaving. "Girls never come to good who let their eyes go walking through the earth, and have the names of all the wild gallants on their tongues. *Agnes* knows no such nonsense, — blessed be her gracious patroness, with Our Lady and Saint Michael!"

"I hope there is no harm in knowing what is right before one's eyes," said *Giulietta*.

lietta. "Anybody must be blind and deaf not to know the Lord Adrian. All the girls in Sorrento know him. They say he is even greater than he appears,—that he is brother to the King himself; at any rate, a handsomer and more gallant gentleman never wore spurs."

"Let him keep to his own kind," said Elsie. "Eagles make bad work in doves. No good comes of such gallants for us."

"Nor any harm, that I ever heard of," said Giulietta. "But let me see, pretty one,—what did he give you? Holy Mother! what a handsome ring!"

"It is to hang on the shrine of Saint Agnes," said the younger girl, looking up with simplicity.

A loud laugh was the first answer to this communication. The scarlet clover-tops shook and quivered with the merriment.

"To hang on the shrine of Saint Agnes!" Giulietta repeated. "That is a little too good!"

"Go, go, you baggage!" said Elsie, wrathfully brandishing her spindle. "If ever you get a husband, I hope he'll give you a good beating! You need it, I warrant! Always stopping on the bridge there, to have cracks with the young men! Little enough you know of saints, I dare say! So keep away from *my* child!—Come, Agnes," she said, as she lifted the orange-basket on to her head; and, straightening her tall form, she seized the girl by the hand to lead her away.

CHAPTER II.

THE DOVE-COT.

THE old town of Sorrento is situated on an elevated plateau, which stretches into the sunny waters of the Mediterranean, guarded on all sides by a barrier of mountains which defend it from bleak winds and serve to it the purpose of walls to a garden. Here, groves of oranges and lemons, with their almost fabulous coincidence of fruitage with flowers, fill

the air with perfume, which blends with that of roses and jessamines; and the fields are so starred and enamelled with flowers that they might have served as the type for those Elysian realms sung by ancient poets. The fervid air is fanned by continual sea-breezes, which give a delightful elasticity to the otherwise languid climate. Under all these cherishing influences, the human being develops a wealth and luxuriance of physical beauty unknown in less favored regions. In the region about Sorrento one may be said to have found the land where beauty is the rule and not the exception. The singularity there is not to see handsome points of physical proportion, but rather to see those who are without them. Scarce a man, woman, or child you meet who has not some personal advantage to be commended, while even striking beauty is common. Also, under these kindly skies, a native courtesy and gentleness of manner make themselves felt. It would seem as if humanity, rocked in this flowery cradle, and soothed by so many daily caresses and appliances of nursing Nature, grew up with all that is kindest on the outward,—not repressed and beat in, as under the inclement atmosphere and stormy skies of the North.

The town of Sorrento itself overhangs the sea, skirting along rocky shores, which, hollowed here and there into picturesque grottoes, and fledged with a wild plumage of brilliant flowers and trailing vines, descend in steep precipices to the water. Along the shelly beach, at the bottom, one can wander to look out on the loveliest prospect in the world. Vesuvius rises with its two peaks softly clouded in blue and purple mists, which blend with its ascending vapors,—Naples and the adjoining villages at its base gleaming in the distance like a fringe of pearls on a regal mantle. Nearer by, the picturesque rocky shores of the island of Capri seem to pulsate through the dreamy, shifting mists that veil its sides; and the sea shimmers and glitters like the neck of a peacock with an iridescent mingling of colors: the whole air is a glorifying

medium, rich in prismatic hues of enchantment.

The town on three sides is severed from the main land by a gorge two hundred feet in depth and forty or fifty in breadth, crossed by a bridge resting on double arches, the construction of which dates back to the time of the ancient Romans. This bridge affords a favorite lounging-place for the inhabitants, and at evening a motley assemblage may be seen lolling over its moss-grown sides,—men with their picturesque knit caps of scarlet or brown falling gracefully on one shoulder, and women with their shining black hair and the enormous pearl earrings which are the pride and heirlooms of every family. The present traveller at Sorrento may remember standing on this bridge and looking down the gloomy depths of the gorge, to where a fair villa, with its groves of orange-trees and gardens, overhangs the tremendous depths below.

Hundreds of years since, where this villa now stands was the simple dwelling of the two women whose history we have begun to tell you. There you might have seen a small stone cottage with a two-arched arcade in front, gleaming brilliantly white out of the dusky foliage of an orange-orchard. The dwelling was wedged like a bird-box between two fragments of rock, and behind it the land rose rocky, high, and steep, so as to form a natural wall. A small ledge or terrace of cultivated land here hung in air,—below it, a precipice of two hundred feet down into the Gorge of Sorrento. A couple of dozen orange-trees, straight and tall, with healthy, shining bark, here shot up from the fine black volcanic soil, and made with their foliage a twilight shadow on the ground, so deep that no vegetation, save a fine velvet moss, could dispute their claim to its entire nutritious offices. These trees were the sole wealth of the women and the sole ornament of the garden; but, as they stood there, not only laden with golden fruit, but fragrant with pearly blossoms, they made the little rocky platform seem a perfect Garden of

the Hesperides. The stone cottage, as we have said, had an open, whitewashed arcade in front, from which one could look down into the gloomy depths of the gorge, as into some mysterious underworld. Strange and weird it seemed, with its fathomless shadows and its wild grottoes, over which hung, silently waving, long pendants of ivy, while dusky gray aloes uplifted their horned heads from great rock-rifts, like elfin spirits struggling upward out of the shade. Nor was wanting the usual gentle poetry of flowers; for white iris leaned its fairy pavilion over the black void like a pale-cheeked princess from the window of some dark enchanted castle, and scarlet geranium and golden broom and crimson gladiolus waved and glowed in the shifting beams of the sunlight. Also there was in this little spot what forms the charm of Italian gardens always,—the sweet song and prattle of waters. A clear mountain-spring burst through the rock on one side of the little cottage, and fell with a lulling noise into a quaint moss-grown water-trough, which had been in former times the sarcophagus of some old Roman sepulchre. Its sides were richly sculptured with figures and leafy scrolls and arabesques, into which the sly-footed lichens with quiet growth had so insinuated themselves as in some places almost to obliterate the original design; while, round the place where the water fell, a veil of ferns and maiden's-hair, studded with tremulous silver drops, vibrated to its soothing murmur. The superfluous waters, drained off by a little channel on one side, were conducted through the rocky parapet of the garden, whence they trickled and tinkled from rock to rock, falling with a continual drip among the swaying ferns and pendent ivy-wreaths, till they reached the little stream at the bottom of the gorge. This parapet or garden-wall was formed of blocks or fragments of what had once been white marble, the probable remains of the ancient tomb from which the sarcophagus was taken. Here and there a marble acanthus-leaf, or the capital of an old

column, or a fragment of sculpture jutted from under the mosses, ferns, and grasses with which prodigal Nature had filled every interstice and carpeted the whole. These sculptured fragments everywhere in Italy seem to whisper from the dust, of past life and death, of a cycle of human existence forever gone, over whose tomb the life of to-day is built.

"Sit down and rest, my dove," said Dame Elsie to her little charge, as they entered their little inclosure.

Here she saw for the first time, what she had not noticed in the heat and hurry of her ascent, that the girl was panting and her gentle bosom rising and falling in thick heart-beats, occasioned by the haste with which she had drawn her onward.

"Sit down, dearie, and I will get you a bit of supper."

"Yes, grandmother, I will. I must tell my beads once for the soul of the handsome gentleman that kissed my forehead to-night."

"How did you know that he was handsome, child?" said the old dame, with some sharpness in her voice.

"He bade me look on him, grandmother, and I saw it."

"You must put such thoughts away, child," said the old dame.

"Why must I?" said the girl, looking up with an eye as clear and unconscious as that of a three-year old child.

"If she does not think, why should I tell her?" said Dame Elsie, as she turned to go into the house, and left the child sitting on the mossy parapet that overlooked the gorge. Thence she could see far off, not only down the dim, sombre abyss, but out to the blue Mediterranean beyond, now calmly lying in swathing-bands of purple, gold, and orange, while the smoky cloud that overhung Vesuvius became silver and rose in the evening light.

There is always something of elevation and purity that seems to come over one from being in an elevated region. One feels morally as well as physically

above the world, and from that clearer air able to look down on it calmly with disengaged freedom. Our little maiden sat for a few moments gazing, her large brown eyes dilating with a tremulous lustre, as if tears were half of a mind to start in them, and her lips apart with a delicate earnestness, like one who is pursuing some pleasing inner thought. Suddenly rousing herself, she began by breaking the freshest orange-blossoms from the golden-fruited trees, and, kissing and pressing them to her bosom, she proceeded to remove the faded flowers of the morning from before a little rude shrine in the rock, where, in a sculptured niche, was a picture of the Madonna and Child, with a locked glass door in front of it. The picture was a happy transcript of one of the fairest creations of the religious school of Florence, done by one of those rustic copyists of whom Italy is full, who appear to possess the instinct of painting, and to whom we owe many of those sweet faces which sometimes look down on us by the way-side from rudest and homeliest shrines.

The poor fellow by whom it had been painted was one to whom years before Dame Elsie had given food and shelter for many months during a lingering illness; and he had painted so much of his dying heart and hopes into it that it had a peculiar and vital vividness in its power of affecting the feelings. Agnes had been familiar with this picture from early infancy. No day of her life had the flowers failed to be freshly placed before it. It had seemed to smile down sympathy on her childish joys, and to cloud over with her childish sorrows. It was less a picture to her than a presence; and the whole air of the little orange-garden seemed to be made sacred by it. When she had arranged her flowers, she kneeled down and began to say prayers for the soul of the young gallant.

"Holy Jesus," she said, "he is young, rich, handsome, and a king's brother; and for all these things the Fiend may tempt him to forget his God and throw away

his soul. Holy Mother, give him good counsel!"

"Come, child, to your supper," said Dame Elsie. "I have milked the goats, and everything is ready."

CHAPTER III.

THE GORGE.

AFTER her light supper was over, Agnes took her distaff, wound with shining white flax, and went and seated herself in her favorite place, on the low parapet that overlooked the gorge.

This ravine, with its dizzy depths, its waving foliage, its dripping springs, and the low murmur of the little stream that pursued its way far down at the bottom, was one of those things which stimulated her impressible imagination, and filled her with a solemn and vague delight. The ancient Italian tradition made it the home of fauns and dryads, wild woodland creatures, intermediate links between vegetable life and that of sentient and reasoning humanity. The more earnest faith that came in with Christianity, if it had its brighter lights in an immortality of blessedness, had also its deeper shadows in the intenser perceptions it awakened of sin and evil, and of the mortal struggle by which the human spirit must avoid endless woe and rise to endless felicity. The myths with which the colored Italian air was filled in mediæval ages no longer resembled those graceful, floating, cloud-like figures one sees in the ancient chambers of Pompeii, — the bubbles and rainbows of human fancy, rising aimless and buoyant, with a mere freshness of animal life, against a black background of utter and hopeless ignorance as to man's past or future. They were rather expressed by solemn images of mournful, majestic angels and of triumphant saints, or fearful, warning presentations of loathsome fiends. Each lonesome gorge and sombre dell had tales no more of tricky fauns and dryads, but of those restless, wandering demons

who, having lost their own immortality of blessedness, constantly lie in wait to betray frail humanity, and cheat it of that glorious inheritance bought by the Great Redemption.

The education of Agnes had been one which rendered her whole system peculiarly sensitive and impressible to all influences from the invisible and unseen. Of this education we shall speak more particularly hereafter. At present we see her sitting in the twilight on the moss-grown marble parapet, her distaff, with its silvery flax, lying idly in her hands, and her widening dark eyes gazing intently into the gloomy gorge below, from which arose the far-off complaining babble of the brook at the bottom and the shiver and sigh of evening winds through the trailing ivy. The white mist was slowly rising, wavering, undulating, and creeping its slow way up the sides of the gorge. Now it hid a tuft of foliage, and now it wreathed itself around a horned clump of aloes, and, streaming far down below it in the dimness, made it seem like the goblin robe of some strange, supernatural being.

The evening light had almost burned out in the sky: only a band of vivid red lay low in the horizon out to sea, and the round full moon was just rising like a great silver lamp, while Vesuvius with its smoky top began in the obscurity to show its faintly flickering fires. A vague agitation seemed to oppress the child; for she sighed deeply, and often repeated with fervor the Ave Maria.

At this moment there began to rise from the very depths of the gorge below her the sound of a rich tenor voice, with a slow, sad modulation, and seeming to pulsate upward through the filmy, shifting mists. It was one of those voices which seem fit to be the outpouring of some spirit denied all other gifts of expression, and rushing with passionate fervor through this one gate of utterance. So distinctly were the words spoken, that they seemed each one to rise as with a separate intelligence out of the mist, and to knock at the door of the heart.

Sad is my life, and lonely!
No hope for me,
Save thou, my love, my only,
I see!

Where art thou, O my fairest?
Where art thou gone?
Dove of the rock, I languish
Alone!

They say thou art so saintly,
Who dare love thee?
Yet bend thine eyelids holy
On me!

Though heaven alone possess thee,
Thou dwell'st above,
Yet heaven, didst thou but know it,
Is love.

There was such an intense earnestness in these sounds, that large tears gathered in the wide, dark eyes, and fell one after another upon the sweet alyssum and maiden's hair that grew in the crevices of the marble wall. She shivered and drew away from the parapet, and thought of stories she had heard the nuns tell of wandering spirits who sometimes in lonely places pour forth such entrancing music as bewilders the brain of the unwary listener, and leads him to some fearful destruction.

"Agnes!" said the sharp voice of old Elsie, appearing at the door,—"here! where are you?"

"Here, grandmamma."

"Who 's that singing this time o' night?"

"I don't know, grandmamma."

Somehow the child felt as if that singing were strangely sacred to her,—a *rapport* between her and something vague and invisible, which might yet become dear.

"Is't down in the gorge?" said the old woman, coming with her heavy, decided step to the parapet, and looking over, her keen black eyes gleaming like dagger-blades into the mist. "If there 's anybody there," she said, "let them go away, and not be troubling honest women with any of their caterwauling. Come, Agnes," she said, pulling the girl by the sleeve, "you must be tired, my lamb! and your evening-prayers are always so

long, best be about them, girl, so that old grandmamma may put you to bed. What ails the girl? Been crying! Your hand is cold as a stone."

"Grandmamma, what if that might be a spirit?" she said. "Sister Rosa told me stories of singing spirits that have been in this very gorge."

"Likely enough," said Dame Elsie; "but what 's that to us? Let 'em sing!—so long as we don't listen, where 's the harm done? We will sprinkle holy water all round the parapet, and say the office of Saint Agnes, and let them sing till they are hoarse."

Such was the triumphant view which this energetic good woman took of the power of the means of grace which her church placed at her disposal.

Nevertheless, while Agnes was kneeling at her evening-prayers, the old dame consoled herself with a soliloquy, as with a brush she vigorously besprinkled the premises with holy water.

"Now, here 's the plague of a girl! If she 's handsome,—and nobody wants one that is n't,—why, then, it 's a purgatory to look after her. This one is good enough,—none of your hussies, like Giulietta: but the better they are, the more sure to have fellows after them. A murrain on that cavalier,—king's brother, or what not!—it was he serenading, I 'll be bound. I must tell Antonio, and have the girl married, for aught I see: and I don't want to give her to him either; he did n't bring her up. There 's no peace for us mothers. Maybe I 'll tell Father Francesco about it. That 's the way poor little Isella was carried away. Singing is of the Devil, I believe; it always bewitches girls. I 'd like to have poured some hot oil down the rocks: I 'd have made him squeak in another tone, I reckon. Well, well! I hope I shall come in for a good seat in paradise for all the trouble I 've had with her mother, and am like to have with her,—that 's all!"

In an hour more, the large, round, sober moon was shining fixedly on the little mansion in the rocks, silvering the glossy darkness of the orange-leaves, while the

scent of the blossoms arose like clouds about the cottage. The moonlight streamed through the unglazed casement, and made a square of light on the little bed where Agnes was sleeping, in which square her delicate face was framed, with its tremulous and spiritual expression most resembling in its sweet plaintive purity some of the Madonna faces of Frà Angelico, — those tender wild-flowers of Italian religion and poetry.

By her side lay her grandmother, with those sharp, hard, clearly cut features, so worn and bronzed by time, so lined with labor and care, as to resemble one of the Fates in the picture of Michel Angelo; and even in her sleep she held the delicate lily hand of the child in her own hard, brown one, with a strong and determined clasp.

While they sleep, we must tell something more of the story of the little Agnes, — of what she is, and what are the causes which have made her such.

CHAPTER IV.

WHO AND WHAT.

OLD Elsie was not born a peasant. Originally she was the wife of a steward in one of those great families of Rome whose state and traditions were princely. Elsie, as her figure and profile and all her words and movements indicated, was of a strong, shrewd, ambitious, and courageous character, and well disposed to turn to advantage every gift with which Nature had endowed her.

Providence made her a present of a daughter whose beauty was wonderful, even in a country where beauty is no uncommon accident. In addition to her beauty, the little Isella had quick intelligence, wit, grace, and spirit. As a child she became the pet and plaything of the Duchess whom Elsie served. This noble lady, pressed by the *ennui* which is always the moth and rust on the purple and gold of rank and wealth, had, as other noble ladies had in those days, and have now, sundry pets: greyhounds, white

and delicate, that looked as if they were made of Sèvres china; spaniels with long silky ears and fringy paws; apes and monkeys, that made at times sad devastations in her wardrobe; and a most charming little dwarf, that was ugly enough to frighten the very owls, and spiteful as he was ugly. She had, moreover, peacocks, and macaws, and parrots, and all sorts of singing-birds, and falcons of every breed, and horses, and hounds, — in short, there is no saying what she did *not* have. One day she took it into her head to add the little Isella to the number of her acquisitions. With the easy grace of aristocracy, she reached out her jewelled hand and took Elsie's one flower to add to her conservatory, — and Elsie was only too proud to have it so.

Her daughter was kept constantly about the person of the Duchess, and instructed in all the wisdom which would have been allowed her, had she been the Duchess's own daughter, which, to speak the truth, was in those days nothing very profound, — consisting of a little singing and instrumentation, a little embroidery and dancing, with the power of writing her own name and of reading a love-letter.

All the world knows that the very idea of a pet is something to be spoiled for the amusement of the pet-owner; and Isella was spoiled in the most particular and circumstantial manner. She had suits of apparel for every day in the year, and jewels without end, — for the Duchess was never weary of trying the effect of her beauty in this and that costume; so that she sported through the great grand halls and down the long aisles of the garden much like a bright-winged humming-bird, or a damsel-fly all green and gold. She was a genuine child of Italy, — full of feeling, spirit, and genius, — alive in every nerve to the finger-tips; and under the tropical sunshine of her mistress's favor she grew as an Italian rose-bush does, throwing its branches freakishly over everything in a wild labyrinth of perfume, brightness, and thorns.

For a while her life was a triumph, and her mother triumphed with her at an humble distance. The Duchess had no daughter, and was devoted to her with the blind fatuity with which ladies of rank at times will invest themselves in a caprice. She arrogated to herself all the praises of her beauty and wit, allowed her to flirt and make conquests to her heart's content, and engaged to marry her to some handsome young officer of her train, when she had done being amused with her.

Now we must not wonder that a young head of fifteen should have been turned by this giddy elevation, nor that an old head of fifty should have thought all things were possible in the fortune of such a favorite. Nor must we wonder that the young coquette, rich in the laurels of a hundred conquests, should have turned her bright eyes on the son and heir, when he came home from the University of Bologna. Nor is it to be wondered at that this same son and heir, being a man as well as a duke's son, should have done as other men did, — fallen desperately in love with this dazzling, sparkling, piquant mixture of matter and spirit, which no university can prepare a young man to comprehend, — which always seemed to run from him, and yet always threw a Parthian shot behind her as she fled. Nor is it to be wondered at, if this same duke's son, after a week or two, did not know whether he was on his head or his heels, or whether the sun rose in the east or the south, or where he stood, or whither he was going.

In fact, the youthful pair very soon came into that dream-land where are no more any points of the compass, no more division of time, no more latitude and longitude, no more up and down, but only a general wandering among enchanted groves and singing nightingales.

It was entirely owing to old Elsie's watchful shrewdness and address that the lovers came into this paradise by the gate of marriage; for the young man was ready to offer anything at the

feet of his divinity, as the old mother was not slow to perceive.

So they stood at the altar, for the time being a pair of as true lovers as Romeo and Juliet: but then, what has true love to do with the son of a hundred generations and heir to a Roman principality?

Of course, the rose of love, having gone through all its stages of bud and blossom into full flower, must next begin to drop its leaves. Of course. Who ever heard of an immortal rose?

The time of discovery came. Isella was found to be a mother; and then the storm burst upon her and drabbled her in the dust as fearlessly as the summer-wind sweeps down and besmirches the lily it has all summer been wooing and flattering.

The Duchess was a very pious and moral lady, and of course threw her favorite out into the street as a vile weed, and virtuously ground her down under her jewelled high-heeled shoes.

She could have forgiven her any common frailty; — of course it was natural that the girl should have been seduced by the all-conquering charms of her son; — but aspire to *marriage* with their house! — pretend to be her son's *wife*! Since the time of Judas had such treachery ever been heard of?

Something was said of the propriety of walling up the culprit alive, — a mode of disposing of small family-matters somewhat *à la mode* in those times. But the Duchess acknowledged herself foolishly tender, and unable quite to allow this very obvious propriety in the case.

She contented herself with turning mother and daughter into the streets with every mark of ignominy, which was reduplicated by every one of her servants, lackeys, and court-companions, who, of course, had always known just how the thing must end.

As to the young Duke, he acted as a well-instructed young nobleman should, who understands the great difference there is between the tears of a duchess and those of low-born women. No sooner did he behold his conduct in the

light of his mother's countenance than he turned his back on his low marriage with edifying penitence. He did not think it necessary to convince his mother of the real existence of a union whose very supposition made her so unhappy, and occasioned such an uncommonly disagreeable and tempestuous state of things in the well-bred circle where his birth called him to move. Being, however, a religious youth, he opened his mind to his family-confessor, by whose advice he sent a messenger with a large sum of money to Elsie, piously commending her and her daughter to the Divine protection. He also gave orders for an entire new suit of raiment for the Virgin Mary in the family-chapel, including a splendid set of diamonds, and promised unlimited candles to the altar of a neighboring convent. If all this could not atone for a youthful error, it was a pity. So he thought, as he drew on his riding-gloves and went off on a hunting-party, like a gallant and religious young nobleman.

Elsie, meanwhile, with her forlorn and disgraced daughter, found a temporary asylum in a neighboring mountain-village, where the poor, bedrabbled, broken-winged song-bird soon panted and fluttered her little life away.

When the once beautiful and gay Isella had been hidden in the grave, cold and lonely, there remained a little wailing infant, which Elsie gathered to her bosom.

Grim, dauntless, and resolute, she resolved, for the sake of this hapless one, to look life in the face once more, and try the battle under other skies.

Taking the infant in her arms, she travelled with her far from the scene of her birth, and set all her energies at work to make for her a better destiny than that which had fallen to the lot of her unfortunate mother.

She set about to create her nature and order her fortunes with that sort of downright energy with which resolute people always attack the problem of a new human existence. This child *should be*

happy; the rocks on which her mother was wrecked she should never strike upon, — they were all marked on Elsie's chart. Love had been the root of all poor Isella's troubles, — and Agnes never should know love, till taught it safely by a husband of Elsie's own choosing.

The first step of security was in naming her for the chaste Saint Agnes, and placing her girlhood under her special protection. Secondly, which was quite as much to the point, she brought her up laboriously in habits of incessant industry, — never suffering her to be out of her sight, or to have any connection or friendship, except such as could be carried on under the immediate supervision of her piercing black eyes. Every night she put her to bed as if she had been an infant, and, wakening her again in the morning, took her with her in all her daily toils, — of which, to do her justice, she performed all the hardest portion, leaving to the girl just enough to keep her hands employed and her head steady.

The peculiar circumstance which had led her to choose the old town of Sorrento for her residence, in preference to any of the beautiful villages which impearl that fertile plain, was the existence there of a flourishing convent dedicated to Saint Agnes, under whose protecting shadow her young charge might more securely spend the earlier years of her life.

With this view, having hired the domicile we have already described, she lost no time in making the favorable acquaintance of the sisterhood, — never coming to them empty-handed. The finest oranges of her garden, the whitest flax of her spinning, were always reserved as offerings at the shrine of the patroness whom she sought to propitiate for her grandchild.

In her earliest childhood the little Agnes was led toddling to the shrine by her zealous relative; and at the sight of her fair, sweet, awe-struck face, with its viny mantle of encircling curls, the torpid bosoms of the sisterhood throbbed with a strange, new pleasure, which they hum-

bly hoped was not sinful,—as agreeable things, they found, generally were. They loved the echoes of her little feet down the damp, silent aisles of their chapel, and her small, sweet, slender voice, as she asked strange baby-questions, which, as usual with baby-questions, hit all the insoluble points of philosophy and theology exactly on the head.

The child became a special favorite with the Abbess, Sister Theresa, a tall, thin, bloodless, sad-eyed woman, who looked as if she might have been cut out of one of the glaciers of Monte Rosa, but in whose heart the little fair one had made herself a niche, pushing her way up through, as you may have seen a lovely blue-fringed gentian standing in a snow-drift of the Alps with its little ring of melted snow around it.

Sister Theresa offered to take care of the child at any time when the grandmother wished to be about her labors; and so, during her early years, the little one was often domesticated for days together at the Convent. A perfect mythology of wonderful stories encircled her, which the good sisters were never tired of repeating to each other. They were the simplest sayings and doings of childhood,—handfuls of such wild-flowers as bespread the green turf of nursery-life everywhere, but miraculous blossoms in the eyes of these good women, whom Saint Agnes had unwittingly deprived of any power of making comparisons or ever having Christ's sweetest parable of the heavenly kingdom enacted in homes of their own.

Old Jocunda, the portress, never failed to make a sensation with her one stock-story of how she found the child standing on her head and crying,—having been put into this reversed position in consequence of climbing up on a high stool to get her little fat hand into the vase of holy water, failing in which Christian attempt, her heels went up and her head down, greatly to her dismay.

"Nevertheless," said old Jocunda, gravely, "it showed an edifying turn

in the child; and when I lifted the little thing up, it stopped crying the minute its little fingers touched the water, and it made a cross on its forehead as sensible as the oldest among us. Ah, sisters! there's grace there, or I'm mistaken."

All the signs of an incipient saint were, indeed, manifested in the little one. She never played the wild and noisy plays of common children, but busied herself in making altars and shrines, which she adorned with the prettiest flowers of the gardens, and at which she worked hour after hour in the quietest and happiest earnestness. Her dreams were a constant source of wonder and edification in the Convent, for they were all of angels and saints; and many a time, after hearing one, the sisterhood crossed themselves, and the Abbess said, "*Ex oribus parvulorum.*" Always sweet, dutiful, submissive, cradling herself every night with a lulling of sweet hymns and infant murmur of prayers, and found sleeping in her little white bed with her crucifix clasped to her bosom, it was no wonder that the Abbess thought her the special favorite of her divine patroness, and, like her, the subject of an early vocation to be the celestial bride of One fairer than the children of men, who should snatch her away from all earthly things, to be united to Him in a celestial paradise.

As the child grew older, she often sat at evening, with wide, wondering eyes, listening over and over again to the story of the fair Saint Agnes:—How she was a princess, living in her father's palace, of such exceeding beauty and grace that none saw her but to love her, yet of such sweetness and humility as passed all comparison; and how, when a heathen prince would have espoused her to his son, she said, "Away from me, tempter! for I am betrothed to a lover who is greater and fairer than any earthly suitor,—he is so fair that the sun and moon are ravished by his beauty, so mighty that the angels of heaven are his servants"; how she bore meekly with persecutions and threatenings and

death for the sake of this unearthly love; and when she had poured out her blood, how she came to her mourning friends in ecstatic vision, all white and glistening, with a fair lamb by her side, and bade them weep not for her, because she was reigning with Him whom on earth she had preferred to all other lovers. There was also the legend of the fair Cecilia, the lovely musician whom angels had rapt away to their choirs; the story of that queenly saint, Catharine, who passed through the courts of heaven, and saw the angels crowned with roses and lilies, and the Virgin on her throne, who gave her the wedding-ring that espoused her to be the bride of the King Eternal.

Fed with such legends, it could not be but that a child with a sensitive, nervous organization and vivid imagination should have grown up with an unworldly and spiritual character, and that a poetic mist should have enveloped all her outward perceptions similar to that palpitating veil of blue and lilac vapor that enshrouds the Italian landscape.

Nor is it to be marvelled at, if the results of this system of education went far beyond what the good old grandmother intended. For, though a stanch good Christian, after the manner of those times, yet she had not the slightest mind to see her grand-daughter a nun; on the contrary, she was working day and night to add to her dowry, and had in her

eye a reputable middle-aged blacksmith, who was a man of substance and prudence, to be the husband and keeper of her precious treasure. In a home thus established she hoped to enthrone herself, and provide for the rearing of a generation of stout-limbed girls and boys who should grow up to make a flourishing household in the land. This subject she had not yet broached to her grand-daughter, though daily preparing to do so, — deferring it, it must be told, from a sort of jealous, yearning craving to have wholly to herself the child for whom she had lived so many years.

Antonio, the blacksmith to whom this honor was destined, was one of those broad-backed, full-chested, long-limbed fellows one shall often see around Sorrento, with great, kind, black eyes like those of an ox, and all the attributes of a healthy, kindly, animal nature. Contentedly he hammered away at his business; and certainly, had not Dame Elsie of her own providence elected him to be the husband of her fair grand-daughter, he would never have thought of the matter himself; but, opening the black eyes aforementioned upon the girl, he perceived that she was fair, and also received an inner light through Dame Elsie as to the amount of her dowry; and, putting these matters together, conceived a kindness for the maiden, and awaited with tranquillity the time when he should be allowed to commence his wooing.

REST AND MOTION.

MOTION and Rest are the two feet upon which existence goes. All action and all definite power result from the intimacy and consent of these opposite principles. If, therefore, one would construct any serviceable mechanism, he must incorporate into it, and commonly in a manifold way, a somewhat passive, a some-

what contrary, and, as it were, inimical to action, though action be the sole aim and use of his contrivance. Thus, the human body is penetrated by the passive and powerless skeleton, which is a mere weight upon the muscles, a part of the burden that, nevertheless, it enables them to bear. The lever of Archimedes would

push the planet aside, provided only it were supplied with its indispensable complement, a fulcrum, or fixity: without this it will not push a pin. The block of the pulley must have its permanent attachment; the wheel of the locomotive engine requires beneath it the fixed rail; the foot of the pedestrian, solid earth; the wing of the bird rests upon the relatively stable air to support his body, and upon his body to gain power over the air. Nor is it alone of operations mechanical that the law holds good: it is universal; and its application to pure mental action may be shown without difficulty. A single act of the mind is represented by the formation of a simple sentence. The process consists, first, in the mind's *fixing upon and resting in* an object, which thereby becomes the subject of the sentence; and, secondly, in predication, which is movement, represented by the verb. The reader will easily supply himself with instances and illustrations of this, and need not, therefore, be detained.

In the economy of animal and vegetable existence, as in all that Nature makes, we observe the same inevitable association. Here is perpetual fixity of form, perpetual flux of constituent,—the ideas of Nature never changing, the material realization of them never ceasing to change. A horse is a horse through all the ages; yet the horse of to-day is changed from the horse of yesterday.

If one of these principles seem to get the start, and to separate itself, the other quickly follows. No sooner, for example, does any person perform an initial deed, proceeding purely (let us suppose) from free will, than Nature in him begins to repose therein, and consequently inclines to its repetition for the mere reason that it has been once done. This is *Habit*, which makes action passive, and is the greatest of labor-saving inventions. Custom is the habit of society, holding the same relation to progressive genius. It is the sleeping partner in the great social firm; it is thought and force laid up and become fixed capital. Annihilate this,—as in the French Revolution was attempt-

ed,—and society is at once reduced to its bare immediate force, and must scratch the soil with its fingers.

Sometimes these principles seem to be strictly hostile to each other and in no respect reciprocal, as where habit in the individual and custom in society oppose themselves bitterly to free will and advancing thought: yet even here the special warfare is but the material of a broader and more subtle alliance. An obstinate fixity in one's bosom often serves as a rock on which to break the shell of some hard inclosed faculty. Upon stepping-stones of our *slain* selves we mount to new altitudes. So do the antagonisms of these principles in the broader field of society equally conceal a fundamental reciprocation. By the opposition to his thought of inert and defiant custom, the thinker is compelled to interrogate his consciousness more deeply and sacredly; and being cut off from that sympathy which has its foundation in similarity of temperaments and traditions, he must fall back with simpler abandonment upon the pure idea, and must seek responses from that absolute nature of man which the men of his time are not human enough to afford him. This absolute nature, this divine identity in man, underrunning times, temperaments, individualities, is that which poet and prophet must address: yet to speak *to* it, they must speak *from* it; to be heard by the universal heart, they must use a universal language. But this marvellous vernacular can be known to him alone whose heart is universal, in whom even self-love is no longer selfish, but is a pure respect to his own being as it is Being. Well it is, therefore, that here and there one man should be so denied all petty and provincial claim to attention, that only by speaking to Man as Man, and in the sincerest vernacular of the human soul, he can find audience; for thus it shall become his need, for the sake of joy no less than of duty, to know himself purely as man, and to yield himself wholly to his immortal humanity. Thus does fixed custom force back the most moving souls,

until they touch the springs of inspiration, and are indued with power: then, at once potent and pure, they gush into history, to be influences, to make epochs, and to prevail over that through whose agency they first obtained strength.

Thus, everywhere, through all realms, do the opposite principles of Rest and Motion depend upon and reciprocally empower each other. In every act, mechanical, mental, social, must both take part and consent together; and upon the perfection of this consent depends the quality of the action. Every progress is conditioned on a permanence; every permanence *lives* but in and through progress. Where all, and with equal and simultaneous impulse, strives to move, nothing can move, but chaos is come; where all refuses to move, and therefore stagnates, decay supervenes, which is motion, though a motion downward.

Having made this general statement, we proceed to say that there are two chief ways in which these universal opposites enter into reciprocation. The first and more obvious is the method of alternation, or of rest *from* motion; the other, that of continuous equality, which may be called a rest *in* motion. These two methods, however, are not mutually exclusive, but may at once occupy the same ground, and apply to the same objects, — as oxygen and nitrogen severally fill the same space, to the full capacity of each, as though the other were absent.

Instances of the alternation, either total or approximative, of these principles are many and familiar. They may be seen in the systole and diastole of the heart; in the alternate activity and passivity of the lungs; in the feet of the pedestrian, one pausing while the other proceeds; in the waving wings of birds; in the undulation of the sea; in the creation and propagation of sound, and the propagation, at least, of light; in the alternate acceleration and retardation of the earth's motion in its orbit, and in the waving of its poles. In all vibrations and undulations there is a going and returning,

between which must exist minute periods of repose; but in many instances the return is simply a relaxation or a subsidence, and belongs, therefore, to the department of rest. Discourse itself, it will be observed, has its pauses, seasons of repose thickly interspersed in the action of speech; and besides these has its accented and unaccented syllables, emphatic and unemphatic words, — illustrating thus in itself the law which it here affirms. History is full of the same thing; the tides of faith and feeling now ascend and now subside, through all the ages, in the soul of humanity; each new affirmation prepares the way for new doubt, each honest doubt in the end furthers and enlarges belief; the pendulum of destiny swings to and fro forever, and earth's minutest life and heaven's remotest star swing with it, rising but to fall, and falling that they may rise again. So does rhythm go to the very bottom of the world: the heart of Nature pulses, and the echoing shore and all music and the throbbing heart and swaying destinies of man but follow and proclaim the law of her inward life.

The universality and mutual relationship of these primal principles have, perhaps, been sufficiently set forth; and this may be the place to emphasize the second chief point, — that the perfection of this mutuality measures the degree of excellence in all objects and actions. It will everywhere appear, that, the more regular and symmetrical their relationship, the more beautiful and acceptable are its results. For example, sounds proceeding from vibrations wherein the strokes and pauses are in invariable relation are such sounds as we denominate *musical*. Accordingly all sounds are musical at a sufficient distance, since the most irregular undulations are, in a long journey through the air, wrought to an equality, and made subject to exact law, — as in this universe all irregularities are sure to be in the end. Thus, the thunder, which near at hand is a wild crash, or nearer yet a crazy crackle, is

by distance deepened and refined into that marvellous bass which we all know. And doubtless the jars, the discords, and moral contradictions of time, however harsh and crazy at the outset, flow into exact undulation along the ether of eternity, and only as a pure proclamation of law attain to the ear of Heaven. Nay, whoso among men is able to plant his ear high enough above this rude clangor may, in like manner, so hear it, that it shall be to him melody, solace, fruition, a perpetual harvest of the heart's dearest wishes, a perpetual corroboration of that which faith affirms.

We may therefore easily understand why musical sounds *are* musical, why they are acceptable and moving, while those affront the sense in which the minute repose are capricious, and, as it were, upon ill terms with the movements. The former appeal to what is most universal and cosmical within us,—to the pure Law, the deep Nature in our breasts; they fall in with the immortal rhythm of life itself, which the others encounter and impugn.

It will be seen also that verse differs from prose as musical sounds from ordinary tones; and having so deep a ground in Nature, rhythmical speech will be sure to continue, in spite of objection and protest, were it, if possible, many times more energetic than that of Mr. Carlyle. But always the best prose has a certain rhythmic emphasis and cadence: in Milton's grander passages there is a symphony of organs, the bellows of the mighty North (one might say) filling their pipes; Goldsmith's flute still breathes through his essays; and in the ampler prose of Bacon there is the swell of a summer ocean, and you can half fancy you hear the long soft surge falling on the shore. Also in all good writing, as in good reading, the pauses suffer no slight; they are treated handsomely; and each sentence rounds gratefully and clearly into rest. Sometimes, indeed, an attempt is made to reach in an illegitimate way this force of firm pauses, as in exaggerated French style, wherein the writer seems never to

stride or to run, but always to jump like a frog.

Again, as reciprocal opposites, our two principles should be of equal dignity and value. To concede, however, the equality of rest with motion must, for an American, be not easy; and it is therefore in point to assert and illustrate this in particular. What better method of doing so than that of taking some one large instance in Nature, if such can be found, and allowing this, after fair inspection, to stand for all others? And, as it happens, just what we require is quite at hand;—the alternation of Day and Night, of sleep and waking, is so broad, obvious, and familiar, and so mingled with our human interests, that its two terms are easily subjected to extended and clear comparison; while also it deserves discussion upon its own account, apart from its relation to the general subject.

Sleep is now popularly known to be coextensive with Life,—inseparable from vital existence of whatever grade. The rotation of the earth is accordingly implied, as was happily suggested by Paley, in the constitution of every animal and every plant. It is quite evident, therefore, that this necessity was not laid upon man through some inadvertence of Nature; on the contrary, this arrangement must be such as to her seemed altogether suitable, and, if suitable, economical. Eager men, however, avaricious of performance, do not always regard it with entire complacency. Especially have the saints been apt to set up a controversy with Nature in this particular, submitting with infinite unwillingness to the law by which they deem themselves, as it were, defrauded of life and activity in so large measure. In form, to be sure, their accusation lies solely against themselves; they reproach themselves with sleeping beyond need, sleeping for the mere luxury and delight of it; but the venial self-deception is quite obvious,—nothing plainer than that it is their necessity itself which is repugnant to them, and that their wills are blamed for not sufficiently withstanding and thwarting it. Pious

William Law, for example, is unable to disparage sleep enough for his content. "The poorest, dullest refreshment of the body," he calls it, . . . "such a dull, stupid state of existence, that even among animals we despise them most which are most drowsy." You should therefore, so he urges, "begin the day in the spirit of renouncing sleep." Baxter, also, — at that moment a walking catalogue and epitome of all diseases, — thought himself guilty for all sleep he enjoyed beyond three hours a day. More's Utopians were to rise at very early hours, and attend scientific lectures before breakfast.

Ambition and cupidity, which, in their way, are no whit less earnest and self-sacrificing than sanctity, equally look upon sleep as a wasteful concession to bodily wants, and equally incline to limit such concession to its mere minimum. Commonplaces accordingly are perpetually circulating in the newspapers, especially in such as pretend to a didactic tone, wherein all persons are exhorted to early rising, to resolute abridgment of the hours of sleep, and the like. That Sir Walter Raleigh slept but five hours in twenty-four; that John Hunter, Frederick the Great, and Alexander von Humboldt slept but four; that the Duke of Wellington made it an invariable rule to "turn out" whenever he felt inclined to turn over, and John Wesley to arise upon his first awaking: instances such as these appear on parade with the regularity of militia troops at muster; and the precept duly follows, — "Whoso would not be insignificant, let him go and do likewise." "All great men have been early risers," says my newspaper.

Of late, indeed, a better knowledge of the laws of health, or perhaps only a keener sense of its value and its instability, begins to supersede these rash inculcations; and paragraphs due to some discreet Dr. Hall make the rounds of the press, in which we are reminded that early rising, in order to prove a benefit, rather than a source of mischief, must be duly matched with early going to bed. The one, we are told, will by no means

answer without the other. As yet, however, this is urged upon hygienic grounds alone; it is a mere concession to the body, a bald necessity that we hampered mortals lie under; which necessity we are quite at liberty to regret and accuse, though we cannot with safety resist it. Sleep is still admitted to be a waste of time, though one with which Nature alone is chargeable. And I own, not without reluctance, that the great authority of Plato can be pleaded for this low view of its functions. In the "Laws" he enjoins a due measure thereof, but for the sake of health alone, and adds, that the sleeper is, for the time, of no more value than the dead. Clearly, mankind would sustain some loss of good sense, were all the dullards and fat-wits taken away; and Sancho Panza, with his hearty, "Blessings on the man that invented sleep!" here ekes out the scant wisdom of sages. The talking world, however, of our day takes part with the Athenian against the Manchegan philosopher, and, while admitting the present necessity of sleep, does not rejoice in its original invention. If, accordingly, in a computation of the length of man's life, the hours passed in slumber are carefully deducted, and considered as forming no part of available time, not even the medical men dispute the justice of such procedure. They have but this to say: — "The stream of life is not strong enough to keep the mill of action always going; we must therefore periodically shut down the gate and allow the waters to accumulate; and he ever loses more than he gains who attempts any avoidance of this natural necessity."

As medical men, they are not required, perhaps, to say more; and we will be grateful to them for faithfully urging this, — especially when we consider, that, under the sage arrangements now existing, all that the physician does for the general promotion of health is done in defiance of his own interests. We, however, have further questions to ask. Why is not the life-stream more affluent? Sleep is needful, — but *wherefore*? The physi-

cian vindicates the sleeper; but the philosopher must vindicate Nature.

It is surely one step toward an elucidation of this matter to observe that the necessity here accused is not one arbitrarily laid upon us *by* Nature, but one existing *in* Nature herself, and appertaining to the very conception of existence. The elucidation, however, need not pause at this point. The assumption that sleep is a piece of waste, as being a mere restorative for the body, and not a service or furtherance to the mind,—this must be called in question and examined closely; for it is precisely in this assumption, as I deem, that the popular judgment goes astray. *Is* sleep any such arrest and detention of the mind? That it is a shutting of those outward gates by which impressions flow in upon the soul is sufficiently obvious; but who can assure us that it is equally a closing of those inward and skyward gates through which come the reinforcements of faculty, the strength that masters and uses impression? I persuade myself, on the contrary, that it is what Homer called it, *divine*,—able, indeed, to bring the blessing of a god; and that hours lawfully passed under the pressure of its heavenly palms are fruitful, not merely negatively, but positively, not only as recruiting exhausted powers, and enabling us to be awake again, but by direct contribution to the resources of the soul and the uses of life; that, in fine, one awakes farther on in *life*, as well as farther on in *time*, than he was at falling asleep. This deeper function of the night, what is it?

Sleep is, first of all, a filter, or sieve. It strains off the impressions that engross, but not enrich us,—that superfluous *material* of experience which, either from glutting excess, or from sheer insignificance, cannot be spiritualized, made human, transmuted into experience itself. Every man in our day, according to the measure of his sensibility, and with some respect also to his position, is *mobbed* by impressions, and must fight as for his life, if he escape being taken utterly captive by them. It is our perpetual

peril that our lives shall become so sentient as no longer to be reflective or artistic,—so beset and infested by the immediate as to lose all amplitude, all perspective, and to become mere puppets of the present, mere Chinese pictures, a huddle of foreground without horizon, or heaven, or even earthly depth and reach. It is easy to illustrate this miserable possibility. A man, for example, in the act of submitting to the extraction of a tooth, is, while the process lasts, one of the poorest poor creatures with whose existence the world might be taunted. His existence is but skin-deep, and contracted to a mere point at that: no vision and faculty divine, no thoughts that wander through eternity, now: a tooth, a jaw, and the iron of the dentist,—these constitute, for the time being, his universe. Only when this monopolizing, enslaving, sensualizing impression has gone by, may what had been a point of pained and quivering animality expand once more to the dimensions of a human soul. Kant, it is said, could withdraw his attention from the pain of gout by pure mental engagement, but found the effort dangerous to his brain, and accordingly was fain to submit, and be no more than a toe-joint, since evil fate would have it so. These extreme cases exemplify a process of impoverishment from which we all daily suffer. The external, the immediate, the idiots of the moment, telling tales that signify nothing, yet that so overcry the suggestion of our deeper life as by the sad and weary to be mistaken for the discourse of life itself,—these obtrude themselves upon us, and multiply and brag and brawl about us, until we have neither room for better guests, nor spirits for their entertainment. We are like schoolboys with eyes out at the windows, drawn by some rattle of drum and squeak of fife, who would study, were they but deaf. Reproach sleep as a waste, forsooth! It is this tyrannical attraction to the surface, that indeed robs us of time, and defrauds us of the uses of life. We cannot hear the gods for the buzzing of

flies. We are driven to an idle industry,—the idlest of all things.

And to this description of loss men are nowadays peculiarly exposed. The modern world is all battle-field; the smoke, the dust, the din fill every eye and ear; and the hill-top of Lucretius, where is it? The indispensable, terrible newspaper, with its late allies, the Titans and sprites of steam and electricity,—bringing to each retired nook, and thrusting in upon each otherwise peaceful household, the crimes, follies, fears, solitudes, doubts, problems of all kingdoms and peoples,—exasperates the former Scotch mist of impressions into a flooding rain, and almost threatens to swamp the brain of mankind. The incitement to thought is ever greater; but the possibility of thinking, especially of thinking in a deep, simple, central way, is ever less. Problems multiply, but how to attend to them is ever a still greater problem. Guests of the intellect and imagination accumulate until the master of the house is pushed out of doors, and hospitality ceases from the mere excess of its occasion. That must be a greater than Homer who should now do Homer's work. He, there in his sweet, deep-skied Ionia, privileged with an experience so simple and yet so salient and powerful, might well hope to act upon this victoriously by his spirit, might hope to transmute it, as indeed he did, into melodious and enduring human suggestion. Would it have been all the same, had he lived in our type-setting modern world, with its multitudinous knowledges, its aroused conscience, its spurred and yet thwarted sympathies, its new incitements to egotism also, and new tools and appliances for egotism to use,—placed, as it were, in the focus of a vast whispering-gallery, where all the sounds of heaven and earth came crowding, contending, incessant upon his ear? One sees at a glance how the serious thought and poetry of Greece cling to a few master facts, not being compelled to fight always with the many-headed monster of detail; and this suggests to me that our

literature may fall short of Grecian amplitude, depth, and simplicity, not wholly from inferiority of power, but from complications appertaining to our position.

The problem of our time is, How to digest and assimilate the Newspaper? To complain of it, to desire its abolition, is an anachronism of the will: it is to complain that time proceeds, and that events follow each other in due sequence. It is hardly too bold to say that the newspaper is the modern world, as distinct from the antique and the mediæval. It represents, by its advent, that epoch in human history wherein each man must begin, in proportion to his capability of sympathy and consideration, to collate his private thoughts, fortunes, interests with those of the human race at large. We are now in the crude openings of this epoch, fevered by its incidents and demands; and one of its tokens is a general exhaustion of the nervous system and failure of health, both here and in Europe,—those of most sensitive spirit, and least retired and sheltered from the impressions of the time, suffering most. All this will end, *must* end, victoriously. In the mean time can we not somewhat adjust ourselves to this new condition?

One thing we can and must not fail to do: we can learn to understand and appreciate Rest. In particular, we should build up and reinforce the powers of the night to offset this new intensity of the day. Such, indeed, as the day now is has it ever been, though in a less degree: always it has cast upon men impressions significant, insignificant, and of an ill significance, promiscuously and in excess; and always sleep has been the filter of memory, the purifier of experience, providing a season that follows closely upon the impressions of the day, ere yet they are too deeply imbedded, in which our deeper life may pluck away the adhering burrs from its garments, and arise disburdened, clean, and free. I make no doubt that Death also performs, though in an ampler and more thorough way, the same functions. It opposes the tyranny of memory. For

were our experience to go on forever accumulating, unwinnowed, undiminished, every man would sooner or later break down beneath it; every man would be crushed by his own traditions, becoming a grave to himself, and drawing the clods over his own head. To relieve us of these accidental accretions, to give us back to ourselves, is the use, in part, of that sleep which rounds each day, and of that other sleep — brief, but how deep! — which rounds each human life.

Accordingly, he who sleeps well need not die so soon,—even as in the order of Nature he will not. He has that other and rarer half of a good memory, namely, a good forgetting. For none remembers so ill as he that remembers all. “A great German scholar affirmed that he knew not what it was to forget.” Better have been born an idiot! An unwashed memory,—faugh! To us moderns and Americans, therefore, who need above all things to forget well,—our one imperative want being a simplification of experience,—to us, more than to all other men, is requisite, in large measure of benefit, the winnowing-fan of sleep, sleep with its choices and exclusions, if we would not need the offices of death too soon.

But a function of yet greater depth and moment remains to be indicated. Sleep enables the soul not only to shed away that which is foreign, but to adopt and assimilate whatever is properly its own. Dr. Edward Johnson, a man of considerable penetration, though not, perhaps, of a balanced judgment, has a dictum to the effect that the formation of blood goes on during our waking hours, but the composition of tissue during those of sleep. I know not upon what grounds of evidence this statement is made; but one persuades himself that it must be approximately true of the body, since it is undoubtedly so of the soul. Under the eye of the sun the fluid elements of character are supplied; but the final edification takes place beneath the stars. Awake, we think, feel, act; sleeping, we *become*. Day feeds our consciousness;

night, out of those stores which action has accumulated, nourishes the vital unconsciousness, the pure unit of the man. During sleep, the valid and serviceable experience of the day is drawn inward, wrought upon by spiritual catalysis, transmuted into conviction, sentiment, character, life, and made part of that which is to attract and assimilate all subsequent experience. Who, accordingly, has not awaked to find some problem already solved with which he had vainly grappled on the preceding day? It is not merely that in the morning our invigorated powers work more efficiently, and enable us to reach this solution immediately *after* awaking. Often, indeed, this occurs; but there are also numerous instances—and such alone are in point—wherein the work is complete *before* one’s awakening: not unfrequently it is by the energy itself of the new perception that the soft bonds of slumber are first broken; the soul hails its new dawn with so lusty a cheer, that its clarion reaches even to the ear of the body, and we are unconsciously murmuring the echoes of that joyous salute while yet the iris-hued fragments of our dreams linger about us. The poet in the morning, if true divine slumber have been vouchsafed him, finds his mind enriched with sweeter imaginations, the thinker with profounder principles and wider categories: neither begins the new day where he left the old, but each during his rest has silently, wondrously, advanced to fresh positions, commanding the world now from nobler summits, and beholding around him an horizon beyond that over which yesterday’s sun rose and set. Milton gives us testimony very much in point:—

“My celestial patroness, who deigns
Her nightly visitation unimplored,
And dictates to me slumb’ring.”

Thus, in one important sense, is day the servant of night, action the minister of rest. I fancy, accordingly, that Marcus Antoninus may give Heraclitus credit for less than his full meaning in saying that “men asleep are then also laboring”; for he understands him to signify only

that through such the universe is still accomplishing its ends. Perhaps he meant to indicate what has been here affirmed, — that in sleep one's personal destiny is still ripening, his true life proceeding.

But if, as the instance which has been under consideration suggests, these two principles are of equal dignity, it will follow that the ability to rest profoundly is of no less estimation than the ability to work powerfully. Indeed, is it not often the condition upon which great and sustained power of action depends? The medal must have two sides. "Danton," says Carlyle, "was a great nature that could rest." Were not the force and terror of his performance the obverse fact? I do not now mean, however true it would be, to say that without rest physical resources would fail, and action be enfeebled in consequence; I mean that the soul which wants the attitude of repose wants the condition of power. There is a petulant and meddlesome industry which proceeds from spiritual debility, and causes more; it is like the sleeplessness and tossing of exhausted nervous patients, which arises from weakness, and aggravates its occasion. As few things are equally wearisome, so few are equally wasteful, with a perpetual indistinct sputter of action, whereby nothing is done and nothing let alone. Half the world *breaks* out with action; its performance is cutaneous, of the nature of tetter. Hence is it that in the world, with such a noise of building, so few edifices are reared.

We require it as a pledge of the sanity of our condition, and consequent wholeness of our action, that we *can* withhold our hand, and leave the world in that of its Maker. No man is quite necessary to Omnipotence; grass grew before we were born, and doubtless will continue to grow when we are dead. If we act, let it be because our soul has somewhat to bring forth, and not because our fingers itch. We have in these days been emphatically instructed that all speech not rooted in silence, rooted, that is, in pure, vital, silent Nature, is

poor and unworthy; but we should be aware that action equally requires this solemn and celestial perspective, this issue out of the never-trodden, noiseless realms of the soul. Only that which comes from a divine depth can attain to a divine height.

There is a courage of withholding and forbearing greater than any other courage; and before this Fate itself succumbs. Wellington won the Battle of Waterloo by heroically standing still; and every hour of that adventurous waiting was heaping up significance for the moment when at length he should cry, "Up, Guards, and at them!" What Cecil said of Raleigh, "He can toil terribly," has been styled "an electric touch"; but the "masterly inactivity" of Sir James Mackintosh, happily appropriated by Mr. Calhoun, carries an equal appeal to intuitive sense, and has already become proverbial. He is no sufficient hero who in the delays of Destiny, when his way is hedged up and his hope deferred, cannot reserve his strength and bide his time. The power of acting greatly includes that of greatly abstaining from action. The leader of an epoch in affairs should therefore be some Alfred, Bruce, Gustavus Vasa, Cromwell, Washington, Garibaldi, who can wait while the iron of opportunity heats at the forge of time; and then, in the moment of its white glow, can so smite as to shape it forever to the uses of mankind.

One should be able not only to wait, but to wait strenuously, sternly, immovably, rooted in his repose like a mountain oak in the soil; for it may easily happen that the necessity of refraining shall be most imperative precisely when the external pressure toward action is most vehement. Amid the violent urgency of events, therefore, one should learn the art of the mariner, who, in time of storm lies to, with sails mostly furled, until milder gales permit him again to spread sail and stretch away. With us, as with him, even a fair wind may blow so fiercely that one cannot safely run before it. There are movements with

whose direction we sympathize, which are yet so ungoverned that we lose our freedom and the use of our reason in committing ourselves to them. So the seaman who runs too long before the increasing gale has thereafter no election; go on he must, for there is death in pausing, though it be also death to proceed. Learn, therefore, to wait. Is there not many a one who never arrives at fruit, for no better reason than that he persists in plucking his own blossoms? Learn to wait. Take time, with the smith, to raise your arm, if you would deliver a telling blow.

Does it seem wasteful, this waiting? Let us, then, remind ourselves that excess and precipitation are more than wasteful, —they are directly destructive. The fire that blazes beyond bounds not warms the house, but burns it down, and only helps infinitesimally to warm the wide out-of-doors. Any live snail will out-travel a wrecked locomotive, and besides will leave no trail of slaughter on its track. Though despatch be the soul of business, yet he who outruns his own feet comes to the ground, and makes no despatch,—unless it be of himself. Hurry is the spouse of Flurry, and the father of Confusion. Extremes meet, and over-action steadfastly returns to the effect of non-action,—bringing, however, the seven devils of disaster in its company. The ocean storm which heaps the waves so high may, by a sufficient increase, blow them down again; and in no calm is the sea so level as in the extremest hurricane.

Persistent excess of outward performance works mischief in one of two directions,—either upon the body or on the soul. If one will not accommodate himself to this unreasonable quantity by abatement of quality,—if he be resolute to put love, faith, and imagination into his labor, and to be alive to the very top of his brain,—then the body enters a protest, and dyspepsia, palsy, phthisis, insanity, or somewhat of the kind, ensues. Commonly, however, the tragedy is different from this, and deeper. Common-

ly, in these cases, action loses height as it gains lateral surface; the superior faculties starve, being robbed of sustenance by this avarice of performance, and consequently of supply, on the part of the lower,—they sit at second table, and eat of remainder-crums. The delicate and divine sprites, that should bear the behests of the soul to the will and to the houses of thought in the brain her intuitions, are crowded out from the streets of the cerebral cities by the mob and trample of messengers bound upon baser errands; and thus is the soul deprived of service, and the man of inspiration. The man becomes, accordingly, a great merchant who values a cent, but does not value a human sentiment; or a lawyer who can convince a jury that white is black, but cannot convince himself that white is white, God God, and the sustaining faiths of great souls more than moonshine. So if the apple-tree will make too much wood, it can bear no fruit; during summer it is full of haughty thrift, but the autumn, which brings grace to so many a dwarfed bush and low shrub, shows it naked and in shame.

How many mistake the crowing of the cock for the rising of the sun, albeit the cock often crows at midnight, or at the moon's rising, or only at the advent of a lantern and a tallow candle! And yet what a bloated, gluttonous devourer of hopes and labors is this same precipitation! All shores are strewn with wrecks of barks that went too soon to sea. And if you launch even your well-built ship at half-tide, what will it do but strike bottom, and stick there? The perpetual tragedy of literary history, in especial, is this. What numbers of young men, gifted with great imitative quickness, who, having, by virtue of this, arrived at fine words and figures of speech, set off on their nimble rhetorical Pegasus, keep well out of the Muse's reach ever after! How many go conspicuously through life, snapping their smart percussion-caps upon empty barrels, because, forsooth, powder and ball do not come of themselves, and it takes time to load!

I know that there is a divine impatience, a rising of the waters of love and noble pain till they *must* overflow, with or without the hope of immediate apparent use, and no matter what swords and revenges impend. History records a few such defeats which are worth thousands of ordinary victories. Yet the rule is, that precipitation comes of levity. Eagerness is shallow. Haste is but half-earnest. If an apple is found to grow mellow and seemingly ripe much before its fellows on the same bough, you will probably discover, upon close inspection, that there is a worm in it.

To be sure, any time is too soon with those who dote upon Never. There are such as find Nature precipitate and God forward. They would have effect limp at untraversable distances behind cause; they would keep destiny carefully abed and feed it upon spoon-victual. They play duenna to the universe, and are perpetually on the *qui vive*, lest it escape, despite their care, into improprieties. The year is with them too fast by so much as it removes itself from the old almanac. The reason is that *they* are the old almanac. Or, more distinctly, they are at odds with universal law, and, knowing that to them it can come only as judgment and doom, they, not daring to denounce the law itself, fall to the trick of denouncing its agents as visionaries, and its effects as premature. The felon always finds the present an unseasonable day on which to be hanged: the sheriff takes another view of the matter.

But the error of these consists, not in realizing good purposes too slowly and patiently, but in failing effectually to purpose good at all. To those who truly *are* making it the business of their lives to accomplish worthy aims, this counsel cannot come amiss,—TAKE TIME. Take a year in which to thread a needle, rather than go dabbling at the texture with the naked thread. And observe, that there is an excellence and an efficacy of slowness, no less than of quickness. The armadillo is equally secure of his

prey with the hawk or leopard; and Sir Charles Bell mentions a class of thieves in India, who, having, through extreme patience and command of nerve, acquired the power of motion imperceptibly slow, are the most formidable of all peculators, and almost defy precaution. And to leave these low instances, slowness produced by profoundness of feeling and fineness of perception constitutes that divine patience of genius without which genius does not exist. Mind lingers where appetite hurries on; it is only the Newtons who stay to meditate over the fall of an apple, too trivial for the attention of the clown. It is by this noble slowness that the highest minds faintly emulate that inconceivable deliberateness and delicacy of gradation with which solar systems are built and worlds habilitated.

Now haste and intemperance are the Satans that beset virtuous Americans. And these mischiefs are furthered by those who should guard others against them. The Rev. Dr. John Todd, in a work, not destitute of merit, entitled "The Student's Manual," urges those whom he addresses to study, while about it, with their utmost might, crowding into an hour as much work as it can possibly be made to contain; so, he says, they will increase the power of the brain. But this is advice not fit to be given to a horse, much less to candidates for the graces of scholarly manhood. I read that race-horses, during the intervals between their public contests, are permitted only occasionally and rarely to be driven at their extreme speed, but are assiduously made to *walk* several hours each day. By this constancy of *moderate* exercise they preserve health and suppleness of limb, without exhaustion of strength. And it appears, that, were such an animal never to be taken from the stable but to be pushed to the top of his speed, he would be sure to make still greater speed toward ruin. Why not be as wise for men as for horses?

And here I desire to lay stress upon one point, which American students will do well to consider gravely,—*It is a*

PURE, *not a strained and excited, attention which has signal prosperity.* Distractions, tempests, and head-winds in the brain, by-ends, the sidelong eyes of vanity, the overleaping eyes of ambition, the bleared eyes of conceit,—these are they which thwart study and bring it to nought. Nor these only, but all impatience, all violent eagerness, all passionate and perturbed feeling, fill the brain with thick and hot blood, suited to the service of desire, unfit for the uses of thought. Intellect can be served only by the finest properties of the blood; and if there be any indocility of soul, any impurity of purpose, any coldness or carelessness, any prurience or crude and intemperate heat, then base spirits are sent down from the seat of the soul to summon the sanguineous forces; and these gather a crew after their own kind. Purity of attention, then, is the magic that the scholar may use; and let him know, that, the purer it is, the more temperate, tranquil, reposeful. Truth is not to be run down with fox-hounds; she is a divinity, and divinely must he draw nigh who will gain her presence. Go to, thou bluster-brain! Dost thou think to learn? Learn docility first, and the manners of the skies. And thou egotist, thinkest thou that these eyes of thine, smoky with the fires of diseased self-love, and thronged with deceiving wishes, shall perceive the essential and eternal? They shall see only silver and gold, houses and lands, reputes, supremacies, fames, and, as instrumental to these, the forms of logic and seemings of knowledge. If thou wilt discern the truth, desire it, not its accidents and collateral effects. Rest in the pursuit of it, putting *simplicity of quest* in the place of either force or wile; and such quest cannot be unfruitful.

Let the student, then, shun an excited and spasmodic tension of brain, and he will gain more while expending less. It is not toil, it is morbid excitement, that kills; and morbid excitement in constant connection with high mental endeavor is, of all modes and associations of excitement, the most disastrous. Study as the

grass grows, and your old age—and its laurels—shall be green.

Already, however, we are trenching upon that more intimate relationship of the great opposites under consideration which has been designated *Rest in Motion*. More intimate relationship, I say,—at any rate, more subtle, recondite, difficult of apprehension and exposition, and perhaps, by reason of this, more central and suggestive. An example of this in its physical aspect may be seen in the revolutions of the planets, and in all orbital or circular motion. For such, it will be at once perceived, is, in strictness of speech, *fixed and stationary* motion: it is, as Sir Isaac Newton demonstrated, an exact and equal obedience, in the same moment, to the law of fixity and the law of progression. Observe especially, that it is not, like merely retarded motion, a partial neutralization of each principle by the other, an imbecile Aristotelian compromise and half-way house between the two; but it is at once, and in virtue of the same fact, perfect *Rest* and perfect *Motion*. A revolving body is not hindered, but the same impulse which begot its movement causes this perpetually to return into itself.

Now the principles that are seen to govern the material universe are but a large-lettered display of those that rule in perfect humanity. Whatsoever makes distinguished order and admirableness in Nature makes the same in man; and never was there a fine deed that was not begot of the same impulse and ruled by the same laws to which solar systems are due. I desire, accordingly, here to take up and emphasize the statement previously made in a general way,—that the secret of perfection in all that appertains to man—in morals, manners, art, politics—must be sought in such a correspondence and reciprocation of these great opposites as the motions of the planets perfectly exemplify.

It must not, indeed, be overlooked or unacknowledged, that the planets do not move in exact circles, but diverge slight-

ly into ellipses. The fact is by no means without significance, and that of an important kind. Pure circular motion is the type of perfection in the universe as a *whole*, but each part of the whole will inevitably express its partiality, will acknowledge its special character, and upon the frankness of this confession its comeliness will in no small degree depend; nevertheless, no sooner does the eccentricity, or individuality, become so great as to suggest disloyalty to the idea of the whole, than ugliness ensues. Thus, comets are portents, shaking the faith of nations, not supporting it, like the stars. So among men. Nature is at pains to secure divergence, magnetic variation, putting into every personality and every powerful action some element of irregularity and imperfection; and her reason for doing so is, that irregularity appertains to the state of growth, and is the avenue of access to higher planes and broader sympathies; still, as the planets, though not moving in perfect circles, yet come faithfully round to the same places, and accomplish the *ends* of circular motion, so in man, the divergence must be special, not total, no act being the mere are of a circle, and yet *revolution* being maintained. And to the beauty of characters and deeds, it is requisite that they should never *seem* even to imperil fealty to the universal idea. Revolution perfectly exact expresses only necessity, not voluntary fidelity; but departure, *still deferential to the law of the whole*, in evincing freedom elevates its obedience into fealty and noble faithfulness: by this measure of eccentricity, *centricity* is not only emphasized, but immeasurably exalted.

But having made this full and willing concession to the element of individuality in persons and of special character in actions, we are at liberty to resume the general thesis,—that orbital rest of movement furnishes the type of perfect excellence, and suggests accordingly the proper targe of aspiration and culture.

In applying this law, we will take first a low instance, wherein the opposite

principles stand apart, rather upon terms of outward covenant, or of mere mixture, than of mutual assimilation. *Man* is infinite; *men* are finite: the purest aspect of great laws never appears in collections and aggregations, yet the same laws rule here as in the soul, and such excellence as is possible issues from the same sources. As an instance, accordingly, of that ruder reciprocation, which may obtain among multitudes, I name the Roman Legion.

It is said that the success of the armies of Rome is not fully accounted for, until one takes into account the constitution of this military body. It united, in an incomparable degree, the different advantages of fixity and fluency. Moderate in size, yet large enough to give the effect of mass, open in texture, yet compact in form, it afforded to every man room for individual prowess, while it left no man to his individual strength. Each soldier leaned and rested upon the Legion, a body of six thousand men; yet around each was a space in which his movements might be almost as free, rapid, and individual as though he had possessed the entire field to himself. The Macedonian Phalanx was a marvel of mass, but it was mass not penetrated with mobility; it could move, indeed could be said to have an existence, only as a whole; its decomposed parts were but *débris*. The Phalanx, therefore, was terrible, the constituent parts of it imbecile; and the Battle of Cynocephalæ finally demonstrated its inferiority, for the various possible exigencies of battle, to the conquering Legion. The brave rabble of Gauls and Goths, on the other hand, illustrated all that private valor, not reposing upon any vaster and more stable strength, has power to achieve; but these rushing torrents of prowess dashed themselves into vain spray upon the coordinated and reposing courage of Rome.

The same perpetual opposites must concur to produce the proper form and uses of the State,—though they here appear in a much more elevated form. Rest is here known as *Law*, motion as

Liberty. In the true commonwealth, these, so far from being mutually destructive or antagonistic, incessantly beget and vivify each other; so that Law is the expression and guaranty of Freedom, while Freedom flows spontaneously into the forms of Justice. Neither of these can exist, neither can be properly *conceived of*, apart from its correlative opposite. Nor will any condition of mere truce, or of mere mechanical equilibrium, suffice. Nothing suffices but a reciprocation so active and total that each is constantly resolving itself into the other.

The notion of Rousseau, which is countenanced by much of the phraseology, to say the least, of the present day, was, indeed, quite contrary to this. He assumed freedom to exist only where law is not, that is, in the savage state, and to be surrendered, piece for piece, with every acknowledgment of social obligation. Seldom was ever so plausible a doctrine equally false. Law is properly the *public definition of freedom and the affirmation of its sacredness and inviolability as so defined*; and only in the presence of it, either express or implicit, does man become free. Duty and privilege are one and the same, however men may set up a false antagonism between them; and accordingly social obligation can subtract nothing from the privilege and prerogative of liberty. Consequently, the freedom which is defined as the negation of social duty and obligation is not true regal freedom, but is that worst and basest of all tyrannies, the tyranny of pure egotism, masked in the semblance of its divine contrary. That, be it observed, is the freest society, in which the noblest and most delicate human powers find room and secure respect,—wherein the loftiest and costliest spiritualities are most invited abroad by sympathetic attraction. Now among savages little obtains appreciation, save physical force and its immediate allies: the divine fledglings of the human soul, instead of being sweetly drawn and tempted forth, are savagely menaced,

rudely repelled; whatsoever is finest in the man, together with the entire nature of woman, lies, in that low temperature, enchained and repressed, like seeds in a frozen soil. The harsh, perpetual contest with want and lawless rivalry, to which all uncivilized nations are doomed, permits only a few low powers, and those much the same in all,—lichens, mosses, rude grasses, and other coarse cryptogamous growths,—to develop themselves; since these alone can endure the severities of season and treatment to which all that would clothe the fields of the soul must remain exposed. Meanwhile the utmost of that wicked and calamitous suppression of faculty, which constitutes the essence and makes the tragedy of human slavery, is equally effected by the inevitable isolation and wasteful trampling and consequent barrenness of savage life. Liberty without law is not liberty; and the converse may be asserted with like confidence.

Where, then, the fixed term, State, or Law, and the progressive term, Person, or Freewill, are in relations of reciprocal support and mutual reproduction, there alone is freedom, there alone public order. We were able to command this truth from the height of our general proposition, and closer inspection shows those anticipations to have been correct.

But man is greater than men; and for the finest aspect of high laws, we must look to individual souls, not to masses.

What is the secret of noble manners? Orbital action, always returning into and compensating itself. The gentleman, in offering his respect to others, offers an equal, or rather the same, respect to himself; and his courtesies may flow without stint or jealous reckoning, because they feed their source, being not an expenditure, but a circulation. Submitting to the inward law of honor and the free sense of what befits a man,—to a law perpetually made and spontaneously executed in his own bosom, the instant flowering of his own soul,—he commands his own obedience, and he obeys his own commanding. Though throned

above all nations, a king of kings, yet the faithful humble vassal of his own heart; though he serve, yet regal, doing imperial service; he escapes outward constraint by inward anticipation; and all that could be rightly named as his duty to others, he has, ere demand, already discovered, and engaged in, as part of his duty to himself. Now it is the expression of royal freedom in loyal service, of sovereignty in obedience, courage in concession, and strength in forbearance, which makes manners noble. Low may he bow, not with loss, but with access of dignity, who bows with an elevated and ascending heart: there is nothing loftier, nothing less allied to abject behavior, than this grand lowliness. The worm, because it is low, cannot be lowly; but man, uplifted in token of supremacy, may kneel in adoration, bend in courtesy, and stoop in condescension. Only a great pride, that is, a great and reverential repose in one's own being, renders possible a noble humility, which is a great and reverential acknowledgment of the being of others; this humility in turn sustains a higher self-reverence; this again resolves itself into a more majestic humility; and so run, in ever enhancing wave, the great circles of inward honor and outward grace. And without this self-sustaining return of the action into itself, each quality feeding itself from its correlative opposite, there can be no high behavior. This is the reason why qualities loftiest in kind and largest in measure are vulgarly mistaken, not for their friendly opposites, but for their mere contraries, — why a very profound sensibility, a sensibility, too, peculiarly of the spirit, not of nerve only, is sure to be named coldness, as Mr. Ruskin recently remarks, — why vast wealth of good pride, in its often meek acceptance of wrong, in its quiet ignoring of insult, in its silent superiority to provocation, passes with the superficial and petulant for poverty of pride and mere mean-spiritedness, — why a courage which is not partial, but *total*, coexisting, as it always does, with a noble peacefulness, with a noble inapt-

ness for frivolous hazards, and a noble slowness to take offence, is, in its delays and forbearances, thought by the half-courageous to be no better than cowardice; — it is, as we have said, because great qualities revolve and repose in orbits of reciprocity with their opposites, which opposites are by coarse and ungente eyes misdeemed to be contraries. Feeling transcendently deep and powerful is unimpassioned and far lower-voiced than indifference and unfeelingness, being wont to express itself, not by eloquent ebullition, but by extreme understatement, or even by total silence. Sir Walter Raleigh, when at length he found himself betrayed to death — and how basely betrayed! — by Sir Lewis Stukely, only said, “Sir Lewis, these actions will not turn to your credit.” The New Testament tells us of a betrayal yet more quietly received. These are instances of noble manners.

What actions are absolutely moral is determined by application of the same law, — those only which repose wholly in themselves, being to themselves at once motive and reward. “Miserable is he,” says the “Bhagavad Gita,” “whose motive to action lies, not in the action itself, but in its reward.” Duty purchased with covenant of special delights is not duty, but is the most pointed possible denial of it. The just man looks not beyond justice; the merciful reposes in acts of mercy; and he who would be bribed to equity and goodness is not only bad, but shameless. But of this no further words.

Rest is sacred, celestial, and the appreciation of it and longing for it are mingled with the religious sentiment of all nations. I cannot remember the time when there was not to me a certain ineffable suggestion in the apostolic words, “There remaineth, therefore, a rest for the people of God.” But the repose of the godlike must, as that of God himself, be *infinitely* removed from mere sluggish inactivity; since the conception of action is the conception of existence itself, — that is, of Being in the act of self-mani-

festation. Celestial rest is found in action so universal, so purely identical with the great circulations of Nature, that, like the circulation of the blood and the act of breathing, it is not a subtraction from vital resource, but is, on the contrary, part of the very fact of life and all its felicities. This does not exclude rhythmic or recreative rest; but the need of such rest detracts nothing from pleasure or perfection. In heaven also, if such figure of speech be allowable, may be that toil which shall render grateful the cessation from toil, and give sweetness to sleep; but right weariness has its own peculiar delight, no less than right exercise; and as the glories of sunset equal those of dawn, so with equal, though diverse pleasure, should noble and temperate labor take off its sandals for evening repose, and put them on to go forth "beneath the opening eyelids of the morn." Yet, allowing a place for this rhythm in the detail and close inspection even of heavenly life, it still holds true on the broad scale, that pure beauty and beatitude are found there only where life and character sweep in orbits of that complete expression which is at once divine labor and divine repose.

Observe, now, that this rest-motion, as being without waste or loss, is a *manifested immortality*, since that which wastes not ends not; and therefore it puts into every motion the very character and suggestion of immortal life. Yea, one deed rightly done, and the doer is in heaven, — is of the company of immortals. One deed so done that in it is *no* mortality; and in that deed the meaning of man's history, — the meaning, indeed, and the glory, of existence itself, — are declared. Easy, therefore, it is to see how any action may be invested with universal significance and the utmost conceivable charm. The smaller the realm and the humbler the act into which this amplitude and universality of spirit are carried, the more are they emphasized and set off; so that, without opportunity of unusual occasion, or singular opulence of natural power, a man's life may possess all that

majesty which the imagination pictures in archangels and in gods. Indeed, it is but simple statement of fact to say, that he who rests *utterly* in his action shall belittle not only whatsoever history has recorded, but all which that poet of poets, Mankind, has ever dreamed or fabled of grace and greatness. He shall not peer about with curiosity to spy approbation, or with zeal to defy censure; he shall not know if there be a spectator in the world; his most public deed shall be done in a divine privacy, on which no eye intrudes, — his most private in the boundless publicities of Nature; his deed, when done, falls away from him, like autumn apples from their boughs, no longer his, but the world's and destiny's; neither the captive of yesterday nor the propitiator of to-morrow, he abides simply, majestically, like a god, in being and doing. Meanwhile, blame and praise whirl but as unrecognized cloudlets of gloom or glitter beneath his feet, enveloping and often blinding those who utter them, but to him never attaining.

It is not easy at present to suggest the real measure and significance of such manhood, because this age has debased its imagination, by the double trick, first, of confounding man with his body, and next, of considering the body, not as a symbol of truth, but only as an agent in the domain of matter, — comparing its size with the sum total of physical space, and its muscular power with the sum total of physical forces. Yet

"What know we greater than the soul?"

A man is no outlying province, nor does any province lie beyond him. East, West, North, South, and height and depth are contained in his bosom, the poles of his being reaching more widely, his zenith and nadir being more sublime and more profound. We are cheated by nearness and intimacy. Let us look at man with a telescope, and we shall find no star or constellation of sweep so grand, no nebulae or star-dust so provoking and suggestive to fancy. In truth, there are no words to say how either

large or small, how significant or insignificant, men may be. Though solar and stellar systems amaze by their grandeur of scale, yet is true manhood the maximum of Nature; though microscopic and sub-microscopic protophyta amaze by their inconceivable littleness, yet is mock manhood Nature's minimum. The latter is the only negative quantity known to Nature; the former the only revelation of her entire heart.

In concluding, need I say that only the pure can repose in his action,—only he obtain deliverance by his deed, and after deliverance from it? The egotism, the baseness, the partialities that are in our performance are hooks and barbs by which it wounds and wearies us in the passage, and clings to us being past.

Law governs all; no favor is shown; the event is as it must be; only he who has no blinding partiality toward himself, who is whole and one with the whole, he who is Nature and Law and divine Necessity, can be blest with that blessedness which Nature is able to give only by her presence. There is a labor and a rest that are the same, one fact, one felicity; in this are power, beauty, immortality; by existence as a whole it is always perfectly exemplified; to man, as the eye of existence, it is also possible; but it is possible to him only as he is purely man,—only as he abandons himself to the divine principles of his life: in other words, this Sabbath remaineth in very deed to no other than the people of God.

LIGHTS OF THE ENGLISH LAKE DISTRICT.

At the opening of the present century, the Lake District of Cumberland and Westmoreland was groaned over by some residents as fast losing its simplicity. The poet Gray had been the first to describe its natural features in an express manner; and his account of the views above Keswick and Grasmere was quoted, sixty years since, as evidence of the spoiling process which had gone on since the introduction of civilization from the South. Gray remarked on the absence of red roofs, gentlemen's houses, and garden-walls, and on the uniform character of the humble farmsteads and gray cottages under their sycamores in the vales. Wordsworth heard and spoke a good deal of the innovations which had modified the scene in the course of the thirty years which elapsed between Gray's visits (in 1767-69) and his own settlement in the Lake District; but he lived to say more, at the end of half a century, of the wider and deeper changes which time had wrought in the aspect of the country and the minds and manners of the people.

According to his testimony, and that of Southey, the barbarism was of a somewhat gross character at the end of the last century; the magistrates were careless of the condition of the society in which they bore authority; the clergy were idle or worse,—“marrying and burying machines,” as Southey told Wilberforce; and the morality of the people, such as it was, was ascribed by Wordsworth, in those his days of liberalism in politics, to the state of republican equality in which they lived. Excellent, fussy Mr. Wilberforce thought, when he came for some weeks into the District, that the Devil had had quite time enough for sowing tares while the clergy were asleep; so he set to work to sow a better seed; and we find in his diary that he went into house after house “to talk religion to the people.” I do not know how he was received; but at this day the people are puzzled at that kind of domestic intervention, so unsuitable to their old-fashioned manners,—one old dame telling with wonder, some little time since, that a young lady had called

and sung a hymn to her, but had given her nothing at the end for listening. The rough independence of the popular manners even now offends persons of a conventional habit of mind; and when poets and philosophers first came from southern parts to live here, the democratic tone of feeling and behavior was more striking than it is now or will ever be again.

Before the Lake poets began to give the public an interest in the District, some glimpses of it were opened by the well-known literary ladies of the last century who grouped themselves round their young favorite, Elizabeth Smith. I do not know whether her name and fame have reached America; but in my young days she was the English school-girls' subject of admiration and emulation. She had marvellous powers of acquisition, and she translated the Book of Job, and a good deal from the German, — introducing Klopstock to us at a time when we hardly knew the most conspicuous names in German literature. Elizabeth Smith was an accomplished girl in all ways. There is a damp, musty-looking house, with small windows and low ceilings, at Conistown, where she lived with her parents and sister, for some years before her death. We know, from Mrs. Elizabeth Hamilton's and the Bowdler's letters, how Elizabeth and her sister lived in the beauty about them, rambling, sketching, and rowing their guests on the lake. In one of her rambles, Elizabeth sat too long under a heavy dew. She felt a sharp pain in her chest, which never left her, and died in rapid decline. Towards the last she was carried out daily from the close and narrow rooms at home, and laid in a tent pitched in a field just across the road, whence she could overlook the lake, and the range of mountains about its head. On that spot now stands Tent Lodge, the residence of Tennyson and his bride after their marriage. One of my neighbors, who first saw the Lake District in early childhood, has a solemn remembrance of the first impression. The tolling of the bell of Hawkeshead church was heard

from afar; and it was tolling for the funeral of Elizabeth Smith. Her portrait is before me now, — the ingenuous, child-like face, with the large dark eyes which alone show that it is not the portrait of a child. It was through her that a large proportion of the last generation of readers first had any definite associations with Coniston.

Wordsworth had, however, been in that church many a time, above twenty years before, when at Hawkeshead school. He used to tell that his mother had praised him for going into the church, one week-day, to see a woman do penance in a white sheet. She considered it good for his morals. But when he declared himself disappointed that nobody had given him a penny for his attendance, as he had somehow expected, his mother told him he was served right for going to church from such an inducement. He spoke with gratitude of an usher at that school, who put him in the way of learning the Latin, which had been a sore trouble at his native Cockermouth, from unskilful teaching. Our interest in him at that school, however, is from his having there first conceived the idea of writing verse. His master set the boys, as a task, to write a poetical theme, — "The Summer Vacation"; and Master William chose to add to it "The Return to School." He was then fourteen; and he was to be double that age before he returned to the District and took up his abode there.

He had meantime gone through his college course, as described in his Memoirs, and undergone strange conditions of opinion and feeling in Paris during the Revolution; had lived in Dorsetshire, with his faithful sister; had there first seen Coleridge, and had been so impressed by the mind and discourse of that wonderful young philosopher as to remove to Somersetshire to be near him; had seen Klopstock in Germany, and lived there for a time; and had passed through other changes of residence and places, when we find him again among the Lakes in 1779, still with his sister by his side, and their brother John, and Coleridge,

who had never been in the District before.

As they stood on the margin of Grasmere, the scene was more like what Gray saw than what is seen at this day. The churchyard was bare of the yews which now distinguish it,—for Sir George Beaumont had them planted at a later time; and where the group of kindred and friends—the Wordsworths and their relatives—now lie, the turf was level and untouched. The iron rails and indelible monuments, which Wordsworth so reprobated half a century later, did not exist. The villas which stud the slopes, the great inns which bring a great public, were uncreated; and there was only the old Roman road where the Wishing-Gate is, or the short cut by the quarries to arrive by from the South, instead of the fine mail-road which now winds between the hills and the margin of the lake. John Wordsworth guided his brother and Coleridge through Grisedale, over a spur of Helvellyn, to see Ullswater; and Coleridge has left a characteristic testimony of the effect of the scenery upon him. It was “a day when light and darkness coexisted in contiguous masses, and the earth and sky were but one. Nature lived for us in all her wildest accidents.” He tells how his eyes were dim with tears, and how imagination and reality blended their objects and impressions. Wordsworth’s account of the same excursion is in as admirable contrast with Coleridge’s as their whole mode of life and expression was, from first to last. With the carelessness of the popular mind in such cases, the British public had already almost confounded the two men and their works, as it soon after mixed up Southey with both; whereas they were all as unlike each other as any three poets could well be.

Coleridge and Wordsworth were both contemplative, it is true, while Southey was not: but the remarkable thing about Coleridge was the exclusiveness of his contemplative tendencies, by which one set of faculties ran riot in his mind and life, making havoc among his powers, and a dismal wreck of his existence. The

charm and marvel of his discourse upset all judgments during his life, and for as long as his voice remained in the ear of his enchanted hearers; but, apart from the spell, it is clear to all sober and trained thinkers that Coleridge wandered away from truth and reality in the midst of his vaticinations, as the *clairvoyant* does in the midst of his previsions, so as to mislead and bewilder, while inspiring and intoxicating the hearer or reader. He recorded, in regard to himself, that “history and particular facts lost all interest” in his mind after his first launch into metaphysics; and he remained through life incapable of discerning reality from inborn images. Wordsworth took alarm at the first experience of such a tendency in himself, and relates that he used to catch at the trees and palings by the roadside to satisfy himself of existences out of himself; but Coleridge encouraged this subjective exclusiveness, to the destruction of the balance of his mind and the *morale* of his nature. He was himself a wild poem; and he discoursed wild poems to us,—musical romances from Dreamland; but the luxury to himself and us was bought by injury to others which was altogether irreparable, and pardonable only on the ground that the balance of his mind was destroyed by a fatal intellectual, in addition to physical intemperance. In him we see an extreme case of a life of contemplation uncontrolled by will and unchecked by action. His faculty of will perished, and his prerogative of action died out. His contemplations must necessarily be worth just so much the less to us as his mental structure was deformed,—extravagantly developed in one direction, and dwarfed in another.

The singularity in Wordsworth’s case, on the other hand, is that his contemplative tendencies not only coexisted with, but were implicated with, the most precise and vivid apprehension of small realities. There was no proportion in his mind; and vaticination and twaddle rolled off his eloquent tongue as chance would have it. At one time he would discourse like a seer,

on the slightest instigation, by the hour together; and next, he would hold forth with equal solemnity, on the pettiest matter of domestic economy. I have known him take up some casual notice of a "beck" (brook) in the neighborhood, and discourse of brooks for two hours, till his hearers felt as if they were by the rivers of waters in heaven; and next, he would talk on and on, till stopped by some accident, on his doubt whether Mrs. Wordsworth gave a penny apiece or a half-penny apiece for trapped mice to a little girl who had undertaken to clear the house of them. It has been common to regret that he held the office of Stamp-Distributor in the District; but it was probably a great benefit to his mind as well as his fortunes. It was something that it gave him security and ease as to the maintenance of his family; but that is less important than its necessitating a certain amount of absence from home, and intercourse with men on business. He was no reader in mature life; and the concentration of his mind on his own views, and his own genius, and the interests of his home and neighborhood, caused some foibles, as it was; and it might have been almost fatal, but for some office which allowed him to gratify his love of out-door life at the same time that it led him into intercourse with men in another capacity than as listeners to himself, or peasants engrossed in their own small concerns.

Southey was not contemplative or speculative, and it could only have been because he lived at the Lakes and was Coleridge's brother-in-law that he was implicated with the two speculative poets at all. It has been carelessly reported by Lake tourists that Southey was not beloved among his neighbors, while Wordsworth was; and that therefore the latter was the better man, in a social sense. It should be remembered that Southey was a working man, and that the other two were not; and, moreover, it should never be for a moment forgotten that Southey worked double-tides to make up for Coleridge's idleness. While Coleridge was dreaming and discoursing, Southey was

toiling to maintain Coleridge's wife and children. He had no time and no attention to spare for wandering about and making himself at home with the neighbors. This practice came naturally to Wordsworth; and a kind and valued neighbor he was to all the peasants round. Many a time I have seen him in the road, in Scotch bonnet and green spectacles, with a dozen children at his heels and holding his cloak, while he cut ash-sticks for them from the hedge, hearing all they had to say or talking to them. Southey, on the other hand, took his constitutional walk at a fixed hour, often reading as he went. Two families depended on him; and his duty of daily labor was not only distinctive, but exclusive. He was always at work at home, while Coleridge was doing nothing but talking, and Wordsworth was abroad, without thinking whether he was at work or play. Seen from the stand-point of conscience and of moral generosity, Southey's was the noblest life of the three; and Coleridge's was, of course, nought. I own, however, that, considering the tendency of the time to make literature a trade, or at least a profession, I cannot help feeling Wordsworth's to have been the most privileged life of them all. He had not work enough to do; and his mode of life encouraged an excess of egoism: but he bore all the necessary retribution of this in his latter years; and the whole career leaves an impression of an airy freedom and a natural course of contemplation, combined with social interest and action, more healthy than the existence of either the delinquent or the exemplary comrade with whom he was associated in the public view.

I have left my neighbors waiting long on the margin of Grasmere. That was before I was born; but I could almost fancy I had seen them there.

I observed that Wordsworth's report of their trip was very unlike Coleridge's. When his sister had left them, he wrote to her, describing scenes by brief precise touches which draw the picture that Cole-

ridge blurs with grand phrases. Moreover, Wordsworth tells sister Dorothy that John will give him forty pounds to buy a bit of land by the lake, where they may build a cottage to live in henceforth. He says, also, that there is a small house vacant near the spot.—They took that house; and thus the Wordsworths became “Lakers.” They entered that well-known cottage at Grasmere on the shortest day (St. Thomas’s) of 1799. Many years afterwards, Dorothy wrote of the aspect of Grasmere on her arrival that winter evening,—the pale orange lights on the lake, and the reflection of the mountains and the island in the still waters. She had wandered about the world in an unsettled way; and now she had cast anchor for life,—not in that house, but within view of that valley.

All readers of Wordsworth, on either side the Atlantic, believe that they know that cottage, (described in the fifth book of the “Excursion,”) with its little orchard, and the moss house, and the tiny terrace behind, with its fine view of the lake and the basin of mountains. There the brother and sister lived for some years in a very humble way, making their feast of the beauty about them. Wordsworth was fond of telling how they had meat only two or three times a week; and he was eager to impress on new-comers—on me among others—the prudence of warning visitors that they must make up their minds to the scantiest fare. He was as emphatic about this, laying his finger on one’s arm to enforce it, as about catching mice or educating the people. It was vain to say that one would rather not invite guests than fail to provide for them; he insisted that the expense would be awful, and assumed that his sister’s and his own example settled the matter. I suppose they were poor in those days; but it was not for long. A devoted sister Dorothy was. Too late it appeared that she had sacrificed herself to aid and indulge her brother. When her mind was gone, and she was dying by inches, Mrs. Wordsworth offered me the serious warning that she gave whenever occasion al-

lowed, against overwalking. She told me that Dorothy had, not occasionally only, but often, walked forty miles in a day to give her brother her presence. To repair the ravages thus caused she took opium; and the effect on her exhausted frame was to overthrow her mind. This was when she was elderly. For a long course of years, she was a rich household blessing to all connected with her. She shared her brother’s peculiarity of investing trifles with solemnity, or rather, of treating all occasions alike (at least in writing) with pedantic elaboration; but she had the true poet’s, combined with the true woman’s nature; and the fortunate man had, in wife and sister, the two best friends of his life.

The Wordsworths were the originals of the Lake *coterie*, as we have seen. Born at Cockermouth, and a pupil at the Hawkeshead school, Wordsworth was looking homewards when he settled in the District. The others came in consequence. Coleridge brought his family to Greta Hall, near Keswick; and with them came Mrs. Lovell, one of the three Misses Fricker, of whom Coleridge and Southey had married two. Southey was invited to visit Greta Hall, the year after the Wordsworths settled at Grasmere; and thus they became acquainted. They had just met before, in the South; but they had yet to learn to know each other; and there was sufficient unlikeness between them to render this a work of some time and pains. It was not long before Southey, instead of Coleridge, was the lessee of Greta Hall; and soon after Coleridge took his departure, leaving his wife and children, and also the Lovells, a charge upon Southey, who had no more fortune than Coleridge, except in the inexhaustible wealth of a heart, a will, and a conscience. Wordsworth married in 1802; and then the two poets passed through their share of the experience of human life, a few miles apart, meeting occasionally on some mountain ridge or hidden dale, and in one another’s houses, drawn closer by their common joys and sorrows, but never approximating in the quality of their

genius, or in the stand-points from which they respectively looked out upon human affairs. They had children, loved them, and each lost some of them; and they felt tenderly for each other when each little grave was opened. Southey, the most amiable of men in domestic life, gentle, generous, serene, and playful, grew absolutely ferocious about politics, as his articles in the "Quarterly Review" showed all the world. Wordsworth, who had some of the irritability and pettishness, mildly described by himself as "gentle stirrings of the mind," which occasionally render great men ludicrously like children, and who was, moreover, highly conservative after his early democratic fever had passed off, grew more and more liberal with advancing years. I do not mean that he verged towards the Reformers,—but that he became more enlarged, tolerant, and generally sympathetic in his political views and temper. It thus happened that society at a distance took up a wholly wrong impression of the two men,—supposing Southey to be an ill-conditioned bigot, and Wordsworth a serene philosopher, far above being disturbed by troubles in daily life, or paying any attention to party-politics. He showed some of his ever-growing liberality, by the way, in speaking of this matter of temper. In old age, he said that the world certainly does get on in minor morals: that when he was young "everybody had a temper"; whereas now no such thing is allowed; amiability is the rule; and an imperfect temper is an offence and a misfortune of a distinctive character.

Among the letters which now and then arrived from strangers, in the early days of Wordsworth's fame, was one which might have come from Coleridge, if they had never met. It was full of admiration and sympathy, expressed as such feelings would be by a man whose analytical and speculative faculties predominated over all the rest. The writer was, indeed, in those days, marvellously like Coleridge,—subtle in analysis to excess, of gorgeous imagination, bewitching discourse, fine scholarship, with a magnificent pow-

er of promising and utter incapacity in performing, and with the same habit of intemperance in opium. By his own account, his "disease was to meditate too much and observe too little." I need hardly explain that this was De Quincey; and when I have said that, I need hardly explain further that advancing time and closer acquaintance made the likeness to Coleridge bear a smaller and smaller proportion to the whole character of the man.

In return for his letter of admiration and sympathy, he received an invitation to the Grasmere valley. More than once he set forth to avail himself of it; but when within a few miles, the shyness under which in those days he suffered overpowered his purpose, and he turned back. After having achieved the meeting, however, he soon announced his intention of settling in the valley; and he did so, putting his wife and children eventually into the cottage which the Wordsworths had now outgrown and left. There was little in him to interest or attach a family of regular domestic habits, like the Wordsworths, given to active employment, sensible thrift, and neighborly sympathy. It was universally known that a great poem of Wordsworth's was reserved for posthumous publication, and kept under lock and key meantime. De Quincey had so remarkable a memory that he carried off by means of it the finest passage of the poem,—or that which the author considered so; and he published that passage in a magazine article, in which he gave a detailed account of the Wordsworths' household, connections, and friends, with an analysis of their characters and an exhibition of their faults. This was in 1838, a dozen years before the poet's death. The point of interest is,—How did the wronged family endure the wrong? They were quiet about it,—that is, sensible and dignified; but Wordsworth was more. A friend of his and mine was talking with him over the fire, just when De Quincey's disclosures were making the most noise, and mentioned the subject. Wordsworth begged to be

spared hearing anything about them, saying that the man had long passed away from the family life and mind, and he did not wish to disturb himself about what could not be remedied. My friend acquiesced, saying, "Well, I will tell you only one thing that he says, and then we will talk of something else. He says your wife is too good for you." The old man's dim eyes lighted up instantly, and he started from his seat, and flung himself against the mantel-piece, with his back to the fire, as he cried with loud enthusiasm, "And that's true! There he is right!"

It was by his written disclosures only that De Quincey could do much mischief; for it was scarcely possible to be prejudiced by anything he could say. The whole man was grotesque; and it must have been a singular image that his neighbors in the valley preserved in their memory. A frail-looking, diminutive man, with narrow chest and round shoulders and features like those of a dying patient, walking with his hands behind him, his hat on the back of his head, and his broad lower lip projected, as if he had something on his tongue that wanted listening to, — such was his aspect; and if one joined company with him, the strangeness grew from moment to moment. His voice and its modulations were a perfect treat. As for what he had to say, it was everything from odd comment on a passing trifle, eloquent enunciation of some truth, or pregnant remark on some lofty subject, down to petty gossip, so delivered as to authorize a doubt whether it might not possibly be an awkward effort at observing something outside of himself, or at getting a grasp of something that he supposed actual. That he should have so supposed was his weakness, and the retribution for the peculiar intemperance which depraved his nature and alienated from their proper use powers which should have made him one of the first philosophers of his age. His singular organization was fatally deranged in its action before it could show its best quality, and his is one of the cases in which we cannot

be wrong in attributing moral disease directly to physical disturbance; and it would no doubt have been dropped out of notice, if he had been able to abstain from comment on the characters and lives of other people. Justice to them compels us to accept and use the exposures he offers us of himself.

About the time of De Quincey's settlement at Grasmere, Wilson, the future CHRISTOPHER NORTH, bought the Elleray estate, on the banks of Windermere. He was then just of age, — supreme in all manly sports, physically a model man, and intellectually, brimming with philosophy and poetry. He came hither a rather spoiled child of fortune, perhaps; but he was soon sobered by a loss of property which sent him to his studies for the bar. Scott was an excellent friend to him at that time; and so strong and prophetic was Wilson's admiration of his patron, that he publicly gave him the name of "The Great Magician" before the first "Waverley Novel" was published. Within ten years from his getting a foothold on Windermere banks, he had raised periodical literature to a height unknown before in our time, by his contributions to "Blackwood's Magazine"; and he seemed to step naturally into the Moral Philosophy Chair in Edinburgh in 1820. Christopher North has perhaps conveyed to foreign, and untravelled English, readers as true a conception of our Lake scenery and its influences in one way as Wordsworth in another. The very spirit of the moorland, lake, brook, tarn, ghyll, and ridge breathes from his prose poetry: and well it might. He wandered alone for a week together beside the trout-streams and among the highest tarns. He spent whole days in his boat, coasting the bays of the lake, or floating in the centre, or lying reading in the shade of the trees on the islands. He led with a glorious pride the famous regatta on Windermere, when Canning was the guest of the Boltons at Storrs, and when Scott, Wordsworth, and Southey were of the company; and he liked almost as well steering the packet-boat from Waterhead

to Bowness, till the steamer drove out the old-fashioned conveyance. He sat at the stern, immovable, with his hand on the rudder, looking beyond the company of journeymen-carpenters, fish- and butter-women, and tourists, with a gaze on the water-and-sky-line which never shifted. Sometimes a learned professor or a brother sportsman was with him; but he spoke no word, and kept his mouth peremptorily shut under his beard. It was a sight worth taking the voyage for; and it was worth going a long round to see him standing on the shore,—"reminding one of the first man, Adam," (as was said of him,) in his best estate,—the tall, broad frame, large head, marked features, and long hair; and the tread which shook the ground, and the voice which roused the echoes afar and made one's heart-strings vibrate within. These attributes made strangers turn to look at him on the road, and fixed all eyes on him in the ball-room at Ambleside, when any local object induced him to be a steward. Every old boatman and young angler, every hoary shepherd and primitive housewife in the uplands and dales, had an enthusiasm for him. He could enter into the solemnity of speculation with Wordsworth while floating at sunset on the lake; and not the less gamesomely could he collect a set of good fellows under the lamp at his supper-table, and take off Wordsworth's or Coleridge's monologues to the life. There was that between them which must always have precluded a close sympathy; and their faults were just what each could least allow for in another. Of Wilson's it is enough to say that Scott's injunction to him to "leave off sack, purge, and live cleanly," if he wished for the Moral Philosophy Chair, was precisely what was needed. It was still needed some time after, when, though a Professor of Moral Philosophy, he was seen, with poor Campbell, leaving a tavern one morning, in Edinburgh, haggard and red-eyed, hoarse and exhausted,—not only the feeble Campbell, but the mighty Wilson,—they having sat together twenty-four hours, discussing poetry and wine with all their

united energies. This sort of thing was not to the taste of Wordsworth or Southey, any more than their special complacencies were venerable to the humor of Christopher North. Yet they could cordially admire one another; and when sorrows came over them, in dreary impartiality, they could feel reverently and deeply for each other. When Southey lost his idolized boy, Herbert, and had to watch over his insane wife, always his dearest friend, and all the dearer for her helpless and patient suffering under an impenetrable gloom,—when Wordsworth was bereaved of the daughter who made the brightness of his life in his old age,—and when Wilson was shaken to the centre by the loss of his wife, and mourned alone in the damp shades of Elleray, where he would allow not a twig to be cut from the trees she loved,—the sorrow of each moved them all. Elleray was a gloomy place then, and Wilson never surmounted the melancholy which beset him there; and he wisely parted with it some years before his death. The later depression in his case was in proportion to the earlier exhilaration. His love of Nature and of genial human intercourse had been too exuberant; and he became incapable of enjoyment from either, in his last years. He never recovered from an attack of pressure on the brain, and died paralyzed in the spring of 1854. He had before gone from among us with his joy; and then we heard that he had dropped out of life with his griefs; and our beautiful region, and the region of life, were so much the darker in a thousand eyes.

While speaking of Elleray, we should pay a passing tribute of gratitude to an older worthy of that neighborhood,—the well-known Bishop of Llandaff, Richard Watson, who did more for the beauty of Windermere than any other person. There is nothing to praise in the damp old mansion at Calgarth, set down in low ground, and actually with its back to the lake, and its front windows commanding no view; but the woods are the glory of Bishop Watson. He was not a happy prelate, believing himself undervalued

and neglected, and fretting his heart over his want of promotion; but he must have had many a blessed hour while planting those woods for which many generations will be grateful to him. Let the traveller remember him, when looking abroad from Miller Brow, near Bowness. Below lies the whole length of Windermere, from the white houses of Clappersgate, nestling under Loughrigg at the head, to the Beacon at the foot. The whole range of both shores, with their bays and coves and promontories, can be traced; and the green islands are clustered in the centre; and the whole gradation of edifices is seen, from Wray Castle, on its rising ground, to the tiny boat-houses, each on its creek. All these features are enhanced in beauty by the Calgarth woods, which cover the undulations of hill and margin beneath and around, rising and falling, spreading and contracting, with green meadows interposed, down to the white pebbly strand. To my eye, this view is unsurpassed by any in the District.

Bishop Watson's two daughters were living in the neighborhood till two years ago, — antique spinsters, presenting us with a most vivid specimen of the literary female life of the last century. They were excellent women, differing from the rest of society chiefly in their notion that superior people should show their superiority in all the acts of their lives, — that literary people should talk literature, and scientific people science, and so on; and they felt affronted, as if set down among common people, when an author talked about common things in a common way. They did their best to treat their friends to wit and polite letters; and they expected to be ministered to in the same fashion. This was rather embarrassing to visitors to whom it had never occurred to talk for any other purpose than to say what presented itself at the moment; but it is a privilege to have known those faithful sisters, and to have seen in them a good specimen of the literary society of the last century.

There is another spot in that neighborhood which strangers look up to with

interest from the lake itself, — Dovenest, the abode of Mrs. Hemans for the short time of her residence at the Lakes. She saw it for the first time from the lake, as her published correspondence tells, and fell in love with it; and as it was vacant at the time, she went into it at once. Many of my readers will remember her description of the garden and the view from it, the terrace, the circular grass-plot with its one tall white rose-tree. "You cannot imagine," she wrote, in 1830, "how I delight in that fair, solitary, neglected-looking tree." The tree is not neglected now. Dovenest is inhabited by Mrs. Hemans's then young friend, the Rev. R. P. Graves; and it has recovered from the wildness and desolation of thirty years ago, while looking as secluded as ever among the woods on the side of Wansfell.

All this time, illustrious strangers were coming, year by year, to visit residents, or to live among the mountains for a few weeks. There was Wilberforce, spending part of a summer at Rayrigg, on the lake shore. One of his boys asked him, "Why should you not buy a house here? and then we could come every year." The reply was characteristic: — that it would be very delightful; but that the world is lying, in a manner, under the curse of God; that we have something else to do than to enjoy fine prospects; and that, though it may be allowable to taste the pleasure now and then, we ought to wait till the other life to enjoy ourselves. Such was the strait-lacing in which the good man was forever trying to compress his genial, buoyant, and grateful nature. — Scott came again and again; and Wordsworth and Southey met to do him honor. The tourist must remember the Swan Inn, — the white house beyond Grasmere, under the skirts of Helvellyn. There Scott went daily for a glass of something good, while Wordsworth's guest, and treated with the homely fare of the Grasmere cottage. One morning, his host, himself, and Southey went up to the Swan, to start thence with ponies for the ascent of Helvellyn. The

innkeeper saw them coming, and accosted Scott with "Eh, Sir! ye 're come early for your draught to-day!"—a disclosure which was not likely to embarrass his host at all. Wordsworth was probably the least-discomposed member of the party.—Charles Lamb and his sister once popped in unannounced on Coleridge at Keswick, and spent three weeks in the neighborhood. We can all fancy the little man on the top of Skiddaw, with his mind full as usual of quips and pranks, and struggling with the emotions of mountain-land, so new and strange to a Cockney, such as he truly described himself. His loving readers do not forget his statement of the comparative charms of Skiddaw and Fleet Street; and on the spot we quote his exclamations about the peak, and the keen air there, and the look over into Scotland, and down upon a sea of mountains which made him giddy. We are glad he came and enjoyed a day, which, as he said, would stand out like a mountain in his life; but we feel that he could never have followed his friends hither,—Coleridge and Wordsworth,—and have made himself at home. The warmth of a city and the hum of human voices all day long were necessary to his spirits. As to his passage at arms with Southey,—everybody's sympathies are with Lamb; and he only vexes us by his humility and gratitude at being pardoned by the aggressor, whom he had in fact humiliated in all eyes but his own. It was one of Southey's spurts of insolent bigotry; and Lamb's plea for tolerance and fair play was so sound as to make it a poor affectation in Southey to assume a pardoning air; but, if Lamb's kindly and sensitive nature could not sustain him in so virtuous an opposition, it is well that the two men did not meet on the top of Skiddaw.—Canning's visit to Storrs, on Windermere, was a great event in its day; and Lockhart tells us, in his "Life of Scott," what the regatta was like, when Wilson played Admiral, and the group of local poets, and Scott, were in the train of the statesman. Since that

day, it has been a common thing for illustrious persons to appear in our valleys. Statesmen, churchmen, university-men, princes, peers, bishops, authors, artists, flock hither; and during the latter years of Wordsworth's life, the average number of strangers who called at Rydal Mount in the course of the season was eight hundred.

During the growth of the District from its wildness to this thronged state, a minor light of the region was kindling, flickering, failing, gleaming, and at last going out,—anxiously watched and tended, but to little purpose. The life of Hartley Coleridge has been published by his family; and there can, therefore, be no scruple in speaking of him here. The remembrance of him haunts us all,—almost as his ghost haunts his kind landlady. Long after his death, she used to "hear him at night laughing in his room," as he used to do when he lived there. A peculiar laugh it was, which broke out when fancies crossed him, whether he was alone or in company. Travellers used to look after him on the road, and guides and drivers were always willing to tell about him; and still his old friends almost expect to see Hartley at any turn,—the little figure, with the round face, marked by the blackest eyebrows and eyelashes, and by a smile and expression of great eccentricity. As we passed, he would make a full stop in the road, face about, take off his black-and-white straw hat, and bow down to the ground. The first glance in return was always to see whether he was sober. The Hutchinsons must remember him. He was one of the audience, when they held their concert under the sycamores in Mr. Harrison's grounds at Ambleside; and he thereupon wrote a sonnet,* doubtless

* SONNET

TO TENNYSON, AFTER HEARING ABBY HUTCHINSON SING "THE MAY-QUEEN" AT AMBLESIDE.

I would, my friend, indeed, thou hadst been
here

Last night, beneath the shadowy sycamore,
To hear the lines, to me well known before,

well known in America. When I wanted his leave to publish that sonnet, in an account of "Frolics with the Hutchinsons," it was necessary to hunt him up, from public-house to public-house, early in the morning. It is because these things are universally known,—because he was seen staggering in the road, and spoken of by drivers and lax artisans as an alehouse comrade, that I speak of him here, in order that I may testify how he was beloved and cherished by the best people in his neighborhood. I can hardly speak of him myself as a personal acquaintance; for I could not venture on inviting him to my house. I saw what it was to others to be subject to day-long visits from him, when he would ask for wine, and talk from morning to night,—and a woman, solitary and busy, could not undertake that sort of hospitality; but I saw how forbearing his friends were, and why,—and I could sympathize in their regrets when he died. I met him in company occasionally, and never saw him sober; but I have heard from several common friends of the charm of his conversation, and the beauty of his gentle and affectionate nature. He was brought into the District when four years old; and it does not appear that he ever had a chance allowed him of growing into a sane man. Wordsworth used to say that Hartley's life's failure arose mainly from his having grown up "wild as the breeze,"—delivered over, without help or guardianship, to the vagaries of an imagination which overwhelmed all the rest of him. There was a strong constitutional likeness to his father, evident enough to all; but no pains

seem to have been taken on any hand to guard him from the snare, or to invigorate his will, and aid him in self-discipline. The great catastrophe, the ruinous blow, which rendered him hopeless, is told in the Memoir; but there are particulars which help to account for it. Hartley had spent his school-days under a master as eccentric as he himself ever became. The Rev. John Dawes of Ambleside was one of the oddities that may be found in the remote places of modern England. He had no idea of restraint, for himself or his pupils; and when they arrived, punctually or not, for morning school, they sometimes found the door shut, and chalked with "Gone a-hunting," or "Gone a-fishing," or gone away somewhere or other. Then Hartley would sit down under the bridge, or in the shadow of the wood, or lie on the grass on the hill-side, and tell tales to his schoolfellows for hours. His mind was developed by the conversation of his father and his father's friends; and he himself had a great friendship with Professor Wilson, who always stood by him with a pitying love. He had this kind of discursive education, but no discipline; and when he went to college, he was at the mercy of any who courted his affection, intoxicated his imagination, and then led him into vice. His Memoir shows how he lost his fellowship at Oriel College, Oxford, at the end of his probationary year. He had been warned by the authorities against his sin of intemperance; and he bent his whole soul to get through that probationary year. For eleven months, and many days of the twelfth, he lived soberly and studied well. Then the old tempters agreed in London to go down to Oxford and get hold of Hartley. They went down on the top of the coach, got access to his room, made him drunk, and carried him with them to London; and he was not to be found when he should have passed. The story of his death is but too like this.

His fellowship lost, he came, ruinously humbled, to live in this District, at first under compulsion to take pupils, whom,

Embalmed in music so translucent clear.
Each word of thine came singly to the ear,
Yet all was blended in a flowing stream.
It had the rich repose of summer dream,
The light distinct of frosty atmosphere.
Still have I loved thy verse, yet never knew
How sweet it was, till woman's voice invested
The pencilled outline with the living hue,
And every note of feeling proved and tested.
What might old Pindar be, if once again
The harp and voice were trembling with his strain!

of course, he could not manage. On the death of his mother, an annuity was purchased for him, and paid quarterly, to keep him out of debt, if possible. He could not take care of money, and he was often hungry, and often begged the loan of a sixpence; and when the publicans made him welcome to what he pleased to have, in consideration of the company he brought together, to hear his wonderful talk, his wit, and his dreams, he was helpless in the snare. We must remember that he was a fine scholar, as well as a dreamer and a humorist; and there was no order of intellect, from the sage to the peasant, which could resist the charm of his discourse. He had taken his degree with high distinction at Oxford; and yet the old Westmoreland "statesman," who, offered whiskey and water, accepts the one and says the other can be had anywhere, would sit long to hear what Hartley had to tell of what he had seen or dreamed. At gentlemen's tables, it was a chance how he might talk,—sublimely, sweetly, or with a want of tact which made sad confusion. In the midst of the great black-frost at the close of 1848, he was at a small dinner-party at the house of a widow lady, about four miles from his lodgings. During dinner, some scandal was talked about some friends of his to whom he was warmly attached. He became excited on their behalf,—took Champagne before he had eaten enough, and, before the ladies left the table, was no longer master of himself. His host, a very young man, permitted some practical joking: brandy was ordered, and given to the unconscious Hartley; and by eleven o'clock he was clearly unfit to walk home alone. His hostess sent her footman with him, to see him home. The man took him through Ambleside, and then left him to find his way for the other two miles. The cold was as severe as any ever known in this climate; and it was six in the morning when his landlady heard some noise in the porch, and found Hartley stumbling in. She put him to bed, put hot bricks to his feet,

and tried all the proper means; and in the middle of the day he insisted on getting up and going out. He called at the house of a friend, Dr. S——, near Ambleside. The kind physician scolded him for coming out, sent for a carriage, took him home, and put him to bed. He never rose again, but died on the 6th of January, 1849. The young host and the old hostess have followed him, after deeply deploring that unhappy day.

It was sweet, as well as sorrowful, to see how he was mourned. Everybody, from his old landlady, who cared for him like a mother, to the infant-school children, missed Hartley Coleridge. I went to his funeral at Grasmere. The rapid Rotha rippled and dashed over the stones beside the churchyard; the yews rose dark from the faded grass of the graves; and in mighty contrast to both, Helvellyn stood, in wintry silence, and sheeted with spotless snow. Among the mourners Wordsworth was conspicuous, with his white hair and patriarchal aspect. He had no cause for painful emotions on his own account; for he had been a faithful friend to the doomed victim who was now beyond the reach of his tempters. While there was any hope that stern remonstrance might rouse the feeble will and strengthen the suffering conscience to relieve itself, such remonstrance was pressed; and when the case was past hope, Wordsworth's door was ever open to his old friend's son. Wordsworth could stand by that open grave without a misgiving about his own share in the scene which was here closing; and calm and simply grave he looked. He might mourn over the life; but he could scarcely grieve at the death. The grave was close behind the family group of the Wordsworth tombs. It shows, above the name and dates, a sculptured crown of thorns and Greek cross, with the legend, "By thy Cross and Passion, Good Lord, deliver me!"

One had come and gone meantime who was as express a contrast to Hartley Coleridge as could be imagined,—a man of energy, activity, stern self-discipline, and

singular strength of will. Such a cast of character was an inexplicable puzzle to poor Hartley. He showed this by giving his impression of another person of the same general mode of life,—that A. B. was “a monomaniac about everything.” It was to rest a hard-worked mind and body, and to satisfy a genuine need of his nature, that Dr. Arnold came here from Rugby with his family,—first, to lodgings for an occasional holiday, and afterwards to a house of his own, at Christmas and Midsummer, and with the intention of living permanently at Fox How, when he should give up his work at Rugby.

He was first at a house at the foot of Rydal Mount, at Christmas, 1831, “with the road on one side of the garden, and the Rotha on the other, which goes brawling away under our windows with its perpetual music. The higher mountains that bound our view are all snow-capped; but it is all snug, and warm, and green in the valley. Nowhere on earth have I ever seen a spot of more perfect and enjoyable beauty, with not a single object out of tune with it, look which way I will.” He built Fox How, two or three years later, and at once began his course of hospitality by having lads of the sixth form as his guests,—not for purposes of study, but of recreation, and, yet more, to give them that element of education which consists in familiarity with the noblest natural scenery. The hue and cry which arose when he showed himself a reformer, in Church matters as in politics, followed him here, as we see by his letters; and it was not till his “Life and Correspondence” appeared that his neighbors here understood him. It has always been difficult, perhaps, for them to understand anything modern, or at all vivacious. Everybody respected Dr. Arnold for his energy and industry, his services to education, and his devotedness to human welfare; but they were afraid of his supposed opinions. Not the less heartily did he honor everything that was admirable in them; and when he was gone, they remembered his ways, and cherished every

trace of him, in a manner which showed how they would have made much of him, if their own timid prejudices had not stood in the way. They point out to this day the spot where they saw him stand, without his hat, on Rotha bridge, watching the gush of the river under the wooded bank, or gazing into the basin of vapors within the *cul-de-sac* of Fairfield,—the same view which he looked on from his study, as he sat on his sofa, surrounded by books. The neighbors show the little pier at Waterhead whence he watched the morning or the evening light on the lake, the place where he bathed, and the tracks in the mountains which led to his favorite ridges. Everybody has read his “Life and Correspondence,” and therefore knows what his mode of life was here, and how great was his enjoyment of it. We have all read of the mountain-trips in summer, and the skating on Rydal Lake in winter,—and how his train of children enjoyed everything with him, as far as they could. It was but for a few years; and the time never came for him to retire hither from Rugby. In June, 1842, he had completed his fourteenth year at Rugby, and was particularly in need, under some harassing cares, of the solace and repose which a few hours more would have brought him, when he was cut off by an illness of two hours. On the day when he was to have been returning to Fox How, some of his children were travelling thence to his funeral. His biographer tells us how strong was the consternation at Rugby, when the tidings spread on that Sunday morning, “Dr. Arnold is dead.” Not slight was the emotion throughout this valley, when the news passed from house to house, the next day. As I write, I see the windows which were closed that day, and the trees round the house,—so grown up since he walked among them!—and the course of the Rotha, which winds and ripples at the foot of his garden. I never saw him, for I did not come here till two years after; but I have seen his widow pass on into her honored old age, and his children part off into their various homes, and their several callings in life,

—to meet in the beloved house at Fox How, at Christmas, and at many another time.

This leaves only Southey and the Wordsworths; and their ending was not far off. The old poet had seen almost too much of these endings. One day, when I found a stoppage in the road at the foot of Rydal Mount, from a sale of furniture, such as is common in this neighborhood every spring and autumn, I met Mr. Wordsworth,—not looking observant and amused, but in his blackest mood of melancholy, and evidently wanting to get out of the way. He said he did not like the sight: he had seen so many of these sales; he had seen Southey's, not long before; and these things reminded him how soon there must be a sale at Rydal Mount. It was remarked by a third person that this was rather a wilful way of being miserable; but I never saw a stronger love of life than there was in them all, even so late in their day as this. Mrs. Wordsworth, then past her three-score years and ten, observed to me that the worst of living here was that it made one so unwilling to go. It seems but lately that she said so; yet she nursed to their graves her daughter and her husband and his sister, and she herself became blind; so that it was not hard "to go," when the time came.

Southey's decline was painful to witness,—even as his beloved wife's had been to himself. He never got over her loss; and his mind was decidedly shaken before he made the second marriage which has been so much talked over. One most touching scene there was when he had become unconscious of all that was said and done around him. Mrs. Southey had been careless of her own interests about money when she married him, and had sought no protection for her own property. When there was manifestly no hope of her husband's mind ever recovering, his brother assembled the family and other witnesses, and showed them a kind of will which he had drawn up, by which Mrs. Southey's property was returned to herself, intact. He said they were all

aware that their relative could not, in his condition, make a will, and that he was even unaware of what they were doing; but that it was right that they should pledge themselves by some overt act to fulfil what would certainly have been his wish. The bowed head could not be raised, but the nerveless hand was guided to sign the instrument; and all present agreed to respect it as if it were a veritable will,—as of course they did. The decline was full of painful circumstances; and it must have been with a heart full of sorrow that Wordsworth walked over the hills to attend the funeral.

The next funeral was that of his own daughter Dora, — Mrs. Quillinan. A story has got about, as untrue as it is disagreeable, that Dora lost her health from her father's opposition to her marriage, and that Wordsworth's excessive grief after her death was owing to remorse. I can myself testify to her health having been very good for a considerable interval between that difficulty and her last illness; and this is enough, of itself, to dispose of the story. Her parents considered the marriage an imprudent one; but after securing sufficient time for consideration, they said that she must judge for herself; and there were fine qualities in Mr. Quillinan which could not but win their affection and substantial regard. His first wife, a friend of Dora Wordsworth's, was carried out of the house in which she had just been confined, from fire in the middle of the night; she died from the shock; and she died recommending her husband and her friend to marry. Such is the understood history of the case. After much delay they did marry, and lived near Rydal Mount, where Dora was, as always, the light of the house, as long as she could go to it. But, after a long and painful decline, she died in 1847. Her husband followed soon after Wordsworth's death. He lies in the family corner of Grasmere churchyard, between his two wives. This appeared to be the place reserved for Mrs. Wordsworth, so that Dora would lie between her parents. There seemed now

to be no room left for the solitary survivor, and many wondered what would be done; but all had been thought of. Wordsworth's grave had been made deep enough for two; and there his widow now rests.

There was much vivid life in them, however clearly the end was approaching, when I first knew them in 1845. The day after my arrival at a friend's house, they called on me, excited by two kinds of interest. Wordsworth had been extremely gratified by hearing, through a book of mine, how his works were estimated by certain classes of readers in the United States; and he and Mrs. Wordsworth were eager to learn facts and opinions about mesmerism, by which I had just recovered from a long illness, and which they hoped might avail in the case of a daughter-in-law, then in a dying state abroad. After that day, I met them frequently, and was at their house, when I could go. On occasion of my first visit, I was struck by an incident which explained the ridicule we have all heard thrown on the old poet for a self-esteem which he was merely too simple to hide. Nothing could be easier than to make a quiz of what he said to me; but to me it seemed delightful. As he at once talked of his poems, I thought I might; and I observed that he might be interested in knowing which of his poems had been Dr. Channing's favorite. Seeing him really interested, I told him that I had not been many hours under Dr. Channing's roof before he brought me "The Happy Warrior," which, he said, moved him more than any other in the whole series. Wordsworth remarked, — and repeated the remark very earnestly, — that this was evidently applicable to the piece, "not as a poem, not as fulfilling the conditions of poetry, but as a chain of extremely valuable *thoughts*." Then he repeated emphatically, — "a chain of extremely *valuable* thoughts!" This was so true that it seemed as natural for him to say it as Dr. Channing, or any one else.

It is indisputable that his mind and manners were hurt by the prominence

which his life at the Lakes — a life very public, under the name of seclusion — gave, in his own eyes, to his own works and conversation; but he was less absorbed in his own objects, less solemn, less severed from ordinary men than is supposed, and has been given out by strangers, who, to the number of eight hundred in a year, have been received by him with a bow, asked to see the garden-terraces where he had meditated this and that work, and dismissed with another bow, and good wishes for their health and pleasure, — the host having, for the most part, not heard, or not attended to, the name of his visitor. I have seen him receive in that way a friend, a Commissioner of Education, whom I ventured to take with me, (a thing I very rarely did,) and in the evening have had a message asking if I knew how Mr. Wordsworth could obtain an interview with this very gentleman, who was said to be in the neighborhood. All this must be very bad for anybody; and so was the distinction of having early chosen this District for a home. When I first came, I told my friends here that I was alarmed for myself, when I saw the spirit of insolence which seemed to possess the cultivated residents, who really did virtually assume that the mountains and vales were somehow their property, or at least a privilege appropriate to superior people like themselves. Wordsworth's sonnets about the railway were a mild expression of his feelings in this direction; and Mrs. Wordsworth, in spite of her excellent sense, took up his song, and declared with unusual warmth that green fields, with daisies and buttercups, were as good for Lancashire operatives as our lakes and valleys. I proposed that the people should judge of this for themselves; but there was no end to ridicule of "the people from Birthwaite" (the end of the railway, five miles off). Some had been seen getting their dinner in the churchyard, and others inquiring how best to get up Loughrigg, — "evidently, quite puzzled, and not knowing where to go." My reply, "that they would know next time," was not at all sympathized

in. The effect of this exclusive temper was pernicious in the neighborhood. A petition to Parliament against the railway was not brought to me, as it was well known that I would not sign it; but some little girls undertook my case; and the effect of their parroting of Mr. Wordsworth, about "ourselves" and "the common people" who intrude upon us, was as sad as it was absurd. The whole matter ended rather remarkably. When all were gone but Mrs. Wordsworth, and she was blind, a friend who was as a daughter to her remarked, one summer day, that there were some boys on the Mount in the garden. "Ah!" said Mrs. Wordsworth, "there is no end to those people;—boys from Birthwaite!—boys from Birthwaite!" It was the Prince of Wales, with a companion or two.

The notion of Wordsworth's solemnity and sublimity, as something unremitting, was a total mistake. It probably arose from the want of proportion in his mind, as in his sister's, before referred to. But he relished the common business of life, and not only could take in, but originate a joke. I remember his quizzing a common friend of ours,—one much esteemed by us all,—who had a wonderful ability of falling asleep in an instant, when not talking. Mr. Wordsworth told me of the extreme eagerness of this gentleman, Mrs. Wordsworth, and himself, to see the view over Switzerland from the ridge of the Jura. Mrs. Wordsworth could not walk so fast as the gentlemen, and her husband let the friend go on by himself. When they arrived, a minute or two after him, they found him sitting on a stone in face of all Switzerland,—fast asleep. When Mr. Wordsworth mimicked the sleep, with his head on one side, anybody could have told whom he was quizzing.—He and Mrs. Wordsworth, but too naturally impressed with the mischief of overwalking in the case of women, took up a wholly mistaken notion that I walked too much. One day I was returning from a circuit of ten miles with a guest, when we met the Wordsworths. They asked where we had been. "By Red Bank to Gras-

mere." Whereupon Mr. Wordsworth laid his hand on my guest's arm, saying, "There, there! take care what you are about! don't let her lead you about! I can tell you, she has killed off half the gentlemen in the county!"—Mrs. Hemans tells us, that, before she had known him many hours, she was saying to him, "Dear me, Mr. Wordsworth! how can you be so giddy?"

His interest in common things never failed. It has been observed that he and Mrs. Wordsworth did incalculable good by the example they unconsciously set the neighborhood of respectable thrift. There are no really poor people at Rydal, because the great lady at the Hall, Lady Le Fleming, takes care that there shall be none,—at the expense of great moral mischief. But there is a prevalent recklessness, grossness, and mingled extravagance and discomfort in the family management, which, I am told, was far worse when the Wordsworths came than it is now. Going freely among the neighbors, and welcoming and helping them familiarly, the Wordsworths laid their own lives open to observation; and the mingled carefulness and comfort—the good thrift, in short—wrought as a powerful lesson all around. As for what I myself saw,—they took a practical interest in my small purchase of land for my abode; and Mr. Wordsworth often came to consult upon the plan and progress of the house. He used to lie on the grass, beside the young oaks, before the foundations were dug; and he referred me to Mrs. Wordsworth as the best possible authority about the placing of windows and beds. He climbed to the upper rooms before there was a staircase; and we had to set Mrs. Wordsworth as a watch over him, when there was a staircase, but no balustrade. When the garden was laid out, he planted a stone-pine (which is flourishing) under the terrace-wall, washed his hands in the watering-pot, and gave the place and me at once his blessing and some thrifty counsel. When I began farming, he told me an immense deal about his cow; and

both of them came to see my first calf, and ascertain whether she had the proper marks of the handsome short-horn of the region. The distinctive impression which the family made on the minds of the people about them was that of practical ability; and it was thoroughly well conveyed by the remark of a man at Rydal, on hearing some talk of Mrs. Wordsworth, a few days after the poet's death: — "She's a gay [rare] clever body, who will carry on the business as well as any of 'em."

Nothing could be more affecting than to watch the silent changes in Mrs. Wordsworth's spirits during the ten years which followed the death of her daughter. For many months her husband's gloom was terrible, in the evenings, or in dull weather. Neither of them could see to read much; and the poet was not one who ever pretended to restrain his emotions, or assume a cheerfulness which he did not feel. We all knew that the mother's heart was the bereaved one, however impressed the father's imagination might be by the picture of his own desolation; and we saw her mute about her own trial, and growing whiter in the face and smaller from month to month, while he put no restraint upon his tears and lamentations. The winter evenings were dreary; and in hot summer days the aged wife had to follow him, when he was missed for any time, lest he should be sitting in the sun without his hat. Often she found him asleep on the heated rock. His final illness was wearing and dreary to her; but there her part was clear, and she was adequate to it. "You are going to Dora," she whispered to him, when the issue was no longer doubtful. She thought he did not hear or heed; but some hours after, when some one opened the curtain, he said, "Are you Dora?" Composed and cheerful in the prospect of his approaching rest, and absolutely without solicitude for herself, the wife was everything to him till the last moment; and when he was gone, the anxieties of the self-forgetting woman were over. She attended his funeral, and af-

terwards chose to fill her accustomed place among the guests who filled the house. She made tea that evening as usual; and the lightening of her spirits from that time forward was evident. It was a lovely April day, the 23d, (Shakespeare's birth- and death-day,) when her task of nursing closed. The news spread fast that the old poet was gone; and we all naturally turned our eyes up to the roof under which he lay. There, above and amidst the young green of the woods, the modest dwelling shone in the sunlight. The smoke went up thin and straight into the air; but the closed windows gave the place a look of death. There he was lying whom we should see no more.

The poor sister remained for five years longer. Travellers, American and others, must remember having found the garden-gate locked at Rydal Mount, and perceiving the reason why, in seeing a little garden-chair, with an emaciated old lady in it, drawn by a nurse round and round the gravelled space before the house. That was Miss Wordsworth, taking her daily exercise. It was a great trouble, at times, that she could not be placed in some safe privacy; and Wordsworth's feudal loyalty was put to a severe test in the matter. It had been settled that a cottage should be built for his sister, in a field of his, beyond the garden. The plan was made, and the turf marked out, and the digging about to begin, when the great lady at the Hall, Lady Le Fleming, interfered with a prohibition. She assumed the feudal prerogative of determining what should or should not be built on all the lands over which the Le Flemings have borne sway; and her extraordinary determination was, that no dwelling should be built, except on the site of a former one! We could scarcely believe we had not been carried back into the Middle Ages, when we heard it; but the old poet, whom any sovereign in Europe would have been delighted to gratify, submitted with a good grace, and thenceforth rubbed his sister's feet, and coaxed and humored her at home,—

trusting his guests to put up with the inconveniences of her state, as he could not remove them from sight and hearing. After she was gone also, Mrs. Wordsworth, entirely blind, and above eighty years of age, seemed to have no cares, except when the errors and troubles of others touched her judgment or sympathy. She was well cared for by nieces and friends. Her plain common sense and cheerfulness appeared in one of the last things she said, a few hours before her death. She remarked on the character of the old hymns, practical and familiar, which people liked when she was young, and which answered some purposes better than the sublimer modern sort. She repeated part of a child's hymn,—very homely, about going straight to school, and taking care of the books, and learning the lesson well,—and broke off, saying, "There! if you want to hear the rest, ask the Bishop o' London. *He* knows it."

Then, all were gone; and there remained only the melancholy breaking up of the old home which had been interesting to the world for forty-six years. Mrs. Wordsworth died in January, 1859. In the May following, the sale took place which Wordsworth had gloomily foreseen so many years before. Everything of value was reserved, and the few articles desired by strangers were bought by commission; and thus the throng at the sale was composed of the ordinary elements. The spectacle was sufficiently painful to make it natural for old friends to stay away. Doors and windows stood wide. The sofa and tea-table where the wisest and best from all parts of the world had held converse were turned out to be examined and bid for. Anybody who chose passed the sacred threshold; the auctioneer's hammer was heard on the terrace; and the hospitable parlor and kitchen were crowded with people swallowing tea in the intervals of their busi-

ness. One farmer rode six-and-thirty miles that morning to carry home something that had belonged to Wordsworth; and, in default of anything better, he took a patched old table-cover. There was a bed of anemones under the windows, at one end of the house; and a bed of anemones is a treasure in our climate. It was in full bloom in the morning; and before sunset, every blossom was gone, and the bed was trampled into ruin. It was dreary work! The two sons live at a distance; and the house is let to tenants of another name.

I perceive that I have not noticed the poet's laureateship. The truth is, the office never seemed to belong to him; and we forgot it, when not specially reminded of it. We did not like to think of him in court-dress, going through the ceremonies of levee or ball, in his old age. His white hair and dim eyes were better at home among the mountains.

There stand the mountains, from age to age; and there run the rivers, with their full and never-pausing tide, while those who came to live and grow wise beside them are all gone! One after another, they have lain down to their everlasting rest in the valleys where their step and their voices were as familiar as the points of the scenery. The region has changed much since they came as to a retreat. It was they who caused the change, for the most part; and it was not for them to complain of it; but the consequence is, that with them has passed away a peculiar phase of life in England. It is one which can neither be continued nor repeated. The Lake District is no longer a retreat; and any other retreat must have different characteristics, and be illumined by some different order of lights. The case being so, I have felt no scruple in asking the attention of my readers to a long story, and to full details of some of the latest Lights of the Lake District.

PINK AND BLUE.

EVERYBODY knows that a *departing* guest has the most to say. The touch of the door-knob sends to his lips a thousand things which *must* be told. Is it strange, then, that old people, knowing they have "made out their visit," and feeling themselves brimful of wisdom and experience, should wish to speak from the fulness of their hearts to those whom they must so shortly leave?

Nobody thinks it strange. The world expects it, and, as a general thing, bears it patiently. Knowing how universal is this spirit of forbearance, I should, perhaps, have forever held my peace, lest I might abuse good-nature, had it not been for some circumstances which will be related a little farther on.

My little place of business (I am the goldsmith of our village) has long been the daily resort of several of my particular cronies. They are men of good minds, —some of them quite literary; for we count, as belonging to our set, the lawyer, the schoolmaster, the doctor, men of business, men of no business, and sometimes even the minister. As may be supposed, our discussions take a wide range: I can give no better notion of *how* wide than to say that we discuss everything in the papers. Yesterday was a snow-storm, but the meeting was held just the same. It was in the afternoon. The schoolmaster came in late with a new magazine, from which he read, now and then, for the general edification.

"Ah!" said he, "if this be true, we can all write for the papers."

"How's that?" we asked.

"Why, it says here, that, if the true experience of any human heart were written, it would be worth more than the best tale ever invented."

It was a terribly stormy day. The snow came whirling against the two windows of my shop, clinging to the outside, making it twilight within. I had given up work; for my eyes are not what they

were, and I have to favor them. Nobody spoke for a while; all had been set to thinking. Those few words had sent us all back, back, back, thirty, forty, fifty years, to call up the past. We were gazing upon forms long since perished, listening to voices long ago hushed forever. Could those forms have been summoned before us, how crowded would have been my little shop! Could those voices have been heard, how terrible the discord, the cries of the wretched mingling with the shouts of the happy ones! There was a dead silence. The past was being questioned. Would it reply?

At last some one said, —

"Try it."

"But," said another, "it would fill a whole book."

"Take up one branch, then; for instance, our — well, our courting-days. Let each one tell how he won his wife."

"But shall we get any money by it?"

"To be sure we shall. Do you think people write for nothing? '*Worth more*' are the very words used; '*worth more*' *what*? Money, of course."

"But what shall we do with all our money?"

"Buy a library for the use of us all. We will draw lots to see who shall write first; and if he succeeds, the others can follow in order."

And thus we agreed.

I was rather sorry the lot fell upon me; for I was always bashful, and never thought much of myself but once. I think my bashfulness was mostly owing to my knowing myself to be not very good-looking. I believe that I am not considered a bad-looking old man; indeed, people who remember me at twenty-five say that I have grown handsome every year since.

I do not intend giving a description of myself at that age, but shall confine myself principally to what was suggested by

my friend, as above mentioned,—namely, how I won my wife.

It is astonishing how a man may be deluded. Knowing, as I did, just the facts in the case, regarding my face and figure, yet the last day of the year 1817 found me in the full belief that I was quite a good-looking and every way a desirable young man. This was the third article in my creed. The second was, that Eleanor Sherman loved me; and the first, that I loved her. It is curious how I became settled in the third article by means of the second.

I had spent hours before my looking-glass, trying to make it give in that I was good-looking. But never was a glass so set in its way. In vain I used my best arguments, pleaded before it hour after hour, re-brushed my hair, re-tied my cravat, smiled, bowed, and so forth, and so forth. "Ill-looking and awkward!" was my only response. At last it went so far as to intimate that I had, with all the rest, a *conceited* look. This was not to be borne, and I withdrew in disgust. The argument should be carried on in my own heart. Pure reasoning only was trustworthy. Philosophers assured us that our senses were not to be trusted. How easy and straightforward the mental process! "Eleanor loves me; therefore I cannot look ill!"

It was on the last day of the year I have mentioned, that, just having, for the fortieth time, arrived at the above conclusion, I prepared to go forth upon the most delightful of all possible errands. All day I had been dwelling upon it, wondering at what hour it would be most proper to go. At three o'clock, I arrayed myself in my Sunday-clothes. I gave a parting glance of triumph at my glass, and stepped briskly forth upon the crispy snow. I met people well wrapped up, with mouth and nose covered, and saw men leave working to thrash their hands. It must have been cold, therefore; but I felt none of it.

Her house was half a mile distant. 'T was on a high bank a little back from the road, of one story in front, and two at

the sides. It was what was called a single house; the front showed only two windows, with a door near the corner. The sides were painted yellow, the front white, with a green door. There was an orchard behind, and two poplar-trees before it. The pathway up the bank was sprinkled with ashes. I had frequently been as far as the door with her, evenings when I waited upon her home; but I had never before approached the house by daylight,—that is, any nearer than the road. I had never *said* anything; it wasn't time; but I had given her several little things, and had tried to be her beau every way that I knew.

Before I began to notice her, I had never been about much with the young folks,—partly because I was bashful, and partly because I was so clumsy-looking. I was more in earnest, therefore, than if I had been in the habit of running after the girls. After I began to like her, I watched every motion,—at church, at evening meetings, at singing-school; and a glance from her eye seemed to fall right upon my heart. She had been very friendly and sociable with me, always thanked me very prettily for what little trifles I gave her, and never refused my company home. She would put her hand within my arm without a moment's hesitation, chatting all the while, never seeming in the least to suspect the shiver of joy which shot through my whole frame from the little hand upon my coat-sleeve.

I had long been pondering in my mind, in my walks by day and my lyings-down at night, what should be the next step, what *overt act* I might commit; for something told me it was not yet time to *say* anything.

What could have been more fortunate for my wishes, then, than the project set on foot by the young people, of a grand sleighing-party on New-Year's evening? They were mostly younger than myself, especially the girls. Eleanor was but seventeen, I was twenty-three. But I determined to join this party, and it was to invite Eleanor that I arrayed myself and set forth, as above mentioned. It

was a bold step for a bashful man,—I mean now the *inviting* part.

I had thought over, coming along, just what words I should use; but, as I mounted the bank, I felt the words, ideas, and all, slipping out at the ends of my fingers. If it had been a thickly settled place, I should not have thought much about being watched; but, as there was only one house in sight, I was sure that not a motion was lost, that my proceedings would be duly reported, and discussed by the whole village. All these considerations rendered my situation upon the stone step at the front-door very peculiar.

I knew the family were in the back part of the house; for the shutters of the front-room were tightly closed, as, indeed, they always were, except on grand occasions. Nevertheless, knocking at the front-door seemed the right thing to do, and I did it. With a terrible choking in my throat, and wondering all the while *who* would come to open, I did it. I knocked three times. Nobody came. Peddlers, I had observed in like cases, opened the outside door and knocked at the inner. I tried this with no better result. I then ventured to open the inner door softly, and with feelings of awe I stood alone in the spare-room.

By the light which streamed in through the holes in the tops of the shutters I distinguished the green painted chairs backed up stiffly against the wall, the striped homespun carpet, andirons crossed in the fireplace, with shovel and tongs to match, the big Bible on the table under the glass, a *waxwork* on the high mahogany desk in the corner, and a few shells and other ornaments upon the mantel-shelf.

The terrible order and gloom oppressed me. I felt that it was no slight thing to venture thus unbidden into the spare-room,—the room set apart from common uses, and opened only on great occasions: evening-meetings, weddings, or funerals. But, in the midst of all my tribulation, one other thought would come,—I don't exactly like to tell it, but then I believe I promised to keep nothing back;—well,

then, if I must,—I thought that this spare-room was the place where Eleanor would make up the fire, when—when I was far enough along to come regularly every Sunday night. With that thought my courage revived. I heard voices in the next room, the pounding of a flat-iron, and a frequent step across the floor. I gave a loud rap. The door opened, and Eleanor herself appeared. She had on a spotted calico gown, with a string of gold beads around her neck. She held in her hand a piece of fan coral. I felt myself turning all colors, stammered, hesitated, and believed in my heart that she would think me a fool. Very likely she did; for I really suppose that she never, till then, thought that I *meant anything*.

She contrived, however, to pick out my meaning from the midst of the odd words and parts of sentences offered her, and replied that she would let me know that evening. As she did not invite me to the kitchen, the only thing left me to do was to say good-afternoon and depart. I don't know which were the queerest,—my feelings in going up or in coming down the bank.

When fairly in the road, happening to glance back at the house, I saw that one half of a shutter was open, and that a man was watching me. He drew back before I could recognize him. That evening was singing-school. That was why I went to invite Eleanor in the afternoon. I was afraid some other fellow would ask her before school was out.

When I got there, I found all the young folks gathered about the stove. Something was going on. I pressed in, and found Harry Harlow. He had been gone a year at sea, and had arrived that forenoon in the stage from Boston. They were all listening to his wonderful stories.

When school was over, I stepped up close to Eleanor and offered my arm. She drew back a little, and handed me a small package. Harry stepped up on the other side. She took his arm, and they went off slowly together. I stood still a moment to watch them. When

they turned the corner, I went off alone. Confounded, wonder-struck, I plunged on through the snow-drifts, seeing, feeling, knowing nothing but the package in my hand. I found mother sitting by the fire. She and I lived together,—she and I, and that was all. I knew I should find her with her little round table drawn up to the fire, her work laid aside, and the Bible open. She never went to bed with me out.

I didn't want to tell her. I wouldn't for the world, if I could have had the opening of my package all to myself. She asked me if I had fastened the back-door. I sat down by the fire and slowly undid the string. A silver thimble fell on the bricks. There was also an artificial flower made of feathers, a copy of verses headed "To a Pair of Bright Eyes," cut from the county newspaper, a cherry-colored neck-ribbon, a smelling-bottle, and, at the bottom, a note. I knew well enough what was in the note.

"MR. ALLEN,—

"I must decline your invitation to the sleigh-ride; and I hope you will not be offended, if I ask you not to go about with me any more. I think you are a very good young man, and, as an acquaintance, I like you very much.

"Respectfully yours,

"ELEANOR SHERMAN.

"P. S.—With this note you will find the things you have given me."

I took the iron tongs which stood near, picked up the thimble and dropped it into the midst of the hot coals, then the flower, then the verses, then the ribbon, then the smelling-bottle, and would gladly have added myself.

My mother and I were everything to each other. We two were all that remained of a large family. I had always confided in her; but still I was sorry that I had opened the package there. I might have taken it to my chamber. But then she would have known, she *must* have known from my manner, that something was wrong with me. I think, on the

whole, I was glad to have her know the worst. I knew that my mother worshipped me; but she was not one of those who let their feelings be seen on common occasions. I gave her the note, and no more was needed. She tried to comfort me, as mothers will; but I would not be comforted. It was my first great heart-trouble, and I was weighed down beneath it. She drew me towards her, I leaned my head upon her shoulder, and was not ashamed that she knew of the hot tears upon my cheeks. At last I heard her murmuring softly,—

"Oh, what shall I do? He is all I have, and he is so miserable! How can I bear his sorrow?"

I think it was the recollection of these words which induced me afterwards to hide my feelings, that she might not suffer on my account.

The next day was clear and bright. The sleighing was perfect. I was miserable. I had not slept. I could not eat. I dared not go into the village to encounter the jokes which I was certain awaited me there. Early in the evening, just as the moon rose, I took my stand behind a clump of trees, half-way up a hill, where I knew the sleighs must pass.

There I stood, feeling neither cold nor weariness, waiting, watching, listening for the sleigh-bells. At last I heard them, first faintly, then louder and louder, until they reached the bottom of the hill. Slowly they came up, passing, one after another, by my hiding-place. There were ten sleighs in all. She and Harry were in the fourth. The moon shone full in their faces, and his looked just as I had often felt; but I had never dared to show it as Harry did. I felt sure that he would kiss her. A blue coverlet was wrapped around them, and he was tucking it in on her side. The hill was steep just there, so that they were obliged to move quite slowly. They were talking earnestly, and I heard my name. I was not sure at first; but afterwards I knew.

"I never thought of his being in earnest before. He is a great deal older

than I, and I never thought that anybody so homely and awkward as he could suppose" —

"Jingle, jingle, jingle," and that was all I heard. I held myself still, watched the sleighs disappear, one after another, over the brow of the hill, listened till the last note of the last bell was lost in the distance, then turned and ran.

I ran as if I had left my misery behind, and every step were taking me farther from it. But when I reached home, there it was, aching, aching in my heart, just the same as before. And there it stayed. Even now, I can hardly bear to think of those terrible days and nights. But for my mother's sake I tried to seem cheerful, though I no longer went about with the young folks. I applied myself closely to my business, sawed my mother's wood for exercise, learned to paint, and read novels and poetry for amusement.

Thus time passed on. The little boys began to call themselves young men, and me an old *bach*; and into this character I contentedly settled down. My wild oats, of which I had had but scant measure, I considered sown. My sense of my own ill-looks became morbid. I hardly looked at a female except my mother, lest she'd think that I "*could suppose*." The old set were mostly married off. Eleanor married the young sailor. People spoke of her as being high-tempered, as being extravagant, spending in fine clothes the money he earned at the risk of his life. I don't know that it made any difference to my feelings. It might. At the time she turned me off, I think I should have married her, knowing she had those faults. But she removed to the city, and by degrees time and absence wore off the edge of my grief. My mother lost part of her little property, and I was obliged to exert myself that she might miss none of her accustomed comforts. She was a good mother, thoughtful and tender, sympathizing not only in my troubles, but in my every-day pursuits, my work, my books, my paintings.

When I was about thirty, Jane Wood

came to live near us. Her mother and young sister came with her. They rented a small house just across the next field from us. Although ours, therefore, might have been considered an infected neighborhood, yet I never supposed myself in the slightest danger, because I had had the disease. Nevertheless, having an abiding sense of my own ugliness, I should not have ventured into the immediate presence of the Woods, *except* on works of necessity and mercy.

The younger sister was taken very ill with the typhus fever. It was customary, in our village, for the neighbors, in such cases, to be very helpful. Mother was with them day and night, and, when she could not go herself, used to send me to see if they wanted anything, for they had no men-folks.

I seldom saw Jane, and when I did, I never looked at her. I mean, I did not look her full in the face. It was to her mother that I made all my offers of assistance.

This habit of shunning the society of all young females, and particularly of the Wood girls, was by no means occasioned by any fears in regard to my own safety. Far from it. I considered myself as one set apart from all mankind, — set apart, and fenced in, by my own personal disadvantages. The thought of my caring for a girl, or of being cared for by a girl, never even occurred to me. "Taboo," so far as I was concerned, was written upon them all. The marriage state I saw from afar off. Beautiful and bright it looked in the distance, like the Promised Land to true believers. Some visions I beheld of its beautiful angels walking in shining robes; strains of its sweet melody were sometimes wafted across the distance; but I might never enter there. It was no land of promise to me. A gulf, dark and impassable, lay between. And beside all this, as I have already intimated, I considered myself out of danger. My life's lesson had been learned. I knew it by heart. What more could be expected of me?

But, after all, we can't go right against

our natures; and it is not the nature of man to look upon the youthful and the elderly female exactly in the same light. The feelings with which they are approached are essentially different, whether he who approaches be seventeen or seventy. Thus, in conversing with the old lady Wood, I was quite at my ease. When the invalid began to get well, I often carried her nice little messes, which my mother prepared, and was generally lucky enough to find Mrs. Wood,—for I always went in at the back-door. She asked me, one day, if I could lend Ellen something to read,—for she was then just about well enough to amuse herself with a book, but not strong enough to work. Now I always had (so my mother said) a kind and obliging way with me, and had, besides, a great pride in my library. I was delighted that anybody wanted to read my books, and hurried home to make a selection.

That very afternoon, I took over an armful. Nobody was in the kitchen; so I sat down to wait. The door of the little keeping-room was open, and I knew by their voices that some great discussion was going on. I tipped over a cricket to make them aware of my presence. The door was opened wide, and Mrs. Wood appeared.

"Now here is Mr. Allen," she exclaimed. "Let us get his opinion."

Then she took me in, where they were holding solemn council over a straw bonnet and various colored ribbons. She introduced me to Ellen, whom I had never before met. She was a merry-looking, black-eyed maiden, and the roses were already blooming out again upon her cheeks. She was very young,—not more than fifteen or sixteen.

"Now, Mr. Allen," said Jane, (she was not so bashful to me as I was to her,) "let us have your opinion upon these trimmings. Remember, though, that pink and blue can't go together."

She turned her face full upon me, and I looked straight into her eyes. I really believe it was the first time I had done so. They were beautifully blue, with

long dark lashes. She had been a little excited by the discussion, and her cheeks were like two roses. A strange boldness came over me.

"How can I remember that," I answered, "when I see in your face that pink and blue *do* go together?"

Never, till within a few years, could I account for this sudden boldness. I have now no doubt that I spoke by what spiritualists call "impression." We were all surprised, and I most of all. Jane laughed, and looked pinker than before. She would as soon have expected a compliment from the town pump, and I felt it.

I knew nothing of bonnets, but I had studied painting, and was a judge of colors. I made a selection, and could see that they were again surprised at my good taste. I then offered my books, spoke of the different authors, turned to what I thought might particularly please them, and, before I knew it, was all aglow with the unusual excitement of conversation. I saw that they were not without cultivation, and that they had a quick appreciation of literary merit.

And thus an acquaintance commenced. I called often, for it seemed a pleasant thing to do. As my excuse, I took with me my books, papers, and all the new publications which reached me. I always thought they appeared very glad to see me.

Being strangers in the place, they saw but little company, and it seemed to be nothing more than my duty to call in now and then in a neighborly way. I talked quite easily; for among books I felt at home. They talked easily, too; for they (I say it in no ill-natured way) were women. They began to consider my frequent calling as a matter of course, and always smiled upon me when I entered. I felt that they congratulated themselves upon finding me out. They had penetrated the ice, and found open sea beyond. I speak of it in this way, because I afterwards overheard Ellen joking her sister about discovering the Northwest Passage to my heart.

This was in the fall of the year, when

the evenings were getting quite long. They were fond of reading, but had not much time for it. I was fond of reading, and had many long evenings at my disposal. It followed, therefore, that I read aloud, while they worked. With the "Pink and Blue" just opposite, I read evening after evening. At first I used to look up frequently, to see how such and such a passage would strike her; but one evening Ellen asked me, in a laughing, half-saucy sort of way, why I didn't look at *her* sometimes to see how *she* liked things. This made me color up; and Jane colored up, too. After that I kept my eyes on my book; but I always knew when she stopped her work and raised her head at the interesting parts, and always hoped she didn't see the red flushes spreading over my face, and always wished, too, that she would look away,—for, somehow, my voice would not go so smoothly.

Those red flushes were to myself most mysterious. Nevertheless, they continued, and even appeared to be on the increase. At first, I felt them only while reading; then, upon entering the room; and at last they began to come before I got across the field. Still I felt no real uneasiness, but, on the contrary, was glad I could be of so much use to the family. Never before was the want of men-folks felt so little by a family of women-folks. I did errands, split kindling, dug "tracks," (*i. e.*, paths in the snow,) and glued broken furniture.

I always thought of Jane as "Pink and Blue." Sometimes I thought from her manner that she would a little rather I wouldn't come so often. I thought she didn't look up at me so pleasantly as she used to at first, and seemed a little stiff; but, as I had a majority in my favor, I continued my visits. I always had one good look at her when I said good-night; but it made the red come, so that I had to hurry out before she saw. It seemed to me that her cheeks then looked pinker than ever, and the two colors, pink and blue, seemed to mingle and float before my eyes all the way home. "Pink and blue,"

"pink and blue." How those two little words kept running in my head, and, I began to fear, in my heart too!—for no sooner would I close my eyes at night than those delicate pink cheeks and blue eyes would appear before me. They haunted my dreams, and were all ready to greet me at waking.

I was completely puzzled. It reminded me of old times. Seemed just like being in love again. Could it be possible that I was liable to a second attack?

One night I took a new book and hurried across the field to the Woods', for I never was easy till I saw "Pink and Blue" face to face; and then,—why, then, I was not at all easy. I felt the red flushes coming long before I reached the house. As soon as I entered the room, I felt that she was missing. I must have looked blank; for Mrs. Wood began to explain immediately, that Jane was not well, and had gone to bed;—nothing serious; but she had thought it better for her not to sit up. I remained and read as usual, but, as it seemed to me, to bare walls. I had become so accustomed to reading with "Pink and Blue" just opposite, to watching for the dropping of her work and the raising of her eyes to my face, that I really seemed on this occasion to be reading to no purpose whatever. I went home earlier than usual, very sober and very full of thought. My mother noticed it, and inquired if they were well at Mrs. Wood's. So I told her about Jane.

That night my eyes were fully opened. I was in love. Yes, the old disease was upon me, and my last state was worse than my first,—just as much so as Jane was superior to Eleanor. The discovery threw me into the greatest distress. Hour after hour I walked the floor, in my own chamber, trying to reason the love from my heart,—but in vain; and at length, tossing myself on the bed, I almost cursed the hour in which I first saw the Woods. I called myself fool, dolt, idiot, for thus running my head a second time into the noose. It may seem strange, but the thought that she might possibly care for me never once occurred to my

mind. Eleanor's words in the sleigh still rang in my ears: "I never thought that anybody so homely and awkward could suppose" — No, I must not "suppose." Once, in the midst of it all, I calmed down, took a light, and, very deliberately walking to the glass, took a complete view of my face and figure,—but with no other effect than to settle me more firmly in my wretchedness. Towards morning I grew calmer, and resolved to look composedly upon my condition, and decide what should be done.

While I was considering whether or not to continue my visits at the Woods', I fell asleep just where I had thrown myself, outside the bed, in overcoat and boots. I dreamed of seeing "Pink and Blue" carried off by some horrid monster, which, upon examination, proved to be myself. The sun shining in my face woke me, and I remembered that I had decided upon nothing. The best thing seemed to be to snap off the acquaintance and quit the place. But then I could not leave my mother. No, I must keep where I was,—and if I kept where I was, I must keep on at the Woods',—and if I kept on at the Woods', I should keep on feeling just as I did, and perhaps—more so. I resolved, finally, to remain where I was, and to take no abrupt step, (which might cause remark,) but to break off my visits gradually. The first week, I could skip one night,—the next, two,—and so on,—using my own judgment about tapering off the acquaintance gradually and gracefully to an imperceptible point. The way appearing plain at last, how that *unloving* might be made easy, I assumed a cheerful air, and went down to breakfast. My mother looked up rather anxiously at my entrance; but her anxiety evidently vanished at sight of my face.

It did not seem to me quite right to forsake the Woods that morning; for some snow had fallen during the night, and I felt it incumbent upon me to dig somewhat about the doors. With my trousers tucked into my boots, I trod a new path across the field. It would have seemed strange not to go in; so I went

in and warmed my feet at the kitchen-fire. Only Mrs. Wood was there; but I made no inquiries. Not knowing what to say, I rose to go; but, just at that minute, the mischievous Ellen came running out of the keeping-room and wanted to know where I was going. Why didn't I come in and see Jane? So I went in to see Jane, saying my prayers, as I went,—that is, praying that I might not grow foolish again. But I did. I don't believe any man could have helped it. She was reclining upon a couch which was drawn towards the fire. I sat down as far from that couch as the size of the room would allow. She looked pale and really ill, but raised her blue eyes when she said good-morning; and then—the hot flushes began to come. She looked red, too, and I thought she had a settled fever. I wanted to say something, but didn't know what. Some things seemed too warm, others too cold. At last I thought,—“Why, *anybody* can say to anybody, ‘How do you do?’” So I said,—

“Miss Wood, how do you do, this morning?”

She looked up, surprised; for I tried hard to stiffen my words, and had succeeded admirably.

“Not very unwell, I thank you, Sir,” she replied; but I knew she was worse than the night before. My situation grew unbearable, and I rose to go.

“Mr. Allen, what do you think about Jane?” said Ellen. “You know about sickness, don't you? Come, feel her pulse, and see if she will have a fever.” And she drew me towards the lounge.

My heart was in my throat, and my face was on fire. Jane flushed up, and I thought she was offended at my presumption. What could I do? Ellen held out to me the little soft hand; but I dared not touch it, unless I asked her first.

“Miss Wood,” I asked, “shall I mind Ellen?”

“Of course you will,” exclaimed Ellen. “Tell him yes, Jane.”

Then Jane smiled and said,—

“Yes, if he is willing.”

And I took her wrist in my thumb and

finger. The pulse was quick and the skin dry and hot. I think I would have given a year's existence to clasp that hand between my own, and to stroke down her hair. I hardly knew how I didn't do it; and the fear that I should made me drop her arm in a hurry, as if it had burned my fingers. Ellen started. I bade them good-morning abruptly, and left the room and the house. "This, then," I thought, as I strode along towards the village, "is the beginning of the ending!"

That evening, I felt in duty bound to go, as a neighbor, to inquire for the sick. I went, but found no one below. When Ellen came down, she said that Jane was quite ill. I remained in the keeping-room all the evening, mostly alone, asked if I could do anything for them, and obtained some commissions for the next day at the village.

Jane's illness, though long, was not dangerous, — at least, not to her. To me it was most perilous, particularly the convalescence; for then I could be of so much use to her! The days were long and spring-like. Wild flowers appeared. She liked them, and I managed that she should never be without a bunch of them. She liked paintings, and I brought over my own portfolio. She must have wondered at the number of violets and roses therein. The readings went on and seemed more delicious than ever. I owned a horse and chaise, and for a whole week debated whether it would be safe for me to take her to drive. But I didn't; for I should have been obliged to hand her in, to help her out, and to sit close beside her all alone. All that could never be done without my betraying myself. But she got well without any drives; and by the latter part of April, when the evenings had become very short, I thought it high time to begin to skip one. I began on Monday. I kept away all day, all the evening, and all the next day. Tuesday evening, just before dark, I took the path across the field. The two girls were at work making a flower-garden. "Pink and Blue" had a spade, and was actually

spading up the ground. I caught it from her hand so quickly that she looked up almost frightened. Her face was flushed with exercise; but her blue eyes looked tired. How I reproached myself for not coming sooner! At dark, I went in with them. We took our accustomed seats, and I read. "Paradise regained" was what I kept thinking of. Once, when I moved my seat, that I might be directly opposite Jane, who was lying on the couch, I thought I saw Ellen and her mother exchange glances. I was suspected, then, — and with all the pains I had taken, too. This rather upset me; and what with my joy at being with Jane, my exertions to hide it, and my mortification at being discovered, my reading, I fear, was far from satisfactory.

The next morning I went early to the flower-garden, and, before anybody was stirring, had it all hoed and raked over, so that no more hard work could be done there. I didn't go in. Thursday night I went again, and again Saturday night. The next week I skipped two evenings, and the next, three, and flattered myself I was doing bravely. Jane never asked me why I came so seldom, but Ellen did frequently; and I always replied that I was very busy. Those were truly days of suffering. Nevertheless, having formed my resolution, I determined to abide by it. God only knew what it cost me. On the beautiful May mornings, and during the long "after tea," which always comes into country-life, I could watch them, watch her, from my window, while the planting, watering, and weeding went on in the flower-garden. I saw them go in at dark, saw the light appear in the keeping-room, and fancied them sitting at their work, wondering, perhaps, that nobody came to read to them.

One day, when I had not been there for three days and nights, I received, while at work in my shop, a sudden summons from home. My mother, the little boy said, was very sick. I hurried home in great agitation. I could not bear the thought that sickness or death should

reach my dear mother. Mrs. Wood met me at the door, to say that a physician had been sent for, but that my mother was relieved and there was no immediate danger. I hurried to her chamber and found—Jane by her bedside. For all my anxiety about my mother, I felt the hot flush spreading over my face. It seemed so good to see her taking care of my mother! In my agitation, I caught hold of her hand and spoke before I thought.

"Oh, Jane," I whispered, "I am so glad you are here!"

Her face turned as red as fire. I thought she was angry at my boldness, or, perhaps, because I called her Jane.

"Excuse me," said I. "I am so agitated about mother that I hardly know what I am about."

When the doctor came, he gave hopes that my mother would recover; but she never did. She suffered little, but grew weaker and weaker every day. Jane was with her day and night; for my mother liked her about her bed better than anybody. Oh, what a strange two weeks were those! My mother was so much to me, how could I give her up? She was the only person on earth who cared for me, and she must die! Yet side by side in my heart with this great grief was the great joy of living, day after day, night after night, under the same roof with Jane. By necessity thrown constantly with her, feeling bound to see that she, too, did not get sick, with watching and weariness,—yet feeling myself obliged to measure my words, to keep up an unnatural stiffness, lest I should break down, and she know all my weakness!

At last all was over,—my mother was dead. It is of no use,—I never can put into words the frenzied state of my feelings at that time. I had not even the poor comfort of grieving like other people. I ground my teeth and almost cursed myself, when the feeling would come that sorrow for my mother's death was mingled with regrets that there was no longer any excuse for my remaining in the same neighborhood with Jane. I

reproached myself with having made my mother's death-bed a place of happiness; for my conscience told me that those two weeks had been, in one sense, the happiest of my life.

By what I then experienced I knew that our connection must be broken off entirely. Half-way work had already been tried too long. Sitting by the dead body of my mother, gazing upon that face which, ever since I could remember, had reflected my own joys and sorrows, I resolved to decide once for all upon my future course. I was without a single tie. In all the wide world, not a person cared whether I lived or died. One part of the wide world, then, was as good for me as another. There was but one little spot where I must not remain; all the rest was free to me. I took the map of the world. I was a little past thirty, healthy, and should probably, accidents excepted, live out the time allotted to man. I divided the land mapped out before me into fifteen portions. I would live two years in each; then, being an old man, I would gradually draw nearer to this forbidden little spot," inquire what had become of the Woods, and settle down in the same little house, patiently to await my summons. My future life being thus all mapped out, I arose with calmness to perform various little duties which yet remained to be done before the funeral could take place.

Beautiful flowers were in the room; a few white ones were at my mother's breast. Jane brought them. She had done everything, and I had not even thanked her. How could I, in that stiff way I had adopted towards her?

My father was buried beneath an elm-tree, at the farthest corner of the garden. I had my mother laid by his side. When the funeral was over, Mrs. Wood and her daughters remained at the house to arrange matters somewhat, and to give directions to the young servant, who was now my only housekeeper. At one time I was left alone with Jane; the others were up stairs. Feeling that any emotion on my part might reasonably be at-

tributed to my affliction, I resolved to thank her for her kindness. I rushed suddenly up to her, and, seizing her hand, pressed it between my own.

"I want to thank you, Jane," I began, "but—I cannot."

And I could not, for I trembled all over, and something choked me so that I could not speak more.

"Oh, don't, Mr. Allen!" she said; and the tone in which she uttered the words startled me.

It seemed as if they came from the very depths of her being. Feeling that I could not control myself, I rushed out and gained my own chamber. What passed there between myself and my great affliction can never be told.

In a week's time all was ready for my departure. I gave away part of the furniture to some poor relations of my father's. My mother's clothing and the silver spoons, which were marked with her maiden name, I locked up in a trunk, and asked Mrs. Wood to take care of it. She inquired where I was going, and I said I didn't know. I didn't, for I was not to decide until I reached Boston. I think she thought my mind was impaired by grief, and it was. I spent the last evening there. They knew I was to start the next forenoon in the stage, and they really seemed very sober. No reading was thought of. Jane had her knitting-work, and Mrs. Wood busied herself about her mending. The witchy little Ellen was quite serious. She sat in a low chair by the fire, sometimes stirring up the coals and sometimes the conversation. Jane appeared restless. I feared she was overwearied with watching and her long attendance on my mother, for her face was pale and she had a headache. She left the room several times. I felt uneasy while she was out; but no less so when she came back,—for there was a strange look about her eyes.

At last I summoned all my courage and rose to depart.

"I will not say good-bye," I said, in a strange, hollow voice; "I will only shake hands, and bid you good-night."

I shook hands with them all,—Jane last. Her hand was as cold as clay. I dared not try to speak, but rushed abruptly from the house. Another long night of misery!

When I judged, from the sounds below stairs, that my little servant had breakfast ready, I went down and forced myself to eat; for I was feeling deathly faint, and knew I needed food. I gave directions for the disposition of some remaining articles, and for closing the house, then walked rapidly towards the public-house in the village, where my trunks had already been carried. I was very glad that I should not have to pass the Woods'. I saw the girls out in their garden just before I left, and took a last long look, but was sorry I did; it did me no good.

I was to go to Boston in the stage, and then take a vessel to New York, whence I might sail for any part of the world. When I arrived at the tavern, the Boston stage was just in, and the driver handed me a letter. It was from the mate of the vessel, saying that its sailing would be delayed two days, and requesting me to take a message from him to his family, who lived in a small village six miles back from what was called the stage-road. I went on horseback, performed my errand, dined with the family, and returned at dark to the inn. After supper, it occurred to me to go to the Woods' and surprise them. I wanted to see just what they were doing, and just how they looked,—just how *she* looked. But a moment's reflection convinced me that I had much better not. But be quiet I could not, and I strolled out of the back-door of the inn, and so into a wide field behind. There was a moon, but swift dark clouds were flying across it, causing alternate light and shadow. I strayed on through field and meadow, hardly knowing whither I went, yet with a half-consciousness that I should find myself at the end by my mother's grave. I felt, therefore, no surprise when I saw that I was approaching, through a field at the back of my garden, the old elm-tree. As I drew

near the grave, the moon, appearing from behind a cloud, showed me the form of a woman leaning against the tree. She wore no bonnet,—nothing but a shawl thrown over her head. Her face was turned from me, but I knew those features, even in the indistinct moonlight, and my heart gave a sudden leap, as I pressed eagerly forward. She turned in affright, half screamed, half ran, then, recognizing me, remained still as a statue.

"Mr. Allen, you here? I thought you were gone," she said, at last.

"Jane, you here?" said I. "You ought not; the night is damp; you will get sick."

Nevertheless, I went on talking, told what had detained me, described my journey and visit, and inquired after her family, as if I had been a month absent. I never talked so easily before; for I knew she was not looking in my face, and forgot how my voice might betray me. I spoke of my mother, of how much she was to me, of my utter loneliness, and even of my plans for the future.

"But I am keeping you too long," I exclaimed, at last; "this evening air is bad; you must go home."

I walked along with her, up through the garden, and along the road towards her house. I did not offer my arm, for I dared not trust myself so near. The evening wind was cool, and I took off my hat to let it blow upon my forehead, for my head was hot and my brain in a whirl. We came to a stop at the gate, beneath an apple-tree, then in full bloom. I think now that my mind at that time was not—exactly sound. The severe mental discipline which I had forced upon myself, the long striving to subdue the strongest feelings of a man's heart, together with my real heart-grief at my mother's death, were enough, certainly, to craze any one. I was crazy; for I only meant to say "Good-bye," but I said, "Good-bye, Jane; I would give the world to stay, but I must go." I thought I was going to take her hand; but, instead of that, I took her face between my

own two hands, and turned it up towards mine. First I kissed her cheeks. "That is for the pink," I said. Then her eyes. "And that is for the blue. And now I go. You won't care, will you, Jane, that I kissed you? I shall never trouble you any more; you know you will never see me again. Good-bye, Jane!"

I grasped her hand tightly and turned away. I thought I was off, but she did not let go my hand. I paused, as if to hear what she had to say. She had hitherto spoken but little; she had no need, for I had talked with all the rapidity of insanity. She tried to speak now, but her voice was husky, and she almost whispered.

"Why do you go?" she asked.

"Because I *must*, Jane," I replied. "I *must* go."

"And *why* must you go?" she asked.

"Oh, Jane, don't ask me why I must go; you wouldn't, if you knew"——

There I stopped. She spoke again. There was a strange tone in her voice, and I could feel that she was trembling all over.

"Don't go, Henry."

Never before had she called me Henry, and this, together with her strong emotion and the desire she expressed for me to stay, shot a bright thought of joy through my soul. It was the very first moment that I had entertained the possibility of her caring for me. I seemed another being. Strange thoughts flashed like lightning across my mind. My resolve was taken.

"Who cares whether I go or stay?" I asked.

"I care," said she.

I took both her hands in mine, and, looking full in her face, said, in a low voice,—

"Jane, *how much* do you care?"

"A whole heart full," she replied, in a voice as low and as earnest as my own.

She was leaning on the fence; I leaned back beside her, for I grew sick and faint, thinking of the great joy that might be coming.

"Jane," said I, solemnly, "you wouldn't marry me, would you?"

"Certainly not," she replied. "How can I, when you have never asked me?"

"Jane," said I, and my voice sounded strange even to myself, "I hope you are not trifling;—you never would dare, did you know the state I am in, that I have been in for—oh, so long! But I can't have hidden all my love. Can't you see how my life almost is hanging upon your answer? Jane, do you love me, and will you be my wife?"

"Henry," she replied, softly, but firmly, "I do love you. I have loved you a long, long time, and I shall be proud to be your wife, if—you think me worthy."

It was more than I could bear. The sleepless nights, the days of almost entire fasting, together with all my troubles, had been too much for me. I was weak in body and in mind.

"Oh, Jane!" was all I could say. Then, leaning my head upon her shoulder, I cried like a child. It didn't seem childish then.

"Oh, but, Henry, I won't, then, if you feel so badly about it," said she, half laughing. Then, changing her tone, she begged me to become calm. But in vain. The barriers were broken down, and the tide of emotion, long suppressed, must gush forth. She evidently came to this conclusion. She stood quiet and silent, and at last began timidly stroking my hair. I shall never forget the first touch of her hand upon my forehead. It soothed me, or else my emotion was spent; for, after a while, I became quite still.

"Oh, Jane," I whispered, "my sorrow I could bear; but this strange happiness overwhelms me. Can it be true? Oh, it is a fearful thing to be so happy! How came you to love me, Jane? You are so beautiful, and I—I am so"—

"You are so good, Henry!" she exclaimed, earnestly,—"too good for me! You are a true-hearted, noble soul, worthy the love of any woman. If you weren't so bashful," she continued, in a lower tone, "I should not say so much; but—do you suppose nobody is happy but

yourself? There is somebody who scarcely more than an hour ago was weeping bitter tears, feeling that the greatest joy of her life was gone forever. But now her joy has returned to her, her heart is glad, she trembles with happiness. Oh, Henry, 'it is a fearful thing to be so happy!'"

I could not answer; so I drew her close up to me. She was mine now, and why should I not press her closely to my heart,—that heart so brimful of love for her? There was a little bench at the foot of the apple-tree, and there I made her sit down by me and answer the many eager questions I had to ask. I forgot all about the dampness and the evening air. She told how her mother had liked me from the first,—how they were informed, by some few acquaintances they had made in the village, of my early disappointment, and also of the peculiar state of mind into which I was thrown by those early troubles; but when she began to love me she couldn't tell. She had often thought I cared for her,—mentioned the day when I found her at my mother's bedside, also the day of the funeral; but so well had I controlled my feelings that she was never sure until that night.

"I trust you will not think me unmaidenly, Henry," said she, looking timidly up in my face. "You won't think worse of me, will you, for—for almost offering myself to you?"

There was but one answer to this, and I failed not to give it. 'T was a very earnest answer, and she drew back a little. Her voice grew lower and lower, while she told how, at my shaking hands the night before, she almost fainted,—how she longed to say "Stay," but dared not, for I was so stiff and cold: how could she say, "Don't go, Mr. Allen; please stay and marry me?"—how she passed a wretched night and day, and walked out at evening to be alone,—how she felt that she could go nowhere but to my mother's grave,—and, finally, how overwhelmed with joy she was when I came upon her so suddenly.

All this she told me, speaking softly and

slowly, for which I was thankful; for I liked to feel the sweet words of healing, dropping one by one upon my heart.

In the midst of our talk, we heard the front-door of the house open.

"They are coming to look for me," said Jane. "You will go in?"

Hand in hand we walked up the pathway. We met Ellen half-way down. She started with surprise at seeing me.

"Why, Mr. Allen!" she exclaimed, "I thought you a hundred miles off. Why, Jane, mother was afraid you had fallen down the well."

She tripped gayly into the house.

"Mother!" she called out,—*"you sent me for one, and I have brought you two."*

Jane and I walked in hand in hand; for I would not let her go. Her mother looked surprised, but well pleased.

"Mrs. Wood," said I, "Jane has asked me to stay, and I am going to."

Nothing more was needed; our faces told the rest.

"Now Heaven be praised," she replied, "that we are still to have you with us! I could not help thinking, that, if you only knew how much we cared for you, you would not have been in such a hurry to leave us." And she glanced significantly towards Jane.

The rest of the evening was spent in the most interesting explanations. I passed the night at the village inn, as I had intended,—passed it, not in sleep, but in planning and replanning, and in trying to persuade myself that "*Pink and Blue*" was my own to keep.

The next day I spent at the Woods'. It was the first really happy day of my life. In the afternoon, I took a long walk with Jane, through green lanes, and orchards white and fragrant with blossoms. In the evening, the family assembled, and we held sweet council together. It was decided unanimously, that, situated as I was, there was no reason for delaying the wedding,—that I should repossess myself

of the furniture I had given away, by giving new in exchange, the old being dearer to both Jane and myself,—and, finally, that our wedding should be very quiet, and should take place as soon as Jane could be got ready. Through it all I sat like one in a dream, assenting to everything, for everything seemed very desirable.

As soon as possible, I reopened my house, and established myself there with the same little servant. It took Jane about a month to get ready, and it took me some years to feel wholly my own happiness.

The old house is still standing; but after Mrs. Wood died, and Ellen was married, we moved into the village; for the railroad came very near us, cutting right through the path "*across the field.*" I had the bodies of my father and mother removed to the new cemetery.

My wife has been to me a lifelong blessing, my heart's joy and comfort. They who have not tried it can never know how much love there is in a woman's heart. The pink still lingers on her cheek, and her blue eye has that same expression which so bewitched me in my younger days. The spell has never been broken. I am an old man and she is an old woman, and, though I don't do it before folks, lest they call us two old fools, yet, when I come in and find her all alone, I am free to own that I do hug and kiss her, and always mean to. If anybody is inclined to laugh, let him just come and see how beautiful she is.

Our sons are away now, and all our daughters are married but one. I'm glad they haven't taken her,—she looks so much as her mother did when I first knew her. Her name is Jane Wood Allen. She goes in the village by the name of Jennie Allen; but I like Jane better,—Jane Wood.

That is a true account of "*How I won my wife.*"

POMEGRANATE-FLOWERS.

THE street was narrow, close, and dark,
And flanked with antique masonry,
The shelving eaves left for an ark
But one long strip of summer sky.
But one long line to bless the eye —
The thin white cloud lay not so high,
Only some brown bird, skimming nigh,
From wings whence all the dew was dry
Shook down a dream of forest scents,
Of odorous blooms and sweet contents,
Upon the weary passers-by.

Ah, few but haggard brows had part
Below that street's uneven crown,
And there the murmurs of the mart
Swarmed faint as hums of drowsy noon.
With voices chiming in quaint tune
From sun-soaked hulls long wharves adown,
The singing sailors rough and brown
Won far melodious renown,
Here, listening children ceasing play,
And mothers sad their well-a-way,
In this old breezy sea-board town.

Ablaze on distant banks she knew,
Spreading their bowls to catch the sun,
Magnificent Dutch tulips grew
With pompous color overrun.
By light and snow from heaven won
Their misty web azaleas spun;
Low lilies pale as any nun,
Their pensile bells rang one by one;
And spicing all the summer air
Gold honeysuckles everywhere
Their trumpets blew in unison.

Than where blood-cored carnations stood
She fancied richer hues might be,
Scents rarer than the purple hood
Curled over in the fleur-de-lis.
Small skill in learned names had she,
Yet whatso wealth of land or sea
Had ever stored her memory,
She decked its varied imagery
Where, in the highest of the row
Upon a sill more white than snow,
She nourished a pomegranate-tree.

Some lover from a foreign clime,
 Some roving gallant of the main,
 Had brought it on a gay spring-time,
 And told her of the nacar stain
 The thing would wear when bloomed again.
 Therefore all garden growths in vain
 Their glowing ranks swept through her brain,
 The plant was knit by subtile chain
 To all the balm of Southern zones,
 The incenses of Eastern thrones,
 The tinkling hem of Aaron's train.

The almond shaking in the sun
 On some high place ere day begin,
 Where winds of myrrh and cinnamon
 Between the tossing plumes have been,
 It called before her, and its kin
 The fragrant savage balaustine
 Grown from the ruined ravelin
 That tawny leopards couch them in;
 But this, if rolling in from seas
 It only caught the salt-fumed breeze,
 Would have a grace they might not win.

And for the fruit that it should bring,
 One globe she pictured, bright and near,
 Crimson, and thoroughly perfuming
 All airs that brush its shining sphere.
 In its translucent atmosphere
 Afrite and Princess reappear, —
 Through painted panes the scattered spear
 Of sunrise scarce so warm and clear, —
 And pulped with such a golden juice,
 Ambrosial, that one cannot choose
 But find the thought most sumptuous cheer.

Of all fair women she was queen,
 And all her beauty, late and soon,
 O'ercame you like the mellow sheen
 Of some serene autumnal noon.
 Her presence like a sweetest tune
 Accorded all your thoughts in one.
 Than last year's alder-tufts in June
 Browner, yet lustrous as a moon
 Her eyes glowed on you, and her hair
 With such an air as princes wear
 She trimmed black-braided in a crown.

A perfect peace prepared her days,
 Few were her wants and small her care,
 No weary thoughts perplexed her ways,
 She hardly knew if she were fair.

Bent lightly at her needle there
In that small room stair over stair,
All fancies blithe and debonair
She deftly wrought on fabrics rare,
All clustered moss, all drifting snow,
All trailing vines, all flowers that blow,
Her dædal fingers laid them bare.

Still at the slowly spreading leaves
She glanced up ever and anon,
If yet the shadow of the eaves
Had paled the dark gloss they put on.
But while her smile like sunlight shone,
The life danced to such blossom blown
That all the roses ever known,
Blanche of Provence, Noisette, or Yonne,
Wore no such tint as this pale streak
That damasked half the rounding cheek
Of each bud great to bursting grown.

And when the perfect flower lay free,
Like some great moth whose gorgeous wings
Fan o'er the husk unconsciously,
Silken, in airy balancings, —
She saw all gay dishevellings
Of fairy flags, whose revellings
Illumine night's enchanted rings.
So royal red no blood of kings
She thought, and Summer in the room
Sealed her escutcheon on their bloom,
In the glad girl's imaginings.

Now, said she, in the heart of the woods
The sweet south-winds assert their power,
And blow apart the snowy snoods
Of trilliums in their thrice-green bower.
Now all the swamps are flushed with dower
Of viscid pink, where, hour by hour,
The bees swim amorous, and a shower
Reddens the stream where cardinals tower.
Far lost in fern of fragrant stir
Her fancies roam, for unto her
All Nature came in this one flower.

Sometimes she set it on the ledge
That it might not be quite forlorn
Of wind and sky, where o'er the edge,
Some gaudy petal, slowly borne,
Fluttered to earth in careless scorn,
Caught, for a fallen piece of morn
From kindling vapors loosely shorn,
By urchins ragged and wayworn,

Who saw, high on the stone embossed,
A laughing face, a hand that tossed
A prodigal spray just freshly torn.

What wizard hints across them fleet, —
These heirs of all the town's thick sin,
Swift gypsies of the tortuous street,
With childhood yet on cheek and chin!
What voices dropping through the din
An airy murmuring begin, —
These floating flakes, so fine and thin,
Were they and rock-laid earth akin?
Some woman of the gods was she,
The generous maiden in her glee?
And did whole forests grow within?

A tissue rare as the hoar-frost,
White as the mists spring dawns condemn,
The shadowy wrinkles round her lost,
She wrought with branch and anadem,
Through the fine meshes netting them,
Pomegranate-flower and leaf and stem.
Dropping it o'er her diadem
To float below her gold-stitched hem,
Some duchess through the court should sail
Hazed in the cloud of this white veil,
As when a rain-drop mists a gem.

Her tresses once when this was done,
—Vanished the skein, the needle bare, —
She dressed with wreaths vermillion
Bright as a trumpet's dazzling blare.
Nor knew that in Queen Dido's hair,
Loading the Carthaginian air,
Ancestral blossoms flamed as fair
As any ever hanging there.
While o'er her cheek their scarlet gleam
Shot down a vivid varying beam,
Like sunshine on a brown-bronzed pear.

And then the veil thrown over her,
The vapor of the snowy lace
Fell downward, as the gossamer
Tossed from the autumn winds' wild race
Falls round some garden-statue's grace.
Beneath, the blushes on her face
Fled with the Naiad's shifting chase
When flashing through a watery space.
And in the dusky mirror glanced
A splendid phantom, where there danced
All brilliances in paler trace.

A spicery of sweet perfume,
As if from regions rankly green
And these rich hoards of bud and bloom,
Lay every waft of air between.
Out of some heaven's unfancied screen
The gorgeous vision seemed to lean.
The Oriental kings have seen
Less beauty in their dais-queen,
And any limner's pencil then
Had drawn the eternal love of men,
But twice Chance will not intervene.

For soon with scarce a loving sigh
She lifts it off half unaware,
While through the clinging folds held high,
Arachnean in a silver snare
Her rosy fingers nimbly fare,
Till gathered square with dainty care.
But still she leaves the flowery flare
— Such as Dame Venus' self might wear —
Where first she placed them, since they blow
More bounteous color hanging so,
And seem more native to the air.

Anon the mellow twilight came
With breath of quiet gently freed
From sunset's felt but unseen flame.
Then by her casement wheeled in speed
Strange films, and half the wings indeed
That steam in rainbows o'er the mead,
Now magnified in mystery, lead
Great revolutions to her heed.
And leaning out, the night o'erhead,
Wind-tossed in many a shining thread,
Hung one long scarf of glittering brede.

Then as it drew its streamers there,
And furled its sails to fill and flaunt
Along fresh firmaments of air
When ancient morn renewed his chant, —
She sighed in thinking on the plant
Drooping so languidly aslant;
Fancied some fierce noon's forest-haunt
Where wild red things loll forth and pant,
Their golden antlers wave, and still
Sigh for a shower that shall distil
The largess gracious nights do grant.

The oleanders in the South
Drape gray hills with their rose, she thought,
The yellow-tasselled broom through drouth
Bathing in half a heaven is caught.

Jasmine and myrtle flowers are sought
 By winds that leave them fragrance-fraught.
 To them the wild bee's path is taught,
 The crystal spheres of rain are brought,
 Beside them on some silent spray
 The nightingales sing night away,
 The darkness woos them in such sort.

But this, close shut beneath a roof,
 Knows not the night, the tranquil spell,
 The stillness of the wildwood ouphe,
 The magic dropped on moor and fell.
 No cool dew soothes its fiery shell,
 Nor any star, a red sardel,
 Swings painted there as in a well.
 Dyed like a stream of muscadel
 No white-skinned snake coils in its cup
 To drink its soul of sweetness up,
 A honeyed hermit in his cell.

No humming-bird in emerald coat,
 Shedding the light, and bearing fain
 His ebon spear, while at his throat
 The ruby corselet sparkles plain,
 On wings of misty speed astain
 With amber lustres, hangs amain,
 And tireless hums his happy strain;
 Emperor of some primeval reign,
 Over the ages sails to spill
 The luscious juice of this, and thrill
 Its very heart with blissful pain.

As if the flowers had taken flight
 Or as the crusted gems should shoot
 From hidden hollows, or as the light
 Had blossomed into prisms to flute
 Its secret that before was mute,
 Atoms where fire and tint dispute,
 No humming-birds here hunt their fruit.
 No burly bee with banded suit
 Here dusts him, no full ray by stealth
 Sifts through it stained with warmer wealth
 Where fair fierce butterflies salute.

Nor night nor day brings to my tree,
 She thought, the free air's choice extremes,
 But yet it grows as joyfully
 And floods my chamber with its beams,
 So that some tropic land it seems
 Where oranges with ruddy gleams,
 And aloes, whose weird flowers the creams
 Of long rich centuries one deems,

Wave through the softness of the gloom, —
And these may blush a deeper bloom
Because they gladden so my dreams.

The sudden street-lights in moresque
Broke through her tender murmuring,
And on her ceiling shades grotesque
Reeled in a bacchanalian swing.
Then all things swam, and like a ring
Of bubbles welling from a spring
Breaking in deepest coloring
Flower-spirits paid her minst'ring.
Sleep, fusing all her senses, soon
Fanned over her in drowsy rune
All night long a pomegranate wing.

THE PRAIRIE STATE.

ON the head-waters of the Wabash, near Lake Erie, we first meet with those grassy plains to which the early French explorers of the West gave the name of Prairies. In Southern Michigan, they become more frequent; in the State of Indiana, still more so; and when we arrive in Illinois, we find ourselves in the Prairie State proper, three-quarters of its territory being open meadow, or prairie. Southern Wisconsin is partly of this character, and, on crossing the Mississippi, most of the surface of both Iowa and Minnesota is also prairie.

Illinois, with little exception, is one vast prairie, — dotted, it is true, with groves, and intersected with belts of timber, but still one great open plain. This State, then, being the type of the prairie lands, a sketch of its history, political, physical, and agricultural, will tolerably well represent that of the whole prairie region.

The State of Illinois was originally part of Florida, and belonged to Spain, by the usual tenure of European title in the sixteenth century, when the King of France or Spain was endowed by His Holiness with half a continent; the rights

of the occupants of the soil never for a moment being considered. So the Spaniard, in 1541, having planted his flag at the mouth of the Mississippi, became possessed of the whole of the vast region watered by its tributary streams, and Illinois and Wisconsin became Spanish colonies, and all their native inhabitants vassals of His Most Catholic Majesty. The settlement of the country was, however, never attempted by the Spaniards, who devoted themselves to their more lucrative colonies in South America.

The French missionaries and fur-traders found their way from Canada into these parts at an early day; and in 1667 Robert de la Salle made his celebrated explorations, in which he took possession of the territory of Illinois in behalf of the French crown. And here we may remark, that the relations of the Jesuits and early explorers give a delightful picture of the native inhabitants of the prairies. Compared with their savage neighbors, the Illini seem to have been a favored people. The climate was mild, and the soil so fertile as to afford liberal returns even to their rude husbandry; the rivers and lakes abounded in fish and

fowl; the groves swarmed with deer and turkeys,—bustards the French called them, after the large gallinaceous bird which they remembered on the plains of Normandy; and the vast expanse of the prairies was blackened by herds of wild cattle, or buffaloes. The influence of this fair and fertile land seems to have been felt by its inhabitants. They came to meet Father Marquette, offering the calumet, brilliant with many-colored plumes, with the gracious greeting,—“How beautiful is the sun, O Frenchman, when thou comest to us! Thou shalt enter in peace all our dwellings.” A very different reception from that offered by the stern savages of Jamestown and Plymouth to John Smith and Miles Standish! So, in peace and plenty, remained for many years this paradise in the prairies.

About the year 1700, Illinois was included in Louisiana, and came under the sway of Louis XIV., who, in 1712, presented to Anthony Crozat the whole territory of Louisiana, Illinois, and Wisconsin,—a truly royal gift!

The fortunate recipient, however, having spent vast sums upon the territory without any returns, surrendered his grant to the crown a few years afterwards; and a trading company, called the Company of the Indies, was got up by the famous John Law, on the basis of these lands. The history of that earliest of Western land-speculations is too well known to need repetition; suffice it to say, that it was conducted upon a scale of magnificence in comparison with which our modern imitations in 1836 and 1856 were feeble indeed. A monument of it stood not many years ago upon the banks of the Mississippi, in the ruins of Fort Chartres, which was built by Law when at the height of his fortune, at a cost of several millions of livres, and which toppled over into the river in a recent inundation.

In 1759 the French power in North America was broken forever by Wolfe, upon the Plains of Abraham; and in 1763, by the Treaty of Paris, all the French possessions upon this continent

were ceded to England, and the territory of the Illinois became part of the British empire.

Pontiac, the famous Ottawa chief, after fighting bravely on the French side through the war, refused to be transferred with the territory; he repaired to Illinois, where he was killed by a Peoria Indian. His tribe, the Ottawas, with their allies, the Pottawatomies and Chippewas, in revenge, made war upon the Peorias and their confederates, the Kaskaskias and Cahokias, in which contest these latter tribes were nearly exterminated.

At this time, the French population of Illinois amounted to about three thousand persons, who were settled along the Mississippi and Illinois rivers, where their descendants remain to this day, preserving a well-defined national character in the midst of the great flood of Anglo-American immigration which rolls around them.

Illinois remained under British rule till the year 1778, when George Rogers Clarke, with four companies of Virginia rangers, marched from Williamsburg, a distance of thirteen hundred miles, through a hostile wilderness, captured the British posts of Kaskaskia and Cahokia, and annexed a territory larger than Great Britain to the new Republic. Many of Colonel Clarke's rangers, pleased with the beauty and fertility of the country, settled in Illinois; but the Indians were so numerous and hostile, that the settlers were obliged to live in fortified stations, or block-houses, and the population remained very scanty for many years.

In 1809 Illinois was made into a separate Territory, and Ninian Edwards appointed its first Governor.

During the War of 1812, Tecumseh, an Indian chief of remarkable ability, endeavored to form a coalition of all the tribes against the Americans, but with only partial success. He inflicted severe losses upon them, but was finally defeated and slain at the Battle of the Thames, leaving behind him the reputation of being the greatest hero and noblest patriot of his race.

In 1818, Illinois, then having a population of about forty-five thousand, was admitted into the Union. The State was formed out of that territory which by the Ordinance of 1787 was dedicated to freedom; but there was a strong party in the State who wished for the introduction of slavery, and in order to effect this it was necessary to call a convention to amend the Constitution. On this arose a desperate contest between the two principles, and it ended in the triumph of freedom. Among those opposed to the introduction of slavery were Morris Birkbeck, Governor Coles, David Blackwell, Judge Lockwood, and Daniel P. Cook. It was a fitting memorial of the latter, that the County of Cook, containing the great commercial city of Chicago, should bear his name. The names of the pro-slavery leaders we will leave to oblivion.

In 1824 the lead mines near Galena began to be worked to advantage, and thousands of persons from Southern Illinois and Missouri swarmed thither. The Illinoisans ran up the river in the spring, worked in the mines during the summer, and returned to their homes down the river in the autumn,—thus resembling in their migrations the fish so common in the Western waters, called the Sucker. It was also observed that great hordes of uncouth ruffians came up to the mines from Missouri, and it was therefore said that she had vomited forth all her worst population. Thenceforth the Missourians were called "Pukes," and the people of Illinois "Suckers."

From 1818 to 1830, the commerce of the State made but small progress. At this time, there were one or two small steamboats upon the Illinois River, but most of the navigation was carried on in keel-boats. The village merchants were mere retailers; they purchased no produce, except a few skins and furs, and a little beeswax and honey. The farmers along the rivers did their own shipping,—building flat-boats, which, having loaded with corn, flour, and bacon, they would float down to New Orleans, which was the only market accessible to them. The

voyage was long, tedious, and expensive, and when the farmer arrived, he found himself in a strange city, where all were combined against him, and often he was cheated out of his property,—returning on foot by a long and dangerous journey to a desolate farm, which had been neglected during his absence. Thus two crops were sometimes lost in taking one to market.

The manners and customs of the people were simple and primitive. The costume of the men was a raccoon-skin cap, linsey hunting-shirt, buck-skin leggings and moccasins, with a butcher-knife in the belt. The women wore cotton or woollen frocks, striped with blue dye and Turkey-red, and spun, woven, and made with their own hands; they went barefooted and bareheaded, except on Sundays, when they covered the head with a cotton handkerchief. It is told of a certain John Grammar, for many years a representative from Union County, and a man of some note in the State councils, though he could neither read nor write, that in 1816, when he was first elected, lacking the necessary apparel, he and his sons gathered a large quantity of hazel-nuts, which they took to the nearest town and sold for enough blue strouding to make a suit of clothes. The pattern proved to be scanty, and the women of the household could only get out a very bob-tailed coat and leggings. With these Mr. Grammar started for Kaskaskia, the seat of government, and these he continued to wear till the passage of an appropriation bill enabled him to buy a civilized pair of breeches.

The distinctions in manners and dress between the higher and lower classes were more marked than at present; for while John Grammar wore blue strouding, we are told that Governor Edwards dressed in fine broadcloth, white-topped boots, and a gold-laced cloak, and rode about the country in a fine carriage, driven by a negro.

In those days justice was administered without much parade or ceremony. The judges held their courts mostly in log

houses or in the bar-rooms of taverns, fitted up with a temporary bench for the judge, and chairs for the lawyers and jurors. At the first Circuit Court in Washington County, held by Judge John Reynolds, the sheriff, on opening the court, went out into the yard, and said to the people, "Boys, come in; our John is going to hold court." The judges were unwilling to decide questions of law, preferring to submit everything to the jury, and seldom gave them instructions, if they could avoid it. A certain judge, being ambitious to show his learning, gave very pointed directions to the jury, but they could not agree on a verdict. The judge asked the cause of their difference, when the foreman answered with great simplicity,—"Why, Judge, this 'ere 's the difficulty: the jury wants to know whether that 'ar what you told us, when we went out, was r'aly the law, or whether it was on'y jist your notion."

In the spring of 1831, Black Hawk, a Sac chief, dissatisfied with the treaty by which his tribe had been removed across the Mississippi, recrossed the river at the head of three or four hundred warriors, and drove away the white settlers from his old lands near the mouth of the Rock River. This was considered an invasion of the State, and Governor Reynolds called for volunteers. Fifteen hundred men answered the summons, and the Indians were driven out. The next spring, however, Black Hawk returned with a larger force, and commenced hostilities by killing some settlers on Indian Creek, not far from Ottawa. A large force of volunteers was again called out, but in the first encounter the whites were beaten, which success encouraged the Sacs and Foxes so much that they spread themselves over the whole of the country between the Mississippi and the Lake, and kept up a desultory warfare for three or four months against the volunteer troops. About the middle of July, a body of volunteers under General Henry of Illinois pursued the Indians into Wisconsin, and by forced marches brought them to action near the Mississippi, before the Unit-

ed States troops, under General Atkinson, could come up. The Indians fought desperately, but were unable to stand long before the courage and superior numbers of the whites. They escaped across the river with the loss of nearly three hundred, killed in the action, or drowned in the retreat. The loss of the Illinois volunteers was about thirty, killed and wounded.

This defeat entirely broke the power of the Sacs and Foxes, and they sued for peace. Black Hawk, and some of his head men, were taken prisoners, and kept in confinement for several months, when, after a tour through the country, to show them the numbers and power of the whites, they were set at liberty on the west side of the Mississippi. In 1840 Black Hawk died, at the age of eighty years, on the banks of the great river which he loved so well.

After the Black-Hawk War, the Indian title being extinguished, and the country open to settlers, Northern Illinois attracted great attention, and increased wonderfully in wealth and population.

In 1830, the population of the State amounted to 157,445; in 1840, to 476,183; in 1850, to 851,470; in 1860, to 1,719,496.

Situated in the centre of the United States, the State of Illinois extends from 37° to 42° 30' N. latitude, and from 10° 47' to 14° 26' W. longitude from Washington. The State is 378 miles long from North to South, and 212 miles broad from East to West. Its area is computed at 55,408 square miles, or 35,459,200 acres, less than two millions of which are called swamp lands, the remaining thirty-three millions being tillable land of unsurpassed fertility.

The State of Illinois forms the lower part of that slope which embraces the greater part of Indiana, and of which Lake Michigan, with its shores, forms the upper part. At the lowest part of this slope, and of the State, is the city of Cairo, situated about 350 feet above the level of the Gulf of Mexico, at the confluence of the Ohio and the Mississippi;

hence, the highest place in Illinois being only 800 feet above the level of the sea, it will appear that the whole State, though containing several hilly sections, is a pretty level plain, being, with the exception of Delaware and Louisiana, the flattest country in the Union.

The State contains about twenty-five considerable streams, and brooks and rivulets innumerable. There are no large lakes within its borders, though it has some sixty miles of Lake Michigan for its boundary on the east. Small clear lakes and ponds abound, particularly in the northern portion of the State.

As to the quality of the soil, Illinois is divided as follows:—

First, the alluvial land on the margins of the rivers, and extending back from half a mile to six or eight miles. This soil is of extraordinary fertility, and, wherever it is elevated, makes the best farming land in the State. Where it is low, and exposed to inundations, it is very unsafe to attempt its cultivation. The most extensive tract of this kind is the so-called American Bottom, which received this name when it was the western boundary of the United States. It extends from the junction of the Kaskaskia and Mississippi, along the latter, to the mouth of the Missouri, containing about 288,000 acres.

Secondly, the table-land, fifty to a hundred feet higher than the alluvial; it consists principally of prairies, which, according to their respectively higher or lower situations, are either dry or marshy.

Thirdly, the hilly sections of the State, which, consisting alternately of wood and prairie, are not, on the whole, as fertile as either the alluvial or the table-land.

There are no mountains in Illinois; but in the southern as well as the northern part, there are a few hills. Near the banks of the principal rivers the ground is elevated into bluffs, on which may be still found the traces left by water, which was evidently once much higher than it now is; whence it is inferred, that, where the fertile plains of Illinois now extend, there must once have been a vast sheet

of water, the mud deposited by which formed the soil, thus accounting for the great fertility of the prairies.

As we have said, the entire area of Illinois seems at one period to have been an ocean-bed, which has not since been disturbed by any considerable upheaval. The present irregularities of the surface are clearly traceable to the washing out and carrying away of the earth. The Illinois River has washed out a valley about two hundred and fifty feet deep, and from one and a half to six miles wide. The perfect regularity of the beds of mountain limestone, sandstone, and coal, as they are found protruding from the bluffs on each side of this valley, on the same levels, is pretty conclusive evidence that the valley itself owes its existence to the action of water. That the channels of the rivers have been gradually sunken, we may distinctly see by the shores of the Upper Mississippi, where are walls of rock, rising perpendicularly, which extend from Lake Pepin to below the mouth of the Wisconsin, as if they were walls built of equal height by the hand of man. Wherever the river describes a curve, walls may be found on the convex side of it.

The upper coal formation occupies three-fifths of the State, commencing at 41° 12' North latitude, where, as also along the Mississippi, whose banks it touches between the places of its junction with the Illinois and Missouri rivers, it is inclosed by a narrow layer of calcareous coal. The shores of Lake Michigan, and that narrow strip of land, which, commencing near them, runs along the northern bank of the Illinois towards its southwestern bend, until it meets Rock River at its mouth, belong to the Devonian system. The residue of the northern part of the State consists of Silurian strata, which, containing the rich lead mines of Galena in the north-west corner of the State, rise at intervals into conical hills, giving the landscape a character different from that of the middle or southern portion. Scattered along

the banks of rivers, and in the middle of prairies, are frequently found large masses of granite and other primitive rocks. Since the nearest beds of primitive rocks first appear in Minnesota and the northern part of Wisconsin, their presence here can be accounted for only by assuming that at the time this region was covered with water they were floated down from the North, inclosed and supported in masses of ice, which, melting, allowed the rocks to sink to the bottom. A still further proof of the presence of the ocean here in former times is to be found in the sea-shells which occur upon many of the higher knolls and bluffs west of the Mississippi in Iowa.

Illinois contains probably more coal than any other State in the Union. It is mined at a small depth below the surface, and crops out upon the banks of most of the streams in the middle of the State. These mines have been very imperfectly worked till within a few years; but it is found, that, as the work goes deeper, the quality of the coal improves, and in some of the later excavations is equal to the best coals of Ohio and Pennsylvania, and will undoubtedly prove a source of immense wealth to the State.

The two northwestern counties of the State form a part of the richest and most extensive lead region in the world. During the year 1855, the product of these mines, shipped from the single port of Galena, was 430,365 pigs of lead, worth \$1,732,219.02.

Copper has been found in large quantities in the northern counties, and also in the southern portion of the State. Some of the zinc ores are found in great quantities at the lead mines near Galena, but have not yet been utilized. Silver has been found in St. Clair County, whence Silver Creek has derived its name. It is said that in early times the French sunk a shaft here, from which they obtained large quantities of the metal. Iron is found in many parts of the State, and the ores have been worked to considerable extent.

Among other valuable mineral prod-

ucts may be mentioned porcelain and potter's clay, fire clay, fuller's earth, limestone of many varieties, sandstone, marble, and salt springs.

Illinois has an average temperature, which, if compared with that of Europe, corresponds to that of Middle Germany; its winters are more severe than those of Copenhagen, and its summers as warm as those of Milan or Palermo. Compared with other States of the Union, Northern Illinois possesses a temperature similar to that of Southern New York, while the temperature of Southern Illinois will not differ much from that of Kentucky or Virginia. By observations of the thermometer during twenty years, in the southern part of the State, on the Mississippi, the mercury, once in that period, fell to 25°, and four times it rose above 100°, Fahrenheit.

The prevailing winds are either western or southeastern. The severest storms are those coming from the west, which traverse the entire space between the Rocky Mountains and the Atlantic coast in forty-eight hours.

There are on an average eighty-nine rainy days in the year; the quantity of rain falling amounts to forty-two inches, — the smallest amount being in January, and the largest in June. The average number of thunder-storms in a year is forty-nine; of clear days, one hundred and thirty-seven; of changeable days, one hundred and eighty-three; and of days without sunshine, forty-five.

The vegetation of the State forms the connecting link between the Flora of the Northeastern States and that of the Upper Mississippi, — exhibiting, besides the plants common to all the States lying between the Mississippi and the Atlantic Ocean, such as are, properly speaking, natives of the Western prairies, not being found east of the Alleghany Mountains. Immense grassy plains, interlaced with groves, which are found also along the watercourses, cover two-thirds of the entire area of the State in the North,

while the southern part is garnished with heavy timber.

No work which we have seen gives so good an account of the Flora of the prairies as the one by Frederick Gerhard, called "Illinois as it is." We have been indebted to this work for a good deal of valuable matter, and shall now make some further extracts from it.

"Before we finally turn our backs on the last scattered houses of the village, we find both sides of the road lined with ugly worm-fences, which are overtopped by the various species of *Helianthus*, *Thistles*, *Biennial Gaura*, and the Illinoisian *Bell-flower* with cerulean blossoms, and other tall weeds. Here may also be found the coarse-haired *Asclepias tuberosa*, with fiery red umbels, the strong-scented *Monarda fistulosa*, and an umbelliferous plant, the grass-like, spiculated leaves of which recall to mind the Southern Agaves, the *Eryngo*. Among these children of Nature rises the civilized plant, the Indian Corn, with its stalks nearly twelve feet high."

"Having now arrived at the end of the cultivated lands, we enter upon the dry prairies, extending up the bluffs, where we meet the small vermilion Sorrel (*Rumex acetosella*) and Mouse-ear, which, however, do not reside here as foreigners, but as natives, like many other plants that remind the European of his native country, as, for instance, the Dandelion (*Taraxacum officinale*); a kind of Rose, (*Rosa lucida*), with its sweet-scented blossoms, has a great predilection for this dry soil. With surprise we meet here also with many plants with hairy, greenish-gray leaves and stalk-covers, as, for instance, the *Onosmodium molle*, *Hieracium longipilum*, *Pycnanthemum pilosum*, *Chrysopsis villosa*, *Amorpha canescens*, *Tephrosia virginiana*, *Lithospermum canescens*; between which the immigrated Mullein (*Verbascum thapsus*) may be found. The pebbly fragments of the entire slope, which during spring-time were sparingly covered with dwarfish herbs, such as the *Androsace occidentalis*, *Draba Caroliniana*, *Plantago Virginica*, *Scu-*

tellaria parvula, are now crowded with plants of taller growth and variegated blossoms. *Rudbeckia hirta*, with its numerous radiating blossoms of a lively yellow, and the closely allied *Echinacea purpurea*, whose long purple rays hang down from a ruddy hemispherical disc, are the most remarkable among plants belonging to the genus *Compositae*, which blossom early in summer; in the latter part of summer follow innumerable plants of the different species, *Liatris*, *Vernonia*, *Aster*, *Solidago*, *Helianthus*, etc."

"We approach a sinuous chasm of the bluffs, having better soil and underwood, which, thin at first, increases gradually in density. Low bushes, hardly a foot high, are formed by the American Thistle, (*Ceanothus Americanus*), a plant whose leaves were used instead of tea, in Boston, during the Revolution. Next follow the Hazel-bush, (*Corylus Americana*), the fiery-red *Castilleja coccinea*, and the yellow Canadian Louse-wort; the *Dipteracanthus strepens*, with great blue funnel-shaped blossoms, and the *Gerardia pedicularia*, are fond of such places; and where the bushes grow higher, and the *Rhus glabra*, *Zanthoxylum Americanum*, *Ptelea trifoliata*, *Staphylea trifolia*, together with *Ribes-Rubus*, *Pyrus*, *Cornus*, and *Crataegus*, form an almost impenetrable thicket, surrounded and garlanded by the round-leaved, rough Bindweed, (*Smilax rotundifolia*), and *Dioscorea villosa*, the Climbing Rose, (*Rosa setigera*), *Celastrus scandens*, remarkable for its beautiful red fruits, *Clematis Virginiana*, *Polygonum*, *Convolvulus*, and other vines, these weedy herbs attempt to overtop the bushes."

"We now enter upon the illimitable prairie which lies before us, the fertile prairie, in whose undulating surface the moisture is retained; this waits for cultivation, and will soon be deprived of its flowery attire, and bear plain, but indispensable grain. Those who have not yet seen such a prairie should not imagine it like a cultivated meadow, but rather a heaving sea of tall herbs and plants, decking it with every variety of color.

"In the summer, the yellow of the large *Compositæ* will predominate, intermingled with the blue of the *Tradescantias*, the fiery red of the Lilies, (*Lilium Philadelphicum* and *Lilium Canadense*), the purple of the Phlox, the white of the *Cacalia tuberosa*, *Melanthium Virginicum*, and the umbelliferous plants. In spring, small-sized plants bloom here, such as the Anemone, with its blue and white blossoms, the Palmated Violet, the *Ranunculus*, which are the first ornaments of the prairies in spring; then follow the Esculent Sea-Onion, *Pentalophus longiflorus*, *Lithospermum hirtum*, *Cynthia Virginica*, and *Baptisia leucophæa*. As far as the eye reaches, no house nor tree can be seen; but where civilization has come, the farmer has planted small rows of the quickly growing Black Acacia, which affords shelter from the sun to his cattle and fuel for his hearth."

"We now enter the level part of the forest, which has a rich black soil. Great sarmentous plants climb here up to the tops of the trees: wild Grapes, the climbing, poisonous Sumach, (*Rhus toxicodendron*), and the vine-like Cinque-foil, which transforms withered, naked trunks into green columns, Bignonias, with their brilliant scarlet trumpet-flowers, are the most remarkable. The *Thuja occidentalis*, which may be met with in European gardens, stands in mournful solitude on the margins of pools; here and there an isolated Cedar, (*Juniperus Virginiana*), and the low Box-tree, (*Taxus Canadensis*), are in Illinois the only representatives of the evergreens, forests of which first appear in the northern part of Wisconsin and Minnesota."

"Flowers of the most brilliant hues bedeck the rivers' banks; above all, the *Lobelia cardinalis* and *Lobelia syphilitica*, of the deepest carmine and cerulean tinge, the yellow *Cassia Marilandica*, and the delicate *Rosa blanda*, a rose without thorns; also the *Scrophularia nodosa*."

"On the marshy ground thrive the *Iris versicolor*, *Asclepias incarnata*, the Primrose-tree, Liver-wort, the tall *Physostegia Virginiana*, with rosy-red blossoms, and

the *Helenium autumnale*, in which the yellow color predominates. In spring, the dark violet blossom of the *Amorpha fruticosa* diffuses its fragrance."

"Entering a boat on the river, where we cannot touch the bottom with the oar, we perceive a little white flower waving to and fro, supported by long spiral halms between straight, grass-like leaves. This is the *Vallisneria spiralis*, a remarkable plant, which may be also met with in Southern Europe, especially in the Canal of Languedoc, and regarding the fructification of which different opinions prevail."

"Nearer to the land, we observe similar grass-like leaves, but with little yellow stellated flowers: these belong to the order of *Schollera graminea*. Other larger leaves belong to the Amphibious Polygony, and different species of the *Potamogeton*, the ears of whose blossoms rise curiously above the surface of the water. Clearing our way through a row of tall swamp weeds, *Zizania aquatica*, *Scirpus lacustris*, *Scirpus pungens*, among which the white flowers of *Sparganium ramosum* and *Sagittaria variabilis* are conspicuous, we steer into a large inlet entirely covered with the broad leaves of the *Nymphæa odorata* and the *Nelumbium luteum*, of which the former waves its beautiful flower on the surface of the river, while the latter, the queen, in fact, of the waters, proudly raises her magnificent crown upon a perpendicular foot-stalk. On the opposite bank, the evening breeze lifts the triangular leaves and rosy-red flowers of the Marsh-Mallow, overhung by Gray Willows and the Silver-leaved Maple and the Red Maple, on which a flock of white herons have alighted."

In all the rivers and swamps of the Northwest grows the Wild Rice, (*Zizania aquatica*), a plant which was formerly very important to the Indians as food, and now attracts vast flocks of water-fowl to feed upon it in the season. In autumn the squaws used to go in their canoes to these natural rice-fields, and, bending the tall stalks over the gunwale,

beat out the heads of grain with their paddles into the canoe. It is mentioned among the dainties at Hiawatha's wedding-feast:—

“Haunch of deer, and hump of bison,
Yellow cakes of the Mondamin,
And the wild rice of the river.”

The Fruits of the forest are Strawberries, Blackberries, Raspberries, Gooseberries, in some barren spots Whortleberries, Mulberries, Grapes, Wild Plums and Cherries, Crab-Apples, the Persimmon, Pawpaw, Hickory-nuts, Hazel-nuts, and Walnuts.

The Timber-trees are,—of the Oaks, *Quercus alba*, *Quercus macrocarpa*, *Quercus tinctoria*, *Quercus imbricaria*,—Hard and Soft Maples,—and of the Hickories, *Carya alba*, *Carya tomentosa*, and *Carya amara*. Other useful timber-trees are the Ash, Cherry, several species of Elm, Linden, and Ironwood (*Carpinus Americana*).

Of Medicinal Plants, we find *Cassia Marilandica*, *Polygala Senega*, *Sanguinaria Canadensis*, *Lobelia inflata*, *Phytolacca decandra*, *Podophyllum peltatum*, *Sassafras officinale*.

Various species of the Vine are native here, and the improved varieties succeed admirably in the southern counties.

The early travellers in this region mention the great herds of wild cattle which roamed over the prairies in those times, but the last Buffalo on the east side of the Mississippi was killed in 1832; and now the hunter who would see this noble game must travel some hundreds of miles west, to the head-waters of the Kansas or the Platte. The Elk, which was once so common in Illinois, has also receded before the white man, and the Deer is fast following his congener. On the great prairies south of Chicago, where, fifteen years ago, one might find twenty deer in a day's tramp, not one is now to be seen. Two species of Hare occur here, and several Tree Squirrels, the Red, Black, Gray, Mottled, and the Flying; besides these, there are two or three which

live under ground. The Beaver is nearly or quite extinct, but the Otter remains, and the Musk-Rat abounds on all the river-banks and marshes.

Of carnivorous animals, we have the Panther and Black Bear in the wooded portions of the State, though rare; the Lynx, the Gray and Black Wolf, and the Prairie Wolf; the Skunk, the Badger, the Woodchuck, the Raccoon, and, in the southern part of the State, the Opossum.

Mr. Lapham of Wisconsin has published a list of the birds of that State, which will also answer for Northern Illinois. He enumerates two hundred and ninety species, which, we think, is below the number which visit the central parts of Illinois. From the central position of this State, most of the birds of the United States are found here at one season or another. For instance, among the rapacious birds, we have the three Eagles which visit America, the White-Headed, the Washington, and the Golden or Royal Eagle. Of Hawks and Falcons, fourteen or fifteen species, among which are the beautiful Swallow-tailed Hawk, and that noble falcon, the Peregrine. Ten or twelve Owls, among which, as a rare visitor, we find the Great Gray Owl, (*Syrnium cinereum*.) and the Snowy Owl, which is quite common in the winter season on the prairies, preying upon grouse and hares. Of the Vultures, we have two, as summer visitors, the Turkey-Buzzard and the Black Vulture. Of omnivorous birds, sixteen or eighteen species, among which is the Raven, which here takes the place of the Crow, the two species not being able to live together, as the stronger robber drives away the weaker. Of the insectivorous birds, some sixty or seventy species are found here, among which is the Mocking-Bird, in the middle and southern districts. Thirty-five to forty species of granivorous birds, among which we occasionally find in winter that rare Arctic bird, the Evening Grosbeak. Of the *Zygodactyls*, fourteen species, among which is found the Paroquet, in the southern part of the State.

Tenuirostres, five species. Of the Kingfishers, one species. Swallows and Goatsuckers, nine species. Of the Pigeons, two, the Turtle-Dove and the Passenger Pigeon, of which the latter visit us twice a year, in immense flocks.

Of the gallinaceous birds, the Turkey, which is found in the heavy timber in the river bottoms; the Quail, which has become very abundant all over the State, within twenty years, following, it would seem, the march of civilization and settlement; the Ruffed Grouse, abundant in the timber, but never seen on the prairie; the Pinnated Grouse, or Prairie Hen, always found on the open plains. These birds increased very much in number after the settlement of the State, owing probably to the increase of food for them, and the decrease of their natural enemies, the prairie wolves; but since the building of railroads, so many are killed to supply the demands of New York and other Eastern cities, that they are now decreasing very rapidly, and in a very few years the sportsman will have to cross the Mississippi to find a pack of grouse. The Sharp-tailed Grouse, an occasional visitor in winter from Wisconsin, is found in the timbered country.

Of wading birds, from forty to fifty species, among which the Sand-Hill Crane is very abundant, and the Great White or Whooping Crane very rare, although supposed by some authors to be the same bird in different stages of plumage.

Of the lobe-footed birds, seven species, of which is the rare and beautiful Wilson's Phalarope, which breeds in the wet prairies near Chicago.

Of web-footed birds, about forty species, among which are two Swans and five Geese. Among the Ducks, the Canvas-Back is found; but, owing to the want of its favorite food in the Chesapeake, the *Vallisneria*, it is, in our waters, a very ordinary duck, as an article of food.

The waters of Illinois abound with fish, of which class we enumerate,—

Species		Species	
Percidæ,	3	Pomotis,	2
Labrax,	3	Cottus,	2

Species		Species	
Lucioperca,	2	Corvina,	1
Huro,	1	Pimelodus,	5
Centrarchus,	3	Leuciscus,	6
Catostomus,	4	Salmo,	1
Hydragea,	2	Coregonus,	3
Esox,	3	Amia,	1
Hyodon,	1	Lepidosteus,	3
Lota,	2	Accipenser,	3

Of these, the Perch, White, Black, and Rock Bass, the Pike-Perch, the Catfish, the Pike and Muskalonge, the Whitefish, the Lake Trout, and the Sturgeon are valuable fishes for the table.

Of the class of Reptiles, we have among the Lizards the Mud-Devil, (*Menopoma Alleghaniensis*), which grows in the sluggish streams to the length of two feet; also *Triton dorsalis*, *Necturus lateralis*, *Ambystoma punctata*.

Of the Snakes, we find three venomous species, the Rattlesnake, the Massasauga, and the Copper-Head. The largest serpents are the Black Snake, five feet long, and the Milk Snake, from five to six feet in length.

Among the Turtles is *Emys picta*, *Chelonura serpentina*, and *Cistuda clausa*.

Of the Frogs, we have *Rana sylvatica*, *Rana palustris*, and *Rana pipiens*, nearly two feet long, and loud-voiced in proportion,—a Bull-Frog, indeed!

Various theories and speculations have been formed as to the origin of the prairies. One of them is, that the forests which formerly occupied these plains were swept away at some remote period by fire; and that the annual fires set by the Indians have continued this state of things. Another theory is, that the violent winds which sweep over them have prevented the growth of trees; a third, that want of rain forbids their growth; a fourth, that the agency of water has produced the effect; and lastly, a learned professor at the last meeting of the Scientific Convention put forth his theory, which was, that the real cause of the absence of trees from the prairies is the mechanical condition of the soil, which is, he thinks, too fine,—a coarse, rocky

soil being, in his estimation, a necessary condition of the growth of trees.

Most of these theories seem to be inconsistent with the plain facts of the case. First, we know that these prairies existed in their present condition when the first white man visited them, two hundred years ago; and also that similar treeless plains exist in South America and Central Africa, and have so existed ever since those countries were known. We are told by travellers in those regions, that the natives have the same custom of annually burning the dry grass and herbage for the same reason that our Indians did it, and that the early white settlers kept up the custom,—namely, to promote the growth of young and tender feed for the wild animals which the former hunted and the cattle which the latter live by grazing.

Another fact, well known to all settlers in the prairie, is, that it is only necessary to keep out the fires by fences or ditches, and a thick growth of trees will spring up on the prairies. Many fine groves now exist all over Illinois, where nothing grew twenty years ago but the wild grasses and weeds; and we have it on record, that locust-seed, sown on the prairie near Quincy, in four years produced trees with a diameter of trunk of four to six inches, and in seven years had become large enough for posts and rails. So with fruit-trees, which nowhere flourish with more strength and vigor than in this soil,—too much so, indeed, since they are apt to run to wood rather than fruit. Moreover, the soil in the groves and on the river bottoms, where trees naturally grow, is the same, chemically and mechanically, as that of the open prairie; the same winds sweep over both, and the same rain falls upon both; so that it would seem that the absence of trees cannot be attributed wholly to fire, water, wind, or soil, but is owing to a combination of two or more of those agencies.

But from whatever cause the prairies originated, they have no doubt been perpetuated by the fires which annually sweep over their surface. Where the soil is too wet to sustain a heavy growth

of grass, there is no prairie. Timber is found along the streams, almost invariably,—and, where the banks are high and dry, will usually be found on the east bank of those streams whose course is north and south. This is caused by the fact that the prevailing winds are from the west, and bring the fire with them till it reaches the stream, which forms a barrier and protects the vegetation on the other side.

If any State in the Union is adapted to agriculture, and the various branches of rural economy, such as stock-raising, wool-growing, or fruit-culture, it must surely be Illinois, where the fertile natural meadows invite the plough, without the tedious process of clearing off timber, which, in many parts of the country, makes it the labor of a lifetime to bring a farm under good cultivation. Here, the farmer who is satisfied with such crops as fifty bushels of corn to the acre, eighteen of wheat, or one hundred of potatoes, has nothing to do but to plough, sow, and reap; no manure, and but little attention, being necessary to secure a yield like this. Hence a man of very small means can soon become independent on the prairies. If, however, one is ambitious of raising good crops, and doing the best he can with his land, let him manure liberally and cultivate diligently; nowhere will land pay for good treatment better than here.

Mr. J. Ambrose Wight, of Chicago, the able editor of the "*Prairie Farmer*," writes as follows:—

"From an acquaintance with Illinois lands and Illinois farmers, of eighteen years, during thirteen of which I have been editor of the '*Prairie Farmer*,' I am prepared to give the following as the rates of produce which may be had per acre, with ordinary culture:—

Winter Wheat, . . .	15 to 25	Bushels.
Spring " . . .	10 to 20	"
Corn,	40 to 70	"
Oats,	40 to 60	"
Potatoes,	100 to 200	"
Grass, Timothy and Clover, 1½ to 3		Tons.

"*Ordinary culture*, on prairie lands, is not what is meant by the term in the Eastern or Middle States. It means here, no manure, and commonly but once, or at most twice, ploughing, on perfectly smooth land, with long furrows, and no stones or obstructions; where two acres per day is no hard job for one team. It is often but very poor culture, with shallow ploughing, and without attention to weeds. I have known crops, not unfrequently, far greater than these, with but little variation in their treatment: say, 40 to 50 bushels of winter wheat, 60 to 80 of oats, and 100 of Indian corn, or 300 of potatoes. *Good culture*, which

means rotation, deep ploughing, farms well stocked, and some manure applied at intervals of from three to five years, would, in good seasons, very often approach these latter figures."

We will now give the results of a very detailed account of the management of a farm of 240 acres, in Kane County, Illinois, an average farm as to soil and situation, but probably much above the average in cultivation,—at least, we should judge so from the intelligent and business-like manner in which the account is kept; every crop having a separate account kept with it in Dr. and Cr., to show the net profit or loss of each.

23 acres of Wheat,	30	bushels per acre, net profit, .	\$ 453.00
17½ " " on Corn ground, 22½		" " "	278.50
9½ " Spring Wheat,	24	" " "	159.70
2½ " Winter Rye,	22½	" " "	10.25
5½ " Barley,	33½	" " "	32.55
12 " Oats,	87½	" " "	174.50
28½ " Corn,	60	" " "	638.73
1 " Potatoes,	150	" " "	27.50
103 Sheep, average weight of fleece, 3½ lbs.,		" " "	177.83
15 head of Cattle and one Colt,		" " "	103.00
1500 lbs. Pork,		" " "	35.00
Fruit, Honey, Bees, and Poultry,		" " "	73.75
21 acres Timothy Seed, 4 bushels per acre,		" " "	123.00
			\$ 2287.81

A farm of this size, so situated, with the proper buildings and stock, may, at the present price of land, be supposed to represent a capital of \$15,000—on which sum the above account gives an interest of over 15 per cent. Is there any other part of the country where the same interest can be realized on farming capital?

But this farm of 240 acres is a mere retail affair to many farms in the State. We will give some examples on a larger scale.

"Winstead Davis came to Jonesboro', Illinois, from Tennessee, thirty years ago, without means of any kind; now owns many thousand acres of land, and has under cultivation, this year, from 2500 to 3000 acres."

"W. Willard, native of Vermont, commenced penniless; now owns more than 10,000 acres of land, and cultivates 2000."

"Jesse Funk, near Bloomington, Illinois, began the world thirty years ago, at rail-splitting, at twenty-five cents the hundred. He bought land, and raised cattle; kept increasing his lands and herds, till he now owns 7000 acres of land, and sells over \$40,000 worth of cattle and hogs annually.

"Isaac Funk, brother of the above, began in the same way, at the same time. He has gone ahead of Jesse; for he owns 27,000 acres of land, has 4000 in cultivation, and his last year's sales of cattle amounted to \$65,000."

It is evident that the brothers Funk are men of administrative talent; they would have made a figure in Wall Street, could have filled cabinet office at Washington, or, perhaps, could even have "kept a hotel."

These are but specimens of the large-acred men of Illinois. Hundreds of oth-

ers there are, who farm on nearly the same scale.

The great difficulty in carrying on farming operations on a large scale in Illinois has always been the scarcity of labor. Land is cheap and plenty, but labor scarce and dear: exactly the reverse of what obtains in England, where land is dear and labor cheap. It must be evident that a different kind of farming would be found here from that in use in older countries. There, the best policy is to cultivate a few acres well; here, it has been found more profitable to skim over a large surface. But within a few years the introduction of labor-saving machines has changed the conditions of farming, and has rendered it possible to give good cultivation to large tracts of land with few men. Many of the crops are now put in by machines, cultivated by machines, and harvested by machines. If, as seems probable, the steam-plough of Fawkes shall become a success, the revolution in farming will be complete. Already some of the large farmers employ wind or steam power in various ways to do the heavy work, such as cutting and grinding food for cattle and hogs, pumping water, etc.

Although the soil and climate of Illinois are well adapted to fruit-culture, yet, from various causes, it has not, till lately, been much attended to. The early settlers of Southern and Middle Illinois were mostly of the Virginia race, Hoosiers, — who are a people of few wants. If they have hog-meat and hominy, whiskey and tobacco, they are content; they will not trouble themselves to plant fruit-trees. The early settlers in the North were, generally, very poor men; they could not afford to buy fruit-trees, for the produce of which they must wait several years. Wheat, corn, and hogs were the articles which could be soonest converted into money, and those they raised. Then the early attempts at raising fruit were not very successful. The trees were brought from the East, and were either spoiled by the way, or were unsuited to this region. But the great difficulty has

been the want of drainage. Fruit-trees cannot be healthy with wet feet for several months of the year, and this they are exposed to on these level lands. With proper tile-draining, so that the soil shall be dry and mellow early in the spring, we think that the apple, the pear, the plum, and the cherry will succeed on the prairies anywhere in Illinois. The peach and the grape flourish in the southern part of the State, already, with very little care; in St. Clair County, the culture of the latter has been carried on by the Germans for many years, and the average yield of Catawba wine has been two hundred gallons per acre. The strawberry grows wild all over the State, both in the timber and the prairie; and the cultivated varieties give very fine crops. All the smaller fruits do well here, and the melon family find in this soil their true home; they are raised by the acre, and sold by the wagon-load, in the neighborhood of Chicago.

Stock-raising is undoubtedly the most profitable kind of farming on the prairies, which are so admirably adapted to this species of rural economy, and Illinois is already at the head of the cattle-breeding States. There were shipped from Chicago in 1860, 104,122 head of live cattle, and 114,007 barrels of beef.

The Durham breed seems to be preferred by the best stock-farmers, and they pay great attention to the purity of the race. A herd of one hundred head of cattle raised near Urbanna, and averaging 1965 pounds each, took the premium at the World's Fair in New York. Although the Durhams are remarkable for their large size and early maturity, yet other breeds are favorites with many farmers, — such as the Devons, the Herefords, and the Holsteins, the first particularly, — for working cattle, and for the quality of their beef. There is a sweetness about the beef fattened upon these prairies which is not found elsewhere, and is noticed by all travellers who have eaten of that meat at the best Chicago hotels.

In fact, Illinois is the paradise of cattle, and there is no sight more beautiful,

in its way, than one of those vast natural meadows in June, dotted with the red and white cattle, standing belly-deep in rich grass and gay-colored flowers, and almost too fat and lazy to whisk away the flies. Even in winter they look comfortable, in their sheltered barn-yard, surrounded by huge stacks of hay or long ranges of corn-cribs, chewing the cud of contentment, and untroubled with any thought of the inevitable journey to Brighton.

Where corn is so plenty as it is in Illinois, of course hogs will be plenty also. During the year 1860, two hundred and seventy-five thousand porkers rode into Chicago by railroad, eighty-five thousand of which pursued their journey, still living, to Eastern cities,—the balance remaining behind to be converted into lard, bacon, and salt pork.

The wholesale way of making beef and pork is this. All summer the cattle are allowed to run on the prairie, and the hogs in the timber on the river bottoms. In the autumn, when the corn is ripe, the cattle are turned into one of those great fields, several hundred acres in extent, to gather the crop; and after they have done, the hogs come in to pick up what the cattle have left.

Sheep do well on the prairies, particularly in the southern part of the State, where the flocks require little or no shelter in winter. The prairie wolves formerly destroyed many sheep; but since the introduction of strychnine for poisoning those voracious animals, the sheep have been very little troubled.

Horses and mules are raised extensively, and in the northern counties, where the Morgans and other good breeds have been introduced, the horses are as good as in any State of the Union. Theory would predict this result, since the horse is found always to come to his greatest perfection in level countries,—as, for instance, the deserts of Arabia, and the *llanos* of South America.

There are two articles in daily and

indispensable use, for which the Northern States have hitherto been dependent on the Southern: Sugar and Cotton. With regard to the first, the introduction of the Chinese Sugar-Cane has demonstrated that every farmer in the State can raise his own sweetening. The experience of several years has proved that the *Sorghum* is a hardier plant than corn, and that it will be a sure crop as far North as latitude 42° or 43°.

An acre of good prairie will produce 18 tons of the cane, and each ton gives 60 gallons of juice, which is reduced, by boiling, to 10 gallons of syrup. This gives 180 gallons of syrup to the acre, worth from 40 to 50 cents a gallon,—say 40 cents, which will give 72 dollars for the product of an acre of land; from which the expenses of cultivation being deducted, with rent of land, etc., say 36 dollars, there will remain a net profit of 36 dollars to the acre, besides the seed, and the fodder which comes from a third part of the stalk, which is cut off before sending the remainder to the mill. This is found to be the most nutritious food that can be used for cattle and horses, and very valuable for milch cows. These results have been obtained from Mr. Luce, of Plainfield, Will County, who has lately built a steam-mill for making the syrup from the cane which is raised by the farmers in that vicinity. In this first year, he manufactured 12,500 gallons of syrup, which sells readily at fifty cents a gallon. A quantity of it was refined at the Chicago Sugar-Refinery, and the result was a very agreeable syrup, free from the peculiar flavor which the home-made *Sorghum*-syrup usually has. As yet, no experiments on a large scale have been made to obtain crystallized sugar from the juice of this cane, it having been, so far, used more economically in the shape of syrup. That it can be done, however, is proved by the success of several persons who have tried it in a small way. In the County of Vermilion, it is estimated that three hundred thousand gallons of syrup were made in 1860.

As to Cotton, since the building of the Illinois Central Railroad has opened the southern part of the State to the world, and let in the light upon that darkened Egypt, it is found that those people have been raising their own cotton for many years, from the seed which they brought with them into the State from Virginia and North Carolina. The plant has become acclimated, and now ripens its seed in latitude 39° and 40°. Perhaps the culture may be carried still farther, so that cotton may be raised all over the State. The heat of our summers is tropical, but they are too short. If, however, the cotton-plant, like Indian corn and the tomato, can be gradually induced to ma-

ture itself in four or five months, the consequences of such a change can hardly be estimated.

But whether or not it be possible to raise cotton and sugar profitably in Illinois, that she is the great bread- and meat-producing State no one can doubt; and in 1861 it happens that Cotton is King no longer, but must yield his sceptre to Corn.

The breadstuffs exported from the Northwest to Europe and to the Cotton States will this year probably amount to more money than the whole foreign export of cotton,—the crop which to some persons represents all that the world contains of value.

Probable export of Cotton in 1861, three-fourths of the crop of 4,000,000			
bales, 3,000,000 bales, at \$45	.	.	\$135,000,000
Estimated export of Breadstuffs to Europe			
"	"	"	\$100,000,000
"	"	"	45,000,000
to Southern States			\$145,000,000

We are feeding Europe and the Cotton States, who pay us in gold; we feed the Northern States, who pay us in goods; we are feeding our starving brothers in Kansas, who have paid us beforehand, by their heroic devotion to the cause of freedom. Let us hope that their troubles are nearly over, and that, having passed through more hardships than have fallen to the lot of any American community, they may soon enter upon a career of prosperity as signal as have been their misfortunes, so that the prairies of Kansas may, in their turn, assist in feeding the world.

Nothing has done so much for the rapid growth of Illinois as her canal and railroads.

As early as 1833 several railroad charters were granted by the legislature; but the stock was not taken, and nothing was done until the year 1836, when a vast system of internal improvements was projected, intended "to be commensurate with the wants of the people,"—that is, there was to be a railroad to run by every man's door. About thirteen hundred miles of railroads were planned, a canal

was to be built from Chicago to the Illinois River at Peru, and several rivers were to be made navigable. The cost of all this it was supposed would be about eight millions of dollars, and the money was to be raised by loan. In order that all might have the benefit of this system, it was provided that two hundred thousand dollars should be distributed among those counties where none of these improvements were made. To cap the climax of folly, it was provided that the work should commence on all these roads simultaneously, at each end, and from the crossings of all the rivers.

As no previous survey or estimate had been made, either of the routes, the cost of the works, or the amount of business to be done on them, it is not surprising that the State of Illinois soon found herself with a heavy debt, and nothing to show for it, except a few detached pieces of railroad embankments and excavations, a half-finished canal, and a railroad from the Illinois River to Springfield, which cost one million of dollars, and when finished would not pay for operating it.

The State staggered on for some ten

years under this load of debt, which, as she could not pay the interest upon it, had increased in 1845 to some fourteen millions. The project of repudiating the debt was frequently brought forward by unscrupulous politicians; but to the honor of the people of Illinois be it remembered, that even in the darkest times this dishonest scheme found but few friends.

In 1845, the holders of the canal bonds advanced the sum of \$1,700,000 for the purpose of finishing the canal; and subsequently, William B. Ogden and a few other citizens of Chicago, having obtained possession of an old railroad-charter for a road from that city to Galena, got a few thousand dollars of stock subscribed in those cities, and commenced the work. The difficulties were very great, from the scarcity of money and the want of confidence in the success of the enterprise. In most of the villages along the proposed line there was a strong opposition to having a railroad built at all, as the people thought it would be the ruin of their towns. Even in Chicago, croakers were not wanting to predict that the railroad would monopolize all the trade of the place.

In the face of all these obstacles, the road was built to the Des Plaines River, twelve miles,—in a very cheap way, to be sure; as a second-hand strap-rail was used, and half-worn cars were picked up from Eastern roads.

These twelve miles of road between the Des Plaines and Chicago had always been the terror of travellers. It was a low, wet prairie, without drainage, and in the spring and autumn almost impassable. At such seasons one might trace the road by the broken wagons and dead horses that lay strewn along it.

To be able to have their loads of grain carried over this dreadful place for three or four cents a bushel was to the farmers of the Rock River and Fox River valleys—who, having hauled their wheat from forty to eighty miles to this Slough of Despond, frequently could get it no farther—a privilege which they soon began to appreciate. The road had all it could

do, at once. It was a success. There was now no difficulty in getting the stock taken up, and before long it was finished to Fox River. It paid from fifteen to twenty per cent. to the stockholders, and the people along the line soon became its warmest friends,—and no wonder, since it doubled the value of every man's farm on the line. The next year the road was extended to Rock River, and then to Galena, one hundred and eighty-five miles.

This road was the pioneer of the twenty-eight hundred and fifty miles of railroads which now cross the State in every direction, and which have hastened the settlement of the prairies at least fifty years.

Among these lines of railway, the most important, and one of the longest in America, is the Illinois Central, which is seven hundred and four miles in length, and traverses the State from South to North, namely:—

1. The main line, from Cairo to La Salle 308 miles
2. The Galena Branch, from La Salle to Dunleith 146 "
3. The Chicago Branch, from Chicago to Centralia 250 "

This great work was accomplished in the short space of four years and nine months, by the help of a grant of two and a half millions of acres of land lying along the line. The company have adopted the policy of selling these lands on long credit to actual settlers; and since the completion of the road, in 1856, they have sold over a million of acres, for fifteen millions of dollars, in secured notes, bearing interest. The remaining lands will probably realize as much more, so that the seven hundred and four miles of railroad will actually cost the corporators nothing.

There are eleven trunk and twenty branch and extension lines, which centre in Chicago, the earnings of nineteen of which, for the year 1859, were fifteen millions of dollars. As that, however, was a year of great depression in business, with a short crop through the North-

west, we think, in view of the large crop of 1860, and the consequent revival of business, that the earnings of these nineteen lines will not be less this year than twenty-two millions of dollars.

In the early settlement of the State, twenty-five or thirty years ago, the pioneers being necessarily very liable to want of good shelter, to bad food and impure water, suffered much from bilious and intermittent fevers. As the country has become settled, the land brought under cultivation, and the habits of the people improved, these diseases have in a great measure disappeared. Other forms of disease have, however, taken their place, pulmonary affections and fevers of the typhoid type being more prevalent than formerly; but as most of the immigrants into Northern Illinois are from Western New York and New England, where this latter class of diseases prevails, the people are much less alarmed by them than they used to be by the bilious diseases, though the latter were really less dangerous. The coughs, colds, and consumptions are old acquaintances, and through familiarity have lost their terrors.

The census of 1850 gives the following comparative view of the annual percentage of deaths in several States:—

Massachusetts, . . .	1.95 per cent.
Rhode Island, . . .	1.52 "
New York, . . .	1.47 "
Ohio, . . .	1.44 "
Illinois, . . .	1.36 "
Missouri, . . .	1.80 "
Louisiana, . . .	2.31 "
Texas, . . .	1.46 "

This table shows that Illinois stands in point of health among the very highest of the States.

Having sketched the history and traced the material development of the Prairie State to the present time, we will close this article with a few words as to its politics and policy.

As we have seen, the early settlers of Illinois were from Virginia and Ken-

tucky, and brought with them the habits, customs, and ideas of Slaveholders; and though by the sagacity and virtue of a few leading men the institution of Slavery was kept out, yet for many years the Democratic Party, always the ally and servant of the Slave-Power, was in the ascendant. Until 1858, the Legislature and the Executive have always been Democratic, and the Democratic candidate for the Presidency, from Jackson down to Buchanan, was sure of the electoral vote of Illinois. But the growth of the northern half of the State has of late years been far outstripping that of the southern portion, and the former now has the majority. We have now a Republican Legislature and a Republican Governor, and, by the new apportionment soon to be made, the Republican Party will be much more largely in the ascendant,—so much so, indeed, that there is no probability of another Democratic Senator being chosen from Illinois in the next twenty years. Mr. Douglas will be the last of his race.

The people of Northern Illinois, who are in future to direct the policy of the State, are mostly from Western New York and New England.

"Coelum, non animus mutant."

They bring with them their unconquered prejudices in favor of freedom; their great commercial city is as strongly anti-slavery as Worcester or Syracuse, and has been for years an unsafe spot for a slave-hunter. Their interests and their sympathies are all with the Northern States. What idle babble, then, is this theory of a third Confederacy, to be constructed out of the middle Atlantic States and the Northwest!

If, as one of our orators says, New England is the brain of this country, then the Northwest is its bone and muscle, ready to cultivate its wide prairies and feed the world,—or, if need be, to use the same strength in crushing treason, and in preserving the Territories for free settlers.

CONCERNING FUTURE YEARS.

*Copied**from Fraser's Magazine*

DOES it ever come across you, my friend, with something of a start, that things cannot always go on in your lot as they are going now? Does not a sudden thought sometimes flash upon you, a hasty, vivid glimpse, of what you will be long hereafter, if you are spared in this world? Our common way is too much to think that things will always go on as they are going. Not that we clearly think so: not that we ever put that opinion in a definite shape, and avow to ourselves that we hold it: but we live very much under that vague, general impression. We can hardly help it. When a man of middle age inherits a pretty country-seat, and makes up his mind that he cannot yet afford to give up business and go to live there, but concludes that in six or eight years he will be able with justice to his children to do so, do you think he brings plainly before him the changes which must be wrought on himself and those around him by these years? I do not speak of the greatest change of all, which may come to any of us so very soon: I do not think of what may be done by unlooked-for accident: I think merely of what must be done by the passing on of time. I think of possible changes in taste and feeling, of possible loss of liking for that mode of life. I think of lungs that will play less freely, and of limbs that will suggest shortened walks, and dissuade from climbing hills. I think how the children will have outgrown daisy-chains, or even got beyond the season of climbing trees. The middle-aged man enjoys the prospect of the time when he shall go to his country house; and the vague, undefined belief surrounds him, like an atmosphere, that he and his children, his views and likings, will be then just such as they are now. He cannot bring it home to him at how many points change will be cutting into him, and hedging him in, and paring him down. And we all live very much under that

vague impression. Yet it is in many ways good for us to feel that we are going on, — passing from the things which surround us, — advancing into the undefined future, into the unknown land. And I think that sometimes we all have vivid flashes of such a conviction. I dare say, my friend, you have seen an old man, frail, soured, and shabby, and you have thought, with a start, Perhaps *there* is Myself of Future Years.

We human beings can stand a great deal. There is great margin allowed by our constitution, physical and moral. I suppose there is no doubt that a man may daily for years eat what is unwholesome, breathe air which is bad, or go through a round of life which is not the best or the right one for either body or mind, and yet be little the worse. And so men pass through great trials and through long years, and yet are not altered so very much. The other day, walking along the street, I saw a man whom I had not seen for ten years. I knew that since I saw him last he had gone through very heavy troubles, and that these had sat very heavily upon him. I remembered how he had lost that friend who was the dearest to him of all human beings, and I knew how broken down he had been for many months after that great sorrow came. Yet there he was, walking along, an unnoticed unit, just like any one else; and he was looking wonderfully well. No doubt he seemed pale, worn, and anxious: but he was very well and carefully dressed; he was walking with a brisk, active step; and I dare say is feeling pretty well reconciled to being what he is, and to the circumstances amid which he is living. Still, one felt that somehow a tremendous change had passed over him. I felt sorry for him, and all the more that he did not seem to feel sorry for himself. It made me sad to think that some day I should be like him; that perhaps in the eyes of

my juniors I look like him already, careworn and aging. I dare say in his feeling there was no such sense of falling off. Perhaps he was tolerably content. He was walking so fast, and looking so sharp, that I am sure he had no desponding feeling at the time. Despondency goes with slow movements and with vague looks. The sense of having materially fallen off is destructive to the eagle-eye. Yes, he was tolerably content. We can go down-hill cheerfully, save at the points where it is sharply brought home to us that we are going down-hill. Lately I sat at dinner opposite an old lady who had the remains of striking beauty. I remember how much she interested me. Her hair was false, her teeth were false, her complexion was shrivelled, her form had lost the round symmetry of earlier years, and was angular and stiff; yet how cheerful and lively she was! She had gone far down-hill physically; but either she did not feel her decadence, or she had grown quite reconciled to it. Her daughter, a blooming matron, was there, happy, wealthy, good; yet not apparently a whit more reconciled to life than the aged grandam. It was pleasing, and yet it was sad, to see how well we can make up our mind to what is inevitable. And such a sight brings up to one a glimpse of *Future Years*. The cloud seems to part before one, and through the rift you discern your earthly track far away, and a jaded pilgrim plodding along it with weary step; and though the pilgrim does not look like you, yet you know the pilgrim is yourself.

This cannot always go on. To what is it all tending? I am not thinking now of an outlook so grave, that this is not the place to discuss it. But I am thinking how everything is going on. In this world there is no standing still. And everything that belongs entirely to this world, its interests and occupations, is going on towards a conclusion. It will all come to an end. It cannot go on forever. I cannot always be writing sermons as I do now, and going on in this

regular course of life. I cannot always be writing essays. The day will come when I shall have no more to say, or when the readers of the Magazine will no longer have patience to listen to me in that kind fashion in which they have listened so long. I foresee it plainly, this evening, — even while writing my first essay for the "*Atlantic Monthly*," — the time when the reader shall open the familiar cover, and glance at the table of contents, and exclaim indignantly, "Here is that tiresome person again: why will he not cease to weary us?" I write in sober sadness, my friend: I do not intend any jest. If you do not know that what I have written is certainly true, you have not lived very long. You have not learned the sorrowful lesson, that all worldly occupations and interests are wearing to their close. You cannot keep up the old thing, however much you may wish to do so. You know how vain anniversaries for the most part are. You meet with certain old friends, to try to revive the old days; but the spirit of the old time will not come over you. It is not a spirit that can be raised at will. It cannot go on forever, that walking down to church on Sundays, and ascending those pulpit-steps; it will change to feeling, though I humbly trust it may be long before it shall change in fact. Don't you all sometimes feel something like that? Don't you sometimes look about you and say to yourself, That furniture will wear out: those window-curtains are getting sadly faded; they will not last a lifetime? Those carpets must be replaced some day; and the old patterns which looked at you with a kindly, familiar expression, through these long years, must be among the old familiar faces that are gone. These are little things, indeed, but they are among the vague recollections that bewilder our memory; they are among the things which come up in the strange, confused remembrance of the dying man in the last days of life. There is an old fir-tree, a twisted, strange-looking fir-tree, which will be among my last recollections, I know, as it was among my first. It was

always before my eyes, when I was three, four, five years old : I see the pyramidal top, rising over a mass of shrubbery ; I see it always against a sunset-sky ; always in the subdued twilight in which we seem to see things in distant years. These old friends will die, you think ; who will take their place ? You will be an old gentleman, a frail old gentleman, wondered at by younger men, and telling them long stories about the days when Lincoln was President, like those which weary you now about the War of 1812. It will not be the same world then. Your children will not be always children. Enjoy their fresh youth while it lasts, for it will not last long. Do not skim over the present too fast, through a constant habit of onward-looking. Many men of an anxious turn are so eagerly concerned in providing for the future, that they hardly remark the blessings of the present. Yet it is only because the future will some day be present, that it deserves any thought at all. And many men, instead of heartily enjoying present blessings while they are present, train themselves to a habit of regarding these things as merely the foundation on which they are to build some vague fabric of they know not what. I have known a clergyman, who was very fond of music, and in whose church the music was very fine, who seemed incapable of enjoying its solemn beauty as a thing to be enjoyed while passing, but who persisted in regarding each beautiful strain merely as a promising indication of what his choir would come at some future time to be. It is a very bad habit, and one which grows, unless repressed. You, my reader, when you see your children racing on the green, train yourself to regard all that as a happy end in itself. Do not grow to think merely that those sturdy young limbs promise to be stout and serviceable when they are those of a grown-up man ; and rejoice in the smooth little forehead with its curly hair, without any forethought of how it is to look some day when overshadowed (as it is sure to be) by the great wig of the Lord Chancellor. Good advice : let us all try

to take it. Let all happy things be not merely regarded as means, but enjoyed as ends. Yet it is in the make of our nature to be ever onward-looking ; and we cannot help it. When you get the first number for the year of the magazine which you take in, you instinctively think of it as the first portion of a new volume ; and you are conscious of a certain, though slight, restlessness in the thought of a thing incomplete, and of a wish that you had the volume completed. And sometimes, thus looking onward into the future, you worry yourself with little thoughts and cares. There is that old dog : you have had him for many years ; he is growing stiff and frail ; what are you to do when he dies ? When he is gone, the new dog you get will never be like him ; he may be, indeed, a far handsomer and more amiable animal, but he will not be your old companion ; he will not be surrounded with all those old associations, not merely with your own by-past life, but with the lives, the faces, and the voices of those who have left you, which invest with a certain sacredness even that humble, but faithful friend. He will not have been the companion of your youthful walks, when you went at a pace which now you cannot attain. He will just be a common dog ; and who that has reached your years cares for *that* ? The other, indeed, was a dog too ; but that was merely the substratum on which was accumulated a host of recollections : it is *Auld Lang Syne* that walks into your study, when your shaggy friend of ten summers comes stiffly in, and after many querulous turnings lays himself down on the rug before the fire. Do you not feel the like when you look at many little matters, and then look into the Future Years ? That harness,—how will you replace it ? It will be a pang to throw it by ; and it will be a considerable expense, too, to get a new suit. Then you think how long harness may continue to be serviceable. I once saw, on a pair of horses drawing a stage-coach among the hills, a set of harness which was thirty-five years old. It had been very costly and grand when new ; it had

belonged for some of its earliest years to a certain wealthy nobleman. The nobleman had been for many years in his grave, but there was his harness still. It was tremendously patched, and the blinkers were of extraordinary aspect; but it was quite serviceable. There is comfort for you, poor country parsons! How thoroughly I understand your feeling about such little things! I know how you sometimes look at your phaëton or your dog-cart; and even while the morocco is fresh, and the wheels still are running with their first tires, how you think you see it after it has grown shabby and old-fashioned. Yes, you remember, not without a dull kind of pang, that it is wearing out. You have a neighbor, perhaps, a few miles off, whose conveyance, through the wear of many years, has become remarkably seedy; and every time you meet it you think that there you see your own, as it will some day be. Every dog has his day: but the day of the rational dog is overclouded in a fashion unknown to his inferior fellow-creature; it is overclouded by the anticipation of the coming day which will not be his. You remember how that great, though morbid man, John Foster, could not heartily enjoy the summer weather, for thinking how every sunny day that shone upon him was a downward step towards the winter gloom. Each indication that the season was progressing, even though progressing as yet only to greater beauty, filled him with great grief. "I have seen a fearful sight to-day," he would say,—"I have seen a buttercup." And we know, of course, that in his case there was nothing like affectation; it was only that, unhappily for himself, the bent of his mind was so onward-looking, that he saw only a premonition of the snows of December in the roses of June. It would be a blessing, if we could quite discard the tendency. And while your trap runs smoothly and noiselessly, while the leather is fresh and the paint unscratched, do not worry yourself with visions of the day when it will rattle and creak, and when you will make it wait for you at the corner of

back-streets when you drive into town. Do not vex yourself by fancying that you will never have heart to send off the old carriage, nor by wondering where you shall find the money to buy a new one.

Have you ever read the "Life of Mansie Wauch, Tailor in Dalkeith," by that pleasing poet and most amiable man, the late David Macbeth Moir? I have been looking into it lately; and I have regretted much that the Lowland Scotch dialect is so imperfectly understood in England, and that even where so far understood its raciness is so little felt; for great as is the popularity of that work, it is much less known than it deserves to be. Only a Scotchman can thoroughly appreciate it. It is curious, and yet it is not curious, to find the pathos and the polish of one of the most touching and elegant of poets in the man who has with such irresistible humor, sometimes approaching to the farcical, delineated humble Scotch life. One passage in the book always struck me very much. We have in it the poet as well as the humorist and it is a perfect example of what I have been trying to describe in the pages which you have read. I mean the passage in which Mansie tells us of a sudden glimpse which, in circumstances of mortal terror, he once had of the future. On a certain "awful night" the tailor was awakened by cries of alarm, and, looking out, he saw the next house to his own was on fire from cellar to garret. The earnings of poor Mansie's whole life were laid out on his stock in trade and his furniture, and it appeared likely that these would be at once destroyed.

"Then," says he, "the darkness of the latter days came over my spirit like a vision before the prophet Isaiah; and I could see nothing in the years to come but beggary and starvation,—myself a fallen-back old man, with an out-at-the-elbows coat, a greasy hat, and a bald brow, hirpling over a staff, requeeshting an awmous; Nanse a broken-hearted beggar-wife, torn down to tatters, and weeping like Rachel when she thought on better days; and poor wee Benjie go-

ing from door to door with a meal-pock on his back."

Ah, there is exquisite pathos *there*, as well as humor; but the thing for which I have quoted that sentence is its startling truthfulness. You have all done what Mansie Wauch did, I know. Every one has his own way of doing it, and it is his own especial picture which each sees; but there has appeared to us, as to Mansie, (I must recur to my old figure,) as it were a sudden rift in the clouds that conceal the future, and we have seen the way, far ahead,—the dusty way,—and an aged pilgrim pacing slowly along it; and in that aged figure we have each recognized our own young self. How often have I sat down on the mossy wall that surrounded my churchyard, when I had more time for reverie than I have now,—sat upon the mossy wall, under a great oak, whose branches came low down and projected far out,—and looked at the rough gnarled bark, and at the passing river, and at the belfry of the little church, and there and then thought of Mansie Wauch and of his vision of *Future Years*! How often in these hours, or in long solitary walks and rides among the hills, have I had visions, clear as that of Mansie Wauch, of how I should grow old in my country parish! Do not think that I wish or intend to be egotistical, my friendly reader. I describe these feelings and fancies because I think this is the likeliest way in which to reach and describe your own. There was a rapid little stream that flowed, in a very lonely place, between the highway and a cottage to which I often went to see a poor old woman; and when I came out of the cottage, having made sure that no one saw me, I always took a great leap over the little stream, which saved going round a little way. And never once, for several years, did I thus cross it without seeing a picture as clear to the mind's eye as Mansie Wauch's,—a picture which made me walk very thoughtfully along for the next mile or two. It was curious to think how one was to get through the accustomed duty after having grown old and frail.

The day would come when the brook could be crossed in that brisk fashion no more. It must be an odd thing for the parson to walk as an old man into the pulpit, still his own, which was his own when he was a young man of six-and-twenty. What a crowd of old remembrances must be present each Sunday to the clergyman's mind, who has served the same parish and preached in the same church for fifty years! Personal identity, continued through the successive stages of life, is a commonplace thing to think of; but when it is brought home to your own case and feeling, it is a very touching and a very bewildering thing. There are the same trees and hills as when you were a boy; and when each of us comes to his last days in this world, how short a space it will seem since we were little children! Let us humbly hope, that, in that brief space parting the cradle from the grave, we may (by help from above) have accomplished a certain work which will cast its blessed influence over all the years and all the ages before us. Yet it remains a strange thing to look forward and to see yourself with gray hair, and not much even of that; to see your wife an old woman, and your little boy or girl grown up into manhood or womanhood. It is more strange still to fancy you see them all going on as usual in the round of life, and you no longer among them. You see your empty chair. There is your writing-table and your inkstand; there are your books, not so carefully arranged as they used to be; perhaps, on the whole, less indication than you might have hoped that they miss you. All this is strange when you bring it home to your own case; and that hundreds of millions have felt the like makes it none the less strange to you. The commonplaces of life and death are not commonplace when they befall ourselves. It was in desperate hurry and agitation that Mansie Wauch saw his vision; and in like circumstances you may have yours too. But for the most part such moods come in leisure,—in saunterings through the autumn woods,—in reveries by the winter fire.

I do not think, thus musing upon our occasional glimpses of the Future, of such fancies as those of early youth, — fancies and anticipations of greatness, of felicity, of fame; I think of the onward views of men approaching middle age, who have found their place and their work in life, and who may reasonably believe, that, save for great unexpected accidents, there will be no very material change in their lot till that "change come" to which Job looked forward four thousand years since. There are great numbers of educated folk who are likely always to live in the same kind of house, to have the same establishment, to associate with the same class of people, to walk along the same streets, to look upon the same hills, as long as they live. The only change will be the gradual one which will be wrought by advancing years.

And the onward view of such people in such circumstances is generally a very vague one. It is only now and then that there comes the startling clearness of prospect so well set forth by Mansie Wauch. Yet sometimes, when such a vivid view comes, it remains for days, and is a painful companion of your solitude. Don't you remember, clerical reader of thirty-two, having seen a good deal of an old parson, rather sour in aspect, rather shabby-looking, sadly pinched for means, and with powers dwarfed by the sore struggle with the world to maintain his family and to keep up a respectable appearance upon his limited resources; perhaps with his mind made petty and his temper spoiled by the little worries, the petty malignant tattle and gossip and occasional insolence of a little backbiting village? and don't you remember how for days you felt haunted by a sort of nightmare that there was what you would be, if you lived so long? Yes; you know how there have been times when for ten days together that jarring thought would intrude, whenever your mind was disengaged from work; and sometimes, when you went to bed, that thought kept you awake for hours. You knew the impression was morbid, and you were angry

with yourself for your silliness; but you could not drive it away.

It makes a great difference in the prospect of Future Years, if you are one of those people who, even after middle age, may still make a great rise in life. This will prolong the restlessness which in others is sobered down at forty: it will extend the period during which you will every now and then have brief seasons of feverish anxiety, hope, and fear, followed by longer stretches of blank disappointment. And it will afford the opportunity of experiencing a vividly new sensation, and of turning over a quite new leaf, after most people have settled to the jog-trot at which the remainder of the pilgrimage is to be covered. A clergyman of the Church of England may be made a bishop, and exchange a quiet rectory for a palace. No doubt the increase of responsibility is to a conscientious man almost appalling; but surely the rise in life is great. There you are, one of four-and-twenty, selected out of near twenty thousand. It is possible, indeed, that you may feel more reason for shame than for elation at the thought. A barrister unknown to fame, but of respectable standing, may be made a judge. Such a man may even, if he gets into the groove, be gradually pushed on till he reaches an eminence which probably surprises himself as much as any one else. A good speaker in Parliament may at sixty or seventy be made a Cabinet Minister. And we can all imagine what indescribable pride and elation must in such cases possess the wife and daughters of the man who has attained this decided step in advance. I can say sincerely that I never saw human beings walk with so airy tread, and evince so fussily their sense of a greatness more than mortal, as the wife and the daughter of an amiable but not able bishop I knew in my youth, when they came to church on the Sunday morning on which the good man preached for the first time in his lawn sleeves. Their heads were turned for the time; but they gradually came right again, as the ladies became accustomed to the summits of

human affairs. Let it be said for the bishop himself, that there was not a vestige of that sense of elevation about him. He looked perfectly modest and unaffected. His dress was remarkably ill put on, and his sleeves stuck out in the most awkward fashion ever assumed by drapery. I suppose that sometimes these rises in life come very unexpectedly. I have heard of a man who, when he received a letter from the Prime Minister of the day offering him a place of great dignity, thought the letter was a hoax, and did not notice it for several days. You could not certainly infer from his modesty what has proved to be the fact, that he has filled his place admirably well. The possibility of such material changes must no doubt tend to prolong the interest in life, which is ready to flag as years go on. But perhaps with the majority of men the level is found before middle age, and no very great worldly change awaits them. The path stretches on, with its ups and downs; and they only hope for strength for the day. But in such men's lot of humble duty and quiet content there remains room for many fears. All human beings who are as well off as they can ever be, and so who have little room for hope, seem to be liable to the invasion of great fear as they look into the future. It seems to be so with kings, and with great nobles. Many such have lived in a nervous dread of change, and have ever been watching the signs of the times with apprehensive eyes. Nothing that can happen can well make such better; and so they suffer from the vague foreboding of something which will make them worse. And the same law reaches to those in whom hope is narrowed down, not by the limit of grand possibility, but of little,—not by the fact that they have got all that mortal can get, but by the fact that they have got the little which is all that Providence seems to intend to give to them. And, indeed, there is something that is almost awful, when your affairs are all going happily, when your mind is clear and equal to its work, when your bodily health is unbroken, when your home is

pleasant, when your income is ample, when your children are healthy and merry and hopeful,—in looking on to Future Years. The more happy you are, the more there is of awe in the thought how frail are the foundations of your earthly happiness,—what havoc may be made of them by the chances of even a single day. It is no wonder that the solemnity and awfulness of the Future have been felt so much, that the languages of Northern Europe have, as I dare say you know, no word which expresses the essential notion of Futurity. You think, perhaps, of *shall* and *will*. Well, these words have come now to convey the notion of Futurity; but they do so only in a secondary fashion. Look to their etymology, and you will see that they *imply* Futurity, but do not *express* it. *I shall* do such a thing means *I am bound to do it*, *I am under an obligation to do it*. *I will* do such a thing means *I intend to do it*, *It is my present purpose to do it*. Of course, if you are under an obligation to do anything, or if it be your intention to do anything, the probability is that the thing will be done; but the Northern family of languages ventures no nearer than *that* towards the expression of the bare, awful idea of Future Time. It was no wonder that Mr. Croaker was able to cast a gloom upon the gayest circle, and the happiest conjuncture of circumstances, by wishing that all might be as well that day six months. Six months! What might that time not do? Perhaps you have not read a little poem of Barry Cornwall's, the idea of which must come home to the heart of most of us:—

“Touch us gently, Time!

Let us glide adown thy stream
Gently,—as we sometimes glide

Through a quiet dream.

Humble voyagers are we,

Husband, wife, and children three;—

One is lost,—an angel, fled

To the azure overhead.

“Touch us gently, Time!

We 've not proud nor soaring wings:

Our ambition, our content,

Lies in simple things.”

Humble voyagers are we,
O'er life's dim, unsounded sea,
Seeking only some calm clime:—
Touch us gently, gentle Time!"

I know that sometimes, my friend, you will not have much sleep; if, when you lay your head on your pillow, you begin to think how much depends upon your health and life. You have reached now that time at which you value life and health not so much for their service to yourself, as for their needfulness to others. There is a petition familiar to me in this Scotch country, where people make their prayers for themselves, which seems to me to possess great solemnity and force, when we think of all that is implied in it. It is, *Spare useful lives!* One life, the slender line of blood passing into and passing out of one human heart, may decide the question, whether wife and children shall grow up affluent, refined, happy, yes, and *good*, or be reduced to hard straits, with all the manifold evils which grow of poverty in the case of those who have been reduced to it after knowing other things. You often think, I doubt not, in quiet hours, what would become of your children, if you were gone. You have done, I trust, what you can to care for them, even from your grave: you think sometimes of a poetical figure of speech amid the dry technical phrases of English law: you know what is meant by the law of *Mortmain*; and you like to think that even your *dead hand* may be felt to be kindly intermeddling yet in the affairs of those who were your dearest: that some little sum, slender, perhaps, but as liberal as you could make it, may come in periodically when it is wanted, and seem like the gift of a thoughtful heart and a kindly hand which are far away. Yes, cut down your present income to any extent, that you may make some provision for your children after you are dead. You do not wish that they should have the saddest of all reasons for taking care of you, and trying to lengthen out your life. But even after you have done everything which your small means permit, you will still

think, with an anxious heart, of the possibilities of Future Years. A man or woman who has children has very strong reason for wishing to live as long as may be, and has no right to trifle with health or life. And sometimes, looking out into days to come, you think of the little things, hitherto so free from man's heritage of care, as they may some day be. You see them shabby, and early anxious: can *that* be the little boy's rosy face, now so pale and thin? You see them in a poor room, in which you recognize your study-chairs with the hair coming out of the cushions, and a carpet which you remember now threadbare and in holes.

It is no wonder at all that people are so anxious about money. Money means every desirable material thing on earth, and the manifold immaterial things which come of material possessions. Poverty is the most comprehensive earthly evil; all conceivable evils, temporal, spiritual, and eternal, may come of *that*. Of course, great temptations attend its opposite; and the wise man's prayer will be what it was long ago,—“Give me neither poverty nor riches.” But let us have no nonsense talked about money being of no consequence. The want of it has made many a father and mother tremble at the prospect of being taken from their children; the want of it has embittered many a parent's dying hours. You hear selfish persons talking vaguely about faith. You find such heartless persons jauntily spending all they get on themselves, and then leaving their poor children to beggary, with the miserable pretext that they are doing all this through their abundant trust in God. Now this is not faith; it is insolent presumption. It is exactly as if a man should jump from the top of St. Paul's, and say that he had faith that the Almighty would keep him from being dashed to pieces on the pavement. There is a high authority as to such cases, —“Thou shalt not tempt the Lord thy God.” If God had promised that people should never fall into the miseries of penury under any circumstances, it would be faith to trust that promise, however un-

likely of fulfilment it might seem in any particular case. But God has made no such promise; and if you leave your children without provision, you have no right to expect that they shall not suffer the natural consequences of your heartlessness and thoughtlessness. True faith lies in your doing everything you possibly can, and *then* humbly trusting in God. And if, after you have done your very best, you must still go, with but a blank outlook for those you leave, why, *then* you may trust them to the Husband of the widow and Father of the fatherless. Faith, as regards such matters, means firm belief that God will do all He has promised to do, however difficult or unlikely. But some people seem to think that faith means firm belief that God will do whatever they think would suit them, however unreasonable, and however flatly in the face of all the established laws of His government.

We all have it in our power to make ourselves miserable, if we look far into Future Years and calculate their probabilities of evil, and steadily anticipate the worst. It is not expedient to calculate too far ahead. Of course, the right way in this, as in other things, is the middle way: we are not to run either into the extreme of over-carefulness and anxiety on the one hand, or of recklessness and imprudence on the other. But as mention has been made of faith, it may safely be said that we are forgetful of that rational trust in God which is at once our duty and our inestimable privilege, if we are always looking out into the future, and vexing ourselves with endless fears as to how things are to go then. There is no divine promise, that, if a reckless blockhead leaves his children to starve, they shall not starve. And a certain inspired volume speaks with extreme severity of the man who fails to provide for them of his own house. But there *is* a divine promise which says to the humble Christian,—"As thy days, so shall thy strength be." If your affairs are going on fairly now, be thankful, and try to do your duty,

and to do your best, as a Christian man and a prudent man, and then leave the rest to God. Your children are about you; no doubt they may die, and it is fit enough that you should not forget the fragility of your most prized possessions; it is fit enough that you should sometimes sit by the fire and look at the merry faces and listen to the little voices, and think what it would be to lose them. But it is not needful, or rational, or Christian-like, to be always brooding on that thought. And when they grow up, it may be hard to provide for them. The little thing that is sitting on your knee may before many years be alone in life, thousands of miles from you and from his early home, an insignificant item in the bitter price which Britain pays for her Indian Empire. It is even possible, though you hardly for a moment admit *that* thought, that the child may turn out a heartless and wicked man, and prove your shame and heartbreak: all wicked and heartless men have been the children of somebody; and many of them, doubtless, the children of those who surmised the future as little as Eve did when she smiled upon the infant Cain. And the fireside by which you sit, now merry and noisy enough, may grow lonely,—lonely with the second loneliness, not the hopeful solitude of youth looking forward, but the desponding loneliness of age looking back. And it is so with everything else. Your health may break down. Some fearful accident may befall you. The readers of the magazine may cease to care for your articles. People may get tired of your sermons. People may stop buying your books, your wine, your groceries, your milk and cream. Younger men may take away your legal business. Yet how often these fears prove utterly groundless! It was good and wise advice, given by one who had managed, with a cheerful and hopeful spirit, to pass through many trying and anxious years, to "take short views":—not to vex and worry yourself by planning too far ahead. And a wiser than the wise and cheerful Sydney Smith had anticipated his philosophy. You remember Who said, "Take

no thought"—that is, no over-anxious and over-careful thought—"for the morrow; for the morrow shall take thought for the things of itself." Did you ever sail over a blue summer sea towards a mountainous coast, frowning, sullen, gloomy: and have you not seen the gloom retire before you as you advanced; the hills, grim in the distance, stretch into sunny slopes when you neared them; and the waters smile in cheerful light, that looked so black when they were far away? And who is there that has not seen the parallel in actual life? We have all known the anticipated ills of life—the danger that looked so big, the duty that looked so arduous, the entanglement that we could not see our way through—prove to have been nothing more than spectres on the far horizon; and when at length we reached them, all their difficulty had vanished into air, leaving us to think what fools we had been for having so needlessly conjured up phantoms to disturb our quiet. Yes, there is no doubt of it, a very great part of all we suffer in this world is from the apprehension of things that never come. I remember well how a dear friend, whom I (and many more) lately lost, told me many times of his fears as to what he would do in a certain contingency which both he and I thought was quite sure to come sooner or later. I know that the anticipation of it caused him some of the most anxious hours of a very anxious, though useful and honored life. How vain his fears proved! He was taken from this world before what he had dreaded had cast its most distant shadow. Well, let me try to discard the notion which has been sometimes worrying me of late, that perhaps I have written nearly as many essays as any one will care to read. Don't let any of us give way to fears which may prove to have been entirely groundless.

And then, if we are really spared to see those trials we sometimes think of, and which it is right that we should sometimes think of, the strength for them will come at the time. They will not look nearly so black, and we shall be en-

abled to bear them bravely. There is in human nature a marvellous power of accommodation to circumstances. We can gradually make up our mind to almost anything. If this were a sermon instead of an essay, I should explain my theory of how this comes to be. I see in all this something beyond the mere natural instinct of acquiescence in what is inevitable; something beyond the benevolent law in the human mind, that it shall adapt itself to whatever circumstances it may be placed in; something beyond the doing of the gentle comforter Time. Yes, it is wonderful what people can go through, wonderful what people can get reconciled to. I dare say my friend Smith, when his hair began to fall off, made frantic efforts to keep it on. I have no doubt he anxiously tried all the vile concoctions which quackery advertises in the newspapers, for the advantage of those who wish for luxuriant locks. I dare say for a while it really weighed upon his mind, and disturbed his quiet, that he was getting bald. But now he has quite reconciled himself to his lot; and with a head smooth and sheeny as the egg of the ostrich, Smith goes on through life, and feels no pang at the remembrance of the ambrosial curls of his youth. Most young people, I dare say, think it will be a dreadful thing to grow old: a girl of eighteen thinks it must be an awful sensation to be thirty. Believe me, not at all. You are brought to it bit by bit; and when you reach the spot, you rather like the view. And it is so with graver things. We grow able to do and to bear that which it is needful that we should do and bear. As is the day, so the strength proves to be. And you have heard people tell you truly, that they have been enabled to bear what they never thought they could have come through with their reason or their life. I have no fear for the Christian man, so he keeps to the path of duty. Straining up the steep hill, his heart will grow stout in just proportion to its steepness. Yes, and if the call to martyrdom came, I should not despair of finding men who would show

themselves equal to it, even in this commonplace age, and among people who wear Highland cloaks and knickerbockers. The martyr's strength would come with the martyr's day. It is because there is no call for it now, that people look so little like it.

It is very difficult, in this world, to strongly enforce a truth, without seeming to push it into an extreme. You are very apt, in avoiding one error, to run into the opposite error; forgetting that truth and right lie generally between two extremes. And in agreeing with Sydney Smith, as to the wisdom and the duty of "taking short views," let us take care of appearing to approve the doings of those foolish and unprincipled people who will keep no outlook into the future time at all. A bee, you know, cannot see more than a single inch before it; and there are many men, and perhaps more women, who appear, as regards their domestic concerns, to be very much of bees: not bees in the respect of being busy; but bees in the respect of being blind. You see this in all ranks of life. You see it in the artisan, earning good wages, yet with every prospect of being weeks out of work next summer or winter, who yet will not be persuaded to lay by a little in preparation for a rainy day. You see it in the country gentleman, who, having five thousand a year, spends ten thousand a year; resolutely shutting his eyes to the certain and not very remote consequences. You see it in the man who walks into a shop and buys a lot of things which he has not the money to pay for, in the vague hope that something will turn up. It is a comparatively thoughtful and anxious class of men who systematically overcloud the present by anticipations of the future. The more usual thing is to sacrifice the future to the present; to grasp at what in the way of present gratification or gain can be got, with very little thought of the consequences. You see silly women, the wives of men whose families are mainly dependent on their lives, constantly urging on their husbands to extravagances which eat up the little pro-

vision which might have been made for themselves and their children when he is gone who earned their bread. There is no sadder sight, I think, than that which is not a very uncommon sight, the careworn, anxious husband, laboring beyond his strength, often sorrowfully calculating how he may make the ends to meet, denying himself in every way; and the extravagant idiot of a wife, bedizened with jewelry and arrayed in velvet and lace, who tosses away his hard earnings in reckless extravagance; in entertainments which he cannot afford, given to people who do not care a rush for him; in preposterous dress; in absurd furniture; in needless men-servants; in green-grocers above measure; in resolute aping of the way of living of people with twice or three times the means. It is sad to see all the forethought, prudence, and moderation of the wedded pair confined to one of them. You would say that it will not be any solid consolation to the widow, when the husband is fairly worried into his grave at last,—when his daughters have to go out as governesses, and she has to let lodgings,—to reflect that while he lived they never failed to have Champagne at his dinner-parties; and that they had three men to wait at table on such occasions, while Mr. Smith, next door, had never more than one and a maid-servant. If such idiotic women would but look forward, and consider how all this must end! If the professional man spends all he earns, what remains when the supply is cut off; when the toiling head and hand can toil no more? Ah, a little of the economy and management which must perforce be practised after *that* might have tended powerfully to put off the evil day. Sometimes the husband is merely the careworn drudge who provides what the wife squanders. Have you not known such a thing as that a man should be laboring under an Indian sun, and cutting down every personal expense to the last shilling, that he might send a liberal allowance to his wife in England; while she meanwhile was recklessly spending twice what was thus sent

her; running up overwhelming accounts, dashing about to public balls, paying for a bouquet what cost the poor fellow far away much thought to save, giving costly entertainments at home, filling her house with idle and empty-headed scapegraces, carrying on scandalous flirtations; till it becomes a happy thing, if the certain ruin she is bringing on her husband's head is cut short by the needful interference of Sir Cresswell Cresswell? There are cases in which tarring and feathering would soothe the moral sense of the right-minded onlooker. And even where things are not so bad as in the case of which we have been thinking, it remains the social curse of this age, that people with a few hundreds a year determinedly act in various respects as if they had as many thousands. The dinner given by a man with eight hundred a year, in certain regions of the earth which I could easily point out, is, as regards food, wine, and attendance, precisely the same as the dinner given by another man who has five thousand a year. When will this end? When will people see its silliness? In truth, you do not really, as things are in this country, make many people better off by adding a little or a good deal to their yearly income. For in all probability they were living up to the very extremity of their means before they got the addition; and in all probability the first thing they do, on getting the addition, is so far to increase their establishment and their expense that it is just as hard a struggle as ever to make the ends meet. It would not be a pleasant arrangement, that a man who was to be carried across the straits from England to France should be fixed on a board so weighted that his mouth and nostrils should be at the level of the water, and thus that he should be struggling for life, and barely escaping drowning all the way. Yet hosts of people, whom no one proposes to put under restraint, do as regards their income and expenditure a precisely analogous thing. They deliberately weight themselves to that degree that their heads are barely above water,

and that any unforeseen emergency dips their heads under. They rent a house a good deal dearer than they can justly afford; and they have servants more and more expensive than they ought; and by many such things they make sure that their progress through life shall be a drowning struggle: while, if they would rationally resolve and manfully confess that they cannot afford to have things as richer folk have them, and arrange their way of living in accordance with what they can afford, they would enjoy the feeling of ease and comfort; they would not be ever on the wretched stretch on which they are now, nor keeping up the hollow appearance of what is not the fact. But there are folk who make it a point of honor never to admit, that, in doing or not doing anything, they are actuated for an instant by so despicable a consideration as the question whether or not they can afford it. And who shall reckon up the brains which this social calamity has driven into disease, or the early paralytic shocks which it has brought on?

When you were very young, and looked forward to *Future Years*, did you ever feel a painful fear that you might outgrow your early home affections, and your associations with your native scenes? Did you ever think to yourself,—Will the day come when I shall have been years away from that river's side, and yet not care? I think we have all known the feeling. O plain church, to which I used to go when I was a child, and where I used to think the singing so very splendid! O little room, where I used to sleep! and you, tall tree, on whose topmost branch I cut the initials which perhaps the reader knows! did I not even then wonder to myself if the time would ever come when I should be far away from you,—far away, as now, for many years, and not likely to go back,—and yet feel entirely indifferent to the matter? and did not I even then feel a strange pain in the fear that very likely it might? These things come across the mind of a little boy with a curious grief and bewilderment. Ah, there is some-

thing strange in the inner life of a thoughtful child of eight years old! I would rather see a faithful record of his thoughts, feelings, fancies, and sorrows, for a single week, than know all the political events that have happened during that space in Spain, Denmark, Norway, Sweden, Russia, and Turkey. Even amid the great grief at leaving home for school in your early days, did you not feel a greater grief to think that the day might come when you would not care at all; when your home ties and affections would be outgrown; when you would be quite content to live on, month after month, far from parents, sisters, brothers, and feel hardly a perceptible blank when you remembered that they were far away? But it is of the essence of such fears, that, when the thing comes that you were afraid of, it has ceased to be fearful; still it is with a little pang that you sometimes call to remembrance how much you feared it once. It is a daily regret, though not a very acute one, (more 's the pity,) to be thrown much, in middle life, into the society of an old friend whom as a boy you had regarded as very wise, and to be compelled to observe that he is a tremendous fool. You struggle with the conviction; you think it wrong to give in to it; but you cannot help it. But it would have been a sharper pang to the child's heart, to have impressed upon the child the fact, that "Good Mr. Goose is a fool, and some day you will understand that he is." In those days one admits no imperfection in the people and the things one likes. You like a person; and *he is good*. That seems the whole case. You do not go into exceptions and reservations. I remember how indignant I felt, as a boy, at reading some depreciatory criticism of the "Waverley Novels." The criticism was to the effect that the plots generally dragged at first, and were huddled up at the end. But to me the novels were enchaining, enthralling; and to hint a defect in them stunned one. In the boy's feeling, if a thing be good, why, there cannot be anything bad about it. But in the man's mature judgment, even in the people he likes

best, and in the things he appreciates most highly, there are many flaws and imperfections. It does not vex us much now to find that this is so; but it would have greatly vexed us many years since to have been told that it would be so. I can well imagine, that, if you told a thoughtful and affectionate child, how well he would some day get on, far from his parents and his home, his wish would be that any evil might befall him rather than that! We shrink with terror from the prospect of things which we can take easily enough when they come. I dare say Lord Chancellor Thurlow was moderately sincere when he exclaimed in the House of Peers, "When I forget my king, may my God forget me!" And you will understand what Leigh Hunt meant, when, in his pleasant poem of "The Palfrey," he tells us of a daughter who had lost a very bad and heartless father by death, that,

"The daughter wept, and wept the more,
To think her tears would soon be o'er."

Even in middle age, one sad thought which comes in the prospect of Future Years is of the change which they are sure to work upon many of our present views and feelings. And the change, in many cases, will be to the worse. One thing is certain,—that your temper will grow worse, if it do not grow better. Years will sour it, if they do not mellow it. Another certain thing is, that, if you do not grow wiser, you will be growing more foolish. It is very true that there is no fool so foolish as an old fool. Let us hope, my friend, that, whatever be our honest worldly work, it may never lose its interest. We must always speak humbly about the changes which coming time will work upon us, upon even our firmest resolutions and most rooted principles; or I should say for myself that I cannot even imagine myself the same being, with bent less resolute and heart less warm to that best of all employments which is the occupation of my life. But there are few things which, as we grow older, impress us more deeply than the transitoriness of thoughts and feelings in human hearts.

Nor am I thinking of contemptible people only, when I say so. I am not thinking of the fellow who is pulled up in court in an action for breach of promise of marriage, and who in one letter makes vows of unalterable affection, and in another letter, written a few weeks or months later, tries to wriggle out of his engagement. Nor am I thinking of the weak, though well-meaning lady, who devotes herself in succession to a great variety of uneducated and unqualified religious instructors; who tells you one week how she has joined the flock of Mr. A., the converted prize-fighter, and how she regards him as by far the most improving preacher she ever heard; and who tells you the next week that she has seen through the prize-fighter, that he has gone and married a wealthy Roman Catholic, and that now she has resolved to wait on the ministry of Mr. B., an enthusiastic individual who makes shoes during the week and gives sermons on Sundays, and in whose addresses she finds exactly what suits her. I speak of the better feelings and purposes of wiser, if not better folk. Let me think here of pious emotions and holy resolutions, of the best and purest frames of heart and mind. Oh, if we could all always remain at our best! And after all, permanence is the great test. In the matter of Christian faith and feeling, in the matter of all our worthier principles and purposes, that which lasts longest is best. This, indeed, is true of most things. The worth of anything depends much upon its durability,—upon the wear that is in it. A thing that is merely a fine flash and over only disappoints. The highest authority has recognized this. You remember Who said to his friends, before leaving them, that He would have them bring forth fruit, and much fruit. But not even *that* was enough. The fairest profession for a time, the most earnest labor for a time, the most ardent affection for a time, would not suffice. And so the Redeemer's words were,—"I have chosen you, and ordained you, that ye should go and bring forth fruit, and that *your fruit should remain.*"

Well, let us trust, that, in the most solemn of all respects, only progress shall be brought to us by all the changes of Future Years.

But it is quite vain to think that feelings, as distinguished from principles, shall not lose much of their vividness, freshness, and depth, as time goes on. You cannot now by any effort revive the exultation you felt at some unexpected great success, nor the heart-sinking of some terrible loss or trial. You know how women, after the death of a child, determine that every day, as long as they live, they will visit the little grave. And they do so for a time, sometimes for a long time; but they gradually leave off. You know how burying-places are very trimly and carefully kept at first, and how flowers are hung upon the stone; but these things gradually cease. You know how many husbands and wives, after their partner's death, determine to give the remainder of life to the memory of the departed, and would regard with sincere horror the suggestion that it was possible they should ever marry again; but after a while they do. And you will even find men, beyond middle age, who made a tremendous work at their first wife's death, and wore very conspicuous mourning, who in a very few months may be seen dangling after some new fancy, and who in the prospect of their second marriage evince an exhilaration that approaches to crackiness. It is usual to speak of such things in a ludicrous manner; but I confess the matter seems to me anything but one to laugh at. I think that the rapid dying out of warm feelings, the rapid change of fixed resolutions, is one of the most sorrowful subjects of reflection which it is possible to suggest. Ah, my friends, after we die, it would not be expedient, even if it were possible, to come back. Many of us would not like to find how very little they miss us. But still, it is the manifest intention of the Creator that strong feelings should be transitory. The sorrowful thing is when they pass and leave absolutely no trace behind them. There should always be some corner kept

in the heart for a feeling which once possessed it all. Let us look at the case temperately. Let us face and admit the facts. The healthy body and mind can get over a great deal; but there are some things which it is not to the credit of our nature should ever be entirely got over. Here are sober truth, and sound philosophy, and sincere feeling together, in the words of Philip van Artevelde:—

“Well, well, she’s gone,
And I have tamed my sorrow. Pain and grief
Are transitory things, no less than joy;
And though they leave us not the men we were,
Yet they do leave us. You behold me here,
A man bereaved, with something of a blight
Upon the early blossoms of his life,
And its first verdure, — having not the less
A living root, and drawing from the earth
Its vital juices, from the air its powers:
And surely as man’s heart and strength are whole,
His appetites regeminate, his heart
Reopens, and his objects and desires
Spring up renewed.”

But though Artevelde speaks truly and well, you remember how Mr. Taylor, in that noble play, works out to our view the sad sight of the deterioration of character, the growing coarseness and harshness, the lessening tenderness and kindness, which are apt to come with advancing years. Great trials, we know, passing over us, may influence us either for the worse or the better; and unless our nature is a very obdurate and poor one, though they may leave us, they will not leave us the men we were. Once, at a public meeting, I heard a man in eminent station make a speech. I had never seen him before; but I remembered an inscription which I had read, in a certain churchyard far away, upon the stone that marked the resting-place of his young wife, who had died many years before. I thought of its simple words of manly and hearty sorrow. I knew that the eminence he had reached had not come till she who would have been proudest of it was beyond knowing it or caring for it. And I cannot say with what interest and satisfaction I thought I could

trace, in the features which were sad without the infusion of a grain of sentimentalism, in the subdued and quiet tone of the man’s whole aspect and manner and address, the manifest proof that he had not shut down the leaf upon that old page of his history, that he had never quite got over that great grief of earlier years. One felt better and more hopeful for the sight. I suppose many people, after meeting some overwhelming loss or trial, have fancied that they would soon die; but that is almost invariably a delusion. Various dogs have died of a broken heart, but very few human beings. The inferior creature has pined away at his master’s loss: as for us, it is not that one would doubt the depth and sincerity of sorrow, but that there is more endurance in our constitution, and that God has appointed that grief shall rather mould and influence than kill. It is a much sadder sight than an early death, to see human beings live on after heavy trial, and sink into something very unlike their early selves and very inferior to their early selves. I can well believe that many a human being, if he could have a glimpse in innocent youth of what he will be twenty or thirty years after, would pray in anguish to be taken before coming to *that*! Mansie Wauch’s glimpse of destitution was bad enough; but a million times worse is a glimpse of hardened and unabashed sin and shame. And it would be no comfort—it would be an aggravation in that view—to think that by the time you have reached that miserable point, you will have grown pretty well reconciled to it. *That* is the worst of all. To be wicked and depraved, and to feel it, and to be wretched under it, is bad enough; but it is a great deal worse to have fallen into that depth of moral degradation and to feel that really you don’t care. The instinct of accommodation is not always a blessing. It is happy for us, that, though in youth we hoped to live in a castle or a palace, we can make up our mind to live in a little parsonage or a quiet street in a country town. It is happy for us, that, though

in youth we hoped to be very great and famous, we are so entirely reconciled to being little and unknown. But it is not happy for the poor girl who walks the Haymarket at night that she feels her degradation so little. It is not happy that she has come to feel towards her miserable life so differently now from what she would have felt towards it, had it been set before her while she was the blooming, thoughtless creature in the little cottage in the country. It is only by fits and starts that the poor drunken wretch, living in a garret upon a little pittance allowed him by his relations, who was once a man of character and hope, feels what a sad pitch he has come to. If you could get him to feel it constantly, there would be some hope of his reclamation even yet.

It seems to me a very comforting thought, in looking on to Future Years, if you are able to think that you are in a profession or a calling from which you will never retire. For the prospect of a total change in your mode of life, and the entire cessation of the occupation which for many years employed the greater part of your waking thoughts, and all this amid the failing powers and flagging hopes of declining years, is both a sad and a perplexing prospect to a thoughtful person. For such a person cannot regard this great change simply in the light of a rest from toil and worry; he will know quite well what a blankness and listlessness and loss of interest in life will come of feeling all at once that you have nothing at all to do. And so it is a great blessing, if your vocation be one which is a dignified and befitting one for an old man to be engaged in, one that bessems his gravity and his long experience, one that bessems even his slow movements and his white hairs. It is a pleasant thing to see an old man a judge; his years become the judgment-seat. But then the old man can hold such an office only while he retains strength of body and mind efficiently to perform its duties; and he must do all

his work for himself: and accordingly a day must come when the venerable Chancellor resigns the Great Seal; when the aged Justice or Baron must give up his place; and when these honored Judges, though still retaining considerable vigor, but vigor less than enough for their hard work, are compelled to feel that their occupation is gone. And accordingly I hold that what is the best of all professions, for many reasons, is especially so for this, that you need never retire from it. In the Church you need not do all your duty yourself. You may get assistance to supplement your own lessening strength. The energetic young curate or curates may do that part of the parish work which exceeds the power of the aging incumbent, while the entire parochial machinery has still the advantage of being directed by his wisdom and experience, and while the old man is still permitted to do what he can with such strength as is spared to him, and to feel that he is useful in the noblest cause yet. And even to extremest age and frailty,—to age and frailty which would long since have incapacitated the judge for the bench,—the parish clergyman may take some share in the much-loved duty in which he has labored so long. He may still, though briefly, and only now and then, address his flock from the pulpit, in words which his very feebleness will make far more touchingly effective than the most vigorous eloquence and the richest and fullest tones of his young coadjutors. There never will be, within the sacred walls, a silence and reverence more profound than when the withered kindly face looks as of old upon the congregation, to whose fathers its owner first ministered, and which has grown up mainly under his instruction,—and when the voice that falls familiarly on so many ears tells again, quietly and earnestly, the old story which we all need so much to hear. And he may still look in at the parish school, and watch the growth of a generation that is to do the work of life when he is in his grave; and kindly smooth the children's heads; and tell them how One, once a

little child, and never more than a young man, brought salvation alike to young and old. He may still sit by the bedside of the sick and dying, and speak to such with the sympathy and the solemnity of one who does not forget that the last great realities are drawing near to both. But there are vocations which are all very well for young or middle-aged people, but which do not quite suit the old. Such is that of the barrister. Wrangling and hair-splitting, browbeating and bewildering witnesses, making coarse jokes to excite the laughter of common jurymen, and addressing such with clap-trap bellowings, are not the work for gray-headed men. If such remain at the bar, rather let them have the more refined work of the Equity Courts, where you address judges, and not juries; and where you spare clap-trap and misrepresentation, if for no better reason, because you know that these will not stand you in the slightest stead. The work which best befits the aged, the work for which no mortal can ever become too venerable and dignified or too weak and frail, is the work of Christian usefulness and philanthropy. And it is a beautiful sight to see, as I trust we all have seen, *that* work persevered in with the closing energies of life. It is a noble test of the soundness of the principle that prompted to its first undertaking. It is a hopeful and cheering sight to younger men, looking out with something of fear to the temptations and trials of the years before them. Oh! if the gray-haired clergyman, with less now, indeed, of physical strength and mere physical warmth, yet preaches, with the added weight and solemnity of his long experience, the same blessed doctrines now, after forty years, that he preached in his early prime; if the philanthropist

of half a century since is the philanthropist still,—still kind, hopeful, and unwearied, though with the snows of age upon his head, and the hand that never told its fellow of what it did now trembling as it does the deed of mercy; then I think that even the most doubtful will believe that the principle and the religion of such men were a glorious reality! The sternest of all touchstones of the genuineness of our better feelings is the fashion in which they stand the wear of years.

But my shortening space warns me to stop; and I must cease, for the present, from these thoughts of Future Years,—cease, I mean, from writing about that mysterious tract before us: who can cease from thinking of it? You remember how the writer of that little poem which has been quoted asks Time to touch gently him and his. Of course he spoke as a poet, stating the case fancifully,—but not forgetting, that, when we come to sober sense, we must prefer our requests to an Ear more ready to hear us and a Hand more ready to help. It is not to Time that I shall apply to lead me through life into immortality! And I cannot think of years to come without going back to a greater poet, whom we need not esteem the less because his inspiration was loftier than that of the Muses, who has summed up so grandly in one comprehensive sentence all the possibilities which could befall *him* in the days and ages before him. "Thou shalt guide me with Thy counsel, and afterward receive me to glory!" Let us humbly trust that in that sketch, round and complete, of all that can ever come to us, my readers and I may be able to read the history of our Future Years!

Copied from Fraser's Magazine

BROTHER JONATHAN'S LAMENT FOR SISTER CAROLINE.

SHE has gone, — she has left us in passion and pride, —
Our stormy-browed sister, so long at our side!
She has torn her own star from our firmament's glow,
And turned on her brother the face of a foe!

O Caroline, Caroline, child of the sun,
We can never forget that our hearts have been one, —
Our foreheads both sprinkled in Liberty's name,
From the fountain of blood with the finger of flame!

You were always too ready to fire at a touch;
But we said, "She is hasty, — she does not mean much."
We have scowled, when you uttered some turbulent threat;
But Friendship still whispered, "Forgive and forget!"

Has our love all died out? Have its altars grown cold?
Has the curse come at last which the fathers foretold?
Then Nature must teach us the strength of the chain
That her petulant children would sever in vain.

They may fight till the buzzards are gorged with their spoil,
Till the harvest grows black as it rots in the soil,
Till the wolves and the catamounts troop from their caves,
And the shark tracks the pirate, the lord of the waves:

In vain is the strife! When its fury is past,
Their fortunes must flow in one channel at last,
As the torrents that rush from the mountains of snow
Roll mingled in peace through the valleys below.

Our Union is river, lake, ocean, and sky:
Man breaks not the medal, when God cuts the die!
Though darkened with sulphur, though cloven with steel,
The blue arch will brighten, the waters will heal!

O Caroline, Caroline, child of the sun,
There are battles with Fate that can never be won!
The star-flowering banner must never be furled,
For its blossoms of light are the hope of the world!

Go, then, our rash sister! afar and aloof, —
Run wild in the sunshine away from our roof;
But when your heart aches and your feet have grown sore,
Remember the pathway that leads to our door!

ORIGINAL MEMORIALS OF MRS. PIOZZI.

NINETY years ago, one of the pleasantest houses near London, for the society that gathered within it, was Mr., or rather, Mrs. Thrale's, at Streatham Park. To be a guest there was to meet the best people in England, and to hear such good talk that much of it has not lost its flavor even yet. Strawberry Hill, Holland House, or any other famous house of that day, has left but faint memories of itself, compared with those of Streatham. Boswell, the most sagacious of men in the hunt after good company, had the good wit and good fortune to get entrance here. One day, in 1769, Dr. Johnson delivered him "a very polite card" from Mr. and Mrs. Thrale, inviting him to Streatham. "On the 6th of October, I complied," he says, "with their obliging invitation, and found, at an elegant villa six miles from town, every circumstance that can make society pleasing." Upon the walls of the library hung portraits of the master and mistress of the house, and of their most familiar friends and guests, all by Sir Joshua. Madame d'Arblay, in her most entertaining "Diary," gives a list of them,—and a list is all that is needed of such famous names. "Mrs. Thrale and her eldest daughter were in one piece, over the fireplace, at full length. The rest of the pictures were all three-quarters. Mr. Thrale was over the door leading to his study. The general collection then began by Lord Sandys and Lord Westcote, (Lyttelton,) two early noble friends of Mr. Thrale. Then followed Dr. Johnson, Mr. Burke, Dr. Goldsmith, Mr. Murphy, Mr. Garrick, Mr. Baretti, Sir Robert Chambers, and Sir Joshua Reynolds himself,—all painted in the highest style of this great master, who much delighted in this his Streatham Gallery. There was place left but for one more frame when the acquaintance with Dr. Burney began at Streatham."

A household which had such men for its intimates must have had a more than

common charm in itself, and at Streatham this charm lay chiefly in the character of its mistress. It was Mrs. Thrale who had the rare power "to call together the most select company when it pleased her." In 1770 she was thirty years old. A small and not beautiful woman, but with a variety of expression that more than compensated for the want of handsome features, with a frank, animated manner, and that highest tact which sets guests at ease, there was something specially attractive in her first address. But beyond this she was the pleasantest converser of all the ladies of the day. In that art in which one "has all mankind for competitors," there was no one equal to her in her way. Gifted with the readiest of well-stored memories, with a lively wit and sprightly fancy, with a strong desire to please and an ambition to shine, she never failed to win admiration, while her sweetness of temper and delicate consideration for others gained for her a general regard. For many years she was the friend who did most to make Johnson's life happy. He was a constant inmate at Streatham. "I long thought you," wrote he, "the first of womankind." It was her "kindness which soothed twenty years of a life radically wretched." "To see and hear you," he wrote, "is always to hear wit and to see virtue." She belonged, in truth, to the most serviceable class of women,—by no means to the highest order of her sex. She was not a woman of deep heart, or of noble or tender feeling; but she had kindly and ready sympathies, and such a disposition to please as gave her the capacity of pleasing. Her very faults added to her success. She was vain and ambitious; but her vanity led her to seek the praises of others, and her ambition taught her how to gain them. She was selfish; but she pleased herself not at the expense of others, but by paying them attentions which returned to her in personal gratifications. She was made for

such a position as that which she held at Streatham. The highest eulogy of her is given in an incidental way by Boswell. He reports Johnson as saying one day, "How few of his friends' houses would a man choose to be at when he is sick!" He mentioned one or two. I recollect only Thrale's."

All the world of readers know the main incidents of Mrs. Thrale's life. Her own books, Boswell, Madame d'Arblay, have made us almost as familiar with her as with Dr. Johnson himself. Not yet have people got tired of wondering at her marriage with Piozzi, or of amusing themselves with the gossip of the old lady who remained a wit at eighty years old, and, having outlived her great contemporaries, was happy in not outliving her own faculties. Few characters not more remarkable have been more discussed than hers. Macaulay, with characteristic unfairness, gave a view of her conduct which Mr. Hayward, in his recently published entertaining volumes,* shows to have been in great part the invention of the great essayist's lively and unprincipled imagination. In the autobiographical memorials of Mrs. Piozzi, now for the first time printed, there is much that throws light on her life, and her relations with her contemporaries. They do not so much raise one's respect for her, as present her to us as a very natural and generally likable sort of woman, even in those acts of her life which have been the most blamed.

If she had but died while she was mistress of Streatham, we should have only delightful recollections of her. She would have been one of the most agreeable famous women on record. But the last forty years of her life were not as charming as the first. Her weaknesses gained mastery over her, her vanity led her into follies, and she who had once been the favorite correspondent of Dr. Johnson

now appears as the correspondent of such inferior persons that no association is connected with their names. Mrs. Thrale and Mrs. Piozzi are two different persons. One belongs to Streatham, the other to Bath; one is "always young and always pretty," the other a rouged old woman. But it is unfair to push the contrast too far. Mrs. Piozzi at seventy or eighty was as sprightly, as good-natured, as Mrs. Thrale at thirty or forty. She never lost her vivacity, never her desire to please. But it is a sadly different thing to please Dr. Johnson, Burke, or Sir Joshua, and to please

"Those real genuine no-mistake Tom Thumbs, The little people fed on great men's crumbs."

One of the most marked and least satisfactory expressions of Mrs. Piozzi's character during her later years was a fancy that she took to Conway, a young and handsome actor, who appeared in Bath, where she was then living, in the year 1819. From the time of her first acquaintance with him, till her death, in 1821, she treated him with the most flattering regard,—with an affection, indeed, that might be called motherly, had there not been in it an element of excitement which was neither maternal nor dignified. Conway was a gentleman in feeling, and seems to have had not only a grateful sense of the old lady's partiality for him, but a sincere interest also in hearing from her of the days and the friends of her youth. So she wrote letters to him, gave him books filled with annotations, (it was a favorite habit of hers to write notes on the margins of books,) wrote for him the story of her life, and drew on the resources of her marvellous memory for his amusement. The old woman's kindness was one of the few bright things in poor Conway's unhappy life. His temperament was morbidly sensitive; and when, in 1821, while acting in London, Theodore Hook attacked him in the most cruel and offensive manner in the columns of the "John Bull," he threw up his engagement, determined to act no more in London, and for a time left the stage. A year or two afterwards he

* *Autobiography, Letters, and Literary Remains of Mrs. Piozzi (Thræle)*. Edited, with Notes and an Introductory Account of her Life and Writings, by A. Hayward, Esq., Q. C. In Two Volumes. London, 1861. Reprinted by Ticknor & Fields.

came to this country, and met with a very considerable success. But he fancied himself underrated, and, after performing in Philadelphia in the winter of 1826, he took passage for Charleston, and on the voyage threw himself overboard and was lost. His effects were afterwards sold by auction in New York. Among them were many interesting relics and memorials of Mrs. Piozzi. Mr. Hayward mentions "a copy of the folio edition of Young's 'Night Thoughts,' in which he had made a note of its having been presented to him by his 'dearly attached friend, the celebrated Mrs. Piozzi.'" But there were other books of far greater interest and value than this. There was, as we have been informed, a copy of Malone's Shakspeare, with numerous notes in the handwriting of Dr. Johnson,—and a copy of "Prayers and Meditations by Samuel Johnson," with several additional manuscript prayers, and Mrs. Piozzi's name upon one of the fly-leaves. But more curious still was a copy of Mrs. Piozzi's "Journey through France, Italy, and Germany," both volumes of which are full of marginal notes, while, inserted at the beginning and the end, are many pages of Mrs. Piozzi's beautifully written manuscript, containing a narrative and anecdotes of portions of her life. These volumes now lie before us,* and their unpublished contents are as lively, as entertaining, and as rich in autobiographic illustration, as any of the material of which Mr. Hayward's recent book is composed.

On the first fly-leaf is the following inscription:—

"These Books do not in any wise belong to me; they are the property of William Augustus Conway, Esq., who left them to my care, for purpose of putting notes, when he quitted Bath, May 14, 1819.

* This unique copy of the *Journey through France*, etc., is in the possession of Mr. Duncan C. Pell, of Newport, R. I. It is to his liberality that we are indebted for the privilege of laying before the readers of the *Atlantic* the following portions of Mrs. Piozzi's manuscript.

"Hester Lynch Piozzi writes this for fear lest her death happening before his return, these books might be confounded among the others in her study."

On the next page the narrative begins, and with a truly astonishing spirit for the writing of a woman in her eightieth year. Her old vivacity is still natural to her; there is nothing forced in the pleasantry of this introduction.

"A Lady once—'t was many years ago—asked me to lend her a book out of my library at Streatham Park. 'A book of entertainment,' said I, 'of course.' 'That I don't know or rightly comprehend,' was her odd answer; 'I wish for an *Abridgment*.' 'An Abridgment of what?' 'That,' she replied, 'you must tell me, my Dear; for I am no reader, like you and Dr. Johnson; I only remember that the last book I read was very pretty, and my husband called it an Abridgment.' . . . And if I give some account of myself here in these few little sheets prefixed to my 'Journey thro' Italy,' you must kindly accept

"The Abridgment."

The first pages of the manuscript are occupied by Mrs. Piozzi with an account of her family and of her own early life. They contain in brief the same narrative that she gave in her "Autobiographical Memoirs," printed by Mr. Hayward, in his first volume. Here is a story, however, which we do not remember to have seen before.

"My heart was free, my head full of Authors, Actors, Literature in every shape; and I had a dear, dear friend, an old Dr. Collier, who said he was sixty-six years old, I remember, the day I was sixteen, and whose instructions I prized beyond all the gayeties of early life: nor have I ever passed a day since we parted in which I have not recollected with gratitude the boundless obligations that I owe him. He was intimate with the famous James Harris of Salisbury, Lord Malmesbury's father, of whom you have heard how Charles Townshend said, when he took his seat in the House of Commons,—'Who is this man?'—to his next neigh-

bour; 'I never saw him before.' 'Who? Why, Harris the author, that wrote one book about Grammar [so he did] and one about Virtue.' 'What does he come here for?' replies Spanish Charles; 'he will find neither Grammar nor Virtue here.' Well, my dear old Dr. Collier had much of both, and delighted to shake the superflux of his full mind over mine, ready to receive instruction conveyed with so much tender assiduity."

In both her autobiographies, the printed as well as the manuscript, Mrs. Piozzi speaks in very cold and disparaging terms of her first husband, Mr. Thrale. Her marriage with him had not been a love-match; but we suspect that the long course of years had been unfavorable to his memory in her recollection, and that the blame with which his friends visited her second marriage, which was in all respects an affair of the heart, produced in her a certain bitterness of feeling toward Mr. Thrale, as if he had been the author of these reproaches. It is impossible to believe that he was as indifferent to her as she represents, and that her marriage with him was not moderately happy. Had it been otherwise, however well appearances might have been kept up, Dr. Johnson could hardly have been deceived concerning the truth, and would hardly have ventured to write to her in his letter of consolation upon Mr. Thrale's death in 1781, —

"HE that has given you happiness in marriage, to a degree of which, without personal knowledge, I should have thought the description fabulous, can give you another mode of happiness as a mother."

One of her most decided intellectual characteristics was her versatility, or, to give it a harder name, what Johnson called her "instability of attention." Dulness was, in her code, the unpardonable sin. Variety was the charm of life, and of books. She never dwelt long on one idea. Her letters and her books are pieces of mosaic-work, the bits of material being put together without any regular pattern, but often with a pretty effect. Here is an illustration of her style.

"In a few years (our Letters tell the date) Johnson was introduced; and now I must laugh at a ridiculous *Retrospection*. When I was a very young wench, scarce twelve years old I trust, my notice was strongly attracted by a Mountebank in some town we were passing through. 'What a fine fellow!' said I; 'dear Papa, do ask him to dinner with us at our inn! — or, at least, Merry Andrew, because he could tell us such *clever stories of his master*.' My Father laughed sans intermission an hour by the dial, as Jacques once at Motley. — Yet did dear Mr. Conway's fancy for H. L. P.'s conversation grow up, at first, out of something not unlike this, when, his high-polished mind and fervid imagination taking fire from the tall Beacon bearing Dr. Johnson's fame above the clouds, he thought some information might perhaps be gained by talk with the old female who so long *carried coals to it*. She has told all, or nearly all, she knew, —

'And like poor Andrew must advance,
Mean mimic of her master's dance; —
But similes, like songs in love,
Describing much, too little prove.'

So now, leaving Prior's pretty verses, and leaving Dr. Johnson too, who was himself severely censured for his rough criticism on a writer who had pleased all in our Augustan age of Literature, poor H. L. P. turns egotist at eighty, and tells her own adventures."

But the octogenarian egotist has something to tell about beside herself. Here is a passage of interest to the student of Shakspearian localities, and bearing on a matter in dispute from the days of Malone and Chalmers.

"For a long time, then, — or I thought it such, — my fate was bound up with the old Globe Theatre, upon the Bankside, Southwark; the alley it had occupied having been purchased and thrown down by Mr. Thrale to make an opening before the windows of our dwelling-house. When it lay desolate in a black heap of rubbish, my Mother, one day, in joke, called it the Ruins of Palmyra; and after they had laid it down in a grass-plot,

Palmyra was the name it went by, I suppose, among the clerks and servants of the brew-house; for when the Quaker Barclay bought the whole, I read that name with wonder in the Writings."—"But there were really curious remains of the old Globe Playhouse, which, though hexagonal in form without, was round within, as circles contain more space than other shapes, and Bees make their cells in hexagons only because that figure best admits of junction. Before I quitted the premises, however, I learned that Tarleton, the actor of those times, was not buried at St. Saviour's, Southwark, as he wished, near Massinger and Gower, but at Shoreditch Church. He was the first of the profession whose fame was high enough to have his portrait solicited for to be set up as a Sign; and none but he and Garrick, I believe, ever obtained that honour. Mr. Dance's picture of our friend David lives in a copy now in Oxford St.,—the character, King Richard."

Somewhat more than three years after her first husband's death, Mrs. Thrall, in spite of the opposition of her friends, the repugnance of her daughters, and the sneers of society, married Piozzi. He was a poor Italian gentleman, whose only fortune was in his voice and his musical talent. He had been for some time an admired public singer in London and Paris. There was nothing against him but the opinion of society. Mrs. Thrall set this opinion at defiance: a rash thing for a woman to do, and hardly an excusable one in her case; for she was aware that she would thus alienate her daughters, and offend her best friends. But she was in love with him; and though for a time she tried to struggle against her passion, it finally prevailed over her prudence, her pride, and such affections as she had for others. Her health suffered during the struggle, the termination of which she thus narrates in her "Abridgment." The account differs in some slight particulars from that in her "Autobiographical Memoirs"; but a comparison between the two serves rather to

confirm than to impugn her general accuracy.

"I hoped," she says, "in defiance of probability, to live my sorrows out, and marry the man of my choice. Health, however, began to give way, as my Letters to Dr. Johnson testify; and when my kind physician, Dobson, from Liverpool, found it in actual and positive danger,—'Now,' said he, 'I have respected your delicacy long enough; tell me at once who he is that holds *such* a life in his power: for write to him I must and will; it is my sacred duty.' 'Dear Sir,' said I, 'the difficulty is to keep him at a distance. Speak to these cruel girls, if you will speak.' 'One of whose lives your assiduous tenderness,' cried he, 'saved, with my little help, only a month ago!'—and ran up-stairs to the ladies. 'We know,' was their reply, 'that she is fretting after a fellow; but where he is—you may ask her—we know not.' 'He is at Milan, with his friend the Marquis of Araceli,' said I,—'from whom I had a letter last week, requesting Piozzi's recall from banishment, as he gallantly terms it, little conscious of what I suffer.' So we wrote; and he returned on the eleventh day after receiving the letter. Meanwhile my health mended, and I waited on the lasses to their own house at Brighthelmston, leaving Miss Nicholson, a favorite friend of theirs, and all their intolerably insolent servants, with them. Piozzi's return accelerated the recovery of your poor friend, and we married in both Churches,—at St. James', Bath, on St. James' Day, 1784,—thirty-five years ago now that I write this Abridgment. When we came to examine Papers, however, our attorney, Greenland, discovered a *suppression* of fifteen hundred pounds, which helped pay our debts, discharge the mortgage, etc.,—as Piozzi, like Portia, permitted me not to sleep by his side with an unquiet soul. He settled everything with his own money, depended on God and my good constitution for our living long and happily together,—and so we did, twenty-five years,—said change of scenery would complete the cure, and carried me off in

triumph, as he called it, to shew his friends in Italy the foreign wife he had so long been sighing for. 'Ah, Madam!' said the Marquis, when he first saluted me, 'we used to blame dear Piozzi;—now we envy him!'"

Of Mrs. Piozzi's journey on the Continent we shall speak in another article. After a residence abroad of two years and a half, she and her husband returned to London in March, 1787. Mrs. Piozzi had come home determined to resume, if it were possible, her old place in society, and to assert herself against the attacks of wits and newspapers, and the coldness of old friends. She had been hardly and unfairly dealt with by the public, in regard to her marriage. The appearance, during her absence, of her volume of "*Anecdotes of Dr. Johnson*" had given unfriendly critics an opportunity to pass harsh judgment upon her literary merits, and had excited the jealousy of rival biographers of the dead lion. Boswell, Hawkins, Baretti, Chalmers, Peter Pindar, Gifford, Horace Walpole, all had their fling at her. Never was an innocent woman in private life more unfeelingly abused, or her name dragged before the public more wantonly, in squibs and satires, jests and innuendoes. The women who transgress social conventionalities are often treated as if they had violated the rules of morals. But she was not to be put down in this way. Her temperament enabled her to escape much of the pain which a more sensitive person would have suffered. She hardened herself against the malice of her satirists; and in doing so, her character underwent an essential change. She was truly happy with Piozzi, and she preserved, by strength of will, an inexhaustible fund of good spirits.

On first reaching London, "we drove," she writes in the Conway MSS., "to the Royal Hotel in Pall Mall, and, arriving early, I proposed going to the Play. There was a small front box, in those days, which held only two; it made the division, or connexion, with the side boxes, and, being unoccupied, we sat in it,

and saw Mrs. Siddons act Imogen, I well remember, and Mrs. Jordan, Priscilla Tomboy. Mr. Piozzi was amused, and the next day was spent in looking at houses, counting the cards left by old acquaintances, etc. The lady-daughters came, behaved with cold civility, and asked what I thought of *their* decision concerning Cecilia, then at school. No reply was made, or a gentle one; but she was the first cause of contention among us. The lawyers gave her into my care, and we took her home to our new habitation in Hanover Square, which we opened with Music, cards, etc., on, I think, the 22 March. Miss Thrales refused their company; so we managed as well as we could. Our affairs were in good order, and money ready for spending. The World, as it is called, appeared good-humored, and we were soon followed, respected, and admired. The summer months sent us about visiting and pleasuring, and after another gay London season, Streatham Park, unoccupied by tenants, called us as if *really home*. Mr. Piozzi, with more generosity than prudence, spent two thousand pounds on repairing and furnishing it in 1790;—and we had danced all night, I recollect, when the news came of Louis Seize's escape from, and recapture by, his rebel subjects."

Poor old woman, who could thus write of her own daughters!—poor old woman, who had not heart enough either to keep the love of her children or to grieve for its loss! Cecilia was her fourth and youngest child, and her story, as her mother tells it, may as well be finished here. After speaking in her manuscript of a claim on some Oxfordshire property, disputed by her daughters, she says, in words hard and cold as steel,—"We threw it up, therefore, and contented ourselves with the plague Cecilia gave us, who, by dint of intriguing lovers, teased my soul out before she was fifteen,—when she fortunately ran away, jumping out of the window at Streatham Park, with Mr. Mostyn of Segroid,—a young man to whom Sir Thomas Mostyn's title

will go, if he does not marry, but whose property, being much encumbered, made him no match for Ceezy and her forty thousand pounds; and we were censured for not taking better care, and suffering her to wed a *Welsh* gentleman,—object of ineffable contempt to the daughters of Mr. Thrale, with whom she always held correspondence while living with us, who indulged her in every expense and every folly,—although allowed only one hundred and forty pounds per ann. on her account.”

After two or three years spent in London, the Piozzis resided for some time at Streatham,—how changed in mistress and in guests from the Streatham of which Mrs. Thrale had been the presiding genius! But after a while they removed to Wales, where, on an old family estate belonging to Mrs. Piozzi, they built a house, and christened the place with the queer Welsh-Italian compound name of Brynbella. “Mr. Piozzi built the house for me, he said; my own old chateau, Bachygraig by name, tho’ very curious, was wholly uninhabitable; and we called the Italian villa he set up as mine in the Vale of Cluid, North Wales, Brynbella, or the beautiful brow, making the name half Welsh and half Italian, as *we* were.” Here they lived, with occasional visits to other places, during the remainder of Piozzi’s life. “Our head quarters were in Wales, where dear Piozzi repaired my church, built a new vault for my old ancestors, chose the place in it where he and I are to repose together. . . . He lived some twenty-five years with me, however, but so punished with Gout that we found Bath the best wintering-place for many, many seasons.—Mrs. Siddons’ last appearance there he witnessed, when she played Calista to Dimond’s Lothario, in which he looked so like Garrick it shocked us *all three*, I believe; for Garrick adored Mr. Piozzi, and Siddons hated the little great man to her heart. Poor Dimond! he was a well-bred, pleasing, worthy creature, and did the honours of his own house and table with peculiar grace indeed.

No likeness in private life or manner,—none at all; no wit, no fun, no frolic humour had Mr. Dimond:—no grace, no dignity, no real unaffected elegance of mien or behaviour had his predecessor, David,—whose partiality to my fastidious husband was for that reason never returned. Merriment, difficult for *him* to comprehend, made no amends for the want of that which no one understood better;—so he hated all the wits but Murphy.”

And now that we are on anecdotes of the Theatre, here is another good story, which belongs to a somewhat earlier time, but of which Mrs. Piozzi does not mention the exact date. “The Richmond Theatre at that time attracted all literary people’s attention, while a Coterie of Gentlemen and Noblemen and Ladies entertained themselves with getting up Plays, and acting them at the Duke of Richmond’s house, Whitehall. Lee’s ‘Theodosius’ was the favorite. Lord Henry Fitzgerald played Varanus very well,—for a Dilettante; and Lord Derby did his part surprisingly. But there was a song to be sung to Athenais, while she, resolving to take poison, sits in a musing attitude. Jane Holman—then Hamilton—*would* sing an air of Sacchini, and the manager *would not* hear Italian words. The ballad appointed by the author was disapproved by all, and I pleased everybody by my fortunate fancy of adapting some English verses to the notes of Sacchini’s song; and Jane Hamilton sung them enchantingly:—

‘Vain’s the breath of Adulation,
Vain the tears of tenderest Passion,
Whilst a strong Imagination
Holds the wandering Mind away:
Art in vain attempts to borrow
Notes to soothe a rooted sorrow;
Fixed to die, and die to-morrow,
What can touch her soul to-day?’

The lines were printed, but I lost them. ‘What a wild Tragedy is this!’ said I to Hannah More, who was one of the audience. ‘Wild enough,’ was her reply; ‘but there’s good Poetry in it, and good Passion, and they will always do.’

Hannah More never goes now to a Theatre. How long is H. L. Piozzi likely to be seen there? How long will Mr. Conway keep the stage?"

In the year 1798, the family of Mr. Piozzi having suffered greatly from the French invasion of Lombardy, he sent for the son of his youngest brother, a "little boy just turned of five years old." "We have got him here," wrote Mrs. Piozzi in a letter from Bath, dated January, 1799, published by Mr. Hayward, "and his uncle will take him to school next week." "As he was by a lucky chance baptized, in compliment to me, John Salusbury, [Salusbury was her family name,] he will be known in England by no other, and it will be forgotten he is a foreigner." "My poor little boy from Lombardy said, as I walked with him across our market, 'These are sheep's heads, are they not, aunt? I saw a basket of men's heads at Brescia.'" Little John, though he went to school, was often at home. After writing of the troubles with her own daughters, Mrs. Piozzi says in the manuscript before us, — "Had we vexations enough? We had certainly many pleasures. The house in Wales was beautiful, and the Boy was beautiful too. Mr. Piozzi said I had spoiled my own children and was spoiling his. My reply was, that I loved spoiling people, and hated any one I could not spoil. Am I not now trying to spoil dear Mr. Conway?"

Piozzi was not far from wrong in his judgment of her treatment of this boy, if we may trust to her complaints of his coldness and indifference to her. In 1814, at the time of his marriage, five years after Piozzi's death, she gave to him her Welsh estate; and it may have been a greater satisfaction to her than any gratification of the affections could have afforded, to see him, before she died, high sheriff of his county, and knighted as Sir John Salusbury Piozzi Salusbury.

There was little gayety in the life at Brynbellia, or at Bath, — and the society that Mrs. Piozzi now saw was made up chiefly of new and for the most part

uninteresting acquaintances. The old Streatham set, with a few exceptions, were dead, and of the few that remained none retained their former relations with its mistress. But she suffered little from the change, was contented to win and accept the flattery of inferior people, and, instead of spending her faculties in soothing the "radically wretched life" of Johnson, used them, perhaps not less happily, in lightening the sufferings of Piozzi during his last years. She tells a touching story of him in these days.

"Piozzi's fine hand upon the organ and pianoforte deserted him. Gout, such as I never knew, fastened on his fingers, distorting them into every dreadful shape. . . . A little girl, shewn to him as a musical wonder of five years old, said, 'Pray, Sir, why are your fingers wrapped up in black silk so?' 'My Dear,' replied he, 'they are in mourning for my Voice.' 'Oh, me!' cries the child, 'is she dead?' He sung an easy song, and the Baby exclaimed, 'Ah, Sir! you are very naughty, — you tell fibs!' Poor Dears! and both gone now!!"

There were no morbid sensibilities in Mrs. Piozzi's composition. She can tell all her sorrows without ever a tear. A mark of exclamation looks better than a blot. And yet she had suffered; but it had been with such suffering as makes the soul hard rather than tender. The pages with which she ends this narrative of her life are curiously characteristic.

"When life was gradually, but perceptibly, closing round him [Piozzi] at Bath, in 1808, I asked him if he would wish to converse with a Romish priest, — we had full opportunity there. 'By no means,' said he. 'Call Mr. Leman of the Crescent.' We did so, — poor Bessy ran and fetched him. Mr. Piozzi received the blessed Sacrament at his hands; but recovered sufficiently to go home and die in his own house. I sent for Salusbury, but he came three hours too late, — his master, Mr. Shephard, with him. In another year he went to Oxford, where he spent me above seven hundred pounds per annum, and kept me in continual terror

lest the bad habits of the place should ruin him, body, soul, and purse. His old school-fellow, Smythe Owen, — then Pemberton, — accompanied him, and to that gentleman's sister he of course gave his heart. The Lady and her friends took advantage of my fondness, and insisted on my giving up the Welsh estate. I did so, hoping to live at last with my own children, at Streatham Park; — *there*, however, I found no solace of the sort. So, after entangling my purse with new repairing and furnishing that place, retirement to Bath with my broken heart and fortune was all I could wish or expect. Thither I hasted, heard how the possessors of Brynbella lived and thrived, but

'Who set the twigs will he remember
Who is in haste to sell the timber?'

Well, no matter! One day before I left it there was talk how Love had always Interest annexed to it. 'Nay, then,' said I, 'what is my love for Salusbury?' 'Oh!' replied Shephard, 'there is Interest there. Mrs. Piozzi cannot, could not, I am sure, exist without some one upon whom to energize her affections; his Uncle is gone, and she is much obliged to young Salusbury for being ready at her hand to pet and spoil; her children will not suffer her to love them, and' — with a coarse laugh — 'what will she do when this fellow throws her off, as he soon will?' Shephard was right enough. I sunk into a stupor, worse far than all the torments I had endured: but when Canadian Indians take a prisoner, dear Mr. Conway knows what agonies they put them to; the man bears all without complaining, — smokes, dances, triumphs in his anguish, —

'For the son of Alcnoomak shall never complain.'

When a little remission comes, however, then comes the torpor too; — he cannot then be waked by pain or moderate pleasure: and such was *my* case, when your talents roused, your offered friendship opened my heart to enjoyment. Oh! never say hereafter that

the obligations are on your side. Without you, dulness, darkness, stagnation of every faculty would have enveloped and extinguished all

the powers of hapless

H. L. P.*

The picture that Mrs. Piozzi paints of herself in these last words is a sad one. She herself was unconscious, however, of its real sadness. In its unintentional revelations it shows us the feebleness without the dignity of old age, vivacity without freshness of intellect, the pretence without the reality of sentiment. "Hapless H. L. P." — to have lived to eighty years, and to close the record of so long a life with such words!

A little more than a year after this "Abridgment" was written, in May, 1821, Mrs. Piozzi died. Her children, from whom she had lived separated, were around her death-bed.*

In judging her, it is to be borne in mind that the earlier and the later portions of her life are widely different from each other. As we have before said, Mrs. Thrale and Mrs. Piozzi are two distinct persons. Mrs. Thrale, whom the world smiled upon, whom the wits liked and society courted, who had the best men in

* It is but four years ago that the Viscountess Keith, Mrs. Piozzi's eldest daughter, died. She was ninety-five years old. Her long life connected our generation with that of Johnson and Burke. She was the last survivor of the Streatham "set," — for, as "Queeney," she had held a not unimportant place in it. She was at Johnson's death-bed. At their last interview he said, — "My dear child, we part forever in this world; let us part as Christian friends should; let us pray together."

It was in 1808 that Miss Thrale married Lord Keith, a distinguished naval officer.

In *The Gentleman's Magazine*, for May, 1857, is an interesting notice of Lady Keith. "During many years," it is there said, "Viscountess Keith held a distinguished position in the highest circles of the fashionable world in London; but during the latter portion of her life . . . her time was almost entirely devoted to works of charity and to the performance of religious duties. No one ever did more for the good of others, and few ever did so much in so unostentatious a manner."

England for her friends, is a woman who will always be pleasant in memory. Her unaffected grace, her kindliness, her good-humor, her talents, make her perpetually charming. She was helped by her surroundings to be good, pleasant, and clever; and she will always keep her place as one of the most attractive figures in the circle which was formed by Johnson, and Burke, and Reynolds, and Fanny Burney, and others scarcely less conspicuous. But Mrs. Piozzi, whom the world frowned upon, whom the wits jeered at, and society neglected, whose friends nobody now

knows, will be best remembered and best liked as having once been Mrs. Thrale. There is no great charge against her; she was more sinned against than sinning; she was only weak and foolish, only degenerated from her first excellence. And even in her old age some traits of her youthful charms remain, and, seeing these, we regard her with a tender compassion, and remember of her only the bright helpfulness and freshness of her younger days, when Johnson "loved her, esteemed her, revered her, and thought her the first of womankind."

THE NIGER, AND ITS EXPLORERS.

A CENTURY ago, the interior of Africa was a sealed book to the civilized world. Candace, Queen of the Ethiopians, had been noticed in Holy Writ; the Nile with Thebes and Memphis on its banks, and a ship-canal to the Red Sea with triremes on its surface, had not escaped the eye of Herodotus: but the countries which gave birth to Queen and River were alike unknown. The sunny fountains, the golden sands, the palmy plains of Africa were to be traced in the verses of the poet; but he dealt neither in latitude nor longitude. The maps presented a *terra incognita*, or sterile mountains, where modern travellers have found rivers, lakes, and alluvial basins,—or exhibited barren wastes, where recent discoveries find rich meadows annually flowed, studded with walled towns and cities, enlivened by herds of cattle, or cultivated in plantations of maize and cotton.

Although the northern coast of Africa had once been the granary of Carthage and Rome, cultivation had receded, and the corn-ship of antiquity had given place to the felucca of the corsair, preying upon the commerce of Europe. A few caravans, laden with a little ivory and

gold-dust or a few packages of drugs and spices, crept across the Desert, and the slave-trade principally, if not alone, drew to Africa the attention of civilized nations. Egypt, Tripoli and Tunis, Turkey and the Spanish Provinces, the West India Isles and the Southern States, knew it as the mart where human beings were bought and sold; and Christians were reconciled to the traffic by the hope that it might contribute to the moral, if not physical, welfare of the captive, by his removal to a more civilized region.

During the last three centuries, millions of Africans have perished either on their way to slavery or in exhausting toil under a tropical sun; and the flag of England has been the most prominent in this demoralizing traffic. But it is due to England to say, that, since she withdrew from it, she has aimed to atone for the past by a noble and persevering devotion to the improvement of Africa. By repeated expeditions, by missions, treaties, colonies, and incentives to commerce, she has spread her light over the interior, and is now recognized both by the tribes of the Desert and by civilized nations as the great protector of Africa, and both geography and commerce owe to her

most of their advances on the African continent.

So little was known of Africa, that, when Mungo Park made his report, in 1798, of the discovery of the Niger, and described large cities on its banks, and vessels of fifty tons burden navigating its waters, the world was incredulous; and his subsequent fate threw a cloud over the subject which was not entirely dispelled until his course was traced and his statements verified by modern travellers.

The route of Dr. Park was from the west coast, near Sierra Leone, to the upper branches of the Niger. On his second expedition he took with him a detachment of British soldiers, and a number of civilians, fresh from England, none of whom survived him. It appears from his journal that his men followed the foot-paths of the natives, slept in the open air, were exposed to the dews at night, and were overtaken by the rainy season before they embarked upon the Niger. Unacclimated, with no proper means of conveyance, no suitable clothing, and no precautions against the fever of the country, they nearly all became victims to their indiscretions. Park, however, at length launched his schooner on the Niger, passed the city of Timbuctoo, and, with two or three Englishmen, followed the river more than a thousand miles to Boussa. Reaching the rapids at this point in a low stage of the water, he was so indiscreet as to fire on the natives, and was drowned in his attempt to escape from them; but his fate remained in uncertainty for eighteen years.

The long struggle with Napoleon, the fearful loss of life which attended the journey of Park, and the doubts as to his fate, checked for many years the exploration of Africa. In 1821, a third attempt to explore the Niger was made by a Major Laing, who failed in his efforts to reach Timbuctoo, and fell a victim to Mahometan intolerance.

In 1822, a new effort was made by England to reach the interior, and Messrs.

Denham and Clapperton joined the caravan from Tripoli, and crossed the Desert to the Soudan. They explored the country to the ninth degree of north latitude, found large Negro and Mahometan states in the interior, and visited Sacattoo, Kano, Murfeia, Tangalra, and other large towns, some of which contained twenty or thirty thousand people.

In their journal we find a vivid sketch of a Negro army marching from Bornou to the South, with horsemen in coats-of-mail, as in the days of chivalry, and armed, as in those days, with lances and bows and arrows. A glowing description is given of the ravages that attended their march. When they entered an enemy's country, desolation marked their path, houses and corn-fields were destroyed, all the full-grown males were put to death, and the women and children reduced to servitude.

It was obvious that an incessant struggle was in progress between the Mahometan and Negro states, and that the Mahometan faith and Arab blood were slowly gaining an ascendancy over the Negro even down to the equator. The conquering tribes, by intermarriage with the females, were gradually changing the race, and introducing greater energy and intelligence; and the mixed races have exhibited great proficiency in various branches of manufacture. The invaders took with them large herds of cattle, and pursued a pastoral life, leaving the culture of the land principally to the Negro.

In 1825 Clapperton made his second expedition to the interior, accompanied by Richard Lander. In this journey the adventurous travellers landed at Badagry, and crossed through Yarriba to the Niger. On their way they spent several days at Katunga, the capital of Yarriba, a city so extensive that one of its streets is described as five miles in length. The town of Koosô, with twenty thousand inhabitants, as also large cotton-plantations, are mentioned by these travellers; and some idea of the territory they explored may be formed from the following extract from their narrative:—

"The further we penetrate into the country, the more dense we find the population to be, and civilization becomes at every step more strikingly apparent. Large towns, at a distance of only a few miles from each other, we were informed, lay on all sides of us, the inhabitants of which pay the greatest respect to the laws, and live under a regular form of government."

It is to this fertile, populous, and peaceful region of the interior that the most successful efforts of the English missionaries have been of late directed.

In this expedition, Captain Clapperton died of the fever of the country. His faithful servant, Lander, after publishing his journal, returned to Africa, in 1830, with his brother, landed at Badagry, and again crossed the country to the Niger.

At Boussa, they obtained the first authentic information of the death of Park, and recovered his gun, robe, and other relics. Here, embarking in canoes, they ascended the river through its rapids to Yaouri, and thence traced it to the sea in the Bight of Benin. On their way, they discovered the Benue, which joins the Niger two hundred and seventy miles from the ocean, with a volume of water and a width nearly equal to its own. They encountered a large number of canoes, nearly fifty feet in length, armed in some cases with a brass six-pounder at the bow, and each manned by sixty or seventy men actively engaged in the slave-trade. Forty of these canoes were found together at Eboe, near the mouth of the Niger.

During the interval between the two expeditions of Lander to trace the course of this mysterious river, France was exploring its upper waters.

In 1827, René Caillié, a Frenchman, adopting the disguise of a Mahometan, left the western coast at Kakundy, a few miles north of Sierra Leone, and crossed the intervening highlands to the affluents of the Niger, which he struck within two hundred and fifty miles of the coast.

He first came to the Tankesso, a rapid stream flowing into the Niger just below

its cascades, and noticed here a mountain of pale pink quartz in regular strata of eighteen inches in thickness, a few miles below which the river flows in a wide and tranquil stream through extensive plains, which it fertilizes by its inundations. One hundred miles below, at Boure, were rich gold mines within twenty miles of the Niger. In the dry season he found its waters very cold and waist-deep.

Caillié travelled by narrow paths impervious to horses or carriages, and with a party of natives bearing merchandise on their heads. His route was through a country gradually ascending and occasionally mountainous, but fertile in the utmost degree, and watered by numerous streams and rivulets which kept the verdure constantly fresh, with delightful plains that required only the labor of the husbandman to produce everything necessary for human life.

Proceeding westward, he reached the main Niger, which he found, at the close of the dry season, and before it had received its principal tributaries, nine feet deep and nine hundred feet in width, with a velocity of two and a half miles an hour.

To this point, where the river becomes navigable for steamers, a common road or railway of three hundred miles in length might be easily constructed from Sierra Leone; and it is a little surprising that Great Britain, with her solicitude to reach the interior, should not have been tempted by the fertility, gold mines, and navigable waters in the rear of Sierra Leone, so well pictured by Caillié, to open at least a common highway to the Niger, an enterprise which might be effected for fifty thousand pounds. Although this may be so easily accomplished, the principal route to the interior of Africa is still the caravan track from Tripoli through the Desert, requiring three months by a hazardous and most fatiguing journey of fifteen hundred miles. The first movement for a road to the interior has been recently made in Yarriba, by T. J. Bowen, the American Baptist missionary, who pro-

nounces it to be the prerequisite to civilization and Christianity.

Caillié reached the Niger in May, just as the rainy season commenced, but, finding no facilities for descending the stream, he proceeded to the southwest, crossed many of its affluents, traversed a rich country, and, having exposed himself to the fever and met with many detentions, finally embarked in the succeeding March at Djenne, in a vessel of seventy tons burden, for Timbuctoo. He describes this vessel as one hundred feet in length, fourteen feet broad, and drawing seven feet of water. It was laden with rice, millet, and cotton, and manned by twenty-one men, who propelled the frail bark by poles and paddles. With a flotilla of sixty of these vessels he descended the Niger several hundred miles to Timbuctoo. He speaks of the river as varying from half to three-fourths of a mile in width, annually overflowing its banks and irrigating a large basin generally destitute of trees. After paying toll to the Tassareks, a Moorish tribe, on the way, and losing one of the flotilla, he landed safely at Timbuctoo, and probably was the first European who visited that remote city, although Adams, an American sailor wrecked on the coast, claims to have been carried there before as a captive.

From the narratives of Park, Clapperton, Lander, and Caillié, confirmed by Bairkie and Barth, the latter of whom explored the banks of the Niger from Timbuctoo to Boussa, it has been ascertained to be a noble stream, navigable for nearly twenty-five hundred miles, with an average width of more than half a mile, and an average depth of three fathoms, — comparing favorably with our own Mississippi. There appears to be but one portion of the stream difficult for navigation, and that is the portion from Yaouri to Lagaba, a distance of eighty miles. In this space are several reefs and ledges, mostly bare at low water, and the river is narrowed in width by mountains on either side; but in the wet season it overflows its banks at this point, and is then navigated by the larger class of canoes.

There can be little doubt that it is susceptible of navigation above and below by the largest class of river steamers, and that the rapids themselves may in the higher stages of water be ascended by the American high-pressure steamers which navigate our Western rivers, drawing, as they do in low stages of the Ohio and Missouri, but sixteen to eighteen inches.

As soon as it was ascertained that the Niger reached the ocean in the Bight of Benin, and that its upper waters had been navigated by Caillié and Park, a private association, aided by the British government, fitted out a brig and several steamers, with a large party of scientific men, who, in 1833, entered the Niger from the sea.

Great Britain, though enterprising and persevering, is slow in adapting means to ends, and made a series of mistakes in her successive expeditions, which might have been avoided, if she would have condescended to profit by the experience of her children on this side of the Atlantic.

The expedition of 1833 was deficient in many things. The power and speed of the steamers were insufficient, their draught of water too great, and they were so long delayed in their outfit and in their sea-voyage that they found the river falling, and were detained by shoals and sand-bars. The accommodations were unsuitable; and the men, exposed to a bad atmosphere among the mangroves at the mouth of the river, and confined in the holds of the vessels, were attacked by fever, and but ten of them survived. The expedition, however, succeeded in reaching Rabba, on the Niger, five hundred miles from the sea, ascended the Benue, eighty miles above the confluence, and charts were made and soundings taken for the distance explored.

In 1842 the British government made a new effort to explore the Niger, and built for that purpose three iron steamers, the Wilberforce, Albert, and Soudan, vessels of one hundred to one hundred and thirty-nine feet in length. The error committed in the first expedition, of

too great draught, was avoided; but the steamers had so little power and keel that their voyage to the Niger was both tedious and hazardous, and their speed was found insufficient to make more than three knots per hour against the current of the river. Arriving on the coast late in the season, they were unable to ascend above the points already explored, and the officers and men, suffering from the tedious navigation, close cabins, and effluvia from the falling river, lost one-fourth of their number by fever, while the African Kroomen, accustomed to the climate and sleeping on the open deck, enjoyed perfect health. It was the intention of government to establish a model farm and mission at the confluence of the Niger and Benue; but the officers, discouraged by sickness, abandoned their original purpose, and the expedition proved another failure, involving a loss of at least sixty thousand pounds.

After the lapse of twelve years, it was ascertained that private steamers and sailing vessels were resorting to the Niger, and that an active trade was springing up in palm-oil, the trees producing which fringe the banks of the river for some hundreds of miles from the sea; and in 1853, a Liverpool merchant, McGregor Laird, who had accompanied the former expedition, fitted out, with the aid of government, the *Pleiad* steamer for a voyage up the Niger.

One would imagine that by this time the British government would have corrected their former errors; and a part were corrected. The speed of this steamer surpassed that of her predecessors, and her draught did not exceed five feet. She was well provided with officers, and a crew of native Kroomen from the coast; and she was supplied with ample stores of quinine. But, singular as it may appear, this steamer, destined to ascend the great rivers up which the former expedition found a strong breeze flowing daily, was not furnished with a *sail*; and although the banks of the Niger were lined with for-

est-trees, and the supply of coal was sufficient for a few days only, not a single *axe* or *saw* was provided for cutting wood, and the Kroomen hired from the coast were compelled to trim off with shingle-hatchets nearly all the fuel used in ascending the river, — and in descending, the steamer was obliged to drift down with the current. Moreover, she ~~was~~ but one hundred feet in length, with an engine and boiler occupying thirty feet of her hold, — thus leaving but thirty-five feet at each end for officers, men, and stores. Neither state-room, cabin, nor awning was provided on deck to shelter the crew from an African sun.

With all these deficiencies, however, they achieved a partial triumph. Entering the river in July, they ascended the southern branch, now known as the Benue, for a distance of seven hundred miles from the sea, reaching Adamawa, a Mahometan state of the Soudan. On the fifteenth of August they encountered the rise of waters, and found the Benue nearly a mile in width and from one to three fathoms in depth. They observed it overflowing its banks for miles and irrigating extensive and fertile plains to the depth of several feet, and saw reason to believe that this river, which flows westerly from the interior, may be navigated at least one thousand miles from the sea. As Dr. Barth visited it at a city several hundred miles above the point reached by the *Pleiad*, and found it flowing with a wide and deep current, it may be regarded as the gateway into the interior of Africa.

One of our light Western steamers, manned by our Western boatmen and axemen, with its three decks, lofty state-rooms, superior speed, and light draught, would have been most admirably fitted for this exploration.

But the expedition, with all its deficiencies, achieved a further triumph. Dr. Bairkie, by using quinine freely, and by removing the beds of the officers from the stifling cabins to the deck, escaped the loss of a single man, although four months on the river, — thus demonstrating that

the white man can reach the interior of Africa in safety, a problem quite as important to be solved as the course and capacity of the Niger and its branches.

Thus have been opened to navigation the waters of the Mysterious River.

When the Landers first floated down the stream in their canoe, thirty years since, they found vast forests and little cultivation, and the natives seemed to have no commerce except in slaves and yams for their support. But an officer who accompanied the several steam expeditions was astonished in his last visit to see the change which a few years had produced. New and populous towns had sprung up, extensive groves of palm-trees and gardens lined the banks, and vessels laden with oil, yams, ground-nuts, and ivory indicated the progress of legitimate commerce.

The narrative of Dr. Bairkie, a distinguished German scholar, who has written an account of the voyage of the *Pleid*, will be found both interesting and instructive; and we may some day expect another volume, for he has returned to the scene of his adventures.

Another German in the service of Great Britain has given us a vivid picture of Central Africa north of the equator. Dr. Henry Barth has recently published, in four octavo volumes, a narrative of his travels in Africa for five years preceding 1857. During this period, he accompanied the Sheik of Bornou, one of the chief Negro states of Africa, on his march as far south as the Benue, explored the borders of Lake Tsadda, crossed the Niger at Sai, and visited the far-famed city of Timbuctoo. Here he incurred some danger from the fanaticism of the Moslems; but his command of Arabic, his tact and adroitness in distinguishing the Protestant worship of the Deity from the homage paid by Roman Catholics to images of the Virgin and Saints, and in illustrating the points in which his Protestant faith agreed with the Ko-

ran, extricated him from his embarrassment.

Dr. Barth found various Negro cities with a population ranging from fifteen to twenty thousand, and observed large fields of rice, cotton, tobacco, and millet. On his way to Timbuctoo, he saw a field of this last-named grain in which the stalks stood twenty-four feet high. Our Patent Office should secure some of the seed which he has doubtless conveyed to Europe. The following prices, which he names, give us an idea of the cheapness of products in Central Africa:—An ox two dollars, a sheep fifty cents, tobacco one to two cents per pound.

From the sketch we have given of the Niger and its branches, and of the countries bordering upon them, it would appear to be the proper policy of Great Britain and other commercial nations to open a way from Sierra Leone to the Niger, and to establish a colony near the confluence of this river with the Benue. From this point, which is easily accessible from the sea and the ports of the British colonies on the western coast of Africa, light steamers may probably ascend to Sego and Djenne, encountering no difficulties except at the rapids near Boussa, and may penetrate into the heart of the Soudan. In this region are mines of lead, copper, gold, and iron, a rich soil, adapted to cotton, rice, indigo, sugar, coffee, and vegetable butter, with very cheap labor. With steamers controlling the rivers, a check could here be given to the slave-trade, and to the conflicts between the Moors and Negroes, and Christianity have a fair prospect of diffusion. Such a colony is strongly recommended by Lieutenant Allen, who accompanied the expeditions of 1833 and 1842; and there can be no doubt that it would attract the caravans from the remote interior, and put an end to the perilous and tedious expeditions across the Desert.

REVIEWS AND LITERARY NOTICES.

Benvenuto Rambaldi da Imola Illustrato nella Vita e nelle Opere, e di lui Comento Latino sulla Divina Commedia di Dante Allighieri voltato in Italiano dall' Avvocato GIOVANNI TAMBURINI. Imola. 1855-56. 3 voll. in 8vo. [The Commentary of Benvenuto Rambaldi of Imola on the *Divina Commedia*, translated from Latin into Italian, by Giovanni Tamburini.]

ALMOST five centuries have passed since Benvenuto of Imola, one of the most distinguished men of letters of his time, was called by the University of Bologna to read a course of lectures upon the "*Divina Commedia*" before the students at that famous seat of learning. From that time till the present, a great part of his "*Comment*" has lain in manuscript, sharing the fate of the other earliest commentaries on the poem of Dante, not one of which, save that of Boccaccio, was given to the press till within a few years. This neglect is the more strange, since it was from the writers of the fourteenth century, almost contemporary as they were with Dante, that the most important illustrations both of the letter and of the sense of the "*Divina Commedia*" were naturally to be looked for. When they wrote, the lapse of time had not greatly obscured the memory of the events which the poet had recorded, or to which he had referred. The studies with which he had been familiar, the external sources from which he had drawn inspiration, had undergone no essential change in direction or in nature. The same traditions and beliefs possessed the intellects of men. Similar social and political influences moulded their characters. The distance that separated Dante from his first commentators was mainly due to the surpassing nature of his genius, which, in some sort, made him, and still makes him, a stranger to all men, and very little to changes like those which have slowly come about in the passage of centuries, and which divide his modern readers from the poet.

It was the intention of Benvenuto, as he tells us, "to elucidate what was dark in the poem being veiled under figures, and to explain what was involved in its multi-

plex meanings." But his *Comment* is more illustrative than analytic, more literal than imaginative, and its chief value lies in the abundance of current legends which it contains, and in the number of stories related in it, which exhibit the manners or illustrate the history of the times. So great, indeed, is the value of this portion of his work, that Muratori, to whom a large debt of gratitude is due from all students of Italian history, published in 1738, in the first volume of his "*Antiquitates Italicae Medii Ævi*," a selection of such passages, amounting altogether to about one half of the whole *Comment*. However satisfactory this incomplete publication might be to the mere historical investigator, the students of the "*Divina Commedia*" could not but regret that the complete work had not been printed, — and they accordingly welcomed with satisfaction the announcement, a few years since, of the volumes whose title stands at the head of this article, which professed to contain a translation of the whole *Comment*. It seemed a pity, indeed, that it should have been thought worth while to translate a book addressing itself to a very limited number of readers, most of whom were quite as likely to understand the original Latin as the modern Italian, while also a special value attached to the style and form in which it was first written. But no one could have suspected what "*translation*" meant in the estimation of the Signor Tamburini, whose name appears on the title-page as that of the translator.

Traduttore — traditore, "*Translator — traitor*," says the proverb; and of all traitors shielded under the less offensive name, Signor Tamburini is beyond comparison the worst we have ever had the misfortune to encounter. A place is reserved for him in that lowest depth in which, according to Dante's system, traitors are punished.

It appears from his preface that Signor Tamburini is not without distinction in the city of Imola. He has been President of the Literary Academy named that of "*The Industrious*." To have been President of an Academy in the Roman States implies that the person bearing this honor was either an ecclesiastic or a favorite of

ecclesiastics. Hitherto, no one could hold such an office without having his election to it confirmed by a central board of ecclesiastical inspectors (*la Sacra Congregazione degli Studj*) at Rome. The reason for noticing this fact in connection with Signor Tamburini will soon become apparent.

In his preface, Signor Tamburini declares that in the first division of the poem he has kept his translation close to the original, while in the two later divisions he had been *meno legato*, "less exact," in his rendering. This acknowledgment, however unsatisfactory to the reader, presented at least an appearance of fairness. But, from a comparison of Signor Tamburini's work with the portions of the original preserved by Muratori, we have satisfied ourselves that his honesty is on a level with his capacity as a translator, and what his capacity is we propose to enable our readers to judge for themselves. For our own part, we have been unable to distinguish any important difference in the methods of translation followed in the three parts of the Comment.

So far as we are aware, this book has not met with its dues in Europe. The well-known Dantophilist, Professor Blanc

of Halle, speaks of it in a note to a recent essay (*Versuch einer bloß philologischen Erklärung der Göttlichen Komödie*, von Dr. L. G. Blanc, Halle, 1860, p. 5) as "a miserably unsatisfactory translation," but does not give the grounds of his assertion. We intend to show that a grosser literary imposition has seldom been attempted than in these volumes. It is an outrage on the memory of Dante not less than on that of Benvenuto. The book is worse than worthless to students; for it is not only full of mistakes of carelessness, stupidity, and ignorance, but also of wilful perversions of the meaning of the original by additions, alterations, and omissions. The three large volumes contain few pages which do not afford examples of mutilation or misrepresentation of Benvenuto's words.

We will begin our exhibition of the qualities of the Procrustean mistranslator with an instance of his almost incredible carelessness, which is, however, excusable in comparison with his more wilful faults. Opening the first volume at page 397, we find the following sentence, which we put side by side with the original as given by Muratori. The passage relates to the 33d and succeeding verses of Canto XVI.

TAMBURINI.

Qui Dante fa menzione di Guido Guerra, e meravigliano molti della modestia dell'autore, che da costui e dalla di lui moglie tragga l'origine sua, mentre poteva derivarla da più nobile fonte. Ma io in tale modestia trovo merito maggiore perchè non volle mancare di gratitudine affettuosa a quella, — Gualdrada, — stipite suo, — dandole nome e tramandandola quasi all'eternità, mentre per sè stessa sarebbe forse rimasta sconosciuta.

BENVENUTO.

Et primo incepit a digniori, scilicet a Guidone Guerra; et circa istius descriptionem lectori est aliquantulum immorandum, quia multi mirantur, immo truffantur ignoranter, quod Dantes, qui poterat describere istum præclarum virum a claris progenitoribus et ejus claris gestis, describit eum ab una femina, avita sua, Domna Gualdrada. Sed certe Auctor fecit talem descriptionem tam laudabiliter quam prudenter, ut heic implicite tangeret originem famosæ stirpis istius, et ut daret meritam famam et laudem huic mulieri dignissime.

A literal translation will afford the most telling comment on the nature of the Italian version.

TRANSLATION.

Here Dante makes mention of Guido Guerra, and many marvel at the modesty of the author, in deriving his own origin from him and from his wife, when he might have derived it from a more noble source. But I find in such modesty the greater merit, in that he did not wish to fail in affectionate gratitude toward her, — Gualdrada, — his ancestress, — giving her name and handing her down as it were to eternity, while she by

TRANSLATION.

In the first place he began with the worthiest, namely, Guido Guerra; and in regard to the description of this man it is to be dwelt upon a little by the reader, because many wonder, and even in their ignorance scoff at Dante, because, when he might have described this very distinguished man by his distinguished ancestors and his distinguished deeds, he does describe him by a woman, his grandmother, the Lady Gual-

herself would perhaps have remained unknown.

It will be noticed that Signor Tamburini makes Dante derive *his own* origin from Guadrada, — a mistake from which the least attention to the original text, or the slightest acquaintance with the biography of the poet, would have saved him.

Another amusing instance of stupidity occurs in the comment on the 135th verse of Canto XXVIII., where, speaking of the young king, son of Henry II. of England, Benvenuto says, "Note here that this youth was like another Titus the son of Vespasian, who, according to Suetonius, was called the love and delight of the human race." This simple sentence is rendered in the following astounding manner: "John [the young king] was, according to Suetonius, another Titus Vespasian, the love and joy of the human race"!

Again, in giving the account of Guido da Montefeltro, (*Inferno*, Canto XXVII.,) Benvenuto says on the lines,

— e poi fui Cordeliero,
Credendomi sì cinto fare ammenda,

"And then I became a Cordelier, believing thus girt to make amends," — "That is, hoping under such a dress of misery and poverty to make amends for my sins; but others did not believe in him [in his

repentance]. But certainly the author did this not less praiseworthy than wisely, that he might here, by implication, touch upon the origin of that famous family, and might give a merited fame and praise to this most worthy woman.

repentance]. Wherefore Dominus Malatesta, having learned from one of his household that Dominus Guido had become a Minorite Friar, took precautions that he should not be made the guardian of Rimini." This last sentence is rendered by our translator, — "One of the household of Malatesta related to me (!) that Ser Guido adopted the dress of a Minorite Friar, and sought by every means not to be appointed guardian of Rimini." A little farther on the old commentator says, — "He died and was buried in Ancona, and I have heard many things about him which may afford a sufficient hope of his salvation"; but he is made to say by Signor Tamburini, — "After his death and burial in Ancona many works of power were ascribed to him, and I have a sweet hope that he is saved."

We pass over many instances of similar misunderstanding of Benvenuto's easily intelligible though inelegant Latin, to a blunder which would be extraordinary in any other book, by which our translator has ruined a most characteristic story in the comment on the 112th verse of Canto XIV. of the "Purgatory." We must give here the two texts.

BENVENUTO.

Et heic nota, ut videas, si magna nobilitas vigeat paulo ante in Bretenorio, quod tempore istius Guidonis, quando aliquis vir nobilis et honorabilis applicabat ad terram, magna contentio erat inter multos nobiles de Bretenorio, in ejus domum ille talis forensis deberet declinare. Propter quod concorditer conveniunt inter se, quod columna lapidea figeretur in medio plateæ cum multis annulis ferreis, et omnis superveniens esset hospes illius ad ejus anulum alligaret equum.

TRANSLATION.

And here take notice, that you may see if great nobility flourished a little before this time in Brettinoro, that, in the days of this Guido, when any noble and honorable man came to the place, there was a great rival-

TAMBURINI.

Al tempo di Guido in Brettinoro anche i nobili aravano le terre; ma insorsero discordie fra essi, e sparve la innocenza di vita, e con essa la liberalità. I brettinoresi determinarono di alzare in piazza una colonna con intorno tanti anelli di ferro, quanto le nobili famiglie di quel castello, e chi fosse arrivato ed avesse legato il cavallo ad uno de' predetti anelli, dovea esser ospite della famiglia, che indicava l'anello cui il cavallo era attaccato.

TRANSLATION.

In the time of Guido in Brettinoro even the nobles ploughed the land; but discords arose among them, and innocence of life disappeared, and with it liberality. The people of Brettinoro determined to erect in the pub-

ry among the many nobles of Brettinoro, as to which of them should receive the stranger in his house. Wherefore they harmoniously agreed that a column of stone should be set up in the middle of the square, furnished with many iron rings, and any one who arrived should be the guest of him to whose ring he might tie his horse.

Surely, Signor Tamburini has fixed the dunce's cap on his own head so that it can never be taken off. The commonest Latin phrases, which the dullest school-boy could not mistranslate, he misunderstands, turning the pleasant sense of the worthy commentator into the most self-contradictory nonsense.

"Ad confirmandum propositum," says Benvenuto, "occurrit mihi res jocosa,"*—"In confirmation of this statement, a laughable matter occurs to me"; and he goes on to relate a story about the famous astrologer Pietro di Abano. But our translator is not content without making him stultify himself, and renders the words we have quoted, "A maggiore conferma referirò un fatto a me accaduto"; that is, he makes Benvenuto say, "I will report an incident that happened to me," and then go on to tell the story of Pietro di Abano, which had no more to do with him than with Signor Tamburini himself.

We might fill page after page with examples such as these of the distortions and corruptions of Benvenuto's meaning which we have noted on the margin of this so-called translation. But we have given more than enough to prove the charge of incompetence against the President of the "Academy of the Industrious," and we pass on to exhibit him now no longer as simply an ignoramus, but as a mean and treacherous rogue.

Among the excellent qualities of Benvenuto there are few more marked than his freedom in speaking his opinion of rulers and ecclesiastics, and in holding up their vices to reproach, while at the same time he shows a due spirit of respect for proper civil and ecclesiastical authority. In this he imitates the temper of the poet upon whose work he comments,—and in so doing he has left many most valuable records of the character and manners especially of the clergy of those days. He loved a good story, and he did not hesitate to tell it even when it went

lie square a column with as many iron rings upon it as there were noble families in that stronghold, and he who should arrive and tie his horse to one of those rings was to be the guest of the family pointed out by the ring to which the horse was attached.

hard against the priests. He knew and he would not hide the corruptions of the Church, and he was not the man to spare the vices which were sapping the foundations not so much of the Church as of religion itself. But his translator is of a different order of men, one of the devout votaries of falsehood and concealment; and he has done his best to remove some of the most characteristic touches of Benvenuto's work, regarding them as unfavorable to the Church, which even now in the nineteenth century cannot well bear to have exposed the sins committed by its rulers and its clergy in the thirteenth or fourteenth. Signor Tamburini has sought the favor of ecclesiastics, and gained the contempt of such honest men as have the ill-luck to meet with his book. Wherever Benvenuto uses a phrase or tells an anecdote which can be regarded as bearing in any way against the Church, we may be sure to find it either omitted or softened down in this Papalistic version. We give a few specimens.

In the comment on Canto III. of the "Inferno," Benvenuto says, speaking of Dante's great enemy, Boniface VIII.,—"Auctor sæpissime dicit de ipso Bonifacio magna mala, qui de rei veritate fuit magnanimus peccator": "Our author very often speaks exceedingly ill of Boniface, who was in very truth a grand sinner." This sentence is omitted in the translation.

Again, on the well-known verse, (*Inferno*, xix. 53), "Se' tu già costì ritto, Bonifazio?" Benvenuto commenting says,— "Auctor quando ista scripsit, viderat pravam vitam Bonifacii, et ejus mortem rabidam. Ideo bene judicavit eum damnatum. . . . Heic dictus Nicolaus impropere Bonifacio duo mala. Primo, quia Sponsam Christi fraudulenter assumpsit de manu simplicis Pastoris. Secundo, quia etiam eam more meretricis tractavit, simoniace vendendo eam, et tyrannice tractando": "The author, when he wrote these things, had witnessed the evil life of Boniface, and his

* Comment on *Purg.* xvi. 80.

raving death. Therefore he well judged him to be damned. . . . And here the aforementioned Pope Nicholas charges two crimes upon Boniface: first, that he had taken the Bride of Christ by deceit from the hand of a simple-minded Pastor; second, that he had treated her as a harlot, simoniacally selling her, and tyrannically dealing with her."

These two sentences are omitted by the translator; and the long further account which Benvenuto gives of the election and rule of Boniface is throughout modified by him in favor of this "*magnanimus peccator*." And so also the vigorous narrative of the old commentator concerning Pope Nicholas III. is deprived of its most telling points: "Nam fuit primus in cujus curia palam committeretur Simonia per suos attinentes. Quapropter multum ditavit eos possessionibus, pecuniis et castellis, super omnes Romanos": "For he was the first at

BENVENUTO.

Judicio meo mihi videtur quod quatuor deduxerunt eam nobilem provinciam ad tantam desolationem. Primum est avaritia Pastorum Ecclesiarum, qui nunc vendunt unam terram, nunc aliam; et nunc unus favet uni Tyranno, nunc alius alteri, secundum quod sæpe mutantur officiales. Secundum est pravitates Tyrannorum suorum, qui semper inter se se lacerant et rodunt, et subditos excoerant. Tertium est fertilitas locorum ipsius provinciarum, cujus pinguedo allicit barbaros et externos in prædā. Quartum est invidia, quæ viget in cordibus ipsorum incolarum.

"In my judgment," says Benvenuto, who speaks with the authority of long experience and personal observation, "it seems to me that four things have brought that noble province to so great desolation. The first of which is, the avarice of the Pastors of the Church, who now sell one tract of its land, and now another; while one favors one Tyrant, and another another, so that the men in authority are often changed. The second is, the wickedness of the Tyrants themselves, who are always tearing and biting each other, and fleecing their subjects. The third is, the fertility of the province itself, which by its very richness allures barbarians and foreigners to prey upon it. The fourth is, that spirit of jealousy which flourishes in the hearts of the inhabitants themselves." It will be noticed that the translator

whose court Simony was openly committed in favor of his adherents. Whereby he greatly enriched them with possessions, money, and strongholds, above all the Romans." "*Sed quod Clerici capiunt raro dimittunt*": "What the clergy have once laid hands on, they rarely give up." Nothing of this is found in the Italian, — and history fails of her dues at the hands of this tender-conscenced modernizer of Benvenuto. The comment on the whole canto is in this matter utterly vitiated.

In the comment on Canto XXIX. of the "*Inferno*," which is full of historic and biographic material of great interest, but throughout defaced by the license of the translator, occurs a passage in regard to the Romagna, which is curious not only as exhibiting the former condition of that beautiful and long-suffering portion of Italy, but also as applying to its recent state and its modern grievances.

TAMBURINI.

Per me ritengo, che quattro fossero le cagioni per cui la Romagna si ridusse a tanta desolazione: l' abuso per avarizia di alcuni ecclesiastici, che alienarono or una, or un' altra terra, e si misero d' accordo coi tiranni, — i tiranni stessi che sempre erano discordi fra loro a danno de' sudditi, — la fertilità de' terreni, e si misero d' accordo coi tiranni, — l' invidia, che regna fra gli stessi romagnuoli.

changes the phrase, "the avarice of the Pastors of the Church," into "the avarice of some ecclesiastics," while throughout the passage, as indeed throughout every page of the work, the vigor of Benvenuto's style and the point of his animated sentences are quite lost in the flatness of a dull and inaccurate paraphrase.

A passage in which the spirit of the poet has fully roused his manly commentator is the noble burst of indignant reproach with which he inveighs against and mourns over Italy in Canto VI. of the "*Purgatory*": —

Ahi serva Italia, di dolore ostello,
Nave senza nocchiero in gran tempesta,
Non donna di provincie, ma bordello.

"Nota metaphoram pulcrā: sicut enim in lupanari venditur caro humana pretio sine pudore, ita meretrix magna, idest Cu-

ria Romana, et Curia Imperialis, vendunt libertatem Italianam. . . . Ad Italiam concurrunt omnes barbaræ nationes cum aviditate ad ipsam conculcandam. . . . Et heic, Lector, me excusabis, qui antequam ulterius procedam, cogor facere invectivam contra Dantem. O utinam, Poeta mirifice, rivivisceres modo! Ubi pax, ubi tranquillitas in Italia? Nunc autem dicere possim de tota Italia quod Vergilius tuus de una Urbe dixit:

— 'Crudelis ubique

Luctus, ubique pavor, et plurima mortis imago.'

. . . . Quanto ergo excusabilis, si fas esset, possem exclamare ad Omnipotentem quam tu, qui in tempora felicia incidisti, quibus nos omnes nunc viventes in misera Italia possumus invidere? Ipse ergo, qui potest, mittat amodo Veltrum, quem tu vidisti in Somno, si tamen umquam venturus est."

"Note the beauty of the metaphor: for, as in a brothel the human body is sold for a price without shame, so the great harlot, the Court of Rome, and the Imperial Court, sell the liberty of Italy. . . . All the barbarous nations rush eagerly upon Italy to trample upon her. . . . And here, Reader, thou shalt excuse me, if, before

going farther, I am forced to utter a complaint against Dante. Would that, O marvellous poet, thou wert now living again! Where is peace, where is tranquillity in Italy? But I may say now of all Italy what thy Virgil said of a single city, — 'Cruel mourning everywhere, everywhere alarm, and the multiplied image of death.' With how much more reason, then, were it but right, might I call upon the Omnipotent, than thou who fellest upon happy times, which we all now living in wretched Italy may envy! Let Him, then, who can, speedily send the Hound that thou sawest in thy dream, if indeed he is ever to come!"

It would be surprising, but for what we have already seen of the manner in which Signor Tamburini performs his work, to find that he has here omitted all reference to the Church, omitted also the address to Dante, and thus changed the character of the whole passage.

Again, in the comment on Canto XX. of the "Purgatory," where Benvenuto gives account of the outrage committed, at the instigation of Philippe le Bel, by Sciarra Colonna, upon Pope Boniface VIII., at Anagni, the translator omits the most characteristic portions of the original.

BENVENUTO.

Sed intenso dolore superante animum ejus, conversus in rabiem furoris, cepit se rodere totum. Et sic verificata est prophetia simplicissimi Coelestini, qui prædixerat sibi: In-trāsti ut Vulpes, Regnabis ut Leo, Morieris ut Canis.

"But his intense mortification overcoming the mind of the Pope, he fell into a rage of madness, and began to bite himself all over his body. And thus the prophecy of the simple-minded Celestine came true, who had predicted to him, Thou hast entered [into the Papacy] like a Fox, thou wilt reign like a Lion, thou wilt die like a Dog."

It will be observed that the prophecy is referred to by the translator, but that its stinging words are judiciously left out.

The mass of omissions such as these is enormous. We go forward to the comment on Canto XII. of the "Paradiso," which exhibits a multitude of mutilations and alterations. For instance, in the comment on the lines in which Dante speaks of

TAMBURINI.

L'angoscia per altro là vinse sul di lui animo, perchè fu preso da tal dolore, che si mordeva e lacerava le membra, e così terminò sua vita. In tal modo nel corso della vita di Bonifazio fu verificata la profezia di Celestino.

St. Dominick as attacking heresies most eagerly where they were most firmly established, (*dove le resistenze eran più grosse*,) our translator represents Benvenuto as saying, "That is, most eagerly in that place, namely, the district of Toulouse, where the Albigenses had become strong in their heresy and in power." But Benvenuto says nothing of the sort; his words are, "Idest, ubi erant majores Hæretici, vel ratione scientiæ, vel potentia. Non enim fecit sicut quidam moderni Inquisitores, qui non sunt audaces nec solertes, nisi contra quosdam divites denariis, pauperes amicis, qui non possunt facere magnam resistantiam, et extorquent ab eis pecunias, quibus postea emunt Episcopatum."

"That is, where were the greatest Heretics, either through their knowledge or their power. For he did not do like some modern Inquisitors, who are bold and skilful only against such as are rich in money, but poor in friends, and who cannot make a great resistance, and from these they squeeze out their money with which they afterwards buy an Episcopate."

Such is the way in which what is most illustrative of general history, or of the personal character of the author himself, is constantly destroyed by the processes of Signor Tamburini. From the very next page a passage of real value, as a contemporary judgment upon the orders of St. Dominick and St. Francis, has utterly disappeared under his hands. "And here take notice, that our most far-sighted author, from what he saw of these orders, conjectured what they would become. For, in very truth, these two illustrious orders of Preachers and Minorites, formerly the two brightest lights of the world, now have indeed undergone an eclipse, and are in their decline, and are divided by quarrels and domestic discords. And consequently it seems as if they were not to last much longer. Therefore it was well answered by a monk of St. Benedict, when he was reproached by a Franciscan friar for his wanton life,—When Francis shall be as old as Benedict, then you may talk to me."

But there is a still more remarkable instance of Signor Tamburini's tenderness to the Church, and of the manner in which he cheats his readers as to the spirit and meaning of the original, in the comment on the passage in Canto XXI. of the "Paradise," where St. Peter Damiano rebukes the luxury and pomp of the modern prelates, and mentions, among their other displays of vanity, the size of their cloaks, "which cover even their steeds, so that two beasts go under one skin." "Namely," says the honest old commentator, "the beast of burden, and the beast who is borne, who in truth is the more beastly of the two. And, indeed, were the author now alive, he might change his words, and say, So that three beasts go under one skin,—to wit, a cardinal, a harlot, and a horse; for thus I have heard of one whom I knew well, that he carried his mistress to the chase, seated behind him on the croup of his horse or mule, and he himself was in truth 'as the

horse or as the mule, which have no understanding.' . . . And wonder not, Reader, if the author as a poet thus reproach these prelates of the Church; for even great Doctors and Saints have not been able to abstain from rebukes of this sort against such men in the Church." Nothing of all this is to be found in the Italian version.

But it is not only in omission that the translator shows his devotion to the Church. He takes upon himself not infrequently to alter the character of Benvenuto's narratives by the insertion of phrases or the addition of clauses to which there is nothing corresponding in the original. The comment on Canto XIX. of the "Inferno" affords several instances of this unfair procedure. "Among the Cardinals," says Benvenuto, "was Benedict of Anagni, a man most skilful in managing great affairs and in the rule of the world; who, moreover, sought the highest dignity." "Vir astutissimus ad quæque magna negotia et imperia mundi; qui etiam affectabat summam dignitatem." This appears in the translation as follows: "Uomo astutissimo, perito d'affari, e conoscitore delle altre corti: affettava un contegno il più umile, e riservato." "A man most astute, skilled in affairs, and acquainted with other courts; he assumed a demeanor the most humble and reserved." A little farther on, Benvenuto tells us that many, even after the election of Benedict to the Papacy, reputed Celestine to be still the true and rightful Pope, in spite of his renunciation, because, they said, such a dignity could not be renounced. To this statement the translator adds, "because it comes directly from God,"—a clause for the benefit of readers under the pontificate of Pius IX.

In the comment on Canto XIX. of the "Purgatory" occurs the following striking passage: "Summus Pontificatus, si bene geritur, est summus honor, summum onus, summa servitus, summus labor. Si vero male, est summum periculum animæ, summum malum, summa miseria, summus pudor. Ergo dubium est ex omni parte negotium. Ideo bene præfatus Adrianus Papa IV. dicebat, Cathedram Petri spinosam, et Mantum ejus acutissimis per totum consertum aculeis, et tantæ gravitatis, ut robustissimos premit et conterat humeros. Et concludebat, Nonne miseria dignus est qui pro tanta pugnat miseria?"

"The Papacy, if it be well borne, is the chief of honors, of burdens, of servitudes, and of labors; but if ill, it is the chief of perils for the soul, the chief of evils, of miseries, and of shames. Wherefore, it is throughout a doubtful affair. And well did the aforesaid Pope Adrian IV. say, that the Chair of Peter was thorny, and his Mantle full of sharpest stings, and so heavy as to weigh down and bruise the stoutest shoulders; and, added he, Does not that man deserve pity, who strives for a woe like this?"

This passage, so worthy of preservation and of literal translation, is given by Signor Tamburini as follows: "The tiara is the first of honors, but also the first and heaviest of burdens, and the most rigorous slavery; it is the greatest risk of misfortune and of shame. The Papal mantle is pierced with sharp thorns; who, then, will excuse him who frets himself for it?"

But it is not only in passages relating to the Church that the translator's faithlessness is displayed. Almost every page of his work exhibits some omission, addition, transposition, or paraphrase, for which no explanation can be given, and not even an insufficient excuse be offered. In Canto IX. of the "Paradise," Dante puts into the mouth of Cunizza, speaking of Foulques of Marseilles, the words, "Before his fame shall die, the hundredth year shall five times come around." "And note here," says Benvenuto, "that our author manifestly tells a falsehood; since of that man there is no longer any fame, even in his own country. I say, in brief, that the author wishes tacitly to hint that he will give fame to him by his power, — a fame that shall not die so long as this book shall live; and if we may conjecture of the future, it is to last for many ages, since we see that the fame of our author continually increases. And thus he exhorts men to live virtuously, that the wise may bestow fame upon them, as he himself has now given it to Cunizza, and will give it to Foulques." Not a word of this appears in Signor Tamburini's pages, interesting as it is as an early expression of confidence in the duration of Dante's fame.

A similar omission of a curious reference to Dante occurs in the comment on the 23d verse of Canto XXVII. of the "Inferno," where Benvenuto, speaking of the power of mental engrossment or moral

affections to overcome physical pain, says, "As I, indeed, have seen a sick man cause the poem of Dante to be brought to him for relief from the burning pains of fever."

Such omissions as these deprive Benvenuto's pages of the charm of *naïveté*, and of the simple expression of personal experience and feeling with which they abound in the original, and take from them a great part of their interest for the general reader. But there is another class of omissions and alterations which deprives the translation of value for the special student of the text of Dante, — a class embracing many of Benvenuto's discussions of disputed readings and remarks upon verbal forms. Signor Tamburini has thus succeeded in making his book of no use as an authority, and prevented it from being referred to by any one desirous of learning Benvenuto's judgment in any case of difficulty. To point out in detail instances of this kind is not necessary, after what we have already done.

The common epithets of critical justice fail in such a case as that of this work. The facts concerning it, as they present themselves one after another, are stronger in their condemnation of it than any words. It would seem as if nothing further could be added to the disgrace of the translator; but we have still one more charge to prove against him, worse than the incompetence, the ignorance, and the dishonesty of which we have already found him guilty. In reading the last volume of his work, after our suspicions of its character had been aroused, it seemed to us that we met here and there with sentences which had a familiar tone, which at least resembled sentences we had elsewhere read. We found, upon examination, that Signor Tamburini, under the pretence of a translation of Benvenuto, had inserted through his pages, with a liberal hand, considerable portions of the well-known notes of Costa, and, more rarely, of the still later Florentine editor, the Abate Bianchi. It occurred to us as possible that Costa and Bianchi had in these passages themselves translated from Benvenuto, and that Signor Tamburini had simply adopted their versions without acknowledgment, to save himself the trouble of making a new translation. But we were soon satisfied that his trickery had gone farther than this, and that he had inserted

the notes of these editors to fill up his own pages, without the slightest regard to their correspondence with or disagreement from the original text. It is impossible to discover the motive of this proceeding; for it certainly would seem to be as easy to translate, after the manner in which Signor Tamburini translates, as to copy the words of other authors. Moreover, his thefts seem quite without rule or order: he takes one note and leaves the next; he copies a part, and leaves the other part of the same note; he sometimes quotes half a page, sometimes only a line or two in many pages. Costa's notes on the 98th and 100th verses of Canto XXI. of the "Paradise" are taken out without the change of a single word, and so also his note on v. 94 of the next Canto. In this last instance we have the means of knowing what Benvenuto wrote, because, although the passage has not been given by Muratori, it is found in the note by Parenti, in the Florentine edition of the "Divina Commedia" of 1830. "Vult dicere Benedictus quod miraculosius fuit Jordanem converti retrorsum, et Mare Rubrum aperiri per medium, quam si Deus succurreret et provideret istis malis. Ratio est quod utrumque prædictorum miraculorum fuit contra naturam; sed punire reos et nocentes naturale est et usitatum, quamvis Deus punierit peccatores Ægyptios per modum inusitatum supernaturaliter. Jordanus sic nominatur a duobus fontibus, quorum unus vocatur JOR et alius vocatur DAN: inde JORDANUS, ut ait Hieronymus, locorum orientalium per sedulus indagator. *Volto ritroso*; scilicet, versus ortum suum, vel contra: *el mar fugire*; idest, et Mare Rubrum fugere hinc inde, quando fecit viam populo Dei, qui transivit sicco pede: *fu qui mirabile a vedere*; idest, miraculosius, *chel soccorso que*, idest, quam esset mirabile succursum divinum hic venturum ad puniendos perversos." Now this whole passage is omitted in Signor Tamburini's work; and in its place appears a literal transcript from Costa's note, as follows: "Veramente fu più mirabile cosa vedere il Giordano volto all' indietro o fuggire il mare, quando così volle Iddio, che non sarebbe vedere qui il provvedimento a quel male, che per colpa de' traviati religiosi viene alla Chiesa di Dio."

Another instance of this complete deser-

tion of Benvenuto, and adoption of another's words, occurs just at the end of the same Canto, v. 150; and the Florentine edition again gives us the original text. It is even more inexplicable why the so-called translator should have chosen this course here than in the preceding instance; for he has copied but a line and a half from Costa, which is not a larceny of sufficient magnitude to be of value to the thief.

We have noted misappropriations of this sort, beside those already mentioned, in Cantos II. and III. of the "Purgatory," and in Cantos I., II., XV., XVI., XVIII., XIX., and XXIII., of the "Paradise." There are undoubtedly others which have not attracted our attention.

We have now finished our exposure of the false pretences of these volumes, and of the character of their author. After what has been said of them, it seems hardly worth while to note, that, though handsome in external appearance, they are very carelessly and inaccurately printed, and that they are totally deficient in needed editorial illustrations. Such few notes of his own as Signor Tamburini has inserted in the course of the work are deficient alike in intelligence and in object.

A literary fraud of this magnitude is rarely attempted. A man must be conscious of being supported by the forces of a corrupt ecclesiastical literary police before venturing on a transaction of this kind. No shame can touch the President of the "Academy of the Industrious." His book has the triple *Imprimatur* of Rome. It is a comment, not so much on Dante, as on the low standard of literary honesty under a government where the press is shackled, where true criticism is forbidden, where the censorship exerts its power over the dead as well as the living, and every word must be accommodated to the fancied needs of a despotism the more exacting from the consciousness of its own decline.

It is to be hoped, that, with the new freedom of Italian letters, an edition of the original text of Benvenuto's Comment will be issued under competent supervision. The old Commentator, the friend of Petrarch and Boccaccio, deserves this honor, and should have his fame protected against the assault made upon it by his unworthy compatriot.

Reminiscences of Scottish Life and Character.

By E. B. RAMSAY, M. A., LL.D., F. R. S. E., Dean of Edinburgh. From the Seventh Edinburgh Edition. Boston: Ticknor & Fields. 12mo.

THIS book was not made, but grew. The foundation was a short lecture delivered in Edinburgh. It was so popular that it was published in a pamphlet form. The popularity of the pamphlet induced Dean Ramsay to recall many anecdotes illustrating national peculiarities which could not be compressed into a lyceum address. The result was that the pamphlet became a thin volume, which grew thicker and thicker as edition after edition was called for by the curiosity of the public. The American reprint is from the seventh and last Edinburgh edition, and is introduced by a genial preface, written especially for American readers. The author is more than justified in thinking that there are numerous persons scattered over our country, who, from ties of ancestry or sympathy with Scotland, will enjoy a record of the quaint sayings and eccentric acts of her past humorists,—"her original and strong-minded old ladies,—her excellent and simple parish ministers,—her amusing parochial half-daft idiots,—her pawky lairds,—and her old-fashioned and now obsolete domestic servants and retainers." Indeed, the Yankee is sufficiently allied, morally and intellectually, with the Scotchman, to appreciate everything that illustrates the peculiarities of Scottish humor. He has shown this by the delight he has found in those novels of Scott's which relate exclusively to Scotland. The Englishman, and perhaps the Frenchman, may have excelled him in the appreciation of "Ivanhoe" and "Quentin Durward," but we doubt if even the first has equalled him in the cozy enjoyment of the "Antiquary" and "Guy Mannering." And Dean Ramsay's book proves how rich and deep was the foundation in fact of the qualities which Sir Walter has immortalized in fiction. He has arranged his "Reminiscences of Scottish Life and Character" under five heads, relating respectively to the religious feelings and observances, the conviviality, the domestic service, the language and proverbs, and the peculiarities of the wit and humor of Scotland. In New England, and wherever in any part of the country the New-

Englander resides, the volume will receive a most cordial recognition. Dean Ramsay's qualifications for his work are plainly implied in his evident understanding and enjoyment of the humor of Scottish character. He writes about that which he feels and knows; and, without any exercise of analysis and generalization, he subtly conveys to the reader the inmost spirit of the national life he undertakes to illustrate by narrative, anecdote, and comment. The finest critical and artistic skill would be inadequate to insinuate into the mind so keen and vivid a perception of Scottish characteristics as escape unconsciously from the simple statements of this true Scotchman, who is in hearty sympathy with his countrymen.

The Pulpit of the American Revolution: or, The Political Sermons of the Period of 1776.

With a Historical Introduction, Notes, and Illustrations. By JOHN WINGATE THORNTON, A. M. Boston: Gould & Lincoln. 12mo.

THIS is a volume worthy a place in every American library, public or private. It consists of nine discourses by the same number of patriotic clergymen of the Revolution. Mr. Thornton, the editor, has supplied an historical introduction, full of curious and interesting matter, and has also given a special preface to each sermon, with notes explaining all those allusions in the text which might puzzle an ordinary reader of the present day. His annotations have not only the value which comes from patient research, but the charm which proceeds from loving partisanship. He transports himself into the times about which he writes, and almost seems to have listened to the sermons he now comes forward to illustrate. The volume contains Dr. Mayhew's sermon on "Unlimited Submission," Dr. Chauncy's on the "Repeal of the Stamp Act," Rev. Mr. Cooke's Election Sermon on the "True Principles of Civil Government," Rev. Mr. Gordon's "Thanksgiving Sermon in 1774," and the discourses, celebrated in their day, of Langdon, Stiles, West, Payson, and Howard. Among these, the first rank is doubtless due to Dr. Mayhew's remarkable discourse at the West Church on the 30th of January, 1750. The topics relating to

"non-resistance to the higher powers," which Macaulay treats with such wealth of statement, argument, and illustration, in his "History of England," are in this sermon discussed with equal earnestness, energy, brilliancy, fulness, and independence of thought. If all political sermons were characterized by the rare mental and moral qualities which distinguish Jonathan Mayhew's, there can be little doubt that our politicians and statesmen would oppose the intrusion of parsons into affairs of state on the principle of self-preservation, and not on any arrogant pretension of superior sagacity, knowledge, and ability. In the power to inform the people of their rights and teach them their duties, we would be willing to pit one Mayhew against a score of Cushings and Rhetts, of Slidells and Yanceys. The fact that Mayhew's large and noble soul glowed with the inspiration of a quick moral and religious, as well as common, sense, would not, in our humble opinion, at all detract from his practical efficiency.

Works of Charles Dickens. Household Edition. Illustrated from Drawings by F. O. C. Darley and John Gilbert. *The Pickwick Papers.* New York: W. A. Townsend & Co. 4 vols. 12mo.

WE have long needed a handsome American edition of the works of the most popular English novelist of the time, and here we have the first volumes of one which is superior, in type, paper, illustrations, and general taste of mechanical execution, to the best English editions. It is to be published at the rate of two volumes a month until completed, and in respect both to cheapness and elegance is worthy of the most extensive circulation. Such an enterprise very properly commences with "The Pickwick Papers," the work in which the hilarity, humor, and tenderness of the author's humane and beautiful genius first attracted general regard; and it is to be followed by equally fine editions of the romances which succeeded, and, as some think, eclipsed it in merit and popularity. We most cordially wish success to an undertaking which promises to substitute the finest workmanship of the Riverside Press for the bad type and

dingy paper of the common editions, and hope that the publishers will see the propriety of adequately remunerating the author.

It is pleasant to note that years and hard work have not dimmed the brightness or impaired the strength of Dickens's mind. The freshness, vigor, and affluence of his genius are not more evident in the "Old Curiosity Shop" than in "Great Expectations," the novel he is now publishing, in weekly parts, in "All the Year Round." Common as is the churlish custom of depreciating a new work of a favorite author by petulantly exalting the worth of an old one, no fair reader of "Great Expectations" will feel inclined to say that Dickens has written himself out. In this novel he gives us new scenes, new incidents, new characters, and a new purpose; and from his seemingly exhaustless fund of genial creativeness, we may confidently look for continual additions to the works which have already established his fame. The characters in "Great Expectations" are original, and some of them promise to rank among his best delineations. Pip, the hero, who, as a child, "was brought up by hand," and who appears so far to be led by it, — thus illustrating the pernicious effect in manhood of that mode of taking nourishment in infancy, — is a delicious creation, quite equal to David Copperfield. Jaggers, the peremptory lawyer, who carries into ordinary conduct and conversation the habits of the criminal bar, and bullies and cross-examines even his dinner and his wine, — Joe, the husband of "the hand" by which Pip was brought up, — Wopsle, Wemmick, Orlick, the family of the Pockets, the mysterious Miss Havisham, and the disdainful Estella, are not repetitions, but personages that the author introduces to his readers for the first time. The story is not sufficiently advanced to enable us to judge of its merit, but it has evidently been carefully meditated, and here and there the reader's curiosity is stung by fine hints of a secret which the weaver of the plot still contrives to keep to himself. The power of observation, satire, humor, passion, description, and style, which the novel exhibits, gives evidence that Dickens is putting forth in its production his whole skill and strength.

AGNES OF SORRENTO.

CHAPTER V.

IL PADRE FRANCESCO.

THE next morning Elsie awoke, as was her custom, when the very faintest tinge of dawn streaked the horizon. A hen who has seen a hawk balancing his wings and cawing in mid-air over her family could not have awakened without her feathers, metaphorically speaking, in a more bristling state of caution.

"Spirits in the gorge, quotha?" said she to herself, as she vigorously adjusted her dress. "I believe so,—spirits in good sound bodies, I believe; and next we shall hear, there will be rope-ladders, and climbings, and the Lord knows what. I shall go to confession this very morning, and tell Father Francesco the danger; and instead of taking her down to sell oranges, suppose I send her to the sisters to carry the ring and a basket of oranges?"

"Ah, ah!" she said, pausing, after she was dressed, and addressing a coarse print of Saint Agnes pasted against the wall,—*"you look very meek there, and was a great thing no doubt to die as I did; but if you 'd lived to be married and bring up a family of girls, you 'd have known something greater. Please, don't take offence with a poor old wom-*

an who has got into the way of speaking her mind freely! I'm foolish, and don't know much,—so, dear lady, pray for me!" And old Elsie bent her knee and crossed herself reverently, and then went out, leaving her young charge still sleeping.

It was yet dusky dawn when she might have been seen kneeling, with her sharp, clear-cut profile, at the grate of a confession-box in a church in Sorrento. Within was seated a personage who will have some influence on our story, and who must therefore be somewhat minutely introduced to the reader.

Il Padre Francesco had only within the last year arrived in the neighborhood, having been sent as superior of a brotherhood of Capuchins, whose convent was perched on a crag in the vicinity. With this situation came a pastoral care of the district; and Elsie and her grand-daughter found in him a spiritual pastor very different from the fat, jolly, easy Brother Girolamo, to whose place he had been appointed. The latter had been one of those numerous priests taken from the peasantry, who never rise above the average level of thought of the body from which they are drawn. Easy, gossipy, fond of good living and good stories, sympathetic in troubles and in joys, he

had been a general favorite in the neighborhood, without exerting any particularly spiritualizing influence.

It required but a glance at Father Francesco to see that he was in all respects the opposite of this. It was evident that he came from one of the higher classes, by that indefinable air of birth and breeding which makes itself felt under every change of costume. Who he might be, what might have been his past history, what rank he might have borne, what part played in the great warfare of life, was all of course sunk in the oblivion of his religious profession, where, as at the grave, a man laid down name and fame and past history and worldly goods, and took up a coarse garb and a name chosen from the roll of the saints, in sign that the world that had known him should know him no more.

Imagine a man between thirty and forty, with that round, full, evenly developed head, and those chiselled features, which one sees on ancient busts and coins no less than in the streets of modern Rome. The cheeks were sunken and sallow; the large, black, melancholy eyes had a wistful, anxious, penetrative expression, that spoke a stringent, earnest spirit, which, however deep might be the grave in which it lay buried, had not yet found repose. The long, thin, delicately formed hands were emaciated and bloodless; they clasped with a nervous eagerness a rosary and crucifix of ebony and silver,—the only mark of luxury that could be discerned in a costume unusually threadbare and squalid. The whole picture of the man, as he sat there, had it been painted and hung in a gallery, was such as must have stopped every person of a certain amount of sensibility before it with the conviction that behind that strong, melancholy, earnest figure and face lay one of those hidden histories of human passion in which the vivid life of mediæval Italy was so fertile.

He was listening to Elsie, as she knelt, with that easy air of superiority which marks a practised man of the world, yet

with a grave expression which showed that her communication had awakened the deepest interest in his mind. Every few moments he moved restlessly in his seat, and interrupted the flow of the narrative by an inquiry concisely put, in tones which, clear and low, had a solemn and severe distinctness, producing, in the still, dusky twilight of the church, an almost ghostly effect.

When the communication was over, he stepped out of the confessional and said to Elsie in parting,—“My daughter, you have done well to take this in time. The devices of Satan in our corrupt times are numerous and artful, and they who keep the Lord's sheep must not sleep. Before many days I will call and examine the child; meanwhile I approve your course.”

It was curious to see the awe-struck, trembling manner in which old Elsie, generally so intrepid and commanding, stood before this man in his brown rough woollen gown with his corded waist; but she had an instinctive perception of the presence of the man of superior birth no less than a reverence for the man of religion.

After she had departed from the church, the Capuchin stood lost in thought; and to explain his reverie, we must throw some further light on his history.

Il Padre Francesco, as his appearance and manner intimated, was in truth from one of the most distinguished families of Florence. He was one of those whom an ancient writer characterizes as “men of longing desire.” Born with a nature of restless stringency that seemed to doom him never to know repose, excessive in all things, he had made early trial of ambition, of war, and of what the gallants of his time called love,—plunging into all the dissipated excesses of a most dissolute age, and outdoing in luxury and extravagance the foremost of his companions.

The wave of a great religious impulse—which in our times would have been called a revival—swept over the city of Florence, and bore him, with multi-

tudes of others, to listen to the fervid preaching of the Dominican monk, Jerome Savonarola; and amid the crowd that trembled, wept, and beat their breasts under his awful denunciations, he, too, felt within himself a heavenly call, — the death of an old life, and the uprising of a new purpose.

The colder manners and more repressed habits of modern times can give no idea of the wild fervor of a religious revival among a people so passionate and susceptible to impressions as the Italians. It swept society like a spring torrent from the sides of the Apennines, bearing all before it. Houses were sacked with religious fervor by penitent owners, and licentious pictures and statuary and books, and all the thousand temptations and appliances of a luxurious age, were burned in the great public square. Artists convicted of impure and licentious designs threw their palettes and brushes into the expiatory flames, and retired to convents, till called forth by the voice of the preacher, and bid to turn their art into higher channels. Since the days of Saint Francis no such profound religious impulse had agitated the Italian community.

In our times a conversion is signalized by few outward changes, however deep the inner life; but the life of the Middle Ages was profoundly symbolical, and always required the help of material images in its expression.

The gay and dissolute young Lorenzo Sforza took leave of the world with rites of awful solemnity. He made his will and disposed of all his worldly property, and assembling his friends, bade them the farewell of a dying man. Arrayed as for the grave, he was laid in his coffin, and thus carried from his stately dwelling by the brethren of the Misericordia, who, in their ghostly costume, with mournful chants and lighted candles, bore him to the tomb of his ancestors, where the coffin was deposited in the vault, and its occupant passed the awful hours of the night in darkness and solitude. Thence he was carried, the next day, almost in

a state of insensibility, to a neighboring convent of the severest order, where, for some weeks, he observed a penitential retreat of silence and prayer, neither seeing nor hearing any living being but his spiritual director.

The effect of all this on an ardent and sensitive temperament can scarcely be conceived; and it is not to be wondered at that the once gay and luxurious Lorenzo Sforza, when emerging from this tremendous discipline, was so wholly lost in the worn and weary Padre Francesco that it seemed as if in fact he had died and another had stepped into his place. The face was ploughed deep with haggard furrows, and the eyes were as those of a man who has seen the fearful secrets of another life. He voluntarily sought a post as far removed as possible from the scenes of his early days, so as more completely to destroy his identity with the past; and he devoted himself with enthusiasm to the task of awakening to a higher spiritual life the indolent, self-indulgent monks of his order, and the ignorant peasantry of the vicinity.

But he soon discovered, what every earnest soul learns who has been baptized into a sense of things invisible, how utterly powerless and inert any mortal man is to inspire others with his own insights and convictions. With bitter discouragement and chagrin, he saw that the spiritual man must forever lift the dead weight of all the indolence and indifference and animal sensuality that surround him, — that the curse of Cassandra is upon him, forever to burn and writhe under awful visions of truths which no one around him will regard. In early life the associate only of the cultivated and the refined, Father Francesco could not but experience at times an insupportable *ennui* in listening to the confessions of people who had never learned either to think or to feel with any degree of distinctness, and whom his most fervent exhortations could not lift above the most trivial interests of a mere animal life. He was weary of the childish quarrels and bickerings of the monks, of their querulous

ty, of their selfishness and self-indulgence, of their hopeless vulgarity of mind, and utterly discouraged with their inextricable labyrinths of deception. A melancholy deep as the grave seized on him, and he redoubled his austerities, in the hope that by making life painful he might make it also short.

But the first time that the clear, sweet tones of Agnes rang in his ears at the confessional, and her words, so full of unconscious poetry and repressed genius, came like a strain of sweet music through the grate, he felt at his heart a thrill to which it had long been a stranger, and which seemed to lift the weary, aching load from off his soul, as if some invisible angel had borne it up on his wings.

In his worldly days he had known women as the gallants in Boccaccio's romances knew them, and among them one enchantress whose sorceries had kindled in his heart one of those fatal passions which burn out the whole of a man's nature, and leave it, like a sacked city, only a smouldering heap of ashes. Deepest, therefore, among his vows of renunciation had been those which divided him from all womankind. The gulf that parted him and them was in his mind deep as hell, and he thought of the sex only in the light of temptation and danger. For the first time in his life, an influence serene, natural, healthy, and sweet breathed over him from the mind of a woman, — an influence so heavenly and peaceful that he did not challenge or suspect it, but rather opened his worn heart insensibly to it, as one in a fetid chamber naturally breathes freer when the fresh air is admitted.

How charming it was to find his most spiritual exhortations seized upon with the eager comprehension of a nature innately poetic and ideal! Nay, it sometimes seemed to him as if the suggestions which he gave her dry and leafless she brought again to him in miraculous clusters of flowers, like the barren rod of Joseph, which broke into blossoms when

he was betrothed to the spotless Mary; and yet, withal, she was so humbly unconscious, so absolutely ignorant of the beauty of all she said and thought, that she impressed him less as a mortal woman than as one of those divine miracles in feminine form of which he had heard in the legends of the saints.

Thenceforward his barren, discouraged life began to blossom with wayside flowers, — and he mistrusted not the miracle, because the flowers were all heavenly. The pious thought or holy admonition that he saw trodden under the swinish feet of the monks he gathered up again in hope, — *she* would understand it; and gradually all his thoughts became like carrier-doves, which, having once learned the way to a favorite haunt, are ever fluttering to return thither.

Such is the wonderful power of human sympathy, that the discovery even of the existence of a soul capable of understanding our inner life often operates as a perfect charm; every thought, and feeling, and aspiration carries with it a new value, from the interwoven consciousness that attends it of the worth it would bear to that other mind; so that, while that person lives, our existence is doubled in value, even though oceans divide us.

The cloud of hopeless melancholy which had brooded over the mind of Father Francesco lifted and sailed away, he knew not why, he knew not when. A secret joyfulness and alacrity possessed his spirits; his prayers became more fervent and his praises more frequent. Until now, his meditations had been most frequently those of fear and wrath, — the awful majesty of God, the terrible punishment of sinners, which he conceived with all that haggard, dreadful sincerity of vigor which characterized the modern Etruscan phase of religion of which the "Inferno" of Dante was the exponent and the out-come. His preachings and his exhortations had dwelt on that lurid world seen by the severe Florentine, at whose threshold hope forever departs, and around whose eternal circles of liv-

ing torture the shivering spirit wanders dismayed and blasted by terror.

He had been shocked and discouraged to find how utterly vain had been his most intense efforts to stem the course of sin by presenting these images of terror: how hard natures had listened to them with only a coarse and cruel appetite, which seemed to increase their hardness and brutality; and how timid ones had been withered by them, like flowers scorched by the blast of a furnace; how, in fact, as in the case of those cruel executions and bloody tortures then universal in the jurisprudence of Europe, these pictures of eternal torture seemed to exert a morbid demoralizing influence which hurried on the growth of iniquity.

But since his acquaintance with Agnes, without his knowing exactly why, thoughts of the Divine Love had floated into his soul, filling it with a golden cloud like that which of old rested over the mercy-seat in that sacred inner temple where the priest was admitted alone. He became more affable and tender, more tolerant to the erring, more fond of little children; would stop sometimes to lay his hand on the head of a child, or to raise up one who lay overthrown in the street. The song of little birds and the voices of animal life became to him full of tenderness; and his prayers by the sick and dying seemed to have a melting power, such as he had never known before. It was spring in his soul,—soft, Italian spring,—such as brings out the musky breath of the cyclamen, and the faint, tender perfume of the primrose, in every moist dell of the Apennines.

A year passed in this way, perhaps the best and happiest of his troubled life,—a year in which, insensibly to himself, the weekly interviews with Agnes at the confessional became the rallying-points around which the whole of his life was formed, and she the unsuspected spring of his inner being.

It was his duty, he said to himself, to give more than usual time and thought

to the working and polishing of this wondrous jewel which had so unexpectedly been intrusted to him for the adorning of his Master's crown; and so long as he conducted with the strictest circumspection of his office, what had he to fear in the way of so delightful a duty? He had never touched her hand; never had even the folds of her passing drapery brushed against his garments of mortification and renunciation; never, even in pastoral benediction, had he dared lay his hand on that beautiful head. It is true, he had not forbidden himself to raise his glance sometimes when he saw her coming in at the church-door and gliding up the aisle with downcast eyes, and thoughts evidently so far above earth, that she seemed, like one of Frà Angelico's angels, to be moving on a cloud, so encompassed with stillness and sanctity that he held his breath as she passed.

But in the confession of Dame Elsie that morning he had received a shock which threw his whole interior being into a passionate agitation which dismayed and astonished him.

The thought of Agnes, his spotless lamb, exposed to lawless and licentious pursuit, of whose nature and probabilities his past life gave him only too clear an idea, was of itself a very natural source of anxiety. But Elsie had unveiled to him her plans for her marriage, and consulted him on the propriety of placing Agnes immediately under the protection of the husband she had chosen for her; and it was this part of her communication which had awakened the severest internal recoil, and raised a tumult of passions which the priest vainly sought either to assuage or understand.

As soon as his morning duties were over, he repaired to his convent, sought his cell, and, prostrate on his face before the crucifix, began his internal reckoning with himself. The day passed in fasting and solitude.

It is now golden evening, and on the square, flat roof of the convent, which, high-perched on a crag, overlooks the bay, one might observe a dark figure slowly

pacing backward and forward. It is Father Francesco; and as he walks up and down, one could see by his large, bright, dilated eye, by the vivid red spot on either sunken cheek, and by the nervous energy of his movements, that he is in the very height of some mental crisis,—in that state of placid *extase* in which the subject supposes himself perfectly calm, because every nerve is screwed to the highest point of tension and can vibrate no more.

What oceans had that day rolled over him and swept him, as one may see a little boat rocked on the capricious surges of the Mediterranean! Were, then, all his strivings and agonies in vain? Did he love this woman with any earthly love? Was he jealous of the thought of a future husband? Was it a tempting demon that said to him, "Lorenzo Sforza might have shielded this treasure from the profanation of lawless violence, from the brute grasp of an inappreciative peasant, but Father Francesco cannot"? There was a moment when his whole being vibrated with a perception of what a marriage bond might have been that was indeed a sacrament, and that bound together two pure and loyal souls who gave life and courage to each other in all holy purposes and heroic deeds; and he almost feared that he had cursed his vows,—those awful vows, at whose remembrance his inmost soul shivered through every nerve.

But after hours of prayer and struggle, and wave after wave of agonizing convulsion, he gained one of those high points in human possibility where souls can stand a little while at a time, and where all things seem so transfigured and pure that they fancy themselves thenceforward forever victorious over evil.

As he walks up and down in the gold-and-purple evening twilight, his mind seems to him calm as that glowing sea that reflects the purple shores of Ischia, and the quaint, fantastic grottos and cliffs of Capri. All is golden and glowing; he sees all clear; he is delivered from his

spiritual enemies; he treads them under his feet.

Yes, he says to himself, he loves Agnes,—loves her all-sacredly as her guardian angel does, who ever beholdeth the face of her Father in Heaven. Why, then, does he shrink from her marriage? Is it not evident? Has that tender soul, that poetic nature, that aspiring genius, anything in common with the vulgar, coarse details of a peasant's life? Will not her beauty always draw the eye of the licentious, expose her artless innocence to solicitation which will annoy her and bring upon her head the inconsiderate jealousy of her husband? Think of Agnes made subject to the rude authority, to the stripes and correction, which men of the lower class, under the promptings of jealousy, do not scruple to inflict on their wives! What career did society, as then organized, present to such a nature, so perilously gifted in body and mind? He has the answer. The Church has opened a career to woman which all the world denies her.

He remembers the story of the dyer's daughter of Siena, the fair Saint Catharine. In his youth he had often visited the convent where one of the first artists of Italy has immortalized her conflicts and her victories, and knelt with his mother at the altar where she now communes with the faithful. He remembered how, by her sanctity, her humility, and her holy inspirations of soul, she had risen to the courts of princes, whither she had been sent as ambassadress to arrange for the interests of the Church; and then rose before his mind's eye the gorgeous picture of Pinturicchio, where, borne in celestial repose and purity amid all the powers and dignitaries of the Church, she is canonized as one of those that shall reign and intercede with Christ in heaven.

Was it wrong, therefore, in him, though severed from all womankind by a gulf of irrevocable vows, that he should feel a kind of jealous property in this gifted and beautiful creature? and though he

might not, even in thought, dream of possessing her himself, was there sin in the vehement energy with which his whole nature rose up in him to say that no other man should,—that she should be the bride of Heaven alone?

Certainly, if there were, it lurked far out of sight; and the priest had a case that might have satisfied a conscience even more fastidious;—and he felt a sort of triumph in the results of his mental scrutiny.

Yes, she should ascend from glory to glory,—but *his* should be the hand that should lead her upward. *He* would lead her within the consecrated grate,—*he* would pronounce the awful words that should make it sacrilege for all other men to approach her; and yet through life *he* should be the guardian and director of her soul, the one being to whom she should render an obedience as unlimited as that which belongs to Christ alone.

Such were the thoughts of this victorious hour,—which, alas! were destined to fade as those purple skies and golden fires gradually went out, leaving, in place of their light and glory, only the lurid glow of Vesuvius.

CHAPTER VI.

THE WALK TO THE CONVENT.

ELSIE returned from the confessional a little after sunrise, much relieved and satisfied. Padre Francesco had shown such a deep interest in her narrative that she was highly gratified. Then he had given her advice which exactly accorded with her own views; and such advice is always regarded as an eminent proof of sagacity in the giver.

On the point of the marriage he had recommended delay,—a course quite in accordance with Elsie's desire, who, curiously enough, ever since her treaty of marriage with Antonio had been commenced, had cherished the most whimsical, jealous dislike of him, as if he were

about to get away her grandchild from her; and this rose at times so high that she could scarcely speak peaceably to him,—a course of things which caused Antonio to open wide his great soft ox-eyes, and wonder at the ways of woman-kind; but he waited the event in philosophic tranquillity.

The morning sunbeams were shooting many a golden shaft among the orange-trees when Elsie returned and found Agnes yet kneeling at her prayers.

"Now, my little heart," said the old woman, when their morning meal was done, "I am going to give you a holiday to-day. I will go with you to the Convent, and you shall spend the day with the sisters, and so carry Saint Agnes her ring."

"Oh, thank you, grandmamma! how good you are! May I stop a little on the way, and pick some cyclamen and myrtles and daisies for her shrine?"

"Just as you like, child; but if you are going to do that, we must be off soon, for I must be at my stand betimes to sell oranges: I had them all picked this morning while my little darling was asleep."

"You always do everything, grandmamma, and leave me nothing to do: it is not fair. But, grandmamma, if we are going to get flowers by the way, let us follow down the stream, through the gorge, out upon the sea-beach, and so walk along the sands, and go by the back path up the rocks to the Convent: that walk is so shady and lovely at this time in the morning, and it is so fresh along by the sea-side!"

"As you please, dearie; but first fill a little basket with our best oranges for the sisters."

"Trust me for that!" And the girl ran eagerly to the house, and drew from her treasures a little white wicker basket, which she proceeded to line curiously with orange-leaves, sticking sprays of blossoms in a wreath round the border.

"Now for some of our best blood-oranges!" she said;—"old Jocunda says

they put her in mind of pomegranates. And here are some of these little ones,—see here, grandmamma!” she exclaimed, as she turned and held up a branch just broken, where five small golden balls grew together with a pearly spray of white buds just beyond them.

The exercise of springing up for the branch had sent a vivid glow into her clear brown cheek, and her eyes were dilated with excitement and pleasure; and as she stood joyously holding the branch, while the flickering shadows fell on her beautiful face, she seemed more like a painter’s dream than a reality.

Her grandmother stood a moment admiring her.

“She’s too good and too pretty for Antonio or any other man: she ought to be kept to look at,” she said to herself. “If I could keep her always, no man should have her; but death will come, and youth and beauty go, and so somebody must care for her.”

When the basket was filled and trimmed, Agnes took it on her arm. Elsie raised and poised on her head the great square basket that contained her merchandise, and began walking erect and straight down the narrow rocky stairs that led into the gorge, holding her distaff with its white flax in her hands, and stepping as easily as if she bore no burden.

Agnes followed her with light, irregular movements, glancing aside from time to time, as a tuft of flowers or a feathery spray of leaves attracted her fancy. In a few moments her hands were too full, and her woollen apron of many-colored stripes was raised over one arm to hold her treasures, while a hymn to Saint Agnes, which she constantly murmured to herself, came in little ripples of sound, now from behind a rock, and now out of a tuft of bushes, to show where the wanderer was hid. The song, like many Italian ones, would be nothing in English,—only a musical repetition of sweet words to a very simple and childlike idea, the *bella, bella, bella* ringing out

in every verse with a tender joyousness that seemed in harmony with the waving ferns and pendent flowers and long ivy-wreaths from among which its notes issued. “Beautiful and sweet Agnes,” it said, in a thousand tender repetitions, “make me like thy little white lamb! Beautiful Agnes, take me to the green fields where Christ’s lambs are feeding! Sweeter than the rose, fairer than the lily, take me where thou art!”

At the bottom of the ravine a little stream tinkles its way among stones so mossy in their deep, cool shadow as to appear all verdure; for seldom the light of the sun can reach the darkness where they lie. A little bridge, hewn from solid rock, throws across the shrunken stream an arch much wider than its waters seem to demand; for in spring and autumn, when the torrents wash down from the mountains, its volume is often suddenly increased.

This bridge was so entirely and evenly grown over with short thick moss that it might seem cut of some strange kind of living green velvet, and here and there it was quaintly embroidered with small blossoming tufts of white alyssum, or feathers of ferns and maiden’s-hair which shook and trembled to every breeze. Nothing could be lovelier than this mossy bridge, when some stray sunbeam, slanting up the gorge, took a fancy to light it up with golden hues, and give transparent greenness to the tremulous thin leaves that waved upon it.

On this spot Elsie paused a moment, and called back after Agnes, who had disappeared into one of those deep grottos with which the sides of the gorge are perforated, and which are almost entirely veiled by the pendent ivy-wreaths. “Agnes! Agnes! wild girl! come quick!”

Only the sound of “*Bella, bella Agnella*” came out of the ivy-leaves to answer her; but it sounded so happy and innocent that Elsie could not forbear a smile, and in a moment Agnes came springing down with a quantity of the feathery lycopodium in her hands, which

grows nowhere so well as in moist and dripping places.

Out of her apron were hanging festoons of golden broom, crimson gladiolus, and long, trailing sprays of ivy; while she held aloft in triumph a handful of the most superb cyclamen, whose rosy crowns rise so beautifully above their dark quaint leaves in moist and shady places.

"See, see, grandmother, what an offering I have! Saint Agnes will be pleased with me to-day; for I believe in her heart she loves flowers better than gems."

"Well, well, wild one,—time flies, we must hurry." And crossing the bridge quickly, the grandmother struck into a mossy foot-path that led them, after some walking, under the old Roman bridge at the gateway of Sorrento. Two hundred feet above their heads rose the mighty arches, enamelled with moss and feathered with ferns all the way; and below this bridge the gorge grew somewhat wider, its sides gradually receding and leaving a beautiful flat tract of land, which was laid out as an orange-orchard. The golden fruit was shut in by rocky walls on either side which here formed a perfect hot-bed, and no oranges were earlier or finer.

Through this beautiful orchard the two at length emerged from the gorge upon the sea-sands, where lay the blue Mediterranean swathed in bands of morning mist, its many-colored waters shimmering with a thousand reflected lights, and old Capri panting through sultry blue mists, and Vesuvius with his cloud-spotted sides and smoke-wreathed top burst into view. At a little distance a boat-load of bronzed fishermen had just drawn in a net, from which they were throwing out a quantity of sardines, which flapped and fluttered in the sunshine like scales of silver. The wind blowing freshly bore thousands of little purple waves to break one after another at the foamy line which lay on the sand.

Agnes ran gayly along the beach with her flowers and vines fluttering from her

gay striped apron, and her cheeks flushed with exercise and pleasure,—sometimes stopping and turning with animation to her grandmother to point out the various floral treasures that enamelled every crevice and rift of the steep wall of rock which rose perpendicularly above their heads in that whole line of the shore which is crowned with the old city of Sorrento: and surely never did rocky wall show to the open sea a face more picturesque and flowery. The deep red cliff was hollowed here and there into fanciful grottos, draped with every varied hue and form of vegetable beauty. Here a crevice high in air was all abloom with purple gillyflower, and depending in festoons above it the golden blossoms of the broom; here a cleft seemed to be a nestling-place for a colony of gladiolus, with its crimson flowers and blade-like leaves; here the silver-frosted foliage of the miller-geranium, or of the wormwood, toned down the extravagant brightness of other blooms by its cooler tints. In some places it seemed as if a sort of floral cascade were tumbling confusedly over the rocks, mingling all hues and all forms in a tangled mass of beauty.

"Well, well," said old Elsie, as Agnes pointed to some superb gillyflowers which grew nearly half-way up the precipice,— "is the child possessed? You have all the gorge in your apron already. Stop looking, and let us hurry on."

After a half-hour's walk, they came to a winding staircase cut in the rock, which led them a zigzag course up through galleries and grottos looking out through curious windows and loop-holes upon the sea, till finally they emerged at the old sculptured portal of a shady garden which was surrounded by the cloistered arcades of the Convent of Saint Agnes.

The Convent of Saint Agnes was one of those monuments in which the piety of the Middle Ages delighted to commemorate the triumphs of the new Christianity over the old Heathenism.

The balmy climate and paradisiacal charms of Sorrento and the adjacent shores of Naples had made them favor-

ite resorts during the latter period of the Roman Empire,—a period when the whole civilized world seemed to human view about to be dissolved in the corruption of universal sensuality. The shores of Baïæ were witnesses of the orgies and cruelties of Nero and a court made in his likeness, and the palpitating loveliness of Capri became the hot-bed of the unnatural vices of Tiberius. The whole of Southern Italy was sunk in a debasement of animalism and ferocity which seemed irrecoverable, and would have been so, had it not been for the handful of salt which a Galilean peasant had about that time cast into the putrid, fermenting mass of human society.

We must not wonder at the zeal which caused the artistic Italian nature to love to celebrate the passing away of an era of unnatural vice and demoniac cruelty by visible images of the purity, the tenderness, the universal benevolence which Jesus had brought into the world.

Some time about the middle of the thirteenth century, it had been a favorite enterprise of a princess of a royal family in Naples to erect a convent to Saint Agnes, the guardian of female purity, out of the wrecks and remains of an ancient temple of Venus, whose white pillars and graceful acanthus-leaves once crowned a portion of the precipice on which the town was built, and were reflected from the glassy blue of the sea at its feet. It was said that this princess was the first lady abbess. Be that as it may, it proved to be a favorite retreat for many ladies of rank and religious aspiration, whom ill-fortune in some of its varying forms led to seek its quiet shades, and it was well and richly endowed by its royal patrons.

It was built after the manner of conventual buildings generally,—in a hollow square, with a cloistered walk around the inside looking upon a garden.

The portal at which Agnes and her grandmother knocked, after ascending the winding staircase cut in the precipice, opened through an arched passage into this garden.

As the ponderous door swung open, it was pleasant to hear the lulling sound of a fountain, which came forth with a gentle patter, like that of soft summer rain, and to see the waving of rose-bushes and golden jessamines, and smell the perfumes of orange-blossoms mingling with those of a thousand other flowers.

The door was opened by an odd-looking portress. She might be seventy-five or eighty; her cheeks were of the color of very yellow parchment drawn in dry wrinkles; her eyes were those large, dark, lustrous ones so common in her country, but seemed, in the general decay and shrinking of every other part of her face, to have acquired a wild, unnatural appearance; while the falling away of her teeth left nothing to impede the meeting of her hooked nose with her chin. Add to this, she was hump-backed, and twisted in her figure; and one needs all the force of her very good-natured, kindly smile to redeem the image of poor old Jocunda from association with that of some Thracian witch, and cause one to see in her the appropriate portress of a Christian institution.

Nevertheless, Agnes fell upon her neck and imprinted a very fervent kiss upon what was left of her withered cheek, and was repaid by a shower of those epithets of endearment which in the language of Italy fly thick and fast as the petals of the orange-blossom from her groves.

"Well, well," said old Elsie,—*"I'm going to leave her here to-day. You've no objections, I suppose?"*

"Bless the sweet lamb, no! She belongs here of good right. I believe blessed Saint Agnes has adopted her; for I've seen her smile, plain as could be, when the little one brought her flowers."

"Well, Agnes," said the old woman, "I shall come for you after the Ave Maria." Saying which, she lifted her basket and departed.

The garden where the two were left was one of the most peaceful retreats that the imagination of a poet could create.

Around it ran on all sides the Byzan-

tine arches of a cloistered walk, which, according to the quaint, rich fashion of that style, had been painted with vermilion, blue, and gold. The vaulted roof was spangled with gold stars on a blue ground, and along the sides was a series of fresco pictures representing the various scenes in the life of Saint Agnes; and as the foundress of the Convent was royal in her means, there was no lack either of gold or gems or of gorgeous painting.

Full justice was done in the first picture to the princely wealth and estate of the fair Agnes, who was represented as a pure-looking, pensive child, standing in a thoughtful attitude, with long ripples of golden hair flowing down over a simple white tunic, and her small hands clasping a cross on her bosom, while, kneeling at her feet, obsequious slaves and tire-women were offering the richest gems and the most gorgeous robes to her serious and abstracted gaze.

In another, she was represented as walking modestly to school, and winning the admiration of the son of the Roman Prætor, who fell sick—so says the legend—for the love of her.

Then there was the demand of her hand in marriage by the princely father of the young man, and her calm rejection of the gorgeous gifts and splendid gems which he had brought to purchase her consent.

Then followed in order her accusation before the tribunals as a Christian, her trial, and the various scenes of her martyrdom.

Although the drawing of the figures and the treatment of the subjects had the quaint stiffness of the thirteenth century, their general effect, as seen from the shady bowers of the garden, was of a solemn brightness, a strange and fanciful richness, which was poetical and impressive.

In the centre of the garden was a fountain of white marble, which evidently was the wreck of something that had belonged to the old Greek temple. The statue of a nymph sat on a green mossy

pedestal in the midst of a sculptured basin, and from a partially reversed urn on which she was leaning a clear stream of water dashed down from one mossy fragment to another, till it lost itself in the placid pool.

The figure and face of this nymph, in their classic finish of outline, formed a striking contrast to the drawing of the Byzantine paintings within the cloisters, and their juxtaposition in the same inclosure seemed a presentation of the spirit of a past and present era: the past so graceful in line, so perfect and airy in conception, so utterly without spiritual aspiration or life; the present limited in artistic power, but so earnest, so intense, seeming to struggle and burn, amid its stiff and restricted boundaries, for the expression of some diviner phase of humanity.

Nevertheless, the nymph of the fountain, different in style and execution as it was, was so fair a creature, that it was thought best, after the spirit of those days, to purge her from all heathen and improper histories by baptizing her in the waters of her own fountain, and bestowing on her the name of the saint to whose convent she was devoted. The simple sisterhood, little conversant in nice points of antiquity, regarded her as Saint Agnes dispensing the waters of purity to her convent; and marvellous and sacred properties were ascribed to the water, when taken fasting with a sufficient number of prayers and other religious exercises. All around the neighborhood of this fountain the ground was one bed of blue and white violets, whose fragrance filled the air, and which were deemed by the nuns to have come up there in especial token of the favor with which Saint Agnes regarded the conversion of this heathen relic to pious and Christian uses.

This nymph had been an especial favorite of the childhood of Agnes, and she had always had a pleasure which she could not exactly account for in gazing upon it. It is seldom that one sees in the antique conception of the immortals any trace of human feeling. Passionless

perfection and repose seem to be their uniform character. But now and then from the ruins of Southern Italy fragments have been dug, not only pure in outline, but invested with a strange pathetic charm, as if the calm, inviolable circle of divinity had been touched by some sorrowing sense of that unexplained anguish with which the whole lower creation groans. One sees this mystery of expression in the face of that strange and beautiful Psyche which still enchants the Museum of Naples. Something of this charm of mournful pathos lingered on the beautiful features of this nymph, — an expression so delicate and shadowy that it seemed to address itself only to finer natures. It was as if all the silent, patient woe and discouragement of a dumb antiquity had been congealed into this memorial. Agnes was often conscious, when a child, of being saddened by it, and yet drawn towards it with a mysterious attraction.

About this fountain, under the shadow of bending rose-trees and yellow jessamines, was a circle of garden-seats, adopted also from the ruins of the past. Here a graceful Corinthian capital, with every white acanthus-leaf perfect, stood in a mat of acanthus-leaves of Nature's own making, glossy green and sharply cut; and there was a long portion of a frieze sculptured with graceful dancing figures; and in another place a fragment of a fluted column, with lycopodium and colosseum vine hanging from its fissures in graceful draping. On these seats Agnes had dreamed away many a tranquil hour, making garlands of violets, and listening to the marvellous legends of old Jocunda.

In order to understand anything of the true idea of conventual life in those days, we must consider that books were as yet unknown, except as literary rarities, and reading and writing were among the rare accomplishments of the higher classes; and that Italy, from the time that the great Roman Empire fell and broke into a thousand shivers, had been subject to a continual series of conflicts and struggles, which

took from life all security. Norman, Dane, Sicilian, Spaniard, Frenchman, and German mingled and struggled, now up and now down; and every struggle was attended by the little ceremonies of sacking towns, burning villages, and routing out entire populations to utter misery and wretchedness. During these tumultuous ages, those buildings consecrated by a religion recognized alike by all parties afforded to misfortune the only inviolable asylum, and to feeble and discouraged spirits the only home safe from the prospect of reverses.

If the destiny of woman is a problem that calls for grave attention even in our enlightened times, and if she is too often a sufferer from the inevitable movements of society, what must have been her position and needs in those ruder ages, unless the genius of Christianity had opened refuges for her weakness, made inviolable by the awful sanctions of religion?

What could they do, all these girls and women together, with the twenty-four long hours of every day, without reading or writing, and without the care of children? Enough: with their multiplied diurnal prayer periods, with each its chants and ritual of observances, — with the preparation for meals, and the clearing away thereafter, — with the care of the chapel, shrine, sacred gifts, drapery, and ornaments, — with embroidering altar-cloths and making sacred tapers, — with preparing conserves of rose-leaves and curious spiceries, — with mixing drugs for the sick, — with all those mutual offices and services to each other which their relations in one family gave rise to, — and with divers feminine gossipries and harmless chatterings and cooings, one can conceive that these dove-cots of the Church presented often some of the most tranquil scenes of those convulsive and disturbed periods.

Human nature probably had its varieties there as elsewhere. There were there the domineering and the weak, the ignorant and the vulgar and the patriotic and the princess, and though pro-

fessedly all brought on the footing of sisterly equality, we are not to suppose any Utopian degree of perfection among them. The way of pure spirituality was probably, in the convent as well as out, that strait and narrow one which there be few to find. There, as elsewhere, the devotee who sought to progress faster toward heaven than suited the paces of her fellow-travellers was reckoned a troublesome enthusiast, till she got far enough in advance to be worshipped as a saint.

Sister Theresa, the abbess of this convent, was the youngest daughter in a princely Neapolitan family, who from her cradle had been destined to the cloister, in order that her brother and sister might inherit more splendid fortunes and form more splendid connections. She had been sent to this place too early to have much recollection of any other mode of life; and when the time came to take the irrevocable step, she renounced with composure a world she had never known.

Her brother had endowed her with a *livre des heures*, illuminated with all the wealth of blue and gold and divers colors which the art of those times afforded, — a work executed by a pupil of the celebrated Frà Angelico; and the possession of this treasure was regarded by her as a far richer inheritance than that princely state of which she knew nothing. Her neat little cell had a window that looked down on the sea, — on Capri, with its fantastic grottos, — on Vesuvius, with its weird daily and nightly changes. The light that came in from the joint reflection of sea and sky gave a golden and picturesque coloring to the simple and bare furniture, and in sunny weather she often sat there, just as a lizard lies upon a wall, with the simple, warm, delightful sense of living and being amid scenes of so much beauty. Of the life that people lived in the outer world, the struggle, the hope, the fear, the vivid joy, the bitter sorrow, Sister Theresa knew nothing. She could form no judgment and give no advice founded on any such experience.

The only life she knew was a certain ideal one, drawn from the legends of the saints; and her piety was a calm, pure enthusiasm which had never been disturbed by a temptation or a struggle. Her rule in the Convent was even and serene; but those who came to her flock from the real world, from the trials and temptations of a real experience, were always enigmas to her, and she could scarcely comprehend or aid them.

In fact, since in the cloister, as everywhere else, character will find its level, it was old Jocunda who was the real governess of the Convent. Jocunda was originally a peasant woman, whose husband had been drafted to some of the wars of his betters, and she had followed his fortunes in the camp. In the sack of a fortress, she lost her husband and four sons, all the children she had, and herself received an injury which distorted her form, and so she took refuge in the Convent. Here her energy and *savoir-faire* rendered her indispensable in every department. She made the bargains, bought the provisions, (being allowed to sally forth for these purposes,) and formed the medium by which the timid, abstract, defenceless nuns accomplished those material relations with the world with which the utmost saintliness cannot afford to dispense. Besides and above all this, Jocunda's wide experience and endless capabilities of narrative made her an invaluable resource for enlivening any dull hours that might be upon the hands of the sisterhood; and all these recommendations, together with a strong mother-wit and native sense, soon made her so much the leading spirit in the Convent that Mother Theresa herself might be said to be under her dominion.

"So, so," she said to Agnes, when she had closed the gate after Elsie, — "you never come empty-handed. What lovely oranges! — worth double any that one can buy of anybody else but your grandmother."

"Yes, and these flowers I brought to dress the altar."

"Ah, yes! Saint Agnes has given

you a particular grace for that," said Jocunda.

"And I have brought a ring for her treasury," said Agnes, taking out the gift of the Cavalier.

"Holy Mother! here is something, to be sure!" said Jocunda, catching it eagerly. "Why, Agnes, this is a diamond, —and as pretty a one as ever I saw. How it shines!" she added, holding it up. "That's a prince's present. How did you get it?"

"I want to tell our mother about it," said Agnes.

"You do?" said Jocunda. "You'd better tell me. I know fifty times as much about such things as she."

"Dear Jocunda, I will tell you, too; but I love Mother Theresa, and I ought to give it to her first."

"As you please, then," said Jocunda. "Well, put your flowers here by the fountain, where the spray will keep them cool, and we will go to her."

GREEK LINES.

BLESSED are the shadows of porches and cloisters! Blessed the walls that shut us out from the dusty, dazzling world, and shed upon us the repose and consolation of our own serene humanity! We, harassed among the base utilities of life, made weary and sore by the ceaseless struggles of emulation and daily warfare, turn wistfully to the Peripatetic among the shady groves of Athens, — dream of quiet Saracenic courts, echoing with plashy fountains, — of hooded monks, pacing away their cloistered lives beneath storied vaults and little patches of sky, — knowing, while we dream, that out of these came of yore the happiness of the old *eurekas* and the deep sweetness of ancient knowledge. And then, away from the city of our toil, the tumult of our ambitions, we gratefully find Vallombrosas of our own, where we walk not alone, but in the pleasant companionship of elevated thoughts, and of old sages and masters, long passed away, but still wise and gentle to those who approach them with faith and simplicity. Here, like those chimes which wander unheeded over the house-tops of the roaring town, till they drop down blessed dews of Heaven into still, grass-grown courts and deserted by-ways, the great universal human heart beats closer to our own,

and our whole being palpitates with almost ethereal sympathies. Voices of old minstrels, wandering down to us on loving lips through the generations, murmur in our ears the dear burden of human affection for men and things; and the same tale is poured abundantly into our hearts by all those great masters who, through their Art, have become to us oracles of Beauty and eloquent interpreters of the Love of God.

There are few persons so hardened in the practical life as not to have recognized that in these moments of large and spiritual stillness all the processes of the mind seem to be instinctively attuned to harmonies almost celestial. Experience and memory present their pictures softened and made gentle by some mysterious power. The imagination is swayed by the sweetest impulses of humanity; and the whole man is changed. The mere instincts of affinity are purified and deepened into tenderest affection, and all the external relations of existence

"come apparelled in more precious habit,
More moving delicate and full of life,
Into the eye and prospect of the soul,"

than when they offered themselves to the ordinary waking senses. This is a wonder and a mystery. I sometimes believe, thinking on these things, that we have

inherited from our father Adam a habit of day-dreaming; that in this exile of coarse and work-day life our heated brows are sometimes fanned with breezes from some half-remembered Araby the Blest, and there instinctively come over us such visions of beatitude that the Paradise we have lost is recalled to us, and we live once more among the dreamy and grateful splendors of Eden. These moods come upon us so like memories! But you, graybeard travellers in the Desert of Life, you are not to be deceived by the trickery of the elements; you know the moist *mirage*; you are not to be beguiled by it from your track; let the unwary dream dreams of bubbling well-springs and pleasant shade, of palmy oases and tranquil repose; as for you, you must goad your camels and press onward for Jerusalem.

But I like to chase phantoms; I hate the plodding of the caravans. I turn aside and spread my own tent apart. Will you tarry awhile under its shadow, O serious and gentle stranger, and listen to some poor words of mine?

These memories of Eden! Let us cherish them, for they are not worthless or deceitful. We, who, when we can, carry our hearts in our eyes, know very well, and have often said it before, that Eden is not so many days' journey away from our feet that we may not inhale its perfumes and press our brows against its sod whenever we wish. It is not cant, I hope, to say that Eden is not lost entirely. There stands no angel at its gates with flaming sword; nor did it fade away with all its legendary beauties, drop its leaves into the melancholy streams, leaving no trace behind of its glades and winding alleys, its stretches of flowery mead, its sunny hill-sides, and valleys of happiness and peace. But Eden still blooms wherever Beauty is in Nature; and Beauty, we know, is everywhere. We cannot escape from it, if we would. It is ever knocking at the door of our hearts in sweet and unexpected missions of grace and tenderness. We are haunted by it in our loneliest walks. Almost

unconsciously, out of flowers and trees, earth and sky, sunrises and sunsets,—out of mosses under the feet, mosses and pebbles and grasses,—out of the loveliness of moon and stars, their harmonies and changes,—out of sea-foam, and what sea-foam reveals to us of the rich and strange things beneath the waters far down,—out of sweet human eyes,—out of all these things creeps into our spirits the knowledge that God is Love, and His handiwork the expression of ineffable tenderness and affection. I believe, indeed, that the principle of Beauty, philosophically speaking, pervades all material objects, all motions and sounds in Nature,—that it enters intimately into the very idea of Creation. But we, poor finite beings, do not seek for it, as we do for gold and gems. We remain content with those conventional manifestations of it which are continually and instinctively touching our senses as we walk the earth. Fearfully and wonderfully as we are made, there is no quality in our being so blessed as this sensitiveness to Beauty. All the organs of our life are attuned by it to that vast universal symphony which, in spite of the warring elements of passion and prejudice, unites us in friendly sympathies with all mankind. If

“the meanest flower that blows can bring Thoughts that do often lie too deep for tears,”—if it can so move some of us, who have cared to open the portals of our hearts to receive and cherish the little waif,—why, verily, the simple violet that blooms alike under every sky, the passing cloud that floats changing ever over every land, gathering equal glories from the sunsets of Italy and Labrador, are more potent missionaries of peace and good-will to all the earth than the most persuasive accents of human eloquence.

These are familiar truths. Like

“The stretchèd metre of an antique song,”

they flow from our grateful lips in ready words. But we do not suspect how these manifestations of material Beauty are received by the mysterious alembic of the

soul,—how they are worked up there by exquisite and subtle processes of moral chemistry, humanized, spiritualized, and appropriated unconsciously to sweet uses of piety and affection. We do not know how the star, the flower, the dear human face, the movement of a wave, the song of a bird,—we do not know how these things enter into the heart, become ideal, mingle with human emotions, consecrate and are consecrated, and come forth once more into light, but transfigured into tenderest sympathies and the gentle offices of charity and grace. There was Wordsworth,—he knew something of this still machinery, this “kiss of toothed wheels” within the soul of man. Listen to him,—he had been to Tintern Abbey and heard once more the “soft inland murmur” of the Wye:—

“These beauteous forms,
Through a long absence, have not been to
me

As is a landscape to a blind man's eye:
But oft, in lonely rooms, and 'mid the din
Of towns and cities, I have owed to them,
In hours of weariness, sensations sweet,
Felt in the blood, and felt along the heart,
And passing even into my purer mind,
With tranquil restoration:—*feelings, too,
Of unremembered pleasure*: such, perhaps,
As have no slight or trivial influence
On that best portion of a good man's life,
His little, nameless, unremembered acts
Of kindness and of love.”

And then who that has ever read it can
forget his exquisite picture in the “Education
of a little Child”?—

“And she shall lean her ear
In many a secret place,
Where rivulets dance their wayward round,
And beauty born of murmuring sound
Shall pass into her face!”

The material Beauty of the world, as exhibited in the manifold objects, sounds, perfumes, motions of Nature, is created for a nobler purpose than only to delight the senses and please the æsthetic faculties. I believe it is the distant source whence flow all our dear daily affections. We know, that, according to the suggestions of our merely human passions and instincts, we ease our hearts of Love by

heaping treasures and the choicest gifts of fancy in the laps of those whom we most dearly cherish. We take no credit to ourselves for such precious prodigalities; for they are the inevitable and disinterested outpourings of affection. They are received as such. And when we cast our eyes abroad and behold the loving prodigality of a divine hand, we accept the manifestation, are made happy in the consciousness of being beloved, and, constituted as we are in the image and likeness of God, express our instinctive gratitude in those fine human sympathies which impress the seal of Truth on the primary idea of our creation.

And so, blessed are the shadows of porches and cloisters! Blessed the hours of serene meditation, when the “tender grace of days that are dead,” of flowers that have faded, of scenes “gone glimmering through the dream of things that were,” comes back to us with a new meaning, softening and refining the heart to unexpected capacities of affection. But how they fade away, these ghostly and unsubstantial pageants, when they “scent the morning air”! How they leave in our hearts nought but the dim consciousness that we are capable of an existence ineffably deeper and vaster than that which we lead in the visible world! Nought but this? Alas, poor human nature! do we leave the casket of Pandora open in wanton carelessness, and let all escape but the mere scent of the roses? Or does there not remain behind an indefinable presence to comfort and console us,—the precious *Ideal of Beauty*,—

“The light that never was on sea or land,
The inspiration and the poet's dream”?

The human heart forever yearns to create,—this is the pure antique word for it,—to give expression and life to an evasive loveliness that haunts the soul in those moments when the body is laid asleep and the spirit walks. There is a continual and going on to embody these elusive phantoms of Beauty. But the immortal songs which remain unsung, the exquisite idyls which gasp for words, the bewildering and restless imagery

which seeks in vain the eternal repose of marble or of canvas,—while these confess the affectionate and divine desires of humanity, they prove how few there are to whom it is given to learn the great lesson of Creation. When one arises among us, who, like Pygmalion, makes no useless appeal to the Goddess of Beauty for the gift of life for his Ideal, and who creates as he was created, we cherish him as a great interpreter of human love. We call him poet, composer, artist, and speak of him reverently as *Master*. We say that his lips have been wet with dews of Hybla,—that, like the sage of Crotona, he has heard the music of the spheres,—that he comes to us, another Numa, radiant and inspired from the kisses of Egeria.

Thus, as infinite Love begets infinite Beauty, so does infinite Beauty reflect into finite perceptions that image of its divine parentage which the antique world worshipped under the personification of Astarte, Aphrodite, Venus, and recognized as the *great creative principle* lying at the root of all high Art.

There is a curious passage in Boehme, which relates how Satan, when asked the cause of the enmity of God and his own consequent downfall, replied,—“I wished to be an Artist.” So, according to antique tradition, Prometheus manufactured a man and woman of clay, animated them with fire stolen from the chariot of the Sun, and was punished for the crime of Creation; Titans chained him to the rocks of the Indian Caucasus for thirty thousand years!

This Ideal, this Aphrodite of old mythologies, still reigns over the world of Art, and every truly noble effort of the artist is saturated with her spirit, as with a religion. It is impossible for a true work of Art to exist, unless this great creative principle of Love be present in its inception, in its execution, in its detail. It must be pervaded with the warmth of human, passionate affection. The skill which we are so apt to worship is but the instrument in the hands of Love. It is the means by which this humanity is

transferred to the work, and there idealized in the forms of Nature. Thus the test of Art is in our own hearts. It is not something far away from us, throwing into our presence gleaming reflections from some supernal source of Light and Beauty; but it is very near to us,—so near, that, like the other blessings which lie at our feet, we overlook it in our far-reaching searches after the imaginary good. We, poor underlings, have been taught in the school of sad experience the mortal agony of Love without Skill,—the power of perception, without the power of utterance. We know how dumb are the sweet melodies of our souls,—how fleeting their opulent and dreamy pageantries. But we have not fully learned the utter emptiness and desolation of Skill without Love. We accept its sounding brass and tinkling cymbals for immortal harmonies. We look reverently upon its tortured marbles and its canvases stained with academic knowledge as revelations of higher intelligence; forgetting, that, if we go down to the quiet places of our own souls, we shall find there the universe reflected, like a microcosm, in the dark well-springs, and that out of these well-springs in the deep silence rises the beautiful Ideal, Anadyomene, to compensate and comfort us for the vacancy of Life. If we know ourselves, it is not to the dogmas of critics, the artificial rules of æsthetics, that we most wisely resort for judgments concerning works of Art. Though technical externals and the address of manipulation naturally take possession of our senses and warp our opinions, there are depths of immortal Truth within us, rarely sounded, indeed, but which can afford a standard and a criterion far nobler than the schools can give us.

The broken statues and columns and traditions and fragmentary classics which Greece has left us are so still and tranquil to the eye and ear, that we search in vain for the Delphic wisdom they contain, till we find it echoed in the sympathetic depths of our souls, and repeated in the half-impalpable Ideals there. It is to

Greece that we must look for the external type of these Ideals, whose existence we but half suspect within us. It is not pleasant, perhaps, to think that we were nearly unconscious of the highest capacities of our humanity, till we recognized their full expression in the ashes of a distant and dead civilization,—that we did not know ourselves, till

"The airy tongues that syllable men's names
In pathless wildernesses"

uttered knowledge to us among the ghastly ruins of Hellas. It is good for us to lend a spiritual ear to these ancient whisperings, and hear nymph calling to nymph and faun to faun, as they caper merrily with the god Pan through the silence. It is good for us to listen to that "inextinguishable laughter" of the happy immortals of Olympus, ever mingling with all the voices of Nature and setting them to the still sweet music of humanity,—good, because so we are reminded how close we are to the outward world, and how all its developments are figurative expressions of our near relationships with the visible Beauty of things. Thus it is that the poetic truths of old religions exquisitely vindicate themselves; thus we find, even we moderns, with our downward eyes and our wrinkled brows, that we still worship at the mythological altars of childlike divinities; and when we can get away from the distracting Bedlam of steam-shrieks and machinery, we behold the secrets of our own hearts, the Lares and Penates of our own households, reflected in the "white ideals" on antique vases and medallions.

Abstract lines are the most concentrated expressions of human ideas, and, as such, are peculiarly sensitive to the critical tests of all theories of the Beautiful. Distinguished from the more usual and direct means by which artists express their inspirations and appeal to the sympathies of men, distinct from the common language of Art, which contents itself with conveying merely local and individual ideas, abstract lines are recognized as the

grand hieroglyphic symbolism of the aggregate of human thought, the artistic manifestations of the great human Cosmos. The natural world, passing through the mind of man, is immediately interpreted and humanized by his creative power, and assumes the colors, forms, and harmonies of Painting, Sculpture, and Music. But abstract lines, as we find them in Architecture and in the ceramic arts, are the independent developments of this creative power, coming directly from humanity itself, and obtaining from the outward world only the most distant motives of composition. Thus it is an inevitable deduction that Architecture is the most *human* of all arts, and its lines the most *human* of all lines.

"A thing of beauty is a joy forever";

and the affectionate devotion with which this gift is received by finite intelligences from the hand of God is expressed in Art, when its infinite depth *can* be so expressed at all, in a twofold language,—the one objective, the other subjective; the one recalling the immediate source of the emotion, and presenting it palpably to the senses, arrayed in all the ineffable tenderness of Art, which is Love,—the other, portraying rather the emotion than the cause of it, and by an instinctive and universal symbolism expressing the deep and serious joy with which the "thing of beauty" is welcomed to the heart. Hence come those lines which æsthetic writers term "*Lines of Beauty*," so eloquent to us with an uncomprehended meaning,—so near, and yet so far,—so simple, and yet so mysterious,—so animated with life and thought and musical motion, and yet so still and serene and spiritual. Links which bind us fraternally to old intelligences, tendrils by which the soul climbs up to a wider view of the glimmering landscape, they are grateful and consoling to us. We look with cognizant eyes at their subtle affinities with some unexpressed part of human life, and, turning one to another, are apt to murmur,

"We cannot understand: we love."

The mysteries of orb and cycle, with which old astrologers girded human life, and sought to define from celestial phenomena the horoscope of man, have been brought down to modern applications by learned philosophers and mathematicians. These have labored with a godlike energy and skill to trace the interior relationships existing between the recondite revelations of their Geometry, their wonderful laws of mathematical harmonies and unities, and those lines which by common consent are understood to be exponential of certain phases of our own existence. No well-organized intellect can fail to perceive that a sublime and immortal Truth underlies these speculations. Undoubtedly, in the straight line, in the conic sections, in the innumerable composite curves of the mathematician, lie the germs of all these symbolic expressions. But the artist, whose lines of Beauty vary continually with the emotions which produce them, who feels in his own human heart the irresistible impulse which gives an exquisite balance and poise to those lines, cannot allow that the *spirit* of his compositions is governed by the exact and rigid formulæ of the philosopher to any greater extent or in any other manner than as the numbers of the poet are ruled by the grammar of his language. These formulæ may be applied as a curious test to ascertain what strange sympathies there may be between such lines and the vast organic harmonies of Nature and the Universe; but they do not enter into the soul of their creation any more than the limitations of counterpoint and rhythm laid their incubus on the lyre of Apollo. The porches where Callicrates, Hermogenes, and Callimachus walked were guarded by no such Cerberus as the disciples of Plato encountered at the entrance of the groves of the Academy,—

“Οὐδεὶς ἀγεωμέτρητος εἰσὶτω,”

“Let no one ignorant of Geometry enter here”;

but the divine Aphrodite welcomed all mankind to the tender teachings of the Wild Acanthus, the Honeysuckle, and the

Sea-Shell, and all the deep utterances of boundless Beauty.

Truly, it is sad and dispiriting to the artist to find that all modern æsthetical writings limit and straiten the free walks of highest Art with strict laws deduced from rigid science, with mathematical proportions and the formal restrictions of fixed lines and curves, nicely adapted from the frigidities of Euclid. The line A B must equal the line C D; somewhere in space must be found the centre or the focus of every curve; and every angle must subtend a certain arc, to be easily found on reference to the tables of the text-books. “The melancholy days have come” for Art, when the meditative student finds his early footsteps loud among these dry, withered, and sapless leaves, instead of brushing away the dews by the fountains of perpetual youth. I am aware of no extant English work on Greek Lines which does not aim to reduce that magnificent old Hellenic poetry to the cold, hard limitations of Geometry. Modern Pharisees nail that antique Ideal of loveliness and purity to a mathematical cross.

Now it is capable of distinct proof, that abstract Lines of Beauty, even in a greater degree than any other expressions of Art, are born and baptized in Love. Because parabolic curves frequently *coincide* with these lines, it is no proof that they *created* them.

The Water-Lily, or Lotus, perpetually occurs in Oriental mythology as the sublime and hallowed symbol of the productive power in Nature,—the emblem of that great life-giving principle which the Hindu and the Egyptian and all early nations instinctively elevated to the highest and most cherished place in their Pantheons. Payne Knight, quoted in Mr. Squier's work on the “Antiquities of America,” ingeniously attributes the adoption of this symbol to the fact, that the Lotus, instead of rejecting its seeds from the vessels where they are germinated, nourishes them in its bosom till they have become perfect plants, when, arrayed in all the irresistible panoply

of grace and beauty, they spring forth, Minerva-like, float down the current, and take root wherever deposited. And so it was used by nearly all the early peoples to express the creative spirit which gives life and vegetation to matter. *Laeshti*, the beautiful Hindu goddess of abundance, corresponding to the *Venus Aphrodite* of the Greeks, was called "the Lotus-born," as having ascended from the ocean in this flower. Here, again, is the inevitable intermingling of the eternal principles of Beauty, Love, and the Creative Power in that pure triune medallion image which the ancients so tenderly cherished and so exquisitely worshipped with vestal fires and continual sacrifices of Art. Old Father Nile, reflecting in his deep, mysterious breast the monstrous temples of Nubia and Pylæ, bears eloquent witness to the earnestness and sincerity of the old votive homage to Isis, "the Lotus-crowned" *Venus of Egypt*. For the symbolic Water-Lily, *recreated* by human Art, blooms forever in the capitals of Karnac and Thebes, and wherever columns were reared and lintels laid throughout the length and breadth of the "Land of Bondage." It is the key-note of all that architecture; and a brief examination into the principles of this new birth of the Lotus, of the monumental straightening and stiffening of its graceful and easy lines, will afford some insight into the strange processes of the human mind, when it follows the grandest impulse of Love, and out of the material beauties of Nature creates a work of Art.

It is well known that the religion of the old Egyptians led them to regard this life as a mere temporary incident, an unimportant phase of their progress toward that larger and grander state imaged to them with mysterious sublimity in the idea of Death or Eternity. In accordance with this belief, they expressed in their dwellings the sentiment of transitoriness and vicissitude, and in their tombs the immortality of calm repose. And so their houses have crumbled into dust ages ago, but their tombs are eternal. In

all the relations of Life the sentiment of Death was present in some form or other. The hallowed mummies of their ancestors were the most sacred mortgages of their debts, and to redeem them speedily was a point of the highest honor. They had corpses at their feasts to remind them how transitory were the glory and happiness of the world, how eternal the tranquillity of Death.

Now, how was this prevailing idea expressed in their Art? They looked around them and saw that all Organic Life was full of movement and wavy lines; their much-loved Lotus undulated and bent playfully to the solemn flow of the great Nile; the Ibis fluttered with continual motion; their own bodies were full of ever-changing curves; and their whole visible existence was unsteady, like the waves of the sea. But when the temporary Life was changed, and "this mortal put on immortality," their eyes and souls were filled with the utter stillness and repose of its external aspects; its features became rigid and fixed, and were settled to an everlasting and immutable calm; the vibrating grace of its lines departed, and their ever-varying complexity became simplified, and assumed the straightness and stiffness of Death. So the straight line, the natural expression of eternal repose, in contradistinction to the wavy line, which represents the animal movements of Life, became the motive and spirit of their Art. The anomaly of Death in Life was present in every development of the creative faculty, and no architectural feature could be so slight and unimportant as not to be thoroughly permeated with this sentiment. The tender and graceful lines of the Lotus became sublime and monumental under the religious loyalty of Egyptian chisels; and these lines, whether grouped or single, in the severity of their fateful repose, in their stateliness and immobility, wherever found, are awful with the presence of a grand serious humanity long passed away from any other contact with living creatures. The rendering of the human form, under this impulse of Art, produced re-

sults in which the idea of mutability was so overwhelmed in this grandeur of immortality, that we cry

“O melancholy eyes!

O vacant eyes! from which the soul has gone
To gaze in other lands,”

bend not upon us, living and loving mortals, that stony stare of death,—lest we too, as smit with the basilisk, be turned into monumental stone, and all the dear grace and movement of life be lost forever!

“Solid-set,

And moulded in colossal calm,”

all the lines of this lost Art thus recall the sentiment of endless repose, and even the necessary curves of its mouldings are dead with straightness. The Love which produced these lines was not the passionate Love which *we* understand and feel; they were not the result of a sensuous impulse; but the Egyptian artist seemed ever to be standing alone in the midst of a trackless and limitless desert,—around him earth and sky meeting with no kiss of affection, no palpitating embrace of mutual sympathy; he felt himself encircled by a calm and pitiless Destiny, the cold expression of a Fate from which he could not flee, and in himself the centre and soul of it all. Oppressed thus with a vast sense of spiritual loneliness, when he uttered the inspirations of Art, the memories of playful palms and floating lilies and fluttering wings, though they came warm to the Love of his heart, were attuned in the outward expression to the deep, solemn, prevailing monotone of his humanity. His Love for the Lotus and the Ibis, more profound than the passion of the senses, dwelt serene in the bottom of his soul, and thence came forth transfigured and dedicated to the very noblest uses of Life. And this is the Art of Egypt.

But among all the old nations which have perished with their gods, Greece appeals to our closest sympathies. She looks upon us with the smile of childhood, free, contented, and happy, with no ascetic self-denials to check her wild-flower growth, no stern religion to bind the lib-

erty of her actions. All her external aspects are in harmony with the weakness and the strength of human nature. We recognize ourselves in her, and find all the characteristics of our own humanity there developed into a theism so divine, clothed with a personification so exquisite and poetical, that the Hellenic mythology seems still to live in our hearts, a silent and shadowy religion without ceremonies or altars or sacrifices. The festive gods of the “*Iliad*” made man a deity to himself, and his soul the dwelling-place of Ideal Beauty. In this Ideal they lived and moved and had their being, and came forth thence, bronze, marble, chryselephantine, a statuesque and naked humanity, chaste in uncomprehended sin and glorified in antique virtue. The Beauty of this natural Life and the Love of it was the soul of the Greek Ideal; and the nation continually cherished and cultivated and refined this Ideal with impulses from groves of Arcadia, vales of Tempe, and flowery slopes of Attica, from the manliness of Olympic Games and the loveliness of Spartan Helens. They cherished and cultivated and refined it, because here they set up their altars to known gods and worshipped attributes which they could understand. The Ideal was their religion, and the Art which came from it the expression of their highest aspiration.

Lines of Beauty, produced in such a soil, were not, as might at first be supposed, tropic growths of wanton and luxurious curves, wild, spontaneous utterances of superabundant Life. The finely studied perception of the Greek artist admitted no merely animal, vegetable, instinctive, licentious renderings of what Nature was ever giving him with a liberal hand in the whorls of shells, the veins of leaves, the life of flames, the convolutions of serpents, the curly tresses of woman, the lazy grace of clouds, the easy sway of tendrils, flowers, and human motion. He was no literal interpreter of her whispered secrets. But the Grace of his Art was a *deliberate grace*,—a grace of thought and study. His lines were *crea-*

tions, and not instincts or imitations. They came from the depth of his Love, and it was his religion so to nurture and educate his sensitiveness to Beauty and his power to love and create it, that his works of Art should be deeds of passionate worship and expressions of a godlike humanity. Unlike the Egyptian's, there was nothing in his creed to check the sweet excess of Life, and no grim shadow, "feared of man," scared him in his walks, or preached to him sermons of mortality in the stones and violets of the wayside. Life was hallowed and dear to him for its own sake. He saw it was lovable, and he made it the theme of his noblest poems, his subtlest philosophies, and his highest Art. Hence the infinite joy and endless laughter on Olympus, the day-long feasting, *the silver stir of strings* in the hollow shell of the exquisite Phœbus, "the soft song of the Muse with voices sweetly replying."

I believe that all true Lines of Grace and Beauty, in their highest, *intellectual*, *human* significance, may be concentrated and expressed in one; not a *precise* and *exact* line, like a formula of mathematics, to which the neophyte can refer for deductions of Grace to suit any premises or conditions. This, of course, is contrary to the spirit of beautiful design; and the ingenious Hay, who maintains that his "composite ellipse" is capable of universal application in the arts of ornamental composition, and that by its use any desirable lines in mouldings or vases can be mechanically produced, especially Greek lines, falls into the grave error of endeavoring to materialize and fix that *animula vagula, blandula*, that coy and evasive spirit of Art, which is its peculiar characteristic, and gives to its works inspiration, harmony, and poetic sentiment. Ideal Beauty can be hatched from no geometrical eggs. But the line which I refer to, as the expression of most subtle Grace, pretends to be merely a type of that large language of forms with which the most refined intellects of antiquity uttered their Love, and their joyful worship of Aphrodite. This line, of course, is Greek.

The three great distinctive eras of Art, in a purely psychological sense, have been the Egyptian, the Grecian, and the Romanesque,—including in the latter term both Roman Art itself and all subsequent Art, whether derived directly or indirectly from Rome, as the Byzantine, the Moresque, the Mediæval, and the Renaissance. Selecting the most characteristic works to which these great eras respectively gave birth, it is not difficult, by comparison, to ascertain the master-spirit, or type, to which each of these three families may be reduced. If we place these types side by side, the result will be as in the diagram, presenting to the eye, at one view, the concentration of three civilizations, DESTINY, LOVE, and LIFE;—Destiny, finding utterance in the stern and inflexible simplicity of the tombs and obelisks of Egypt; Love, expressing itself in the statuesque and thoughtful grace of Grecian temples, statues, and urns; Life, in the sensuous and impulsive change, evident in all the developments of Art, since Greece became Achaia, a province of the Roman Empire. Here we behold the perpetual youth, the immortal genius of Hellas, tempering the solid repose of Egypt with the passion of Life. This intermediate Beauty is the essence of the age of Pericles; and in it "the capable eye" may discover the pose of the Cnidian Venus of Praxiteles, of the Jupiter Olympius of Phidias, and the other lost wonders of ancient chisels, and, more directly, the tender severity of Doric capitals, and the

secret grace of the shafts of the Parthenon.

You remember Pliny's account of the visit of Apelles to the great painter Protogenes, at Rhodes;—how, not finding him at home, Apelles inscribed *a line* upon a board, assuring the slave that this line would signify to the master who had been to see him. Whatever the line was, Protogenes, we hear, recognized in it the hand of the greatest limner of Greece. It was the signature of that Ideal, known to the antique world by its wider developments in the famous pictures of the Venus Anadyomene, and Alexander with the Thunderbolt, hung in the temple of Diana at Ephesus.

The gravity with which this apparently trifling anecdote is given us from antiquity evidently proves that it was one of the household tales of old Greece. It did not seem absurd in those times, when Art was recognized as a great Unity, an elaborate system of infinite language founded on the simplest elements of Life, and in its grandest and widest flowings bearing ever in its bosom, like a great river, the memory of the little weeping Naiad far up among the mountains with her "impoverished urn." And so every great national Art, growing up naturally out of the necessities of an earnest people, expressing the grand motives of their Life, as that of the Greeks and the Egyptians and the mediæval nations of Europe, is founded on the simplest laws. So long as these laws are obeyed in simplicity and Love, Art is good and true; so long as it remembers the purity and earnestness of its childhood, the strength that is ordained out of the mouth of babes is present in all its expressions; but when it spreads itself abroad in the fens and marshes of humanity, it has lost the purity of its aim, the singleness and unity of its action,—it becomes stagnant, and sleeps in the Death of Idleness.

Therefore I believe in the expressiveness of single lines as symbols of the grandest phases of human Life. And when one studies Greek Art, the whole

motive of it seems so childlike and so simple that the impulse to seek for that little Naiad which is the fountain and source of it all is irresistible. Look at the line I have traced, and see if there is not a curious humanity about it. It is impossible to produce it with a wanton flourish of the pencil, as I have done in that wavy, licentious curve, which Hogarth, in his quaint "Analysis of Beauty," assumes as the line of true Grace; nor yet are its infinite motions governed by any cold mathematical laws. In it is the earnest and deliberate labor of Love. There are thought and tenderness in every instant of it; but this thought is grave and almost solemn, and this tenderness is chastened and purified by wise reserve. Measure it by time, and you will find it no momentary delight, no voluptuous excess which comes and goes in a breath; but there is a whole cycle of deep human feeling in it. It is the serene joy of a nation, and not the passionate impulse of a man. Observe, from beginning to end, its intention is to give expression by the serpentine line to that sentiment of beautiful Life which was the worship of the Greeks; but they did not toss it off, like a wine-cup at a feast. They prolonged it through all the varied emotions of a lifetime with exquisite art, making it the path of their education in childhood and of their wider experience as men. All the impulses of humanity they bent to a kindly parallelism with it. This is that famous principle of Variety in Unity which St. Augustine and hosts of other philosophers considered the true Ideal of Beauty. Start with this line from the top upon its journeying: look at the hesitation of it, ere it launches into action; how it cherishes its resources, and gathers up its strength!—with a confidence in its beautiful Destiny, and yet a chaste shrinking from the full enjoyment of it, how inevitably, but how purely, it yields itself up to the sudden curve! It does not embrace this curve with a sensuous sweep, nor does it, like Sappho, throw itself with quick passion into the tide. It enters with maidenly

and dignified reserve into its new Life; and then how is this new Life spent? As you glance at it, it seems almost ascetic, and reminds you of the rigid fatalism of Egypt. Its grace is almost strangled, as those other serpents were in the grasp of the child Hereules. But if you watch it attentively, you will find it ever changing, though with subtlest refinement, ever human, and true to the great laws of emotion. There is no straight line here, — no Death in Life, — but the severity and composure of intellectual meditation, — meditation, moving with serious pleasure along the grooves of happy change, —

“As all the motions of its starry train
Were governed by a strain
Of music, audible to it alone!”

As the eye is cheated out of its rectitude, following this grave delight, and seems to dilate and grow dreamy in the cool shade of imaginative cloisters and groves, the wanton joyousness of Life, with its long waving lily-stems and the luscious pend-ing of vines, comes with dim recollections into the mind, but modified by a certain habitual chastity of thought. Follow the line still farther, and you will find it grateful to the sight, neither fatiguing with excess of monotony nor cloying the appetite with change. And when the round hour is full and the end comes, this end is met by a Fate, which does not clip with the shears of Atropos and leave an aching void, but fulfils itself in gentleness and peace. The line bends quietly and unconsciously towards the beautiful consummation, and then dies, because its work is done.

This is the way the Greeks made that Line which represents to “the capable eye” the true Attic civilization. And when we examine the innumerable lines of Grecian architecture, we find that they never for an instant lost sight of this Ideal. The fine humanity of it was everywhere present, and mingled not only with such grand and heroic lines as those of the sloping pediments and long-drawn entablatures of the Parthenon and The-

seion, bending them into curves so subtly modulated that our coarse perceptions did not perceive the variations from the dead straight lines till the careful ad-measurements of Penrose and Cockerel and their *confrères* of France assured us of the fact, — not only did it make these enormous harp-strings vibrate with deep human soul-music, but there is not an abstract line in moulding, column, or vase, belonging to old Greece or the islands of the Ægean or Ionia or the colonies of Italy, which does not have the same intensity of meaning, the same statuesque Life of thought. Besides, I very much doubt if the same line, in all its parts and proportions, is ever repeated twice, — certainly not with any emphasis; and this is following out the great law of our existence, which varies the emotion infinitely with the occasion which produced it. Let us suppose, for example, that a moulding was needed to crown a column with fitting glory and grace. Now the capital of a column may fairly be called the throne of Ideal expression; it is the *cour d'honneur* of Art. The architect in this emergency did not set himself at “the antique,” and seek for authorities, and reproduce and copy; for he desired not only an abstract line of Beauty there, but a line which in every respect should answer all the requirements of its peculiar position, a line which should have its individual and essential relationships with the other lines around it, those of shaft, architrave, frieze, and cornice, should swell its fitting melody into the great *fugue*. And so, between the summit of the long shaft and that square block, the *abacus*, on which reposes the dead weight of the lintel of Greece, the Doric *echinus* was fashioned, crowning the serene Atlas-labor of the column with exquisite glory, and uniting the upright and horizontal masses of the order with a marriage ring, whose beauty is its perfect fitness. The profile of this moulding may be rudely likened to the upper and middle parts of the line assumed as the representative of the Greek Ideal. But it varied ever with the exigency of cir-

cumstances. Over the short and solid shafts of Pæstum, it became flat and almost horizontal; they needed there an expression of emphatic and sudden grace; they meet the *abacus* with a moulding of passionate energy, in which the soft undulations of Beauty are nearly lost in a masculine earnestness of purpose. On the other hand, the more slender and feminine columns of the Parthenon glide into the *echinus* with gentleness and sweetness, crown themselves with a diadem of chastity, as if it grew there by Fate, pre-ordained from the base of the shaft, like a flower from the root. It was created as with "the Dorian mood of soft recorders." Between these two extremes there is an infinity of change, everywhere modified and governed by "the study of imagination."

The same characteristics of nervous grace and severe intellectual restraint are found wherever the true Greek artist put his hand and his heart to work. Every moulding bears the impress of utter refinement, and modulates the light which falls upon it with exquisite and harmonious gradations of shade. The sun, as it touches it, makes visible music there, as if it were the harp of Memnon,—now giving us a shadow-line sharp, strict, and defined, now drawing along a beam of quick and dazzling light, and now dying away softly and insensibly into cool shade again. All the phenomena of reflected lights, half lights, and broken lights are brought in and attuned to the great *dædal* melody of the edifice. The antiquities of Attica afford nothing frivolous or capricious or merely fanciful, no playful extravagances or wanton meanderings of line; but ever loyal to the purity of a high Ideal, they present to us, even from their ruins, a wonderful and very evident Unity of expression, pervading and governing every possible mood and manner of thought. No phase of Art that ever existed gives us a line so very human and simple in itself as this Greek type, and so pliable to all the uses of monumental language. If this type were a mere mathematical type, its applicability

to the expression of human emotions would be limited to a formalism absolutely fatal to the freedom of thought in Art. But because it has its birth in intense Love, in refined appreciation of all the movements of Life and all the utterances of Creation, because it is the humanized essence of these motions and developments, it becomes thus an inestimable Unity, containing within itself the germs of a new world of ever new delight.

When this type in Greek Art was brought to bear on the interpretation of natural forms into architectural language, we shall curiously discover that the creative pride of the artist and his reverence for the integrity of his Ideal were so great, that he not only subjected these forms to a rigid subservience to the abstract line till Nature was nearly lost in Art, but the immediate adoption of these forms under any circumstances was limited to some three or four of the most ordinary vegetable productions of Greece and to one sea-shell. This wise reserve and self-restraint, among the boundless riches of a delicious climate and a soil teeming with fertility, present to us the best proof of the fastidious purity of artistic intentions. Nature poured out at the feet of the Greek artist a most plentiful offering, and the lap of Flora overflowed for him with tempting garlands of Beauty; but he did not gather these up with any greedy and indiscriminate hand, he did not intoxicate himself at the harvest of the vineyard. Full of the divinity of high purpose, and intent upon the nobler aim of creating a pure work of Art, he considered serenely what were his needs for decoration, took lovingly a few of the most ordinary forms, and, studying the creative sentiment of them, breathed a new and immortal life into them, and tenderly and hesitatingly applied them to the work of illustrating his grand Ideal. These leaves and flowers were selected not for their own sake, though he felt them to be beautiful, but for the decorative motive they suggested, the humanity there was in them, and the harmony they had with the emergencies of

his design. The design was not bent to accommodate them, but they were translated and lifted up into the sphere of Art.

A drawing of the Ionic capitals of the temple of Minerva Polias in the Erechtheum is accessible to nearly everybody. It is well to turn to it and see what use the Greeks, under such impulses, made of the Wild Honeysuckle and of Sea-Shells. Perhaps this capital affords one of the most instructive epitomes of Greek Art, inasmuch as in its composition use is made of so much that Nature gave, and those gifts are so tenderly modelled and wrought into such exquisite harmony and eloquent repose. Examine the volute: this is the nearest approach to a mathematical result that can be found in Grecian architecture; yet this very approximation is one of the greatest triumphs of Art. No geometrical rule has been discovered which can exactly produce the spirals of the Erechtheum, nor can they be found in shells. In avoiding the exuberance of the latter and the rigid formalism of the former, a work of human thought and Love has been evolved. Follow one of these volutes with your eye from its centre outwards, taking all its congeries of lines into companionship; you find your sympathies at once strangely engaged. There is an intoxication in the gradual and melodious expansion of these curves. They seem to be full of destiny, bearing you along, as upon an inevitable tide, towards some larger sphere of action. Ere you have grown weary with the monotony of the spiral, you find that the system of lines which compose it gradually leave their obedience to the centrifugal forces of the volute, and, assuming new relationships of parts, sweep gracefully across the summit of the shaft, and become presently entangled in the reversed motion of the other volute, at whose centre Ariadne seems to stand, gathering together all the clues of this labyrinth of Beauty. This may seem fanciful to one who regards these things as matters of formalism. But inasmuch as, to the studious eye of affection, they

suggest human action and human sympathies, this is a proof that they had their birth in some corresponding affection. It is the inanimate body of Geometry made spiritual and living by the Love of the human heart. And when a later generation reduced the Ionic volutes to rule, and endeavored to inscribe them with the gyrations of the compass, they have no further interest for us, save as a mathematical problem with an unknown value equal to a mysterious symbol x , in which the soul takes no comfort. But true Art, using the volute, inevitably makes it eloquent with an intensity of meaning, a delicacy of expression, which awakens certain very inward and very poetic sentiments, akin to those from which it was evolved in the process of creation. When we reasonably regard the printed words of an author, we not only behold an ingenious collection of alphabetical symbols, but are placed by them in direct contact with the mind which brought them together, and, for the moment, our train of thought so entirely coincides with that of the writer, that, though perhaps he died centuries ago, he may be said to live again in us. This great work of architectural Art has the same immortal life; and though it may not so often find a heart capable of discerning the sentiment and intention of it under the outward lines, yet that heart, when found, is touched very deeply and very tenderly. We imbibe the creative impulse of the artist, and the beautiful thing has a new life in our affections. Studying it, we become artists and poets ere we are aware. The alphabet becomes a living soul.

Under the volutes of this capital, and belting the top of the shaft, is a broad band of ornamentation, so happy and effectual in its uses, and so pure and perfect in its details, that a careful examination of it will, perhaps, afford us some knowledge of that spiritual essence in the antique Ideal out of which arose the silent and motionless Beauty of Greek marbles.

Here are brought together the *sentiments* of certain vegetable productions of Greece, but sentiments so entirely subordinated to

the flexure of the abstract line, that their natural significance is almost lost in a new and more human meaning. Here is the Honeysuckle, the wildest, the most elastic and undulating of plants, under the severe discipline of order and artistic symmetry, assuming a strict and chaste propriety, a formal elegance, which render it at once monumental and dignified. The harmonious succession and repetition of parts, the graceful contrasts of curves and the strict poise and balance of them, their unity in variety, their entire subjection to æsthetic laws, their serious and emphatic earnestness of purpose,—these qualities combine in the creation of one of the purest works of Art ever conceived by the human mind. It is called the Ionic *Anthemion*, and suggests in its composition all the creative powers of Greece. Its value is not alone in the sensuous gratification of the eye, as with the Arabesque tangles of the Alhambra, but it is more especially in its complete intellectual expression, the evidence there is in it of thoughtfulness and judgment and deliberate care. The inventor studied not alone the plant, but his own spiritual relationships with it; and ere he made his interpretation, he considered how, in mythological traditions, each flower once bore a human shape, and how Daphne and Syrinx, Narcissus and Philemon, and those other idyllic beings, were eased of the stress of human emotions by becoming Laurels and Reeds and Daffodils and sturdy Oaks, and how human nature was thus diffused through all created things and was epigrammatically expressed in them.

"And he, with many feelings, many thoughts,
Made up a meditative joy, and found
Religious meanings in the forms of Nature."

Like Faustus, he was permitted to look into her deep bosom, as into the bosom of a friend,—to find his brothers in the still wood, in the air, and in the water,—to see himself and the mysterious wonders of his own breast in the movements of the elements. And so he took Nature as a figurative exponent of humanity, and extracted the symbolic truths from her productions, and used them nobly in his Art.

Garbett, an English æsthetic writer, assures us that the *Anthemion* bears not the slightest resemblance to the Honeysuckle or any other plant, "being no representation of anything in Nature, but simply the necessary result of the complete and systematic attempt to combine unity and variety by the principle of *gradation*." But here he speaks like a geometer, and not like an artist. He seeks rather for the resemblance of form than the resemblance of spirit, and, failing to realize the object of his search, he endeavors to find a cause for this exquisite effect in pure reason. With equal perversity, Poe endeavored to persuade the public that his "Raven" was the result of mere æsthetic deductions!

And here the old burden of our song must once again be heard: If we would know the golden secret of the Greek Ideal, we must ourselves first learn how to *love* with the wisdom and chastity of old Hellenic passion. We must sacrifice Taste and Fancy and Prejudice, whose specious superficialities are embodied in the errors of modern Art,—we must sacrifice these at the shrine of the true Aphrodite; else the modern Procrustes will continue to stretch and torture Greek Lines on geometrical beds, and the æsthetic Pharisees around us will still crucify the Greek Ideal.

[To be continued.]

THE ROSE ENTHRONED.

It melts and seethes, the chaos that shall grow
To adamant beneath the house of life :
In hissing hatred atoms clash, and go
To meet intenser strife.

And ere that fever leaves the granite veins,
Down thunders o'er the waste a torrid sea :
Now Flood, now Fire, alternate despot reigns, —
Immortal foes to be.

Built by the warring elements, they rise,
The massive earth-foundations, tier on tier,
Where slimy monsters with unhuman eyes
Their hideous heads uprear.

The building of the world is not for you
That glare upon each other, and devour :
Race floating after race fades out of view,
Till beauty springs from power

Meanwhile from crumbling rocks and shoals of death
Shoots up rank verdure to the hidden sun ;
The gulfs are eddying to the vague, sweet breath
Of richer life begun, —

Richer and sweeter far than aught before,
Though rooted in the grave of what has been.
Unnumbered burials yet must heap Earth's floor,
Ere she her heir shall win ;

And ever nobler lives and deaths more grand
For nourishment of that which is to come :
While 'mid the ruins of the work she planned
Sits Nature, blind and dumb.

For whom or what she plans, she knows no more
Than any mother of her unborn child ;
Yet beautiful forewarnings murmur o'er
Her desolations wild.

Slowly the clamor and the clash subside :
Earth's restlessness her patient hopes subdue :
Mild oceans shoreward heave a pulse-like tide :
The skies are veined with blue.

And life works through the growing quietness
To bring some darling mystery into form :
Beauty her fairest Possible would dress
In colors pure and warm.

Within the depths of palpitating seas
A tender tint; — anon a line of grace
Some lovely thought from its dull atom frees,
The coming joy to trace; —

A pencilled moss on tablets of the sand,
Such as shall veil the unbudded maiden-blush
Of beauty yet to gladden the green land; —
A breathing, through the hush,

Of some sealed perfume longing to burst out
And give its prisoned rapture to the air; —
A brooding hope, a promise through a doubt
Is whispered everywhere.

And, every dawn a shade more clear, the skies
A flush as from the heart of heaven disclose:
Through earth and sea and air a message flies,
Prophetic of the Rose.

At last a morning comes of sunshine still,
When not a dew-drop trembles on the grass;
When all winds sleep, and every pool and rill
Is like a burnished glass

Where a long-looked-for guest may lean to gaze;
When day on earth rests royally, — a crown
Of molten glory, flashing diamond rays,
From heaven let lightly down.

In golden silence, breathless, all things stand.
What answer meets this questioning repose?
A sudden gush of light and odors bland,
And, lo! the Rose! the Rose!

The birds break into canticles around;
The winds lift Jubilate to the skies:
For, twin-born with the rose on Eden-ground,
Love blooms in human eyes.

Life's marvellous queen-flower blossoms only so,
In dust of low ideals rooted fast.
Ever the Beautiful is moulded slow
From truth in errors past.

What fiery fields of Chaos must be won,
What battling Titans rear themselves a tomb,
What births and resurrections greet the sun,
Before the rose can bloom!

And of some wonder-blossom yet we dream,
Whereof the time that is infolds the seed, —
Some flower of light, to which the rose shall seem
A fair and fragile weed.

A BAG OF MEAL.

I OFTEN wonder what was the appearance of Saul's mother, when she walked up the narrow aisle of the meeting-house and presented her boy's brow for the mystic drops that sealed him with the name of Saul.

Saul isn't a common name. It is well, — for Saul is not an ordinary man, — and — Saul is my husband.

We came in the cool of an evening upon the brink of the swift river that flows past the village of Skylight.

The silence of a nearing experience brooded over my spirit; for Saul's home was a vast unknown to me, and I fain would have delayed awhile its coming.

I wonder if the primal motion of unknown powers, like electricity, for instance, is spiral. Have you ever seen it winding out of a pair of human eyes, knowing that every fresh coil was a spring of the soul, and felt it fixing itself deeper and deeper in your own, until you knew that you were held by it?

Perhaps not. I have: as when Saul turned to me in the cool of that evening, and drew my eyes away, by the power I have spoken of, from the West, where the orange of sunset was fading into twilight.

I have felt it otherwise. A horse was standing, surrounded by snow; the biting winds were cutting across the common, and the blanket with which he had been covered had fallen from him, and lay on the snow. He had turned his head toward the place where it lay, and his eyes were fixed upon it with such power, that, if that blanket had been endowed with one particle of sensation, it would have got up, and folded itself, without a murmur, around the shivering animal. Such a picture as it was! Just then, I would have been Rosa Bonheur; but being as I was, I couldn't be expected to blanket a horse in a crowded street, could I?

We were on the brink of the river. Saul drew my eyes away, and said, —

"You are unhappy, Lucy."

"No," I answered, — "not that."

"That does not content me. May I ask what troubles you?"

I aroused myself to reason. Saul is never satisfied, unless I assign a reason for any mood I am in.

"Saul!" I questioned, "why do the mortals that we call Poets write, and why do non-Poets, like ourselves, sigh over the melancholy days of autumn, and why are we silent and thoughtful every time we think enough of the setting sun to watch its going down?"

"Simply because the winter coming is cold and dreary, in the one case, — and in the other, there are several reasons. Some natures dread the darkness; others have not accomplished the wishes or the work of the day."

"I don't think you go below the surface," I ventured. "It seems to me that the entire reason is simple want of faith, a vague uncertainty as to the coming back of the dried-up leaf and flower, when they perish, and a fear, though unexpressed, that the sun is going down out of your sight for the last time, and you would hold it a little longer."

"Would you now to-night, Lucy?"

"If I could."

My husband did not speak again for a long time, and gradually I went back into my individuality.

We came upon an eminence outside the river-valley, and within sight of the village.

"Is it well? do you like it?" asked Saul.

The village was nested in among the elms to such a degree that I could only reply, —

"I am certain that I shall, when I find out what it is."

Saul stayed the impatient horse at the point where we then were, and, indicat-

ing a height above and a depth below, told me the legend of the naming of his village.

It was given thus :—

“A long time ago, when the soundless tread of the moccason walked fearlessly over the bed of echoes in this valley, two warriors, Wabausee and Waubeeneemah, came one day upon the river, at its opposite sides. Both were weary with the march; both wore the glory of many scalps. Their belts were heavy with wampum, their hearts were heavy with hate. Wabausee was down amid the dark pines that grew beside the river’s brink. Waubeeneemah was upon the high land above the river. With folded arms and unmoved faces they stood, whilst in successive flashes across the stream their eyes met, until Wabausee slowly opened out his arms, and, clasping a towering tree, cried out, ‘I see sky!’ and he steadfastly fixed his gaze upon the crevices of brightness that urged their way down amid the pines over his head.

“Waubeeneemah turned his eyes over the broad valley, and answered the cry with, ‘I see light!’

“Thus they stood, one with his eyes downward, the other with his intent on the sky, and fast and furious ran the river, swollen with the meltings of many snows, and fierce and quick rang the battle-cries of ‘I see sky!’ ‘I see light!’

“A white man was near; his cabin lay just below; he had climbed a tree above Waubeeneemah and remained a silent witness of this wordy war, until, looking up the river, he saw a canoe that had broken from its fastenings and was rushing down to the rapids below. It contained the families of the two warriors, who were helplessly striving against the swift flow of waters.

“The white man spoke, and the warriors listened. He cried, ‘Look to your canoe! and see Skylight!’

“Through the pines rushed Wabausee, and down the river-bank Waubeeneemah, and into the tide, until they met the coming canoe, across whose birchen bow they

gave the grasp of peace, and ever since that time Indian and white man have called this place Skylight.”

“Where are the Indians now?” I could not help asking,—and yet with no purpose, beyond expression of the thought question.

The shadows were gathering, the eyelids of the day were closing. Saul caught me up again through the shadows into those eyes of his, and answered,—

“Here, Lucy! I am a pale form of Waubeeneemah! I know it! I feel it now! I sometimes ache for foemen and the wilds.”

Why do I think of that time to-night on the Big Blue, far away from Skylight, and imagine that the prairie airs are ringing with the echoes of the great cries that are heard in my native land, “I see North!” and “I see South!” and there is no white man of them all high enough to see the United States?

I’ve wandered! Let me think,—yes, I have it! My thought began with trying to fancy Saul’s mother taking him to baptism.

She was dead, when I went to Skylight, her son’s wife.

She went into the higher life at thirty-three of the threescore-and-ten cycle of the human period. How young to die!

The longer we live, the stronger grows the wish to live. And why not? When the circle is almost ended, and all the momentum of threescore-and-ten is gained, why not pass the line and enter into second childhood? What more beautiful truth in Nature’s I Am, than obedience to this law?

I’ve another fancy on the Big Blue to-night. It is a place for fancies. I remember—a long time ago it seems, and yet I am not so old as Saul’s mother—the first knowledge that I had of life. I saw the sun come up one morning out of the sea, and with it there came out of the night of my past a consciousness. I was a soul, and held relations separate from other souls to that risen sun and that sea. From that hour I grew into life. A growth from the Unseen came to me

with every day, born I knew not how into my soul. I sent out nothing to people the future. All came to me.

Is this true, this faith or fancy that God sends a tidal wave through man, bringing with it from Heaven's ocean fragments set afloat from its shore to lodge in our lives, until there comes an ebb, and then begin our hopes and desires all to tend heavenward, or *elsewhere*? Have you never felt, do you not now feel, that there is more of yourself *somewhere else* than there is upon the Earth?

I like to think thus, when I see a person ill, or in sorrow, or weighed down with weary griefs. I like to think that that which is ebbing here is flowing and ripening into fitness for the freed soul in that land where there shall be "no more sea."

In insanity, does the kind Lord remove *all* from this world in order to fit up the new life more gloriously? and are those whom most we pity clasped the closest in the Living Arms?

It may be,—there is such comfort in possibilities.

Will Saul come to-night? I am all alone on the Big Blue. There's not another settled claim for miles away.

The August sun drank up the moisture from our corn-fields, took out the blood of our prairie-grasses, and God sent no cooling rains. Why?

Skylight was charming for a while. I had forgotten Saul's assertion that he was a pale shadow of Waubeeneemah, as we forget a dream of our latest sleep.

At my home Aunt Carter appeared one day, and said she had "come to spend the afternoon and stay to tea"; and she seated her amplitude of being in Saul's favorite chair, and began to count the stitches in the heel of the twenty-fourth stocking that she assured me "she had knit every stitch of since the night she saw my husband lift me down at the gate just outside the window." Her blue eyes went down deeper and deeper into the bluer yarn her fingers were threading; and after a long pause, during which I had forgotten her presence, and was

counting out the hours on the face of the clock which the slow hands must travel over before Saul would be at home, suddenly she looked up and began with,—

"Mrs. Monten!"

There was something startling in her voice. I knew it was the first drop of a coming flood, and I fortified myself. She went on repeating,—

"Mrs. Monten! I've been thinking, for a great long while, that it isn't right for you to go on living with that man, without knowing what he is. And I for one have got up to the point of coming right over here and telling you of it to once."

I could not help the involuntary question of—

"Is my husband an evil man?"

"Evil! I should think he might be, when he has got"—

"Stay, Mrs. Carter!" I interrupted. "I will hear no news of my husband that he does not choose to give me. Only one question,—Do you know of any action that my husband has done that is wrong or wicked?"

Aunt Carter forgot her blue eyes and her bluer yarn, for she stopped her knitting, and her eyes changed to gray in my sight, as she ejaculated,—

"He's got Indian blood in him! I should think you'd be afraid he'd scalp you, if you didn't do just as he told you to. Everybody in Skyline is just as sorry for you as ever they can be."

Aunt Carter paused. An open door announced my husband's unexpected presence.

Aunt Carter rolled up her twenty-fourth twin of a stocking, and, hastily declaring that "she'd always noticed that 't was better to visit people when they was alone," she made all possible effort to escape before Saul came in.

My husband an Indian! I looked at him anew. He wore the same presence that he did when first I saw him, a twelve-month before. There was no outward trace of the savage, as he came to welcome me; and I forgot my thought presently, as I listened to his words.

"I am tired of this life," he said; "let us go."

"Where, Saul?"

"Anywhere, where we can breathe. I feel pent up here. I long to hunt something wild and free as I would be. Shall it be to the prairies, Lucy?"

"Will you live on the hunt?" I asked.

"I had not thought of that. No; I'll build you a" — And he paused.

I laughed, and added, —

"Let us have it, Saul. A wigwam?"

"Why not?"

"Why not, indeed, Saul? I am content, — let us go."

On the morrow I began the work of preparation. I was sitting upon the carpet, where I had cast all our treasures of knowledge, in the various guises of the printer's and binder's art, and was selecting the books that I fondly thought would be essential to my existence, when Saul came in.

He looked down upon me with that look that always drinks up my sight into his, and said, —

"You are sorry to go, Lucy. I will stay."

"No, Saul, I wish to go. You shall teach me the pleasures of wild life; and who knows but I shall like it so well that we will give up civilization for it? Where shall I pack all these books?"

"Leave them all," he said. "We will close the house as it is, until we come back." And I left them all at home.

In the heart of these preparations an insane desire came into my mind to know something of Saul's ancestors, and there was but one way to know, namely, by asking, which I would not do of human soul. Thus it came to pass that I was driven out, between this world of my mind and wouldn't of my soul, to search for some knowledge from inanimate things. The last night before our departure I became particularly restless and unsatisfied. I went to the place of burial of the villagers, where I found duly recorded on two stones the names of Saul's parents, Richard Monten and Agnes Monten, his wife.

There was nothing Indian there, and I went home once more to the place that had been so happy until the spirit of inquiry grew stronger than I. That night I watched Saul, until he grew restless, and asked me why I did so.

I evaded direct reply, and on the morrow we were wheeling westward.

From the instant we left the line of man's art, Saul became another person. All the romance and the glory in his nature blossomed out gorgeously, and I grew glad and gay with him. We crossed the Missouri. We traversed the riverland to Fort Leavenworth, amid cottonwoods, oaks, and elms which it would have done Dr. Holmes's heart and arms good to see and measure.

"Will you ride, Lucy? will you try the prairie?" asked Saul, the morning following our arrival in Fort Leavenworth.

I signified my pleasure, and mounted a brave black mustang, written all over with liberty. We had ridden out the dew of the morning, and for miles not one word had been spoken, the only sound in the stillness having been the hoofs' echo on the prairie-grass, when Saul rode close to me, and, laying his hand on my pony's head, spoke in a deep, strange voice that put my soul into expectancy, for I had heard the same once before in my life.

"Lucy," he said, "I sometimes think that I have done a great wrong in taking you into my keeping; for I *must* accept these calls to wildness that come over me at intervals."

"Have you ever been here before?" I asked.

"Twice, Lucy, I have crossed the American Desert, and lain down to sleep at the foot of the Rocky Mountains."

"You are not going there now?" I almost gasped.

"Why not? Can't you go with me?"

Oh, how my spirit recoiled at the thought of the Desert! Wild animals processioned through my brain in endless circles. All the stories of Indian ferocity that ever I had heard came into

my consciousness, as it is said all the past events of life do in the drowning, and I had no time to hesitate. The decision of my lifetime gathered into that instant. Saul or nothing; and bravely I answered,—did I not?—when, with brightening eyes, I said, “Let us on!”—and shaking the hand from my saddle-bow, I gave my prairie friend leave to fly.

“Lucy! Lucy!” cried Saul, and he soon overtook me,—“Lucy, I sought you as the thirsting man seeks water on the desert; and I *have* sought to bless you, almost as Hagar blessed the Angel,—almost as the devout soul blesses God, when it finds a spring that He has made to rise out of the sands. Having found you, I was content. I thought that I could live always, as other men do, in the tameness of Town and Law; but I could not, unless you refused to go with me into the Nature that my spirit demands as a part of its own life.”

“Saul, you know that you *can* go without me,—else I should not wish to go. I go, not because I am a necessity to you, but a free-born soul, that wills to go where you go.”

The grave Professor (for I whisper it here to-night, with only the wind to hear, that Saul is a Professor in a famed seat of learning not many leagues away from the Atlantic coast) looked down at me with a vague, puzzled air, for an instant, then said,—

“I see! It is so, Lucy. You have divined the secret. I am not to let you know that I cannot live without you,—and, if you can, you are to make me think that you only tolerate me.”

“What of it? Isn’t it almost true? I sometimes think, that, if ever we are in heaven, effort to remain there will be necessary to its full joy. We are always crying for rest, when effort is the only pleasure worth possessing.”

“You are right, and you are wrong. Let us leave mental philosophy with mankind, who have to do with it. Just now, I am willing to confess that I need you, and you are to do as you will. Come! let us look into this thicket.”

And leading the way, Saul rode presently under a tall cottonwood-tree, and, lifting for me the low-hanging branches of a black-jack, I entered an amphitheatre whose walls were leaves of living green domed in blue, with a river-aisle winding through.

I had not time to take in all the joy of the circle, before it was evidenced that Saul had premeditated the scene. A fire of twigs sent up a spicy perfume. A camp-kettle stood beside the fire, and a creature stood beside it. A yellow savage I should have said, but for my husband’s welcome. Never in our home library did brother-professor ever receive warmer grasp of hand than I knew this Indian met. They used words, in speaking, that were unknown to me. Presently I perceived that an introduction was pending. That being over, the Indian, Meotona, pointed to a swinging-chair, built for me out of the wealth of grapevine. It was cushioned with the velvet of the buffalo-grass.

“Tell me how to thank him,” I said to Saul.

Meotona immediately replied,—

“Me no thank,—him,” pointing to Saul.

I laid my sun-wearied head against the vine, and through half-closed eyes watched in delicious rest the preparations for dinner. My prairie-horse mistook my comfort for his own. I found his length of liberty included my chair-cushion, and I gave him tuft after tuft, until something like justice seemed to penetrate into his soul,—for he heroically refused the last morsel, and wandered away into the next arc of his liberty.

“If all the days are to be like this, how delicious it will be!” I said, as Saul came to me with choice bits of prairie fare.

“Not this,” he said. “Wait until we hunt the buffalo!—that wakes up the spirit of man!”

“But I am not a man, and you must excuse me from hunting buffalo,” I could not help saying, as I slid out of the grapevine chair to the grass, beside Saul; for

verily, I believed that he had forgotten that I was a woman, and a child of the Puritans.

No more words were spoken until our repast was over. Meotona gathered up the furniture of our dining-room, and with us returned toward Fort Leavenworth. The summer sun was setting when we drew near the Missouri. I thought I had disappointed Saul. At the last moment I ventured to ask, —

“Why did you return? I would have gone on. I wished it.”

My husband's face lit into a quick smile, then gloomed as quickly, and he said, —

“I smile at your simplicity in imagining that I ventured out, without consulting you, for the Rocky Mountains. I frown to think that my wife believes that I could go into danger with her, and only one right arm to defend her. No! I went to-day to try you. I couldn't ask you within any four-walled shelter. I wanted the wide expanse to be your only shield before I could trust you. I wanted you to face the foe. Again I ask, Shall we go? Answer from your own individuality, not mine.”

“I will go.”

It was the spirit that spoke; for neither heart nor flesh could have braved the fancied dangers.

A week went by, and every moment of the time Saul was elate and busy, providing for me in every possible way, devising comforts that exceeded my imagination, remembering every idiosyncrasy that I had given expression to in his hearing. Under the guard of the United States mail, we left Fort Leavenworth. Meotona, the yellow savage, went with us. Oh, the delight of those days! it comes to me now, and I almost forget that I am alone on the Big Blue, and that those hours have gone down among “the froth and rainbows” of the past, bearing with them a part of my life. There were nights when I was afloat in the bark of my spirit, and wandering up and on, until I met Half-Way Angels that bade me back to Earth; and then I would wander

away into dreams, watched by the stars and Saul,—for in those first days he never wearied in his care. By day I wandered through a garden of flowers untended by man, whose only keepers were butterflies and birds. Indian faces and forms no longer made me tremble. I grew to see beauty in them, as they dashed by the train, intent on the hunt.

We encamped beside Stranger Creek, on the banks of the Wakarusa, and on the Great Divide separating the Osage from the Wakarusa Valley.

After we left Council Grove, Meotona, I noticed, was on the watch, constantly peering off into the illimitable distance. One day I learned the cause. An exclamation from the Indian led me to look at him. For once, fire flashed out of his eyes,—he had forgotten himself. He was in ecstasy as he saw a party advancing over the prairie.

“Here they come! Now for the heart of the wilderness!” exclaimed my husband, as they rode up.

“We are not going away from the guard?” I ventured to suggest, as chief after chief came up. I knew them in their wild orders, having by this time learned something of Indian customs. They were equipped for the Plains, and among their number I distinguished two white men.

“I know them,—they are safe and true, Lucy,—fear nothing!” whispered Saul close to my whitening cheek; and afterwards we turned aside from the Santa Fe trail to the north of the American Desert.

My husband did not leave me for an instant that afternoon; and I, simple-minded woman, tried to look as happy—well, as a woman and a professor's wife could look under the circumstances. The wings of my tent that night were spread to the breeze that swept low and cool across the Divide.

The next day we came to the lodges of the Indians. Swarthy-faced girls and women came to greet us. It was evident that many of them had never before seen a white woman. As evening came on, I

noticed in one group outside the principal lodge an unusual amount of grimace that was incomprehensible, until, very timidly, a little girl left the crowd. Half-way toward me she stopped and turned back, but again the violent gesticulations were enacted, when the child made a sudden evolution in my direction, and with one hard finger rubbed the back of my hand, until I thought myself quite a Spartan; then looking at her own finger, doubtfully at first, she ran back, and went from one to another, showing her finger. The design was evident. Indians (the women, at least) have some curiosity;—they thought *me painted white*. I forgave them.

We went five hundred miles from this lodge into the wilderness,—two of the squaws accompanying us, for my comfort.

At last came the sight of buffaloes, feeding on the short tufts of grass on the Grand Prairie. My heart grew sick with the shout that rang from a hundred Indian throats, and—must I write it?—from Saul's.

"Stay!" said Saul, and he left me a guard, and was away without one word of farewell.

Night came down, and he was not returned. The stars shone out of the vault like "red-hot diamonds," and on the sight no vision, to the ear no sound.

The women pitched my tent. The guard lit the fire. They brought me savory bits of food, and coffee. My throat was tightened, I could not eat, and I arose and went out into the night alone. I lost all sense of fear, as I wandered away. The prairie had just been burned, and I knew must be free from serpents and other reptiles: beyond these I had no thought. I turned once to see the little dot of fire-light, to see the one point of canvas, my shelter and my home. At last I grew very weary, and remember having lain down, and having thought that the stars were raining down upon me, so near did they seem,—and one after one, constellation mingled with constellation, until I fancied a storm of stars was circling over my head.

I started with a sudden spasm, as a sound burst upon me, wild, ringing, dreadful. A hundred Indians were uttering a war-cry, and, as I lay there, with my head pressed to the burnt sod, I felt the shudder of earth from many hoofs. I turned in the direction whence they were coming;—raise my head from the ground I dared not. All was darkness. Could I possibly escape? Not if I moved. Where I was, there might be a chance that they would pass to the right or the left. On, on they came, and I knew the cry,—it was for vengeance. Feebly, like a setting star, gleamed the watch-fire of my guard in the distance. Suddenly it went down. They had heard the alarm. How awfully my heart kept time to the nearing echo of the many footfalls! My eyes must have been fastened on the West. I saw dark heads rise first above the earth-line, then the moving arms of the horsemen. I heard the ring of weapons, and saw them coming directly over the place where I lay; but I did not stir,—it was as if I had been bound with an equator to the ground. Something struck my arm and was gone. The troop passed by.

It was morning. A low, deep breathing betokened something near me. I opened my eyes, and saw the face of my husband,—but, oh, how changed! I heard him say, "The Lord hear my vow, and record my prayer!"

All that day I lay there, on the prairie, Saul sitting beside me, shielding me from the sun, and giving me drops of coolness, which the Indians pressed from herbs and shrubs that grew not far away. I was in a dream, and when the stars arose they lifted me up and bore me away. I knew it was to the eastward. I felt no resistance in my nature, as I always do when going to the west, either voluntarily or otherwise. We came, after many days, to the Indian lodge. I never saw the guard again, that I left in peace, when I was *driven* out to wander, because I felt wretched and lonely to be deserted for the chase by my husband. They were carried into captivity by the hostile Sioux. There was mourning in the lodge. An

Indian mother, whose daughter had gone with me, sat down in the ashes of sorrow, and moved not for two days; then she arose, and, scattering dust from the earth toward the setting sun, she went into her wigwam and they gave her food.

It was September before I was able to leave the place whither they carried me. My arm was cut with the hoof of the flying horse, and when Saul found me, I had fainted; I was dying from loss of blood, which his coming only had stayed. After I grew stronger, I closely observed my husband.

I never saw such an ache, such a strife, as week after week hunting-parties went out in the morning and returned at evening with their game. Saul grew reserved and silent when I begged him to go, to leave me for a day.

"It is of no use, Lucy; I made a vow, and I must keep it. This Indian blood within me must be subdued; it has met a stronger current on the way, and *must* mingle with it."

He said no more on the subject, and I would not question him. We took our last walk on the prairie. Everything was in readiness for our departure to meet the expected United States mail-train. We returned to the lodge, and Saul left me for a few minutes to make some last arrangements with Meotona. An old Indian woman, whose eyes I had often noticed on me, crept stealthily in at my tent-door, and said to me in English, —

"Let me be welcome; I come to teach you."

I knew that among her tribe she had the reputation of a prophetess, but I had never heard her speak English.

"I am waiting to hear," I said; and this woman fixed her sad, solemn eyes on me and said, —

"Child of the pale man, a great many moons ago, when my eyes were bright like the little quiver-flower, and the young warriors sought me in my father's wigwam, I had a sister. Her name *he* called Luella. The chiefs of the tribe were going for a grand hunt on the Huron.

Some pale men from across the lake came to join them. One of them looked on Luella, and her eyes grew soft and sad. She wrapped her blanket about her, and walked often under the stars at night. Through the winter, she would not talk with the young chiefs; and when the leaves grew again, the pale men came back, and Luella walked again under the stars. She learned English, and no one knew who taught her.

"The hunt went on again until the snow came; and when the pale men left the lodge, Luella was lost from the wigwam. The warriors went in pursuit, but they came back without Luella. She was not with the pale-faces. Many moons came and went, and one night I heard a voice singing in the distance. I knew it was Luella, and she led a child by her side, and he said soft English words. She would not come into the lodge. She only came to tell me that she was with the white man who loved her, that she was content, and to show me her boy; and Luella walked away into the night again, and I told no one.

"I made many moccasins, and wove baskets of twigs; and when Uncas, the chief of the tribe, my father, went to the great hunting-ground beyond the Sun, then I gathered up my moccasins, and went out before the gate opened to let the light through. I left the wigwam for Luella. I hated white people; I hated the white man who stole Luella from me; but the pale-faces took my moccasins, and gave me white wampum, and with that I crossed the lake, and went from town to town, and everywhere I showed the people this," — and the wrinkled woman extended her hand to me; but, at the instant, Saul lifted the tent-curtain and came in. She hid her hand under her blanket, and, wrapping it closely about her, walked out without a glance to testify that ever she had spoken.

Saul asked me the cause of this visit, and I was about to tell him, when there arose in the lodges without such screams and cries as brought all the population into the air. The Indian woman who so

lately had left my tent lay on the ground, in the apparent extreme of agony.

"Let the pale-face come," said the knot of savages around her; "it is for her she calls."

My husband interpreted the words for me, and in doubt and fear I went to her. Her screams had ceased; she held her hands tightly over her heart, as if there had been the spasms of pain. She rolled her eyes around to see if any one was within hearing, and then said,—

"I had fear that you would tell him; stay a little, and let me tell you now. I went on after Luella until I found her. I had the name of the white man to guide me. She was living as the pale-faces live, in a great town of many lodges.

"I saw with my eyes that she was happy, and then I walked many moons back to the Huron, and rowed across the lake in a canoe that I found in the woods.

"Luella came back again. I don't know how she found the way alone, but she came into the wigwam when the leaves were falling, and before the buds grew again she went to Uncas in the West. I asked her about the white man, and she shook her head and hid her eyes. I asked her for the boy, and she threw open her arms wide, to show me he was not there. Look!" said the woman, "I am dying; I'm very old; I ought to have walked with Luella this long time. Listen,—let me teach you. The pale face that you look into has eyes like my Luella. Take care! When he would walk under the stars alone, go not with him. When he would hunt bison, give him all the prairie; don't stand at the wigwam-door to keep him in. And when you are far away beyond my people, you may see this,"—and she handed to me the small parcel from close to her wild heart. I took it.

"You'll keep it for Luella's sake. She held it close when she went away; now I'm going, there's no one else to care. Bring it with you, when the Great Spirit calls."

I could win no more words from the woman. She spoke to those who came to

her, and Saul said she told them that I had "taken away the torment."

"I shall think my Lucy witches somebody beside poor Saul," said my husband; and he gave a sigh as he stood in the tent-door, and watched the westering moon for the last time.

In the morning they told us that the Prophetess had gone into the light beyond the Sun.

Saul went in to see her, and as he came back to me I saw that he was not in a mood for words. Our farewell was very silent. Meotona went with us. Once again, bounding over the prairie, my heart grew lighter than it had been for many days; but I had no opportunity to examine Luella's treasure.

We met the long caravan of wagons on the summit of the Great Divide, and it was joy to unite my fate once more with that of my countrymen. Saul saw this, and said,—

"Know now, Lucy, that you have the portion meted out to me, when I saw the freemen of the wild coming. Your pleasure is that of civilization; mine *was* that of barbaric life. I bid adieu to it henceforth,"—and my brave husband, at this instant, looked out upon the head-waters of the Neosho, where Nature, when she built up the world, must have made a storehouse of material, and never came back for her treasures, they lie so magnificently rolled over the land.

Saul's eyes gathered up the view, as if they were, what they are, memory's absorbents, and said, sadly,—

"It is for the last time, Lucy!"

We went into corral the next evening by the side of a grassy mound covered with low-growing shrubs.

Afterwards Saul wandered out alone. I would have gone with him; but at the instant I put my face outside the tent-door, the memory of the Indian woman's caution came to me, and with it the opportunity to examine Luella's secret.

I entered my tent, lighted the little lamp that had travelled a thousand miles and never done service till now, and opened Luella's treasure. It was wrapped in soft

white fur, bound about with the long, dried grass that grows beside the Huron. A scroll of parchment was rolled within it, faded, yellow, and old. I opened it, with a smile at my strange inheritance.

At the first glance, I thought I had before me some Indian hieroglyphics; but bringing back from the place of its long obscurity the little knowledge of the French language that I held in possession, I deciphered, that, "fourscore years before, beside the froth of the Huron Water, Father Kino had performed the marriage-rite upon Luella, daughter of Uncas, of the Dacotahs, and Richard Monton, of Montreal." Below the certificate of the priest of the Church were strange characters beyond my power to decipher.

With trembling I looked out for Saul's return. Here, upon the banks of the Neosho, I had learned the secret which my life in the East had hidden so long.

A certain kind of guiltiness came over me, as Saul drew near, breaking down with every tread the sun-cured grass,—a sense of unworthiness, to hold in my hand a possession which essentially was his, and which he had not freely given me.

"I will not look into his eyes with a veil lying in the air," I said, very quietly to myself; and so, when my husband saw the burning of the little lamp and asked the cause, I told him all the story of the Indian woman, and put into his hand her gift to me. Saul's mind was preoccupied; he paid very little attention to the story; but when I gave him the white-furred scroll, and he opened it, then the grave professor—Well, it is better that I do not put into words what followed, even here, on the Big Blue.

An hour afterwards Saul spoke. He said,—

"Lucy, you have given me the key of my life. I knew my Indian blood, but I knew not whence it came; therefore I said nothing to you. I remember being tormented by it, when a boy, but never knew by what right. Let me translate for you this Indian register of—let me

see—my grandmother's marriage. 'Ten moons from the lost moon, and many sleeps from the life of the big Huron Water, the Great Spirit called Luella to walk with a son of the Pale-Faces. Thé mystery [the priest] met them, and told them to go on to the Sun. They are gone in the path of the lost moons.'"

"Let us go to Skylight by the way of Montreal," I suggested.

Saul said, "It is well."

At the Missouri I laid aside my prairie costume, and assumed the raiment of fashion.

We found in Canada pleasant people bearing our name, and they welcomed us as relatives.

Richard Monton lay beside a fixed cloud of marble; and although Luella's sister had said she died far away, yet her name was beneath her husband's.

Tradition told us of the beautiful Indian wife with eyes like light,—and how her husband took her, every year, alone with him into the wilds,—and how, when they came back, and the winter snows fell, she would sit all day beside him, with her eyes on figures and letters, whilst her impatient fingers were threading her long hair, and memory shook her head at the attempted education, perhaps wisely and well.

When Mr. Monton died, and left her houses and lands, she turned away from them all, and, leading her boy by the hand, went out of her home and was seen no more until long after, when Father Kino, a kind old priest, going home late one night from a dying soul, in passing the cloud of marble, heard faint moans coming out of it, and, going near, found an Indian woman, in festive dress, like a chief's daughter, kneeling there. A few minutes afterwards, when Father Kino came back with an assistant, there were no more moans, for Luella had "gone on to the Sun."

The fate of the little boy was never known until then, and then it was only known that he had lived and died and was buried in Skylight.

We found houses and lands, but no

record that they were ours. So we left them under British rule, and returned to Skylight, to our cottage and duty.

Aunt Carter came in before we had been an hour at home. I think she watched the opportunity of Saul's absence to find me alone.

"See!" she exclaimed, holding up to my view a small eminence of stockings, "see what I have done, while you've just been going about the world doing nothing at all!" And with a really warm shake of my hand, Aunt Carter seated herself, for the second time, in Saul's chair.

"Why, I've been knitting too!" I said, in extenuation.

"What?" asked Aunt Carter. "Some new-fashioned thing or other, I'll warrant."

"No,—something that is as old as Eve."

"Who ever heard of Eve's knitting? The Bible doesn't say one word about it, Mrs. Monten. Besides, I don't think little Cain and Abel wore stockings at all."

"I did not say that Eve knit in Paradise. I only said I'd been knitting at something as old as Eve. I meant the thread of life. Here comes my husband to tell you how industrious I have been."

Saul led Aunt Carter on to talk of her youth, and gradually of his father, until he had learned all that she knew of his history. It was very little: only that a fur-trader and a party of Dacotahs came to the village, she had heard her father say, to sell their skins, bringing a brown little boy with them; that the child fell sick with scarlet fever, and they left him to the mercy of the village people, and never came back for him, although they had said they would.

Did Luella give her boy away?—Never, I was convinced, and Saul likewise.

Saul went back into his round of professional duties, and with much heart for a while.

Delighted with civilization, and peopled with memories, and joyous with the divine plumage ever hovering around

me, my life ran on. I watched Saul narrowly. He would often take up his hat, after hours of application to science, and rush out of the house, as if a mission lay before him. He would come back, and devote himself to me, as if he were conscious of some neglect in his absence. I planned short excursions all over the adjacent country. I became addicted to angling, because I saw Saul liked it. There were many righteous eyeballs that reproved me for wandering in places not fit for a woman, and Aunt Carter became exceedingly disturbed, even to the point of remonstrance.

"You're spoiling your husband," she would say,— "he'll not know but what you are a squaw," she said to me one day, in true distress.

However, I endured it delightfully for three years. Saul received in one week four letters, each containing the offer of a professor's chair in a desirable institution.

For many months I had seen the *spell* weaving around my good husband; I had seen it flash out of his eyes; I had heard its undertone in his voice; I had felt it in his whole manner, and I knew the hour of battle was near.

I was strong, and I came to the rescue. It was on this wise. Harken! is he coming? No, it is only the wind coming up the Big Blue.

We sat in our Skylight door in an April evening,—unwise, perhaps,—but we were there. Saul had taken down that wild warble of Longfellow's, "Hiawatha." He read to me until the moon came up; then he threw down the book, and said, "Pshaw!"

"What is that for, Saul?" I asked, in some surprise.

"It is not for the book,—for myself, Lucy. I had better not have opened it. Let us go and talk with the Doctor." And we went.

Saul had not answered his letters on the chair question, and I put up a petition.

"I think I never felt so well as when

I was in Kansas," I said. "Really, Saul, I've felt a strong inclination to cough for some time, every morning. The climate of Kansas is wonderfully curative for pulmonary difficulties. I wish you would go out there now, and build a log cabin, plant a few miles of maize, gather it in, and then, when the season is over, come back and go to ———. You know they value you too highly not to wait your time."

I saw a slow kindling up in Saul's eyes, but an instant later it had gone down, and he said, looking into mine, — "Do you really and truly wish this, Lucy?"

And Lucy answered, —

"I really and truly wish it, Saul."

We came hither with the violets and bluebirds. My wigwam points to the sky. We have roamed on the prairies, and wandered in the timber-lands. Under the heavens of the Big Blue we have drunk "the wine of life all day," and "been lighted off" to hemlock-boughs "by the jewels in the cup."

Oh, this life that is passing, passing in unseen marches on to the Great Plains where we shall corral forever! I've just opened my cabin-door to look for Saul; he's been gone ten days. The drought came; our maize withered and died. Ten miles away, there is a town; two houses are there. We left our vast-wilderness lodge to Nature in October, and turned our faces eastward. Reaching the town, we found Azrael hovering there. It was impossible to go on and leave such suffering, and we stayed. While we waited, winter came along, tossing her white mail over the prairie, and we were prisoned. Azrael folded his pinions, and carried in them two souls out of the town of two houses. Afterward, Saul and I came back to our home. I kindled the fire, and Saul went forth to earn our daily food. Life began to grow painfully earnest. The supply of wheat-en flour waxed less and less, and I some-

times wished — no, I *did not wish* that I was a widow, I only wished for flour.

I began to look for manna, and it came, — not "small and white, about the size of coriander-seed," but in the form of the flying life of yesterday.

I have cried many tears over eyes that were shut for me, but I've never been sorry that I came hither.

At last, no more wings came flying over the prairie. Saul came home without food. That was ten days ago. He carried me the next morning to the village, to leave me there, till he should return, — then retraced the ten miles through the snow, and went for food.

I stayed until there was no more for the children to eat. I could not abide that, and this morning I stole away. I've come the ten miles through the snow to light the fire, that Saul may not pass by, and go on to the town this cold night. Where is he now? Not perishing, dying on the prairie, as I was once, when he found me? I'll walk and see. It is so lone outside, there is such an *awful sound in the voice of stillness*, and Saul is not in sight!

Where is my life now? Since Saul went away, so much of it has gone, I feel as if more of myself were there than here. Why couldn't I go on thinking? It was such relief! The moon is up at last. A low rumble over the dried grass, like a great wave treading on sand. I am faint. I have tightened my dress, to keep out hunger, every hour of this day. Those starving children! God pity them! A higher wave of sound, — surely 'tis not fancy. I will look out. The moon shines on a prairie sail, a gleam of canvas. Another roll of the broad wheel, and Saul is here.

"Send the man on quickly," I cried; "the children are starving in the town."

"And you?" said Saul.

The power of his eyes is almost gone. I scarcely heed them. I see — a bag of meal.

NAPOLEON THE THIRD.

On the 6th of October, 1840, a young man was brought up for sentence in one of the highest courts of Europe, before which he had been tried, and by which he had been found guilty of one of the greatest crimes that can be charged upon any human being, though the world seldom visits it with moral condemnation. The young man was Prince Louis Napoleon Bonaparte, the court was the French Chamber of Peers, and the sentence was imprisonment for life. Had the French government of that day felt strong enough to act strongly, the condemned would have been treated as the Neapolitans treated Murat, and as the Mexicans treated Yturbe. He would have been perpetually imprisoned, but his prison would have been "that which the sexton makes." But the Orléans dynasty was never strong, and its head was seldom able to act boldly. To execute a Bonaparte, the undoubted heir of the Emperor, required nerve such as no French government had exhibited since that day on which *Maréchal Ney* had been shot; and there were seven hundred thousand foreign soldiers in France when that piece of judicial butchery was resolved upon. The army might not be ready to join a Bonaparte, but it could not be relied upon to guard the scaffold on which he should be sent to die. The people might not be ready to overthrow Louis Philippe, to give his place to Louis Napoleon, but it did not follow that they would have seen the latter's execution with satisfaction, because they desired peace, and he had fallen into the habit of breaking it. The enthusiasm that was created in France by the arrival in that country of the remains of Napoleon I., not three months after the coming Napoleon III. had been sent to the fortress of Ham, showed how difficult a matter it would have been to proceed capitally against the Prince. Louis Philippe has been praised for sparing him; but the praise is undeserved. Certainly,

the King of the French was not a cruel man, and it was with sincere regret that he signed the death-warrants of men who had sought his own life, and who had murdered his friends; but it would have been no act of cruelty, had he sent his rival to the guillotine. When a man makes a throw for a crown, he accepts what is staked against it,—a coffin. Nothing is better established than this, that, when a sovereign is assailed, the intention of the assailant being his overthrow, that sovereign has a perfect right to put his rival to death, if he succeed in obtaining possession of his person. The most confirmed believer in Richard III.'s demoniac character would not think of adding the execution of Richmond to his crimes, had Plantagenet, and not Tudor, triumphed on Bosworth Field. James II. has never been blamed for causing Monmouth to be put to death, but for having complied with his nephew's request for a personal interview, at which he refused to grant his further request for a mitigation of punishment. Murat's death was an unnecessary act, but Ferdinand of Naples has never been censured for it. Had Louis Philippe followed these examples, and those of a hundred similar cases, he could not have been charged with undue severity in the exercise of his power for the conservation of his own rights, and the maintenance of the tranquillity, not of France alone, but of Europe, and of the world, which the triumph of a Bonaparte might have perilled. He spared the future Emperor's life, not from any considerations of a chivalric character, but because he durst not take it. He feared that the blood of the offender would more than atone for his offence, and he would not throw into the political caldron so rich a material, dreading the effects of its presence there. Then the Orléans party and the Imperial party not only marched with each other, but often crossed and ran into

each other; and it was not safe to run the risk of offending the first by an attempt to punish its occasional ally. There was, too, something of the ludicrous in the Boulogne affair, which enabled government to regard the chief offender with cheap compassion. Louis Philippe is entitled to no credit, on the score of mercy, for his conduct in 1840,—for the decision of the Court of Peers was his inspiration; but he acted wisely,—so wisely, that, if he had done as well in 1848, his grandson would at this moment have been King of the French, and the Emperor that is a wanderer, with nothing but a character for flightiness and a capacity for failure to distinguish him from the herd, while many would have regarded him as a madman. But the end was not then, and the hand of Fate was not even near that curtain which was to be raised for the disclosure of events destined to shake and to change the world.

The defence of Louis Napoleon was conducted by M. Berryer, the great leader of the Legitimists, who, twenty-five years before, had aided in the defence of Ney, and who, nearly twenty years later, defended Montalembert, his client of 1840 being in this last case the prosecutor. In his speech in defence of the Prince, this first of French orators and advocates made use of language, the recollection of which in after-days must have been attended with very conflicting emotions. Addressing himself to the judges, he said,—“Standing where I do, I do not think that the claims of the name in which this project was attempted can possibly fall humiliated by the disdainful expressions of the *Procureur Général*. You make remarks upon the weakness of the means employed, of the poverty of the whole enterprise, which made all hope of success ridiculous. Well, if success is anything, I will say to you who are men,—you, who are the first men in the state,—you, who are members of a great political body,—there is an inevitable and eternal Arbitrator between every judge and every accused who stands before him;—before giving your judgment, now, being in pres-

ence of this Arbitrator, and in face of the country, which will hear your decrees, tell me this, without regard now to weakness of means, but with the rights of the case, the laws, and the institution before your eyes, and with your hands upon your hearts, as standing before your God, and in presence of us, who know you, will you say this:—‘If he had succeeded, if his pretended right had triumphed, I would have denied him and it,—I would have refused all share in his power,—I would have denied and rejected him’? For my part, I accept the supreme arbitration I have mentioned; and whoever there may be amongst you, who, before their God, and before their country, will say to me,—‘If he had succeeded, I would have denied him,’—such a one will I accept for judge in this case.” In making this sweeping challenge, M. Berryer knew that he was hitting the Court of Peers hard, for it contained men who had been leading Napoleonists in the days of the Empire, and others who were ready to join any government which should be powerful enough to establish itself; while it left the Legitimists, the orator’s own party, unharmed. They were the only men, according to M. Berryer’s theory of defence, who would have furnished an impartial tribunal for the trial of his client; for they alone, with strict truth, could have said that they would deny his right, and refuse to share in his power, no matter at what time he should succeed in accomplishing his designs.

Had the French Peers been gifted with that power of mental vision which enables men to see into the future, they would not have been disposed to condemn the man who stood before them in 1840. Could it have been made known to them that in eight years he would be elected President of the French Republic by nearly five and a half millions of votes,—that in twelve years he would become Emperor of the French,—that in fifteen years he would, as the ally of England, have struck down the Russian hegemony,—and that in twenty years he would be the conqueror of Austria, and have called

the Kingdom of Italy into existence, while his enmity was dreaded and his friendship desired by all the nations of the earth, and the fate of the Papedom was in his hands,—had these things been so much as dreamed of by his judges, they would have formed the most lenient of tribunals, and have suffered him to depart in peace. They are not to be charged with a lack of wisdom in not foreseeing what must have appeared to be the ravings of lunacy, had it been deliberately set down by some inspired prophet. Neither the man nor his cause commanded much respect. We, who know that the French Emperor is the first man of the age, as well in intellect as in position, have no right to sneer at the men of 1840 because they looked upon him as a feeble pretender. He had made two attempts to place himself at the head of the French nation, and in each instance his failure had been so signal, and in some respects so ridiculous, that it was impossible to regard him as the representative of a living principle. Even those who thought him a man of talent could account for his want of success only by supposing that Imperialism was no longer powerful in France, and that his appeals were made to an extinct party. The soldiery, amongst whom the traditions of the Empire were supposed to be strong, had evinced no desire to substitute a Bonaparte for a Bourbon of the younger branch; and as to the peasantry, who showed themselves so fanatically Bonapartean in 1848, and in 1851–2, they were never thought of at all. France consisted of the government, the army, the *bourgeoisie*, and the skeleton colleges of electors; and so long as they were agreed, nothing was to be feared either from Prince Louis Napoleon or from the Comte de Chambord. We think this was a sound view of affairs, and that the French government of 1841 might have been the French government of 1861, had not the parties to the combination that ruled France in 1841 quarrelled. It was the loss of the support of the middle class that caused Louis Philippe to lose his

throne in the most ignominious manner; and that support the monarch would not have forfeited, but for the persistence of M. Guizot in a policy which it would have been difficult to maintain under any circumstances, and which was enfeebled in 1847–8 by the gross corruption of some of its principal supporters. That the *bourgeoisie* intended to subvert the throne they had established, for the benefit of either the Republicans or the Imperialists, is not to be supposed; but their natural disgust with the wickedness of the government as it was at the beginning of 1848, and with the refusal of the minister to allow even the peaceful discussion of the reform question, was the occasion of the kingdom's fall, and of the establishment, first of the shadowy Republic, and then of the solid Empire.

The events of 1848 furnished to Louis Napoleon the place whereon to stand, whence to move the French world. He must have lived and died an exile, but for the Revolution of February. The ability with which he profited by events suffices to show that he is entitled to be considered a great man as well as a great sovereign. That he had been born in the purple, and that he bore a great name, and that through the occurrence of several deaths he had become the legitimate heir of Napoleon, were favorable circumstances, and helped not a little to promote his purpose; but they could not alone have made him Emperor of the French, and the world's arbiter. There must have been extraordinary talent in the man who aspired as he did, or he would have failed as completely in 1848 as he had failed in 1836 and in 1840. But the real power of the man came out as soon as he found a standing-place. Previously to 1848, he could act only as a criminal in seeking his proper place, as he believed it to be. He had first to conquer before he could attempt to govern,—and to conquer, too, with the means of his enemy. All this was changed in 1848. Then he was safe in France, as he had been in England, and began the political race on equal terms with such men as Cavaignac

and Ledru-Rollin. That he soon passed far ahead of them was, perhaps, as much due to circumstances as to his political abilities. The name of Bonaparte was associated with the idea of the restoration of order and prosperity, and this helped him with that large class of persons, embracing both rich men and poor men, who not only believe that "order is Heaven's first law," but that under certain conditions it is the supreme law, for the maintenance of which all other laws are to be set aside and disregarded. These men, whose organ and exponent was M. César Romieu, who called so loudly for cannon to put down the revolutionists, — "even if it should come from Russia!" — and whose type of perfection is the churchyard, were all fanatical supporters of "the coming man," and they assisted him along the course with all their might and strength. No matter how swiftly he drove, his chariot-wheels seemed to them to tarry. The very arguments that were made use of to induce other men to act against the rising Bonaparte were those which had the most effect in binding them to his cause. He would establish a cannonarchy, would he? Well, a cannonarchy was exactly what they desired, provided its powers should be directed, not against foreign monarchs, but against domestic Republicans. That a government of which he should be the head would disregard the constitution, would shackle the press, would limit speech, and would suppress the Assembly, was an argument in his favor, that, to their minds, was irresistible. Had they thought of the Russian War, and of the Italian War, and of the extinction of the Pope's temporal power, and of the liberal home-policy that was adopted in 1860, as things possible to occur, Louis Napoleon would have remained Louis Napoleon to the end of his days, for all the support he would have received at their hands. They wished for a sort of high-constable, whose business it should be to maintain order by breaking the heads or seizing the persons of all who did not take their view of men's political duties. It is the custom to speak of this

class of men as if they were peculiar to France, and to say that their existence there is one of the many reasons why that country can never long enjoy a period of constitutional liberty. This is not just to France. The French are a great people, who have their faults, but who are in no sense more servile than are Americans, or Englishmen, or Germans. Extreme disciples of order, men who are ready to sacrifice everything else for the privileges of making and spending or hoarding money in peace, are to be found in all countries; and nowhere are they more numerous, and nowhere is their influence greater or more noxious, than in the United States. The difference of populations considered, there are as many of them in Boston as in Paris; and our breed is ready to go as far in sacrificing freedom, and in treating right with contempt, as were their French brothers of 1848. The infirmity belongs, not to French nature, but to human nature.

Louis Napoleon received not a little assistance, in the early part of his French career, from the strongest of his political enemies. The friends of both branches of the Bourbons were his friends — at that time, and for their own purposes. A restoration was what they desired, and they held that it would be easier to convert the Comte de Chambord or the Comte de Paris into a king as the consequence of another Bonaparteian usurpation, than as the consequence of the Republic's continuance. Louis Napoleon was to destroy the Republic, and they were to destroy him, with the aid of foreign armies. The fate which Cicero wished for Octavius, that he should be elevated and then destroyed, was what they meant for him. They counted upon the effect of that reaction which so soon set in against the revolutions of 1848, and which they did not believe would spare any government which had grown out of any one of those revolutions. They also believed the Prince to be a fool, and thought he would be a much easier person to be disposed of, after he had been sufficiently used, than

any one of his rivals. They overrated their own power as much as they underrated his abilities; and down to the last moment, and when the contest had become one for life or death, they bore themselves as if they were sure that they were acting against a man who had been elevated solely through the force of circumstances, and who could not maintain his position. The *coup d'état* opened their eyes, but it was not until the event of the Russian War had secured for the Emperor the first place in Europe, that they became convinced that in the man who was the ruler of France they had a master. Even now, when the condition of every country within the circle of civilization bears evidence to the vast weight of Imperial France, it is not difficult to find Frenchmen who declare that the Emperor is a mere adventurer, and that he is only "a lucky fellow." If they are right, what shall we think of all France? Does the reign of Napoleon III. serve only to illustrate the proverb, that among the blind the one-eyed man is a king?

The manner in which the French President became Emperor of the French has been much criticized. That some of his deeds, at the close of 1851, and in the early part of 1852, deserve censure, few of his intelligent admirers will be disposed to deny. His defence is, that it was impossible for him to act differently without forfeiting his life. The contest, in 1851, had assumed such a character, that it was evident that the one party or the other must be destroyed. We have M. Guizot's authority for saying that in French political contests no quarter is ever given, and that the vanquished become as the dead. French history shows that there is no exaggeration in this statement, and that every political leader in France must fight for his life as well as for his post, the loss of the latter placing the former in great peril. This is a characteristic of French politics to which sufficient attention has not been paid, in discussing the morality of French statesmen. In England, for many gen-

erations, and in the United States, down to the decision of the last Presidential election, a constitutional opposition was as much a political institution, and as completely a part of the machinery of government, as the administration itself. Formerly, opposition was not without its dangers in England, and, whichever party had possession of the government, it sought to crush out its opponents with all the vigor and venom of an American slavocrat. Charles I. sent Sir John Eliot to the Tower, by way of punishing him for the opposition he had made to unconstitutional government; and there he died, and there he was buried. The execution of Strafford, though as just a deed as ever was performed, must be allowed to have resulted from proceedings that belong to French politics rather than to those of England since the times of the Tudors. All through the reigns of the Stuart kings, and down to the Revolution, parties fought for safety as well as for spoils. A defeat was then often followed by a butchery. Hume, speaking of the political warfare that happened just before the Revolution of 1688, says that the "two parties, actuated by mutual rage, but cooped up within the narrow limits of the law, levelled with poisoned daggers the most deadly blows against each other's breast, and buried in their factious divisions all regard to truth, honor, and humanity." This evil was gradually, but surely, removed from English politics by the triumph of the constitutional party. It lingered, however, for half a century, and after the accession of the House of Hanover caused the impeachment of Oxford and the exile of Bolingbroke and Ormond. The last pronounced appearance of it was in 1742, when Sir Robert Walpole's enemies, not content with his political fall, sought his life. They failed utterly, and for one hundred and twenty years the course of English politics has been strictly constitutional, an opposition party being, as it were, the complement of the administration or ministry. The same party divisions that existed in England under George II. sub-

stantially exist under the grand-daughter of his grandson. So has it been in the United States, though it would not be difficult to show that none of our parties have been so free from approaching to the verge of illegality as English parties have been since 1714; and the conduct of the present American opposition is simply detestable, and has destroyed the national constitution.

The French began their political imitation of the English in 1789. As in most imitations, caricature has largely predominated in it. The one thing that might advantageously have been imitated they have altogether neglected. They never have been able to comprehend the nature and the purpose of an opposition party, and hence every such party that has come into existence in France has been treated by the governing party as if it were composed of enemies of the State. When the Jacobins sent the Girondins to the scaffold, and when Robespierre and St. Just sent Danton and Desmoulins to the same place, and when the Thermidorians so disposed of Robespierre and St. Just, they did no more than has been done by other French political leaders, except that their measures were more trenchant than have been those of later statesmen of their country. The reason why the Revolution led to a military despotism was, that no party would tolerate its political foes, much less protect them in the exercise of the right of free discussion and legal action. The execution of Louis XVI. was but a solitary incident in the game that was played by the most excitable political gamblers that ever converted a nation into a card-table. He was slain, not so much because he was a king, or had been one, as because he was the natural chief of the Royal party, a party which the Republicans would not spare. Party after party rose and fell, the leaders perishing under the guillotine, or flying from their country, or being sent to Guiana. Despotism came as a relief to the people who were thus tormented by the bloody freaks of men who were energetic only as murderers. There

probably never was a more popular government than Bonaparte's Consulship, in its first days. Soon, however, the old evil renewed itself in full force. A few men, the most conspicuous of whom was Carnot, confined their opposition to the policy of the government, and kept themselves within the limits of the law; but others were less scrupulous, and labored for the destruction of the government, and compassed the death of the governors. Jacobins were as bad as Royalists, and Royalists were no better than Jacobins. Confusion was as much the object of the party of order as it was that of the party of disorder. Men of all ranks, opinions, parties, and conditions were among the conspirators of those days, or in some way encouraged the conspirators, from Cadoudal, a hero of the Vendée, to Moreau, the hero of the Black Forest and Hohenlinden. The vigorous, and in some instances tyrannical, action of the government put a stop to this kind of opposition for some years. The seizure and execution of the Duc d'Enghien, though in itself not to be approved, was followed by a cessation of Royalist attempts against the person of the chief of the State. It was one of those terrible lessons by which constituted power sometimes teaches its enemies that the force of lawlessness is not necessarily confined to one side in a political controversy. Nothing contributed more to the establishment of the Empire than the violence of Bonaparte's enemies, as they favored the plan of establishing an hereditary monarchy, the existence of which should not be bound up with the existence of an individual. During the reign of Napoleon I. the opposition was quiet, but it was organized, and its conduct was from first to last illegal, as it corresponded with the banished princes, and with the foreign enemies of France. The Mallet affair, in 1812, which came so very near effecting the Emperor's dethronement when he was in the midst of his Russian disasters, shows how frail was his tenure of power when he was absent from Paris, and how extensive were the ramifications of the in-

formal conspiracy that existed against him. "You have found the tail, but not the head," were the words in which the bold conspirator let his judges know that the danger was not over. The Legislative Body endeavored to act as an opposition party in France after the disasters of 1813, and the Emperor, after giving them a lecture, dismissed them. The Allies would never have dared to cross the French frontier, had they not been advised of the existence of disaffection, which was ready to become treason, in their enemy's country. The opposition to Louis XVIII.'s government was highly treasonable in its character; and so was that which Napoleon encountered during the Hundred Days. When the second Restoration had been effected, the French government found itself in a strange predicament. The extraordinary Chamber of Deputies which then met, "the Impracticable Chamber," was so intensely royalist in its sentiments, that it alarmed every reasonable friend of monarchy in Europe. It would have subjected the king himself to its will, in order that it might be free to punish the enemies of royalty with even more vigor and cruelty than the Jacobins had punished its friends. There was to be a revival of the Terror by the party which had suffered in 1793, and for the purpose of exterminating imperialists, republicans, and moderate monarchists. Lord Macaulay has compared this Chamber with the first English Parliament that was called after the restoration of the House of Stuart. The comparison is unfair to the Parliament. There had been a long and a bitter war between parties in England, and the Cavaliers remembered, because they were events of yesterday, the terrible series of defeats they had experienced, from Edgehill to Worcester. Between the date of the Battle of Worcester and the date of the Restoration there were less than nine years. The same generation that saw Charles I. beheaded saw Charles II. enter Whitehall. England had changed but little in the twenty years that elapsed between the meet-

ing of the Long Parliament and the dissolution of the Convention Parliament. Very different was it in France. There parties had had no fighting in the field, save in Brittany and the Vendée. There the change had been as complete as if it had been half a century in the making. Twenty-three years had passed away since the fall of the monarchy, when the Impracticable Chamber met, to legislate for a new France in the spirit of the worst period of the reigns of the worst Bourbons. These ultra-royalists would have had their way, and the massacres of the Protestants would have been accompanied or followed by the destruction of all parties save the victors, but for the existence of circumstances which it is even now painful for Frenchmen to think of. The Allies occupied the country, and their influence was thrown in behalf of moderate counsels. The good-nature of Louis XVIII. was supported by the sound common-sense of Wellington, and by the humanity of Alexander; and so but few persons were punished for political offences. The conduct of the Chamber showed that the Deputies had no just conception of the nature either of a ministry or of an opposition. So it was, though with less violence, throughout the period known as the Restoration; and the Polignac movement of 1830, which led to the fall of the elder Bourbons, was a *coup d'état*, the object being the destruction of the Charter. In Louis Philippe's reign, there were facts upon facts that establish the proposition that no French party then clearly comprehended the character of a political opposition; and it was the attempt of M. Guizot to prevent even the discussion of the reform question that was the occasion, though not the cause, of the Revolution of 1848. No sooner had the Republic been established than the Royalists began to conspire against its existence, while the Republicans themselves were far from being united, the *Reds* hating the *Blues* quite as intensely as they hated the *Whites*, or old Royalists; and beyond even the *Reds* were large numbers of men who,

for the lack of a more definite name, have been called Socialists, who wanted something as vehemently as Brutus desired his purposes, but who would probably have been much puzzled to say what that something was, had the question been put to them by the agent of a power willing and able to gratify their wish.

It was into such a political chaos as this that Louis Napoleon found himself plunged in 1848. He had a difficult part to fill; and that he did not succeed in satisfying most of those who had been most prominent in elevating him was inevitable from the discrepancy between his views of his position and their views of it. They had intended him to be a tool, and he was determined to be master of all the land. There was a contest for power, which ended in the *coup d'état* of 1851. Victory waited on the heir of her old favorite. The contest was marked by many deeds, on both sides, not defensible on strict moral grounds, but which bear too close a resemblance to the ordinary course of French politics to admit of the actors being sweepingly condemned, as if they had poisoned a pure fountain. Neither party could afford to act with fairness, because each party was convinced that the other was seeking its destruction, according to the usual rule of Gallic political warfare. That the world should have heard much of the errors of the victor, while those of the vanquished have been charitably passed over, is but natural. Victors become objects of envy, while pity is the feeling that is created by thoughts of their foes. It is only in America that the beaten party is so insolent that the conquerors are fairly overcrowded by it. All the blunders, all the acts of violence of which the other side were guilty, have been forgotten, or are not alluded to, because parties are not held accountable for evils that never were perpetrated, though it was intended that they should take form and shape and bear fruit. It is charged against the Emperor, that he deliberately planned the destruction of the Republic, and that he

ceased not to labor until his purpose had been effected. Admitting this charge to be strictly well founded, what is it more than can be brought against the very men who are so loud in preferring it? The Republic was doomed from the hour of its birth, and the final struggle between the Imperialists and the Royalists was made over its carcass. That struggle was neither a Pharsalia, in which two great men contended for supremacy in a republic, nor a Philippi, in which parties fought deliberately in support of certain principles, but an Actium; and the question to be decided was, With which of two energetic forms of force should the victory be? Louis Napoleon contended for the imperial form, for the rehabilitation of the scheme of his uncle, and for an opportunity to develop the Napoleonic ideas. The other side sought the restoration of the monarchy as it had been between 1814 and 1830, with Henry V. for their idol, as any attempt to make the Comte de Paris king must have failed, though in due time Henry V. might have been displaced, if not succeeded regularly, by the head of the Orléans family. Of the two parties to the struggle that followed the election of Louis Napoleon to the Presidency, that of the President was the more friendly to liberal institutions, and the most disposed to govern in accordance with modern sentiments. The President himself was attached to the liberal party, and leaned decidedly to the left wing of it. Circumstances had all tended to make him a Constitutionalist. His connections had been principally with those countries in which liberty is best understood, and whose histories are the histories of freedom. By birth he was a prince of Holland. He had lived much in Switzerland and in England, and he had visited the United States. That part of his youth in which the mind is formed he had passed in those years in which the Bonapartists and Liberals had been allies. His writings prove that he both understood and appreciated the constitutional system of government. Such a man was not likely to become a despot merely

from choice, though circumstances might make him one for the time, as they made Fabius a dictator. His recent action, in extensively liberalizing the imperial system, and in providing for perfect freedom of discussion in the Senate and the Legislative Body,—a freedom of which the supporters of the Pope have thoroughly availed themselves,—confirms the belief that his original intention was to provide a free constitution for France. Had he done so, there would have been civil war in that country within a year from the time that he became master of it. He could not trust his enemies, who, could they have obtained power, would have granted him no mercy, and therefore had no right to expect it from him. Had they been successful, we should have heard much of their acts of usurpation and cruelty, and of the injustice with which the President and his party and policy had been treated. Severe criticism, often unfair both in matter and in manner, is that which every victorious party must experience, not only from those whom it has defeated, but from the world at large. This is one of the items in the details of the heavy price which the victors must pay for their victory, no matter where it is won, or what the character of the contest the issue of which it has decided. Men worship success, but they worship it much after the fashion that some savage tribes worship the gods created by their own hands, tearing and rending at one time the images that at another had been objects of their most abject devotion.

If we judge the conduct of Louis Napoleon by reference only to Napoleon III., we shall not be inclined to condemn it. His rule has not been a perfect one, but it has been the best that France has known for fifty years, not only for the French themselves, but for foreign peoples. He has lifted France out of that slough in which she had floundered under both branches of the Bourbons, and he has done so without being guilty of any act of injustice toward other nations. The greatness of the France of Napoleon I. was unpleasantly associat-

ed with the idea of the degradation of neighboring countries, which implied the ultimate fall of the Empire, as it could not be expected that Russians and Germans would be governed from Paris. Independence is what every people strong enough to vindicate its rights will have; and hence the men at St. Petersburg and Vienna and Berlin were certain to act against the men of Paris at the first favorable opportunity that should present itself. Their dependent state was an unnatural state, and when the reaction came, the torrent swept all before it. The fall of Napoleon I. was the consequence of the manner in which he rose to the greatest height ever achieved by a man in modern days. Napoleon III., whose power is really greater than that of his uncle, has incurred the enmity of no foreign people. He has led his armies into no European capital city, and he has levied no foreign contributions. When it was in his power to dictate terms to Russia, he astonished men, and even made them angry, by the extent of his moderation. His abrupt pause in his career of Italian success, no matter what the motive of it, enabled Austria to retire from a war in which she had found nothing but defeat, with the air of a victor. The only additions he has made to the territory of France—Savoy, Nice, and Monaco—were obtained by the fair consent of all those who had any right to be consulted on the changes that were made. We find nothing in his conduct that betrays any desire to humiliate his contemporaries, and a superiority to vulgar ideas of what constitutes triumph that is almost without a parallel. No man was ever treated more insolently by hereditary sovereigns, from Czar and Kaiser and King to petty German princelings; and this insolence he has never repaid in kind, nor sought to repay in any manner. He has foregone occasions for vengeance that legitimate monarchs would have turned to the fullest account for the gratification of their hatred. He has, apparently, none of that vanity which led Napoleon I. to be pleased with having his

antechamber full of kings whose hearts were brimful of hatred of their lord and master. If he were to have an Erfurt Congress, it would be as plain and unostentatious an affair as that of his uncle was superficially grand and striking. He seems perpetually to have before his mind's eye what the Greeks called *the envy of the gods*, the divine Nemesis, to which he daily makes sacrifice. He is the most prosperous of men, but he is determined not to be prosperity's spoiled child. If the truth were known, it would probably be found that he has not a single personal enemy among the monarchs, all of whom would, as politicians, be glad to witness his fall. In their secret hearts they say that "Monsieur Bonaparte is a well-behaved man, to whom they could wish well in any other part than that which he prefers to hold." Their predecessors hated Napoleon I. personally, and with intense bitterness, which accounts for the readiness with which they took parts in the hunting of the eagle, and for the rancor with which they treated him when his turn came to drain the cup of humiliation to the very dregs. The dislike felt for Napoleon III. is simply political, and such dislike is not incompatible with liberality in judgment and generosity of action. Should it be his fortune to fall, there would be no St. Helena provided for him.

The domestic rule of the Emperor of the French will bear comparison with that of any monarch which that people have ever had. It is not faultless, but it is as little open to criticism of a just nature as that of any European sovereign, and with reference to the changed position of sovereigns. We are not to compare Napoleon III. with Louis XIV., that sublime and ridiculous egotist, who seems never to have had a human feeling, except those feelings which humanity would be the better without. The French Revolution banished that breed of kings from Christendom, if not from the world. He must be compared with monarchs who have felt the responsibilities of their trust very

differently from the man who called himself the State, who thought that twenty millions of people had been made to minister to his vanity, and who gently reproached God with ingratitude because of the victories of Eugène and Marlborough. "God, it appears, is forgetting us," he said, "notwithstanding all that we have done for Him." A monarch of this class is now as extinct as the mammoth, and traces of his footsteps excite the wonder of the disciples of political science. In these days, a monarch must rule mostly for the people, and largely by the people. He is only the popular chief in a country which has not a well-defined constitution over which time has thrown the mantle of reverence. The course of Napoleon III. has been in accordance with this view of his position. He is not the State, but he is the first man in the State. Under his lead and direction the French have known much material prosperity, and have added not a little to that wealth which, when judiciously used as a means, and not worshipped as the end of human exertion, is the source of so much happiness. The readiness with which the people, the masses of his subjects, subscribed to the great war-loans, contending for subscriptions as for valuable privileges, establishes both their prosperity under his government, and their confidence in that government's strength and permanence. That he has not made use of his power to stifle the expression of thought is clear from the numerous works that have been published, some of which were written for the purpose of attacking his dynasty,—authors of eminence choosing to pervert history by converting its volumes into huge partisan pamphlets, in which the subject handled and the object aimed at are alike libelled. He has kept the press, meaning the journals, more sharply reined up than Englishmen and Americans have approved or can approve; but as French journalists, instead of confining their political warfare to its proper use, are in the habit, when free to publish what they please, of assailing the very existence of the government it-

self, he has some excuse for his conduct. An English journal which should recommend the dethronement of Victoria would be as summarily silenced as ever was a French White, Blue, or Red paper. The most determined advocate of freedom of discussion must find it hard to disapprove of the suppression of the "Univers," which, while availing itself of every possible license to advocate the extremest doctrines of despotism in Church and State, demanded the suppression of freedom of all kinds in every other quarter. It is an advantage to the enemies of free speech, that they can avail themselves of its existence to advocate restriction in its comprehensive sense, while their opponents cannot consistently demand that they shall be silenced. Under the liberal policy which has just been inaugurated in France, great advantages will be enjoyed by the enemies of the government, and of free principles generally; and the Emperor is reported to have said that he shall accept the logical consequences of that policy, let the result be what it may. What has thus far happened confirms this report; but it ought not to surprise us, if he should find himself compelled to have resort to measures of restriction not much different from those "warnings" that have been fatal to more than one journal in times past. The tendency in the French mind to illegal opposition, and of the French government to meet such opposition by harsh action, will not allow us to be very sanguine as to the workings of the experiment upon which the Emperor has entered. His chief object is to establish his dynasty, and he cannot tolerate attacks upon that; and attacks of that kind would form the staple of the opposition press, were it permitted to become as free as the press is in England and in the Northern States of America.

One of the charges that have been made against the Imperial system is, that it is a stratocracy, a mere government by the sword, and that it must pass away with the Emperor himself, or be continued in the person of some military man; so that France must degenerate into a vast Al-

giers, and be ruled by a succession of Deys. There is something plausible in this view of the subject, which has imposed upon many persons, and which is all the more imposing because the Emperor is fifty-three years old, while his only son has but completed his fifth year; and Prince Napoleon is not popular with the army, and is an object of both fear and dislike to the members of several powerful interests. The Imperialists have themselves principally to blame for this state of things, as they have encouraged and promulgated opinions that favor its existence. Clever historical writers have discovered a remarkable resemblance between the France of to-day and the Roman Empire of the days of Augustus. Napoleon I. was the modern Julius Cæsar, and Napoleon III. is Octavius. The Emperor is writing a Life of Julius Cæsar, and it is believed that it is his purpose to establish the fact that his family is playing the part which the family of Cæsar played more than eighteen centuries ago. If one were disposed to be critical, it would not be difficult to point out, that, as the first Roman imperial dynasty became Claudian rather than Julian in its blood and character, after the death of Augustus, so has the French imperial dynasty a better claim to be considered of the family of Beauharnais than of the family of Bonaparte. This Cæsarean game is a foolish one, and may be played to an ultimate loss. Of the difference between France as she is and Rome as she was in the times of the first Cæsars it is not necessary to say much, for it presents itself to every cultivated mind. The Roman Empire was an aggregation of various nations, including the highest and lowest forms of human development then known, and stretching from the Atlantic to the Euphrates, and from the forests of Germany to the deserts of Africa. Over that vast and various collection of peoples a portion of Italy bore sway; and it was to break down the tyranny of that Italian rule that the Julian rule was created, and that the Republic was made to give way to the Empire.

The cause of the Cæsars was the cause of the provincials against the Italians, of the masses in twenty lands against the aristocracy of but a part of one land, of many millions of sheep against a few select wolves. The revolution that was effected through the agency of Julius and Octavius was necessary for the continuance of civilization, which was threatened with extinction through the plundering processes of proprietors and proconsuls. The Roman Emperor was the shepherd, who, though he might shear his sheep close to their skins, and not unfrequently convert many of them into mutton, for his own profit or pleasure, would nevertheless protect them against the wolves. He stood between the imperial race, of which he was himself the first member, and all the other races that were to be found in his extensive and diversified dominions. The question that he settled was one of races, not merely one of parties and political principles. What resemblance, then, can there be between the French Emperor and the Roman Emperor, or between the quarrel decided by the Napoleons and that which was decided by the first two Cæsars? There may be said to be some resemblance between them, from the fact that the French aristocracy, as a body, belong to the party that is hostile to the Bonapartes, and that it was the Roman aristocracy who were beaten at Pharsalia and politically destroyed at Philippi; but the nobility of France were ruined before the name of Bonaparte had been raised from obscurity, and the first Napoleon sought to please and to conciliate the remnants of that once brilliant order. There can be no comparison made between the two aristocracies; as the Roman was one of the ablest and most ferocious bodies of men that the world has ever seen, and made a long and desperate fight for the maintenance of its power, — while the French is effete, and it is difficult to believe that in the veins of its members runs the blood of the heroes of the days of the League, or even that of the *Frondeurs*. Their political action reminds us of nothing but

the playing of children; and the best of the leaders of the opposition to the Imperial régime are new men, most of whose names were never heard of until the present century. The Imperial family, too, unlike that of Rome, is a new family. The democratic revolution of Rome, which led to the fall of the Republic, was enabled to triumph only because the movement was headed by one of the noblest-born of Romans, a patrician of the bluest blood, who claimed descent from Venus, and from the last of the Trojan heroes. No Roman had a loftier lineage than "the mighty Julius"; and when the place of Augustus passed to Tiberius, the third Emperor represented the Claudian *gens*, the most arrogant, overbearing, haughty, and cruel of all those patrician *gentes* that figure in the history of the republican times. He belonged, too, to the family of Nero, which was to the rest of the Claudian *gens* what that *gens* was to other men, — the representative of all that is peculiarly detestable in an oligarchical fraternity. The French Cæsars are emphatically *novi homines*, the founder of their greatness not being in existence a century ago, and born of a poor family, which had never made any impression on history. There are abundant points of contrast to be found, when we examine the origin of Imperial Rome in connection with the origin of Imperial France, but few of resemblance.

Even in the bad elements of the modern Imperial rule there is little imitation of that of the Cæsars. "The ordinary notion of absolute government, derived from the form it assumes in Europe at the present day," says Merivale, "is that of a strict system of prevention, which, by means of a powerful army, an ubiquitous police, and a censorship of letters, anticipates every manifestation of freedom in thought or action, from whence inconvenience may arise to it. But this was not the system of the Cæsarean Empire. Faithful to the traditions of the Free State, Augustus had quartered all his armies on the frontiers, and his successors were content with concentrating,

cohort by cohort, a small, though trusty force, for their own protection in the capital. The legions were useful to the Emperor, not as instruments for the repression of discontent at home, but as faithful auxiliaries among whom the most dangerous of his nobles might be relegated, in posts which were really no more than honorable exiles. Nor was the regular police of the city an engine of tyranny. Volunteers might be found in every rank to perform the duty of spies; but it was apparently no part of the functions of the enlisted guardians of the streets to watch the countenances of the citizens, or beset their privacy. We hear of no intrusion into private assemblies, no dispersion of crowds in the streets. . . . They [the Emperors] made no effort to impose restraints upon thought. Freedom of thought may be checked in two ways, and modern despotism resorts in its restless jealousy to both. The one is, to guide ideas by seizing on the channels of education; the other, to subject their utterance to the control of a censorship. In neither one way nor the other did Augustus or Nero interfere at all. From the days of the Republic the system of education had been perfectly untrammelled. It was simply a matter of arrangement between the parties directly interested, the teacher and the learner. Neither State nor Church pretended to take any concern in it: neither priest nor magistrate regarded it with the slightest jealousy. Public opinion ranged, under ordinary circumstances, in perfect freedom, and under its unchecked influence both the aims and methods of education continued long to be admirably adapted to make intelligent men and useful citizens. . . . The same indulgence which was extended to education smiled upon the literature which flowed so copiously from it. There was no restriction upon writing or publication at Rome analogous to our censorships and licensing acts. The fact that books were copied by the hand, and not printed for general circulation, seems to present no real difficulty to the enforcement of such restrictions, had it been the

wish of the government to enforce them. The noble Roman, indeed, surrounded by freedmen and clients of various ability, by rhetoricians and sophists, poets and declaimers, had within his own doors private aid for executing his literary projects; and when his work was compiled, he had in the slaves of his household the hands for multiplying copies, for dressing and binding them, and sending forth an edition, as we should say, of his work to the select public of his own class or society. The circulation of compositions thus manipulated might be to some extent surreptitious and secret. But such a mode of proceeding was necessarily confined to few. The ordinary writer must have had recourse to a professional publisher, who undertook, as a tradesman, to present his work for profit to the world. Upon these agents the government might have had all the hold it required: yet it never demanded the sight beforehand of any speech, essay, or satire which was advertised as about to appear. It was still content to punish after publication what it deemed to be censurable excesses. Severe and arbitrary as some of its proceedings were in this respect, . . . it must be allowed that these prosecutions of written works were rare and exceptional, and that the traces we discover of the freedom of letters, even under the worst of the Emperors, leave on the whole a strong impression of the general leniency of their policy in this particular.* This correct picture of the policy of Imperial Rome on this point shows that the ancient sovereigns of the first of empires were more liberal than are modern rulers of their class, and that the Cæsars scorned to do that which has been common with the Bonapartes. The changes in the direction of freedom which Napoleon III. has recently made are really more Cæsarean in their character than anything that he had previously done in connection with thought and public dis-

* *A History of the Romans under the Empire.*
By CHARLES MERIVALE, B. D., late Fellow
of St. John's College, Cambridge. Vol. VI,
pp. 224-231.

cussion. It ought to be added, however, that the Romans had no daily press, and that journalism, as we understand it, was as unknown to the Cæsars as were steamships and rifled cannon. Had they been troubled with those daily showers of Sibylline leaves that so vex modern potentates, their magnanimity would have been severely tested, and they might have established as severe censorships as ever have been known in Paris or Vienna.

Flattery has discovered a resemblance between the career of Napoleon III. and the career of Augustus, and it required the eyes of flattery to make such a discovery. The Frenchman is the equal of the Roman in talent, but the resemblance goes no farther. What resemblance can there be between the boy who became a statesman at twenty and the man who began his career at forty? between the youth who made himself master of the Roman situation in a few months and the elderly man whose position at fifty-three is by no means an assured one? between the man who at thirty-three had destroyed all rivals and competitors, and gathered into his person all the powers of the State, and the man who at a much later period of life is still engaged upon an experiment in politics? Augustus avenged the murder of Julius within a brief time after it had been perpetrated; Napoleon III. has never avenged the fall of *his* uncle, but has refrained from injuring his uncle's destroyers, when, apparently, he might have done so with profit to himself, and with the general approbation of the world. Augustus's public life knew but one signal calamity, the loss of the legions of Varus, which happened toward its close, and in his dying moments he could congratulate himself on having played well, which meant successfully, his part in the drama of life. Napoleon III.'s life has been full of calamities, and it remains yet to be seen whether history shall have to rank him among its favorites, or high in the list of those unfortunates against whom it has recorded sentence of everlasting condemnation. Should he live, and main-

tain his place, and bequeath his throne to his son, and that son be of an age to appreciate his position, and possessed of fair talent, he may pass for the modern Augustus; but thinking of him, and of the strange reverses of fortune that have happened since 1789 to men and to nations, we subscribe to the wisdom of the hackneyed Greek sentiment, that no man should be called fortunate until the seal of death shall have placed an everlasting and an impassable barrier between him and the cruel sports of Mutabilities which are played "to many men's decay."

In one respect it will be allowed by all but absolutists that the condition of Europe has changed greatly for the better in the last eleven years, as a consequence of the triumphs of the French Emperor. From the year 1815 to 1850, national independence was in its true sense unknown to Continental Europe. The ascendancy of Napoleon I. had small claim to faultlessness, but the men who led in the work of his overthrow proceeded as if they meant to make the world regret his fall. This is the secret — which secret is none — of the reaction that speedily took place in his favor, and which caused an alliance of Liberals and Jacobins and Imperialists to do honor to his memory; so that, being dead, he was from his island-sepulchre a more effective foe to legitimacy and the established order of things than he had been from St. Cloud and the Tuileries. It has been satirically said that a mythical Napoleon rose from the dust of the dead Emperor; who bore no moral resemblance to Europe's master of 1812. As to the resemblance between the master of a hundred legions and "the dead but sceptred sovereign" of 1824, who ruled men's spirits from his urn, we will not stop to inquire; but it can be positively asserted that the mythical Napoleon, if any such creation there was, was the work of the true Napoleon's destroyers. They earned the hatred and detestation of the greater part of the better classes in the civilized world; and as it is the nature of men to love those who

have warred against the objects of their hate, nothing was more natural than for Europeans and Americans to turn fondly to the memory of one who had beaten and trampled upon every member of the Holy Alliance, and who had carried the tricolor, that emblem of revolution, to Vienna and Berlin and Moscow. Men wished to have their own feet upon the necks of Francis and Frederick William and Alexander, and therefore they were ready to forget the faults, and to remember only the virtues, of one who had enjoyed the luxury they so much coveted. It would be unreasonable to complain of that disposition of the public mind toward Napoleon I. which prevailed from about the date of his death to that of the restoration of his dynasty in the person of his nephew, or to sneer at the inconsistency of "that many-headed monster thing," the people, who had shouted over the decisions of Vittoria and Leipsic, and before a decade had expired were regretting that those decisions could not be reversed; for the change was the consequence of the operations of an immutable law, of that reaction which dogs the heels of all conquerors. The legitimate despots, whose union had been too much for the parvenu despot, established a tyranny over Europe that threatened to stunt the human mind, and which would have left the world hopeless, if England had not resolved to part company with her military allies. But her condemnation of their policy did not prevent its development. Even the events of 1830 did not restore national freedom to the Continent; and fifteen years after the overthrow of the elder Bourbons, the partitioners of Poland could unite, in defiance of their plighted faith, to destroy the independence of Cracow, the last shadowy remnant of old and glorious Poland. The ascendancy of Napoleon III. has put a stop to such proceedings as were common from the invasion of France, in 1815, to the invasion of Hungary, in 1849. He has, to be sure, interfered in the affairs of foreign countries, but his acts of interference have been made against the strong,

and not against the weak. He interfered to protect Turkey when she was threatened with destruction by Russia, and he did so with success. He interfered to protect the Italians against the hordes of Austria, and with such effect that the *Kingdom of Italy* has been called into existence through his action, when there was not another sovereign in the world who would have fired a shot to prevent the whole Italian Peninsula, and the great islands of Sicily and Sardinia, from becoming Austrian provinces. He interfered to protect the Christians of the East against the fire and sword of the Mussulmans, and it is under the shadow of the French flag alone that Christianity can be preached in the Lebanon and in the Hollow Syria, in the aged Damascus and in the historical Sidon. He has interfered to assist England in China, whereby there has been a new world, as it were, opened to the enterprise of commerce. He has falsified the predictions of those who have seen in him only the enemy of England, and who have told us twice a year, for nine years past, that he would attempt to throw his legions into Kent, and to march them upon London. He has added nothing to the territory of France that has not been honorably acquired. Having thus redeemed Europe from degradation, and not having justified the fears of those who expected him to renew the old duel between France and England, his continued prosperity may be earnestly desired by Liberals everywhere, and with perfect consistency; for can any intelligent man venture to say that there would be any hope for a better state of things, either for France or for Europe at large, should his rule be changed for that of either branch of the Bourbons, or for that of the Republicans, Red or Blue? Considering the good that he has done, and the evil that he might have done, and yet has refrained from doing, he will compare advantageously with any living ruler; and mankind can overlook his errors in view of his virtues,—save and except those men whom he vanquished at their own weap-

ons, and whose chief regret it is, that, being no better political moralists than was the Prince-President, their immorality was fruitless, while his, according to their interpretation of his history, gave him empire. Other men, whom his success has not consigned to partisan darkness, will judge him more justly, and say that his victory was the proper meed of su-

perior ability, and that whatever was vicious in his manner of acquiring power has been redeemed by the use he has almost invariably made of that power. He is not without sin; but if he shall not die until he shall be stoned by saints selected from governments and parties, his existence will be prolonged until doomsday.

CONCERNING THINGS SLOWLY LEARNT.

YOU will see in a little while what sort of things they are which I understand by *Things Slowly Learnt*. Some are facts, some are moral truths, some are practical lessons; but the great characteristic of all those which are to be thought of in this essay is, that we have to learn them and act upon them in the face of a strong bias to think or act in an opposite way. It is not that they are so difficult in themselves, not that they are hard to be understood, or that they are supported by arguments whose force is not apparent to every mind. On the contrary, the things which I have especially in view are very simple, and for the most part quite unquestionable. But the difficulty of learning them lies in this: that, as regards them, the head seems to say one thing and the heart another. We see plainly enough what we ought to think or to do; but we feel an irresistible inclination to think or to do something else. It is about three or four of these things that we are going, my friend, to have a little quiet talk. We are going to confine our view to a single class, though possibly the most important class, in the innumerable multitude of *Things Slowly Learnt*.

The truth is, a great many things are slowly learnt. I have lately had occasion to observe that the Alphabet is one of these. I remember, too, in my own sorrowful experience, how the Multipli-

cation Table was another. A good many years since, an eminent dancing-master undertook to teach a number of my school-boy companions a graceful and easy deportment; but comparatively few of us can be said as yet to have thoroughly attained it. I know men who have been practising the art of extempore speaking for many years, but who have reached no perfection in it, and who, if one may judge from their confusion and hesitation when they attempt to speak, are not likely ever to reach even decent mediocrity in that wonderful accomplishment. Analogous statements might be made, with truth, with regard to my friend Mr. Snarling's endeavors to produce magazine articles; likewise concerning his attempts to skate, and his efforts to ride on horseback unlike a tailor. Some folk learn with remarkable slowness that Nature never intended them for wits. There have been men who have punned, ever more and more wretchedly, to the end of a long and highly respectable life. People submitted in silence to the infliction; no one liked to inform those reputable individuals that they had better cease to make fools of themselves. This, however, is part of a larger subject, which shall be treated hereafter.

On the other hand, there are things which are very quickly learnt,—which are learnt by a single lesson. One liberal tip, or even a few kind words heart-

ily said, to a manly little schoolboy, will establish in his mind the rooted principle that the speaker of the words or the bestower of the tip is a jolly and noble specimen of humankind. Boys are great physiognomists: they read a man's nature at a glance. Well I remember how, when going to and from school, a long journey of four hundred miles, in days when such a journey implied travel by sea as well as by land, I used to know instantly the gentlemen or the railway officials to whom I might apply for advice or information. I think that this intuitive perception of character is blunted in after years. A man is often mistaken in his first impression of man or woman; a boy hardly ever. And a boy not only knows at once whether a human being is amiable or the reverse, he knows also whether the human being is wise or foolish. In particular, he knows at once whether the human being always means what he says, or says a great deal more than he means. Inferior animals learn some lessons quickly. A dog once thrashed for some offence knows quite well not to repeat it. A horse turns for the first time down the avenue to a house where he is well fed and cared for; next week, or next month, you pass that gate, and though the horse has been long taught to submit his will to yours, you can easily see that he knows the place again, and that he would like to go back to the stable with which, in his poor, dull, narrow mind, there are pleasant associations. I would give a good deal to know what a horse is thinking about. There is something very curious and very touching about the limited intelligence and the imperfect knowledge of that immaterial principle in which the immaterial does not imply the immortal. And yet, if we are to rest the doctrine of a future life in any degree upon the necessity of compensation for the sufferings and injustice of the present, I think the sight of the cab-horses of any large town might plead for the admission of some quiet world of green grass and shady trees, where there should be no cold, starvation, over-work, or flog-

ging. Some one has said that the most exquisite material scenery would look very cold and dead in the entire absence of irrational life. Trees suggest singing-birds; flowers and sunshine make us think of the drowsy bees. And it is curious to think how the future worlds of various creeds are described as not without their lowly population of animals inferior to man. We know what the "poor Indian" expects shall bear him company in his humble heaven; and possibly various readers may know some dogs who in certain important respects are very superior to certain men. You remember how, when a war-chief of the Western prairies was laid by his tribe in his grave, his horse was led to the spot in the funeral procession, and at the instant when the earth was cast upon the dead warrior's dust, an arrow reached the noble creature's heart, that in the land of souls the man should find his old friend again. And though it has something of the grotesque, I think it has more of the pathetic, the aged huntsman of Mr. Assheton Smith desiring to be buried by his master, with two horses and a few couples of dogs, that they might all be ready to start together when they met again far away.

This is a deviation; but that is of no consequence. It is of the essence of the present writer's essays to deviate from the track. Only we must not forget the thread of the discourse; and after our deviation we must go back to it. All this came of our remarking that some things are very quickly learnt; and that certain inferior classes of our fellow-creatures learn them quickly. But deeper and larger lessons are early learnt. Thoughtful children, a very few years old, have their own theory of human nature. Before studying the metaphysicians, and indeed while still imperfectly acquainted with their letters, young children have glimpses of the inherent selfishness of humanity. I was recently present when a small boy of three years old, together with his sister, aged five, was brought down to the dining-room at the period of dessert. The small boy climbed upon his mother's

knee, and began by various indications to display his affection for her. A stranger remarked what an affectionate child he was. "Oh," said the little girl, "he suspects (by which she meant *expects*) that he is going to get something to eat!" Not Hobbes himself had reached a clearer perception or a firmer belief of the selfish system in moral philosophy. "He is always very affectionate," the youthful philosopher proceeded, "when he suspects he is going to get something good to eat!"

By *Things Slowly Learnt* I mean not merely things which are in their nature such that it takes a long time to learn them,—such as the Greek language, or the law of vendors and purchasers. These things indeed take long time and much trouble to learn; but once you have learnt them, you know them. Once you have come to understand the force of the second aorist, you do not find your heart whispering to you, as you are lying awake at night, that what the grammar says about the second aorist is all nonsense; you do not feel an inveterate disposition, gaining force day by day, to think concerning the second aorist just the opposite of what the grammar says. By *Things Slowly Learnt*, I understand things which it is very hard to learn at the first, because, strong as the reasons which support them are, you find it so hard to make up your mind to them. I understand things which you can quite easily (when it is fairly put to you) see to be true, but which it seems as if it would change the very world you live in to accept. I understand things you discern to be true, but which you have all your life been accustomed to think false, and which you are extremely anxious to think false. And by *Things Slowly Learnt* I understand things which are not merely very hard to learn at the first, but which it is not enough to learn for once ever so well. I understand things which, when you have made the bitter effort and admitted to be true and certain, you put into your mind to keep

(so to speak); and hardly a day has passed, when a soft, quiet hand seems to begin to crumble them down and to wear them away to nothing. You write the principle which was so hard to receive upon the tablet of your memory; and day by day a gentle hand comes over it with a bit of india-rubber, till the inscription loses its clear sharpness, grows blurred and indistinct, and finally quite disappears. Nor is the gentle hand content even then; but it begins, very faintly at first, to trace letters which bear a very different meaning. Then it deepens and darkens them day by day, week by week, till at a month's or a year's end the tablet of memory bears, in great, sharp, legible letters, just the opposite thing to that which you had originally written down there. These are my *Things Slowly Learnt*: things you learn at first in the face of a strong bias against them; things, when once taught, you gradually forget, till you come back again to your old way of thinking. Such things, of course, lie within the realm to which extends the influence of feeling and prejudice. They are things in the accepting of which both head and heart are concerned. Once convince a man that two and two make four, and he learns the truth without excitement, and he never doubts it again. But prove to a man that he is of much less importance than he has been accustomed to think,—or prove to a woman that her children are very much like those of other folk,—or prove to the inhabitant of a country parish that Britain has hundreds of parishes which in soil and climate and production are just as good as his own,—or prove to the great man of a little country town that there are scores of towns in this world where the walks are as pleasant, the streets as well paved, and the population as healthy and as well conducted; and in each such case you will find it very hard to convince the individual at the time, and you will find that in a very short space the individual has succeeded in entirely escaping from the disagreeable conviction. You may possibly find, if you endeavor to in-

still such belief into minds of but moderate cultivation, that your arguments will be met less by force of reason than by roaring of voice and excitement of manner; you may find that the person you address will endeavor to change the issue you are arguing, to other issues, wholly irrelevant, touching your own antecedents, character, or even personal appearance; and you may afterwards be informed by good-natured friends, that the upshot of your discussion had been to leave on the mind of your acquaintance the firm conviction that you yourself are intellectually a blockhead and morally a villain. And even when dealing with human beings who have reached that crowning result of a fine training, that they shall have got beyond thinking a man their "enemy because he tells them the truth," you may find that you have rendered a service like that rendered by the surgeon's amputating knife, — salutary, yet very painful, — and leaving forever a sad association with your thought and your name. For among the things we slowly learn are truths and lessons which it goes terribly against the grain to learn at first, which must be driven into us time after time, and which perhaps are never learnt completely.

One thing very slowly learnt by most human beings is, that they are of no earthly consequence beyond a very small circle indeed, and that really nobody is thinking or talking about them. Almost every commonplace man and woman in this world has a vague, but deeply-rooted belief that they are quite different from anybody else, and of course quite superior to everybody else. It may be in only one respect they fancy they are this, but that one respect is quite sufficient. I believe, that, if a grocer or silk-mercant in a little town has a hundred customers, each separate customer lives on under the impression that the grocer or the silk-mercant is prepared to give to him or her certain advantages in buying and selling which will not be accorded to the other ninety-nine customers. "Say it is for

Mrs. Brown," is Mrs. Brown's direction to her servant, when sending for some sugar; "say it is for Mrs. Brown, and he will give it a little better." The grocer, keenly alive to the weaknesses of his fellow-creatures, encourages this notion. "This tea," he says, "would be four-and-sixpence a pound to any one else, but to you it is only four-and-threepence." Judging from my own observation, I should say that retail dealers trade a good deal upon this singular fact in the constitution of the human mind, that it is inexpressibly bitter to most people to believe that they stand on the ordinary level of humanity, — that, in the main, they are just like their neighbors. Mrs. Brown would be filled with unutterable wrath, if it were represented to her that the grocer treats her precisely as he does Mrs. Smith, who lives on one side of her, and Mrs. Snooks, who lives on the other. She would be still more angry, if you asked her what earthly reason there is why she should in any way be distinguished beyond Mrs. Snooks and Mrs. Smith. She takes for granted she is quite different from them, quite superior to them. Human beings do not like to be classed, — at least, with the class to which in fact they belong. To be classed at all is painful to an average mortal, who firmly believes that there never was such a being in this world. I remember one of the cleverest friends I have — one who assuredly cannot be classed intellectually, except in a very small and elevated class — telling me how mortified he was, when a very clever boy of sixteen, at being classed at all. He had told a literary lady that he admired Tennyson. "Yes," said the lady, "I am not surprised at that: there is a class of young men who like Tennyson at your age." It went like a dart to my friend's heart. *Class of young men*, indeed! Was it for *this* that I outstripped all competitors at school, that I have been fancying myself a unique phenomenon in Nature, *different* at least from every other being that lives, that I should be spoken of as one of a *class of young men*? Now in my friend's half-

playful reminiscence I see the exemplification of a great fact in human nature. Most human beings fancy themselves, and all their belongings, to be quite different from all other beings and the belongings of all other beings. I heard an old lady, whose son is a rifleman, and just like all the other volunteers of his corps, lately declare, that, on the occasion of a certain grand review, her Tom looked so entirely different from all the rest. No doubt he did to her, poor old lady,—for he was her own. But the irritating thing was, that the old lady wished it to be admitted that Tom's superiority was an actual fact, equally patent to the eyes of all mankind. Yes, my friend: it is a thing very slowly learnt by most men, that they are very much like other people. You see the principle which underlies what you hear so often said by human beings, young and old, when urging you to do something which it is against your general rule to do. "Oh, but you might do it *for me!*" Why for you more than for any one else? would be the answer of severe logic. But a kindly man would not take that ground: for doubtless the *Me*, however little to every one else, is to each unit in humankind the centre of all the world.

Arising out of this mistaken notion of their own difference from all other men is the fancy entertained by many, that they occupy a much greater space in the thoughts of others than they really do. Most folk think mainly about themselves and their own affairs. Even a matter which "everybody is talking about" is really talked about by each for a very small portion of the twenty-four hours. And a name which is "in everybody's mouth" is not in each separate mouth for more than a few minutes at a time. And during those few minutes, it is talked of with an interest very faint, when compared with that you feel for yourself. You fancy it a terrible thing, when you yourself have to do something which you would think nothing about, if done by anybody else. A lady grows sick, and has to go out of church during the ser-

mon. Well, you remark it; possibly, indeed, you don't; and you say, "Mrs. Thomson went out of church to-day; she must be ill"; and there the matter ends. But a day or two later you see Mrs. Thomson, and find her quite in a fever at the awful fact. It was a dreadful trial, walking out, and facing all the congregation: they must have thought it so strange; she would not run the risk of it again for any inducement. The fact is just this: Mrs. Thomson thinks a great deal of the thing, because it happened to herself. It did not happen to the other people, and so they hardly think of it at all. But nine in every ten of them, in Mrs. Thomson's place, would have Mrs. Thomson's feeling; for it is a thing which you, my reader, slowly learn, that people think very little about you.

Yes, it is a thing slowly learnt,—by many not learnt at all. How many persons you meet walking along the street who evidently think that everybody is looking at them! How few persons can walk through an exhibition of pictures at which are assembled the grand people of the town and all their own grand acquaintances, in a fashion thoroughly free from self-consciousness! I mean without thinking of themselves at all, or of how they look; but in an unaffected manner, observing the objects and beings around them. Men who have attained recently to a moderate eminence are sometimes, if of small minds, much affected by this disagreeable frailty. Small literary men, and preachers with no great head or heart, have within my own observation suffered from it severely. I have witnessed a poet, whose writings I have never read, walking along a certain street. I call him a poet to avoid periphrasis. The whole get-up of the man, his dress, his hair, his hat, the style in which he walked, showed unmistakably that he fancied that everybody was looking at him, and that he was the admired of all admirers. In fact, nobody was looking at him at all. Some time since I beheld a portrait of a very, very small literary man. It was easy to discern from it that the

small author lives in the belief, that, wherever he goes, he is the object of universal observation. The intense self-consciousness and self-conceit apparent in that portrait were, in the words of Mr. Squeers, "more easier conceived than described." The face was a very commonplace and rather good-looking one: the author, notwithstanding his most strenuous exertions, evidently could make nothing of the features to distinguish him from other men. But the length of his hair was very great: and, oh, what genius he plainly fancied glowed in those eyes! I never in my life witnessed such an extraordinary glare. I do not believe that any human being ever lived whose eyes habitually wore that expression: only by a violent effort could the expression be produced, and then for a very short time, without serious injury to the optic nerves. The eyes were made as large as possible; and the thing after which the poor fellow had been struggling was that peculiar look which may be conceived to penetrate through the beholder, and pierce his inmost thoughts. I never beheld the living original, but, if I saw him, I should like in a kind way to pat him on the head, and tell him that *that* sort of expression would produce a great effect on the gallery of a minor theatre. The other day I was at a public meeting. A great crowd of people was assembled in a large hall: the platform at one end of it remained unoccupied till the moment when the business of the meeting was to begin. It was an interesting sight for any philosophic observer seated in the body of the hall to look at the men who by-and-by walked in procession on to the platform, and to observe the different ways in which they walked in. There were several very great and distinguished men: every one of these walked on to the platform and took his seat in the most simple and unaffected way, as if quite unconscious of the many eyes that were looking at them with interest and curiosity. There were many highly respectable and sensible men, whom nobody cared particularly to see, and who took their places in a perfectly natural manner, as though

well aware of the fact. But there were one or two small men, struggling for notoriety; and I declare it was pitiful to behold their entrance. I remarked one, in particular, who evidently thought that the eyes of the whole meeting were fixed upon himself, and that, as he walked in, everybody was turning to his neighbor, and saying with agitation, "See, that's Snooks!" His whole gait and deportment testified that he felt that two or three thousand eyes were burning him up: you saw it in the way he walked to his place, in the way he sat down, in the way he then looked about him. If any one had tried to get up three cheers for Snooks, Snooks would not have known that he was being made a fool of. He would have accepted the incense of fame as justly his due. There once was a man who entered the Edinburgh theatre at the same instant with Sir Walter Scott. The audience cheered lustily; and while Sir Walter modestly took his seat, as though unaware that those cheers were to welcome the Great Magician, the other man advanced with dignity to the front of the box, and bowed in acknowledgment of the popular applause. This of course was but a little outburst of the great tide of vain self-estimation which the man had cherished within his breast for years. Let it be said here, that an affected unconsciousness of the presence of a multitude of people is as offensive an exhibition of self-consciousness as any that is possible. Entire naturalness, and a just sense of a man's personal insignificance, will produce the right deportment. It is very irritating to see some clergymen walk into church to begin the service. They come in, with eyes affectedly cast down, and go to their place without ever looking up, and rise and begin without one glance at the congregation. To stare about them, as some clergymen do, in a free and easy manner, befits not the solemnity of the place and the worship; but the other is the worse thing. In a few cases it proceeds from modesty; in the majority from intolerable self-conceit. The man who keeps his eyes downcast in

that affected manner fancies that everybody is looking at him; there is an insufferable self-consciousness about him; and he is much more keenly aware of the presence of other people than the man who does what is natural, and looks at the people to whom he is speaking. It is not natural nor rational to speak to one human being with your eyes fixed on the ground; and neither is it natural or rational to speak to a thousand. And I think that the preacher who feels in his heart that he is neither wiser nor better than his fellow-sinners to whom he is to preach, and that the advices he addresses to them are addressed quite as solemnly to himself, will assume no conceited airs of elevation above them, but will unconsciously wear the demeanor of any sincere worshipper, somewhat deepened in solemnity by the remembrance of his heavy personal responsibility in leading the congregation's worship; but assuredly and entirely free from the vulgar conceit which may be fostered in a vulgar mind by the reflection, "Now everybody is looking at me!" I have seen, I regret to say, various distinguished preachers whose pulpit demeanor was made to me inexpressibly offensive by this taint of self-consciousness. And I have seen some, with half the talent, who made upon me an impression a thousandfold deeper than ever was made by the most brilliant eloquence; because the simple earnestness of their manner said to every heart, "Now I am not thinking in the least about myself, or about what you may think of me: my sole desire is to impress on your hearts these truths I speak, which I believe will concern us all forever!" I have heard great preachers, after hearing whom you could walk home quite at your ease, praising warmly the eloquence and the logic of the sermon. I have heard others, (infinitely greater in my poor judgment,) after hearing whom you would have felt it profanation to criticize the literary merits of their sermon, high as those were: but you walked home thinking of the lesson and not of the teacher, solemnly revolving the truths you had heard, and asking

the best of all help to enable you to remember them and act upon them.

There are various ways in which self-consciousness disagreeably evinces its existence; and there is not one, perhaps, more disagreeable than the affected avoidance of what is generally regarded as egotism. Depend upon it, my reader, that the straightforward and natural writer who frankly uses the first person singular, and says, "I think thus and thus," "I have seen so and so," is thinking of himself and his own personality a mighty deal less than the man who is always employing awkward and roundabout forms of expression to avoid the use of the obnoxious *I*. Every such periphrasis testifies unmistakably that the man was thinking of himself; but the simple, natural writer, warm with his subject, eager to press his views upon his readers, uses the *I* without a thought of self, just because it is the shortest, most direct, and most natural way of expressing himself. The recollection of his own personality probably never once crossed his mind during the composition of the paragraph from which an ill-set critic might pick out a score of *I*-s. To say, "It is submitted" instead of "I think," "It has been observed" instead of "I have seen," "The present writer" instead of "I," is much the more really egotistical. Try to write an essay without using that vowel which some men think the very shibboleth of egotism, and the remembrance of yourself will be in the background of your mind all the time you are writing. It will be always intruding and pushing in its face, and you will be able to give only half your mind to your subject. But frankly and naturally use the *I*, and the remembrance of yourself vanishes. You are grappling with the subject; you are thinking of it, and of nothing else. You use the readiest and most unaffected mode of speech to set out your thoughts of it. You have written *I* a dozen times, but you have not thought of yourself once.

You may see the self-consciousness of some men strongly manifested in their handwriting. The handwriting of some

men is essentially affected,—more especially their signature. It seems to be a very searching test whether a man is a conceited person or an unaffected person, to be required to furnish his autograph to be printed underneath his published portrait. I have fancied I could form a theory of a man's whole character from reading, in such a situation, merely the words, "Very faithfully yours, Eusebius Snooks." You could see that Mr. Snooks was acting, when he wrote that signature. He was thinking of the impression it would produce on those who saw it. It was not the thing which a man would produce who simply wished to write his name legibly in as short a time and with as little needless trouble as possible. Let me say with sorrow that I have known even venerable bishops who were not superior to this irritating weakness. Some men aim at an aristocratic hand; some deal in vulgar flourishes. These are the men who have reached no farther than that stage at which they are proud of the dexterity with which they handle their pen. Some strive after an affectedly simple and student-like hand; some at a dashing and military style. But there may be as much self-consciousness evinced by handwriting as by anything else. Any clergyman who performs a good many marriages will be impressed by the fact that very few among the humbler classes can sign their name in an unaffected way. I am not thinking of the poor bride who shakily traces her name, or of the simple bumpkin who slowly writes his, making no secret of the difficulty with which he does it. These are natural and pleasing. You would like to help and encourage them. But it is irritating, when some forward fellow, after evincing his marked contempt for the slow and cramped performances of his friends, jauntily takes up the pen and dashes off his signature at a tremendous rate and with the air of an exploit, evidently expecting the admiration of his rustic friends, and laying a foundation for remarking to them on his way home that the parson could not touch him at

penmanship. I have observed with a little malicious satisfaction that such persons, arising in their pride from the place where they wrote, generally smear their signature with their coat-sleeve, and reduce it to a state of comparative illegibility. I like to see the smirking, impudent creature a little taken down.

But it is endless to try to reckon up the fashions in which people show that they have not learnt the lesson of their own unimportance. Did you ever stop in the street and talk for a few minutes to some old bachelor? If so, I dare say you have remarked a curious phenomenon. You have found that all of a sudden the mind of the old gentleman, usually reasonable enough, appeared stricken into a state approaching idiocy, and that the sentence which he had begun in a rational and intelligible way was ending in a maze of wandering words, signifying nothing in particular. You had been looking in another direction, but in sudden alarm you look straight at the old gentleman to see what on earth is the matter; and you discern that his eyes are fixed on some passer-by, possibly a young lady, perhaps no more than a magistrate or the like, who is by this time a good many yards off, with the eyes still following, and slowly revolving on their axes so as to follow without the head being turned round. It is this spectacle which has drawn off your friend's attention; and you notice his whole figure twisted into an ungainly form, intended to be dignified or easy, and assumed because he fancied that the passer-by was looking at him. Oh the pettiness of human nature! Then you will find people afraid that they have given offence by saying or doing things which the party they suppose offended had really never observed that they had said or done. There are people who fancy that in church everybody is looking at them, when in truth no mortal is taking the trouble to do so. It is an amusing, though irritating sight, to behold a weak-minded lady walking into church and taking her seat under this delusion. You remember the affect-

ed air, the downcast eyes, the demeanor intended to imply a modest shrinking from notice, but through which there shines the real *désire*, "Oh, for any sake, look at me!" There are people whose voice is utterly inaudible in church six feet off, who will tell you that a whole congregation of a thousand or fifteen hundred people was listening to their singing. Such folk will tell you that they went to a church where the singing was left too much to the choir, and began to sing as usual, on which the entire congregation looked round to see who it was that was singing, and ultimately proceeded to sing lustily too. I do not remember a more disgusting exhibition of vulgar self-conceit than I saw a few months ago at Westminster Abbey. It was a weekday afternoon service, and the congregation was small. Immediately before me there sat an insolent boor, who evidently did not belong to the Church of England. He had walked in when the prayers were half over, having with difficulty been made to take off his hat, and his manifest wish was to testify his contempt for the whole place and service. Accordingly he persisted in sitting, in a lounging attitude, when the people stood, and in standing up and staring about with an air of curiosity while they knelt. He was very anxious to convey that he was not listening to the prayers; but rather inconsistently, he now and then uttered an audible grunt of disapproval. No one can enjoy the choral service more than I do, and the music that afternoon was very fine; but I could not enjoy it or join in it as I wished, for the disgust I felt at the animal before me, and for my burning desire to see him turned out of the sacred place he was profaning. But the thing which chiefly struck me about the individual was not his vulgar and impudent profanity; it was his intolerable self-conceit. He plainly thought that every eye under the noble old roof was watching all his movements. I could see that he would go home and boast of what he had done, and tell his friends that all the clergy, choristers, and congregation had

been awestricken by him, and that possibly word had by this time been conveyed to Lambeth or Fulham of the weakened influence and approaching downfall of the Church of England. I knew that the very thing he wished was that some one should rebuke his conduct, otherwise I should certainly have told him either to behave with decency or to be gone.

I have sometimes witnessed a curious manifestation of this vain sense of self-importance. Did you ever, my reader, chance upon such a spectacle as this: a very commonplace man, and even a very great blockhead, standing in a drawing-room where a large party of people is assembled, with a grin of self-complacent superiority upon his unmeaning face? I am sure you understand the thing I mean. I mean a look which conveyed, that, in virtue of some hidden store of genius or power, he could survey with a calm, cynical loftiness the little conversation and interests of ordinary mortals. You know the kind of interest with which a human being would survey the distant approaches to reason of an intelligent dog or a colony of ants. I have seen this expression on the face of one or two of the greatest blockheads I ever knew. I have seen such a one wear it while clever men were carrying on a conversation in which he could not have joined to have saved his life. Yet you could see that (who can tell how?) the poor creature had somehow persuaded himself that he occupied a position from which he could look down upon his fellow-men in general. Or was it rather that the poor creature knew he was a fool, and fancied that thus he could disguise the fact? I dare say there was a mixture of both feelings.

You may see many indications of vain self-importance in the fact that various persons, old ladies for the most part, are so ready to give opinions which are not wanted, on matters of which they are not competent to judge. Clever young curates suffer much annoyance from these people: they are always anxious to instruct the young curates how to preach.

I remember well, ten years ago, when I was a curate (which in Scotland we call an *assistant*) myself, what advices I used to receive (quite unsought by me) from well-meaning, but densely stupid old ladies. I did not think the advices worth much, even then; and now, by longer experience, I can discern that they were utterly idiotic. Yet they were given with entire confidence. No thought ever entered the heads of these well-meaning, but stupid individuals, that possibly they were not competent to give advice on such subjects. And it is vexatious to think that people so stupid may do serious harm to a young clergyman by head-shakings and sly innuendoes as to his orthodoxy or his gravity of deportment. In the long run they will do no harm, but at the first start they may do a good deal of mischief. Not long since, such a person complained to me that a talented young preacher had taught unsound doctrine. She cited his words. I showed her that the words were taken *verbatim* from the "Confession of Faith," which is our Scotch Thirty-Nine Articles. I think it not unlikely that she would go on telling her tattling story just the same. I remember hearing a stupid old lady say, as though her opinion were quite decisive of the question, that no clergyman ought to have so much as a thousand a year; for, if he had, he would be sure to neglect his duty. You remember what Dr. Johnson said to a woman who expressed some opinion or other upon a matter she did not understand. "Madam," said the moralist, "before expressing your opinion, you should consider what your opinion is worth." But this shaft would have glanced harmlessly from off the panoply of the stupid and self-complacent old lady of whom I am thinking. It was a fundamental axiom with her that her opinion was entirely infallible. Some people would feel as though the very world were crumbling away under their feet, if they realized the fact that they could go wrong.

Let it here be said, that this vain belief of their own importance, which most people cherish, is not at all a source of

unmixed happiness. It will work either way. When my friend, Mr. Snarling, got his beautiful poem printed in the county newspaper, it no doubt pleased him to think, as he walked along the street, that every one was pointing him out as the eminent literary man who was the pride of the district, and that the whole town was ringing with that magnificent effusion. Mr. Tennyson, it is certain, felt that his crown was being reft away. But, on the other hand, there is no commoner form of morbid misery than that of the poor nervous man or woman who fancies that he or she is the subject of universal unkindly remark. You will find people, still sane for practical purposes, who think that the whole neighborhood is conspiring against them, when in fact nobody is thinking of them.

All these pages have been spent in discussing a single thing slowly learnt: the remaining matters to be considered in this essay must be treated briefly.

Another thing slowly learnt is that we have no reason or right to be angry with people because they think poorly of us. This is a truth which most people find it very hard to accept, and at which, probably, very few arrive without pretty long thought and experience. Most people are angry, when they are informed that some one has said that their ability is small, or that their proficiency in any art is limited. Mrs. Malaprop was very indignant, when she found that some of her friends had spoken lightly of her parts of speech. Mr. Snarling was wroth, when he learned that Mr. Jollikin thought him no great preacher. Miss Brown was so, on hearing that Mr. Smith did not admire her singing; and Mr. Smith, on learning that Miss Brown did not admire his horsemanship. Some authors feel angry, on reading an unfavorable review of their book. The present writer has been treated very, very kindly by the critics,—far more so than he ever deserved; yet he remembers showing a notice of him, which was intended to extinguish him for all coming time, to a warm-

hearted friend, who read it with gathering wrath, and, vehemently starting up at its close, exclaimed, (we knew who wrote the notice,)—"Now I shall go straight and kick that fellow!" Now all this is very natural; but assuredly it is quite wrong. You understand, of course, that I am thinking of unfavorable opinions of you, honestly held, and expressed without malice. I do not mean to say that you would choose for your special friend or companion one who thought meanly of your ability or your sense; it would not be pleasant to have him always by you; and the very fact of his presence would tend to keep you from doing justice to yourself. For it is true, that, when with people who think you very clever and wise, you really are a good deal cleverer and wiser than usual; while with people who think you stupid and silly, you find yourself under a malign influence which tends to make you actually so for the time. If you want a man to gain any good quality, the way is to give him credit for possessing it. If he has but little, give him credit for all he has, at least; and you will find him daily get more. You know how Arnold made boys truthful; it was by giving them credit for truth. Oh that we all fitly understood that the same grand principle should be extended to all good qualities, intellectual and moral! Diligently instil into a boy that he is a stupid, idle, bad-hearted blockhead, and you are very likely to make him all *that*. And so you can see that it is not judicious to choose for a special friend and associate one who thinks poorly of one's sense or one's parts. Indeed, if such a one honestly thinks poorly of you, and has any moral earnestness, you could not get him for a special friend, if you wished it. Let us choose for our companions (if such can be found) those who think well and kindly of us, even though we may know within ourselves that they think too kindly and too well. For that favorable estimation will bring out and foster all that is good in us. There is between this and the unfavorable judgment all the differ-

ence between the warm, genial sunshine, that draws forth the flowers and encourages them to open their leaves, and the nipping frost or the blighting east-wind, that represses and disheartens all vegetable life. But though thus you would not choose for your special companion one who thinks poorly of you, and though you might not even wish to see him very often, you have no reason to have any angry feeling towards him. He cannot help his opinion. His opinion is determined by his lights. His opinion, possibly, founds on those æsthetic considerations as to which people will never think alike, with which there is no reasoning, and for which there is no accounting. God has made him so that he dislikes your book, or at least cannot heartily appreciate it; and that is not his fault. And, holding his opinion, he is quite entitled to express it. It may not be polite to express it to yourself. By common consent it is understood that you are never, except in cases of absolute necessity, to say to any man that which is disagreeable to him. And if you go, and, without any call to do so, express to a man himself that you think poorly of him, he may justly complain, not of your unfavorable opinion of him, but of the malice which is implied in your needlessly informing him of it. But if any one expresses such an unfavorable opinion of you in your absence, and some one comes and repeats it to you, be angry with the person who repeats the opinion to you, not with the person who expressed it. For what you do not know will cause you no pain. And all sensible folk, aware how estimates of any mortal must differ, will, in the long run, attach nearly the just weight to any opinion, favorable or unfavorable.

Yes, my friend, utterly put down the natural tendency in your heart to be angry with the man who thinks poorly of you. For you have, in sober reason, no right to be angry with him. It is more pleasant, and indeed more profitable, to live among those who think highly of you. It makes you better. You actually grow

into what you get credit for. Oh, how much better a clergyman preaches to his own congregation, who listen with kindly and sympathetic attention to all he says, and always think too well of him, than to a set of critical strangers, eager to find faults and to pick holes! And how heartily and pleasantly the essayist covers his pages which are to go into a magazine whose readers have come to know him well, and to bear with all his ways! If every one thought him a dull and stupid person, he could not write at all: indeed, he would bow to the general belief, and accept the truth that he is dull and stupid. But further, my reader, let us be reasonable, when it is pleasant; and let us sometimes be irrational, when *that* is pleasant too. It is natural to have a very kindly feeling to those who think well of us. Now, though, in severe truth, we have no more reason for wishing to shake hands with the man who thinks well of us than for wishing to shake the man who thinks ill of us, yet let us yield heartily to the former pleasant impulse. It is not reasonable, but it is all right. You cannot help liking people who estimate you favorably and say a good word of you. No doubt we might slowly learn not to like them more than anybody else; but we need not take the trouble to learn *that* lesson. Let us all, my readers, be glad if we can reach that cheerful position of mind at which my eloquent friend SHIRLEY and I have long since arrived: that we are extremely gratified when we find ourselves favorably reviewed, and not in the least angry when we find ourselves reviewed unfavorably; that we have a very kindly feeling towards such as think well of us, and no unkind feeling whatever to those who think ill of us. Thus, at the beginning of the month, we look with equal minds at the newspaper notices of our articles; we are soothed and exhilarated when we find ourselves described as sages, and we are amused and interested when we find ourselves shown up as little better than geese.

Of course, it makes a difference in the feeling with which you ought to regard

any unfavorable opinion of you, whether spoken or written, if the unfavorable opinion which is expressed be plainly not honestly held, and be maliciously expressed. You may occasionally hear a judgment expressed of a young girl's music or dancing, of a gentleman's horses, of a preacher's sermons, of an author's books, which is manifestly dictated by personal spite and jealousy, and which is expressed with the intention of doing mischief and giving pain to the person of whom the judgment is expressed. You will occasionally find such judgments supported by wilful misrepresentation, and even by pure invention. In such a case as this, the essential thing is not the unfavorable opinion; it is the malice which leads to its entertainment and expression. And the conduct of the offending party should be regarded with that feeling which, on calm thought, you discern to be the right feeling with which to regard malice accompanied by falsehood. Then, is it well to be angry here? I think not. You may see that it is not safe to have any communication with a person who will abuse and misrepresent you; it is not safe, and it is not pleasant. But don't be angry. It is not worth while. That old lady, indeed, told all her friends that you said, in your book, something she knew quite well you did not say. Mr. Snarling did the like. But the offences of such people are not worth powder and shot; and besides this, my friend, if you saw the case from their point of view, you might see that they have something to say for themselves. You failed to call for the old lady so often as she wished you should. You did not ask Mr. Snarling to dinner. These are bad reasons for pitching into you; but still they are reasons; and Mr. Snarling and the old lady, by long brooding over them, may have come to think that they are very just and weighty reasons. And did you never, my friend, speak rather unkindly of these two persons? Did you never give a ludicrous account of their goings-on, or even an ill-set account, which some kind friend was sure to repeat to them?

Ah, my reader, don't be too hard on Snarling; possibly you have yourself done something very like what he is doing now. Forgive, as you need to be forgiven! And try to attain that quite attainable temper in which you will read or listen to the most malignant attack upon you with curiosity and amusement, and with no angry feeling at all. I suppose great people attain to this: I mean cabinet-ministers and the like, who are daily flayed in print somewhere or other. They come to take it all quite easily. And if they were pure angels, somebody would attack them. Most people, even those who differ from him, know, that, if this world has a humble, conscientious, pious man in it, that man is the present Archbishop of Canterbury: yet last night I read in a certain powerful journal, that the great characteristics of that good man are cowardice, trickery, and simple rascality! Honest Mr. Bumpkin, kind-hearted Miss Goodbody, do you fancy that *you* can escape?

Then we ought to try to fix it in our mind, that, in all matters into which taste enters at all, the most honest and the most able men may hopelessly, diametrically, differ: original idiosyncrasy has so much to say here; and training has also so much. One cultivated and honest man has an enthusiastic and most real love and enjoyment of Gothic architecture, and an absolute hatred for that of the classic revival; another man, equally cultivated and honest, has tastes which are the logical contradictory of these. No one can doubt the ability of Byron, or of Sheridan; yet each of them thought very little of Shakspeare. The question is, *What suits you?* You may have the strongest conviction that you ought to like an author; you may be ashamed to confess that you don't like him; and yet you may feel that you detest him. For myself, I confess with shame, and I know the reason is in myself, I cannot for my life see anything to admire in the writings of Mr. Carlyle. His style, both of thought and language, is to me insufferably irritating. I tried to read the "Sar-

tor Resartus," and could not do it. So if all people who have learned to read English were like me, Mr. Carlyle would have no readers. Happily, the majority, in most cases, possesses the normal taste. At least there is no further appeal than to the deliberate judgment of the majority of educated men. I confess, further, that I would rather read Mr. Helps than Milton: I do not say that I think Mr. Helps the greater man, but that I feel he suits me better. I value the "Autocrat of the Breakfast-Table" more highly than all the writings of Shelley put together. It is a curious thing to read various reviews of the same book, — particularly if it be one of those books which, if you like at all, you will like very much, and which, if you don't like, you will absolutely hate. It is curious to find opinions flatly contradictory of one another set forth in those reviews by very able, cultivated, and unprejudiced men. There is no newspaper published in Britain which contains abler writing than the "Edinburgh Scotsman." And of course no one need say anything as to the literary merits of the "Times." Well, one day within the last few months, the "Times" and the "Scotsman" each published a somewhat elaborate review of a certain book. The reviews were flatly opposed to one another; they had no common ground at all; one said the book was extremely good, and the other that it was extremely bad. You must just make up your mind that in matters of taste there can be no unvarying standard of truth. In æsthetic matters, truth is quite relative. What is bad to you is good to me, perhaps. And indeed, if one might adduce the saddest of all possible proofs how even the loftiest and most splendid genius fails to commend itself to every cultivated mind, it may suffice to say, that that brilliant "Scotsman" has on several occasions found fault with the works of A. K. H. B.!

If you, my reader, are a wise and kind-hearted person, (as I have no doubt whatever but you are,) I think you would like very much to meet and converse with

any person who has formed a bad opinion of you. You would take great pleasure in overcoming such a one's prejudice against you; and if the person were an honest and worthy person, you would be almost certain to do so. Very few folk are able to retain any bitter feeling towards a man they have actually talked with, unless the bitter feeling be one which is just. And a very great proportion of all the unfavorable opinions which men entertain of their fellow-men found on some misconception. You take up somehow an impression that such a one is a conceited, stuck-up person: you come to know him, and you find he is the frankest and most unaffected of men. You had a belief that such another was a cynical, heartless being, till you met him one day coming down a long black stair, in a poor part of the town, from a bare chamber in which is a little sick child, with two large tears running down his face; and when you enter the poor apartment, you learn certain facts as to his quiet benevolence which compel you suddenly to construct a new theory of that man's character. It is only people who are radically and essentially bad whom you can really dislike after you come to know them. And the human beings who are thus essentially bad are very few. Something of the original Image lingers yet in almost every human soul: and in many a homely, commonplace person, what with vestiges of the old, and a blessed planting-in of something new, there is a vast deal of it. And every human being, conscious of honest intention and of a kind heart, may well wish that the man who dislikes and abuses him could just know him.

But there are human beings whom, if you are wise, you would not wish to know you too well: I mean the human beings (if such there should be) who think very highly of you,—who imagine you very clever and very amiable. Keep out of the way of such! Let them see as little of you as possible. For, when they come to know you well, they are quite sure to be disenchanted. The enthusiastic ideal

which young people form of any one they admire is smashed by the rude presence of facts. I have got somewhat beyond the stage of feeling enthusiastic admiration, yet there are two or three living men whom I should be sorry to see: I know I should never admire them so much any more. I never saw Mr. Dickens: I don't want to see him. Let us leave Yarrow unvisited: our sweet ideal is fairer than the fairest fact. No hero is a hero to his valet: and it may be questioned whether any clergyman is a saint to his beadle. Yet the hero may be a true hero, and the clergyman a very excellent man: but no human being can bear too close inspection. I remember hearing a clever and enthusiastic young lady complain of what she had suffered, on meeting a certain great bishop at dinner. No doubt he was dignified, pleasant, clever; but the mysterious halo was no longer round his head. Here is a sad circumstance in the lot of a very great man: I mean such a man as Mr. Tennyson or Professor Longfellow. As an elephant walks through a field, crushing the crop at every step, so do these men advance through life, smashing, every time they dine out, the enthusiastic fancies of several romantic young people.

This was to have been a short essay. But you see it is already long; and I have treated only two of the four Things Slowly Learnt which I had noted down. After much consideration I discern several courses which are open to me:—

1. To ask the editor to allow me forty or fifty pages of the magazine for my essay.

2. To stop at once, and allow it to remain forever a secret what the two remaining things are.

3. To stop now, and continue my subject in a future number of the magazine.

4. To state briefly what the two things are, and get rid of the subject at once.

The fundamental notion of Course No. 1 is manifestly vain. The editor is doubtless well aware that about sixteen pages

is the utmost length of essay which his readers can stand. Nos. 2 and 3, for reasons too numerous to state, cannot be adopted. And thus I am in a manner compelled to adopt Course No. 4.

The first of the two things is a practical lesson. It is this: to allow for human folly, laziness, carelessness, and the like, just as you allow for the properties of matter, such as weight, friction, and the like, without being surprised or angry at them. You know, that, if a man is lifting a piece of lead, he does not think of getting into a rage because it is heavy; or if a man is dragging a tree along the ground, he does not get into a rage because it ploughs deeply into the earth as it comes. He is not surprised at these things. They are nothing new. It is just what he counted on. But you will find that the same man, if his servants are lazy, careless, and forgetful, or if his friends are petted, wrong-headed, and impracticable, will not only get quite angry, but will get freshly angry at each new action which proves that his friends or servants possess these characteristics. Would it not be better to make up your mind that such things are characteristic of humanity, and so that you must look for them in dealing with human beings? And would it not be better, too, to regard each new proof of laziness, not as a new thing to be angry with, but merely as a piece of the one great fact that your servant is lazy, with which you get angry once for all, and have done with it? If your servant makes twenty blunders a day, do not regard them as twenty separate facts at which to get angry twenty several times: regard them just as twenty proofs of the one fact that your servant is a blunderer; and be angry just once, and no more. Or if some one you know gives twenty indications in a day that he or she (let us say she) is of a petted temper, regard these merely as twenty proofs of one lamentable fact, and not as twenty different facts to be separately lamented. You accept the fact that the person is petted and ill-tempered: you regret it and blame it once for all. And

after this once you take as of course all new manifestations of pettedness and ill-temper. And you are no more surprised at them, or angry with them, than you are at lead for being heavy, or at down for being light. It is their nature, and you calculate on it, and allow for it.

Then the second of the two remaining things is this, — that you have no right to complain, if you are postponed to greater people, or if you are treated with less consideration than you would be, if you were a greater person. Uneducated people are very slow to learn this most obvious lesson. I remember hearing of a proud old lady who was proprietor of a small landed estate in Scotland. She had many relations, — some greater, some less. The greater she much affected, the less she wholly ignored. But they did not ignore *her*; and one morning an individual arrived at her mansion-house, bearing a large box on his back. He was a travelling peddler; and he sent up word to the old lady that he was her cousin, and hoped she would buy something from him. The old lady indignantly refused to see him, and sent orders that he should forthwith quit the house. The peddler went; but, on reaching the courtyard, he turned to the inhospitable dwelling, and in a loud voice exclaimed, in the ears of every mortal in the house, "Ay, if I had come in my carriage-and-four, ye wad have been proud to have ta'en me in!" The peddler fancied that he was hurling at his relative a scathing sarcasm: he did not see that he was simply stating a perfectly unquestionable fact. No doubt earthly, if he had come in a carriage-and-four, he would have got a hearty welcome, and he would have found his claim of kindred eagerly allowed. But he thought he was saying a bitter and cutting thing, and (strange to say) the old lady fancied she was listening to a bitter and cutting thing. He was merely expressing a certain and innocuous truth. But though all mortals know that in this world big people meet greater respect than small, (and quite right too,) most

mortals seem to find the principle a very unpleasant one, when it comes home to themselves. And we learn but slowly to acquiesce in seeing ourselves plainly subordinated to other people. Poor Oliver Goldsmith was very angry, when at the club one night he was stopped in the middle of a story by a Dutchman, who had noticed that the Great Bear was rolling about in preparation for speaking, and who exclaimed to Goldsmith, "Stop, stop! Doctor Shonson is going to speak!" Once I arrived at a certain railway station. Two old ladies were waiting to go by the same train. I knew them well, and they expressed their delight that we were going the same way. "Let us go in the same carriage," said the younger, in earnest tones; "and will you be so very kind as to see about our luggage?" After a few minutes of the lively talk of the period and district, the train came up. I feel the tremor of the platform yet. I handed my friends into a carriage, and then saw their baggage placed in the van. It was a station at which trains stop for a few minutes for refreshments. So I went to the door of the carriage into which I had put them, and waited a little before taking my seat. I expected that my friends would proceed with the conversation which had been interrupted; but to my astonishment I found that I had become wholly invisible to them. They did not see me and speak to me at all. In the carriage with them was a living peer, of wide estates and great rank, whom they knew. And so thoroughly did he engross their eyes and

thoughts and words, that they had become unaware of my presence, or even my existence. The stronger sensation rendered them unconscious of the weaker. Do you think I felt angry? No, I did not. I felt very much amused. I recognized a slight manifestation of a grand principle. It was a straw showing how a current sets, but for which Britain would not be the country it is. I took my seat in another carriage, and placidly read my "Times." There was one lady in that carriage. I think she inferred, from the smiles which occasionally for the first few miles overspread my countenance without apparent cause, that my mind was slightly disordered.

These are the two things already mentioned. But you cannot understand, friendly reader, what an effort it has cost me to treat them so briefly. The experienced critic will discern at a glance that the author could easily have made sixteen pages out of the material you have here in two. The author takes his stand upon this,—that there are few people who can beat out thought so thin, or say so little in such a great number of words. But I remember how a very great prelate (who could compress all I have said into a page and a half) once comforted me by telling me that for the consumption of many minds it was desirable that thought should be very greatly diluted; that quantity as well as quality is needful in the dietetics both of the body and the mind. With this soothing reflection I close the present essay.

AMERICAN NAVIGATION:

ITS CHECKS, ITS PROGRESS, ITS DANGERS.—THE BIRTH OF THE NAVY.—THE EMBARGO.

IN these palmy days of Commerce it is difficult to conceive the distress which attended the Embargo. To form some idea of its effects at a period when the nation engrossed most of the carrying trade of the world, let us imagine a message from Washington announcing that Congress, after a few midnight-sessions, has suddenly resolved to withdraw our ships from the ocean, and to export nothing from New York, or any other seaport; that it requires the merchant to dismantle his ships and leave them to decay at the wharves; that it calls upon two hundred thousand masters and mariners, who now plough the main, to seek their bread ashore; that it forbids even the fisherman to launch his chebacco-boat or follow his gigantic prey upon the deep; that it subjects the whole coastwise trade to onerous bonds and the surveillance of custom-house officers; that it interdicts all exports by land to Canada, New Brunswick, or Mexico.

Imagine for a moment five million tons of shipping detained, thousands of seamen reduced to want, the trades of the ship-builder, joiner, rigger, and sail-maker stopped, the masses of produce now seeking the coast for shipment arrested on their way by the entire cessation of demand, the banker and insurer idle, the commissioners of bankruptcy, the sheriff, and the jailer busy. Imagine the whole country, in the midst of a prosperous commerce, thus suddenly brought to a stand. Imagine the navigation, the produce, and the merchandise of the nation thus suddenly embargoed by one great seizure, upon the plea that they might possibly be seized abroad, and some faint idea may be formed of the alarm, distress, and indignant feeling which pervaded the entire seaboard under the Embargo of 1807. At the pe-

riod in question the distressed seamen and ruined merchants had no railways, scarcely an ordinary road to the West. Manufactures were almost unknown, the mechanic arts were undeveloped, and consequently the exclusion from the sea was felt with double force.

Why, urged the merchant and the mariner, should our property perish and our children go supperless to bed, when we can insure our ships and still make large profits? Would the planter reconcile himself to a law which forbade him to harness his teams or use the hoe or the plough, and bade him lie down and die of hunger beside fruitful fields? Does the Constitution of the Union, which empowers Congress to regulate commerce, authorize its destruction? And if it is the intent of Government merely to protect our ships abroad, why are foreign vessels forbidden to purchase or export our perishing fish and provisions? and why is our property to be confiscated and heavy fines to be imposed, if we send it across the Canada line, where there is no risk of seizure?—And when, in the progress of events, it became apparent that France approved of our Embargo, and that England, opening new marts for her trade and new sources of supplies in Russia, Spain, India, and Spanish America, was without a rival on the ocean, monopolizing the trade and becoming the carrier of the world, it was impossible to reconcile the Eastern States to this general interdict.

Many a rich man was ruined, many a prosperous town was utterly prostrated by the shock. Property, real and personal, fell from thirty to sixty per cent., affecting by its fall all classes of society. A spirit of hostility to the party in power was engendered, which outlasted the war with England, and continued

to glow until Monroe had adopted the great Federal measures of a navy, a military academy, and an enlarged system of coast-defence.

Half a century has now elapsed since the signal failure of the Embargo. The theorists who planned it, the cabinet that adopted it, the politicians who blindly sustained it have passed from the stage. Angry feelings have subsided. The measure itself has become a part of the history of the country; but now that our commerce has again expanded, now that our navigation, for at least a quarter of a century, has continued to progress until it has outstripped that of Great Britain in speed, despatch, and capacity to carry, now that it knows no superior either in ancient or modern times, it is a fitting moment to investigate the causes and effects of the measure which once arrested its progress. Its history is replete with lessons; and if our late President has failed in other particulars, he at least cautioned us, in his inaugural address, "that our commerce and navigation are again exceeding the means provided for their defence," and recommended "an increase of a navy now inadequate to the protection of our vast tonnage afloat," greater than that of any other nation, "as well as to the defence of our extended sea-coast." To ascertain and appreciate the true causes of the Embargo, we must ascend to the origin of our commerce and trace it downward.

The Pilgrims who sought freedom in New England were enterprising men. The country in which they landed kindled a commercial spirit. Natural ports and havens, vast forests of pine and oak suitable for spars and timber, abundance of fish and whales, and the occasional failure of their crops, all invited them to the deep. Under the rule of Governor Winthrop, the shallop *Blessing of the Bay* was built at his Ten Hills farm, and made a voyage to Virginia. Boats, soon followed by sloops, engaged in the fisheries; brigs and ships were built for the trade with England. Boston became noted for ship-building, and Portsmouth

supplied the royal navy with spars. The fleet which took Port Royal in 1710 was composed principally of American ships. The New England volunteers who in 1745 captured the fortress of Louisburg from the veteran troops of France were conveyed by ten American ships of war.

As early as 1765, six hundred sail from Massachusetts were engaged in the fisheries, and many American vessels pursued the trade to England, Spain, and the West Indies. The towns of Salem, Marblehead, and Gloucester were almost surrounded by fish-flakes. Fish, lumber, and provisions were the great basis of trade. Ships were built and laden with timber, and sold with their lading in English ports. Cargoes were made up of fish, live stock, and boards, for the West India Islands. The returns were shipped to Spain and Portugal, and there exchanged for silk, iron, fruit, wines, and bills on England. Occasionally ships joined the Jamaica fleet, or adventured on bolder voyages to the French islands; but the admiralty courts at Tortola and New Providence, often supposed to be in league with English admirals, repressed the spirit of adventure, and annually condemned American ships on the most frivolous pretences. The fame of American whalers had already reached England. Burke, in his celebrated speech on America, alludes to their enterprise. "We find them," he says, "in the deepest frozen recesses of Hudson's Bay, and again beneath the frozen serpent of the South. . . . What sea is not vexed by their fisheries? what climate is not witness to their toils?"

No record is to be found of the shipping of the Colonies prior to the Revolution, but there is reason to suppose that it must have exceeded two hundred thousand tons. During the Revolution the merchantmen went generally to decay or were captured. Some were equipped as privateers. But after seven years a ship is in its dotage. New vessels were built and armed. The models which figure in old pictures, with high sterns and bows, proved too clumsy for

war, and modern forms were adopted. At least five hundred armed vessels were fitted out in the commercial States, and among them one hundred and fifty-eight from the single port of Salem. Some of these vessels mounted twenty guns; they captured large numbers of English vessels, and performed feats on the ocean as brilliant as any upon the land. At the close of the war, our shipping, although it included many prizes, was undoubtedly reduced; but it had changed its character. Our ships had improved in size and speed, and were manned by officers and seamen who had measured their strength with Englishmen, and acknowledged no superiors. From the Peace of 1783 to the Embargo of 1807, a period of twenty-four years, is a remarkable epoch in the history of American navigation.

At the close of the war, the country was exhausted by its long and protracted struggle with the colossal power of England. The Eastern States, which furnished most of the shipping, had made great sacrifices, and had contributed more than their share in men, money, and ships to the common defence. They were creditor States, and their means were locked up in "final settlements." Their remaining capital was insufficient to equip their vessels and give them full cargoes. The country was impoverished, too, by the suits of foreign creditors, to whom our merchants had become deeply indebted before the war. Under these circumstances, commerce was slowly resumed. For several years our exports did not exceed ten millions. But our merchants were not disheartened; they gradually enlarged their trade and extended their field of adventure; privateers were put into the India trade, and entered into successful rivalry with the more cumbrous ships of the East India Companies? The new Constitution was adopted, the public debt funded, and duties imposed to meet the interest. The war-worn officer, the patriotic merchant, and the humble capitalist, who had relied on the honor and justice of the country,

were paid in public stocks which found favor abroad. Old capital was resuscitated and became the basis of commerce.

In 1793 our tonnage had risen to 488,000 tons; and in 1799 it had grown to 939,488 tons, and was still increasing. The aggressions of France in 1798 and 1799 were met with a bold spirit and proved of brief continuance, a proper chastisement was inflicted on the corsairs of Africa, the honor of the flag was maintained, our commerce moved onward until the close of 1807, and by the official report of that year our tonnage had increased to 1,208,735 tons, or at least five hundred per cent. in the first twenty-four years after the close of the war. The revenue had risen to fifteen millions, and the official report of the Treasurer showed a balance in the Treasury of eighteen millions in bonds and money; it stated, also, that twenty-six millions of the public debt had been extinguished in the seven years preceding. Our ships, too, had become the great carriers of the deep; our exports for 1807 were \$108,343,750, of which \$59,622,558 were of foreign origin; our ports, remote from the seat of war, had become the depots of goods; and our commerce, whitening the surface of every ocean, had begun to tempt the cupidity of contending nations. In 1807, the United States, in addition to its domestic produce, which went principally to English ports, exported of foreign goods, in round numbers, to

Holland,	\$14,000,000
French ports,	13,000,000
Spanish "	14,000,000
Italian "	5,500,000
Danish "	2,500,000
English and other ports,	10,000,000

In those prosperous days of navigation, during the first period of twenty-four years after the Peace of 1783, the merchants of our country were accumulating riches; but a check was given to their prosperity by the Embargo, closely followed by acts of non-intercourse, by war, and by sixteen years of debility which ensued. In 1814, our tonnage was diminished to 1,159,288 tons, a point actually below

that of 1807; and at the close of the second epoch of twenty-four years, in 1831, during which our population had doubled, the tonnage remained at 1,267,846 tons, having virtually made no progress in the second epoch of twenty-four years, commencing with the Embargo.

We now enter upon the third epoch of equal length, from 1831 to 1855, which stands out in bold relief a striking contrast to the gloomy period which it followed, and bears some resemblance to the epoch which preceded the Embargo, showing the recuperative power of a commerce destined to float after the most disastrous shipwreck.

Peace had continued down to 1831; the debt incurred during the war was at length reduced; new breeds of sheep were imported, and manufactures, aided by new inventions, were established on a permanent basis; our new fabrics began to demand more raw material; the culture of cotton was thus extended; railways were constructed; England, relaxing her commercial code, opened her marts to our breadstuffs; the great discovery of gold followed. Each of these causes gave an impulse to navigation, and at the close of the third epoch of twenty-four years, in 1855, our tonnage had outstripped that of England both in amount and effective power, and had risen by the official report to 5,212,000 tons, exhibiting a gain of more than three hundred per cent. The ratio of its advance may be inferred from the following table:—

Tonnage of ships built in 1818	55,856
do. do. 1831	85,962
do. do. 1832	144,539
do. do. 1848	318,072
do. do. 1855	583,451

Let us contrast these three epochs we have named. During the first, our navigation sprang from infancy to manhood, surmounting all obstacles and bidding defiance to all foes. In the second, in the vigor of manhood, it was withdrawn by a mysterious and pusillanimous policy from the ocean. This very timidity invited aggression, seizures and war followed, and the growth was checked for

nearly the fourth of a century. In the third epoch it resumed its onward march, stimulating improvement, and thereby accelerating its own progress, until at length the offspring has surpassed the parent and taken the lead in navigation. Mark the contrast: the three epochs were of equal length: the first witnessed a growth of five hundred per cent.; in the second there was an entire paralysis; in the third, renewed progress of more than three hundred per cent.

What were the causes that confined the young giant to a Procrustean bed for a quarter of a century?

The subject has become history, and we can now calmly investigate it by the light of the past and the present. May not this investigation illumine the path of the future? Let us examine the maritime policy of our nation during each period.

At the close of the Revolution there was no navy, and few ships to be protected. Our private armed vessels were converted into merchantmen, our solitary ship of the line was presented to France, and we had no frigates worth preserving.

The first great effort of the country was to form a constitution; the second, to provide for the creditors who had sustained the nation; the third, to provide a revenue to meet expenses and interest. And these were all successful. As commerce advanced, the Federal party under Washington revived the idea of a navy, and on March 11th, 1794, against the opposition of Madison, they carried a bill through Congress for the construction of six frigates. Under this bill, the Constitution, Constellation, and United States, all since identified with the fame of our country, were commenced, but they were not launched until the accession of John Adams in 1797.

Washington, in his Farewell Address, gave the sanction of his name to a navy, as well as to the West Point Academy, and to a system of harbor-defence. He thus marked out the great outlines; but the founder of the navy was John Adams. Nurtured among the hardy sons of Massachusetts, familiar with their

exploits upon the ocean during the war both in private and public service, he felt assured of their ability to cope with the Mistress of the Seas. When France seized our ships and undertook to involve us in European wars, Adams renounced her alliance and called for the creation of a navy. In his annual message in 1797, he spoke of "a navy as next to the militia the natural defence of the United States." In 1798 the three frigates above-mentioned were finished and sent to sea, and soon after the Constellation captured the *Insurgent*. During the same year Congress voted to construct six more frigates, twelve sloop-of-war, and six smaller vessels, and appropriated a million for the frames of six ships of the line, two millions for timber, and fifty thousand dollars for two dock-yards. At the same time, in response to a vote of Congress authorizing the acceptance of additional ships, \$711,700 were subscribed, and the frigates *Essex*, *Connecticut*, *Merrimack*, and other vessels, constructed and turned over to the Government by the merchants of Salem, Newburyport, Hartford, and other seaports.

To illustrate the spirit with which the merchants responded to the call for a navy, we may cite the action of the Federal county of *Essex*, none of whose towns at that period contained over ten thousand inhabitants. This county had contributed more armed ships and men to the War of the Revolution than any other county in the Union, and was conspicuous for its enterprise and patriotism before the embargo, non-intercourse, and war had crushed its commerce.

The merchants of *Essex* assembled and subscribed the funds for the frigates *Essex* and *Merrimack*, the first of which was built at Salem and the other at Newburyport, and both of New-England oak; and this effort was the more remarkable, as they advanced the money while the Government found it difficult to borrow at eight per cent., and these patriotic men afterwards took their pay in depreciated six per cent. stock at par.

We have not the history of the *Merri-*

mack; but the *Essex*, a frigate of thirty-two guns, begun in April, was launched in September, 1799, and the best commentary upon the policy of the measure and upon the skill and fidelity of her builders is the fact that she proved the fastest ship in the navy, that she lasted thirty-eight years, namely, till 1837, that she cost for hull, spars, sails, and rigging, when ready to receive her armament and stores, but \$75,473.59, and that under the gallant Porter, in the War of 1812, she captured the British corvette *Alert*, of twenty guns, a transport with one hundred and ninety-seven troops for Canada, and twenty-three other prizes, valued at two millions of dollars; she also broke up the British whale-fishing in the Pacific; and when finally captured at Valparaiso by two ships of superior force, who would not venture within reach of her carronades, she fought a battle of three hours' duration, which does honor to the country. While this frigate was building, so fast did the timber come in, that the spirited contractor, Mr. Briggs, was obliged to insert the following notice in the Salem paper to check the supply.

"THE SALEM FRIGATE.

"Through the medium of the *Gazette* the subscriber pays his acknowledgments to the good people of the County of *Essex*, for their spirited exertions in bringing down the trees of the Forest for building the Frigate.

"In the short space of four weeks the full complement of timber has been furnished. Those who have contributed to their country's defence are invited to come forward and receive the reward of their patriotism. They are informed that with the permission of a kind Providence who hath hitherto favored the undertaking, that

"Next September is the time

When we 'll launch her from the strand,
And our cannon load and prime
With tribute due to Talleyrand."

The promise was fulfilled on September 30th, 1799. The hills in the vicinity and the rocks upon the shores were

covered with people assembled to witness the launch, and the guns of the frigate were planted on an eminence "to speak aloud the joy of the occasion."

A correspondent of the "Gazette" gave the following jubilant account of the affair.

"And Adams said, Let there be a Navy, and there was a Navy. To build a navy was the advice of our venerable sage. How far it has been adhered to is demonstrated by almost every town in the United States that is capable of floating a Galley or Gunboat. Salem has not been backward in this laudable design; impressed with a due sense of the importance of a Navy, the patriotic citizens of this town put out a subscription and thereby obtained an equivalent for building a vessel of force. Among the foremost in this good work were Messrs. Derby & Gray, who set the example by subscribing ten thousand dollars each,—but, alas, the former is no more; we trust his good deeds follow him. Yesterday the stars and stripes were unfurled on board the Frigate Essex, and at twelve o'clock she made a majestic movement into her destined element, there to join her sister-craft in repelling foreign invasion and maintaining the rights and liberties of 'a great, free, peaceful, and independent Republic.'"

The early reports under Adams give the estimated cost of a ship of the line as \$400,000; and the first frigates actually cost as follows:—

Constellation,	\$314,212
Constitution,	302,718
United States,	299,336
President,	220,910
Chesapeake,	220,679
Congress,	197,246
Essex, with armament and stores,	139,202

In 1799 the estimates for the navy were raised to four millions and a half, and large appropriations were continued in 1800. Under these appropriations several navy-yards were established, and frames of live-oak and cedar were furnished for eight ships of the line. The energy of the Administration produced

corresponding effects, convoys were provided for our merchantmen, insurance fell from twenty to ten per cent., and France, impressed by our spirit and armament, retired from the contest.

At the close of 1800 the navy had made great progress; and the Secretary of the Navy, Hon. Benjamin Stoddard of Baltimore, proposed in 1801 an annual appropriation of one million for its increase.

But in 1801 the spirited administration of Adams came to an end. He had favored the payment of the national debt; he had dared to anticipate the future, to impose taxes and provide ships; he had aided the formation of a military academy and advocated a system of coast-defence, and had boldly asserted our national rights against the French Republic; and yet he loved peace so well, that, against the advice and wishes of his party and his cabinet, he sent a minister to France, who made an honorable treaty. Posterity sees little to censure in all these measures, for they evince the courage and forecast of the great Statesman of the Revolution; but they were assailed by his opponents, and aided in effecting his defeat.

Jefferson came into power as the advocate of retrenchment and reform,—captivating terms! Under his administration the military academy was thrown into the shade, the coast-defences were forgotten, most of the new frigates and sloops built by patriotic citizens were sold, the navy reduced to ten frigates, half of which were suffered to decay, the frames of the ships of the line were used for repairs, and the appropriations for the increase of the navy were reduced to the pitiful sum of a quarter of a million, which was applied principally to gunboats. Of these Jefferson built no less than one hundred and seventy, at a cost of \$10,500 each,—incurring for the construction and maintenance of this flotilla an expense of nearly three millions, without a particle of benefit to the country.

We would not detract from the services of Jefferson. Posterity will honor him

as the Patriot of the Revolution, as the champion of the rights of man; but will it not trace to his policy as a statesman, in the cabinet of Washington, in the opposition to Adams, and in the office of President, the grave errors from which sprang the embargo, non-intercourse, and the second war with England? At the close of his administration in 1809, he claimed credit for having left eighteen millions in the Treasury after payment of twenty-six millions of the debt of the Revolution in less than seven years, and his successor, Madison, in 1812, had over eleven millions in funds and cash in the Treasury after the extinguishment of forty-nine millions of the Revolutionary debt, — the expenses of Government, in the mean time, exclusive of the debt, having averaged from five to seven millions only. But parsimony is not always economy.

The embargo cost the nation at least forty millions; non-intercourse twenty more; the war in three years added one hundred and thirteen millions to the debt, with at least an equal loss by the sacrifice of commerce and heavy drafts by taxes: and if the embargo, non-intercourse, and war can be traced to the loss of the navy, we find a saving of a million per annum in ships dearly purchased by a loss of capital which, at compound interest, would exceed to-day one-third the computed wealth of the nation.

Had the policy of Adams been continued from 1800 to 1808, the annual million, aided by the live-oak and cedar frames, the three millions paid for gun-boats, and the frigates on hand when Jefferson came into power, would have provided or placed upon the stocks ten ships of the line, forty frigates, and ten sloop-of-war. If with the increase of revenue this estimate had been doubled in 1808, the material collected and the ships held back until the latter part of 1812, the country would have been supplied with twenty sail of the line, fifty frigates, and thirty sloop-of-war, — a force which would have employed at least threefold its number of English ships, upon our coast, upon the passage, and

in the dock-yards. Impressment, orders in council, paper blockades, would have gone down before such a force of American ships ere one-tenth of it had left our harbors; for England, distressed for men and at war with the Continent, could not have spared the ships required to meet such a navy. The reports of Jefferson and Madison now make it apparent, that, without omitting to pay one instalment of the debt, they could have carried out the policy of Adams and provided a navy the very aspect of which would have commanded the respect and deference of the only foe we had occasion to dread.

This point is most forcibly illustrated by the speeches of Lowndes and Cheves of South Carolina in Congress a few years later, cited by Henry Clay in 1812, in which they very justly say, — “If England should determine to station permanently on our coast a squadron of twelve ships of the line, she would require for this service thirty-six ships of the line, one-third in port repairing, one-third on the passage, and one-third on the station; but that is a force which it has been shown England, with her limited navy, could not spare for the American service.” For once, at least, two of the gifted sons of South Carolina sustained the views of Massachusetts. The War of the Revolution and the War of 1812 have both demonstrated that England can maintain no permanent blockade through the winter on our waters, and the largest fleet upon our Atlantic coast during the last war did not exceed twenty sail of armed vessels of all sizes.

Jefferson, in his “Notes on Virginia,” in 1785 had expressed his views on our maritime policy in the following terms:—

“You ask me what I think of the expediency of encouraging our States to become commercial. Were I to indulge my own theory, I wish them to practise neither commerce or navigation, but to stand with respect to Europe precisely on the footing of China.”

We have seen the commercial policy of Adams illustrated by the creation of a navy; we now see the anti-commercial

theory of Jefferson illustrated by its overthrow.

He was once tempted to concede that we might apply a year's revenue to a navy, but that year he never designated. Perhaps, if he could have foreseen the unceremonious way in which a few English frigates have of late years dealt with China, or the facility with which they have compelled her to pay millions for a drug alike pernicious to character and health, or the report of the treaty and tribute dictated from the walls of Peking, — or could he have foreseen the progress of Lord Cochrane's frigates up the Potomac, regardless of his gunboats, — could he have foreshadowed the conflagration of the Capitol and the exit of the Cabinet, — he would perhaps have attached more importance to a navy and found less to admire in the policy of China, and doubtless his immediate successor would not have aimed a side-blow at our army and navy, as he did, in suggesting "that the fifteenth century was the unhappy epoch of military establishments in the time of peace."

But our country, under Jefferson and Madison, for twelve years adopted the blind policy of China. The navy was suffered to decay. In 1807 but one frigate and five sloop-of-war were in commission. The Federal party, however, although in a weak minority, did not tamely submit to the unhappy policy of Southern statesmen; and individuals even of the dominant party opposed it. Among these, the late Justice Story, who in 1807 represented the County of Essex in Congress, made an effort for the revival of the navy. But it was objected, on the part of the Administration, that such a force would be impotent against Great Britain. Williams, subsequently Governor of South Carolina, insisted, that, if we built ships, they would all fall into the hands of the British; and the capture of the Danish fleet at Copenhagen was instanced, — the fall of Genoa, Venice, and Carthage, notwithstanding their navies, being also cited. Story, with almost a prescience of the future, urged in its favor, — "I was

born among the hardy sons of the ocean, and I cannot doubt their courage or their skill; if Great Britain ever gets possession of our present little navy, it will be at the expense of the best blood of the country, and after a struggle which will call for more of her strength than she has ever found necessary for a European enemy." To which Williams replied, — "If our rights are only so to be saved, I would abandon the ocean." And in December, 1807, the ocean was abandoned.

No additions were made to the navy during the period of the embargo or non-intercourse, nor was a new ship sent to sea until after the peace; and at the commencement of the war, in June, 1812, the country had neither navy, fortifications, nor disciplined troops. The relics of the Federal navy then consisted of five frigates and seven sloops and brigs in commission, and three frigates under repair, — a feeble force, indeed, with which to meet the Mistress of the Seas, but which demonstrated by its achievements what fifty or a hundred sail might have accomplished.

In 1812, Quincy, in the House, and Lloyd, in the Senate, both from Massachusetts, advocated a navy, and Clay and Davies, of the West, raised their voices in its support; but their efforts were unavailing.

James Lloyd, who combined the intelligent merchant with the statesman, thus addressed the Senate: — "To make an impression on England, we must have a navy. Give us thirty swift-sailing, well-appointed frigates. In line-of-battle ships and fleet engagements, skill and experience would decide the victory. We are not ripe for them; but bolt together a British and American frigate side by side, and though we should lose sometimes, we should win as often. Give us this little fleet. Place your Navy Department under an able and spirited administration; cashier every officer who strikes his flag; and you will soon have a good account of your navy. This may be thought a hard tenure of service;

but, hard or easy, I will engage in five weeks, yes, in five days, to officer this fleet from New England alone. Give us this little fleet, and in a quarter of the time in which you would operate upon her in any other way, we would bring Great Britain to terms. To terms, not to your feet. No, Sir! Great Britain is at this moment the most colossal power the world ever saw. It is true she has an enormous national debt. Her daily expenditure would in six short weeks wipe off all we owe. But will these millstones sink her? will they subject her to the power of France? No, Sir! let the bubble burst to-morrow,—destroy the fragile basis on which her public credit stands,—sponge out her national debt,—and, dreadful as would be the process, she would rise with renewed vigor from the fall, and present to her enemy a more imposing, irresistible front than ever. No, Sir! Great Britain cannot be subjected by France. The genius of her institutions, the genuine game-cock, bulldog spirit of her people, will lift her head above the waves. From this belief I acknowledge I derive a satisfaction. In New England our blood is unmixed. We are the direct descendants of Englishmen. We are natives of the soil. In the Legislature, now in session, of the once powerful and still respectable State of Massachusetts, composed of more than seven hundred members, to my knowledge not a single foreigner holds a seat. As Great Britain wrongs us, I would fight her. Yet I should be worse than a barbarian, did I not rejoice that the sepulchres of our forefathers, which are in that country, shall remain unsacked, and their coffins rest undisturbed, by the unhallowed rapacity of the Goths and Saracens of modern Europe. Let us have these thirty frigates. Powerful as Great Britain is, she could not blockade them; with our hazardous shores and tempestuous northwest gales, from November to March, all the navies in the world could not blockade them. Divide them into six squadrons; place those squadrons in the Northern ports, ready

for sea; and at favorable moments we would pounce upon her West India Islands,—repeating the game of De Grasse and D'Estaing in '79 and '80. By the time she was ready to meet us there, we would be round Cape Horn, cutting up her whalemén. Pursued thither, we could skim away to the Indian Seas, and would give an account of her China and India ships very different from that of the French cruisers. Now we would follow her Quebec, and now her Jamaica convoys; sometimes make our appearance in the chops of the Channel, and even sometimes wind north about into the Baltic. It would require a hundred British frigates to watch the movements of these thirty. Such are the means by which I would bring Great Britain to her senses. By harassing her commerce with this fleet, we could make the people ask the Government why they continued to violate our rights; whether it were for her interest to sever the chief tie between her and us, by compelling us to become a manufacturing people (and on this head we could make an exhibition that would astonish both friends and foes); what she was to gain by forcing us prematurely to become a naval power, destined one day or other to dispute with her the sceptre of the ocean? We could, in short, bring the people to ask the Government, For whose benefit is this war? And the moment this is brought about on both sides of the water, the business is finished; you would only have to agree on fair and equal terms of peace."

And Daniel Webster, just entering upon public life, made one of his earliest efforts in Congress for a navy. In his characteristic manner, he urged, in 1814,—
 "If war must continue, go to the ocean; let it no longer be said, not one ship of force built by your hands since the war yet floats; if you are seriously contending for maritime rights, go to the theatre where alone those rights can be defended. Thither every indication of your future calls you. There the united wishes and exertions of the nation will go with you."

But a Southern Cabinet still clung to the Chinese policy, and the war for maritime rights was confided to a raw militia upon the land, while Hull, Bainbridge, Stewart, Porter, and Barney were performing the very feats which Lloyd had pictured to the Senate. A vote, it is true, was at length passed, to build four ships of the line, six frigates, and six sloops; but none were finished before the close of the war; and it was not until after its conclusion that the Democratic party, so long opposed to Federal measures, and triumphant from their very opposition, after a loss of at least three hundred millions, caused by their abandonment, gave the most conclusive proof of their value by funding the debt, re-establishing the navy, reviving the Military Academy at West Point, fortifying the coast, and making a tariff for revenue with incidental protection. Well might party-strife cease under the veteran Monroe; for Democracy had become Federalized.

The sketch thus given of the rise and progress of our navigation, and of the origin and decline of our navy, affords us a commanding view of the position of our nation when it adopted the Chinese policy and withdrew from the ocean.

Let us now glance for a moment at the state of Europe at the close of 1807. The great struggle of England and France was in progress. Napoleon, by his brilliant exploits, had subdued Italy and Holland, established the Empire, and by the battles of Marengo, Jena, Austerlitz, and Friedland, humbled Austria, overwhelmed Prussia, and conquered a peace with Russia. The Continent, from the Pyrenees to the Vistula, was subject to his sway, and he had closed it against the manufactures of England. This nation, alike victorious on the sea, had nearly annihilated the navy of France, captured the fleet of Denmark, swept the French and Dutch ships from the ocean, and was now seizing the possessions of France and Holland in the Indies. Regardless of neutral rights, she had declared every part of the Continent, from the Pyr-

enees to the Elbe, in a state of blockade.

To escape impressment, or to obtain higher wages, many of her seamen enlisted in our service. Anxious to reclaim them and to man all her ships, she followed them into American vessels, and impressed American seamen as Englishmen, without the least respect to the rights of a neutral that did not assert by arms the dignity of its flag.

Neither of the parties in the excitement of the great conflict was disposed to respect the rights of the United States, a neutral without an army or a fleet, and too timid to arm its own merchantmen; and the purpose of both seemed to be to compel these merchantmen to contribute to the war. England, in addition to her blockade, required all neutrals bound for the Continent to pay duties in her ports; and France retaliated by declaring all neutral ships which had paid such tribute denationalized and subject to confiscation, and without a frigate on the ocean declared all the ports of England in a state of blockade. There can be no question now that the acts of both parties were a violation of the rights of every neutral.

England, in her sober moments, has tacitly relinquished her claim to impress beneath the American flag; paper blockades and the right of search are no longer recognized in the maritime code of either England or France; and there can be no doubt that our country could, at a later period, have made reclamation on England for seizures, as she has done upon France, Naples, and Denmark; but the policy of our rulers had left us destitute of means either of offence or defence, and of the power to resent any indignity. Three courses were open to us. The first was to devote the funds in the Treasury at once to the creation of a navy; to commence ten or twelve ships of the line in our dock-yards, and twenty frigates in the ship-yards of Boston, Salem, Portsmouth, New York, and Philadelphia; to build them as the Constitution and Constellation were built before; and

to appeal to the merchants who built the Essex and Connecticut to build more, and to take their pay in certificates of stock. In one twelvemonth a navy might have been created; and the note of preparation sounded by a nation enriched by the peaceful commerce of a quarter of a century, and now refreshed for a new struggle, would have been most influential with the conflicting powers.

Another course was open to us. More than two-thirds of our commerce was with English ports, or ports remote from France; for England, Spain, Sweden, Norway, Russia, the Indies were open to our commerce. The premium of insurance against French capture was but five per cent. on ships bound to those ports; for scarcely a French privateer dared show itself on the ocean.

Our nation had cause of war with France, for France was at war with commerce and had invaded her rights; and our little navy, small as it was, and our merchantmen, if allowed to arm, might have bid defiance to France. England, then, would have respected our rights as allies; or, as our commerce was lucrative and paid profits that would cover an occasional seizure, we might have put our merchants on their guard, allowed them to arm their ships, and have temporized until the conflicting powers of the Old World had exhausted their strength, and we had grown strong enough to demand reparation.

We owned at this period from eight to ten thousand vessels, and built annually nearly a thousand more. All the ships seized from 1800 to 1812 did not average one hundred and fifty yearly, of which more than one-third were released, and indemnity finally paid for half the residue: namely, there were 917 seized by England, more than half released; 558 seized by France, one-fourth released; 70 seized by Denmark; 47 seized by Naples; and more property was detained by France than England. But the sympathies of our Cabinet were with Napoleon; a moment had arrived when he had determined to reverse the laws of trade

and exclude the exports of England from the Continent; and our rulers, regardless of our own commerce, determined to withhold all our produce, to cut off the raw material from England at the moment she had lost the sale of her exports, and by this combined process to bring her to submission. They forgot, for the moment, how impossible it is to reverse the great laws of trade; that we thus gratuitously resigned to her the commerce of the globe; that China, the Indies, with their inexhaustible supplies, Spain, Sweden, Norway, Russia, and Africa, were open to her ships and might fill the vacuum. The hazardous experiment was made. Let us trace the progress of events.

May 16, 1806, England passed her Orders in Council, declaring the ports and rivers from Brest to the Elbe in a state of blockade. November 21, 1806, Napoleon issued his Berlin Decree, declaring the British ports blockaded. January 6, 1807, England prohibited all coastwise trade with France, and November 11, 1807, prohibited all neutrals from trading with France or her allies, except on payment of duties to England. December 17, 1807, Napoleon issued his Milan Decree, confiscating all neutral vessels that had been searched by English cruisers, or had paid duties to England. December 16, 1807, the day preceding the date of the Milan Decree, President Jefferson submitted to Congress the Embargo. The Democratic party was then all-powerful, and the measure, after being debated for a few days and nights in the House, and a few hours in the Senate with closed doors, was adopted. This gratuitous surrender to England of the commerce of the world, this measure whose objects were veiled in mystery, conjectured, but not understood, became a law December 22, 1807.

A leader of the Democratic party, in urging its passage, said,—“The President has recommended the measure on his high responsibility. I would not consider, I would not deliberate, I would act; doubtless the President possesses such further information as would justify such

a measure." And the pliant majority acquiesced.

After the passage of the Embargo Act, other acts were speedily passed to give it efficacy. By these, forfeitures of threefold the value of merchandise were imposed on those who violated its provisions, vessels were obliged to give heavy bonds to land their cargoes in the United States, and all shipments to frontier posts were prohibited. Under these acts the shipment of flour coastwise was forbidden, except upon permits issued at the pleasure of the President, upon the requisition of Governors of States, most of whom were members of the dominant party. And last of all came the Enforcing Act, under the provisions of which the collectors were armed with power to call out the militia at their discretion and upon *suspicion* of an intent to violate the law, to require vessels that had given bonds to discharge their cargoes, and to detain every suspected vessel engaged in the coasting-trade. These measures did not pass without opposition. Although the minority was weak in numbers, it was not deficient in talent.

In the House, Josiah Quincy of Massachusetts, at that period the great commercial State, was the Federal leader; and he now, after the lapse of half a century, still survives in a green old age to see his policy vindicated by the verdict of history.

Quincy, in various speeches, urged upon Congress, —

"You undertake to protect better the property of the merchant than his own sense of personal interest would induce him to protect it.

"Suppose the embargo passes; will France forego a policy designed to crush Great Britain and secure her way to universal empire, or England a policy essential to her national existence? It is all very well to talk of the patriotism and quiet submission of the people of the interior; they cannot help submitting, they will have no opportunity to break the embargo. But they whose ships lie on the edge of the ocean laden

with produce, with the alternative before them of total ruin or a rich market, are in a totally different condition."

Again said Quincy, —

"Never before did society witness a total prohibition of all intercourse like this in a commercial nation. But it has been asked in debate, 'Will not Massachusetts, the Cradle of Liberty, submit to such privations?' An Embargo Liberty was never cradled in Massachusetts. Our Liberty was not so much a mountain-nymph as a sea-nymph. She was free as air. She could swim, or she could run. The ocean was her cradle. Our fathers met her as she came, like the Goddess of Beauty, from the waves. They caught her as she was sporting on the beach. They courted her while she was spreading her nets upon the rocks. But an Embargo Liberty, a handcuffed Liberty, Liberty in fetters, a Liberty traversing between the four sides of a prison and beating her head against the walls, is none of our offspring. We abjure the monster! Its parentage is all inland.

"Is embargo independence? Deceive not yourselves! it is palpable submission! France and Great Britain require you to relinquish a part of your commerce, and you relinquish it entirely! At every corner of this great city we meet some gentlemen of the majority wringing their hands and exclaiming, 'What shall we do? nothing but an embargo will save us; remove it, and what shall we do?' Sir, it is not for me, an humble and un-influential individual, at an awful distance from the predominant influences, to suggest plans for Government. But, to my eye, the path of duty is as distinct as the Milky Way,—all studded with living sapphires, glowing with light. It is the path of active preparation, of dignified energy. It is the path of 1776. It consists not in abandoning our rights, but in supporting them as they exist and where they exist,—*on the ocean as well as on the land.*"

Troup of Georgia, one of the champions of the Democratic party, replied to the Opposition,—*"Shall we sacrifice the*

honor and independence of the nation for a little trade in codfish and potash? Permission to arm is equivalent to a declaration of war; make the embargo effective, and it will show what all the great commercial politicians have said is true, —it will vitally affect the manufacturing and commercial interests of England.”

As one coercive measure after another was proposed, John Randolph of Roanoke, who had at first favored an embargo, came out against the measure, and “warned the Administration that they were fast following in the fatal footsteps of Lord North.”

But one of the most effective speeches against the Democratic policy was made in February, 1809, by Gardinier, who represented New York, a city the creation of commerce.

“The avowed object of this policy,” he said, “was to save our vessels and property from capture; the real one seemed to be to establish a total non-intercourse with the whole world. We are engaged perpetually in making additions and supplements to the embargo. Wherever we can spy a hole, although it be no bigger than a wheat-straw, at which industry and enterprise can find vent, all our powers are called in requisition to stop it. The people of the country shall sell nothing but what they can sell to each other. All our surplus produce shall rot on our hands. God knows what all this means; I cannot understand it. I see effects, but I can trace them to no cause. I fear there is an unknown hand guiding us to the most dreadful destinies, unseen, because it cannot endure the light. Darkness and mystery overshadow the House and the whole nation. We know nothing, we are permitted to know nothing. We sit here as mere automata.”

This speech nearly cost Gardinier his life, for he was in consequence of it challenged and dangerously wounded; but the embargo was permitted to continue.

The produce of the country fell sixty to seventy per cent. in value, and much of it passed at low prices into the hands of British agents. Armed ships from

England appeared on the coast of Georgia and loaded with cotton from lighters in defiance of Government, and Northern ships in the outports occasionally eluded the vigilance of collectors or escaped by their collusion; but the measure pressed with a crushing weight upon the honest merchants and ship-owners.

When news of the Enforcing Act reached Boston, it was received with such indignation, that General Lincoln, the collector of the port, resigned, and the flags of the dismantled ships were hoisted at half-mast, processions of starving sailors and mechanics passed through the streets, and the whole community was highly excited; an excitement increased by an order from the Cabinet to the commandant of the fort to allow no vessel whatever to proceed to sea.

But the end of Jefferson’s administration was approaching. He had come in as the advocate of popular rights; and now at the close of his term was enforcing measures more arbitrary than those which preceded the Revolution. Madison was nominated as his successor. All New England, save the inland State of Vermont, was revolutionized and voted against him, while Maryland and New York chose Federal Assemblies. The South, however, gave him its votes, and he was elected; but the tide of public opinion was rolling strongly against the Embargo.

The new legislature of Massachusetts was convened; Governor Gore, who had displaced Gerry, drew their attention to the arbitrary and oppressive measures of Government; and the General Court, in their reply, after denouncing those measures as illegal and unconstitutional, used the memorable words, that “*they would be true to the Union, although they had fallen under the ban of the Empire.*”

The merchants determined to test the legality of the Enforcing Act; but John Quincy Adams and Joseph Story repaired to Washington, and urged the necessity of a repeal. Their representations, and the signal defeat of the Democracy at the North, proved irresistible; and the

Embargo, after a protracted struggle, fell before them.

From this glance at the history of the Embargo we can account for the asperity of feeling towards the Democratic leaders, and the distrust of their measures and men, which pervaded New England from the passage of the Embargo Act until the close of the war.

New England, and more especially Massachusetts, commercial from its infancy, did not come into the Union to surrender its commerce, navigation, or seamen to any visionary theories of the South. For nearly two centuries it had struggled for all its liberties with the parent empire. It had learned in the cruel school of oppression that the price of freedom is perpetual vigilance.

Fifteen months had now elapsed since the laying of the embargo, and it had more than realized all the presages of its opponents. Our minister, Armstrong, had written from France, that it had produced no effect in France and was forgotten in England. Pinckney, in England, did all in his power to save the Administration, by offering to end the embargo, if England would relax her policy; but Canning replied, that England had no complaints to make, that Spain and Russia had been opened to her, and the measure would serve to convince her that she was not absolutely dependent on the trade of America; with cutting irony, he added, he would make but one concession to America: she had complained that England drew a tribute from her merchandise, when shipped to the Continent; he would, out of deference to American delicacy, substitute a total prohibition. He had the tact, also, to draw from Pinckney a letter offering to concede many of the points in dispute, and published it with an insolent commentary.

Jefferson still clung to the embargo; but Madison and his friends, deferring to the reasons of Story and Adams, and yielding to the adverse current now setting strongly against Democracy, March 9, 1809, repealed the obnoxious act. Such was the end and signal failure of a meas-

ure alike disastrous at home and abroad, a measure which had falsified all the predictions of its author. Its avowed object was to secure our seamen from impressment, to protect our commerce, and preserve our ships; its presumed object was to coöperate with France, and starve England into submission: but none of these objects were effected. Instead of rescuing our seamen, it imprisoned them all at home, and deprived them of the food which they found even in the prisons of the enemy. Instead of protecting our commerce, it tamely resigned it to England, and either left our exports to perish or reduced their value sixty per cent. It seized all our ships at home, and left most of them to decay, without giving the sufferer the claim to ultimate redress which consoled him in cases of foreign seizure. It aided France so little, that this "deed of magnanimity" was in a few months forgotten. Instead of impoverishing or humbling England, it poured into her lap the riches of the world, and increased the insolence of her tone; while it impoverished our own nation, broke the spirit of the commercial classes and alienated them from Government, and gave the first of a series of blows to the nation from which it did not recover for a quarter of a century.

But the pusillanimous policy which prompted the embargo survived its repeal. The Chinese theory still showed itself, not in measures for defence, but in impotent measures for restriction or prohibition, and finally in a declaration of war against England on the very eve of her triumph by the power of her navy and commerce over the greatest captain of the age: a war declared by our rulers without an army, navy, officers, coast-defence, or national credit, for the avowed purpose of securing free trade and sailors' rights by measures which the mercantile community rejected. In its progress; the want of discipline, forts, ships, munitions of war, crédit abroad, and frugality at home, was most severely felt; and the principal honor derived from it arose from the exploits of the few frigates

left to us by improvidence and parsimony, from the achievements of the Northern troops of Scott, Brown, and Miller, disciplined during the war, and the courage and sagacity of the veteran Jackson and his Western volunteers behind their cotton ramparts at New Orleans.

If, during the seven years of trial and suffering, from 1808 to 1815, in which nearly one-half of the wealth of New England was extinguished, her citizens became indignant at the wanton sacrifice of their means and of the best opportunity Fortune ever gave them to gain riches by commerce,—if the public sentiment found expression alike through the press, in town-meetings, in legislative halls, and even in the pulpit,—if the capitalists lost confidence in a government which trifled with its own resources,—if the merchant refused all countenance to those who had wrought his ruin,—let the blame fall on the originators of the evil. Lord North did but impose a few light taxes, place a few restrictions upon commerce, and make a few other inroads on freedom; but he set a nation in flames. The Cabinets of 1807 and 1812 warred against commerce itself, and placed an interdict on every harbor; and which of the measures of the British statesman was more arbitrary in its character, more repugnant to the spirit of freemen, or more questionable as to its legality, than the Enforcing Act of 1808? And if the men of New England, who had in their colonial weakness met both France and England by sea and land without a fear, saw the fruits of their industry sacrificed and the bread taken from their children's mouths by the Chinese policy of a Southern cabinet, might they not well chafe under measures so oppressive and so unnecessary that they were ingloriously abandoned? Under a dynasty whose policy had closed their ports, silenced their cannon, nearly ruined their commerce, and left their country without a navy, army, coast-defences, or national credit, could they be expected to rush with ardor into a war with the greatest naval power of the age, elated with her triumph over Napo-

leon,—into a war to be prosecuted on land by raw recruits against the veteran troops of England, for the avowed purpose of protecting the commerce of those who opposed it, and in which munitions of war were to be dragged at their expense across pathless forests,—into a war whose burdens were to fall either in present or prospective charges upon their surviving trade? Must they not have deeply felt that they were still under "the ban of the Empire"? and is it not proof of the extent of their patriotism and intense love of country, that under such trials and adverse policy they were still "true to the Union"?

If Canada were desired, how easily might it have been acquired by a wiser policy! A small loan to the State of New York, from surplus funds, might have opened the Erie and Champlain Canals twenty years in advance of their completion. A little aid to men of genius might have placed Fulton's steamers, then navigating the Hudson, on the Lakes.

A dozen frigates to cruise in the Gulf of St. Lawrence would have cut off supplies from England. The attractions of a new outlet for commerce, aided by a few disciplined regiments, the command of the Lakes, facilities for moving munitions of war and for intercepting supplies, would have settled the question in advance. And instead of a series of measures which embittered parties, created a jealousy between North and South, called into the field one hundred and twenty thousand raw militia, and absorbed in wasteful expenses nearly half our resources, we should have reaped a golden harvest in commerce, preserved our wealth, and have either avoided war, or terminated it in the same style in which the Constitution, Constellation, and United States terminated their conflicts on the deep, or as France and England terminated their recent war with Russia, arresting their foe in his march of conquest, closing his ports, destroying his fleet, seamen, and chief military station, and nearly exhausting his resources,—

and drawing the means of war from commerce, have at the same time expanded our commerce, cities, and wealth to a degree unparalleled in our history.

The past, however, is gone, and the future is before us. England, conscious of her naval power, of her vast steam-marine, and of our deficiencies, has not acceded to our proposal to exempt merchantmen from seizure in future wars. Is it not now our policy to provide in advance for the contingencies of the future,—to obtain the live-oak and cedar frames, the engines, boilers, Paixhan guns for at least one hundred steam-frigates, with coats of mail for some of them,—so that, instead of spending years in their construction, launching them when the war is over, and then leaving them to decay, we may, as the crisis approaches, be able in a few months to fit out a fleet which, if not irresistible, shall at least command respect? Accomplished officers and men can be drawn from the merchant-service at short notice; but we cannot create steamers in a moment.

The appropriations by Congress of late years for steam-frigates and sloops-of-war, and for the defence of New York, New Bedford, Portland, Bath, and Bangor,—for Bath, in particular, which owns

nearly two hundred thousand tons of shipping, and which builds more ships annually than any other port in the Union, Boston excepted,—are most judicious; but are there not other points which deserve the attention of Government? Should not a few thousand rifled cannon, a good supply of rifles, and a proportionate amount of powder and ball be deposited near San Francisco, to enable us, in case of war, to convert our clipper ships and steamers in the Pacific into cruisers? Should not batteries of Paixhan guns be erected at the outlet of Long Island Sound, upon Gull and Fisher's Islands and the opposite points, to convert the whole Sound above into a fortified harbor, and thus defend New York and the important seaports upon the Sound, and by these fortresses and a few coast-batteries between Stonington and Newport, like those on the coast of France, keep open during war an inland navigation for coal and flour between the Chesapeake and Delaware Bays, Pennsylvania, New York, Connecticut, Rhode Island, and Massachusetts? Should not these and similar questions of national defence, in these days of extended commerce, command the attention of the nation?

DENMARK VESEY.

ON Saturday afternoon, May 25th, 1822, a slave named Devany, belonging to Colonel Prioleau of Charleston, South Carolina, was sent to market by his mistress,—the Colonel being absent in the country. After doing his errands, he strolled down upon the wharves, in the enjoyment of that magnificent wealth of leisure which usually characterizes the "house-servant" of the South, when once beyond hail of the street-door. He presently noticed a small vessel lying in the stream, with a peculiar flag flying; and

while looking at it, he was accosted by a slave named William, belonging to Mr. John Paul, who remarked to him,—“I have often seen a flag with the number 76, but never one with the number 96 upon it before.” After some further conversation on this trifling point, he continued with earnestness,—“Do you know that something serious is about to take place?” Devany disclaiming the knowledge of any graver impending crisis than the family dinner, the other went on to inform him that many of the slaves were

"determined to right themselves." "We are determined," he added, "to shake off our bondage, and for that purpose we stand on a good foundation; many have joined, and if you will go with me, I will show you the man who has the list of names, and who will take yours down."

This startling disclosure was quite too much for Devany; he was made of the wrong material for so daring a project; his genius was culinary, not revolutionary. Giving some excuse for breaking off the conversation, he went forthwith to consult a free colored man, named Pensil or Pencell, who advised him to warn his master instantly. So he lost no time in telling the secret to his mistress and her young son; and on the return of Colonel Prioleau from the country, five days afterward, it was at once revealed to him. Within an hour or two he stated the facts to Mr. Hamilton, the Intendant, or, as we should say, Mayor; Mr. Hamilton at once summoned the Corporation, and by five o'clock Devany and William were under examination.

This was the first warning of a plot which ultimately filled Charleston with terror. And yet so thorough and so secret was the organization of the negroes, that a fortnight passed without yielding the slightest information beyond the very little which was obtained from these two. William Paul was, indeed, put in confinement and soon gave evidence inculpat-ing two slaves as his employers,—Mingo Harth and Peter Poyas. But these men, when arrested, behaved with such perfect coolness and treated the charge with such entire levity, their trunks and premises, when searched, were so innocent of all alarming contents, that they were soon discharged by the Wardens. William Paul at length became alarmed for his own safety, and began to let out further facts piecemeal, and to inculcate other men. But some of those very men came voluntarily to the Intendant, on hearing that they were suspected, and indignantly offered themselves for examination. Puzzled and bewildered, the municipal government kept the thing as secret as

possible, placed the city guard in an efficient condition, provided sixteen hundred rounds of ball cartridges, and ordered the sentinels and patrols to be armed with loaded muskets. "Such had been our fancied security, that the guard had previously gone on duty without muskets and with only sheathed bayonets and bludgeons."

It has since been asserted, though perhaps on questionable authority, that the Secretary of War was informed of the plot, even including some details of the plan and the leader's name, before it was known in Charleston. If so, he utterly disregarded it; and, indeed, so well did the negroes play their part, that the whole report was eventually disbelieved, while (as was afterwards proved) they went on to complete their secret organization, and hastened by a fortnight the appointed day of attack. Unfortunately for their plans, however, another betrayal took place at the very last moment, from a different direction. A class-leader in a Methodist church had been persuaded or bribed by his master to procure further disclosures. He at length came and stated, that, about three months before, a man named Rolla, slave of Governor Bennett, had communicated to a friend of his the fact of an intended insurrection, and had said that the time fixed for the outbreak was the following Sunday night, June 16th. As this conversation took place on Friday, it gave but a very short time for the city authorities to act, especially as they wished neither to endanger the city nor to alarm it.

Yet so cautiously was the game played on both sides, that the whole thing was still kept hushed up from the Charleston public; and some members of the city government did not fully appreciate their danger till they had passed it. "The whole was concealed," wrote the Governor afterwards, "until the time came; but secret preparations were made. Saturday night and Sunday morning passed without demonstrations; doubts were excited, and counter orders issued for diminishing the guard." It afterwards proved

that these preparations showed to the slaves that their plot was betrayed, and so saved the city without public alarm. Newspaper correspondence soon was full of the story,—each informant of course hinting plainly that he had been behind the scenes all along, and had withheld it only to gratify the authorities in their policy of silence. It was “now no longer a secret,” they wrote,—adding, that for five or six weeks but little attention had been paid by the community to these rumors, the city council having kept it carefully to themselves, until a number of suspicious slaves had been arrested. This refers to ten prisoners who were seized on June 18th,—an arrest which killed the plot, and left only the terrors of what might have been. The investigation, thus publicly commenced, soon revealed a free colored man named Denmark Vesey as the leader of the enterprise,—among his chief coadjutors being that innocent Peter and that unsuspecting Mingo who had been examined and discharged nearly three weeks before.

It is matter of demonstration, that, but for the military preparations on the appointed Sunday night, the attempt would have been made. The ringleaders had actually met for their final arrangements, when, by comparing notes, they found themselves foiled; and within another week they were prisoners on trial. Nevertheless, the plot which they had laid was the most elaborate insurrectionary project ever formed by American slaves, and came the nearest to a terrible success. In boldness of conception and thoroughness of organization there has been nothing to compare with it, and it is worth while to dwell somewhat upon its details, first introducing the *Dramatis Personæ*.

Denmark Vesey had come very near figuring as a revolutionist in Hayti, instead of South Carolina. Captain Vesey, an old resident of Charleston, commanded a ship that traded between St. Thomas and Cape François, during our Revolutionary War, in the slave-transportation line. In the year 1781 he took on board

a cargo of three hundred and ninety slaves, and sailed for the Cape. On the passage, he and his officers were much attracted by the beauty and intelligence of a boy of fourteen, whom they unanimously adopted into the cabin as a pet. They gave him new clothes and a new name, Télémaque, which was afterwards gradually corrupted into Telmak and Denmark. They amused themselves with him until their arrival at Cape François, and then, “having no use for the boy,” sold their pet as if he had been a macaw or a monkey. Captain Vesey sailed for St. Thomas, and presently making another trip to Cape François, was surprised to hear from his consignee that Télémaque would be returned on his hands as being “unsound,”—not in theology nor in morals, but in body,—subject to epileptic fits, in fact. According to the custom of that place, the boy was examined by the city physician, who required Captain Vesey to take him back; and Denmark served him faithfully, with no trouble from epilepsy, for twenty years, travelling all over the world with him, and learning to speak various languages. In 1800, he drew a prize of fifteen hundred dollars in the East Bay Street Lottery, with which he bought his freedom from his master for six hundred dollars,—much less than his market value. From that time, the official report says, he worked as a carpenter in Charleston, distinguished for physical strength and energy. “Among those of his color he was looked up to with awe and respect. His temper was impetuous and domineering in the extreme, qualifying him for the despotic rule of which he was ambitious. All his passions were ungovernable and savage; and to his numerous wives and children he displayed the haughty and capricious cruelty of an Eastern bashaw.”

“For several years before he disclosed his intentions to any one, he appears to have been constantly and assiduously engaged in endeavoring to embitter the minds of the colored population against the white. He rendered himself perfectly familiar with all those parts of the

Scriptures which he thought he could pervert to his purpose; and would readily quote them, to prove that slavery was contrary to the laws of God,—that slaves were bound to attempt their emancipation, however shocking and bloody might be the consequences,—and that such efforts would not only be pleasing to the Almighty, but were absolutely enjoined and their success predicted in the Scriptures. His favorite texts, when he addressed those of his own color, were Zechariah, xiv. 1-3, and Joshua, vi. 21; and in all his conversations he identified their situation with that of the Israelites. The number of inflammatory pamphlets on slavery brought into Charleston from some of our sister States within the last four years, (and once from Sierra Leone,) and distributed amongst the colored population of the city, for which there was a great facility, in consequence of the unrestricted intercourse allowed to persons of color between the different States in the Union, and the speeches in Congress of those opposed to the admission of Missouri into the Union, perhaps garbled and misrepresented, furnished him with ample means for inflaming the minds of the colored population of this State; and by distorting certain parts of those speeches, or selecting from them particular passages, he persuaded but too many that Congress had actually declared them free, and that they were held in bondage contrary to the laws of the land. Even whilst walking through the streets in company with another, he was not idle; for if his companion bowed to a white person, he would rebuke him, and observe that all men were born equal, and that he was surprised that any one would degrade himself by such conduct,—that he would never cringe to the whites, nor ought any one who had the feelings of a man. When answered, ‘We are slaves,’ he would sarcastically and indignantly reply, ‘You deserve to remain slaves’; and if he were further asked, ‘What can we do?’ he would remark, ‘Go and buy a spelling-book and read the fable of Hercules and the Wagoner,’ which he would

then repeat, and apply it to their situation. He also sought every opportunity of entering into conversation with white persons, when they could be overheard by negroes near by, especially in grog-shops,—during which conversation he would artfully introduce some bold remark on slavery; and sometimes, when, from the character he was conversing with, he found he might be still bolder, he would go so far, that, had not his declarations in such situations been clearly proved, they would scarcely have been credited. He continued this course until some time after the commencement of the last winter; by which time he had not only obtained incredible influence amongst persons of color, but many feared him more than their owners, and, one of them declared, even more than his God.”

It was proved against him that his house had been the principal place of meeting for the conspirators, that all the others habitually referred to him as the leader, and that he had shown great address in dealing with different temperaments and overcoming a variety of scruples. One witness testified that Vesey had read to him from the Bible about the deliverance of the Children of Israel; another, that he had read to him a speech which had been delivered “in Congress by a Mr. King” on the subject of slavery, and Vesey had said that “this Mr. King was the black man’s friend,—that he, Mr. King, had declared he would continue to speak, write, and publish pamphlets against slavery the longest day he lived, until the Southern States consented to emancipate their slaves, for that slavery was a great disgrace to the country.” But among all the reports there are only two sentences which really reveal the secret soul of Denmark Vesey, and show his impulses and motives. “He said he did not go with Creighton to Africa, because he had not a will; *he wanted to stay and see what he could do for his fellow-creatures.*” The other takes us still nearer home. Monday Gell stated in his confession, that Vesey, on first broaching the plan to him, said “he was

satisfied with his own condition, being free, but, as all his children were slaves, he wished to see what could be done for them."

It is strange to turn from this simple statement of a perhaps intelligent preference, on the part of a parent, for seeing his offspring in a condition of freedom, to the naïve astonishment of his judges. "It is difficult to imagine," says the sentence finally passed on Denmark Vesey, "what *infatuation* could have prompted you to attempt an enterprise so wild and visionary. You were a free man, comparatively wealthy, and enjoyed every comfort compatible with your situation. You had, therefore, much to risk and little to gain." Is slavery, then, a thing so intrinsically detestable, that a man thus favored will engage in a plan thus desperate merely to rescue his children from it? "Vesey said the negroes were living such an abominable life, they ought to rise. I said, I was living well; he said, though I was, others were not, and that 't was such fools as I that were in the way and would not help them, and that after all things were well he would mark me." "His general conversation," said another witness, a white boy, "was about religion, which he would apply to slavery; as, for instance, he would speak of the creation of the world, in which he would say all men had equal rights, blacks as well as whites, etc.; all his religious remarks were mingled with slavery." And the firmness of this purpose did not leave him, even after the betrayal of his cherished plans. "After the plot was discovered," said Monday Gell, in his confession, "Vesey said it was all over, unless an attempt were made to rescue those who might be condemned, by rushing on the people and saving the prisoners, or all dying together."

The only person to divide with Vesey the claim of leadership was Peter Poyas. Vesey was the missionary of the cause, but Peter was the organizing mind. He kept the register of "candidates," and decided who should or should not be enrolled. "We can't live so," he often re-

minded his confederates; "we must break the yoke." "God has a hand in it; we have been meeting for four years and are not yet betrayed." Peter was a ship-carpenter, and a slave of great value. He was to be the military leader. His plans showed some natural generalship; he arranged the night-attack; he planned the enrolment of a mounted troop to scour the streets; and he had a list of all the shops where arms and ammunition were kept for sale. He voluntarily undertook the management of the most difficult part of the enterprise,—the capture of the main guard-house,—and had pledged himself to advance alone and surprise the sentinel. He was said to have a magnetism in his eye, of which his confederates stood in great awe; if he once got his eye upon a man, there was no resisting it. A white witness has since narrated, that, after his arrest, he was chained to the floor in a cell, with another of the conspirators. Men in authority came and sought by promises, threats, and even tortures, to ascertain the names of other accomplices. His companion, wearied out with pain and suffering, and stimulated by the hope of saving his own life, at last began to yield. Peter raised himself, leaned upon his elbow, looked at the poor fellow, saying quietly, "Die like a man," and instantly lay down again. It was enough; not another word was extorted.

One of the most notable individuals in the plot was a certain Jack Purcell, commonly called Gullah Jack,—Gullah signifying Angola, the place of his origin. A conjurer by profession and by lineal heritage in his own country, he had resumed the practice of his vocation on this side the Atlantic. For fifteen years he had wielded in secret an immense influence among a sable constituency in Charleston; and as he had the reputation of being invulnerable, and of teaching invulnerability as an art, he was very good at beating up recruits for insurrection. Over those of Angolese descent, especially, he was a perfect king, and made them join in the revolt as one man. They met him

monthly at a place called Bulkley's Farm, selected because the black overseer on that plantation was one of the initiated, and because the farm was accessible by water, thus enabling them to elude the patrol. There they prepared cartridges and pikes, and had primitive banquets, which assumed a melodramatic character under the inspiring guidance of Jack. If a fowl was privately roasted, that mystic individual muttered incantations over it, and then they all grasped at it, exclaiming, "Thus we pull Buckra to pieces!" He gave them parched corn and ground-nuts to be eaten as internal safeguards on the day before the outbreak, and a consecrated *cullah*, or crab's claw, to be carried in the mouth by each, as an amulet. These rather questionable means secured him a power which was very unquestionable; the witnesses examined in his presence all showed dread of his conjurations, and referred to him indirectly, with a kind of awe, as "the little man who can't be shot."

When Gullah Jack was otherwise engaged, there seems to have been a sort of deputy seer employed in the enterprise, a blind man named Philip. He was a preacher, was said to have been born with a caul on his head, and so claimed the gift of second-sight. Timid adherents were brought to his house for ghostly counsel. "Why do you look so timorous?" he said to William Garner, and then quoted Scripture, "Let not your hearts be troubled." That a blind man should know how he *looked* was beyond the philosophy of the visitor, and this piece of rather cheap ingenuity carried the day.

Other leaders were appointed also. Monday Gell was the scribe of the enterprise; he was a native African, who had learned to read and write. He was by trade a harness-maker, working chiefly on his own account. He confessed that he had written a letter to President Boyer of the new black republic; "the letter was about the sufferings of the blacks, and to know if the people of St. Domingo would help them, if they made an effort

to free themselves." This epistle was sent by the black cook of a Northern schooner, and the envelope was addressed to a relative of the bearer.

Tom Russell was the armorer, and made pikes "on a very improved model," the official report admits. Polydore Faber fitted the weapons with handles. Bacchus Hammett had charge of the fire-arms and ammunition, not as yet a laborious duty. William Garner and Mingo Harth were to lead the horse-company. Lot Forrester was the courier, and had done, no one ever knew how much, in the way of enlisting country negroes, of whom Ned Bennett was to take command when enlisted. Being the Governor's servant, Ned was probably credited with some official experience. These were the officers: now for the plan of attack.

It was the custom then, as now, for the country negroes to flock largely into Charleston on Sunday. More than a thousand came, on ordinary occasions, and a far larger number might at any time make their appearance without exciting any suspicion. They gathered in, especially by water, from the opposite sides of Ashley and Cooper Rivers, and from the neighboring islands; and they came in a great number of canoes of various sizes, — many of which could carry a hundred men, — which were ordinarily employed in bringing agricultural products to the Charleston market. To get an approximate knowledge of the number, the city government once ordered the persons thus arriving to be counted, — and that during the progress of the trials, at a time when the negroes were rather fearful of coming into town, — and it was found, that, even then, there were more than five hundred visitors on a single Sunday. This fact, then, was the essential point in the plan of insurrection. Whole plantations were found to have been enlisted among the "candidates," as they were termed; and it was proved that the city negroes who lived nearest the place of meeting had agreed to conceal these confederates in their houses to

a large extent, on the night of the proposed outbreak.

The details of the plan, however, were not rashly committed to the mass of the confederates; they were known only to a few, and were finally to have been announced after the evening prayer-meetings on the appointed Sunday. But each leader had his own company enlisted, and his own work marked out. When the clock struck twelve, all were to move. Peter Poyas was to lead a party ordered to assemble at South Bay, and to be joined by a force from James' Island; he was then to march up and seize the arsenal and guard-house opposite St. Michael's Church, and detach a sufficient number to cut off all white citizens who should appear at the alarm-posts. A second body of negroes, from the country and the Neck, headed by Ned Bennett, was to assemble on the Neck and seize the arsenal there. A third was to meet at Governor Bennett's Mills, under command of Rolla, and, after putting the Governor and Intendant to death, to march through the city, or be posted at Cannon's Bridge, thus preventing the inhabitants of Cannonsborough from entering the city. A fourth, partly from the country and partly from the neighboring localities in the city, was to rendezvous on Gadsden's Wharf and attack the upper guard-house. A fifth, composed of country and Neck negroes, was to assemble at Bulkley's Farm, two miles and a half from the city, seize the upper powder-magazine and then march down; and a sixth was to assemble at Denmark Vesey's and obey his orders. A seventh detachment, under Gullah Jack, was to assemble in Boundary Street, at the head of King Street, to capture the arms of the Neck company of militia, and to take an additional supply from Mr. Duquercron's shop. The naval stores on Mey's Wharf were also to be attacked. Meanwhile a horse-company, consisting of many draymen, hostlers, and butcher-boys, was to meet at Lightwood's Alley and then scour the streets to prevent the whites from assembling. Every white man coming out

of his own door was to be killed, and, if necessary, the city was to be fired in several places,—slow-match for this purpose having been purloined from the public arsenal and placed in an accessible position.

Beyond this, the plan of action was either unformed or undiscovered; some slight reliance seems to have been placed on English aid,—more on assistance from St. Domingo; at any rate, all the ships in the harbor were to be seized, and in these, if the worst came to the worst, those most deeply inculcated could set sail, bearing with them, perhaps, the spoils of shops and of banks. It seems to be admitted by the official narrative, that they might have been able, at that season of the year, and with the aid of the fortifications on the Neck and around the harbor, to retain possession of the city for some time.

So unsuspecting were the authorities, so unprepared the citizens, so open to attack lay the city, that nothing seemed necessary to the success of the insurgents except organization and arms. Indeed, the plan of organization easily covered a supply of arms. By their own contributions they had secured enough to strike the first blow,—a few hundred pikes and daggers, together with swords and guns for the leaders. But they had carefully marked every place in the city where weapons were to be obtained. On King-Street Road, beyond the municipal limits, in a common wooden shop, were left unguarded the arms of the Neck company of militia, to the number of several hundred stand; and these were to be secured by Bacchus Hammett, whose master kept the establishment. In Mr. Duquercron's shop there were deposited for sale as many more weapons; and they had noted Mr. Schirer's shop in Queen Street, and other gunsmiths' establishments. Finally, the State arsenal in Meeting Street, a building with no defences except ordinary wooden doors, was to be seized early in the outbreak. Provided, therefore, that the first moves proved successful, all the rest appeared sure.

little seems to have been said of the conspirators in regard to any crime of debauchery, subsequent to the capture of the city. Either their confessions did not dwell on them, or the authorities did not dare to give testimony, or the authorities to print it. Death was to be dealt out, comprehensive and terrible; but nothing more is mentioned. One prisoner, Rolla, is reported in the evidence to have dropped hints in regard to the destiny of the women; and there was a rumor in the newspapers of the time, that he, or some other of Governor Bennett's slaves, was to have taken the Governor's daughter, a young girl of sixteen, for his wife, in the event of success; but this is all. On the other hand, Denmark Vesey was known to be for a war of immediate and total extermination; and when some of the company opposed killing "the ministers and the women and children," Vesey read from the Scriptures that all should be cut off, and said that "it was for their safety not to leave one white skin alive, for this was the plan they pursued at St. Domingo." And all this was not a mere dream of one lonely enthusiast, but a measure which had been maturing for four full years among several confederates, and had been under discussion for five months among multitudes of initiated "candidates."

As usual with slave-insurrections, the best men and those most trusted were deepest in the plot. Rolla was the only prominent conspirator who was not an active Church-member. "Most of the ringleaders," says a Charleston letter-writer of that day, "were the rulers or class-leaders in what is called the African Society, and were considered faithful, honest fellows. Indeed, many of the owners could not be convinced, till the fellows confessed themselves, that they were concerned, and that the first object of all was to kill their masters." And the first official report declares that it would not be difficult to assign a motive for the insurrectionists, "if it had not been distinctly proved, that, with scarcely an exception, they had no individual hardship

to complain of, and were among the most humanely treated negroes in the city. The facilities for combining and confederating in such a scheme were amply afforded by the extreme indulgence and kindness which characterizes the domestic treatment of our slaves. Many slave-owners among us, not satisfied with ministering to the wants of their domestics by all the comforts of abundant food and excellent clothing, with a misguided benevolence have not only permitted their instruction, but lent to such efforts their approbation and applause."

"I sympathize most sincerely," says the anonymous author of a pamphlet of the period, "with the very respectable and pious clergyman whose heart must still bleed at the recollection that his confidential class-leader, but a week or two before his just conviction, had received the communion of the Lord's Supper from his hand. This wretch had been brought up in his pastor's family, and was treated with the same Christian attention as was shown to their own children." "To us who are accustomed to the base and proverbial ingratitude of these people this ill return of kindness and confidence is not surprising; but they who are ignorant of their real character will read and wonder."

One demonstration of this "Christian attention" had lately been the closing of the African Church,—of which, as has been stated, most of the leading revolutionists were members,—on the ground that it tended to spread the dangerous infection of the alphabet. On January 15th, 1821, the City Marshal, John J. Lafar, had notified, "ministers of the gospel and others who keep night- and Sunday-schools for slaves, that the education of such persons is forbidden by law, and that the city government feel imperiously bound to enforce the penalty." So that there were some special, as well as general grounds for disaffection among these ungrateful favorites of Fortune, the slaves. Then there were fancied dangers. An absurd report had somehow arisen—since you cannot keep men ig-

norant without making them unreasonable also — that on the ensuing Fourth of July the whites were to create a false alarm, and that every black man coming out was to be killed, “in order to thin them”; this being done to prevent their joining an imaginary army supposed to be on its way from Hayti. Others were led to suppose that Congress had ended the Missouri Compromise discussion by making them all free, and that the law would protect their liberty, if they could only secure it. Others again were threatened with the vengeance of the conspirators, unless they also joined; on the night of attack, it was said, the initiated would have a countersign, and all who did not know it would share the fate of the whites. Add to this the reading of Congressional speeches, and of the copious magazine of revolution to be found in the Bible, — and it was no wonder, if they for the first time were roused, under the energetic leadership of Vesey, to a full consciousness of their own condition.

“Not only were the leaders of good character and very much indulged by their owners, but this was very generally the case with all who were convicted, — many of them possessing the highest confidence of their owners, and not one of bad character.” In one case it was proved that Vesey had forbidden his followers to trust a certain man, because he had once been seen intoxicated. In another case it was shown that a slave named George had made every effort to obtain their confidence, but was constantly excluded from their meetings as a talkative fellow who could not be trusted, — a policy which his levity of manner, when examined in court, fully justified. They took no women into counsel, — not from any distrust apparently, but in order that their children might not be left uncared-for, in case of defeat and destruction. House-servants were rarely trusted, or only when they had been carefully sounded by the chief leaders. Peter Poyas, in commissioning an agent to enlist men, gave him excellent cautions: “Don’t mention it to those waiting-men who receive presents

of old coats, etc., from their masters; they’ll betray us; *I will speak to them*. When he did speak, if he could convince them, he at least frightened them; but the chief reliance was on the hired out and therefore more uncontrollable — and also upon the country negroes.

The same far-sighted policy directed the conspirators to disarm suspicion by peculiarly obedient and orderly conduct. And it shows the precaution with which the thing was carried on, that, although Peter Poyas was proved to have had a list of some six hundred persons, yet not one of his particular company was ever brought to trial. As each leader kept to himself the names of his proselytes, and as Monday Gell was the only one of these who turned traitor, any opinion as to the numbers actually engaged must appear altogether conjectural. One witness said nine thousand; another, six thousand six hundred. These statements were probably extravagant, though not more so than Governor Bennett’s assertion, on the other side, that “all who were actually concerned had been brought to justice,” — unless by this phrase he designates only the ringleaders. The avowed aim of the Governor’s letter, indeed, is to smooth the thing over, for the credit and safety of the city; and its evasive tone contrasts strongly with the more frank and thorough statements of the Judges, made after the thing could no longer be hushed up. These best authorities explicitly acknowledge that they had failed to detect more than a small minority of those concerned in the project, and seem to admit, that, if it had once been brought to a head, the slaves generally would have joined in.

“We cannot venture to say,” says the Intendant’s pamphlet, “to how many the knowledge of the intended effort was communicated, who, without signifying their assent, or attending any of the meetings, were yet prepared to profit by events. That there are many who would not have permitted the enterprise to have failed at a critical moment, for the want of their coöperation, we have the best reason for believing.” So believed the community
